Preface	13
Author's preface	13
Translator's preface	15
0. Introduction	17
0.1 "Late Egyptian"	17
0.2 Texts and character of Late Egyptian	18
0.2.0 Preliminary remarks	18
0.2.1 Survey of the textual genres	18
0.2.2 Linguistic hierarchies and linguistic evolution	20
0.2.3 Bibliography	23
0.3 Writing materials: papyrus and ostraca	24
0.3.1 Demand for writing materials	24
0.3.2 Production and use of papyrus	24
0.3.3 Ostraca	26
0.3.4 Bibliography	26
0.4 Conventions of text description	27
0.4.1 Hieroglyphic transcription	27
0.4.2 Scholarly transliteration	28
0.4.3 Notes on translation	29
0.4.4 Bibliography	30
0.5 Grammatical terminology	31
1. Orthography and writing system	33
1.1 The written form of linguistic signs in Late Egyptian	33
1.1.0 "Old" writing and "new" language	33
1.1.1 Sign redundancy	33
1.1.2 Causes: Historical sound change	35
(1) Note	35
(2) Loss and weakening of elements in syllable-final position	35
(3) Neutralizing phonological contrasts	36
(4) Syllable reduction	37
1.1.3 Effects: The suspension of definiteness in writing	37
(1) The relations between phoneme and grapheme	37
(2) Adjustment of phonograms	38

(3) Reassignment of schematograms	38
(4) Hypercorrection and hypercharacterization	39
1.1.4 Bibliography	40
1.2 Notes on the Late Egyptian writing system	41
1.2.1 “Group writing” and its signs	41
(1) The emergence of new graphemes	41
(2) Determinative complexes and complex determinatives	41
(3) The elementary graphemes of group writing	42
1.2.2 Uses of group writing	43
(1) Purpose	43
(2) Examples of “Loan words”	43
(3) Examples of Egyptian words	44
1.2.3 Syllabic writing and vowels	44
1.2.4 Bibliography	45
1.3 Exercises	45
1.3.1 Reading	45
1.3.2 An ostrakon (oDM 1262 vs.)	45
1.3.3 A Decorum text (MedHab 80)	46
2. Morphosyntactic features and peculiarities	49
2.0 Notes on typological change	49
2.0.1 The analytic tendency in the development of forms	49
2.0.2 Bibliography	50
2.1 Modifying the noun	51
2.1.1 Determination and its forms	51
2.1.2 Determiners: suffix pronouns, demonstratives and articles	52
(1) Suffix pronouns	52
(2) Articles and demonstratives	53
2.1.3 Use of the determiners	54
(1) Determination by articles and demonstratives	54
(2) Absence of articles; determination through suffix pronouns	57
2.1.4 Attributive modification: Nominal and adjectival satellites of the noun	59
(1) Apposition	60
(2) The direct nominal attribute (Direct Genitive)	61
(3) The indirect nominal attribute (Indirect Genitive)	63
(4) Adverbial attributes	64
(5) Adjectives and relative phrases (participles, relative forms and relative clauses)	65
(6) Numbers, number-signs and numeral constructions	68
2.1.5 Notes on linguistic evolution	69
2.1.6 Bibliography	69
2.1.7 Exercises	70
(1) An Amarna boundary stela (Stela U lines 4-14)	70
(2) Literature of Late Dynasty XVIII (Astarte Papyrus lines 3,y-2 — 4,1)	74

(3) Grain collection report (Turin Taxation Papyrus, rt. 4,1-5)	75
2.2 Elements of sentence construction	77
2.2.1 The enclitic (dependent) personal pronouns	77
2.2.2 The imperative	78
(1) Forms	78
(2) Usage	79
(3) The negative imperative (Prohibitive).....	79
2.2.3 Infinitive and Old Perfective.....	80
(1) The infinitive.....	80
(2) The Old Perfective (Stative)	81
(3) Uses following auxiliary verbs	83
(4) Use after the negative auxiliary verb <i>tm</i>	85
2.2.4 Particles, conjunctions, prepositions and adverbs	86
(1) Particles and interjections	87
(2) Conjunctions	88
(3) Prepositions	89
(4) Adverbs and adverbials	91
2.2.5 Bibliographical references.....	91
2.2.6 Exercises	92
(1) Love poetry (pChester Beatty I vs. C1,8 - C2,4)	92
(2) Another love poem (pChester Beatty I vs. C3,10 - C4,6)	94
2.3 The construction of verb forms	95
2.3.0 Periphrasis and its spread	95
2.3.1 Paraphrased relative phrases	96
2.3.2 The forms of the Late Egyptian <i>sdm=f</i>	97
(1) The nominal or emphatic <i>sdm=f</i>	97
(2) <i>sdm.t=f</i> as conjunctive phrase (Terminative)	99
(3) Negations: the Negative Aorist and the “not-yet” form	100
(4) Passive forms	101
2.3.3 Prepositional formations as conjugation substitutes	102
(1) Preposition + <i>p̄y=f sdm</i>	103
(2) Preposition with defined infinitive and relative form.....	103
(3) The Conjunctive	104
2.3.4 Bibliography	105
3. Sentence conjugations and simple sentences.....	107
3.0 The transformation of Middle Egyptian sentence structure into a paradigm	107
3.0.1 Construction of sentences	107
3.0.2 General parameters of the development.....	108
3.0.3 Bibliographical references.....	110
3.1 The Adverbial Sentence or the First Present	111
3.1.1 The forms of the independent Adverbial Sentence	111
(1) The sentence and its designation	111

(2) The pronoun set of the Adverbial Sentence	111
(3) Notes on the use of the preposition <i>hr</i>	112
(4) Methods of negation	113
3.1.2 Usage.....	113
3.1.3 The Circumstantial First Present	115
(1) Form	115
(2) Usage.....	115
3.1.4 Bibliographical References	118
3.1.5 Exercises.....	119
(1) Praise of the city of Ramesses (pAnast. II 1,1-2,5)	119
(2) A profession of faith (pAnast. II 6,5-7)	121
3.2 The Third Future.....	122
3.2.1 Form	122
(1) Structural features.....	122
(2) Negation and adverbial subordination	123
3.2.2 Usage.....	124
(1) As an independent sentence form.....	124
(2) In clause compounds, parallel to the “old” <i>iw</i> -sentence	125
3.2.3 Notes on linguistic evolution	126
(1) The “Future” forms of the Middle Egyptian Adverbial Sentence	126
(2) Selection by linguistic evolution	127
3.2.4 Bibliography	128
3.3 The nominal <i>sdm=f</i>	129
3.3.1 Forms and functions	129
(1) Verbal forms as the subject of the sentence.....	129
(2) Negation and adverbial subordination	130
(3) Notes on linguistic evolution	131
3.3.2 Usage.....	132
3.3.3 Bibliographical References	134
3.3.4 Exercise: From a tale of Dynasty XX (HorSeth 5,6-6,2)	134
3.4 Request sentences: imperative and prospective	137
3.4.0 Areas of meaning and means of expression.....	137
(1) Request, wish and command: anticipated and expected actions	137
(2) The subordinate imperative.....	138
(3) The variants of the Late Egyptian <i>sdm=f</i>	138
3.4.1 Forms and functions of the prospective <i>sdm=f</i>	139
3.4.2 Use of the prospective <i>sdm=f</i>	141
(1) Requests, wishes, and desired or planned actions.	141
(2) Nominal and adverbial subordination	143
3.4.3 Causative constructions	144
(1) The Causative Imperative and its negation.....	144
(2) Finalis and Causative Infinitive	146
3.4.4 Notes on linguistic evolution	147

3.4.5 Bibliography	149
3.4.6 Exercise: A small piece with blessings (pAnast. III 4,4-11)	150
3.5 The Preterite	152
3.5.1 The preterite <i>sdm=f</i> and its features	152
(1) The form and its variants in the passive	152
(2) Negation and adverbial subordination	153
(3) Notes on linguistic evolution	154
3.5.2 Usage	155
3.5.3 Bibliography	157
3.5.4 Exercise: A legal document (pBoulaq 10 rt. 1-15)	157
3.6 The preterite converter <i>wn</i>	159
3.6.1 Converting tense in the sentence conjugations	159
3.6.2 <i>wn</i> in relative constructions	161
3.6.3 Bibliography	162
4. The Nominal Sentence	163
4.1 Structure and morphology	163
4.1.1 Defining the nature and role of the Nominal Sentence	163
4.1.2 The pronouns of the Nominal Sentence	164
(1) The forms of the independent pronouns	164
(2) Specific usage	165
4.1.3 Types of Nominal Sentences	166
4.2 The simple Nominal Sentence	167
4.2.1 The Nominal Sentence proper	167
4.2.2 The Adjectival Sentence	169
(1) The characterizing Nominal Sentence	169
(2) Existence as quality: the Existential Sentence	172
4.2.3 The <i>pjy</i> -Sentence	173
4.2.4 Bibliography	175
4.3 The forms of the Cleft Sentence	176
4.3.1 Participles, relative forms and relative clauses with <i>nty</i> as parts of a sentence	176
4.3.2 The Cleft Sentence proper	178
4.3.3 The sentence with noun plus defined relative phrase: the Pseudo-Cleft Sentence	179
4.3.4 Bibliography	181
4.4 Notes on linguistic evolution	182
4.4.1 Tendencies	182
4.4.2 Bibliography	183
4.5 Exercise	183
An interrogation protocol (pBM 10052 5,2-23)	183
5. Clause conjugations and forms of complex sentences	187
5.0 The syntax of subordination in Late Egyptian	187
5.1 The system of syntactic conversion	189
5.1.1 The circumstantial converter <i>lw</i>	189

(1) The constructions and their functions	189
(2) Usage.....	192
5.1.2 The relative converter <i>nty</i> and attribute conversion	195
(1) The system of attribute or relative phrases.....	195
(2) Antecedents and relative phrases	197
(3) The attribute conversion of the sentence conjugations	199
(4) Usage.....	201
5.1.3. Bibliography	206
5.2 Non-initial main sentence and “old” <i>lw</i> -sentence.....	207
5.2.1 Usage.....	207
5.2.2 Formal criteria.....	208
5.2.3 The descendants of the “old” <i>lw</i> -sentence	210
(1) Definitions and usage.....	210
(2) Notes on linguistic evolution	211
5.2.4 Bibliography	211
5.3 Nominal and adverbial conjugations	212
5.3.1. Conjunctions and synthetic forms of subordination.....	212
(1) Definitions: clause conjugations as nouns	212
(2) Forms and Usage.....	213
5.3.2 Noun clauses and content clauses.....	215
(1) Subject noun clauses	215
(2) Object noun clauses.....	216
(3) Indirect speech.....	220
5.3.3 The final circumstantial clause.....	221
5.3.4 Bibliography	223
5.4 The conjunctive clauses.....	223
5.4.1 Forms of explicit subordination.....	223
5.4.2 Temporal circumstantial clauses and the conjugated infinitive	226
(1) The circumstantial clause of anteriority: the Temporal	226
(2) The circumstantial clause of posteriority: the Terminative	228
(3) Infinitive constructions as conjugations.....	229
5.4.3 The Conjunctive	231
(1) Construction and usage.....	231
(2) The Conjunctive as a “mood”	232
(3) Usage.....	234
5.4.4 Bibliography	238
5.5 Notes on linguistic evolution.....	239
5.5.1 Features of an intermediate position	239
5.5.2 Development of the forms	240
5.6 Exercises	242
5.6.1 Model letter for a woman (pBologna 1094, 9,7-10,9)	242
5.6.2 An original letter (pTurin 1975 = <i>LRL</i> 37, 4-14)	244
5.6.3 A criminal charge (pSalt 124, rt. 2,5-18)	246

6. Complex sentences and simple clause groupings	249
6.0 Outline of the subject	249
6.1 <i>lr</i> and the anticipation of phrases and clauses	250
6.1.1 Anticipation and its forms	250
(1) Providing a framework and establishing the topic: topicalization	250
(2) Forms and combinations	251
6.1.2 The topicalized noun phrase	253
(1) Functions	253
(2) The employment of topicalization	254
(3) Sententially extended noun phrases	257
6.1.3 Topicalized adverbials	259
(1) Prepositional expressions organizing time relations	259
(2) Conditions and possible reasons	261
(3) Forms of conditionality	262
6.1.4 Bibliography	265
6.2 Bound expressions	265
6.2.1 Clause combinations with conditional force	265
(1) Form and semantic structure; consequence relations	265
(2) Combinations with initial particles (<i>lhn</i> ; <i>hn</i>)	267
6.2.2 Closed complexes	270
(1) The balanced sentence with <i>wnn</i>	270
(2) Usage	272
(3) Balanced sentences in the oath formulae	274
6.2.3 Bibliography	275
6.3 Forms of co-ordination in narrative	276
6.3.1 The classic forms of textual organization	276
6.3.2 Bibliography	279
6.4 Notes on linguistic evolution	279
6.4.1 The evolution of the forms	279
6.4.2 Bibliography	281
6.5 Exercises	282
6.5.1 An ostrakon letter (oDM 303)	282
6.5.2 A passage from a Late Ramessid story (Wenamun 2,26-37)	283
6.5.3 A letter concerning tax demands (pValençay I)	285
7. Appendix	289
7.1. The New Kingdom oath	289
7.1.1 Characteristics	289
7.1.2 The simple oath	289
(1) The earlier type: the <i>ʿnh</i> -oath	289
(2) The Ramessid type: the <i>wih</i> -oath	290
7.1.3 The extended oath	290
(1) The detailed version	290

(2) The abbreviated version	291
7.1.4 Bibliography	291
7.2 The disposition of letters.....	291
7.2.1 Letters as a genre of text.....	291
7.2.2 The structure of a letter	292
7.2.3 Summary of conventions used in letters	293
(1) Letterhead	293
(2) Salutation	293
(3) Address with requests for blessings.....	294
(4) Subject matter.....	294
(5) Ending the letter.....	295
7.2.4 Bibliography	295
7.3 Measures and indications of value	295
7.3.1 Measures of capacity and weight	295
7.3.2 Units of value	296
(1) Calculation of value.....	296
(2) Comparison	297
(3) Graphemes and terms in the grain measure.....	297
7.3.3 Bibliography	297
7.4 Titles, offices and functions in Deir el-Medineh.....	298
7.4.1 The Tomb Building Administration	298
7.4.2 The organization.....	298
(1) The Gang	298
(2) The managerial body	299
(3) Minor officials	301
7.4.3 The support staff	301
7.4.4 Bibliography	302
8. Bibliography	303
8.1 Sigla and abbreviations.....	303

Conjugations.....	371
10.4 Egyptian morphemes, phrases and syntagmas	372
10.5 General index	377

Preface

Author's preface

This introduction to Late Egyptian grammar is primarily intended to provide an instruction manual for Late Egyptian like those used for introductory courses in Middle Egyptian. There are not many introductions to the language of the New Kingdom (see, however, Neveu, *La langue des Ramsès*), perhaps because Late Egyptian is not taught everywhere, but perhaps also because Late Egyptian is generally assumed to be simpler and better understood than Middle Egyptian. While the latter is not fundamentally disputed, this introduction can serve a useful role easing access to the existing Late Egyptian grammars, and as a guide to the relevant secondary literature. I can unhesitatingly recommend that the interested student turn to the outstanding contributions which have made the understanding of Late Egyptian possible: the present work would be inconceivable without Paul Frandsen's *Outline of the Late Egyptian Verbal System* and Sarah Groll's adaptation of Černý's textual material in Černý/Groll, *A Late Egyptian Grammar*.

This introduction is based on traditional instruction in Late Egyptian insofar as it is assumed that the student already has a grasp of Middle Egyptian. In principle, it should be possible to introduce the student to the Egyptian language directly with Late Egyptian. The peculiarities of Late Egyptian orthography argue against this approach, however, and scholarly tradition has followed another route. Late Egyptian is thus introduced here through the structure of Middle Egyptian, but this introduction also aspires to accompany the student later, serving as a reference work as well, with indexes indicating problems which are frequently encountered, and suggesting solutions. In attempting to produce both a manual and a reference work, it was impossible to avoid compromises.

In the course of the presentation the density increases; this leads to redundancies, repetition, and apparently similar descriptions in different contexts. Unless related to grammatical difficulties, only those words which appear in the examples and exercises are listed in the glossary (§ 9). References to texts and publications are listed in the bibliography (§ 8), but the citation forms are not consistent, as I have attempted a compromise between easy access to recent publications and compatibility with earlier

grammars and publications, including the Erman/Gradow *Wörterbuch* (so, here we list *pLansing* instead of *LEM*, but *LRL* instead of *pBibl. Nat. 197*, etc.).

As with the German edition, this version of the text remains tied to the earliest. The new printer driver software was not able to handle my soft fonts (transliteration, Coptic, hieroglyphs). Some of the hieroglyphs are from my own fonts, but most are from the earliest version of GLYPH (for DOS), and those GLYPH hieroglyphs had to be imported into word processing and layout software in mirrored form. Thus in some citations, the signs do not always correspond to the original. In other cases, the positions of signs in relation to one another and the base line vary from the source, as do the sizes of the signs and the space between them; the hieratic dot cannot be correctly drawn, and the group  does not allow another sign to be placed above it (as is usual in cases like *ᶜdd* or *ḏd*).

The English edition would never have been appeared without David Warburton: In going to the immense trouble of translating and transforming a grammar that was strongly rooted in German grammatical thinking and writing, he carried the lion's share of the burden. I wish to express to him my heartfelt gratitude. The help of many other colleagues and students was also of vital importance for its completion. To Christian Leitz I owe a considerable number of corrections. Thanks to the hard work of Heike Sternberg-el Hotabi, Roxane Kieselbach, Christian Opitz, and Daniel Werning the indexes were ready in time. In the final stage of the process Robert Simpson went over the English text with a grammarian's eye, made many extremely valuable suggestions and put admirable energy into making the text as flawless as was in his power. Of course I take full responsibility for all remaining mistakes. Finally I would like to thank John Baines for accepting this book among the publications of the Griffith Institute and for accompanying its production process.

In this second, and revised, edition, I owe not a small number of corrections and revisions to David Warburton and, not at least, to Deborah Sweeney and her careful review in *Lingua Aegyptia* 12. I am most grateful to both of them. Less easy was to include the remarks of François Neveu (review in *BIFAO* 59, 2002, 260ff) since we differ grossly in attitude towards theoretical and practical issues of grammar and text understanding. And I should have wished him to read in a closer and less biased way. Nonetheless I tried to include what seemed appropriate to me.

Finally, I thank Robert Simpson who went over the text again, and John Baines who offered the opportunity for a second edition and again took care of its production.

Translator's preface

My interest in translating this grammar was to present a workable grammar of Late Egyptian for those who want to use the texts. I was quite conscious that many students of Egyptian civilization are interested in reading Late Egyptian texts but lack a simple introductory grammar, since many of those available are intended for grammarians or students of linguistics. This book fills that gap and the translation will help those who do not feel fully at home in German, while those interested in linguistics will not be disappointed either (although the German edition will have satisfied many of them).

As a person of habit, and one who regards grammar as a tool to be used in order to understand texts in order to “get to the point”, my initial desire was to force Junge's Grammar into the straightjacket of Sir Alan Gardiner's terminology. In fact, however, this is impossible because Junge has a different overall interpretation of the grammar, and thus the English text is virtually identical in terminology to the German text.

Gardiner's *Grammar* was designed as an introduction, and its extraordinary documentation compensates for the seeming lack of a rigorous grammatical system. Junge's book is dominated by a grammatical system, with the exercises and examples designed to enable the student to master the language, but also conveying a particular understanding of that language at the same time. This system stands in stark contrast to what Sir Alan himself admitted to be the seeming “formlessness” of his book. In fact, of course, Gardiner's book is a masterpiece of didactic organization, and an understanding of that work is a precondition for the use of Junge's. Since, however, both Sir Alan and Junge are grammarians at heart, each has his own interpretation of those fundamental features which dominated ancient Egyptian grammar.

Needless to say, this book speaks for itself, but for those who do not keep abreast of linguistic debates, one can point to some of the differences between this text and Gardiner's *Grammar*, so as to avoid confusion at the outset. One of the problems is that even fundamental terms such as “subject” and “predicate” do not carry specific meanings in Egyptology. In modern linguistics, the terms refer to formal grammatical — and not semantic — categories. Sir Alan's *Grammar* and H. J. Polotsky's early work distinguished grammatical, logical and even semantic subjects and predicates. Polotsky later adopted an approach in which subject and predicate were understood primarily as “logical” categories with semantic/pragmatic significance. This appreciation of the subject and predicate as logical rather than strictly grammatical categories is central to understanding the dominant role played by the role of the adverbial sentence in Junge's work.

Whether logical, semantic or grammatical, predicates are traditionally distinguished as being either verbal or non-verbal. Grammatical verbal predicates are easily understood

and classified. Non-verbal predicates can be adverbial, adjectival or nominal, and this implies the existence of corresponding categories of sentences. In contrast to the earlier custom, Sir Alan declined to use the term "nominal sentence" for all the "non-verbal" sentence patterns, and classified sentences according to his understanding of their predication as "nominal or pronominal", "adjectival" and "adverbial". While Anglo-phone grammarians followed Gardiner's lead, in German usage the term "nominal sentence" was retained, although it was specified that these sentences did not necessarily involve nominal (in the sense of substantival) predication. Middle Egyptian is dominated by verbal sentences of different kinds with identical morphology, which are supplemented with adverbial clauses, but these stand alongside sentences belonging to the other categories. Late Egyptian is, however, dominated by adverbial sentences which were traditionally termed pseudo-verbal constructions, and witnessed an increase in other classes of non-verbal expression. Junge has demonstrated that adverbial sentences are a key to Egyptian linguistic evolution, for they form the bridge between Old Egyptian and Coptic. Since these concepts form an integral part of the argument from the linguistic standpoint, this book retains Junge's approach and usage, including the term "nominal sentence", although this does not accord with normal usage in English.

This means that, as presented, Junge's book can be used both as an introduction to the grammar of Late Egyptian, and as a guide to the linguistic evolution of ancient Egyptian. It should not be too difficult to grasp the grammatical intricacies because the presentation is rigorously systematic, and he has provided numerous references to existing grammatical works.

I have always felt that a Late Egyptian grammar and a new hieratic palaeography for Dynasties XIX and XX were absolutely essential tools, and thus when Junge first mentioned that he was writing a Late Egyptian grammar I volunteered unhesitatingly and unthinkingly to translate it. It must be admitted that I already regretted this seconds later, realizing (a) that Junge was far more capable than I of producing an English version, and (b) that in order to translate the work, I would in fact have to understand it myself. My previous efforts at grasping his grammatical treatises had not convinced me that I had really understood them. It was thus with no little trepidation that I began, but the German book was written in a clear style, and Junge reviewed my entire translation.

0. Introduction

0.1 “Late Egyptian”

The modern designations for the various stages of the ancient Egyptian language correspond only superficially to the periods of ancient Egyptian history to which they seem to be related. Thus “Old Egyptian” still means the language of the Pyramid Texts and tomb inscriptions of the Old Kingdom, but “Middle Egyptian” comprises not only the “Classical” language of all genres of text associated with the Middle Kingdom but also those of the early part of the New Kingdom (Dynasty XVIII); sometimes it is even used to characterize the language of religious texts from the New Kingdom to Roman times. “Late Egyptian” is, however, the term used in English for the language of the Late New Kingdom, rather than that of the Late Period, while the French *néo-égyptien* and the German *Neuägyptisch* seem to follow the chronological framework more closely in referring to the language of the New Kingdom. After Adolf Erman’s *Neuägyptische Grammatik*, “*Neuägyptisch*”/“Late Egyptian” was at first used as a quite general term for the language of all genres of text from the Ramesside period and Dynasty XXI — the second half of the New Kingdom. The political and religious convolutions of the short Amarna period were said to have brought a linguistic form to the fore which had hitherto been spoken but not yet written; earlier recorded use of this colloquial form was considered to surface in texts otherwise written in Classical Egyptian, and these are occasionally termed *Frühneuägyptisch* (“Proto-Late Egyptian”) in German.

language stages and their terminology

To characterize this colloquial form more closely, Jaroslav Černý and those scholars following his path sought to exclude hieroglyphic texts and literary sources (like the texts published as *Late Egyptian Stories* — *LES*) from the description of Late Egyptian, striving to reserve the term exclusively for the language used in documents like those published as *Late Ramesside Letters* (*LRL*) or as *Ramesside Administrative Documents* (*RAD*). In accordance with this exemplary approach to the language — in comparison with those used for other stages of the language — recent Late Egyptian grammars thus deal with the non-literary texts, the letters, documents, records, etc. written on ostraca and papyri from late Dynasty XIX to early Dynasty XXI. This Late Egyptian is thus mainly characterized by the appearance of those linguistic forms which come to dominate the

“real Late Egyptian”

later stages of the language, while the traces and remnants of the earlier stages are phased out.

This type of Late Egyptian serves as the foundation of the present grammar. Although such restrictions were of great importance in the history of research, they have undesirably narrowed the field of study and increased its distance from the realities of speech and language. Thus an attempt is made here to draw again upon the grammar of those genres of New Kingdom texts that were excluded in the purist approach.

0.2 Texts and character of Late Egyptian

0.2.0 Preliminary remarks

categories of
texts;
linguistic
norms and
registers

Were one to apply general conditions to the use of language and linguistic norms in their written form, it could be posited that the use of language depends not only on period, but also on social and textual criteria, i.e., that language use depends upon context. In the three hundred and fifty years between late Dynasty XVIII and early Dynasty XXI, Late Egyptian was bound to change, and it did. The extent to which the changes are preserved in texts depends upon their social functions. Letters and memoranda are subject to different linguistic norms than state documents. It is thus even more important with Late Egyptian than with Middle Egyptian to grasp the linguistic register of any given text. The texts themselves can be ranked in a hierarchy of linguistic norms.

the effects of
writing

The very manner in which a text is written conveys a strong message: the types of text recorded in hieroglyphs (stelae and temple inscriptions) are more resistant to linguistic innovation than cursive hieratic texts (papyri and ostraca). Playing with linguistic norms and with the frequency and method of use of more ancient or more colloquial forms is another means of expression used by ancient Egyptian authors; recognizing this sometimes enables one to grasp nuances of form and content. It is thus useful quickly to review the general genres of the Late Egyptian texts with which this grammar is concerned.

Decorum describes the interaction of pictorial and written decoration emphasizing the integration of the socio-cultural norms which it is intended to convey. It is common in private and royal stelae and tomb inscriptions. The concept was introduced by John Baines. Cf. *Fecundity Figures* (Warminster 1985) pp. 277ff.; also idem, in: *Man N-S* 18 (1983): 572ff.; Baines/Eyre, in *GM* 61 (1983): 65ff.

0.2.1 Survey of the textual genres

The texts surveyed here are classified according to their chronological position and speech situation; "speech situation" refers to the circumstances in which the text was used or developed. The texts are therefore generally characterized as representing "daily life", "literature" (*belles lettres*), social or ideologi-

cal “declarations” (termed “decorum” texts: private or royal stelae, tomb inscriptions, so-called “historical” texts) or “theological” texts. For the publication data of these and other texts, the bibliographic abbreviations at the end of this volume should be consulted (§ 8.1, where the texts cited in abbreviated form will also be found; abbreviations: p = papyrus; o = ostrakon; vs. = verso; rt. = recto).

(1) Late Dyn. XVIII

daily life: ostraca (oAmarna)

decorum: Tomb inscriptions (cf. in general Sandman, *Akhenaten*); boundary stelae (cf. § 8.1. The main text of later boundary stelae uses a highly developed form of Middle Egyptian — called Late Middle Egyptian here — while the king’s speech employs a language which is clearly coloured by Late Egyptian) text categories of late Dyn. XVIII

belles lettres: Astarte (reign of Horemhab)

theological: Great Hymn (cf. § 8.1; highly developed, very subtle Middle Egyptian/Late Middle Egyptian)

(2) Dyn. XIX

daily life: correspondence: pCairo 58053-58060; pLeiden I 360-368; written on ostraca (selection), reign of Ramesses II: oDM 116; 118; 303; 314; 317; 321; 324; 328; 560; 581 (cf. also *KRI* III 534-540; 544); reign of Merenptah: oCairo 25581; 25504; oMichaelides 13 (cf. also *KRI* IV 151-153; 155-158) correspondence

administrative documents (reign of Seti II): oCairo 25556; oNash 1 and 2 (*HO* I pl.46,2; 47,1) (cf. also *KRI* IV 302-303; 315-320) administrative documents

didactic (school texts): pAnast. II-VI; pKoller; pSallier I and IV vs.; pTurin A and B; pBologna 1094 didactic texts

belles lettres: pAnast. I; Doomed Prince (reign of Seti I/ beginning of Ramesses II); Taking of Joppa (same date as Doomed Prince); Harris Love Songs (pHarris 500 rt.; same date as Doomed Prince); pD’Orb (Two Brothers; reign of Seti II)

decorum: (texts in hieroglyphic versions) Qadesh Poem/Qadesh Bulletin (Ramesses II; mainly Late Egyptian syntactical structures, but still with some “Middle Egyptianisms” in morphology and orthography); Hittite Treaty (Year 21 of Ramesses II); Libyan War (Merenptah); Israel Stele (Merenptah)

theological: pLeiden I 350 rt. (Great Hymn to Amun from Year 52 of Ramses II; an example for spread of Late Egyptian orthography within vestigial

Middle Egyptian — specifically: Late Middle Egyptian — linguistic structure)

theological:	pNeskhons (reign of Pinodjem)

0.2.2 Linguistic hierarchies and linguistic evolution

Late Egyptian seems to appear quite unexpectedly for the first time in the speeches of the King in the Amarna boundary stelae, in the midst of a text composed in formal Middle Egyptian (cf. Exercise § 2.1.7[1]), apparently illustrating the assumptions of Sethe and Stricker on the history of the language (cf. § 0.2.3): while the written language remained unchanged, spoken forms did change, and it was the King who finally pushed these changes through, in the spirit of the revolutionary realism of the Amarna period. This must however be judged in light of the following considerations:

(1) Colloquial language differs from the language of writing not only in grammar, but also in the content of the messages conveyed: when writing one obeys different linguistic norms. In learning to write, the users of a given language have also learnt involuntarily to observe the unwritten rules governing expression in any given kind of text — they move to another register. The Egyptians of course will have behaved in the same fashion, even if it is true that only a small proportion of the population was actually literate.

colloquial
language —
written
language

Linguistic systems, norms, registers and the

ranked hierarchy of norms: Even if a competent speaker is not conscious of the fact, every use of language is rule-governed. The complete set of rules is the system of a language which determines "what can be said". The choice made by the speaker depends upon the context: who is addressed on which occasion and under which circumstances; whether in speech or in writing; whether in a letter or in a story. The decisions will be guided by those linguistic norms relating to the specific circumstances.

"Norm is a system of obligatory forms which are socio-culturally determined. It does not correspond to what 'can be said' but to what 'has already been said', and what 'you' normally say in the community" (E. Coseriu, *Synchronie, Diachronie und Geschichte*, Munich, 1974, p. 47). The conventional norm for a given situation can also be called a "Register" — which can be understood metaphorically in the sense of registers which can be linguistically "pulled" (introduced into Egyptology by Orly Goldwasser, in *Fs-Lichtheim*, pp. 200-240; cf. also the literature cited there).

The more oral and written speech acts are made in a specific speech situation, the more style and refined forms of expression increase and the more older and customary forms are accumulated. Thus the speech acts belonging to a socially and culturally important speech situation reflect more developed and elaborate norms or registers than others do. Classifying these speech acts according to the degree of elaboration leads to the establishment of a hierarchy of norms.

(2) The use of language in any kind of text is determined by tradition, and the effect of this increases with the cultural significance of the text. Every language and every linguistic norm or register is, however, also subject to change through that very use which the community makes of language, and thus the norms or registers change for written languages also. The speed with which changes appear in particular types of text depends upon their relative positions in the norm hierarchy: the more developed the norm, the slower it changes.

traditional use
of language

(3) Language and writing conventions are two different systems. Writing does not develop at the same pace as the language: changes in the structure and pronunciation of words and forms are not necessarily mirrored in written usage. Conversely, changes in written forms need not reflect changes in other linguistic forms.

language and
script

(4) The members of a community using a given language do not usually recognize changes in their language as linguistic innovations, and innovations emerge so slowly that even outside observers — meaning us — can only recognize them when comparing forms in texts that are

language
change

separated from each other by long periods of time.

Middle
Egyptian —
Late Egyptian

(5) The differences between Classical Middle Egyptian and Late Egyptian are not so fundamental as is widely assumed: all Late Egyptian forms and expressions were in principle present in Middle Egyptian. The main difference from Middle Egyptian is that Late Egyptian is dominated by forms which were rarely used earlier but were already in existence, and that certain usages characteristic of Middle Egyptian were finally abandoned. In short, the linguistic change can be characterized as a change in the frequency with which forms were used, accompanied by shifts — sometimes major — in their roles within the network of linguistic relations.

writing
conventions
and their
dissolution

Developments in Late Egyptian can be summarized thus: although the abandonment of earlier writing conventions is a specific characteristic of New Kingdom texts, earlier forms do in fact persist in the texts for a long time. The relationship of the conventional writing symbols (“graphemes”) to the phonetic segments that differentiate lexically distinct linguistic items (“phonemes”) is not so clearly defined as in Middle Egyptian, making it possible that linguistic changes remain unrecognized. Adjustments in written forms then give evolutionary changes the appearance of abruptness.

“Late
Egyptianisms”

Developments in the forms and morphology of Late Egyptian — linguistic predecessors of the royal speeches in the Amarna boundary stela — can be observed as early as Dyn. XVII or early Dyn. XVIII or even in the late Middle Kingdom, in those texts lacking stylistic pretensions or representing textual genres less burdened with tradition, e.g., letters and administrative records. Late Egyptianisms in such texts or in literary and theological texts of later date do not betray authors who are unconsciously “slipping” into colloquial usages, but are symptoms of linguistic evolution.

hierarchy of
norms and
registers

Temporal linguistic demarcation is thus less real in the period of the New Kingdom than has been generally assumed. Slightly oversimplifying, one can “diagnostically” classify New Kingdom texts according to the proportion of Middle Egyptian linguistic expressions (veiled by their written form). The texts which are culturally most significant — by definition the most conservative — show the highest proportion of Middle Egyptianisms; from the everyday texts through literary to ideological and theological works, the proportion of Middle Egyptian elements increases constantly — or rather these have been maintained longest in the linguistically more protected higher registers of the hierarchy of textual expression. The “Middle Egyptian” of Ramessid theological texts disguised by Late Egyptian writing habits is thus only a manifestation of a perfectly normal use of language. It is only at the end of Dyn. XX that we perceive the re-appearance of a “purer” form of Middle Egyptian displaying all the signs of a language specifically taught in schools, a form which was destined to survive for the rest of ancient Egyptian history as a scholastic language similar to Latin in Europe.

The following concepts are used to distinguish the various linguistic norms and registers in use during the New Kingdom; examples will appear in the exercises.

Designation	Characteristics	Examples
Late Middle Egyptian	Middle Egyptian sentence structure and Middle Egyptian orthography; sparing use of Late Egyptian forms, words and writings	Great Hymn, Amarna; pLeiden I 350 rt.
“Medio”-Late Egyptian	generally Late Egyptian sentence structure with numerous Middle Egyptian syntactical elements and forms; still generally Middle Egyptian orthography	boundary stelae, Amarna; Doomed Prince; Qadesh-Poem/Qadesh-Bulletin; War with Sea Peoples
Late Egyptian	purely Late Egyptian sentence structure with Late Egyptian forms and writings; occasional Middle Egyptianisms in forms and orthography which progressively disappear	oDM; <i>LEM</i> ; <i>RAD</i> ; Two Brothers; HorSeth; Wenamun
“Neo”-Middle Egyptian	Egyptian Second Language; based on Middle Egyptian structure and orthography; own linguistic and writing development. Used from the end of the New Kingdom on	not included in the present work

Observation:

Winand, *Études*, §§ 22-29, uses terms analogous to those used here: generally “Late Middle Egyptian” is Winand’s “*néo-égyptien partiel*”, “Medio-Late Egyptian” his “*néo-égyptien mixte*”, “Late Egyptian” “*néo-égyptien complet*”.

0.3 Writing materials: papyrus and ostraca

0.3.1 Demand for writing materials

A fundamental feature of Egyptian history seems to have been the progressive extension of writing into virtually every sphere of life. For the formative period of the Old Kingdom, most of the recorded utterances preserved are monumental, such as ideological texts engraved in stone (as decorum texts). It is probable that during this period, the number of literate individuals was very limited, and that while the conventions were being established, there was little divergence in the written forms of the language. By the New Kingdom, however, writing was widely used and subject to the conventions developed during the intervening thousand years. Besides socially significant texts and those that are somehow specific to language activity — *belles lettres* texts — there are now also abundant records of business affairs, everyday life and even personal activities (including expressions of religious sentiment).

The monumental demands the imperishable and thus inscriptions in stone. The momentary is satisfied with the transient, and thus the demand for cheap and easily accessible writing material increased over time. From the very beginning, papyrus (“paper”) was such a material, and its importance gradually increased (even being an export product well into classical times).

Not only a great part of the records concerning daily life but also considerable evidence of literary activity comes from the village of Deir el-Medineh. And there the supply of papyrus seems not to have matched the rising demand which was only met by re-using papyrus (“palimpsests”), along with the parallel use of limestone flakes and potsherds, which are termed “ostraca” in Egyptology.

0.3.2 Production and use of papyrus

production of
papyrus

In antiquity, the papyrus plant (*twyf*) grew wild in thickets up to 4 m high in the shallows along the Nile banks and in the swamps of the

Recto/Verso; Palimpsest: The inscribed horizontal fibres of the inner side of the papyrus are called the Recto (abbreviated “rt.”, “rto.”, “ro.”). The inscribed reverse is the Verso (“vs.”, “vso.”, “vo.”). Frequently the recto is not designated as such.

Certain editors term the side with the beginning of a text the “recto” regardless of the fibers, which has led to the emergence of the term “real” recto, meaning the technical recto. The recto of an ostrakon is always the side with the beginning of the text. In German, the recto is occasionally abbreviated Vs., for *Vorderseite*, which can lead to confusion.

Many Ramesside texts are written on papyrus which originally bore another text. The earlier text was “erased” by washing it away, and the second text written on the papyrus when dry. If papyrus was accidentally exposed to water, it could be dried and the text preserved, so that these “erasures” were clearly deliberate. Papyri bearing two texts of this type are termed “palimpsests”.

Delta. To obtain writing material, the triangular stem of the plant was peeled, cut into pieces 42-44 cm long, and split into thin strips. The strips were laid out in parallel — slightly overlapping — rows which were then covered with another set of strips laid perpendicularly over the first set. The strips were glued together by pressure and pounding. When dry, the surfaces were polished with a smooth stone and the edges trimmed. The dimensions differed from one period to another, but in the Ramesside Period, the pages were generally 42 cm high.

Papyrus reached the consumer in rolls which were usually formed in the Ramesside Period by gluing together some 20 sheets (*q^ch.t*). The joins only overlapped by one or two centimetres, and the longest known scroll is the 40.5 m long pHarris I. Although some texts were written on complete rolls (*r.t*), most rolls were cut in half before use,

preparation

so that they were 20 cm high. Scrolls were kept in covers, and these in wooden boxes (*h^rt-^c*). Papyrus is rolled so that the horizontal fibres run inside, along the length of the scroll, while the vertical strips run outside, parallel to the ends of the scroll.

For a longer text, the scribe spread the scroll in front of himself (or herself) with the rolled part on the left and an uncovered “page” on the right, and wrote on the horizontal fibres of the inner surface, from right to

technique of writing on papyrus

left. This inscribed inner surface is termed the recto. The scroll was rolled up again starting from the end on the scribe’s right. In earlier times, it was conventional to inscribe the papyrus in vertical columns, writing from the upper right to the lower left, so that the scroll could be rolled up practically column by column. From Dyn. XII it was usual

to open up an entire page at a time, and to write in horizontal lines from top to bottom.

verso

At first, the outer surface, the verso of the papyrus was not used, and the scroll was re-rolled after completion, so that the beginning of the text was at the beginning of the scroll again. The need for writing materials during the New Kingdom was, however, such that the back was very frequently inscribed as well. The scribe could simply take the inscribed papyrus and start writing

without re-rolling the scroll, so that the first page of the verso text was on the back of the last page of the recto text. If a papyrus with an uninscribed verso had been re-rolled, the scroll could simply be turned over, and the first page of the verso text would be on the back of the first page of the recto text, but the other way up.

letters and
official
documents

Some letters and official documents (and one literary text, Wenamun) were prepared differently. The scribe took the scroll and unrolled it away from himself, and wrote in lines parallel to the end of the papyrus until about half of the text was completed, at which point the text was cut off from the rest of the scroll. He then turned the sheet over and wrote so that the first line of the recto was on the back of the last line of the verso. The recto of such a text is thus written perpendicular to the fibers, and the verso parallel to the fibers. The length of such a text reflects the scribe's decision, and the breadth depends upon whether the papyrus had been halved (21 cm) or quartered (11 cm).

addressing
letters

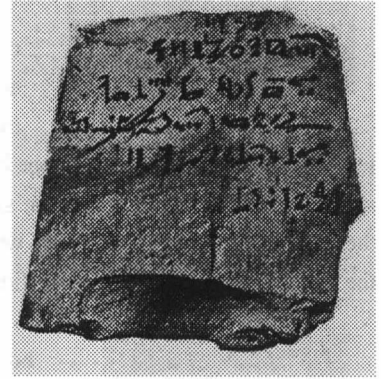

When finished, the scribe would turn back to the recto and fold it several times, beginning with the end of the recto text, which ended up on the inside of the narrow packet, with the uninscribed bottom bit of the verso on the outside. The packet was then folded in half, and the ends tied together. On the upper surface the name of the recipient was written, and on the other side, that of the author.

folded in half, and the ends tied

0.3.3 Ostraca

Large smooth limestone flakes were surprisingly among the writing materials favoured by the community at Deir el-Medineh, where these waste products were used for notes, records, sketches, school exercises, and even letters and inventories.

oDM 18 (Dyn. XIX)

These thousands of flakes — called “ostraca” (*n-d-r*) — have not only considerably augmented the number of texts preserved from the New Kingdom, and contributed to our understanding of its chronology and administration, but have also thrown much light on obscure aspects of daily life.

0.4 Conventions of text description

0.4.1 Hieroglyphic transcription

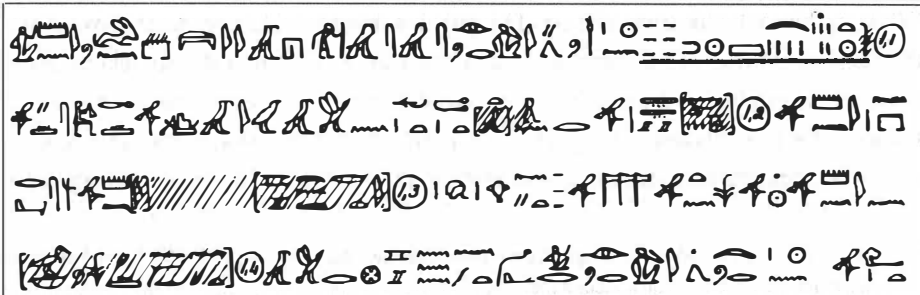

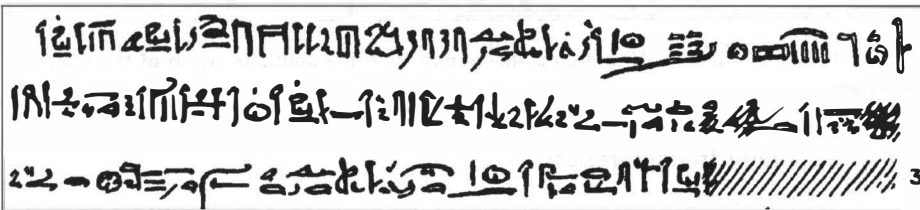

Many New Kingdom texts were written in hieratic — particularly those in “typologically pure” Late Egyptian. In the interest of readability, these are generally published in Egyptological hieroglyphs.

The basic principles of transcription established by Gardiner in 1929 demand that all the cursive hieratic signs be faithfully reproduced in the same relative positions in the hieroglyphic transcription, regardless of how genuine Egyptian hieroglyphs would have been used to write the same words and forms. To understand the difference, one need only turn to the hieroglyphic versions of the Qadesh poems and the transcription of pSallier III. Publications which preceded Gardiner’s article (even the second edition of Erman’s *Neuägyptische Grammatik*) observed different systems, frequently endeavouring to transcribe hieratic as the editor thought an Egyptian craftsman would render the same text in hieroglyphs.

conventions of transcription

Gardiner’s system renders Late Egyptian texts still more alien to the eyes of those accustomed to Middle Egyptian, as Erman warned. There is a whole series of variants and new signs. Many words are abbreviated so much as to be unidentifiable while others are written with many more signs than seemingly necessary; the signs at the ends of some words degenerate into mere strokes, while other words are loaded with determinatives. Many signs come to bear a significance in transcription which they do not have in the cursive hieratic. None of this impinges on the fundamental correctness of the method, but it should be borne in mind when viewing Late Egyptian texts, and above all one

appearance of the texts

Introductory passage of “Wenamun”, hieratic and in hieroglyphic transcription

should not hastily and harshly judge the written forms as corrupt and confused, as was once done.

special signs;
rubra

Hieratic abbreviations and idiosyncratic writings are reproduced in hieroglyphic transcription. The \setminus is used not only for any number of complicated signs, but also for 𓂏 and frequently even for 𓂏 , 𓂏 , and 𓂏 . Merely in order to fill up an empty space above another sign, a dot was inserted¹, as in 𓂏 , which can, however, equally well be intended to be 𓂏 or 𓂏 . Formalistic precision and consistency result in transcriptions such as 𓂏 for the phoneme *b*, although such writings are intended to distinguish the similar hieratic signs for 𓂏 and 𓂏 . The sign 𓂏 is reversed in hieratic, but this reversal does not appear in the hieroglyphic transcription used here. Headings, paragraph introductions and numbers written in red ink are usually marked by underlining the hieroglyphic transcription.

line columns

Hieroglyphic texts of the New Kingdom differ from those of the Middle Kingdom, but not particularly dramatically. Some Ramesside inscriptions testify to an increasing tendency to dispense with the traditional square units in favor of rectangles, so that individual lines of text consist of a series of short columns, which are read from top to bottom (cf. the Israel Stele, the Hittite Treaty or the text below). This New Kingdom innovation survived in monumental marginal texts until hieroglyphs themselves ceased to be used in Late Antiquity.

Part of the titulary of Ramses IV; marginal inscription from the southern pylon of the temple of Medinet Habu

0.4.2 Scholarly transliteration

varieties of
transliteration

While the hieroglyphic transcription of hieratic is subject to widely accepted conventions, the same is not true of the transliteration of the hieroglyphic into Roman letters, and it is not even certain that it could be systematized without an effort completely disproportionate to the task. Phonetic changes (cf. § 1.1) and other shifts in the relationship between the graphemes and morphemes/phonemes mean that the scholarly conventions applied to

¹ In the examples this dot will frequently not be represented since the set of GLYPH hieroglyphs used here did not have it — or it eluded me.

Middle Egyptian cannot be used blindly. Both Erman and Černý agreed that any proposed system would be arbitrary and both concluded that it was “better” or “safer” not to. Two basic tendencies have crystallized: the moderate historical attitude which maintains the system used for Middle Egyptian, and the moderate “phonematic” one endeavouring to represent the hieroglyphic transcription in the transliteration. The latter method would transcribe  “the one who sends forth” as *r.h3b*, the former as *ī.h3b*.

In this work, I attempt to employ a descriptive phonematic transliteration determined by the constraints that words must be recognizable in the dictionary or *Wörterbuch* and grammatical endings in the grammars. Inconsistency in this system: it means that the endings of words find little descriptive attention and that idiosyncrasies of writing are not represented if regular. The endings of the infinitives of weak verbs are seldom transcribed except in explanation or to mark specific forms (e.g. *gmy* will be used as the citation form of the verb “to find”, *gm* for its infinitive, in the explanatory notes, however, sometimes etymologically *gm.t*; with object suffix *gm=s*, but as representing the written evidence or in explanation as *gm.t=s*, even *gm.tw=s* as representing the writing). Syntagmas are usually given in a conventional form, in general in the form used in the secondary literature (i.e., *m-dy.t sdm=f* for the negative causative imperative, even if *dī/dy*, *dy.t* or *d3y.t* is transliterated otherwise). methods used here

Grammatical morphemes are separated by dots, suffixes by a double hyphen, and words are separated by a space as in English: e.g., *t3y=f3h.t* “his field”. Single concepts and compound prepositions or adverbs joining two morphemes are joined by a hyphen, e.g., *z3-Rcw*; when those elements became inseparable, they are joined by a dot, e.g., *m.dī*. The causative *s* is separated from the morpheme with a colon, e.g., *s:mn*. Group writings (syllabic script) are represented with hyphens (e.g., *ī-r-k*, or *īw-r'-k3*, for “Uruk”). When a transliteration sign is used to represent a phoneme, it is put between slashes (e.g. */dl/*), braces mark morphemes (e.g., *{sdm}*). structure sign; asterisk

Hypothetical, imaginary or artificial forms, and “etymological” or over-literal translations, etc., along with hypothetical transliterations and forms which are not recorded are all indicated with an asterisk (*) and impossible forms with two asterisks.

0.4.3 Notes on translation

In general, in translating Egyptian, Egyptologists are inclined to keep their translations as literal as possible, on the assumption that this somehow reduces the degree of interpretation, while simultaneously demonstrating that one has grasped the grammatical structure of the Egyptian text. As a matter of principle, this system will not be observed in this work.

translation is interpretation A “justificatory translation”² fails to achieve the object of representing the statements of one language in another. The attempt to replicate the structure of one language in another merely gives the alien structure an inappropriate role, and is more likely to block understanding than to enhance it. All translation is interpretation, and one cannot avoid this by translating literally. The unavoidable discussion of translation difficulties of a grammatical and semantic nature belongs in the notes and not in the text.

free translation If a free translation is preferred to a literal one, this does not imply that imprecision is permissible. The art of translation is that of giving the precise sense in appropriate phrases in one’s own language, regardless of whether one succeeds in every case or not. Success depends upon mastering not only the mechanics of the other language, but also one’s own.

In this book many of the translations of the examples will be free, but if necessary the accompanying notes will provide translations bridging the gap between the free translation and the Egyptian structure — to ease understanding, but not as substitute or alternative translations. The basic meaning of the words in question will be found in the Glossary (§ 9). If desirable, the same words will be rendered differently in different contexts. Formulaic expressions such as *ᶜnh wd3 snb* will be abbreviated in transliteration and usually left untranslated, except where they should be given a greater weight of meaning.

0.5 Grammatical terminology

Although it might seem somewhat paradoxical, consistency is not necessarily a virtue in the use of grammatical terminology. An introductory grammar must use familiar terms, but it is impossible to avoid the use of new ones. Scholarly tradition is built up as new insights are gained and thus old and new must be blended together, as linguistic understanding increases and changes our perspectives. Some older terms must be incorporated into this — if occasionally with slightly different meanings — but some have to be replaced, and others must be introduced as linguistic data are described differently. Although potentially confusing for the new student, the terminological debate cannot be resolved today. This grammar attempts to keep links to the older grammars of Middle Egyptian with which the student is familiar but which are bound to an older terminology, while current linguistic debate is largely expressed using terminology which varies from scholar to scholar. It is thus not the moment to develop a new terminology, even if this were to result in consistency.

As a paradigm verb, *sḏm* is written only *sḏm* here (*sḏm=f*). In order to enable the student to recognize notions when new forms of analysis and description are introduced, a number of synonymous terms are employed (such as subject, actor, agent; or emphatic *sḏm=f* and nominal *sḏm=f*). At the same time, terms are used in a more general or more analytic way (prospective *sḏm=f*, e.g., is also termed subjunctive-prospective *sḏm=f* where dependent on verbs, occasionally abbreviated to subjunctive *sḏm=f*, etc.). Middle Egyptian “pseudo-verbal constructions” (with Old Perfective/Stative or *hr* and infinitive — *zh3.w hr sḏm* “the scribe is listening”) are grouped together with other prepositional compounds (*zh3.w m pr=f* “the scribe is in his house”) as the “Adverbial Sentence” (Gardiner’s “sentence with adverbial predicate”), but it should be noted that the term Adverbial Sentence is used as equivalent to “First Present” (the usual term for the Late Egyptian form). References to sections refer only back to the earlier parts of the book (to sections which have already been covered); as long as grammatical terms have not yet been explicitly introduced, the commentary notes to the examples attempt to paraphrase forms which will be assigned terms later on (as in the vague “Late Egyptian future expression” for the *iw=f r sḏm*), which is later called the “Third Future”. Those dependent clauses which assume an adverbial role with regard to the sentence governing them are termed circumstantial clauses or forms (“Circumstantial Present”, e.g., is thus the circumstantial or adverbial form of the Adverbial Sentence alias First Present; note that the “Adverbial Sentence” uses an adverbial as one constituent, while its “adverbial” or “circumstantial form”, i.e., the Circumstantial Present, is the form of the Adverbial Sentence used in the role of an adverb!). As a rule, all the terms and concepts are explained in detail in the course of the book.

1. Orthography and writing system

1.1 The written form of linguistic signs in Late Egyptian

1.1.0 "Old" writing and "new" language

The principles of writing the Egyptian language have not changed very much, but not a few signs which appear to be identical to those of Middle Egyptian have acquired new values as a result of sound change. As writing is governed by normative rules only to the extent that more or less individual manners of instruction may allow, sound changes can equally easily remain concealed in familiar forms or appear in new writings. The personal pronoun *sw*, e.g., has been reduced to *s'*, and it can still be encountered as  or already as . Thus in the texts both conventional and modernized forms appear side by side. The register hierarchy prevails here, too, so that religious texts and monumental inscriptions bearing the weight of tradition are more inclined to reflect entrenched conventions. In the ways words and phrases are written, hieroglyphic and cursive hieratic texts can thus differ considerably, a difference which is emphasized by the Egyptological hieroglyphic transcription of hieratic.

1.1.1 Sign redundancy

In many cases, Late Egyptian words cannot be read as in Middle Egyptian. This is particularly true for endings:

Thus phonograms like *-w*, *-y*, *-t*, *-t'* appear, but seemingly without any identifiable redundant phonograms function as graphemes, meaning that the writings do not fulfil any linguistic role, and can consequently be ignored:  *qw* for *q*, "enter";  *hprw* for *hpr*, "become"; or  for *iy* "come";  for *psy* "cook" (which also has a characteristically redundant duplication of *z* and *s*). A typical transfer is to be noticed in  *qdw* and even  **qdnw* for *qd* "form; substance", since the final *n* can also be written *nw*:  **wstn-nw* for *wstn* "stride; go".

marking
grammatical
gender

Another consequence is that the *-.t* ending can no longer serve as an indicator of a grammatical feminine, with *p3 šn'* "the boy" (Coptic ΠΩΗΡΕ) and *t3 šn'* "the girl" (ΤΩΕΡΕ); Coptic reveals that the two were, however, vocalized differently. Grammatically feminine are also, e.g., designations for vessels like *d3d3.w* "jar", or *3^{cc}* "vessel".

complement-
ation

These examples also show that although the biliteral signs are frequently written with complementary uniliteral graphemes, it is not clear that the graphemes correspond to phonemes (that, e.g., the *-3* of *p3* was pronounced — probably it was not: presumably *p3* was already pronounced like the Coptic article Π-. Incidentally, original hieroglyphic texts spell *p3* without the phonetic complement *-3*, although hieratic texts do write it).

redundant
semograms

The use of determinatives is widespread, but oddly, not those with specific classificatory functions, rather the more general ones, which classify less precisely. Such generic determinatives, which do not clearly determine,

like , , or , are combined together as in *nhm* (infinitive) "take".

They will also be found abbreviated to mere strokes: . While the determinatives seem to lose significance as indicators of meaning, their role as word separators increases. The plural strokes very often serve a similar role, but mostly in conjunction with other determinatives.

"image"-
writings

Occasionally writings appear to be nearly incomprehensible, and earlier Egyptologists tended to describe these forms as "wild" or "corrupt". Examples include or as playful forms of "20" (the number)¹ which can hardly be transcribed, except perhaps with the Coptic ΧΟΥΩΤ). Or comparably for *mš'i* "go"; or for *ggb.t* "stricken".

a new writing
system

These writings are the reflections of a new system of writing, the mechanisms of which will be briefly explored here. Admittedly, the derivation and peculiar character of this system are such that even when its principles have been mastered the search for a given

Grapheme, morpheme, phoneme:
Concepts for the smallest units of a structural linguistic description. A phoneme is the smallest phonetic element which can differentiate lexically distinct linguistic items (e.g., bear - wear). A morpheme is the smallest meaningful element of given words (clearly; you; he looks). A grapheme is the smallest written element which distinguishes phonemes, morphemes and other units of language or writing (semograms). Phone, morph, and graph apply to the still smaller elements which are not yet distinctive. If several elements can represent one morpheme, phoneme or grapheme, these are termed allomorph, allophone or allograph.

1 Cf. WB V 552,8.

word can prove to be a bit of an ordeal, involving consideration of the various possibilities and searching in the dictionary until something suitable is found (and generally something is found!).

1.1.2 Causes: Historical sound change

(1) Note

Before proceeding further, it is advisable to issue a warning that a “sound change” is not easy to pin down, given the nature of the writing system. The effects of a change can be recognized, and conjectures about its nature can be made, without it always being possible to identify with certainty either the original sound or its product, or even the approximate date of the change. Transliterations are mere approximations, best regarded as purely conventional names for signs. Generally, for philological purposes or “pragmatic” use of the texts, this type of uncertain knowledge and approximate representation is not a cause for concern. For deeper discussions of phonetics and phonology, cf. Schenkel, *Sprachwissenschaft*, or Loprieno, *Ancient Egyptian*.

(2) Loss and weakening of elements in syllable-final position

In syllable- and word-final position, /n/, /r/ and /t/ can be dropped or weakened into a secondary glottal stop (־; aleph):

— /n/ can disappear in the suffixes $-ṯn$, $-tn$ (> $-t$) or in the forms of the demonstratives /n/ (pn > p).

— A secondary glottal stop derived from /t/ and /r/ can be written as $-ṯ$ (with /r/, rarely /t/; /r/ also ־), as occasionally already in Middle Egyptian ($zwrṯ$ “drink”, for zwr > $zwrṯ$); mostly, however, it is not written. Examples:  $itrw$ “river; Nile” becomes  ($iāt|r\check{w}$ > $iāṣ|r\check{w}$ > Coptic $\epsilon\iota\omicron\omicron\text{P}$);  $hrww$ “day” develops into  ($hār|w\check{w}$ > $hās|w\check{w}$ > $hāw$ > Coptic $\text{ϩ}\omicron\omicron\text{Y}$), but with a plural  hrw “days” ($*hā|r\check{w}$ > Coptic $\text{ϩ}\rho\epsilon\text{Y}$).

The loss of the feminine $-t$ ending in principle already began to take effect during the Middle Kingdom, as can be established from the appearance of the ancient word  $bd.t$ “emmer”, which had long been written  bty (cf. also under [2]), Coptic BDTE .

— If a change in the syllabic structure shifts the /t/ or /r/ from the end of one syllable to the beginning of the next, they are maintained, e.g., in the preposition  hr ($h\check{r}$ > preservation

Coptic 𐩔), followed by a noun (status nominalis), but with suffix 𐩔|𐩔 *hr=f* (*h⁻|rǎf*; status pronominalis) which can also be reinforced in appearance by writing 𐩔|𐩔|𐩔. This reappearance of weakened or dropped phonemes when the syllabic boundaries shift occurs particularly frequently with the *t*-infinitives of those verbs followed by an object suffix.

word writings

— Such changes are occasionally written by maintaining the earlier word writings (“schematograms”) and merely adding the new sounds (as in Middle Egyptian *zwr* > *zwt*; more systematically in the following § 1.1.3[3]):

 for *tr* > *t* “time”; or  for *hpr* “become”, “be” (*hā|par* > *hāp⁻*, Coptic 𐩔𐩔𐩔).

(3) Neutralizing phonological contrasts

Occasionally the contrast of phoneme pairs is neutralized:

depalatization

— Depalatization of /d/ and /t/. Primarily in syllable-final position, but also in syllable-initial position, /d/ and /t/ become /d/ and /t/, without this necessarily being expressed in writing, i.e., depending upon whether it is being written phonologically or traditionally. In hieratic, the length of the signs above or below often partly determines the length of the signs for *t* or *d* — thus it is not always unambiguous whether *t* or *d* is to be read.

Examples:  or  for *rmt* > *rmt* “people” (with further reduction to a secondary glottal stop, cf. Coptic 𐩔𐩔𐩔);  for *snd* > *snd* “fear”;  or  for *tnw* > *tnw* “number”;  or  for *db.t* > *db.t* “brick”.

“develarization” — Develarization. That /q/ lost its velar feature becoming /g/ or /k/ (as in Demotic and Coptic) can be seen where the grapheme for /q/ has occasionally replaced the graphemes

for /g/ and /k/. Examples:  for  *sgnn* “unguent” (Coptic 𐩔𐩔𐩔);  for  *mkh3* “neglect”. The absence of a group-writing

Syllable structure, syllable-initial/syllable-final position: Egyptian words can have one or more syllables. Each syllable begins with a consonant — which is thus in “syllable-initial position”; the syllable contains a short or long vowel, and it may or may not end with a consonant. If it ends without a consonant, the syllable is “open” with a long vowel, and another syllable must follow, e.g. the first syllable in *nātar* (*ntr*) “god”. If it ends with a consonant — which thus is in “syllable-final position”, the syllable is “closed” and the vowel usually short, e.g. *zāh-3aw* (*z3*) “scribe”. The stress falls on either the last syllable (ultima) or the last but one syllable (penultima) of the word — the “tonic syllable”; the stress may be shifted when grammatical endings and suffixes increase the number of syllables. Stressless — “pretonic” or “post-tonic” — syllables can be severely shortened.

sign for *-h-* (cf. § 1.2.1 *infra*) indicates that the difference between *-h-* and *-h-* had already disappeared (as later in Ptolemaic and Coptic).

— Devoicing of the dentals, or else the neutralization of retroflex (emphatic) articulation: /d/ > /t/

cf. Schenkel, *Sprachwissenschaft*, §§ 2.1.2; 2.1.3. /d/ becomes /t/, as in for *hd*

> *ht* “travel north”; this applies occasionally also for /d/ derived from /d/, as

in *nd* > *nty* “flour” (Coptic **NOËT**). Writing variants like

dd=f “to say it” may also signal such a neutralization (*dd=f* > *dt=f*), but they could

just as easily be forms of the status pronominalis of the infinitive.

— In certain environments (e.g., before labials) the articulation of the phonemes *m* and *n* can be neutralized; the graphemes for *m* and *n* may thus serve as allographs for either nasals

(the grapheme *m* can be the phoneme *m* or *n*, and likewise the grapheme *n* can be *n* or *m*).

(4) Syllable reduction

— Particularly in compounds, the strong tonic stress of Egyptian may bring about a by accent

reduction of unaccented, mostly post-tonic syllables, especially in compounds, as

for *hr.y-h3b.t* “lector priest”.

— Reduction of root consonants by assimilation; assimilation of *s* to *š* and subsequent by assimilation

reduction make *pš* (Coptic **ΠΩΩ**, 2-lit. verb) out of *psš/ pšs* “separate” or

šp out of *šzp* “receive” (Coptic **ΩΩΠ**; the hieroglyphic writing is however

inconclusive).

1.1.3 Effects: The suspension of definiteness in writing

(1) The relations between phoneme and grapheme

The phonological system of a language and the ways in which linguistic signs are noted in writing are two separate systems of symbols, which influence each other only indirectly. Changes in one system do not necessarily result in simultaneous changes in the other. The writing system is, however, more conservative than the phonetic system: written signs are consciously learnt as conventions and passed on as such, while phonetic changes occur unconsciously. In this fashion, historical sound change thus weakens the specific conventional relationship between the sign and what is signified, between the grapheme and the phoneme.

This phenomenon is familiar in all European languages, and particularly evident in English. The writing system, the language of graphemes, has virtually never been adjusted

to account for phonetic change, so that the sign inventory will always reflect an earlier stage of the language, although representing a later one: the languages of the phonemes and graphemes are destined to go separate ways. Despite its different type of writing system, Late Egyptian betrays the same tendency. Historical sound change results in shifts of the following types:

(2) Adjustment of phonograms

Some of the traditional phonograms denote new phoneme values, which increases the number of allographs (graphemes used for several phonemes):

- m* and *n* — As prepositions before nouns, or in word-initial position, the graphemes for *m* and *n* can be exchanged. As an example: the Middle Egyptian independent pronoun *ntf* is generally written *mntf* in Late Egyptian (but Coptic ΝΤΟϢ!); the same is true of other words (morphemes) beginning with *m* or *n*.
- r*, *iw*, *i* — As a preposition preceding nouns and as a word-initial morpheme (a prefix), can frequently be exchanged with or (since *r*, *iw*, *i* are allographs of one phoneme).
- t*, *d*; *l*, *d* — , , , can still occasionally have the phonological denotations assigned to them for Middle Egyptian, but are frequently mere allographs for the phoneme /t/. Exactly what is meant in any given unfamiliar word must be established by looking in the dictionary.

(3) Reassignment of schematograms

Traditional schematograms — the conventional grouping of signs that was specific to certain words — may become new phonograms:

effects of
schematograms

— Schematograms permit a word to be identified even if the written form is incomplete.

This is familiar from earlier times, the schematogram — [HQT]^{vessel} — actually denotes *ḥnq.t* “beer”, or the schematogram stands for *rmṯ* “men”; “people”. In the latter case the sound change in syllable-final position, *rmṯ* > *rā|m̃t* > *rā|m̃* > Coptic ΡΟΜΕ, means that the schematogram [RT]^{man, woman} shares only the R with the phoneme sequence /r/, /ā/, /m/ that it is supposed to represent.

Even words which were written earlier with individual graphemes each of which corresponded to individual phonemes, i.e., using the “alphabetic” or elementary graphemes, can also become schematograms, such as , which even after the sound change (*ir̃t|r̃w* > *ir̃s|r̃w*) continued as the written form of *ir̃w* “river”.

complemented
schematograms

— This means that a schematogram could also be retained despite changes in the phonemic structure of the word — and this now explains examples like the already-mentioned

Phonograms, semograms, schematograms: "Phonograms" are written signs or graphemes, which represent a phoneme or groups of (two or three) phonemes (and thus it should be "phonemogram"). "Semograms" ("determinatives") are signs which appear exclusively at the level of writing, assigning the indicated word to a semantic category. The difference between phonograms and semograms/determinatives is ideal or typical, i.e. transfers between the two classes are frequent (see Schenkel, "Schrift", in *LÄ*). The written forms of many words unite phonograms and semograms to form specific combinations for that word which are termed "schematograms" here (after Schenkel, *MDAIK* 27 [1971]: 91). All systems of writing depend on such word images, as they ease comprehension: an English word like "tough", e.g., is pronounced /tʌf/ but not written "tuff".

Middle Egyptian development of  *zwr* "drink" to *zwī*: as with the multiliteral signs taking "phonetic complements", a multiliteral schematogram can also be complemented by a uniliteral grapheme that marks the phoneme change — hence the writing  for *zwī*.

— Thus, a new kind of multiliteral sign was created out of schematograms. This might be illustrated by the following chain of examples:  *šm.t* "go" which develops sound-historically to *š'* (**šimī-t* > *šīī* > *š'* > Coptic **ϣϬ**), occasionally written  (Wenamun 1,12), thus  comes to serve as a biliteral phonogram *š'* in words like  *mš'ī* "march, travel" (*māš'āi* > *māš'* > Coptic **MOOϣϬ**).

schematogram
— phonogram

— These new multiliteral signs are complemented in the traditional fashion (frequently with "group signs", cf. *infra* § 1.2.1):  *hr*, e.g., becomes a new "biliteral" sign for *hr* (<*hr*, cf. § 1.1.1) and is complemented with *p* (, ). Or:  is phonemically only *h'* (<*hr*), but followed by a suffix it is complemented with a second *r* as  (the so-called "status pronominalis" of the preposition): the first *r* was no longer considered to be a "phonetic complement" to the original biliteral sign for *hr*. Infinitives reveal the same tendency, e.g.,  for *dzy* "ferry across", but complemented with *-t* / *-tw* when followed by the object suffix,  *dzy.t* "to take him across" (status pronominalis).

new
multiliteral
signs

(4) Hypercorrection and hypercharacterization

In the case of the *-t* infinitive of *dzy* "ferry across", we observe that what is still intrinsically present can be emphasized or even over-characterized against the background of phonetic loss. Similarly, if it was considered worth emphasizing that an /r/ was retained — in the syllable-initial position, for example — it could be written doubled, as in

hyper-
characterization

for *rm* “weep”. Writings like may thus mark /n/ as retained even in syllable-final position; in a writing like for *hn=i* “hurry” (pD’Orb 3,1) this emphasis of its presence may even show the interference of the forms proper to another linguistic norm, i.e., *sdm.n=f* forms — the use of which was however no longer quite clearly grasped.

hypercorrection Examples like these are attempts at analogous adjustment to forms and writings which are erroneously taken to be standards; they arise when scribes realize that changes have taken place, but are uncertain about where and when — they correct even when there is no reason for it. Such over-correction (termed “hypercorrection” in linguistics) also explains how, e.g., the *-.t* ending (*-ⲓ*) preceding object suffixes of the infinitives of the 3ae inf. verbs (like *dꜣy*) is transformed into a generalized marker of the infinitive for other verbal classes, too, as in

(LRL 20, 4-5)

for *iw=tn hꜣp=f r=i* “and keep it secret from me”.

Over the course of linguistic history, another movement of hypercorrection created a whole series of object pronouns out of this infinitive marker (cf. infra § 2.2.1).

In the realm of phonemic writings, cases such as **sf* for the grammatically feminine *zf.t* “knife” (or *wdf* for *wdf* “hesitate”, etc.) illustrate the attempt to hypercorrectly reverse a mistakenly assumed sound change /d/ > /t/ (or /d/ > /d/). The same may apply to the common spellings of *-tw/ti* with . Since the possible graphemes are all allographs of the phonemes concerned, it is, however, difficult to be certain about the conclusions.

1.2 Notes on the Late Egyptian writing system

1.2.1 “Group writing” and its signs

(1) The emergence of new graphemes

These sound changes and their reflection in writing are all part of a continual process of transformation. The changes occur so gradually and at such different rates and find expression in such different forms that the transformation takes place beyond the consciousness of a speaker. While some forms and words reveal that older relations of language and writing still dominated, others have suffered drastic shifts. While the traditional writing system was still in use, it was continuously augmented with new allographs and graphemes which emerged from the traditional phonograms and schematograms (cf. supra § 1.1.3) and which consist of particular groups of signs, whole grapheme complexes.

The new graphemes are also used according to the principles of the traditional system, however. Multiliteral signs are also complemented, and words are classified semantically with determinatives (semograms) — only the signs themselves are the product of such transformations. The “devaluation” of the uniliteral complementary graphemes — the elementary or alphabetical graphemes — was countered with signs which re-established a way of denoting a specific phoneme unambiguously.

Essentially, two new classes of signs can thus be identified. On the one hand are those semograms or determinatives forming a sign group of several signs, used as complex determinatives. On the other is a new set of elementary graphemes which were intended to substitute for the older alphabetic, uniliteral or one-phoneme, graphemes. These new uniliteral signs can be read as the signs of a syllabic writing, but the more neutral term “group writing” is employed in this book. two new classes of signs

(2) Determinative complexes and complex determinatives

— Two or more simple determinatives can be combined together, whether logically or not. Examples: combination of  (“tooth”) and  (“man with hand at mouth”) with  *wnm* “eat” or  *iry=i* “I will do it!”, meaning “yes”; but  *nḥm* (inf.) “take”. The plural strokes are often added without regard for the number of the noun (cf. supra § 1.1.1). combination of semograms

combination
semogram —
phonogram

— Determinatives/semograms and earlier phonograms can be combined (particularly for signs like those for *-y* or *-t*). In  *šmsy* “follow”, the determinative/semogram is combined with a redundant *-y*-sign, in  *hšy* “go down”, the *-t* is redundant (this applies to forms other than the 3ae inf. infinitives).

transfer of
sign groups

— Association transfers whole groups of signs from one word to another. Examples:
 *psd* “the back” (< *psd*; semogram group from  *šꜥd* “cut”, via the sign group );  *wšd* “vegetables” (semogram group from  *smw* “greens”);  *dns* “be heavy” (rather than  *s:mn* “establish”), taking elements from  *s:mn* “establish”).

(3) The elementary graphemes of group writing

The signs listed here are used increasingly as one-phoneme signs, where it seemed useful to specify the phoneme. In Demotic, they are completely established as such. The sound *-l-* was now occasionally written (in hieroglyphs with the sign , and in hieratic with the group , but it did not acquire the character of a phoneme (a segment that can differentiate lexically distinct linguistic items), and thus remained a mere variant of */r/* which can be written with the *r/n* graphemes.

1.2.2 Uses of group writing

(1) Purpose

It must again be emphasized that group writing was intended primarily to enable the specification of phonemes, replacing the earlier “alphabetic”/one-phoneme graphemes, because these were no longer always able to fulfill their roles due to historical sound change. Making the effort to record the specific phonemes which have been heard is particularly desirable when encountering new words in one’s own language or words from foreign languages. “Loan words” are thus mostly written in group writing. But even in the writing of familiar words, the new signs were increasingly employed, initially, however, in such a way that only parts of the word were written in group writing.

(2) Examples of “loan words”

Foreign words were frequently employed in the diplomatically active, militarily expansive and culturally open society of the New Kingdom. Mostly Old Canaanite or Akkadian (Middle Assyrian or Middle Babylonian) in origin, they reflect particular modes of expression (of administrative officials, soldiers, merchants, gardeners), and accompanied imported wares and technologies: particularly luxuries, military goods and administrative technical terms (chariots, weapons, horses, fortifications, corvée labour and obligatory payments); agricultural and manufactured products (plants and animals, vessels). Foreign words are not understood as foreign, and are treated as words of one’s own language (as “loan words”). There is no causal relationship between the use of foreign terms and the use of group writing — although frequently assumed in the earlier Egyptological literature.

A few selected examples from the numerous classes of new words which flowed into Egypt from the Near East and the Mediterranean:

— Geographical terms (toponyms):

 *y-r-dw-n₃* / *y-r-d-n* = *yrđn* “(river) Jordan”;  *i-w-r-k₃* = *irk/’rk* “Uruk”; or  *w₃-i^w-ry-ya* / *w-y-r-ya* = *wilya* “Ilios (Troy)”

(**Wilya* $\Phi\lambda\iota\omicron\varsigma$, preserving the digamma!);

— Canaanite terms:  *y-m*

“(the) sea” (*yam* > Coptic $\epsilon\iota\omicron\mu$);

 *m-r-k-b-t* = *mrkbt*

“chariot” (cf. Arabic *markaba*; Coptic $\beta\epsilon\pi\epsilon\upsilon\omega\gamma\tau$); *q-r-d-n* “hoe” (from Canaanite גלזן *g-l-z-n*).

(3) Examples of Egyptian words

Group writings can be employed in the most varied fashion for Egyptian words, without these necessarily being “loan words”:

partial group writing

— Partial group writings: *b3-hn, bh3n* “villa; fortress”; *wr-r-y.t, wrry.t* “chariot”; *k-w.wy, ky.wy* “others” (Coptic **KOOYE**); *h-w-w, hwy* “strike”; *sgnn* “unguent”.

complete group writings

— Complete group writings: *i-r-m, irm* “(together) with” (for earlier *hn^c*, of which there is a Late Egyptian variant *r.hn^c*); *b-n-r, bnr/bl* “outside” (*r-bnr* > Coptic **ΕΒΟΛ**); *h-r-r.w, hrr* “flower”. Or *k-d-n, kd3n* “charioteer”, which was borrowed by Akkadian as *gu-zi*.

1.2.3 Syllabic writing and vowels

syllabic writing

Essentially, the signs used in group writing are intended to indicate consonants, just like the signs of the traditional system of writing. To a limited extent, however, they could also indicate vowels (particularly in names, as in toponyms and personal names, as is known from the Ptolemaic period with the writings of “Ptolemy” and “Cleopatra”). This is the reason for the occasional use of the term “syllabic writing” for group writing, reflecting a lengthy controversy about the degree to which the “syllabic” signs are intended to indicate vowels.

vocalic values

In summary one may state: a few signs are used as syllabic signs in the cuneiform sense (such as final for *ya/ja*, for *ku*, for *nu*, for *bi*). Most group writing signs are, however, employed to designate syllables according to a variant of the so-called Devan-āgari-principle, by which the basic form of the group writing sign records a specific consonant and the vowel *-a*, or no vowel at all. The other vowels are then indicated by additional signs. These “vowel markers” are (cf. Edel, *Ortsnamen*, and Schenkel, *Syllabische Schrift*) roughly the following:

Methods of syllabic writing. (1) Devan-āgari-principle (from Sanskrit): The basic form of the sign denotes a specific consonant and the vowel *-a*, the other vowels (e, i, o, u) and no vowel are indicated by additional signs. (2) Cuneiform-principle: Every sign denotes a specific sequence of consonants and one or more vowels.

vocalic value	a	i	u
(1) following consonants (apart from glottal stop/ “aleph”)	(a)	(i)	, (u)
(2) following glottal stop/ “aleph”	('a)	, ('i)	('u)

Examples: *nim* “who?” (Coptic **NIM**); *'u-r-k* “Uruk”; *ku-nu-š* “Knossos” (Linear B: *ko-no-so*); *w-'i-ri-ya*

“Ilios” (*Wiliya, cf. supra);  mu-k-’a-n “Mykene” (*Mukānā > Μυκήνη).

1.3 Exercises

1.3.1 Reading

Transliterate and give meanings:

1.3.2 An ostrakon (oDM 1262 vs.)

Ostrakon oDM 1262 vs. (from Deir el-Medina; transcription by G. Posener) is a short Ramesside prayer to Thoth in the form of the moon, and can be assigned to the category of texts characterized as expressing personal piety (“persönliche Frömmigkeit”). Published and commented on by Fischer-Elfert, *Lit. Ostraka*, p. 68f.

1.3.3 Exercise: MedHab 80

- made last”; followed by phrases relating to the king’s capacities through office; (3) the king’s divine father from whose body he was born and who provided him with the necessary power authorizes the king: “The intellect of god who created earth once again in order to strengthen the borders of the ‘beloved land’ with great victories, selected a lord”; (4) besides Amun, Mont, Seth, Anat and Astarte also take their places beside the king in battle.
- col. 1 from Dyn. XIX on the name of the month indicated is *msw.t-R^cw* (Coptic ΜΕCΟΡΗ, based on the names of the festivals of the lunar months applied to the annual calendar);
- col. 1-2 *s:mn nht.w*: “to make victories endure (by recording them)”;
- col. 2 *šzp n.s.t*: “receive the throne”; *m (> n) lhhy*: as an adverbial to the preceding participle — do something “with exultation, with public approval”;
- dl.t nr̄i*: infinitive as paragraph heading; roughly “There was spreading of fear in every land by the sole lord”;
- col. 3 *nzw šj^c hpr t*: “king who started earth’s (coming into) existence”;
- lstw r.f*: Late Egyptian graphem variant of the earlier *ls̄t*; *lstw r.f* introduces the background of an action (a kind of parenthetical summary: “now this is the way it was”); for the use of the particle, cf. Erman, *Neuägyptische Grammatik*, § 677;
- sentence structure of the adverbial sentence with predicative *sdm.n=f*: NP (*lb ntr pn*) with participle plus AP (*stp.n=f*, col. 4, as predicative/rhematic circumstantial *sdm.n=f*): “the heart of this god, who ..., selected NN”; *m whm-^c*: the “human leg” sign (Gardiner E 56, *rd*) has replaced the “animal-leg” sign (Gardiner F 25, *whm*);
- col. 4 note that in the writing of *hr*,  and  are not clearly distinguished (cf. also col. 12); *stp.n=f* is “Middle Egyptian” circumstantial *sdm.n=f* as predicate/rheme of the whole sentence; “make someone king whom he himself has created” (< “to select as ruler someone who is such and such”);
- col. 7 *sl̄j n̄h my Mhy* “have knowledge of life like the ‘Provider’”; *Mhy* is an epithet of the god Thoth (etymologically either “Provider” or as the “Filler” who causes the crescent moon to become full again); *ip*, here meaning “capable of judgment” or similar;
- z̄j-R^cw* is here the epithet of Shu as the following name in the cartouche of Ramesses III is not his “Son of Re” name, but his *nzw-bl̄t* name (cf. col. 1); curiously, however, the craftsman began with this impression, too, as the initial “Ri^ca-massesa Hiq-ana” was later corrected to “Was-mu^ca-Ri^ca Mai-Amama”;
- col. 8 *pry < m > R^cw*: “(Egg), which came forth from Re”; the graphic loss of the preposition *m* is not rare in Late Egyptian; the expression paraphrases (1) the following “son of Re” title itself, and (2) the “content” of that name: “Re bore him”;
- col. 9 *ph̄.ty ʽj.t s:q̄j.t* “great ‘exalted’ might” is a deferred object of the participle of *sr*, parallel to *nht.w*; *ph̄.ty* is fem.; the noun *ml̄.t.t* is frequently used for the preposition *ml̄* in Late Egyptian;
- col. 10 *r dh̄=w r dr=w*: “in order to subject them and subdue them”; *=w* is the Late Egyptian form of the suffix pronoun 3rd pl. c. *=sn*, here following parallel prepositional infinitives;
- col. 11-12 *wd^c-r̄j* as a writing (circumstantial *sdm=f*) of *wd^c-ry.t* “vindicated at the highest level”, thus: “while in the end Amun vindicates him”;
- col. 12 the preposition *hr-tp* here has the meaning of “(from) above down on someone or something”, thus: (he does not turn back) “with the sword of Egypt over the Asiatics” “when the sword of Egypt is already hanging above the Asiatics”.

2. Morphosyntactic features and peculiarities

2.0 Notes on typological change

2.0.1 The analytic tendency in the development of forms

Many Late Egyptian morphological and syntactical variations can be cursorily described as expressing an “analytic tendency” when compared to Middle Egyptian. While Middle Egyptian constructions and phrases are generally characterized by syntactic density (as in the “participle style”), the speakers of the New Kingdom tend to dissolve this density, expanding the individual parts of the construction. A Middle Egyptian sentence like *gm̄.t.n=ī zī sdr.w* “and I found the man sleeping”, appears as *īw=ī gm p̄zī īw=f sdr* in Late Egyptian (or, etymologically, *īw=ī hr gm.t p̄zī zī īw=f sdr.w*).

Synthetic and analytic types of language: A characteristic of many languages — especially those W. von Humboldt termed “inflected” — is that certain linguistic elements (morphemes) can perform more than one function. Thus, in the English “he laughs”, the morpheme {laugh} carries the meaning (is the lexeme), but is simultaneously the conjugation base, to which the morpheme {-s} is added, which at once signifies the person (“3rd pers.”), number (“sing.”) and tense (“present”). German and Latin are languages of the “synthetic” type. Linguistic evolution frequently follows a tendency (as in the case of Latin and the Romance languages) described as “analytic”, whereby individual functions are distributed among several individual morphemes, rendering the phrase unambiguous: e.g. Latin *legi* > *habeo lectum* > [j] *ai lu* “I have read”; French (like English) is thus of the “analytic type”.

This tendency to make features explicit is expressed morphologically too. Grammatical or semantic features which were formerly expressed through one or few morphemes are now distributed among a larger number of morphemes. This is accompanied by a tendency for linguistic “items defined” to change places with the “items defining”, i.e. to place the defining expressions in the “kernel”-position of a syntagma or a group of expressions. These principles can be illustrated thus:

Middle Egyptian *sdm.n=f* is synthetically constructed from the root morpheme {*sdm*} that carries the lexical meaning “hear”, and to which the dependent morpheme {.n} is joined, thus giving it the meaning “have heard”; with the “3rd person singular masculine” {=f} “suffix pronoun” affixed to the stem, {*sdm.n*} carries both meaning and conjugation. Its char-

appearance of more explicit features

principles of synthetic forms

acteristic conjugation form (generally: the so-called suffix conjugation) distinguishes it from the other conjugations. In Late Egyptian such a form is “analysed” into the “conjugation base” {*ir̄*} (with reference to tense, “past”), the “actor”-expression {=f} and the “meaning”-expression {*sdm*}: *ir̄=f sdm*.¹

Phrase; nucleus, satellite: All are concepts for the structural description of dependent parts of sentences, i.e., word groups or “phrases”. In word groups like “the great house of the king”, only the word “house” can stand alone for the entire group, while all the other words are dependent upon it. “House” is thus termed the kernel or “nucleus” of the phrase, and the dependent words are thus “satellites”. As the nucleus of the inter-related group or phrase in the example is a noun, the phrase is termed a “noun phrase”. If the nucleus is a verb, the phrase is then called a “verb phrase”.

transfer of
marking and
“conversion”

The development of noun phrases is comparable, as may be shown with an example like *prw=n* “our house”: the mark of grammatical gender (masc., ending -Ø), of specification (definite/indefinite; known/unknown) and of possession is removed from the form of the meaning-expression (“house”), and transferred to the so-called “possessive article” — *p̄y=n pr*. Dependence and independence of the constituents of the phrase are also settled through the relative positions of the constituents. The secondary position is generally indicative of dependence in Egyptian: While *prw* was the pivot of the Middle Egyptian noun phrase *prw=n*, its kernel or “nucleus”, and the dependent suffix =n its “satellite”, in the noun phrase *p̄y=n pr* the article form *p̄y=n* is now the nucleus of the phrase, with *pr* its satellite. This move in which the **defining** linguistic elements are transferred from the position of satellite to that of nucleus, and conversely the **defined** elements to that of satellite, has been termed “conversion” and is another feature of the “analytic tendency”. The manifestations of the analytic tendency will now be pursued, allowing us a survey of the morphology of Late Egyptian.

conversion

W. Schenkel, Die Konversion, ein Epiphänomen der kemischen (ägyptisch-koptischen) Sprachgeschichte, in: *MDAIK* 21, 1966, 123ff

1 Note that this example illustrates the process, but is historically incorrect: the periphrastic *ir̄=f sdm* comes into use for most verbs only in Late Demotic; in Late Egyptian *sdm=f* has the function of Middle Egyptian *sdm.n=f*.

2.1 Modifying the noun

2.1.1 Determination and its forms

An apparently easily recognizable feature of Late Egyptian is the use of the articles of the p^3 , t^3 , n^3 -series. This is, however, more apparent than real. Although Late Egyptian texts constantly employ this article, its appearance need not be assumed to betray typological Late Egyptian, as the following must be taken into account:

1. the article is morphologically derived from the similar forms of the earlier demonstrative pronoun;
2. it is by no means immediately clear at what time, and in which texts, the deictic function was reduced to the article function — meaning that some apparent examples of the article are actually still that of the demonstratives;
3. some uses of the demonstratives already in Middle Egyptian (and Late Middle Egyptian) no longer imply the deictic role of the demonstrative, but rather its use as an article (such as pn in the “Eloquent Peasant”).

Finally it should be noted that such article functions as “definite”/“indefinite”, “aforementioned”/“newly introduced” etc. are implicit in Middle Egyptian nouns; in particular the possessive suffixes attached to nouns carry out some of these functions.

With the exception of the p^3 , t^3 , n^3 -series, Middle Egyptian demonstrative pronouns follow the noun which they specify: $\begin{matrix} \square & \square \\ | & \text{---} \end{matrix} prw pn$ “this house”/“the house”. The specified noun is the nucleus of the phrase, and the specifying pronoun its satellite. In Late Egyptian, however, the structure of these noun phrases follows the model of the p^3 -series, with analytic change and conversion moving the pronouns from the satellite position into the nuclear position, and the semantic elements into the satellite position: $p^3y pr$ “this house”.

Middle Egyptian demonstratives agreed with the modified noun in gender and number; apart from fulfilling the article role, Late Egyptian articles themselves also serve to indicate the gender and number of the specified noun (just like the articles in some European languages): $\text{𓆎} \text{𓆏} \text{𓆑} p^3 R^c w$ “the sun-god Re” > “Re”; $\text{𓆒} \text{𓆓} t^3 p.t$ “the sky”. This again is a consequence of the analytical tendency; it leads in turn to a corresponding tendency for the gender and number morphemes of the nouns ($-t$, $-w$) to be either dropped entirely or to lose their marker role, so that $-t$ and $-w$ remain only to indicate the end of the word. Even the gender of those words which were formerly not outwardly recognizable as feminine is thus rendered explicit, such as $\text{𓆑} \text{𓆒} \text{𓆓} \text{𓆔} d^3 d^3 w$ “the jar”.

Possession, which was signalled by adding suffix pronouns to the noun, and occasionally still is, is similarly transferred to the article — $prw=n$ “our house”, $\begin{matrix} \square & \text{---} \\ | & | \end{matrix}$, is

articles and demonstratives

position of modifiers

indication of gender and number

possessive article

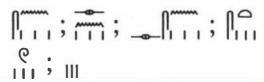

construed as $p^3=n prw > p^3y=n pr$,  . This form is termed the possessive article, following the term used for its successor in Coptic.²

2.1.2 Determiners: suffix pronouns, demonstratives and articles

Like all languages, Late Egyptian possessed a network of forms specifying the range of reference of the noun. These are:

(1) Suffix pronouns

Suffix pronouns were frequently used in Late Egyptian as possessive pronouns attached to nouns of specific semantic classes (namely nouns denoting inalienable things), and as the objects of infinitives, but also as subjects of certain conjugations. Forms:

1. s.c.	=j; =i		f. marked only by the graphemes; =tw after syllable-final -t: <i>ms.t</i> "to bear" > <i>mis</i> ' > MICE, but <i>ms.t=i</i> "to bear me" > MACT
2. s.m.	=k		=t > secondary glottal stop, graphemically \emptyset
f.	='; =t		
3. s.m.	=f		=twf after syllable-final -t
f.	=s		
1. pl.c.	=n		=tn as a rule after syllable-final -t
2. pl.c.	=tn		=twn after syllable-final -t; cf. Coptic -THYTN
3. pl.c.	=sn =w		=sn is in reality only =s'

Observations:

3rd pl. =sn remained in use in texts ranking higher in the register hierarchy. Its replacement form =w appears initially with prepositions, and next, following *iw* (*iw=w* in place of *iw=sn*).

Since the grapheme for the morpheme of the gender-neutral 1st pers. sing. (=i, or more precisely, the glottal stop =') can vary according to the gender of the speaker ( or ) , the

2 Articles and possessive articles are written with group writing signs; a better transliteration would thus be $p=n$, by analogy with Coptic ΠΕΝ-. The traditional transliteration is, however, retained to ensure compatibility.

suffix  can on occasion be used as grapheme for the 2nd pers. sing. fem. too, representing its phonemically secondary glottal stop; conversely the grapheme  of the 2nd pers. sing. fem., equally representing this secondary glottal stop, can be used for the 1st pers. sing. of a female speaker.

It should be noted the Late Egyptian conventional form of reference to a general state of affairs (“something”; so-called neuter) is the 3rd sing. masc., occasionally, but less so, the 3rd sing. fem., as generally in Middle Egyptian; the enclitic pronouns (cf. § 2.2.1) still use mainly *st*.

(2) Articles and demonstratives

Articles and demonstratives and their derivatives form related sets as follows:

	Definite			Indefinite	
	sing. masc.	sing. fem.	pl.	sing.	pl.
Demonstratives	 ΠΑΙ/ ΠΕ	 ΤΑΙ/ ΤΕ	 ΝΑΙ/ ΝΕ		
Articles	 Π-	 Τ-	 Ν-	 ΟΥ-	 ΖΕΝ-
Possessive articles	 ΠΕϸ-	 ΤΕϸ-	 ΝΕϸ-		
Possessive prefix	 ΠΑ-	 ΤΑ-	 ΝΑ-		

Observations:

In the plural of all forms and in the indefinite article, the marking of the grammatical genders is neutralized.

Demonstratives *p3y*, *t3y*, *n3y* have a less common parallel form *p3w* (where the number and gender are not specified) which can be used absolutely (as an independent noun) or in front of relative clauses (of the type “that one who”), cf. Erman, *Neuägyptische Grammatik*, §§ 120-121).

articles The forms shown reflect those of the hieratic texts; hieroglyphic texts write *p3* without the complementary *3* using Gardiner’s sign G40. The plural *n3* and the indefinite article *w^c* initially follow the earlier construction *n3 n* or *w^c n*; the plural indefinite article (*nhy*) is not as common as in Coptic, the usual form of the non-definite noun in plural being the noun without an article, but accompanied by plural marking (in the transcription, occasionally indicated as zero-article, Ø-, following S. Groll).

Possessive Possession is indicated through the addition of the suffix pronouns (*pʒy=f*, articles *tʒy=f*, *nʒy=f*); in the 1st sing. the suffix can be left unmarked (cf. Coptic ΠΑ-).

Possessive *p(ʒ) n*, *tʒ n.t*, *nʒy.w* (*n*): Abbreviated compounds of the article/ demonstrative prefixes series *pʒ*, *tʒ*, *nʒ* with a “genitive” *-n*, meaning “he of/she of” (*p-n hʒtʒ* “He of Hatti”).

The independent pronouns of the nominal sentence (cf. § 4.1.2 infra) like , , and special forms for the 2nd sing., , *twt*, and the 3rd sing.,  or  *swt* have, when following a noun, a function as possessive pronouns, like *pr ink* “my house” (“that house of mine”).

2.1.3 Use of the determiners

(1) Determination by articles and demonstratives

As a rule of thumb, it can be stated that for the determination of nouns Late Egyptian articles and demonstratives conform to their general rules of use in modern French, and are in principle similar to those of German or — less so — English.

demonstratives — Demonstrative pronouns refer to objects of speech in the speech situation (“this table here”, “this remark”), recalling them to memory or to clarify their position, by reference to previous or current use (“this type of remark”; “that paragraph”).

definite articles — Definite articles identify objects of speech as being familiar in the speech situation, whether because they have just been made familiar (explicitly introduced: “A temple was on the river. The temple is dedicated to Amun”) or have already been touched on in the discourse (“the aforementioned”; “the thing named”), or whether because they are common knowledge — epistemologically known or culturally familiar (*pʒ-Rʒw* “the sun”) — or acquire the character of an identification (designation; proper name).

Determination in a general sense signifies the means by which the range of meaning of a given noun is limited and defined. Not every object in the object class “tree” is thus intended, but only a smaller set of specifically “defined trees”. These can be: specified quantities (“some trees”, or “all trees” - the latter signifying the entire class as a set of all of the individual members!), objects within reach (“this tree”) or those within the speaker’s sphere (“his tree”). They can also be things which have been or are now introduced (“A tree is in front of the door; the tree is a birch”), or the reference can be to one member of the class (“a tree”) or to the class itself (“the tree is a plant”/“trees are plants”), or to the indication that the class is organized and subdivided (“the trees”/“trees” — there is no plural of indivisible classes like “gold”). “Designations”/“labels” are nouns whose range of meaning is limited and defined to one object, such as proper names. Such defined nouns belong to the set of the “definite” nouns.

— Indefinite articles modify objects of speech by introducing them into the speech situation as previously unmentioned, or not otherwise familiar. indefinite articles

The following examples illustrate a few of these usages:

(pAbbott 7,8-9)

ḏd p̄y ḥ3.ty-^c n Nw.t nhy n mdw n n3 rwd.w rmt-iz.t n p3 hr (The Vizier speaks to the members of the Great Commission): “The Mayor of Thebes (present) has made accusations concerning the controllers and the workmen of the Tomb Building Administration”.

Notes:

demonstrative *p̄y* literally “this Mayor”: he belongs to the investigative and judicial commission and is present, and being pointed out.

nhy n mdw “some words” > “words”;

article *n3* the article in *n3 rwd.w* could point to an earlier reference to the *rwd.w* in the text, or to an earlier mention in the speech: it should, however, be assumed that this actually signals the general familiarity of the controllers to the members of the commission.

co-ordination the combination of *n3 rwd.w* with *rmt-iz.t* shows that with co-ordinated nouns (“and”), only the first noun is complemented with the article (the same applies for *hr^c* “together with; and” or *hr*), or more precisely: that the first article applies to all co-ordinated nouns (cf. also Erman, *Neuägyptische Grammatik*, § 192); occasionally suffixes rather than possessive articles accomplish the determination within such series of co-ordinated nouns;

article *p3* in the phrase *p3 hr* determines generally: “The Tomb” is a familiar institution, more precisely, the department of the “Supreme Authority for Works” in the Vizierate, which is responsible for the construction of the royal tomb — and specifically that of the reigning king. This designatory and/or denominative usage of the article is common with many — culturally familiar — institutions.

• (Doomed Prince 4,7-9)

iw=f hr tzy r t̄y=f tp-hw.t

iw=f hr gmḥ w^c n tzm iw=f m-s3 w^c n zi ʕ3...

iw=f hr ḏd n p̄y=f s̄dm nty r-gs=f ih p3 nty hr šm.t m-s3 p3 zi ʕ3 nty m iy.t hr t3 ml.t

iw=f (hr) ḏd n=f tsm p̄y

(The young prince became older.) “And he went up to his housetop, saw a greyhound pursuing an adult man,³ ..., and said to his servant beside him, ‘What is that going after the adult who is coming on the way?’ And he said to him: ‘That is a greyhound.’”

Notes:

- construction this passage is part of one of those long chains which are constructed with *lw=fhrsdm* in Late Egyptian, which is the “circumstantial” form of the Adverbial Sentence or so-called First Present, but which is also termed the “narrative” or “non-initial main sentence” form;
- possessive article *t3y=f tp-hw.t* the “solid house” in the desert, in which the Prince lives and which he may not leave, has been treated in the portion of the text that precedes the part cited here;
- indefinite article *w^c (n)* an indication of the first appearance of a single member of a structured class of semantic items (people, dogs) in speech, text or discourse;
- p3 z.t* note the writing of *zI* “man”, and how the feminine marking is overruled by the masculine article;
- article (or possessive article) *p3 nty* is restricted in its range of meaning by the specifying relative clause, and thus before relative clauses has the definite article, which refers forward to the relative clause. The use of the possessive article would actually suggest a translation like “that one of his servants, who stood beside him”;
- article *t3 ml.t* the very well known way which leads to the prince’s palace in the desert;
- demonstrative *p3y* the demonstrative pronouns (as nuclei of the noun clause) can also serve as nouns (here in the Nominal Sentence).

Verse points: As in the story of the “Doomed Prince” (cf. the cited passage, 4, 7-9), many literary and school-texts have clauses marked with black or (more often) red dots. These have been called “verse points” or “dots”, and divide the text into a well-proportioned flow of units of meaning (compare the prose rhythm of Classical texts).

(Wenamun
2,75)

iw n3y.w t3 dml.t pr r=i r hdb=i

(The wind drove Wenamun’s ship onto the shores of Alashia.) “And the townspeople came forth against me, to kill me.”

Commentary Note:

n3y.w t3 dml.t “those of the town” (possessive prefix before the definite article); actually *dml(.t)* is grammatically masculine, here perhaps modified to the grammatically feminine gender of topographical names and the names of countries (cf. Gardiner, *Grammar*, § 92).

For further examples cf. § 2.1.4(1).

vocative

— In contrast to modern English, but as in ancient Greek, the definite article can also mark the vocative (like *pn* in Middle Egyptian), designating the listener in the speech situation as familiar, where the person is not addressed with a proper name:

(oDM 1262
vs. 5)

ink p3y=k b3k p3 nb Hmnw “I am your servant, O Lord of Hermopolis” (the hieroglyphic text is given supra, § 1.3.2);

(Doomed
Prince 5,10-
11)

iy=k tnw p33r nfr “Where do you come from, handsome boy?” (for the hieroglyphic text cf. infra, § 3.3.1[3]).

3 Lit. “being behind an adult”.

— Among the determiners is *nb*, “all; every” as it defines the applicability of a noun with reference to “every single” of “all the members” of a given set: *nb* “all; every”

(Doomed Prince 5,5)

īw-ḫr dī.t īn.tw šrī.w nb n wr.w nb n p3 t3 n H-r (The ruler of Mitanni) “He had all the sons of all the princes of the Land of Syria be brought”, in the sense of “every single son of every single prince”.

An article and *nb* are mutually exclusive (incompatible); their defining effects can be combined only when defining relative phrases: *p3 nty nb m īy.t ḫr t3 mī.t* “any one of those who are going down the road” > “all those who are going down the road”. article and *nb*

Observation:

The demonstrative series *pn, tn* — it is *hrww pn* “this day” in reference to a previously specified date, but *p3 hrww* “today”; “now” (*p3* with demonstrative function) — continues to be used in some expressions and in texts ranked higher in the hierarchy of registers (state ideological and liturgical texts, cf. § 0.2.1).

(2) Absence of articles; determination through suffix pronouns

When considering the significance of the lack of an article, it is important to assess the linguistic register to which a text belongs. The earlier form of determination — avoiding

Speaker, listener, speech situation: A speech situation is an abstraction of the specific location in space and time in which communication takes place. This location can be real, as in a conversation or dialogue, or, as a rule, imaginary, created by discourse through a series of texts of mutual relationship, “co-texts”. A speaker — “I” (sometimes the author) — conveys to a listener — “You” (reader) — a piece of linguistically coded information, whereby both speaker and listener may constantly change. The speaker expresses what he wants to talk about (object of speech, “he, she, it”), which can be concrete or abstract, can be in a real or imaginary speaking space or cannot (can be pointed out or not), which is familiar to the speaker and/or the listener or must be introduced, and he conveys a message (a statement) about this object of speech.

articles and demonstratives — is encountered in those texts reflecting the norms of the hierarchically higher and more conservative registers. The following considerations apply primarily and typically only to the colloquial and literary registers:

Apart from the lack of an article (\emptyset -article) which marks non-definite plural nouns (cf. supra § 2.1.2[2]), determination in a narrower sense is either undesirable or unconventional in conjunction with certain (indicated or consciously introduced) semantic qualities of the noun, or it bears a particular connotation.

— In order to classify (assign expressions to semantic classes) the noun is left without an article. Nouns thus appear without articles nouns without articles: classification

- in the typically classifying Nominal sentence: *tzm p̄y* “that is dog-like” (“that belongs to the class ‘greyhound’”, cf. *supra*, § 2.1.3[1]);
- when following prepositions: *m h̄zq* “as booty”; *m shr.w n it̄i* “in a fatherly manner” (> “in the ways of fathers”); *iw=s n=f r hm.t* “She will be wife to him”; frequently in expressions of time: *m rwh̄z* “at nightfall”;
- and in verb-object compounds: *qd smy* “report” (< * “give a report”); *ir.t c nh̄ n n̄r* “swear by god” (< “make an oath by god”). Examples:

(pTurin
1972,7 =
LRL 7,14-15)

 *iw=f d̄.t n=i ̄*
c.q.w ̄-hnk.t m p̄y=i shr n hr-h̄z.t “And he gave me bread and beer according to my previous custom”;

Note:

iw=f d̄.t the form of *iw=f hr d̄.t* in Late Egyptian proper.

(pBM 10052,
16,13)

 *NN iw=f m ̄-h̄y m.d̄i t̄y=f sn.t šr̄*
 “(NN,) being husband to his younger sister”;

(pBM 10054
rt. 1,6)

 *iw=n d̄.t ̄-h̄.t im=w m ̄-grh̄* (We took the coffins)
 “and we set them on fire at night”; *m p̄z grh̄* would mean “tonight”.

Observation:

Coptic nouns are also used without articles following these same rules (cf. Till, *Koptische Grammatik*, §§ 103-108), as in $\Delta\text{I}\text{X}\text{I}\ \bar{\text{M}}\text{M}\text{O}\text{C}\ \Delta\text{I}\ \bar{\text{N}}\text{C}\text{Z}\text{I}\text{M}\text{E}$ “I took her to wife”.

designations
for inalienable
objects

— A closed set of nouns, defined by the feature of being “designations for inalienable objects” do not take an article. Possession of them is indicated with a suffix pronoun. To this group belong the words for:

- parts of the body: *ir.t* “eye”; *r̄* “mouth”; *ib/h̄z.ty* “heart”; “mind”; *hr* “face”; *q̄zq̄z* “head”; *h̄c* “body”; *h̄z.t* “belly”; etc.;
- terms related to persons, such as *m* “name”; *qs* “self”; *c* “condition”, “state”; etc.;
- property and income, such as *sh̄.t/ih̄.t* “things”; *h̄zw* “possessions”; *b̄zk.w* “payment”; *hr.t/dn̄.t* “portion”, “share”; etc.;
- certain specific topographic designations, such as *pr* “household”; *s.t* “place”; *nw.t* “city”;
- kinship terms (*m'w.t* “mother”; *z̄s* “son”) followed by a proper name in apposition.

Observation:

The nouns listed above are generally those which were still combined with suffix pronouns later in Coptic (cf. Till, *Koptische Grammatik*, § 188; Lambdin, *Sahidic Coptic*, §§ 28.6; 29.4) and

which partly have a separate phonemic structure for these constructions (status pronominalis), as in **ΤΩΡΕ, ΤΟΟΤ=ϣ** “hand”, “his hand”; **ΠΑΝ, ΠΙΝ=ϣ** “name”, “his name”.

Occasionally constructions formed with article + noun + suffix also appear, signalling that the functions are as it were “distributed”: *p3 wb3=i* “the (temple) forecourt of mine” (says the god Amenophis; *LRL* 28,6); *p3 pr=f* “the household of his” (*oDM* 303).

— In the various text registers, theological terms, and those of the cult or state administration (e.g., *hdt* “The White Crown”; *β.ty* “the Vizier”; *pr-ϣ* “Pharaoh”; etc.) can still be found as used in earlier ages, i.e. without articles but with suffix pronouns, if the notion of possession is possible. The usage with or without article varies depending on whether the speakers in question consider these expressions to be common nouns or proper nouns.

2.1.4 Attributive modification: Nominal and adjectival satellites of the noun

The range of meaning of any given noun can be controlled or modified by another noun, an adjective, a nominal or adjectival phrase, or sometimes even by an adverbial phrase (Old Perfective as adverbial attribute).

Construct; direct Genitive: A nucleus-satellite combination of two nouns, where the first is the nucleus (governing noun/regens) and the second, the satellite, grammatically dependent (attribute/governed noun/rectum), specifies its meaning, can be so close that the phonemic form of the nuclear noun is considerably reduced through loss of stress and tone (status constructus), cf. Coptic ϩΟΥΥ “day” in ϩΟΥΥ-ΜΙϩΕ “birthday”. This “construct combination” is called direct genitive; it is, however, a misleading term since Egyptian does not have a case system (and the same is thus true of the “indirect genitive”). The Egyptian construct combination is formally and semantically quite similar to English compounds like “sunrise”, “earthquake”, “Vanity Fair”, or “women students”; in contrast to Egyptian, it is, however, the first noun which determines and the second one which is determined and the nucleus of the phrase in English.

On the one hand its range of meaning can be limited by relating it to the range of meaning of another noun; this is brought about by noun combinations in which the second noun determines the first. Such combinations can be accomplished through direct juxtaposition of the two nouns, either by “apposition” or a “direct genitive” — more precisely: a construct combination. Apposition names an alternative, while the construct/direct genitive modifies by limiting the range of meaning.

The combination of the two nouns can also be established by linking the two with the phrase linker *n*, the so-called indirect genitive. The usage bears in fact some resemblance to that of the Indo-European attributive genitives, but the Egyptian construction was originally adjectival (a *nisbe*-adjective formed from a preposition). The functional contrasts that formerly distinguished the direct and indirect

traditional terms

direct nominal attribute

indirect nominal attribute; phrase conjunction *n*

genitives (specification versus characterization) disappear in Late Egyptian, however: following the analytic tendency, the indirect modification supplants the direct one.

modification
by adjectives
and relative
clauses

On the other hand, the range of meaning of a noun can also be limited by naming those attributes or qualities that the object denoted by the noun should have to make a statement about it valid. Apart from adjectives and relative clauses, particular forms of the verb fulfil this role: the participles and relative forms. Since such participial phrases are nothing but nouns formed from verbs, this type of modification is nothing but a variation of modification through accompanying nouns (apposition; construct/direct genitive), resulting from the semantic quality of the words employed (i.e. denoting qualities); the adjectival attribute can be used as an independent noun, too.

(1) Apposition

Nominal modifications of nouns are termed apposition when they themselves could formally be used with the same significance in place of the modified noun, being merely alternative indications. The most frequent use is with personal names (e.g., modifying names through titles; titles through names). Appositional nouns immediately follow their governing noun/ their nucleus with an article (either definite or indefinite; indefinite, if the naming of a person accompanies that person's introduction into the speech situation):

(pLee 1,3 =
KRI V 362, 2-
3)

iw=f dī.t n=f w^c zh³ n m.w n (Wsr-m³^c.t-R^cw mri-?Imnw) ^c.w.s. p³ ntr ^c3 p³y=f nb ^c. w. s.
“And he gave him a letter of safe conduct (< ‘letter of names’) of Usimaare Miamun, the Great God, his lord” (for other readings cf. Neveu, *BIFAO* 59, 2002, 265f);

(Wenamun
2, 68-69)

w^c ḥs(.t) n Km(.t) “And he had Tentna, an Egyptian singer, brought to me”;

Note:

T³-n.t-Nw.t the woman's name, Tentna, is an “appellative name”, and an example of the use of the possessive prefix sing. fem.: ‘she of ‘the city’” > “the Theban”.

A pronoun can be modified only by means of apposition:

(HorSeth 5,13)

iw=i dī.t n=k t³y wh³.t wn.in=f ḥr dd n=s iw=s iḥ n=i t³y=t wh³.t (Isis said:) “I will give you this cake”; whereupon he said to her, ‘What is it to me, your cake?!’”

Notes:

$\dot{l}w=\dot{l} \dot{d}l.t$ the Late Egyptian form for expressions concerning the future, the so called Third Future $\dot{l}w=\dot{l} r \dot{d}l.t$; during the New Kingdom, the preposition r was increasingly neglected. In contrast to the form $\dot{l}w=\dot{l} \dot{d}l.t$, which looks exactly like it, but is from $\dot{l}w=\dot{l}hr \dot{d}l.t$ (the Circumstantial Present), the Third Future stands at the very beginning of a paragraph (following "Isis said:");

$\dot{l}w=s \dot{l}h$ it is possible that Gardiner was correct in suggesting that an r be inserted ($\dot{l}w=s <r> \dot{l}h$), but it is more probable that the same tendency eliminating the r in the Third Future was responsible for its loss here (transition to Coptic ϵ -).

In longer assemblages, apposition has a tendency to displace the other satellites of the nominal phrase:

$rm\dot{t}-\dot{i}z.t$ 'Imnw-m- $\dot{i}n.t$ z3 H-y n p3 hr "workman of the Tomb Building Administration, Amen-em-ine, son of Hay" (<*“man of the Gang Amen-em-ine, son of Huya, of the ‘Tomb’”). (pAbbott 5,4)

(2) The direct nominal attribute (Direct Genitive)

The construct combination, with direct attribution of nouns, is still used, but less significant in comparison with its frequency and productivity in the earlier periods. It is still common in those groups of words which employ suffix pronouns rather than possessive prefixes, and in those still widely used phrases where the "rectum" (the modifying second noun) is without an article, phrases which lead to some Coptic attributive compounds and nominal prefixes (e.g., $\text{G}\bar{\text{B}}-\text{XOGIT}$ "olive leaf", from $\text{G}\bar{\text{W}}\bar{\text{B}}\bar{\text{E}}$ "leaf"; $\text{M}\bar{\text{N}}\bar{\text{T}}-\text{P}\bar{\text{O}}\bar{\text{M}}\bar{\text{E}}$ "mankind" < * $md.t-rm\dot{t}$): such combinations have the character of compound nouns.

Observation: ky "other"

Those constructions with the words for "other" also belong here, with the forms masc. sing. ky , fem. sing. kt , pl. $kt\dot{h}$ (in Coptic undifferentiated $\text{K}\epsilon$ -): ky/kt assume the role of the specified noun (regens), followed by the specifying noun as an attribute (rectum), $kt \dot{h}m.t$ "another woman" (< *"a womanly other"), $kt\dot{h} shr.w$ "other plans"; these words are nouns and are used as such by themselves, as ky "another" (with usage similar to that of Coptic $\text{G}\epsilon/\text{K}\epsilon$, $\text{K}\epsilon\text{T}$, fem. $\text{K}\epsilon\text{T}\epsilon$, pl. $\text{KOOY}\epsilon$), or in the introductory phrases of letters, meaning "furthermore" and suchlike. If the regens is defined ($p^3 ky$), it can signify "the other (man)" or alternatively, "and also the (man)": $p^3y ky m$ "(he bore) this other name as well" (cf. Erman, *Neuägyptische Grammatik*, § 240; Till, *Koptische Grammatik*, § 230).

— A nominal attribute (rectum) without an article classifies the regens. Under the conditions listed (§ 2.1.3), the regens itself can be defined or not (and the intended nuance can usually be reproduced in the translation). Examples: $hrw \dot{i}s-b-r$ "whip snap" (< *"sound, typical of whips"); $t^3 \dot{c}.t sb^3.w$ "the school" (< *"the house of instruction"; "the instruction house"); $t^3 s.t qrs$ "the place of burial", "the burial-place";

rectum
without an
article

(pAnast. III
vs. 3,2)

st hr ir.t t3y=sn ip.t db.t m mn.t “They are making up their brick quota daily”;

Note:

st hr ir.t the use of an unintroduced dependent pronoun (here of the 3rd pers. plur.) is characteristic of the Late Egyptian Adverbial Sentence (or First Present).

(pD'Orb 10,8-
10)

wn.in p3 sty n t3 nbd šnty hr hpr m n3 n hbs.w n Pr-3

iw=tw h3 m.dī n3 n rh.tyw n Pr-3 c.w.s m dd

sty sgnn m n3 n hbs.w n Pr-3

(A braid of the maiden's hair is swept onto the beach where the king's clothes are washed.)
“Thereupon the fragrance of the braid clung to Pharaoh's clothing, and (the Royal) One argued with Pharaoh's washermen, saying ‘Unguent fragrance is in the clothes of Pharaoh!’”

Notes:

t3 nbd šnty “the lock of hair”, “the braid”;

p3 sty n t3 nbd vs. “the fragrance of the braid” is presented to the reader as something self-evidently existing, as natural, but “fragrance of unguent”, “unguent fragrance” is something unexpected in washed clothes, and furthermore something that can only be classified most generally.

Constructs of this type are frequent in professional and occupational titles, such as zh3.w pr-hd “Secretary of the Treasury”; p3 wh3-3pd “the bird catcher” > “the fowler”.

defined rectum

— A defined nominal attribute (rectum) is used if it is a specific designation, a “labelling noun”, or a proper noun (a name or an identifying term analogous to names, as with cultural or epistemological definiteness). The combination itself then assumes designatory character or marks possession in the sense for which the suffix pronouns were still used in Late Egyptian (cf. supra § 2.1.3[2]): hr imnt.t p3-hr “west of ‘the Tomb’”, t3 in.t p3 3 “the valley of the fir-tree” (not “the fir-tree valley!”); t3 h3s.t Gbty “the Coptos Mountains” (“the desert mountains of Coptos”).

(HorSeth 3,5-
6)

iw=w hmsi m t3 wsh.t Hrw hnty c.b.w iw=tw di.t p3 wh3 m dr.t Dhwty “(Now the letter from Neith the Great, the God's mother, reached the Divine Assembly/the Ennead), when

they had seated themselves in the hall ‘Horus with the Horned Crown’, and the letter was placed in Thoth’s hand.”

Notes:

ḥwsh.t Ḥrw understood as apposition, but the name could also be understood as a direct nominal attribute “the hall of ‘Horus with the Horned Crown’”;

m ḏr.t Dḥwty a labelling rectum (name) following a part of the body.

(3) The indirect nominal attribute (Indirect Genitive)

In some traditional uses and in certain hierarchically higher text registers, the phrase linker *n* can still agree with its governing noun, the regens, but in colloquial and literary registers it tends to become invariable. The forms *nt* (occasionally *nty*) and *nw* are generally mere variants or allographs of *n* (and thus no longer markers of gender and number agreement). In this construction, the regens is generally determined by definite or indefinite articles.

— The defined nominal attribute indicates possession and relationship: *n3 sty n t3 nbd šnty* “the fragrance of the braid” and *n3 n ḥbs.w n Pr-ḥ3* “the clothes of Pharaoh” (“Pharaoh” is an identifying term, “name”; both references to pD’Orb 10,8-10/*LES*, cited above); *n3 rwd.w rmt-iz.t n p3 ḥr* “the controllers and workmen of the Tomb Building Administration” (pAbbott 7,8-9; cited above); *w^c ḥs.t n Km.t* “a singer of Egypt” (Wenamun 2,68-69; cited above); also in chains of attributes like *šr.w nb n wr.w nb n p3 t3 n Ḥ-r* “all the sons of all the princes of the land of Syria” (Doomed Prince 5,5; cited supra p. 55). Toponyms and names of countries (*Km.t*; *Ḥ-r*) function as defined nouns.

defined
rectum:
possession and
relationship

— The undefined nominal attribute without an article classifies its regens by describing its range of meaning (as in English, “the performance of plays”; “the art of love”). This descriptive specification frequently performs the role of an adjective in denoting quality (as in English, “a man of courage”). The construction is thus used

rectum
without an
article:
classification
and qualities

to indicate material or composition:

 | *iw=ḥ ḏl.t n=k p3 ḥtm n nbw nty m ḏr.t(=ḥ)* “I will give you the signet-ring of gold I am wearing” (> “the golden signet-ring”);

(*HorSeth 6,1*)

Notes:

iw=ḥ ḏl.t the Late Egyptian form for expressing the future *iw=ḥ(r) ḏl.t* “I shall give”;

nty m ḏr.t=ḥ lit. “which is on my hand”;

cf. also, *p3 imwn ps.š.t* “the tent of mats”; *wr.t ḥ3.t nt ḏ^cm* “the great chariot of electrum” (Boundary stele U, line 4, infra, § 2.1.7[1]);

to indicate size and content:

(pD'Orb 8,6)

mtw=tw ḥr dī.t n=k w^c n
tḥw n ḥnq.t ḥr dr.t=k “... , if a jar of beer is placed in your hands (and it overflows...)”;

Notes:

mtw=tw ḥr dī.t for *mtw=tw dī.t*, the Late Egyptian form used to continue a future expression, the so-called “conjunctive”; forms with *ḥr* — as here — are not etymologically correct, but occur;

cotext the phrase is preceded by *ḥr ḥw=k m r qd wn.w nk.t r=i* “And you will know that something has happened to me”;

to indicate manner and nature:

(pLansing 6,1-2)

ī.īr=f tšy=f wn.w.t n mtr.t n bšk.w n pš ḥwty “He spends his noontime for the rent of the cultivator.” (< “his hour of midday”);

Notes:

ī.īr=f Late Egyptian nominal or emphatic *sdm=f*, “he does, i.e. spends, his noontime”;

bšk.w n pš ḥwty an example of a regens without an article: the “fee” to be paid to the supervisor, the “fee” that is customarily paid by every tenant-farmer (“the” tenant-farmer as a social group). The preceding *n* is the preposition, and not the phrase linker.

If the undefined rectum is abstract, its qualifying — adjectival — character is particularly clear:

(pLansing 11,3)

qd=i n=k bhṇ n mšw(.t) “I will build you a new villa”;

Notes:

qd=i prospective *sdm=f*, “I will (I intend to) build”;

ø-bhṇ the lack of an article can be ascribed to the traditionality of the register (school-texts/exercise letters/letter writer’s guide) to which pLansing belongs.

Stories use a phrase *m pšy=f šhr.w nty r^cw-nb* (“according to his daily habit”), the meaning of which suggests that *nty* is merely a writing of *n* (cf. Erman, *Neuägyptische Grammatik*, § 214).

(4) Adverbial attributes

In contrast to Middle Egyptian, the adverbial modification of the noun (adnominal adverbs) occurs only occasionally, mostly in the higher ranks of the register hierarchy:

(Beatty Love Songs vs. C3,10)

gm=i š^cf wn “I discovered that his door was open.”
 (cf. § 2.2.6[2]);

Notes:

gm=l Late Egyptian preterite *sdm=f*;structure *sdm=f* with object; the object being the noun + attributive/adnominal Old Perfective.

Alternative explanations are possible (such as an object clause consisting of noun + Old Perfective); various explanations of this type will be discussed at length below.

(5) Adjectives and relative phrases (participles, relative forms and relative clauses)

Adjectives and relative phrases specify those features and qualities which characterize the nature and condition of the classes of nouns to which they refer. Adjectives and relative phrases can also be used as nouns (“nominalization”, “complex nouns”). The grammatical gender of the complex nouns is masculine rather than feminine (*p3 d.y n=s* “that which was given her”, rather than Middle Egyptian *rdi.t n=s*). In contrast to Middle Egyptian, however, adjectives, participles and relative forms are far less common than the relative clauses introduced with *nty*.

— As in Middle Egyptian, Late Egyptian adjectives are primarily derived from verbs: participles of verbs of quality and state such as *nfr* “be good”, *3* “be large/great” (>adjectives), or participles from fientic verbs (verbs that express action or process). With few exceptions, they no longer agree with their antecedents: they have become

adjective
formation

Participles, Relative forms: The semantic and morpho-syntactic relationships between participles and relative forms in Late Egyptian are still best understood in terms of nominalization: they derive from the semantic complex of the verb, insofar as one of the arguments of the verb, the actor (agent/ subject), object, or rection (necessary adverbial complement) becomes the nucleus of a noun phrase, and the other become satellites.

invariable in gender and number (fem. and plural graphemes are occasionally added, but they merely indicate adjectivity).

The derivation of adjectives from nouns or prepositional phrases with the help of the suffix *-y* (*nisbe*-adjectives) is no longer productive. In Late Egyptian, such derived adjectives are lexicalized, i.e. have become individual words with adjectival meaning — the core of a new substitutional category (part of speech) of “real”, non-derived adjectives, e.g., *p3 dw rs.y-3b.ty n 3h.t-3Itn* “the southeastern mountain of Akhet-Aten” (Boundary Stele U, line 8; cf. infra § 2.1.7[1]).

nisbe-adjectives

Actor nominalization	Object nominalization without actor	Object nominalization with actor	Rection nominalization
active participle	passive participle	relative form	“indirect” relat. form/ passive participle
<i>p3-dl n=s st</i>	<i>p3-d.y n=s</i>	<i>p3-dl=f n=s</i>	<i>t3-dl=f n=s st</i> / <i>t3-d.y n=s st</i>
“the one who gave it to her”	“that, which was given her”	“that which he gave her”	“she, to whom he gave it”/ “she, to whom it was given”

- adjectives The participles of adjective-verbs — but also *rh* “to know” — are not marked as such graphemically, but have the syllable structure and vocalic pattern of participles. Remnants of gender and number agreement can still be observed with *nfr* “good”, “beautiful”; *bīn* “evil”; ʕ “large/great” (in compounds still preserved in Coptic, e.g. masc. *nāfir* > -NOYԿԸ; fem. *nāfrāt* > -NOԿԸ).
- Forms of participles and relative forms:
- prefix *ī-* From Dyn. XIX on, the prefix *ī-* (𓂏, 𓂐 or 𓂑) marks the participles and relative forms of 2-rad. fientic/non-adjectival verbs (as *dd* “say”) and those 3-rad. (*hpr* “become”; *ptr* “see”; *wʕr* “flee”; *wšh* “lay down”; etc.) and 3ae inf. (*ir* “do”; *dī* “give”; *īy* “come”; *īn* “bring”; *gm* “find”; etc.) which have been reduced to two radicals, as well as some genuine 3-rad. verbs and the 4ae inf. verbs: 𓂏𓂏 *ī.īr* “acting”, “he who acts”; 𓂏𓂏 *ī.dd* “who says”; 𓂏𓂏𓂏𓂏 *ī.hʕb=k* “what you sent”.
- Where articles and demonstratives precede the prefix, it is assimilated and remains unwritten, *pʕ-ī.dd* (*p-ī.dd*) > 𓂏𓂏 *pī.dd* “that one who speaks”, but 𓂏𓂏𓂏 is also possible. Only rarely does the verb *wn* have the prefix.
- passive ending Primarily passive participles of mainly 3ae inf. transitive verbs (but also occasionally active participles) bear an ending *-y*: mostly 𓂏, but also in forms like 𓂏𓂏𓂏 *ī.īr.y* “done”; 𓂏𓂏𓂏 *d.y* “given”.
- stem formation The stem of the participles and relative forms is generally no longer subject to change. Where participles are written in the traditional fashion with reduplication/gemination of root consonants it should be taken into account that this is probably merely graphic variation (but cf. the note).
- periphrasis with *īr* Increasingly, participles and relative forms (initially primarily those with more than three radicals) are formed with the participle (*ī.īr*) or the relative form (*ī.īr=f*) of *īr* followed by the actual verbal expression in the infinitive, as *ī.īr qnqn* “he who hit”. For verbs with three radicals or less, such *ī.īr*-periphrasis is assigned to the imperfective aspect during the New Kingdom.
- categories of meaning: imperfective, perfective Aspect of participles and relative forms is generally reduced to the categories of either (a) active-imperfective (in forms of *īr*-periphrasis) with the meaning of an aorist or an incompleting present action (“doing”), or (b) active/passive-perfective for completed past actions (“done”).

Observation:

In traditional expressions (e.g., titles) or in higher textual registers of the norm hierarchy, both the earlier forms and the aspect role of the participles and relative forms were still carefully distinguished. As the *sdm.n=f* form has actually become an allomorph of the perfect active *sdm=f* in Late Egyptian,⁴ apparent *sdm.n=f* relative forms appear, as do combinations like 𓂏𓂏𓂏 for *ī.īr=k* “which you did/have done” (for examples cf. Korostovtsev, *Grammaire*, 292f).

With the help of the relative particle or relative adjective $\overline{\text{nty}}$ (also written *r.nty* on occasion) entire sentences can be assigned attributive roles. Like Late Egyptian adjectives and participles, *nty* does not generally agree with the antecedent. In form and usage, *nty* is the predecessor of the Coptic ϮT (Ϯ).

— Examples:

(pD'Orb 11,8)

$\text{lw n3 rmt hr iy.t r dd-smi n hm=f.c.w.s}$ “(After many days passed), the people who had gone abroad came to report to his Majesty.”;

Notes:

construction the basic sentence is the Late Egyptian adverbial sentence with *lw* that in principle marks subordination in Late Egyptian: lw n3 rmt hr iy.t “... while the people were coming” or the like, but forms a closed complex here with the preceding phrase; the relative phrase consisting of the participle with the verb rection *r* + noun is inserted between the subject of the adverbial sentence and its prepositional infinitive.

(pJudTurin 3,1)

all that was done, they were the ones who did it.”

Notes:

mnt.w Late Egyptian form of the 3rd pl. independent pronoun “they”; corresponding to the earlier *nt.sn*;

construction the basic sentence is the Cleft Sentence/participial statement of the type with *nt.f* + participle, which is placed at the start of a sentence through the use of *ir*.

(HorSeth 11,5)

$\text{mi ptr=t n3i ir Si s r=i}$ (Horus says to his mother Isis,) “Come and see what Seth has done to me!”

Notes:

mi ptr=t Imperative *mi* and optative *sdm=f* of *ptr*; alternative translation: “come that you see!”.

(Beatty Love Songs vs. C1,9-C2,1)

$\text{hnw=i m nfi i.h3c m33=s}$ “Mother ought to be good about my affairs where it must be overlooked.” (<*“Good should mother be about my affairs concerning that which to observe is better omitted”);

Notes:

construction adjectival sentence (*nfr* + noun phrase) with a following chain of adverbials; *nfi* old demonstrative *nfj*;

4 *sdm=f* and *sdm.n=f* can function interchangeably as past tense.

$\dot{l}h^c m\dot{s}=s$ passive participle ($\dot{l}h^c$) whose (retained) object is an infinitive ($m\dot{s}$) with its own direct object ($=s$) as the necessary resumptive pronoun: *‘‘that which seeing it is (better) omitted’’. Note the fem. resumptive pronoun of the Middle Egyptian type.

(HorSeth 6,1) $\dot{i}w=\dot{i} \dot{d}\dot{l}.t n=k p\dot{s} htm n nbw nty m \dot{d}r.t(=\dot{i})$ ‘‘I will give you the golden signet-ring I am wearing’’ (for the hieroglyphic text and comments cf. § 2.1.4[3]);

Note:

$nty m \dot{d}r.t(=\dot{i})$ a relative clause with an adverbial sentence following nty . The subject of the adverbial sentence is regularly dropped when it is identical with the antecedent of the relative clause — as it were developed out of $p\dot{s} htm nty (p\dot{s} htm) m \dot{d}r.t(=\dot{i})$.

(Doomed Prince 4, 7-9) $\dot{i}w=f hr \dot{d}d n p\dot{s}y=f s\dot{d}m nty r-gs=f \dot{i}h p\dot{s} nty hr \dot{s}m.t m-s\dot{s} p\dot{s} z\dot{l} nty m \dot{i}y.t hr t\dot{s} m\dot{l}.t$ ‘‘And he (the young prince) said to his servant who was beside him, ‘What is that which is going behind the adult who is coming on the way?’’’ (for the hieroglyphic text and comments cf. § 2.1.3[1]).

(6) Numbers, number-signs and numeral constructions

With the exception of w^c ‘‘one’’, numbers are written with the respective number-signs (numerals). In combination with the item numbered, the numbers form the nucleus of the noun phrase, the modified noun, while the numbered item becomes the modifying noun. Only $sn.w$ (‘‘two’’) is treated as the satellite of what is numbered, $\dot{i}h \dot{i}h \parallel sn sn.w$ ‘‘two brothers’’. w^c ‘‘one’’ can be either nucleus or satellite: as an indefinite article it is the nucleus, and as a number, the satellite ($\dot{i}h \dot{i}h \dot{i}h m bw w^c$ ‘‘in one place’’). In lists (indicating weights and measures, etc.), all numerals can follow their noun, but only as a writing procedure.

fractions Fractions are reduced to the common numerator 1, with $1/2$; $1/3$ etc. These are generally written with the \ominus above the signs, as in $\overline{\text{III}}$ for $1/3$ ($r-hmtw$: ‘‘part 3’’ of three), $\overline{\text{IIII}}$ for $1/4$ etc. The symbol for $1/2$ is \Leftarrow ; for $1/4$ hieratic (and its transcriptions) has \times . As in Middle Egyptian the only variation is $\overline{\text{IIII}} \times$ $2/3$ ($r.wy$ ‘‘the two parts’’ of three): $\overline{\text{IIII}} \overline{\text{IIII}} \times = ‘‘7 + 2/3 + 1/4’’ = ‘‘7 11/12’’$. Fractions in administrative texts frequently follow the corn measure; cf. infra § 7.3.

construction The constructions with the numbers from ‘‘three’’ to ‘‘nine’’ are formed with the direct nominal attribute (direct genitive), while above ‘‘ten’’, the indirect nominal attribute (indirect genitive) prevails. Numbered items are construed in the singular ($\dot{i}h \dot{i}h \overline{\text{IIII}} \dot{i}h p\dot{s}y \delta rm\dot{t}$ ‘‘these six persons’’ < *‘‘this hexad of people’’). In Coptic, numbers assume the gender of the item counted, but in Late Egyptian this is virtually never reflected.

ordinals Ordinal numbers are formed with the prefix $m\dot{h}$ - (participle of $m\dot{h}$, ‘‘completing’’ a number, e.g., $hrww m\dot{h} 3$ ‘‘the third day’’): $\dot{i}h \dot{i}h \overline{\text{IIII}} \dot{i}h \dot{i}nk m\dot{h}-\delta$ ‘‘I am the sixth’’. ‘‘The first’’ has its own form, $\dot{i}h \overline{\text{I}} \times h\dot{s}wty$, also used adjectivally.

2.1.5 Notes on linguistic evolution

The development to Coptic by way of Demotic is characterized by a crystallization of the trends and patterns discussed here. The use of articles in Late Egyptian is very much in line with the later linguistic stages, the absence of articles in Coptic being more strictly regulated (which is, however, also related to the disappearance of the register hierarchy and its writing conventions).

The most striking feature is the disappearance of the direct nominal attribute (Direct Genitive), of adjectives, participles and relative forms: in Coptic, direct nominal attributes, adjectives and participles can only be analysed historically, in lexicalized phrases which behave as individual words, or in nominal prefixes. Modification by attributes is accomplished exclusively in the form of combinations using the indirect nominal attribute (*X n Y*). The relative forms are completely replaced by the relative clause constructions.

Demotic assumes a characteristic position between Late Egyptian and Coptic. Direct genitives and adjectives still appear, although less frequently, the simple participles and relative forms drop out of use, and appear only in the form of the periphrases with *ỉ.ỉr* and *wnn*.

2.1.7 Exercises

(1) An Amarna boundary stela (Stela U lines 4-14)

One of the eleven stelae — of which five are well preserved today — delimiting the city of Akhet-Aten. The text is from N. de G. Davies, *The Rock Tombs of El Amarna, Egypt Exploration Society. Archaeological Survey* 13-18, Vol.V pl.XXV. The transliteration here begins at Sandman, *Akhenaten*, p. 122, line 6.

Purpose: Example of(a) form, peculiarities and arrangement of New Kingdom hieroglyphs; (b) differences in style and form of expression of a Late Middle Egyptian framing text and a Medio-Late Egyptian speech text; (c) use of articles, possessives and demonstratives; and (d) attributes and relative clauses of the earlier type.

Transliteration (intended as a reading aid, the indentation indicating the degree of subordination) This text is preceded by: Regnal Year 6, 4th month of the “sowing season”, day 13, the transliteration starts at the end of line 4:

The text continues.

Notes:

line 4 *hrww pn īw=tw m 3h̄.t ītn*: construction of the Middle Egyptian type noun + *īw*-sentence, with the noun indicating time used absolutely (cf. Gardiner, *Grammar*, § 88): “On this day (one was ...)”; *hrww pn* refers back to the date specified earlier;

line 5 *nty m=f r P̄3-ītn-hr.w*: relative clause with Middle Egyptian construction noun + *r* + noun (“whose name shall be ‘Aten-is-content’”, cf. Gardiner, *Grammar*, § 122);

h̄y.t hr ssm.t hr wml.t: “appearing with horse and chariot” (first *hr* is the rection of *h̄y*, the second *hr* co-ordinates both nouns);

wbn=f m 3h̄.t mh̄.n=f t̄3.wy m mrw.t=f: a characteristic Middle Egyptian expression of the hymns to the Sun-god (sequence *sdm=f - sdm.n=f*; here roughly, “when he, having filled the land with his love, radiates at the horizon”);

lines 5-6 the other stelaē have: *šzp tp w̄3.t nfr.t r 3h̄.t-ītn m zp tpy n gml.tw=s īr̄.n hm=f r sn̄l̄=s* “Conceiving it for the first time, His Majesty set out on the fine way to Akhet-Aten, to found it.” (< ** “Setting out on the fine way to Akhet-Aten at the first time of finding-it-out, which His Majesty did in order to found it”; “which” refers to “Setting out on the way”). Omitting *n gml.tw=s* makes also good sense (“setting out on the way for the first time, which His Majesty did to found”);

line 6 *m̄l wd̄.t.n l̄l̄=f*: “according to what his father NN decreed”, Middle Egyptian *sdm.n*-relative form;

the writing *d̄l (d̄l m̄)^c 3b.t*: according to its form, it could be a passive *sdm.w* (restricted to legal texts in the later New Kingdom) - “An offering was presented” - parallel to the other introductory sentences, but it could just as easily be an infinitive (in a Late Egyptian phonemic or so to speak, ideographic writing);

line 7 *šzp h̄zw(.t) mrw(.t) hr-tp ^cnh̄ wd̄3 snb nzw-b̄l̄t*: “Receiving favours and love for the benefit of the king’s well-being (< Life, Prosperity and Health)” as thanks for the previously mentioned presentation of offerings;

line 8 *stw.t ītn hr=f m ^cnh̄ w̄3s*: “the rays of Aten/the solar disc being upon him with life and power”, appositional adverbial sentence following Middle Egyptian syntax; *hr m̄pl h̄^c=f*: *hr* with infinitive as circumstantial continuation of a phrase falls into disuse in Late Egyptian proper, the construction of *m̄pl* with object, however, appears only with the Amarna Period;

line 9 *^cnh̄ d̄d.t.n nzw-b̄l̄t*: “Oath made by the king”: again *sdm.n*-relative form (which is no longer usual in Late Egyptian proper);

line 10 *n̄dm h̄3.ty=ī hr t̄3 hm̄.t-nzw hr h̄rd.w=s*: “and as I am joyful about the queen and her children” (variant of an oath formula). The first *hr* is the rection of *n̄dm*, “to be happy, joyful about something”; the second *hr* co-ordinates the nouns *hm̄.t-nzw* and *h̄rd.w* (phrase coordination, cf. § 2.1.3[1] commentary Notes on pAbbott 7,8-9); note the suffix rather than the possessive article with *h̄rd.w* (as in line 11): grammatically coordinated nouns depend upon a common article so that the possessive expression gives way to the suffix construction;

nty rd̄l̄(w) l̄3wy hm̄.t-nzw: *nty* is an abbreviated form of *r.ny* “such that”; “because”; “in order to” (Late Egyptian for *r-nt*), cf. Erman, *Neuägyptische Grammatik*, § 680; Gardiner, *Grammar*, §§ 223; 225: “(I am happy about the queen) for the good ageing of the queen is assured (< given)”. The writing *l̄3wy* as *l̄wy* in the publication is an exaggerated purist reproduction of the original bird hieroglyph: cf. the parallels;

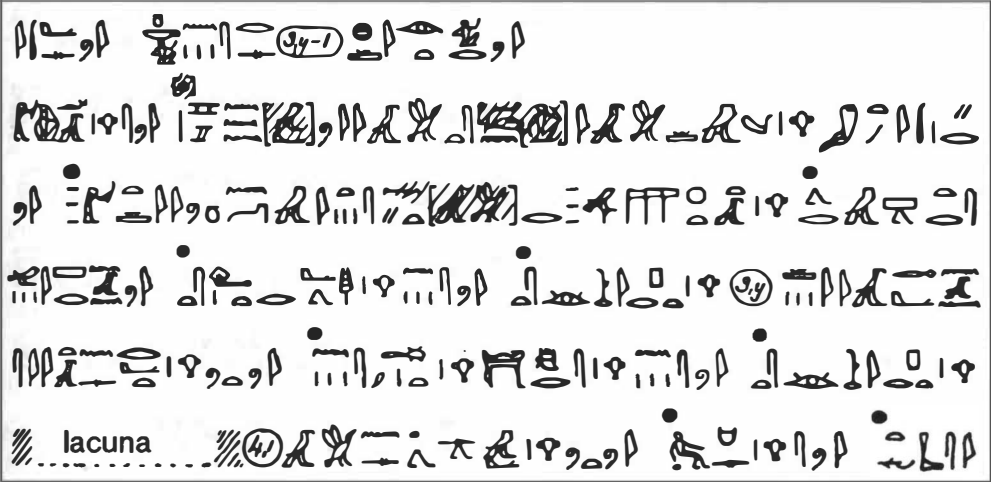

- lw=s hr-dr.t Pr<3*: Late Egyptian circumstantial introduced with *lw*: “she being in Pharaoh’s hand” > “because she was ...”;
- line 11 *p̄y=i n̄h m m̄i<t* “(As my father lives and my heart is happy), my oath is truth” (> my oath is true);⁵ *gd.t=f* as a writing of the status pronominalis of *gd* (infinitive with suffix, “to say it”), cf. § 1.1.2(3);
bn gd=i sw: “I will not say it”; *bn sdm=f* is the negative form of the prospective *sdm=f* in Late Egyptian (cf. Middle Egyptian *nn sdm=f*);
- line 12 *lr p̄ w̄d r̄sy... n̄f p̄3 w̄d n̄ 3h.t-Im p̄y*: “Concerning the southern stela ... it is precisely the stela of Akhet-Aten” (> the stela defining the city); construction of sentence: a noun in anticipation by means of *lr* + sentence. The sentence itself is a Late Egyptian “three-part” nominal sentence: *n̄f, p̄3-A p̄y* (“It, it is the A”);
p̄y lr̄=i h̄c r̄r<c: “the one which I erected being in its due position” (< “which I had made to stand being in its place”, i.e., it is the authentic stela); nominalized relative form of *lr̄* with infinitive;
bn zn̄=i sw: the negative form of the Late Egyptian prospective *sdm=f*: “I will not step beyond it” (< “I will not pass it”);
lr.w: passive *sdm*. This form is rare in Late Egyptian proper, being limited to legal texts. Here it indicates a secondary importance of the Southwest Stela with regard to the previously mentioned South Stela on the Eastern Mountain;
- line 13 note the two completely different meanings of ‘*q̄*’ in the same sentence: “The such-and-such stela was accurately erected opposite it” (“was erected opposite it in accuracy”);
wbnw: “sunrise” is used here and in the following line to signify the East as it was formerly used in our languages in poetic or antiquated expressions like “to march towards sunrise”;
- line 14 *r̄<q̄=f q̄* now: “precisely opposite it”; adverbial to *lr.w*, the passive *sdm*.

(2) Literature of Late Dynasty XVIII (Astarte Papyrus lines 3,y-2—4,1)

A badly preserved hieratic text from the reign of Horemhab in the hieroglyphic transcription of A.H. Gardiner, *Late-Egyptian Stories, Bibliotheca Aegyptiaca* 1, Brussels 1932, p. 79, lines 10-15: part of a tale of the wishes and demands of the sea and its conflict with the goddess Astarte.

Purpose: Example of a hieratic literary text maintaining the writing style and forms of expression specific to the norms of “Medio”-Late Egyptian,⁶ with careful — “Middle Egyptian” — recording of morphemes (fem. *-t*; preposition *hr/r*), regular use of the suffix *=sn*, distinction between subject suffix *=s* and object suffix *=st* in writing (*=st* being an allograph of *=s*).

- 5 Note: in the literature, this is generally understood to be a kind of adjectival construction (cf. § 2.1.4[3]): *p̄y=i n̄h n m̄i<t* *“(my oath of truth)” > “my true oath”. Opposing this however is the fact that the oath formula would not be complete: *“(As my father lives, my true oath, which I will say, which I will not say falsely.”
- 6 Note, too, forms like *h̄c n̄ gd.n=f* (line 1,x+12) or the “conjunctive” *hn̄c ntk gd* (line 2,x+5) in the parts of the text not reproduced here.

2.1.7 Exercises (2): Astarte Papyrus, line 3.y-2 - 4,1

Notes:

- line 3,y-1 The text here begins with the final words of a speech by the sea, where *sn* refers to the Ennead; the postponed independent pronoun *lnk* is in apposition to the suffix *≠*: emphasis by postposition, “I myself”, “I however” (cf. Erman, *Neuägyptische Grammatik*, §706; Till, *Koptische Grammatik*, § 388);
- lw* + noun (or suffix) and adverbial: a type of structure (*lw=f hr dl.t*) that allows the formation of long chains of clauses, the Late Egyptian circumstantial form of the Adverbial Sentence (“Circumstantial First Present”), also termed “narrative” or “non-initial main sentence”;
- nty st lm nwy.t*: *st* is one of the forms of the 3rd pers. pl. dependent pronoun; for the postponed Old Perfective (here *nwy*), cf. Erman, *Neuägyptische Grammatik*, § 706.

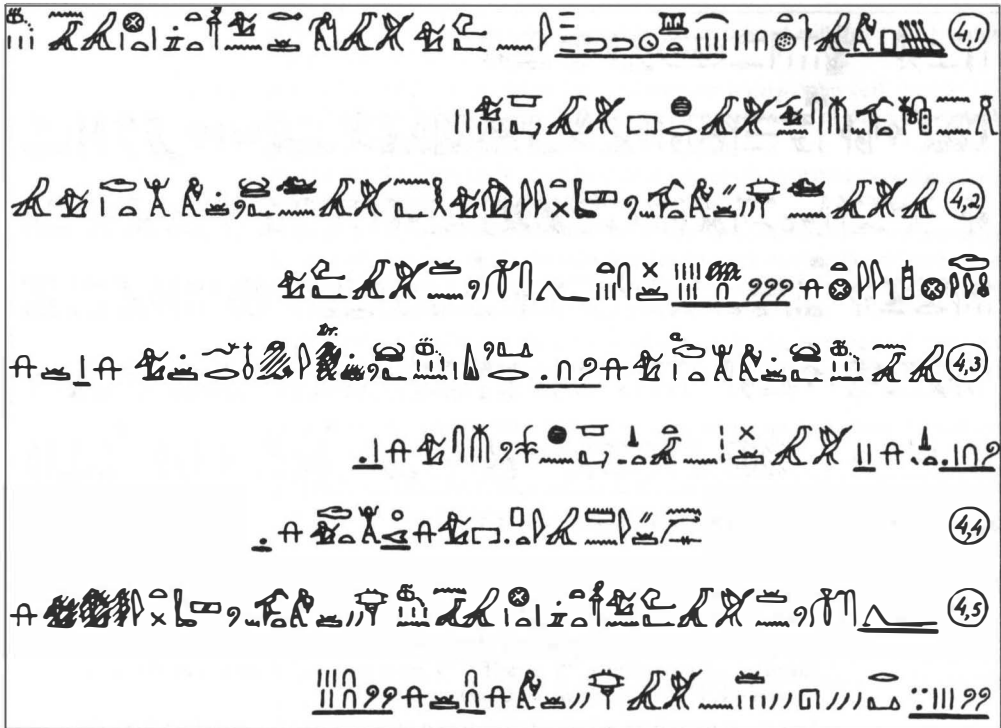

(3) Grain collection report (Turin Taxation Papyrus, rt. 4,1-5)

Part of a record in which Tuthmosis, the “Secretary of the Tomb Building Administration” noted grain tax which he collected towards the end of Dynasty XX; the text is published by A.H. Gardiner, *Ramesside Administrative Documents*, Oxford 1948, the part represented here being from p. 40, lines 3-11.

Purpose: Example of a late Ramesside administrative text with characteristic writing conventions, abbreviations, numbers, and units of measure (cf. Appendix § 7.3); apposition and attributes.

Notes:

- line 4,1 Regnal Year 12, 4th month of the “Inundation Season” (in the festival and, later, the civil calendars, the month *k3-hr-k3*, Coptic ΧΟΙΛΑΚ), day (*sw*!) 24 of King Ramesses XI; *P3-wr-ꜥ* (“the great chief”) and *Dḥwtj-ms* are proper names;  is a common abbreviation for  *lr.y-ꜥ* “porter” (of the Gang of the Tomb Building Administration in Deir el-Medina); *p3 lr.y-ꜥ sn.w* “the two porters” (< * “the porter, twofold”). For the grain reference system, cf. the appendix § 7.3.2(3);

2.1.7 Exercises (3): Turin Taxation Papyrus rt. 4,1 - 4,5

line 4,2  is here probably  *k-r* “boat” (a cargo vessel of considerable capacity, as can be calculated from this source); *Dhwty-wšby* and *Q3-dr.t* are proper names; (*šzp...m nš lt...*) *m dml lwny.t* roughly: “(Receipt of grain) from ‘town’ Esna (Latopolis)” in contrast to a possible “from ‘district’ Esna” — i.e. the use of *dml* as a kind of characterization, of labelling;

 is the sign for the measuring unit *h3r* “sack” (76.88 litres);   is an abbreviated form for *wp=s*, “to specify it:” (< “to separate it”), to give details (also *wp* alone “specification; detail”, cf. line 4,3);

lws.wg n NN m X “Arriving and delivering of X at NN”;

line 4,3 the “dot” (.) in indications of measure is an abbreviation for the unit of measure of $\frac{1}{4}$ *h3r*, equal to 1 *ip.t* (Coptic $\text{OIP}\epsilon$), equal to 4 *hq3.t*;

the customary passive in Late Egyptian is formed by adding *-rw*. A passive *sdm* (as *d3.w* here, *rd3.w* in line 4,5) appears virtually only in legal texts and in formulations of accounts like this one;  *d3.w*, “the income”, “pay” for employees and workers; *lt-nfr* and *Hnsw-ms* are proper names; the sign  is an abbreviation for *dmd* “total”; *d3.t* “remainder” is the deficit in an account;

line 4,4 *Ns-Imn-m-3pt* (< *Ny-sw Imn.w-m-3p.t* “He belongs to Amun-of-Luxor”) is a proper name; for the fractions of the Eye of Horus as writings for $\frac{1}{2}$ and $\frac{1}{4}$ “oipe” cf. § 7.3.2(3) and Gardiner, *Grammar*, § 266;

line 4,5 read: *rd3.w r h3w n NN*.

2.2 Elements of sentence construction

2.2.1 The enclitic (dependent) personal pronouns

Pronouns from the series designated the dependent personal pronouns can be either (a) the object of the Late Egyptian *sdm=f* forms, imperatives, participles and relative forms or (b) the subject of an Adjectival Sentence, but no longer that of an Adverbial Sentence. The older forms are still employed in the higher reaches of the register hierarchy. The forms of Late Egyptian proper and their usage reveal that they have lost their gender differentiation in the singular as well. Assimilated to the suffix pronouns in the course of linguistic evolution, they were eventually completely replaced by them and only traces remain in Coptic. Forms:

1. s.c.	<i>wī</i>	𓂏𓂏 ; 𓂏	like the suffix, this can occasionally be omitted
2. s.c.	<i>tw; tī</i>	𓂏𓂏 ; 𓂏𓂏𓂏 ; 𓂏	fem. is only distinguished by the grapheme
3. s.c.	<i>sw; st</i>	𓂏𓂏 ; 𓂏𓂏 ; 𓂏𓂏	<i>sw, st</i> are only <i>s'</i> , and thus each grapheme group can be used interchangeably
1. pl.c.	<i>n</i>	𓂏𓂏𓂏 ; 𓂏𓂏𓂏 ; 𓂏𓂏𓂏	
2. pl.c.	<i>tn</i>	𓂏𓂏𓂏	
3. pl.c.	<i>sn; st</i>	𓂏𓂏𓂏 ; 𓂏𓂏𓂏 ; 𓂏𓂏	<i>sn, st</i> are only <i>s'</i> , and thus each grapheme group can be used interchangeably

Observations:

st (sing./pl.) is also used to refer to general situations (neuter).

The transfer of the *-t*-ending of the 3ae inf. infinitives to all other verb classes (cf. for hypercorrection, § 1.1.3[4], supra), resulted in a general form of status pronominalis of verbs. Through the detachment of the status endings with the object suffix (and their use following *sdm=f* forms) a separate series of direct object pronouns emerged eventually ('Direct Object' Pronouns, cf. Černý/Groll, *Late Egyptian Grammar*, § 2.5), such as 1st pers. sing. 𓂏 *tw=i* "me", 2nd pers. sing. 𓂏𓂏 *tw=k*, 3rd pers. sing. 𓂏𓂏𓂏 *tw=f*, etc. While these object pronouns are certainly used in Demotic, the acceptance of the series is not compelling in Late Egyptian. Cf. Winand, *Études*, §§ 182-186; J. Borghouts, Object Pronouns of the *tw*-Type in Late Egyptian, in: *Orientalia Lovanensia Periodica* 11, 1980, 99ff.

2.2.2 The imperative

(1) Forms

infinitive vs.
imperative

A large number of verbs do not differ in the imperative and infinitive, and it is therefore possible that direct command is already often expressed through the infinitive rather than the imperative, as in Coptic. This can be clearly seen only in those cases where the form is followed by a pronoun object:¹ Imperatives take the dependent pronoun (*s:wḏ3sw* "Save him!"), while the infinitive takes the suffix (*s:wḏ3=f* "Save him!"). On the graphemic level, however, the 1st pers. sing. suffix and the dependent pronoun *wḏ* frequently cannot be distinguished (object just 𓂏). Gender and number of the addressee are generally not distinguished either.

stem extension
prefix *ḏ*-

The imperatives of the 2-rad. verbs, and those reduced to two radicals (3-rad., rarely 3ae inf.) can receive a stem extension prefix, *ḏ*-, like the participles: 𓂏𓂏 *ḏdd* "speak!" (>Coptic 𓂏𓂏-); 𓂏𓂏𓂏 *ḏsm* "go!"; 𓂏𓂏𓂏𓂏 *ḏw3h* "add!" or the like (Coptic 𓂏𓂏𓂏 / 𓂏𓂏𓂏𓂏 "and"!); and the frequently used 𓂏𓂏 *ḏir* "do (it)!" (>Coptic 𓂏𓂏-). These verbs also exhibit forms without a prefix.

"come" and
"give"

The imperatives of *ḏy* "come" and *ḏi* "give" still use the same forms as in Middle Egyptian: — *ḏy*: 𓂏𓂏 *mḏ* "come!"; feminine addressees are occasionally distinguished graphically, by forms like 𓂏𓂏𓂏 *mḏ* (where an internal vowel modification is indicated, cf. Coptic masc. 𓂏𓂏𓂏, fem. 𓂏𓂏𓂏). — *ḏi*: 𓂏𓂏𓂏 oder 𓂏𓂏𓂏𓂏 *imm (im/imḏ)* "Give!"

Verbal classes and states; classes of meaning. In Late Egyptian the verb roots are still classified according to their root consonants (2-rad.; 3-rad.; 2ae gem.; 3ae inf.; 4ae inf. — conceptual borrowings from the old Latin-oriented description of Afro-Asiatic and Semitic languages meaning "verba tertiae radicalis infirmae" or "verbs of weak third radical (consonant)", etc.,) although their morphological peculiarities are no longer recorded (infinitive forms, endings) or actually abandoned (syntactic reduplication, "gemination"). Coptic reveals that these verbal classes actually survive, expressed by differences in vocalization. In Coptic, the kind of object construction influences the form (infinitive). The "state"-forms are: (a) without object: "status absolutus" (absolute state), Coptic 𓂏𓂏𓂏; (b) with nominal object: "status nominalis" (nominal or construct state), 𓂏𓂏𓂏-; and (c) with pronominal object: "status pronominalis" (pronominal or presuffixal state), 𓂏𓂏𓂏=. Occasionally the Late Egyptian written forms betray the existence of these state-forms, cf. Winand, *Études*, §§ 73-164.

Verbs can also be classified by meaning, into (a) "fientive" verbs indicating process or activity ("to wash"; "to drop") and (b) "non-fientive" verbs indicating a state ("to be"; "to remain"); or verbs of quality ("to be good"), in Afro-Asiatic languages like Egyptian. The verbs of motion form a sub-class in Egyptian because they have a distinctive morphology.

1 If suffix pronouns are not already used as object following imperatives too, as in Coptic.

Observation:

The transliteration *imm* is a convention, and a transliteration *im/imt* would be strictly speaking more appropriate, because in Late Egyptian (and already even in Middle Egyptian) writings, the $\overline{\text{m}}$ of the earlier $\overline{\text{m}}$ *imt* has been reinterpreted as an allograph of *m*.

(2) Usage

Imperatives are frequently combined, as with the imperatives of “coming” and “going”, combination of imperatives

e.g.,  *i.šm i.wn p3 mhr* “go and open the store room!” (pD’Orb 3,1). The imperative can be strengthened with the particle *my* (originally another imperative),  *i.dd my* “say something!”.

Imperatives can also be construed as in Middle Egyptian with reflexive pronouns (*i.ir tw* “You act!”) or the so-called ethical dative,  *h3c sw n=k* “Leave him on your part!” (> “Leave him alone!”; Wenamun 2,47).

A frequently used expression in address is the combination of an imperative *imm* with a following Late Egyptian subjunctive-prospective *sdm=f*, as in *imm iy=f n=i* “Let him come to me” (LRL 19,13-14). The form is the Late Egyptian precursor of the Coptic Causative Imperative (*imm sdm=f* > *imm ir=f-sdm* > $\text{M}\Lambda\text{P}\epsilon\text{C}\omega\text{T}\bar{\text{M}}$); this term will be used here. Causative Imperative

(3) The negative imperative (Prohibitive)

The prohibitive or negative imperative (“Don’t do this or that!”) is expressed with the aid of the earlier prohibitive *m* with *dt* and *irt*. Already from Dynasty XVIII onward the prohibitive formed with *irt* (*m-irt* > Coptic $\text{M}\Pi\bar{\text{P}}$ -) and following infinitive is the periphrasis of the negative imperative of the relevant verbs (cf. Gardiner, *Grammar*, § 340). Note the analogy of the English prohibitive “Don’t (do ...)!”.

 *m-irt dd=f n=i c n* “Don’t say that to me again!” (Coptic roughly $\text{*M}\Pi\bar{\text{P}}.\text{X}\text{O}\text{O}\text{C}\text{N}\Lambda\text{I}\text{O}\text{N}$). (pD’Orb 4,1)

Note:

gd=f written *gd.tw=f*: either a form of the status pronominalis of the infinitive *gd* or — less probably — a marking of the sound change *gd* > *d* > *t*.

The negation of the Causative Imperative is the prohibitive *m* with the infinitive *dt.t* and the following subjunctive: Causative Imperative

 *m-dy.t iry=n shr m hm=n* “Let’s not make plans when we don’t know (anything)!” (< “in our ignorance”). (HorSeth 2,5)

The form *m-îr* can make its way into the group with *dî.t*, as in *m-îr dî.t ptr=î sw* “Don’t make me look at it!” (Wenamun 2,53). This is the precursor of the Coptic negated Causative Infinitive (*m-îr dî.t sdm=f* > *m-îr dî.t îr=f-sdm*² > ΜΠΡΤΡΕΨΩΤΜ).

Observation:

The imperative of *ptr* “look!” becomes a substitute for the earlier 𐤀𐤍𐤏 *mk*, which, however, continues to appear in the appropriate kinds of texts. Just like *mk*, *ptr* loses its literal meaning, and becomes a particle that somehow “presents” the contents of a statement, something like “You can verify by yourself that it is such-and-such”.

2.2.3 Infinitive and Old Perfective

(1) The infinitive

The infinitive is the most commonly used form of the verb. This is a consequence of changes in verbal morphology, where virtually all the earlier forms have been subjected to the analytic tendency, so that the meaning of the verb (its lexical meaning) is introduced via the infinitive (cf. *infra* § 2.3).

nominal forms
of the verb

As in all languages, the use of the infinitive is defined by its dual character: in terms of content it is a verb, but formally it is a noun. Apart from its specific role in verbal forms (where of course it also appears as a noun, particularly after the prepositions *îr* and *r*), it can thus be used in virtually the same way as any noun (with determination as grammatically masculine).

status
pronominalis

The transitive infinitives of the verbs of the 3ae inf. class reveal usually — but not always — two forms:

1. A form without endings, either with or without an object. (Coptic distinguishes here between the status absolutus **MICE** —

Old Perfective; Stative; Qualitative:

Pseudopartizip: These terms refer to a form where the fientive (“event representing”) verbal content is reduced to a state, condition or quality, e.g., “to come” becomes “to have arrived”; “to do” becomes “to have been done”. The form was described as characterizing “the verbal state in which its subject is” by Polotsky (*Grundlagen des koptischen Satzbaus*, p. 173). Its meaning of condition, state or quality is reflected in the term “Stative”, which is used for the grammatically analogous form - with much the same endings - in Akkadian, while “Qualitative” is used for the corresponding Coptic forms. The German term *Pseudopartizip* was introduced by Erman for the characteristic Middle Egyptian adnominal usage (on the assumption that it assumed the role of a participle in modifying the noun). Gardiner used the term Old Perfective to designate the same form, and these two terms have usually been maintained in each language. The Late Egyptian Old Perfective is already formally and functionally close to the Coptic Qualitative.

2. Occurrences already in Ptolemaic Demotic, then especially in Roman Demotic.

of *msī* “to bear” — and the status nominalis MĒC-);

2. A form with a *-t* ending preceding the object suffix, the status pronominalis (Coptic MACT=), written *-tw=*/*-tī=*, e.g.,  *dt* “give”,  *dt.t=i* “give me”;  *gm* “find”,  *gm.t=w* “find them”;  *mry* “love”,  *mr.t=s* “love her”.

Observation:

The form of the status pronominalis is of course etymologically that of the *t*-infinitives of the 3ae inf. class, where the word-final *-t* is lost in the status absolutus (*ms.t > mī|s̄*), but is recovered when a suffix pronoun is attached since it moves into syllable-initial position (*ms.t=f*, *mīs|t̄f*). As the *t*-ending can, however, sometimes appear in Late Egyptian with 2-rad. (such as *ḏd*) or 3-rad. verbs (e.g.,  *hdb.t=f* “kill him”) as part of a more general tendency of linguistic evolution (being quite common in Demotic), a classification as a particular “state” of the infinitive is appropriate (cf. also § 2.2.1 note.)

— The infinitive can be used as (a) an absolute (cf. Amarna Boundary Stela U, § 2.1.7[1]) specific usage or (b) a dependent noun, or (c) the semantic element in verbal, clause and sentence paradigms (cf. the examples in § 2.1.3[1]; and *infra*). Prepositional uses of the infinitive are also worth particular attention; there is the use

- ° as adverbial adjunct with the preposition *r*: defining the purpose (“in order to”, cf. Wenamun 2,75 in § 2.1.3[1]);
- ° in (*r*-)*ḏd* (“in order to say”) introducing direct speech or a (syndetical) clause of *r-ḏd* content/an object clause (Coptic XE-) following verbs like “report”; “say”; “swear” and the verbs of perception, “see”; “hear”; “recognize”; “know”:

 *iw=w gm r-ḏd iry=f st* “And they found that he had done it” (< * “they found the following: He did it”). (*pJudTurin* 4,2 = *KRI V* 352,7-8)

- Notes: structure D. Sweeney, The nominal object clause, in: *Crossroad*, 337ff (cf. p. 223);
iw=w gm Late Egyptian circumstantial clause with *iw*; historically/etymologically *iw=w* (*hr*) *gm(t)*;
iry=f Late Egyptian preterite *sdm=f*.

Observation:

As in Middle Egyptian, infinitives of verbs of motion are generally (with the exceptions of *šm* and *mš̄c*) not combined with the preposition *hr*, but rather *m* (cf. the sources listed in Frandsen, *Outline*, § 42 note 2). A series of Coptic qualitatives of verbs of motion are etymologically derived from such constructions (Wente, *Verbs of Motion*, ch.3).

(2) The Old Perfective (Stative)

The use of the Old Perfective endings tends to decline in the course of the linguistic history of the New Kingdom. Although the typical Old Perfective morphemes still appear,

particularly in norm-hierarchically higher categories of texts, by the end of Dynasty XX, they were in practice, however, either (a) amalgamated into *-t* (written *-tw*; forms with the *t*-ending are occasionally preserved in Coptic), or (b) completely eliminated. All the graphs of the traditional personal morphemes, together with *-t* and *-∅*, thus become mere allographs marking the Old Perfective or Stative.

The forms are now as follows:

	Traditional endings		Reduced endings	
1. sing. c.		<i>-kw</i> ; <i>-k</i>		<i>-tw</i> ; <i>-∅</i>
2. sing. c.		<i>-tw</i> ; <i>-tī</i>		
3. sing. masc.		<i>-w</i> ; <i>-y</i> ; <i>-∅</i>		
fem.		<i>-tw</i> ; <i>-tī</i>		
1. pl. c.		<i>-n</i>		
2. pl. c.		<i>-tn</i>		
3. pl. c.		<i>-w</i> ; <i>-y</i> ; <i>-∅</i>		

Observation:

The 3rd sing. masc. of the Old Perfective of *dī* “give” is frequently written (hieratic).

An example showing the variants of the Old Perfective endings:

(oPetrie 18 rt.
4-5)

īw=i īr.t 3bd (n) hrw īw=i ħms.k īw=i w^c.∅

“And I have spent a whole month just sitting around by myself” (<*“sitting being alone”).

conditions of
usage

— In (a) the Adverbial Sentence and circumstantial clauses derived from it (with *īw*), and (b) combinations with auxiliary verbs (cf. § 2.2.3[3]) the Old Perfective continues to act as a complementary form of the infinitive. The decline of the Old Perfective endings and the disappearance of the prepositions *r* and *ħr* preceding the infinitive means that the Old Perfective and the infinitive are graphically identical in many cases. In practice, however, it is easy to distinguish them:

- the infinitive of transitive verbs can have an object, but the Old Perfective of the same verbs does not (passive meaning), with the exception of *rħ* “know”;
- the Old Perfective of many intransitive verbs and verbs of motion expresses past meaning, and a state which has been achieved;

- the infinitive with verbs of quality is not frequently used, but appears with a specific meaning: cf. *sw hr snb* “he is becoming healthy” as opposed to *sw snb.w* “he is healthy”;
- the Old Perfective is not used with verbs of eating and drinking, speaking, perception, or those indicating a mental or emotional state.

— Apart from its use in the Adverbial Sentence, the circumstantial clause with *iw* and following auxiliary verbs, the general circumstantial use of the Old Perfective declines considerably in comparison with Middle Egyptian. It is still used relatively frequently to qualify the direct object of a verb of perception (asyndetic clause of content/object clause): *gm=i 3=f wn* “I discovered his door open” (> “I noticed that his door was open”; for the hieroglyphic text and commentary cf. supra, § 2.1.4[4] and infra, § 2.2.6[2]);

specific usage

(Beatty Love Songs vs. C3, 10)

or

*gm=n st wd3* “We found it intact”;

(pAbbott 7,12)

Notes:

gm=n st Late Egyptian preterite *sdm=f* 3rd sing. with enclitic pronoun;structure *sdm=f* + object; object = object clause formed of a pronoun + Old Perfective (or direct object pronoun + attributive or adnominal Old Perfective).*iw=f gm=i hms.kw w^c.0* “And he found me alone”

(pD’Orb 5,1)

(< “he found me sitting and being alone”). A comparison with the example from oPetrie 18, 4-5 (above) emphasizes the more traditional usage in the literary register here;

Commentary note:

iw=f gm=i circumstantial clause *iw=f (hr) gm(.t)* with object suffix *=i*. For *hms* as Old Perfective followed by Old Perfective cf. infra, p.85.**Observation:**

In sentences with the locational adverbs “here” and “there” the Old Perfective follows, e.g., *tw=tn di hms.ti hr ir.t ih m-r3-c* “And what are you up to again here?” (HorSeth 8,3; cf. infra § 2.2.3[3]).

(3) Uses following auxiliary verbs

While the use of the *hr* + infinitive construction and the Old Perfective as forms that modify a statement as a whole (sentence adverbs) declined significantly, they were frequently used — the *hr* + infinitive construction in particular — in verbal combinations, as the complement of a number of verbs of incomplete predication (linking verbs) indicating the manner in which the verbal process is accomplished. This serves as a means of shading and explicating meaning or of separating the expression of aspect or *Aktionsart* from the verbal meaning and is another characteristic of the analytic tendency.

analytic tendency

auxiliary verbs

Among the verbs appearing in these verbal combinations are *ḥpr* “become”, *mḥ* “fill”, *wḥm* “repeat”, *ḥḥ* “carry”, and a few verbs of motion such as *šm* “go”, *ḥy* “come” with preposition + infinitive (*šm* appears with *ḥr* as well as *r*; cf. the remarks about imperative combinations, supra, § 2.2.2[3]). Although also still in use as verbs of complete predication, such verbs lose their original meaning to a considerable extent when combined with other verbs — they appear in these combinations as verbs that need to be completed by other verbs, appearing virtually only as auxiliaries (cf. Gardiner, § 483), as linking verbs (“fill” > “be occupied with”; “repeat” > “do again”; “carry” > “to set out”). An example of the more traditional usage may show how the development started (cf. Gardiner, *Grammar*, § 163 [11]):

(*Astarte 3,y-1*) *ḥw=s ḥr ḥḥ=s r šm r ḥr t3 psd.t* “And she got up to go to the Ennead” (for the text, cf. supra, § 2.1.7[2]).

ḥḥ, ḥmsi, sdr

The effect described can be seen with an infinitive or Old Perfective following *ḥpr* “become”, but especially following *ḥḥ* “stand”, *ḥmsi* “sit”, *sdr* “lie”;³ their usage displays an organized system:

as infinitives

— Where *ḥḥ*, *ḥmsi*, *sdr* are themselves infinitives, followed by a *ḥr* + infinitive construction, they describe the **beginning** (inchoative) or the **repetition** of an act (“to set about”, “begin”, “continue to do something”):

(*Doomed Prince 7,14*)

wn.ḥn p3 šri ḥr ḥms ḥr ḥr.t hrw nfr m p3y=f pr “And then the boy set about celebrating in his house”.

As infinitives followed by an Old Perfective, they describe the **beginning of a state** (“become”, “to be at”):

(*Blinding of Truth 4,5*)

ḥw=s ḥḥ ḥw.r.ti p3y grḥ m wḥ ḥḥ šri “And that night⁴ she became pregnant with a small child”.

as Old Perfectives

— Where *ḥḥ*, *ḥmsi*, *sdr* are themselves Old Perfectives, but followed by *ḥr* + infinitive, they describe the coincidence of action and speech, with the **action already occurring** (“to be occupied with”, “to be doing”, “your word, and I am already at it”):

(*HorSeth 8,3*)

tw=tn d3 ḥms.ti ḥr ḥr.t ḥḥ m-r3-ḥ “And what are you doing here again?”;

3 Rarely also *wḥ* “spend the day at something”

4 Gardiner’s proposed emendation < *m* > *p3y grḥ* is unnecessary (absolute use of a noun expressing time as adverb).

Notes:

tw=tn dʿḥms.ti Late Egyptian Adverbial Sentence (First Present) with subject pronoun 2nd. pers. pl.
tw=tn;

m-rʿ-c for this adverbial phrase, cf. *infra*, § 2.2.4(1).

As Old Perfectives followed by Old Perfective constructions, they describe the coincidence of state and speech, with the **state already existing** (“to find something in a certain state”, “to already be something”):

 *iw=f ḥr gm* (pD'Orb 4,8)

tʿy=f ḥm.t sḏr.ti mr.ti n cḏ “And he found his wife pretending to be ill” (< * “he found his wife, being in the state of being ill deceivingly”); another possible interpretation: “he found his wife lying down, being ill deceivingly”).

Observation:

Certain modes of expression with meanings close to those of the verbs mentioned can be construed similarly, with a similar meaning, as *nn ir=i wnw.t cḥk.w* “I will not spend another hour alive” (Doomed Prince 6,16; cf. also pD'Orb 3,7; 5,1; 7,6).

(4) Use after the negative auxiliary verb *tm*

In Late Egyptian, the negatival complement which followed the negative verb *tm*, and which was a verbal noun like the infinitive, is replaced by the infinitive. The negating function of this verbal combination is derived from the “terminating” meaning of *tm* as a verb of complete predication, “cease”, “end”; “perish”; “destroy”, but also “be complete”; “make complete” (“to be complete” > “to be at an end” > “to be no longer”).⁵ The function of the combination can be understood at an abstract level of meaning (basic meaning) as “to omit to do something”. The construction of this verbal combination is distinct from those functional combinations listed above (§ 2.2.3[3]) in that it is not attached to the infinitive by means of the prepositions *ḥr* or *r*, but rather as an adverbially employed absolute noun.

the infinitive
as Negatival
Complement

As in Middle Egyptian, the construction is used only for the nominal forms of the verb: *tm* takes the form of the infinitive, participle, or nominal/prospective *sdm=f* form. It may be said that *tm* brings a negative noun or a negative nominal phrase (something like **pʿtm ir.t* “the not-do”) into the statement. In the everyday registers of Late Egyptian, it is largely restricted to use as an infinitive and a prospective *sdm=f* in purpose clauses (or a prospective *sdm=f* dependent on prepositions or conjunctions) — which can, however, hardly be regarded as a restriction in view of the extended use of the infinitive.

negating
nominal forms
of the verb

⁵ Cf. W. Westendorf, *Grammatik der Medizinischen Texte. Grundriß der Medizin der alten Ägypter* VIII, Berlin 1962, § 360.

negating
infinitives

A widely used form is thus the negation of the infinitive in “pseudo-verbal constructions”:

(pD'Orb 5,2)

$\dot{\imath}.n=f \dot{h}r \dot{d}d n=i \dot{\imath}w=i \dot{h}r tm sdm n=f$ “(‘Come, and let us lie together a little: loosen your hair!’): so did he speak to me, but I did not listen to him” (<***“but I was non-listening to him”);

Notes:

$\dot{\imath}.n=f \dot{h}r \dot{d}d n=i$ the Late Egyptian form of the “unquote” mark: “‘This and that’, so he said”, with the (redundant) qualification, “so he said, speaking to me”; cf. Erman, *Neuägyptische Grammatik*, § 714;

$\dot{\imath}w=i \dot{h}r tm sdm$ Late Egyptian circumstantial Adverbial Sentence (or: non-initial main sentence) $\dot{\imath}w=i \dot{h}r sdm$ “while I was listening” (or the like), with negative infinitive $tm sdm$ (infinitive of tm and infinitive of sdm).

Negation of the infinitive employed as a noun:

(LRL 22,1)

$\dot{B} \dot{\imath}h t\dot{3} md.t n p\dot{3}y tm h\dot{3}b \dot{\imath}.ir=k n=i p\dot{3} nty <m> h\dot{3}.ty=k$ “What is the matter that you did not entrust me with what is on your mind?” (<***“What is the matter of this not-telling me about what is on your mind, that you did?”);

Notes:

$\dot{\imath}h$ interrogative pronoun, “What?”, as the first noun in a nominal sentence;

$t\dot{3} md.t$ defined second noun in a nominal sentence which is further qualified;

$p\dot{3}y tm h\dot{3}b \dot{\imath}.ir=k$ determined infinitive of tm followed by complementary infinitive $h\dot{3}b$ and relative form $n=i \dot{\imath}.ir=k$ to introduce the actor (the prepositional complement $n=i$ and the relative object $p\dot{3} nty$ belong to $h\dot{3}b!$).

prospective
 $sdm=f$

Widely and characteristically used is also the prospective $sdm=f$ of tm to negate purpose clauses:

(pD'Orb 10,
1-2)

$m-\dot{\imath}r pr r-bl tm p\dot{3}ym \dot{h}r \dot{\imath}\dot{3}=t$ “Don’t go out, so that the sea may not seize you”;

Notes:

$tm p\dot{3}ym \dot{\imath}\dot{3}=t$ prospective $sdm=f$ of tm with a nominal actor or subject in a purpose clause;

$\dot{h}r \dot{\imath}\dot{3}=t$ the use of $\dot{h}r$ before the infinitive is not etymological. The preposition is used here (and elsewhere) as a marker of the infinitive.

2.2.4 Particles, conjunctions, prepositions and adverbs

Only those particles, interjections, conjunctions, prepositions, etc., which appear in examples and exercises, or are not familiar from Middle Egyptian, will be introduced here.

(1) Particles and interjections

The term particle here refers to free morphemes which have no influence whatsoever on the grammatical construction of phrases and sentences.

— The interrogative particle (*i*)*n* with its graphic variants ,  and  is placed at the beginning of independent sentences (sentence conjugations), on occasion also at the beginning of those phrases that are not prepositional phrases; example:

(*i*)*n* *tw*=*i* *r*_h.*k* *p*₃ *i*.*ir*=*f**n*=*w* “Do I know what he did to them?” (LRL 32, 11-12). Questions formulated in this manner as well as questions marked only by intonation are questions for corroboration — they require a decision between a “yes” or a “no” answer.

— *is* and *istw* ( or the like) precede independent sentences, in some way interrupting the continuity of a text (a) by providing a “parenthetical” note or (b) by inserting an adversative component, contradicting, restricting or modifying (“but”, “yet”) a preceding statement. *is* and *istw* frequently introduce an element of doubt into the question: *istw* *i*.*ir*.*tw* *ir*_i *grg* *r*^c*w*-*nb* *d*_i “But does one commit injustice every day even here?” (Wenamun 2,79). Cf. Erman, *Neuägyptische Grammatik*, §§ 676; 677; 736; 737; Hintze, *Neuägyptische Erzählungen*, 199ff.

— *inn* ( or the like) is used before passages of which the first element is an independent clause (sentence conjugation), providing the premise (protasis) for the second part of the sentence (apodosis). In translation, it can thus assume the role of (a) “if” in a conditional clause, or (b) “when” in a temporal clause.

— *p₃-wn* ( or the like) precedes independent sentences, particularly Adverbial Sentences (First Present), transforming these into propositions explaining a preceding sentence (“for”); note that *p₃-wn* is a particle co-ordinating independent sentences, like “for” in English.

— *r₃-^c* as part of a compound preposition with *m* follows the word or clause to which it refers (Coptic **PO**), as an adverbial of concession or admission: “still”, “yet”, “however”, “(even) though”, “nevertheless”, “all the same”: *mntk* *m*-*r₃-^c* *mntk* *b₃k* *n* *Imnw* “And you also, you are a Servant of Amun” (Wenamun 2,32); *ptr* *tw*=*i* *c*_n*h*.*kw* *m*-*r₃-^c* “Look, I’m still alive” (pD’Orb 15,8). Cf. also Erman, *Neuägyptische Grammatik*, § 683.

— *r₃-pw* is used alone or in a compound preposition with *m*, as a particle of disjunctive co-ordination of phrases (“or”), or of clauses (“or”, “otherwise”, “else”). It can be found alone, between or following the co-ordinated phrases; the compound preposition *m*-*r₃-pw* separates the two (*p₃mz_h* *m*-*r₃-pw* *p₃h₃w* “the crocodile or the snake”, pD’Orb 4,4).

hn; h3n3

— *hn; h3n3* (𓏏𓏏𓏏 or the like) precedes independent sentences (sentence conjugation-s). Preceding Adverbial Sentences (First Present) without a following sentence, it can express an unreal wish: “If only ...”. Where these main-clause constructions are part of a sentence with an independent clause as protasis followed by an apodosis, formed with a *iw*-phrase or *wn* + *iw*-clause of future statement (Third Future), one can speak of a hypothetical conditional sentence: *hn mʷw.t rh.ti ib=i iw=s Cq.ti n=s r nw* “If only mother knew my heart, it would have occurred to her before.” (Beatty Love Songs vs.C4,3; cf. infra § 2.2.6[2]). The particle can also be joined to the imperative supporter *my* (cf. supra § 2.2.2[2]; *hn-my* > Coptic 𓂗𓂗𓂗𓂗). Cf. Satzinger, *Neuägyptische Studien*, § 1.4.2.2 (109ff).

hr

— *hr* (𓏏) is used frequently, sometimes alone, but also in association with other particles. In a variety of ways, it emphasizes contingency or the conditionality of a statement concerning a situation which has been mentioned, or conditions within it, frequently by way of contrast. This leaves considerable room for manoeuvre in translating, possibly (a) by using “but”, “also”, “and”, “then”, “therefore”, etc; or (b) by syntactic means. This linking particle should not be confused with the preposition *hr* “with”. Cf. Erman, *Neuägyptische Grammatik*, §§ 666-674, and L. Depuydt, The Contingent Tenses of Egyptian, in: *Orientalia* 58, 1989, 1ff; id., *Conjunction*, 201ff; Neveu, *La particule hr*.

k3

— *k3* (𓏏𓏏 or the like) is also a contingency particle, preceding the independent prospective *sdm=f* (expressing a wish, command, or desired future event), emphasizing its effect of sequentiality or relative future time which can be rendered with “then” in translation. It also appears in “if - then” relationships, as in the classical balanced sentences of the type *mdw=s k3 rwd=i* “Should she speak, I will grow”.

gr

— *gr* (𓏏, Coptic 𓂗) is an adverbial particle, which means “also”, “likewise”, “moreover” if placed at the end of the sentence. Followed by an independent pronoun, it emphasizes an earlier pronominal reference, “I too”, or similarly, negated, “not me either”. Cf. Černý/Groll, *Late Egyptian Grammar*, § 2.1.6; Erman, *Neuägyptische Grammatik*, § 682.

(2) Conjunctions

Conjunction is the term used here for those morphemes which play governing roles in constructions.

in; m

— *in; m*: as in Middle Egyptian, the Late Egyptian *in* introduces cleft sentences/participial statements. Besides *in* there is an *m* that serves in the same role: *in/m X i.ir Y* “It is X who did Y”. Although there is a phonetic or phonemic relationship between the two, there does appear to be a significant difference in role: *in* introduces nouns which refer

hn^c indicates co-ordination between defined elements (“and”) and therefore does not tend to be attached to a suffix pronoun (except in the more “style-conscious” texts): *gm=f sw m.dī ḥ.tī-s:ntr NN hn^c n3 iḥ.w wn irm=f* “He found it in the possession of the incense-burner NN, and of the thieves who were with him” (pBM 10052, 4,17-18). *irm* co-ordinates within phrases, fulfilling the function of “to be together with someone”, “to do something together with someone” and is frequently a verbal rection: *ḥmsī irm* “to live with someone”; *wnm irm* “to eat with someone”. Cf. Erman, *Neuägyptische Grammatik*, §§ 194-196; 620; Černý/Groll, *Late Egyptian Grammar*, §§ 7.1.10; 7.1.11.

Observation:

hn^c ḏd introduces a different subject in a letter (“and furthermore: ...”).

m.dī

— *m.dī/mdi* (Coptic $\bar{N}\Gamma\epsilon$; $\bar{N}\Gamma\lambda$) has many uses, basically revolving around the concept of being “with” someone. Graphemically at first, and then functionally, it coalesced with *m^c* (to take “away from” someone, etc.). More specifically, *m.dī/mdi* can have the following meanings (cf. Erman, *Neuägyptische Grammatik*, §§ 622-625; Černý/Groll, *Late Egyptian Grammar*, § 7.3.1):

in the
Adverbial
Sentence

1. in the sentence-forming (predicative) prepositional-phrase component of the Adverbial Sentence (noun *m.dī* noun), “someone or something is with someone or something”, as in *iw=s m.dī NN*, “and she lives with NN” (< “is with him”), or *bn sw m.dī=i* “I don’t have it” (< “It isn’t with me”); also in figurative uses (“to be with someone” in the sense of “to be in relation to someone”): *tw=k m.dī=i m^c3* “As far as I am concerned, you are a donkey” (< * “You are a donkey with me”).

as adverbial
adjunct

2. as the adverbial adjunct of verbs (verb *m.dī* noun), as *iw=tw ḥi3 m.dī=f* “and one argued with him”, especially as a verbal rection that alters meaning: *ini m.dī* “to acquire, to buy from someone”; *šzp m.dī* “to receive from someone, through someone”; *mdw m.dī* “to have a claim against someone”; *sdm m.dī* “to listen to someone”, “to overhear someone”.

coordinating
phrases

3. in combination with the particle *hr* (𓆎), *m.dī* co-ordinates phrases which are separated from each other, “and also”, “just as” etc.: *bw rh=i st nb ... wpw p3y hr nty wn hr m.dī t3y^c.t ...* “I know of no place ... except for this tomb, which is open, and also this house ...” (pAbbott 5,7-8); cf. Erman, *Neuägyptische Grammatik*, §§ 196; 672.

(*r*-)*qrī/q3l-n*

— (*r*-)*qrī-n* or (*r*-)*q3l-n* ($\text{𓆎} \text{𓆏} \text{𓆑} \text{𓆒}$; also $\text{𓆎} \text{𓆏} \text{𓆑} \text{𓆒}$) is a compound preposition formed from the infinitive of the verb *qrī/qrī n/r* “to reach someone”, meaning “(to be) with/near someone”. This preposition can appear either (a) as the rection of verbs or (b) as an adverbial (cf. Erman, *Neuägyptische Grammatik*, § 657): *iw=i šm q3l-n=f* “And I went to him” (Wenamun 2,22).

— $(r-)šš^c-m/(r-)šš^c-r$ are compound prepositions formed with the infinitive $šš^c$ “to begin”, with both spatial and temporal meaning, which also replace several uses of the simple preposition r . $šš^c m/r$ refers to a point of departure (“from there, thence”, “since then”), it can be used alone, $šš^c m šbw$ “from Elephantine”, or, combined with r or $nfr̄y.t$ r , to define both limits: $šš^c m mp.t 1 r mp.t 31$ “from Regnal Year 1 to Regnal Year 31”. $(r-)šš^c$ indicates some point of termination (“as far as such-and-such”): $r-šš^c nh̄h$ “until eternity”; $šš^c Nw.t$ “as far as ‘the Town’”.

(4) Adverbs and adverbials

Adverbs — mostly prepositional phrases or prepositional combinations performing adverbial roles — are essential elements of sentence structure, and thus very common. They can be joined together in long chains which occasionally have complex structures themselves. They are generally used at the end of the sentence in Late Egyptian, too, appearing only exceptionally at the beginning, where they are usually introduced by 𓂏 $īr$.

There are only a few real adverbs: $dī$ (𓂏 𓂏) “here” (Coptic ΤΑΙ, ΤΗ), $īm$ “there”, with its variant writings 𓂏 , 𓂏 , also 𓂏 ; Coptic ΜΜΑΥ), $š$ “quickly”, $qš$ “correctly”, $^c n$ “again”, and others derived from the relevant verbs, as well as the interrogative adverb, tnw “where?” (Coptic ΤΩΝ). $dī$, and also $īm$, generally precede other adverbs and prepositional phrases.

The most important adverbial phrases are the prepositional phrases: (a) the ‘conventional’ ones formed from simple or compound prepositions with defined nouns; (b) those formed from simple prepositions and class-nouns (cf. supra § 2.1.3[2]) which begin to establish a new set of compound adverbials, $m-mn.t$ “daily” (Coptic ΜΜΗΝΕ); $m-pš-hrww$ “today” (ΜΠΟΟΥ); $r-bl$ “outside” (ΕΒΟΛ); $m-hnw$ “within” (ΝΖΟΥΝ) or $r-hnw$ “into, inside” (ΕΖΟΥΝ); and many others.

As in Middle Egyptian, many nominal expressions of time are still used absolutely (without preposition) to fulfil the role of an adverb, e.g., $r^c w-nb$ “every day”: $tw=i dd n nš ntr.w r^c w-nb$ “I pray to the gods daily”. Used absolutely as adverbials nominal expressions of location also occasionally appear; such cases are usually attributed to the loss of prepositions, but this is unnecessary.

2.2.6 Exercises

(1) Love poetry (pChester Beatty I vs. C1,8 - C2,4)

The second of a cycle of seven interrelated poems. Written in the reign of Ramesses V, they were published by Gardiner, *pChester Beatty I* (pls. XXIIa-XXIIIa). Each of the three stanzas of the piece consists of six verses, divided by verse points. The entire cycle bears a single title, with each individual poem numbered, where the first and last words form a word play with the relevant number, in a kind of “rondeau”. A man and a woman speak alternately, with the woman speaking in the two following poems.

Purpose: Example of lyrical language of Dynasty XX, a literary variety of Late Egyptian with interference of more traditional expressions (*nm rh=ī*, use of *mk*, demonstrative *nfi*); numbers; infinitives and Old Perfectives.

Notes:

- vs. C1,8 *ḥw.t* “house”, but as written here meaning “stanza” or “chapter” (cf. Arabic *bayt*); *sn* “brother” echoes with *snw* “two”; *s:βḥ* “confuse”; “sink”. (A hapax legomenon causative of *tβḥ* “sink”; “be dipped” > Coptic **ⲧⲠⲨ** “confuse”);

- dł=f* Late Egyptian preterite *sdm=f* (past expression, cf. also *lł C2, 1*); *dł ły n=l h̄y.t* “cause distress to importune me”;
- sw m s̄h-t̄* Late Egyptian Adverbial Sentence without introductory particle (note the relationship of grammatical number with the preposition *m*: first noun sing. + *m* + second noun pl. means something like “someone is one of those”;
- vs. C1,9-C2, 1 “Mother ought to be good about my affairs where it is to be overlooked” (< * “Fine should mother be in my affairs concerning that which to observe is better omitted”); *l.h̄i^c m̄}̄=s* as passive participle whose object is an infinitive (*m̄}*) with its own direct object (=s) as the necessary resumptive pronoun: * “that which seeing it is (better) omitted”;
- vs. C2, 1 *sh̄}.tw=f*: if *h̄gn* is an Old Perfective (as is probable since it is a verb of quality; cf. WB s.v. Belegstellen), then *sh̄}.tw=f* is a traditional circumstantial *sdm=f* (“when thinking about him”);
- mrw.t=f* status pronominalis;
- vs. C2,2 *l̄w.l̄-l̄b=f* (Coptic ΔΤ-ᲠHT) “foolish” (< * “one whose mind does not exist”);
- l̄w swt l̄w=l m̄}̄ qd=f*: circumstantial form of the Adverbial Sentence (circumstantial First Present) introduced by the particle *l̄w swt*, subordination understood as contrastive: “I, however, I am like him” (< “[he is indeed foolish,] but I too am like him”);
- bw-rh̄=f*: so-called Negative Aorist; Late Egyptian form of Middle Egyptian *n sdm.n=f/n rh̄=f*: to be unable to do something, essentially “not to know” something;
- šy h̄p=f* “the wish to embrace him” (< * “the wish of embracing him”);
- mtw=f-h̄}̄b*: so-called Conjunctive, a form for joining one statement with a previous one (mostly an imperative or a future tense, here a wish): “and that he may appeal to NN” (< “and that he may communicate”);
- vs. C2,3 *tw=l̄*: 1st sing. subject pronoun of the Late Egyptian Adverbial Sentence (First Present), replacing the earlier enclitic (dependent) pronoun in this usage;
- nbw hm.wt*: “women’s gold” meaning the goddess Hathor, the protectress of lovers;
- m̄}̄=l̄ nfr.w=k*: prospective *sdm=f* of purpose, “so that ...”;
- ršw.t* for *ršw*; here — as in the following — prospective *sdm=f* of purpose parallel to *m̄}̄=l̄*.

(2) Another love poem (pChester Beatty I vs. C3,10 - C4,6)

The sixth poem of the same cycle of love poems, published *ibid.* pls. XXIVa - XXVa.

Purpose: Example of lyrical language of Dynasty XX, a literary variety of Late Egyptian with interference of traditional expressions (such as *nn m̄l̄.t.t=f* and participles without *l̄*-prefix); numbers; imperative, infinitives, Old Perfectives; preposition *r* + infinitive; particles; interjections; conjunctions.

Notes:

- vs. C3,10 *s:w̄}̄=l̄ n=f*: Late Egyptian preterite *sdm=f* “I passed by on his behalf”, with the word play of *s:w̄}̄* “pass by” with “six” (earlier *srsw/slsw*, here fem.), revealing that it has already come close to the Coptic word (COOY);
- vs. C4,2 *m-ḡr zny=l̄/ m-ḡr zny.n=l̄*: conjunction *m-ḡr* + *sdm=f* “when I pass/as I passed”. The apparent appearance of a *sdm.n=f* form has two background conditions: (a) the phonemic structure of the word (*znl* can be graphemically recorded *zny/znn*, and thus read *znn=l̄ > zn.n=l̄*); (b) since *sdm.n=f* can appear as a variant of the Late Egyptian

preterite *sdm=f* in texts of this registers, thus it is also an occasional variant, where the *sdm=f* is the subjunctive-prospective *sdm=f*;

tw=ł w.kw rnhm: Late Egyptian Adverbial Sentence (First Present), with the 1st sing. personal pronoun *tw=ł*; *wł r* + infinitive “to do something alone”; note *hntš m* “to delight in something, to enjoy something”;

- vs. C4,3 *qr mš=ł*: preposition with infinitive + pronoun object (“since the seeing me”); altogether: “How my heart bursts with joy, my brother, when you become aware of me!” (< “How my heart delights in joy, my brother ...”);

łw=s q.tł n=s: the first *=s* (written *st*) summarizes the whole previously described situation; *q n* “enter”, “something enters into someone”, here as “entering” into someone’s consciousness, “become clear, occur to someone”;

- vs. C4,4 *hn=ł* is a prospective *sdm=f* introducing a sentence, *znnj(=ł)* < *sn=ł* the same or a prospective *sdm=f* of purpose (“so that”): “then I would hurry so that I might kiss him” or “then I would hurry and kiss him”. The following *sdm=f* forms are all independent prospectives, in the sense of hypothetical statements (“should” or similar);

łm is a writing variant of *ml* “weep”; here weep out of embarrassment;

bw ml=ł n mlł: in Late Egyptian so-called Negative Aorist *bw sdm=f/bw łr=f-sdm* (cf. infra § 2.3.2[3]): to be unable to do something);

- vs. C4,5 *tw=k rħ=ł*: Adverbial Sentence (First Present) with the infinitive of *rħ* (“know someone”, “acknowledge someone”, then even “stand with someone”);

łry=ł; tfl łb=ł: preterite *sdm=f* forms (“I had a party arranged and my heart urged that this-and-that should be done”);

- vs. C4,6 *rrđ.l gmħ=ł*: so called Causative Infinitive (“to let me see” < “to cause that I see”);

nfr-wł is a possible Late Egyptian writing of *nfr-wł* (cf. Erman, *Neuägyptische Grammatik*, § 684), but here it can still be reduced to the adjectival sentence *nfr-wł sł/sw*.

2.3 The construction of verb forms

2.3.0 Periphrasis and its spread

The combination of a auxiliary verb and an infinitive (cf. supra, § 2.2.3[3]) can be so close that the meaning of the former is lost completely, and its function is reduced to that of constructing particular forms of the verb. In a way, such paraphrase with an auxiliary, known as “periphrasis”, is already a possible description of the constructions with *tm* (considering *tm* as a pure grammatical function expressing negation rather than as a verb with the meaning “to omit to do something”). In Late Egyptian, *łr* (in the following abbreviated in transliteration to *łr*) becomes increasingly common as a fully grammaticalised auxiliary verb of this type. periphrasis

Replacing the synthetic constructions of the verbal conjugations by periphrasis is again a symptom of the analytic tendency in linguistic evolution (cf. § 2.0.1). It is now *łr* that is conjugated while the verbal content proper is expressed by the infinitive (“isolation of inflexion”, *Flexionsisolierung*);⁶ it is thus the verb *łr* that retains the traditional conjugation forms, while the specific meaning is conveyed via the infinitive as the object analytical tendency

of *ỉrỉ*. Structurally *ỉrỉ* takes over the conjugation, becoming the conjugation base;⁷ the infinitive has become the meaning expression. Formally it might be represented as follows:

Conjugation modifier	Conjugation base	Actor expression	Meaning expression	
∅	<i>ỉr</i>	=f	<i>sdm</i>	“He heard/has heard”
<i>bw</i>	<i>ỉr</i>	=s	<i>mdt</i>	“She does not speak”
<i>r-š3^c</i>	<i>ỉ.ỉr.t</i>	=k	<i>ỉy</i>	“until you come”

Such uses of infinitives as that in *ỉw=f ỉr sdm* can result in an analogical transfer of *ỉr* to forms with *ỉrỉ*, where the preposition does not properly belong, as if *ỉr* has become a kind of “meaning expression marker”, as in  *bw ỉr=k ỉr sdm* for *bw ỉr=k sdm* “You didn’t hear” (pLansing 8,3).

multilateral verbs

The *ỉrỉ*-periphrases began at an early date with the multilateral verb roots, and in Late Egyptian they prevail initially in negative forms (cf. the prohibitive/negated imperative, § 2.2.2[3]), and only gradually in affirmative forms, so that the entire transformation is really accomplished only in Coptic.

Observation:

In the *ỉw=f ỉr sdm* construction (Third Future) with nominal actors *ỉw* is replaced by a form written  *ỉr* (Coptic **ΕΡΕ-**). Note that this is a phonemic-graphemic variant which has no connection with the periphrasis (cf. Gardiner, *JEA* 16, 1930, 220ff).

2.3.1 Paraphrased relative phrases

The periphrasis of active (but not passive!) participles occurs in those verbs with more than three root consonants, but can also already be observed in shorter roots. Here during the New Kingdom these remain replacement forms of the imperfective participle. The following examples also represent a particular form of the Late Egyptian participial statement, the Cleft Sentence introduced with *m* (cf. Erman, *Neuägyptische Grammatik*, § 386 and supra, § 2.2.4[2]):

(pD’Orb 4,7)

m p̄y=k sn šrỉ ỉ.ỉr qnqn(=ỉ) “It was your younger brother who beat me”;

6 See Polotsky, *Grundlagen des koptischen Satzbaus*, 171 (§ 5).

7 Cf. Polotsky, *Grundlagen des koptischen Satzbaus*, 175f.

(Wenamun 2,61-62)

ih n=k nkt “Your outfitting is what brings profit to you” (< “brings things”).

The same with the relative form:

(pSalt 124 rt. 1,6)

[*ih.t n*] *wḏ3 n nzw* (*Stš.y Mrī.n-Pth*)^c. *w.s ih̄r=tw gm.t=w m.dī=f hr-s3 zm3-t3* “[the things of] the storehouse of King Seti I, which were found with him after the funeral”;

Note:

ih̄r=tw gm.t=w =*tw* as impersonal subject of the relative form (or the *-tw* ending of the passive relative form); the object (=w) of the infinitive of *gmī* in the status pronominalis is an indirect resumption of the nominal antecedent (*ih̄t*) of the relative form.

2.3.2 The forms of the Late Egyptian *sdm=f*

The *sdm=f* in the narrow sense of the term is a common Late Egyptian form used to make statements about the past. Functionally, it corresponds to Middle Egyptian (*ih̄w*) *sdm.n=f* (cf. infra, § 3.2) and expresses past tense (“I did”) as well as perfect tense (“I have done”); it is termed the “preterite” *sdm=f* here.⁸ The range of other forms following its construction principle is limited in Late Egyptian: along with the preterite *sdm=f* there is the nominal or emphatic *sdm=f*, and a *sdm=f* form which follows the negation *bw* (<*n*). A *sdm.t=f* form follows the preposition *r* and the same negation *bw*. In Late Egyptian, *ih̄r*-periphrasis with the preterite *sdm=f* is limited to verbs with more than three root consonants (*ih̄r=f qnqn=i* “he beat me/he has beaten me”), but it has generally taken hold of most of the other *sdm=f* forms. The evolution becomes complete in Demotic and Coptic, with *ih̄r=f sdm* > **ⲁⲢⲤⲱⲧⲙ**.

(1) The nominal or emphatic *sdm=f*

In texts higher up in the register hierarchy, the nominal *mrr=f* and the nominal *mr.n=f* *mrr=f/mr.n=f* continue to be used as in Middle Egyptian; in Late Egyptian, therefore, imperfect and prospective forms can likewise be concealed in the invariable *sdm=f*.

Late Egyptian proper, however, uses a *sdm=f* form with the root extension prefix *ih̄r* - *ih̄r.sdm=f/ih̄r.f sdm* instead. Except with *ih̄r*, the simple form of this construction is rare, being restricted to

⁸ Compare, however, Frandsen, *Outline*, and Černý/Groll, *Late Egyptian Grammar*, who use the term “perfect active” *sdm=f*.

a few verbs (*đl*; *iw*; *šm*; *inl*; *đd*). The form generally used is based on a periphrasis with *ir*: *ir=f sdm*, which is closely related in form to the Late Egyptian relative forms.⁹

function

In Late Egyptian, the functions of the traditional forms also coalesce: *ir=f sdm* is employed for past, present and future. It remains, however, characteristic of this nominal *ir=f sdm* that the semantic weight of the verbal expression is reduced, but that of the adverbial expression is increased — as in Middle Egyptian (stress, emphasis).

(Wenamun
2,3-5)

iw=f wšb đd n=i ir=k iy hr ih n šhn

iw=i đd n=f ir=i iy m-s3 t3 t.t n p3 wš3 šps n Imnw-R^cw nzw ntr.w

ir pšy=k it

ir p3 it n pšy=k it

iw=k ir=f m-r^c

“And he responded, asking me, ‘Because of what orders did you come?’ And I said to him, ‘It was because of the wood for the Great and Noble Bark of Amonrasonther that I came! What your father did, and your grandfather did, you too will do!’”

Notes:

hieroglyphic transcription the sign of the circle (Gardiner N 33) with *iy* represents the hieratic “dot” (which can stand various for *-t*, *-y* and even the “seated woman” [Gardiner B 2]). Occasionally this transcription of the dot will again be used in the examples to follow;

iw=f wšb đd n=i the form of *iw=f hr wšb hr đd n=i* common by now;

iw=k ir=f future form of the *iw*-sentence (Third Future), for *iw=k r ir=f*;

structure the main point is expressed with the preposition *hr* and the interrogative pronoun *ih* (i.e., *ih* with nominal attribute) in the question, the counterpart of which is the prepositional phrase *m-s3 t3 t.t* in the response, which is in exactly the same syntactic role.

(pMayer A nt.
2,19)

m šr “When my father was killed, I was still a child”;

Notes:

ir.w hdb passive *sdm* in nominal function paraphrased with *ir*, or possibly a writing for *ir=w hdb* “When they killed my father”;

iw=i m šr circumstantial form of the Adverbial Sentence (Circumstantial First Present);

9 Cf. — as a *locus classicus* — H. J. Polotsky, *Études de syntaxe copte*, Cairo 1944, 69ff.

structure and translation the main point is the statement of “still being a child”, expressed by the circumstantial form. The reduced semantic weight of the verbal expression can be represented in translation with a subordinate clause (“when”).

(2) *sdm.t=f* as conjunctive phrase (Terminative)

The form *sdm.t=f* is still comparatively uncommon, as in Middle Egyptian, appearing in the texts higher up in the register hierarchy with the preposition *r* (“until he hears”) and sometimes also with other prepositions. Gradually however, this is reduced to a fixed combination (*r-sdm.t=f*), which then adopts the periphrastic form *r-īr.t=f-sdm*.

With the disappearance of the free use of *sdm=f* forms after prepositions, the systematic context (paradigm) is lost, and the *r* reduced to an integral element of the fixed combination, becoming virtually a conjunction. As in other forms (relative phrases, nominal *sdm=f*), the grapheme *r* can also be replaced with the allograph *ī.-*:

r-īr.t=f-sdm becomes *ī.īr.t=f-sdm*.

ḏd ḃ.ty ī.tḃy tḃy s.t-ḥm.t ḏmm sw m rmt-sḃw ī.īr.tw=tw gm ḏḃw-rmt r s:ḥ^cs “The Vizier said, ‘Seize this woman. Make her a prisoner until a thieving person is found to testify against her.’”

Notes:

ḏd NN preterite *sdm=f*;

ī.īr.tw=tw gm for *ī.īr.t=tw gm*, the passive form of the periphrasis for *r sdm.t=f*; or use of the impersonal pronoun *=tw* as actor expression of the *ī.īr.t=f sdm* form.

In the combination *r-īr.t=f sdm*, it is the conjunction *r* that determines the meaning (function) of the form; therefore its phonemic reduction (Coptic ϵ -) is countered by using the preposition (*r*-) \mathfrak{S}^c , which is functionally equivalent to *r* in many respects. The conjugation form \mathfrak{S}^c -*ī.īr.t=f-sdm* (further abbreviated \mathfrak{S}^c .*tw=f-sdm*, in Demotic occasionally \mathfrak{S}^c -*mtw=f-sdm*) which thus developed is the Late Egyptian precursor of the Coptic Terminative ($\Psi\text{ANT}\bar{\text{C}}\text{C}\text{U}\bar{\text{T}}\bar{\text{M}}$); this is also the term used here for the form.

ḏmm ḏn.tw=f ḏḃ^c-ī.īr.tw=ī ḏm r rsy mtw=ī ḏl.t ḏn=tw n=k pḃy=k gb nb zp-2 m-r^c “Let it be brought until I go south and have all your expenses repaid!”;

Notes:

ḏn.tw=f and *ḏn=tw* passive forms of the subjunctive-prospective *sdm=f*;

mtw=ī ḏl.t Conjunctive: a form which continues the imperative, optative and infinitive.

(3) Negations: the Negative Aorist and the “not-yet” form

*n sdm.n=f/ n
sdm.t=f*

As with the negated imperative (prohibitive, cf. supra, § 2.2.2[3]) the *ir̄*-periphrasis was employed in two forms of the earlier *sdm=f* construction which were used to express a specific kind of negation: in the successors of *n sdm.n=f* (“he was unable to hear”) and *n sdm.t=f* (“before he hears/heard”; “he has not yet heard”), the Middle Egyptian negative particle — is replaced with the Late Egyptian 𓂏 , and the *sdm=f* forms by their *ir̄*-periphrasis: *bw ir̄=f-sdm* “he was unable to hear” and *bw ir̄.t=f-sdm* “before he hears/heard”. It is, however, possible that the *bw* is merely another grapheme for *n*¹⁰ (the Coptic negative particle is once again $\bar{\text{N}}$ -).

*bw sdm=f/
bw ir̄=f-sdm*

Like the Middle Egyptian *n sdm.n=f*, the Late Egyptian *bw sdm=f/bw ir̄=f-sdm* forms negate statements concerning “characterizations, statements of custom, generalizations” (Gardiner, *Grammar*, § 418). They express inability to do something, or deny that a particular situation is ordinary, and are thus designated as the Negative Aorist. The construction appears as *bw sdm=f*, generally in the case of the verb *rh* (*bw rh=k* > Coptic $\text{ME}\omega\lambda\text{K}$), and sometimes also in the text registers towards the top of the hierarchy (in the case of *dī* often written as $\text{𓂏}\text{𓂏}$); in such texts *bw sdm.n=f* can also be found in this construction, as a direct analogy to the old *n sdm.n=f*. The form *bw ir̄=f-sdm* is the Late Egyptian precursor of the Coptic $\text{ME}\epsilon\text{C}\omega\text{T}\bar{\text{M}}$. Examples:

(*Beatty Love
Songs vs.
C2,2*)

bw rh=f n̄y=ī 3by h̄pt=f “He does not know my wishes to embrace him” (< “my wishes of embracing him”); for the hieroglyphic text, cf. supra, § 2.2.6[1]);

(*Beatty Love
Songs vs.
C4,4*)

bw rm=ī n rm̄t̄ “I certainly do not weep because of the people” (within the cotext hypothetical, “I would be certain not to weep”; for the hieroglyphic text, cf. supra, § 2.2.6[2]).

(*Wenamun
2,65*)

(*i*)*n bw ir̄=k-pt̄r n̄ 3 ḡš ī.ir̄-ir̄t̄ zp-2 n h̄y r Km.t* “Can you not see the migrant birds who have already flown down to Egypt twice?”

Notes:

(*i*)*n* for the interrogative particles *n*, *in*, cf. supra, § 2.2.4(1);

ir̄t̄ zp-2 n h̄y **“make two times of descending”.

preterite *bw
sdm=f*

It should be noted that along with the Negative Aorist there is another non-periphrastic *bw sdm=f*. Derived from the Middle Egyptian *n sdm=f*, it is common in literary texts and is a way of negating past statements. It can be recognized morphologically in the verb

10 The phonemic significance of — and the relationship between — *n* and *bw* has given rise to many different interpretations.

ỉw/ỉw “come”: for the preterite *bw sdm=f*, it is *bw ỉw=f*; for the Negative Aorist, it is *bw ỉw=f*.

The form *bw sdm.t=f* (thus especially, with verbs of motion), or *bw ỉr.t=f-sdm*, is rare; *bw ỉr.t=f-sdm* it describes a situation which should have already arrived, but has not done so at the time of speaking. *bw ỉr.t=f-sdm* is the Late Egyptian precursor of the Coptic $\overline{\text{M}}\overline{\text{P}}\overline{\text{A}}\overline{\text{T}}\overline{\text{C}}\overline{\text{C}}\overline{\text{O}}\overline{\text{T}}\overline{\text{M}}$. The passive is *bw ỉry.t* + subject.

 *bw ỉr.t=k dd p3 rmṯ* “You have not yet mentioned the man.” (LRL 72.13)

Note: *bw ỉr.t=k dd* “not yet” form of *dd*, “you have not yet said”, here in a writing of *bw ỉr.tw=k* shortened to strokes.

(4) Passive forms

Late Egyptian passives are in a way still construed like the Middle Egyptian forms: morphology

1. there is the passive *sdm* (*sdm.w* passive), which usually shows graphemically the same form as the root itself. *ỉr* (“do”, and as periphrasis verb) is generally written  *ỉr.w*, but also  *rd*; “give” appears as  *dd.tw* or the like, and *gm* “find” very often has . An example of a nominal *sdm=f* in the passive: *ỉ.ỉr.w hdb p3y=i ỉt ỉw=i m šr* “When my father was killed, I was still a child” (cf. (pMayer A rt. supra, § 2.3.2[1], for hieroglyphic text and commentary notes). 2.19)
2. there is the *sdm.tw=f* passive; the stem of the verb receives a *-t* ending (written *-tw*, *-t*), followed by the logical subject, which, if pronominal, takes the form of a suffix pronoun. This is the most common form of the passive construction: *ỉmm ỉn.tw=f š3^c-ỉ.ỉr.tw=i šm r rsy mtw=i d.ỉt ỉn=tw n=k p3y=k gb nb.t zp-2 m-r3^c* “Let it be brought until I go south and have all your expenses repaid” (for the hieroglyphic text, cf. supra, § 2.3.2[2]); (Wenamun 2.36-37)

Note:

ỉn.tw=f and *ỉn=tw* *-t*-passive forms of prospective *sdm=f* as subjunctive following forms of *d* (imperative or infinitive).

3. in some respect and with many peculiarities of its own, there is the Old Perfective of transitive verbs (originally a medial voice), cf. § 2.2.3 (2).

Although closely related to the Middle Egyptian passive, the usage of the various forms has undergone changes. Originating from the passive of Middle Egyptian (*ỉw*) *sdm.n=f*, the Late Egyptian perfect passive *sdm* is as it were the “natural” passive form of the preterite *sdm=f*, but it is not widely used in everyday registers, its role being virtually restricted to the formulae of legal texts: *ỉn.w NN* “NN was brought (for interrogation)”; *dd.wn=f^cnh n nb* “he was made to swear by the lord”. The broader role of the form is taken over by the preterite *sdm.tw/sdm=tw* form: the real Late Egyptian passives are the *sdm.tw* forms. relative frequency

peculiarities
of the passive
ending *-t*

As in many languages, the Egyptian passive originally permitted the actor or subject to remain unidentified, if the speaker so desired. The *sdm.tw* forms, however, can only be admitted as a passive in the strict sense when a suffix appears as the object or "logical subject": (*in.tw=f*). In general, it is in fact more justifiable to take them as active forms with an impersonal actor *=tw* (*sdm=tw p3 zī* "one interrogated the man", rather than *sdm.tw p3 zī* "the man was interrogated"),¹¹ by analogy with (a) the "Adverbial Sentence" (*tw=tw hr sdm* "one hears"); (b) the *īw*-forms (*īw=tw hr sdm* "and one hears/while one hears"). This same tendency is paralleled by the use of the active form with the 3rd pers. pl. pronoun *=w*: *sdm=w sw* "They interrogated him/he was interrogated"; in Coptic this replaces the passive completely.

2.3.3 Prepositional formations as conjugation substitutes

prepositions
and verbal
forms

A significant characteristic of Middle Egyptian sentence construction was the possibility of employing nominal verb forms¹², in the same way as nouns and infinitives, as satellites of prepositional nuclei, rendering the verbs dependent on the prepositions: *hr m33=f*; *m mrr=f*; *hft sdm.n=f*. This type of usage disappears in Late Egyptian, being preserved only

in those prepositional formations characterized by fusion, where verb and preposition are no longer separate paradigmatic entities. These are the combinations of the prepositions

Subject/Agent/Actor; Object; Rection; Semantic complements/ arguments: Important for syntax and translation is the type and number of the possible complements of the verbal meaning, which define the semantic valency of the verb. Verbs without objects (intransitive verbs) have a valency of one: only the subject role is occupied ("X goes"). Verbs which require an object in addition to their subject (transitive verbs), and those which permit an object, have a valency of two ("X presents Y"). Verbs which require yet another complement have a valency of three ("X gives Y Z"; or "X presents Y with Z"). In Egyptian, this third valency role is always a prepositional phrase ("rection" of the verb), defined generally by the preposition *n* or else *m*, *hr*, or *r*; modern English usage resembles Egyptian inasmuch as the third valency role is only rarely occupied by an "indirect object", but usually by a prepositional phrase ("to; for"). These verbal rections must be taken into account when translating, because they can alter the meaning: *hr*, e.g., with a valency of one does not mean "make" ("X makes Y"), but "act" ("X acts").

To distinguish it from the (logical) subject of a sentence, the subject of a verb will also be termed the "actor" or "agent" here.

11 It is, however, questionable whether the differentiation of the passive ending *-tw* and an impersonal suffix pronoun *=tw* should consequently be maintained in transliteration.

12 These nominal verb forms are nominal *sdm=f* and *sdm.n=f*, and subjunctive-prospective *sdm=f*.

m-dr, *m-ht* and *r-tnw* with the subjunctive-prospective *sdm=f* and the combination of *r/r-šš^c* with *sdm.t=f* (cf. § 2.3.2[2] supra).

The functions of the earlier constructions consisting of prepositions with nominal verb forms are partially assumed by constructions in which the infinitive verbal noun is dependent on a preposition. Among these is the “covert” construction of *hn^c* with the infinitive — “covert” because the morphology of the construction is no longer clearly recognizable — the so-called Conjunctive (*mtw=f sdm < hn^c ntf sdm < hn^c sdm ntf*).

There are also two other forms where the subject or actor of verbal forms is introduced by means of (a) the possessive article (“his activity”) and (b) relative forms (“the activity which he was engaged in”), i.e.:

1. preposition + possessive article + infinitive: *m pšy=f sdm*, for present and future;
2. preposition + infinitive + relative form of *irⁱ*: *m pš sdm i.ir=f*, for the past.

As these constructions are not syntactically different from “normal” prepositional phrases, they can be used in the same fashion, as adverbial modifiers of sentences.

(1) Preposition + *pšy=f sdm*

Infinitives with possessive article can appear in any position where a noun could be used. The use after prepositions is just one of several:

iw=i r dī.t in=tw (pCairo 58056 r. 6-7)

n=k pš kr m pšy=i spr “I will send you the boat at my arrival”;

Notes:

iw=i r dī.t future expression, the so-called Third Future;

dī.t in=tw “cause that one bring”, so-called Causative Infinitive.

Translating these constructions poses no unusual difficulties, but where necessary, temporal circumstantial clauses can also be used, e.g., “I will send you the boat when I arrive”.

In the form of the Causative Infinitive, this infinitive combination is still common in Coptic: *m-hnw pš dī.t sdm=f > hn pš dī.t ir=f-sdm > 𐩨𐩢𐩨𐩣𐩠𐩤𐩠𐩨*.

(2) Preposition with defined infinitive and relative form

Prepositional phrases with infinitives can relate to the past with respect to the main sentence where the actor or subject is introduced in the relative form of *irⁱ*:

(pBM 10052, 4,7-8)

iw=k in pšy hq im r-bnr (m-)sš pššm i.ir nš iṭšw “And you brought this silver out of there after the thieves had gone”;

Note:

im r-bnr im “there” in the tomb; *im X r-bnr/r-bl* “to bring out X”.

If such a defined infinitive has an object, this follows the relative form — such cases occasionally require some analytical attention: this is why the form has been termed a “split determined infinitive”:

(pAnast. VI
33-34)

i.îr=w r=k ... hr p3 i3 i.îr=k n3 hbs.wt n t3 mr.t m-b3h p3 im.î-r3 pr-hd “It happened that they acted against you ... because of your seizure of the garments of the weavers in the presence of the Superintendent of the Treasury.”

Notes:

i.îr=w r=k + the function of the Late Egyptian nominal *sdm=f* (cf. supra § 2.3.2[1]) is represented adverbial phrase here by a paraphrase (“it happened that ...”); or else emphatic, “It was because ... that they acted against you”;

p3 i3 n3 hbs.wt defined infinitive + object “the taking-away of the clothing”.

(3) The Conjunctive

By definition the Conjunctive is a form which “conjoins” various expressions. In its Ramesside form its conjugation base is *mtw* combined with the actor-expression suffix pronoun and the infinitive (*mtw=f sdm*). In Coptic it is $\bar{N}4C\bar{O}T\bar{M}$ (but in Boharic, still $\bar{N}TE4C\bar{O}T\bar{E}M$ as well), with a nominal actor expression $\bar{N}TE-$. The prepositions (*r*, *hr*) occasionally — in specific texts (like pD’Orb) quite frequently — preceding the infinitive are unetymological. They may be understood as markers of the semantic element, adopted from other uses, such as *îw=f hr sdm*, where the preposition was frequently omitted, and thus inadvertently reinserted in forms where it did not belong originally (cf. “hypercorrection”, supra, § 1.1.3[4]).

Although the Conjunctive can no longer be synchronically so analysed, it is classified as a prepositional formation because it originated in the combination *hn^c* + infinitive + independent pronoun (in its use as a possessive pronoun): (*hn^c sdm ntf* > *hn^c ntf sdm* > *mtw=f sdm*). The “conjunctive” function was originally derived from the role of the preposition *hn^c*, which co-ordinates nouns (a preceding infinitive as a verbal noun with another one). It can appear as an infinitive complement, but more frequently it is the continuation of imperative, optative and Third Future constructions.

(pMayer A rt.
8,18-19)

imm in.tw mtrw mtw=f s:^ch^c=î
“Get a witness and let him accuse me!”

Notes:

in.tw mtrw passive form of subjunctive-prospective *sdm=f*, “that a witness be brought”;

mtw=f s:ḥ^c=l conjunctive of 3rd pers. sing. with infinitive *s:ḥ^c* + object suffix, “and (that) he should accuse me”.

īm m īn.tw=f šš^c-ī.īr.tw=ī šm r rsy mtw=ī dī.t īn.tw n=k pšy=k gb nb m-rš^c “Let it be brought until I go south and have all your expenses repaid!” (for the hieroglyphic text, cf. supra, § 2.3.2[2]). (Wenamun 2,36-37)

The unchanged original form *ḥn^c ntf sdm* will still be encountered in the texts higher up in the register hierarchy (e.g., in the Astarte papyrus). Even in Dynasty XIX, it will still be found in everyday texts:

(oDM 114, 4-5)

m rdī.t tšy.tw n=k ḥn^c ntk šn.t pš ḥtr n tš lž.t nty ḥr pr-ḥd n Pr-š^c c.w.s. “Don’t get yourself into trouble: ask about the supplies of the Gang with which Pharaoh’s Treasury is charged”;

Notes:

m rdī.t tšy.tw n=k lit. “Do not let someone find fault with you”;

ḥn^c disregard the second ^c;

šn.t in the original text, this word is written with the hieratic ligature for *šn.t* (cf. Erman, *Neuägyptische Grammatik*, § 19[2]);

tš lž.t *tš lž.t n pš ḥr*, the “Gang” of the Tomb Building Administration, who lived in Deir el-Medineh;

nty ḥr pr-ḥd relative clause with *nty*, relating to the *ḥtr* “income, which is at the Treasury”.

3. Sentence conjugations and simple sentences

3.0 The transformation of Middle Egyptian sentence structure into a paradigm

3.0.1 The construction of sentences

Compared with Late Egyptian, Middle Egyptian appears to have a far greater variety of possible sentence structures. Middle Egyptian is dominated by a wide variety of adverbial phrases which are used in correspondingly diverse ways. Adverbial phrases in adverbial clauses play a direct role in the structure of a large number of sentence (“adverbial sentences”), as immediate constituents of the sentence itself, but as adverbial adjuncts or sentence adverbials they are also a means of modifying and enhancing any kind of sentence. Adverbial phrases can be formed of (a) adverbs, (b) prepositional combinations with nouns or infinitives, (c) Old Perfectives, and (d) also forms of *sdm=f* and *sdm.n=f*. Although they need not, sentences constructed from adverbial phrases can begin with *iw*, *h^c.n* or *wn.in*.¹ Such adverbial sentences also display a broad range of verb forms (*mrr=f*; *mri=f*; *mr.n=f*), while graphemically identical *sdm=f* forms can themselves be prospective, subjunctive, nominal or adverbial.

principles of sentence construction in Middle Egyptian

The situation is quite different in Late Egyptian. Adverbial phrases are used as modifiers almost exclusively — but still very frequently — in the form of combinations of prepositions with nouns. A wider set of adverbials — adverbs, prepositions combined with nouns and infinitives, Old Perfectives/Statives — are now basically restricted to the Adverbial Sentences (First Present). The other sentence constructions of the Middle Egyptian type have become morphologically invariable, having developed into morphological units with clearly identifiable forms.

principles of sentence construction in Late Egyptian

Along with the standard initial Adverbial Sentence, these are:

- the *iw*-sentence with *r* + infinitive (Third Future),
- the nominal *sdm=f* sentence,

¹ *mk* — or later *ptr* — does not have any influence on the construction of the sentence, for the clause itself is still grammatically initial, even when introduced by this particle.

- the preterite *sdm=f* sentence,
- the adhortative sentence with imperative or prospective *sdm=f*,
- the various types of nominal sentences (adjectival sentence, Cleft Sentence/Participial statement; the sentence with *pꜣy*; the “pure” nominal sentence).

clause
conjugations

Just as the constructions of the independent sentences were thus morphosyntactically fixed, so were a number of constructions which mark logical subordination: The former variety of adverbial phrase constructions was limited through the appearance of fixed constructions formed from conjunctions and specific forms of the verb (the infinitive, subjunctive *sdm=f*, *sdm.t=f*). Only by their etymology can these be recognized as forms of Middle Egyptian prepositional combinations: the “Temporal” (*m-ḏr sdm=f*) — and a few other similar constructions with conjunctions —, the “Terminative” (*r-ṯr.t=f-sdm/šꜣ^c-ṯ.ṯr.t=f-sdm*), and the “Conjunctive” (*mtw=f-sdm*, from earlier *ḥn^c-sdm*, *ḥn^c-ntf-sdm*).

subordination

Aside from the clause conjugations thus constituted, quite different forms of modifying expressions appear in place of the adverbial phrases used as modifiers: it is now independent sentences themselves that serve as modifiers by being subordinated using conjunctions, which are termed “converters” in Egyptology. Converters are grammatical morphemes which “convert” grammatical independence into grammatical subordination. The most important converter in Late Egyptian is *ṯw*, which converts sentence conjugations into subordinate clauses, into any kind of adverbial or circumstantial clauses, and occasionally even into noun clauses and so-called content clauses.

Sentence Conjugation, Clause Conjugation are concepts for describing the status of Late Egyptian, Demotic and Coptic verbal formations. “Conjugation” refers to grammatical constructions formed out of (a) a verb form, (b) its actor expression (“subject”), (c) an object, if called for, and (d) any further necessary adjuncts. Such conjugations can be either (a) independent or (b) subordinate and dependent on an independent construction. In the first case they are the minimal form of an independent or main sentence (“sentence conjugation”), in the second case they perform the function of parts of speech in their superordinate sentence conjugation or independent sentence, as subject, object, or adverbial clause (“clause conjugations”). These notions were adopted from H. J. Polotsky, *The Coptic Conjugation System*, and transferred to Late Egyptian grammar by Frandsen, *Outline*, and to Demotic by Johnson, *Demotic Verbal System*.

3.0.2 General parameters of the development

This brief survey permits us to point out the parallels and contrasts between the sentence structures of Middle and Late Egyptian and the difficulty of observing a historical connection between the two. This is primarily related to the complete change in the grammatical character of *ṯw*. In Middle Egyptian *ṯw* was employed primarily to begin

independent sentences, while in Late Egyptian, it has become a characteristic feature of subordination.

It is the examination of the fundamental structure of sentence formation that allows the understanding of the origins of Late Egyptian in Middle Egyptian. The following table illustrates Middle Egyptian sentence structure as a kind of “free” combination of specific phrases, so that the forms of one column can be joined with those of the other, e.g.: noun + adverb; *iw* + noun + Old Perfective; nominal *sdm=f* + *r* + infinitive; etc.:

structural relations

Particle/Modifier	Noun phrase	Adverbial phrase
<i>h^c.n/etc.</i>	nominal <i>sdm=f/sdm.n=f</i>	<i>sdm=f/sdm.n=f</i>
<i>iw</i>	noun	adverb
\emptyset		prep. + noun
(<i>mk</i>)		Old Perfective
		prep. <i>hr/m</i> + infinitive
		prep. <i>r</i> + infinitive

It is thus evident that the structural boundary is between the nominal and the adverbial phrases of such structures in Middle Egyptian. Late Egyptian sentence structure can be derived from them by (a) limiting the range of phrases available, and (b) shifting the structural boundary (“rebracketing”). This shifting eventually established the structural boundary between the modifier and the clauses which follow it. This meant in principle that the sentence structure [*iw* + noun] and [preposition + noun] is rebracketed to become [*iw*] and [noun + preposition + noun].

boundary shift

The manner in which the Late Egyptian forms were derived from the Middle Egyptian forms can best be presented as follows. In a Middle Egyptian Adverbial Sentence like *zi im* (“the man is there”), the relationship between the noun *zi* and the adverb *im* was the

derivation pattern

Modifier	Sentence	
	nominal <i>sdm=f</i>	adverb prep. + noun Old Perfective prep. <i>hr/m</i> + inf.
<i>iw</i>	<i>sdm.n=f</i>	
<i>iw</i>	noun	adverb prep. + noun Old Perfective prep. <i>hr/m</i> + inf.
<i>iw</i>	noun	prep. <i>r</i> + inf.

same as the relationship of *iw zi* and *im* in the *iw*-sentence, *iw zi im* (“There is the man there”). In Late Egyptian, the internal relationship of a *iw*-sentence of the *iw zi im* type appears different to the speaker: Apparently it is the — now morphologized — sentence type *zi im* (First Present/Adverbial Sentence) itself

that follows *iw*; it would thus appear that the Adverbial Sentence itself has been “subordinated” to *iw*. The clause following *iw* can thus be understood as a dependent form of an independent sentence, being made dependent by *iw*.

Middle Egyptian > Late Egyptian
zi im > *zi im*
iw zi im > *iw zi im*

The Late Egyptian sentence conjugation forms are thus derived from the Middle Egyptian *iw*-sentence, and this origin likewise clarifies the functional shift of *iw*, which has become the marker indicating the dependency of the following clause.

Converter	Sentence	Designation
<i>iw</i>	nominal <i>sdm=f</i> + adverb + prep. + noun	emphatic sentence/ (2nd tense)
	<i>sdm=f</i> (< <i>sdm.n=f</i>)	preterite <i>sdm=f</i>
<i>iw</i>	noun + adverb + prep. + noun + Old Perfective + prep. <i>hr/m</i> + inf.	Adverbial Sentence/First Present
<i>iw</i>	noun + prep. <i>r</i> + inf.	Third Future

Observation:

The adverbial phrases (Old Perfective; *hr/m* + infinitive) which then drop out of the “emphatic sentence” are replaced with sentence forms converted by *iw*.

Third Future

Only in the form of the Third Future does *iw* retain its previous role, because this form represented a choice (between two alternatives) made by the speaker, for he could have selected (a) the Third Future or (b) the “future Adverbial Sentence” formed *mk sw r sdm*, with its Late Middle Egyptian *tw=i r sdm* variant.

3.0.3 Bibliography

Kroeber, *Neuägyptizismen*, § 3, in particular §§ 32.2; 3.3; Junge, Über die Entwicklung des ägyptischen Konjugationssystems, in: *SAK* 9, 1981, 201ff (with supplements in *GM* 60, 1982, 93ff); id., *Sprachstufen*; Loprieno, *Ancient Egyptian*, §§ 7.9.1; 7.9.2

3.1 The Adverbial Sentence or the First Present

3.1.1 The forms of the independent Adverbial Sentence

(1) The sentence and its designation

The Adverbial Sentence, otherwise termed the First Present, is a bimembral sentence

Actor expression	Predicate expression
(p3) zī sw	hr sdm / m ḥd pr.w dy m nw.t

formed with two phrases: a nominal phrase followed by an adverbial phrase. The noun phrase has the function of the subject, while the predicate (the adverbial phrase) can be (a) an adverb, (b) a preposition combined with nouns (nominal phrases), (c) the prepositions *hr* or *m* with the

infinitive of a verb or (d) an Old Perfective (Stative).

Erman and those who followed him distinguished the use of the “pseudo-verbal forms”, preposition + infinitive and Old Perfective following a nominal phrase, from the use of the adverbial sentence with other adverbial phrases. Only the first of these versions of the adverbial sentence was considered a conjugation form and termed the “First Present” (*Präsens I*).

First Present

This term was historically opposed to a “Second Present” which identified those forms using the auxiliary verb *īw*. The Late Egyptian “Second Present” proved to be a misnomer however, as a number of completely different forms making use of *īw* were incorrectly combined together under this term. It has now been recognized that these are (a) the converted First Present or Circumstantial Present — § 3.1.3 —, (b) a special use of the circumstantial, which came to be known as the “non-initial main sentence” (NIMS), and (c) the Third Future. The connection thus made with the Coptic Second Present is moreover been erroneous, because the Coptic Second Present is the “Second Tense”, the nominal/emphatic form, of the present, which in Late Egyptian did not exist in this form.

history of the term

(2) The pronoun set of the Adverbial Sentence

The introductory nominal phrase is replaced by a pronoun formed with the morpheme *tw* and a suffix pronoun, and no longer by an enclitic pronoun as in Middle Egyptian. With the exception of the 3rd pers. sing. and pl. pronouns, which do not have the *tw*-morpheme, this series is historically the precursor of the Coptic First Present pronouns: *tw=ī hr sdm* > *tw=ī sdm* becomes Coptic †CΩTṢ̄ “I hear”.

1st.sing.c.	<i>tw=i</i>	ⲁⲉⲓ; \ⲁⲓ; ⲁⲉⲓ	†-
2nd.sing.masc.	<i>tw=k</i>	ⲁⲉ	κ-
fem.	<i>tw(=t)</i>	ⲁⲉⲓ	ⲦⲈ-
3rd.sing.masc.	<i>sw</i>	ⲓⲉ	ϣ-
fem.	<i>st</i>	ⲓⲁ; ⲓⲓⲓ; ⲓⲉ	Ϣ-
1st.pl.c.	<i>tw=n</i>	ⲁⲉⲓⲓ; ⲁⲉⲓⲓⲓ; ⲁⲉⲓⲓⲓ	ⲦⲚ-
2nd.pl.c.	<i>tw=tn</i>	ⲁⲉⲓⲓⲓ	ⲦⲈⲦⲚ-
3rd.pl.c.	<i>st</i>	ⲓⲓⲓ; ⲓⲉⲓⲓⲓ; ⲓⲉ	ϢⲈ-
“one”	<i>tw=tw</i>	ⲁⲉⲁⲉ; \ⲁⲁⲁ	

Observation:

Comparing these (proclitic) pronouns with the suffix pronouns (§ 2.1.2[1]) may show how their morphophonemic similarity led as the language developed to the interferences that the corresponding set of Coptic pronouns displays (cf. esp. the 3rd. masc. sing. ϣ-).

(3) Notes on the use of the preposition *hr*

omission

While the preposition *m* continues to be written before verbs of motion, the *hr* preceding the infinitive is increasingly omitted in writing. During Dynasty XIX, the *hr* was still written frequently — but selectively — in literary texts (e.g., “Two Brothers”, “Doomed Prince”) and other registers, but virtually disappears during Dynasty XX (cf. the table in Winand, *Études*, 521, and the detailed references, *ibid.*, pp. 413ff).

versus
convention

It is worth noting that morphophonemically the preposition continued to be used longer in the introductory phrases of letters and with nominal subjects while falling away more rapidly after the proclitic pronouns of the First Present: *p̄s̄ zh̄s̄.w hr n̄d-hr.t n̄ t̄s̄ z.t-h̄m.t* “The scribe inquires about the condition of the woman” as opposed to *sw n̄d-hr.t n̄ t̄s̄ z.t-h̄m.t* “He asks ...”. The same is true of some verbs — such as *ḏd* “speak” — where the preposition can still be written, when it has otherwise disappeared completely.

interference

The morphophonemic loss is accompanied by the tendency to “hypercorrection”. The preposition occasionally appears as a kind of marker of the lexical element even before forms where it did not belong, as in *tw=i hr h̄ms.kw* “I sat” (similarly with the Conjunctive, cf. § 2.3.3[3]).

(4) Methods of negation

The First Present or Adverbial Sentence is usually negated with the negative morpheme  *bn* (etymologically related to  *nn*, Coptic \bar{N} -):

 *st iw n=tn bn st dī m.dī=n* “They have come to you; they are not here with us”. (pLeiden I 365,7)

Observation:

In contrast to the other conjugations, the structure of the affirmative forms is preserved in negative, so that the form belongs to the group of isomorphic negations (cf. S. Groll, *Negative Verbal system*; for the negating particle, cf. J. Osing, *Enchoria* 10, 1980, 93ff).

Another negation, with *bn* followed by *īwn3/īn* (Coptic \bar{N} ... ΔN), appears occasionally, “discontinuous”, like French *ne...pas*; the form later provides the negation morpheme proper of Demotic and particularly of Coptic First Present. It apparently occurs at first when the predication expression is a preposition + noun combination:

 *bn sw m šs īwn3 p3 pš* (pMayer B 1)
ī.īr=k n=i “It is quite unsuitable, this portion which you have left me”;

Notes:

p3 pš postpositive apposition to *sw* (“Epexegis” or explication);

ī.īr=k n=i “(the portion) which you have made for me”.

To negate (a) currently continuous, (b) repetitive acts, or (c) sentences using verbs of speech or perception, a parallel negation form is used, the Negative Aorist (§ 2.3.2.[3]):

 (oBerlin P. 10627,8-9)

tw=k š3 m dīrī r iqr bw īr=k dī.t nkt n w “You enjoy great abundance, yet you never give anything to anyone”.

Notes:

tw=k š3 m dīrī Adverbial Sentence (First Present) with Old Perfective, “you are abundant in valuables”;

bw īr=k dī.t Negative Aorist.

3.1.2 Usage

The Adverbial Sentence (First Present) is syntactically an independent form allowing simple statements in a real or fictitious speech situation. The time is either left unstated or assumed to be the present or a relative present (i.e., the same time as the surrounding context). The situation is presented either as (a) continual or (b) an actually occurring event (*hr/m* + infinitive), or else (c) a state which has been achieved (Old Perfective). The Old Perfective with transitive verbs (passive voice, cf. § 2.2.3[2]) can also characterize an act as past. Examples:

utterance form of presentation

— The expression of the predicate is the Old Perfective of verbs of motion: past movement which ends up in a present or past state:

(HorSeth 7,2-3)

 *wn.ĭn Stš hr dd n=f t3*

rmṯ bĭn ĩy.tĭ r=i c̣n “Then Seth said to him, ‘The evil person came against me again.’”

Notes:

wn.ĭn a narrative form common in literary texts (and particularly so in Horus and Seth), and frequently alternating with *ḥ̣.c̣.n*. The story of Wenamun indicates that its use had declined by the end of the New Kingdom;

t3 rmṯ bĭn nominal subject of the Adverbial Sentence at the absolute beginning of a sentence (following the introductory *dd*).

— The expression of the predicate is the Old Perfective of other intransitive verbs: present (or past) state:

(LRL 1,5-6)

y3 tw=i c̣nh.k m p3 hrww dw3w hr c̣.wy p3 nṯr “Yes, I am alive today, but tomorrow is in the hands of god.”

Notes:

structure two independent statements, the first with a pronominal subject, and the second with a nominal subject (*dw3.w*);

predicate Old Perfective in the first statement, and prepositional phrase in the second.

(HorSeth 8,3)

tw=tn dĭ ḥms.tĭ hr ĩr.t ĩḥ m-r3-c̣ “What are you up to again?”, adverb and Old Perfective (cf. supra § 2.2.3[3]) for the hieroglyphic text).

— The expression of the predicate is constructed with an infinitive: present, continuing or repeated actions or situations:

(pAnast. III vs. 3,2)

st hr ĩr.t n3y=sn ĩp.t db.t m mn.t “They make their lot of bricks daily”. *hr* + infinitive, continuing activity (cf. supra 2.1.4[2] for the hieroglyphic text).

When the expression of the predicate is the infinitive of an adjectival verb, this indicates the beginning of a state of affairs or that a new situation has now emerged: *ĭw=f hr gnr* “he became weak” (pD’Orb 7,9-8,1).

Observation:

There are some rare First Present statements with *r* + infinitive, but restricted to constructions with *ĭb=i*, such as *ĭb=i r ptr=tn*, “I long to see you” (< * “My mind is intent on seeing-you”; LRL 1,8-9).

— The expression of the predicate is a preposition with nouns: without a specific temporal context, or relatively simultaneous (cf. also the example LRL 1, 5-6 supra):

(Beatty Love Songs vs. C2,1-2)

mk sw m ĩw.ty-ĭb=f “He is foolish” (cf. supra, § 2.2.6.[1] for hieroglyphic text).

3.1.3 The Circumstantial First Present

(1) Form

The Adverbial Sentence (First Present) can be subordinated to an independent sentence by introducing it with the morpheme *iw*. This means that, introduced by the “converter” *iw*, an Adverbial Sentence can assume an adverbial — or even nominal — role in a principal sentence: it has the function of an adverbial clause. Such a clause is termed a Circumstantial First Present.

If the subject of such an affirmative subordinate clause is not nominal, the First Present pronoun series is substituted by *iw* + suffix. The Late Egyptian Circumstantial First Present thus resembles the independent Middle Egyptian *iw*-sentence: in both form and function, *iw=f hr sdm* > *iw=f sdm* is the precursor of the Coptic Circumstantial First Present $\epsilon\chi\omega\tau\bar{\mu}$.

The substitution of the pronominal form (*iw=f hr sdm* rather than **iw sw hr sdm*) is however relevant only for the affirmative forms: if the statement is negated with *bn*, the

	affirmative	negative
independent	<i>p3 rmṯ sdm</i> <i>tw=i sdm</i>	<i>bn p3 rmṯ sdm</i> <i>bn tw=i sdm</i>
dependent	<i>iw p3 rmṯ sdm</i> <i>iw=i sdm</i>	<i>iw bn p3 rmṯ sdm</i> <i>iw bn tw=i sdm</i> <i>iw=i tm sdm</i>

pronouns of the First Present are employed: *iw bn sw hr sdm*. The adjoining table compares: “the man hears” and “I hear”, with their negations.

Observation:

Under certain conditions, the infinitive in the *iw=f (hr) sdm* construction can be replaced with a negative infinitive (cf. supra § 2.2.3[4]), i. e., the infinitive of the negating verb *tm* followed by the infinitive of the verb bearing the specific meaning (*iw=f (hr) tm sdm*, cf. supra § 2.2.3[4]). This type of negation and the employment of the circumstantial clause in narrative contributed to the designation of the form as non-initial main sentence.

It occasionally happens that the circumstantial sentence is negated with *iwbn*/*in*, in a form such as *iw bn n3 nty w3h im=w iwbn3* “while those who were left are not among them” (LRL 9, 14). Cf. also Černý/Groll, *Late Egyptian Grammar* § 20.6.2 (313f).

(2) Usage

With the exception of the locational and temporal adverbials, the Circumstantial First Present basically replaced the use of adverbial phrases as sentence extensions, whether prepositional phrases with nouns or infinitives respectively, or Old Perfectives. A Middle Egyptian sentence like *iw hd.n hm=f hr h3q dmṯ.w* “His Majesty went north, conquering cities” becomes something like *hd hm=f iw=f hr h3q dmṯ.w* in Late Egyptian. Charac-

teristic of Middle Egyptian sentences were long chains of adverbial phrases; in Late Egyptian, Demotic and Coptic, long chains of circumstantial clauses are the rule instead.

The Circumstantial First Present is used frequently in all kinds of texts. In order to judge the scope of its use, it is necessary to realize that

sentence
extension

— it is the basic form of adverbial extension of sentences, and can form long chains in this role;

relative present

— it is functionally a form indicating relative simultaneity (relative present), so that it is able to continue the tense implied by the main sentence under many conditions;

non-specific
subordination

— it is not a specific form of subordination and can thus be used even when other languages express subordination using conjunctions (“when”; “while”; “because”; “as”; “so that”; etc.); it is very much akin in usage to the English abridged adverbial clauses with participles, gerunds or infinitives (“Being sick, having finished, he did this and that”, “He hurt himself playing this and that”, etc.). While not unknown, conjunctive subordination is less common in Egyptian;

coordination
by “and”

— it is a form that allows the formulation of “logically looser” relations, which in other languages are expressed, e.g., by coordinating conjunctions like “and”. This usage of the Circumstantial First Present has been categorized as an extra form termed “narrative”, or “non-initial main sentence” or “non-initial main clause” (cf. *infra* § 5.2).

With an infinitive as expression of the predicate:

(pLansing 2,3-4)

krꜣ šꜣꜣ ʕꜣ.wꜣꜣ ꜣb=k bw sdm=k ꜣw=ꜣ mdw “How arrogant you are my boy! You don’t listen when I speak!”;

Notes:

ʕꜣ.wꜣꜣ ꜣb=k literally: “How great your heart is!” (<ʕꜣ.wꜣꜣ-ꜣw/ꜣꜣ ꜣb=k);

structure a Circumstantial First Present subordinated to a Negative Aorist (*bw sdm=k*).

(Wenamun
2,66)

ptr st ꜣw=w nꜣy r qbꜣ.w “Look at them going to the marshes!” (preceding: “Have you not seen the birds who have already flown down to Egypt twice?”; cf., *supra* § 2.3.2[3], for the hieroglyphic text).

With Old Perfective (or adverbial) as expression of the predicate:

(LRL 23,11-12)

ḥꜣꜣ tw=n dꜣ ḥꜣꜣꜣ.tꜣ m tꜣ-Ḥꜣꜣ.t ꜣw=k ḣꜣꜣ.tꜣw ꜣꜣꜣꜣꜣ n ḣꜣꜣꜣ nꜣy twt=n ꜣꜣꜣꜣꜣ “We are now living here in ‘the mansion’, and you know the way of life we have to put up with.”

Notes:

ḥꜣꜣꜣ.tꜣ ḥꜣꜣꜣꜣ used here as a verb of complete predication, and not as an auxiliary verb;

t3-Hwt “the mansion” — the mortuary temple of Ramesses III at Medinet Habu, where the administration of ‘The Tomb’ (*n p3 hr*) took up residence at the end of Dynasty XX;

p3y=n s hr hms “our way of living”;

nty tw=n im=f relative clause with *nty*, *“(the way of living) which we are in”. This case reveals that the First Present is also used when a relative clause has its own actor expression after *nty*.

(LRL 23, 13-14)

st hms m Nw.t iw=i dy hms.tw w^c.k irm zh3.w-mš^c Pn-t3-Hwt-nht “They live in the ‘City’, while I live here alone with the secretary of the army Pentahunakht”;

Notes:

st hms “they” are the *msw-hr*, the youths, sons, apprentices, etc. of the *hr*, the Tomb Building Administration; *hms* here is the verb of complete predication;

Nw.t the “City” par excellence: Thebes;

irm in the original text the preposition is written twice, a “dittograph” at a line-break;

Pn-t3-Hwt-nht *P3-n t3-Hwt nht.w*, proper name (of the sentence type: “He of the ‘Mansion’ is mighty”: “He of the ‘Mansion’” being Amun-Re of Medinet Habu).

— Negation of the circumstantial clause with *bn*:

negation

(Doomed Prince 7,8)

iw=s hr hpr hr z3w p3y=s h3y r iq^r zp-2 iw bn sw hr d3.t pr=f r bnr w^c “And she began to protect her husband zealously, and did not let him go out alone.” (Some signs are restored);

Notes:

iw=s hr hpr hr z3w example of the “narrative” use of the circumstantial (non initial main sentence/clause) in a chain of such; a direct form of address preceded this line; *hpr* is function verb (cf. supra § 2.2.3[3]);

hr d3.t pr=f infinitive with subjunctive *sdm=f* (“allowing that he goes out”); precursor of the Coptic Causative Infinitive (*d3.t sdm=f > d3.t-ir=f-sdm > TPE‘ICWTM*).

A negation with the infinitive of *tm* has roughly the same effect:

(pJud.Turin 4, 12)

in.tw=f hr p3 sdm i.ir=f n3 mdt m.d3 p3y 3 n^c.t wn=f r-q33-n=f iw=f h3p=w iw=f tm dd smi=w “He was brought because he had heard about the affairs from this chamberlain in whose company he was, had concealed it, and failed to report it.”

Notes:

hr p3 sdm i.ir=f “conjugated” infinitive (cf. supra, § 2.3.3[2]) following preposition *hr*;

$w_n=f$ relative form of the verb w_n (< $\dot{l}.w_n=f$) with indirect resumption; w_n turns sentences into the past in Late Egyptian;

$\dot{l}w=f\ tm\ \dot{g}d\ sm\dot{l}=w$ Circumstantial First Present functioning as a non initial main sentence of the type $\dot{l}w=f$ (hr) $tm\ sdm$ (> 'he did not report it'), parallel to $\dot{l}w=f$ (hr) $h\dot{3}p=w$.

adnominal use — Not infrequently the Circumstantial First Present is used to qualify an unspecified noun (this usage is rather unfortunately termed a "virtual relative clause"):

(Wenamun
2, 77)

$n\ mn\ w^c\ n.\dot{l}m=tn\ \dot{l}w=f\ sdm\ mdt\ Km.t$ "Isn't there anyone of you who understands Egyptian?";

Notes:

grapheme for the interrogative particle (i) n (cf. supra § 2.2.4[1]);

mn expresses negated existence: "there aren't" (Coptic $M\bar{N}$ -), etymologically derived from $mn\ wn$ ($nn\ sdm=f$ of w_n). The affirmative equivalent is w_n ;

an early precursor of the Demotic and Coptic status pronominalis of $\dot{l}m$ ($n.\dot{l}m=tn$ > $\bar{M}\bar{M}\bar{O}\bar{T}\bar{N}$).

Observation:

In fact, these usages betray the Late Egyptian transformation of the former manner of specifying nouns. In texts of earlier date (or in texts of the New Kingdom higher up in the register hierarchy), this was accomplished via adverbial phrases: the adnominal use of (a) adverbs, (b) the Old Perfective, or (c) prepositional phrases as adverbial attributes. For Late Egyptian examples of this use of the Old Perfective, cf. supra, § 2.2.3[2].

3.1.4 Bibliography

Adverbial
sentence/First
Present

Tense, Aspect, Mood are notions relating to the temporal position, duration and nature of processes and actions. "Tense" can designate (a) the "absolute" point in time which the speaker wishes to assign to the action related, i.e. in the present, the past, the future, or (b) the form of the verb used: present, preterite, perfect, future form. If the temporal position of an action or process is assigned in relation to the temporal position of another one, tense is relative, i.e. simultaneous, preceding or following, relative present, past or future. "Aspect" describes the relationship of the related actor to the temporal duration of a process or act. If an action is presented as completed at the time stated, this act is described as "perfective"; if the action is still continuing, it is described as "imperfective". "Mood" refers to the degree of reality which the speaker is willing to assign to his statements, the degree to which it can be expected, or desired, or merely recognized as possible ("prospective"). These forms possess reciprocal affinities. A completed act can only be perceived as such if it lies in the past with respect to either the actor or the speaker. A continuing process ("she is running") is present for the actor, but can be past for the speaker ("she was running"). An expected situation must lie in the future for the expectant ("she will be running"), but the speaker can also refer to this in the past ("she will have run"). Middle Egyptian is generally assumed to have had an aspect system, while Late Egyptian is assumed to have had a tense system.

Circumstantial
First Present

3.1.5 Exercises

(1) Praise of the city of Ramesses (pAnast. II 1, 1-2,5)

Dating to the reign of Merenptah, this ode to the city of Ramesses, the Delta Residence, is part of a collection of “examination papers” in Papyrus Anastasi II, published in Gardiner, *Late-Egyptian Miscellanies*, pp. 12-13. pAnast. II gives mostly “eulogies” of this type, besides a series of prayers (cf. [2]; for a general characterization of these texts, cf. Erman, *Schülerhandschriften*).

Purpose: Example of Dynasty XIX higher education in style, text forms and literary registers; use of Adverbial Sentence (First Present), Negative Aorist and Circumstantial First Present.

Notes:

- 1,1 *p} nb n Km.t*: example of determination in a case of culturally specified knowledge, cf. § 2.1.3(1);
qd n=f ḫm=f: preterite *sdm=f* form, frequently used to specify the absolute tense of the text by way of introduction; also used to state the speech act type “narration”: “His Majesty built for himself”;
- 1,2 *ḡ}hy*: the name of the Phoenician and Palestinian coastal region (cf. Gardiner, *Ancient Egyptian Onomastica* I, London 1947, 141*, 145*f) — here specifically the Gaza strip with its hinterland (which later became the Land of the Philistines > Palestine); cf., however, C. Vandersleyen, *Les guerres d'Amosis*, Brussels 1971, pp. 90ff (the whole area of Palestine, Syria, Northern Mesopotamia);
mḫ: circumstantial Old Perfective, dependent on preceding *sw* “being filled with”. This is an older construction: “more” Late Egyptian would be *sw r-ḫwd* toponym *r* toponym *ḫw=f mḫ m NP*);
ḫwnw-šm^cl (ḫnw-šm^cl) “Upper Egyptian Heliopolis” as a designation for Thebes (occasionally also for the toponym “Hermonthis”/Armant);
- 1,3 *ḫw.t-k}Ptḫ* “Mansion of the *ka* of Ptah”, as a designation for Memphis;
wbn p} šw — ḫtp=f: nouns, “The rise of the Light is there — his setting is here”. Or *sdm=f* forms in a balanced sentence of Middle Egyptian type: “As he rises there, he sets here”;
m ḫnw=f: “in it”; or even “in its interior” (in the older sense, dissolving the compound preposition);
ḫ}^c bw-nb n }y=sn dml: preterite *sdm=f*, “All of them have left their home-villages”;
- 1,4-1,5 for the topography of the city of Ramesses, cf. Bietak, in: *LÄ* V 138. One should however note that in the text the city is bordered by temple districts in the “West” and “South”, but not explicitly in the “East” and “North”. The text states that they have been transformed “into” goddesses or that goddesses have come into being in

- them, so that the city is limited by the goddesses themselves, rather than their temples (so that temples need not necessarily be sought in these directions, *contra* Bietak);
p3 b3n, sw ml 3h.t: Adverbial Sentence with noun in anticipation (theme shifting);
- 1,6 used after cartouches, the names of rulers or palaces, the *‘nh wd3 snb* can be abbreviated so that only the sign for *s(nb)* is recognizable in the hieratic, as here;
- 1,6-2,1 these designations refer (1) to Ramesses II by courtly laudatory epithets: the founder of the city is said to fulfil various symbolic city ofices by personifying various divine qualities (as “Ramesses the God”, “Month in the Two Lands”, “Re among the rulers”, “Prosperity of Egypt” < as the one “who refreshes its heart”); and (2) to the monumental statues of the king in front of the temple of the city of Ramesses, which were themselves worshipped. For the king, cf. Habachi, *Features of Deification, Abhandlungen des Deutschen Archäologischen Instituts Kairo* 5, Glückstadt 1969, 27ff;
- 2,1-2,2 *Hti*: “Hatti” (the Hittite Kingdom); *Qdl*: designation for “Kizzuwadna”, according to W. Helck, Cilicia (southeastern region of Asia Minor at the Mediterranean Coast, bordering on Syria); note the distinction between the “*wr 3* of Hatti” and the “*wr* of Qedi”;
- 2,2 *hn=n - dd=n - lry=n*: a chain of prospective *sdm=f* forms as independent sentences: “we want, should, desire, want to (do something)”;
- 2,2-2,3 *lry=n s:wnwn* (with the preposition *n*: “pay respect to Usi-ma-Re”): periphrasis with 4-rad verb;
dl=f 3w: preterite *sdm=f*, “he gave the breath of life”;
n mr=f: an earlier type of form, whether (a) relative form “(to give something) to him whom he loves/chose”; or (b) a nominal *sdm=f* “as he wished” (*n < m*);
hpr m mrw.t=f: “be submitted to his will/wish” (Old Perfective);
- 2,4 structure with independent sentence forming Negative Aorist followed by First Present Circumstantial clause: “it cannot happen, because of such and such”. The meaning of the clause can be rendered, “if such and such does not happen, it is in his power” (the reference of the pronoun thus changes from “Hatti” to the fact in general);
- 2,5 the arm (Gardiner D 41) at the end of the text is a hieratic convention indicating the end of a *hw.t*, a stanza (cf. supra § 2.2.6). It may be either a sign transformed from the lower part of \square , with which stanzas are occasionally marked off, or it could be an abbreviation for *grh* “end”, cf. Grapow, *Sprachliche und schriftliche Formung ägyptischer Texte, Leipziger Ägyptologische Studien* 7, 1936, p. 53.

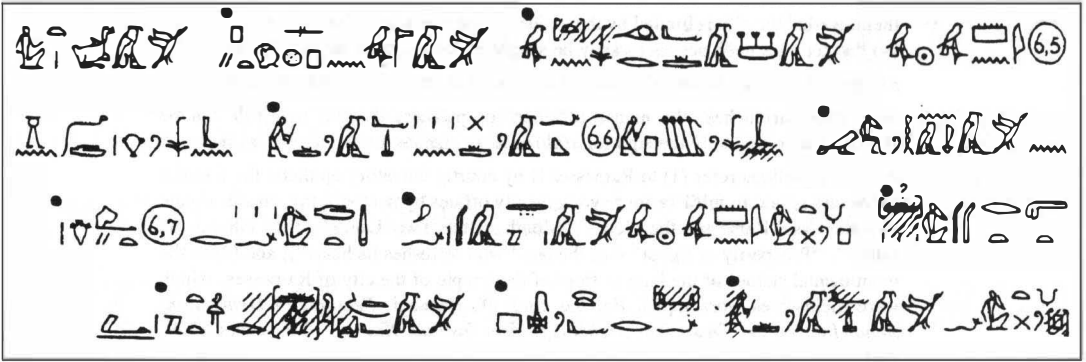

(2) A profession of faith (pAnast. II 6,5-7)

A short prayer of praise to Amun from the reign of Merenptah, from the same collection of examination texts in Papyrus Anastasi II (published in Gardiner, *Late-Egyptian Miscellanies*, p. 16). Passages of the text are identical to those of pBologna 1094, 2, 3-7, and comparison of the two texts gives a good idea of the various alternatives in orthography and means of expression. Verse points and a break divide the prayer into two stanzas of five verses each.

Purpose: Example of Dynasty XIX higher education in style, text forms and literary registers; usage of negated Adverbial Sentence (First Present).

Notes:

- 6,5 structure: negated Adverbial Sentence preceded by a noun (*‘Imnw-R^cw*) with numerous appositions;

3.1.5 Exercises (2) pAnast. II 6,5-7

- 6,6 *ḡd lnl mtr.t*: direct address introduced with *ḡd*, “he did not say: ‘Bring evidence!’” (meaning that Amun does not require witnesses); pBologna 1094, 2,5, has *ḡd n lnl mtr.t* “He does not speak to him who brings testimony”, which calls for a nuance of “false testimony”;
- wpl Imnw-R'w p3 t3*: probably “to divide the land” (from other components of the creation), despite phonetic similarity of the verb *wpl* here and in l. 6, 7 where it has the figurative meaning of “judging the guilty”; Caminos, *LEM*, 10 translates both with “judge”;
- 6,6-7 *md.t=f r ḥ3.ty*: “his words are for the heart”, Adverbial Sentence with preposition *r*: someone or something is directed at something. The parallel pBologna 1094, 2,6, has the preposition *n*: “his words ‘belong’ to the heart”. Caminos (*LEM*, 10) reads *mdw=f* “he speaks”, but this does not yield the correct meaning with the rection *r* (*mdw r* means “to speak against” someone!);
- 6,7 *dl=f r ḥ'w*: possibly the earlier passive *sdm*, “he (the guilty one) has been rendered”. pBologna 1094, 2,6, has *dl=f sw r ḥ'w* “He (Amun) gave him” (preterite *sdm=f*); *ḥ'w* is a hapax legomenon: a place to which those condemned by god are sent, “purgatory” or the “lake of fire”, etc.;
- p3 m3 r lmnt.t*: the object position of *dl* is occupied twice: “the guilty is given this way, the justified that way”.

3.2 The Third Future

3.2.1 Form

(1) Structural features

basic form

The Third Future is a trimembral sentence: (1) the first position is occupied by *iw*, (2) the second with a noun phrase, and (3) the third with a predicate expression generally formed with the preposition *r* + infinitive: *iw=f r sdm*. In most registers of Late Egyptian proper the preposition *r* is however generally not written, although phonetically it continued to exist (cf. *infra* § 3.2.3). This means that the Third Future cannot always be morphologically distinguished from the other sentences which are introduced with *iw*, since the preposition *hr* was likewise graphemically neglected in First Present Circum-

(pD'Orb. 4,1-2)

*m-îr ḏd=f n=i ʿn**ḥr nn îw=i r ḏd=f n w^c**ḥr bn îw=i r ḏ.t pr=f m r3=i n rm̄t nb*

“Don’t repeat that to me again! But I won’t tell anyone else either: I won’t let the word get out to anyone at all.”;

Notes:

ḏd=f writing of the status pronominalis with an object suffix. The use of the 3rd. masc. for a reference to a general thing/a whole situation (neutral) is common in Late Egyptian (cf. supra, § 2.1.2[1]. For the possibility of a “direct object pronoun”, cf. supra § 2.2.1 Observation);

r ḏ.t pr=f m r3=i literally: “will not let it go forth from my mouth to anyone”.
n rm̄t nb

circumstantial form

Adverbial subordination makes it particularly clear that the *îw* in the Third Future belongs to the morphology of the form itself. By means of the converter *îw*, the form in its turn is transformed into the status of a (relatively future) circumstantial clause: *îw îw=f r sdm*. It is negated correspondingly: *îw bn îw=f r sdm*. This form is attested from the end of Dynasty XX:

(LRL 10, 5-6)

[*mtw=k*] 3ty n=s îw îw=k gm=s r îr.t n3y=k îpw.ty îm=s “and you will be careful with it (the boat), for you will find it useful for carrying out your tasks”;

Notes:

mtw=k 3ty n=s Conjunctive as the continuation form of introductory imperatives, Third Futures, etc.;

îw îw=k gm=s Circumstantial Third Future;

gm̄l here specifically “to find something useful or suitable for something”.

3.2.2 Usage

(1) As an independent sentence form

force of the expression

The Third Future is the conventional form for statements related to the future, for announcements and predictions: “This will happen”. It is particularly common when the emphasis is on a particular situation logically proceeding from another. The 1st pers. can indicate a firm intention (analogous to English future tense, when “will” is used for the 1st pers.), while the 2nd pers. can express a command (as in English, when “shall” is used with the 2nd pers.). If the speaker desires to express a wish, he will generally employ an independent prospective *sdm=f* instead of the Third Future.

The syntactic independence of the Third Future sentence is clearest where it follows expressions which indicate the actual beginning of a sentence, the “direct/indirect indicators of initiality” such as *ḏd* or *nty*:

sentence
character

 *ḏw=f ḏd ḏw=i ḏr.t=s r t3y=s s.t mtr.t* (LRL 20, 12)
“And he said, ‘I shall do it at its appropriate place’”.

Frequently the form is used in answering wishes and commands:

 *ḏw=i ḏr.t p3 nty nb ḏw=k ḏd=f* “I am going to do everything that you will say”; (LRL 15, 4-5)

Notes:

relative clause *nty nb ḏw=k ḏd=f* is an example of *nty* as a “direct indicator of initiality”, followed by sentence conjugations (*nty* + Third Future). It should be noted that the sentence structure requires an indirect resumptive pronoun (object =*f*).

Negated and with nominal subject/actor:

 *bn ḏr p3y=i sn ḏi.t mdw.tw m.ḏi=i* (pBM 10052, 6, 9-10)
“My brother won’t let anyone argue with me”;

Note:

mdw m.ḏi “to discuss something with someone” has a broader meaning: “to argue with” or “to fall into a dispute or conflict with” or even to “be aggressive towards someone”.

(2) In clause compounds, parallel to the “old” *ḏw*-sentence

Given its role of declaring logical results, promises or intentions, this form is quite suited to appear as an apodosis in those compound constructions where one situation is affected by another, as e.g. after the particle *ḏnn* (cf. supra § 2.2.4[1]):

conditional
sentences

 *ḏnn bn ḏw=k ḏi.t n=i ḏm=w ḏw=i šm* “If you aren’t going to give me any of it, I’ll go”; (pMayer B 4-5)

Notes:

ḏn writing variant of *ḏnn*;

reference they are talking about stolen silver (=w);

Protasis The protasis is also formulated as a Third Future (negated); the whole situation implied by the sentence compound is thus put into the future.

In such combinations, as in the oath formulas (cf. infra Appendix § 7.1.3), forms also occur which have predicate expressions using (a) the Old Perfective or (b) preposition + noun combinations. Like the Third Future, they also generally have a future component (consequence, promise or declared intention).

ḏw-sentence

(pAdoption rt.
23-24)

inn iw=s ms bn šrī bn šrī(.t) iw=w m rmt-nmḥ.w n p3 t3 n Pr-3 “Whether she gives birth to a son or a daughter, they will be free citizens of the land of Pharaoh”

Notes:

bn ... bn allographs for the interrogative pronoun *n ... n (n3 ... n3)* meaning “either ... or”, “be it this or that”;

iw=w m rmt-nmḥ.w *iw*-sentence expressing future time, though with prepositional phrase, “they will be citizens”.

(pBM 10053
vs. 2, 18)

m3^c.t p3 dd=i nb mtw=i pn^c r3=i n m dw3.w s3 dw3.w iw=i dī.k t3 iw^c Kš “(He swore an oath by the lord as follows:) Everything which I have said is true, and if I reverse my statement at any time in the future, I shall be stationed in the garrison of Cush”.

Notes:

m3^c.t p3 dd=i nb the Late Egyptian Pseudo-Cleft Sentence, with a noun and a specified relative form (*i*.)*dd=i* (“which I have said”): “Truth is what I have said”;

mtw=i pn^c the apparent initiality of the conjunctive is deceptive, but typical of the abbreviated forms of oaths: “(As Amun and the Ruler ruler endure), and I do this and that, such and such will occur” (cf. infra Appendix § 7.1.3[2]);

t3 iw^c < *t3 iw^c.t*; probably an idiomatic expression, *rdl Y iw^c.t* “to put Y in the garrison” (to perform military service). It is however also possible to transliterate *rdl Y <m> t3 iw^c.t*.

These *iw*-sentence forms no longer have a systemic position in Late Egyptian. As derivatives of the Middle Egyptian *iw*-sentence, they have been retained as elements of established formulas.

3.2.3 Notes on linguistic evolution

(1) The “Future” forms of the Middle Egyptian Adverbial Sentence

The Middle Egyptian Adverbial Sentence permits two types of future statement:

future form of
the Adverbial
Sentence

1. The Adverbial Sentence without introductory morpheme with a nominal or pronominal subject and a predicate expression using the preposition *r* + infinitive or noun. These will be termed the future form of the Adverbial Sentence, and it would be tempting to speak of a First Future: *ib n ḥm=k r qbb* “Your Majesty’s mood will be brightened up” (< “refreshed”; pWestcar 5,4); *mk wī r nḥm 3=k šḫ.ty* “I am going to take your donkey away, peasant” (Eloquent Peasant B 1,42);

2. The *īw*-sentence with preposition *r* + infinitive or noun could be termed the future form of the *īw*-sentence, and is the precursor of the Third Future: *īw=f r īī.t t 3.w rs.yw* “He will conquer the lands of the south” (Sin B 71-72).

future form of the *īw*-sentence

Both forms of expression formulate a distinction in speech act. The future form of the Adverbial Sentence refers to an obvious situation or a necessary consequence (“as everyone knows, you will be brightened up”). The future form of the *īw*-sentence draws upon the reliability or trustworthiness of the speaker (“Trust me that he is going to conquer the southern lands”), which is ultimately the only serious attitude possible concerning statements about the future.

difference

(2) Selection by linguistic evolution

From the Late Middle Kingdom and the New Kingdom, there are a couple of rare constructions using the Late Egyptian First Present pronouns. These reveal that the future form of the Adverbial Sentence is in a way adjusted to changes in the course of linguistic evolution.

tw=ī r t 3n h n c =f s d h 3.t=f
īb=ī r n 3m km.t h (w 3.t) c 3m.w

(CarnarvTabl 4-5)

“I will meet with him (the Asiatic), and shatter his body. My will shall save Egypt and subdue the Asiatics”.

The disappearance of the opposition separating adverbial sentences with and without *īw* led to a loss of this type of distinction in speech acts. Linguistic evolution eliminated the future form of the Adverbial Sentence, with its role being taken over by the future form of the *īw*-sentence. As a sentence conjugation with introductory *īw*, its future meaning may possibly have also put analogy pressure on the last traces of the old *īw*-sentence (*īw* + adverbial phrases, cf. supra, § 3.2.2[2]).

Observation:

In idiomatic expressions such as *īb=ī r* + infinitive, “I will do such and such” (“My will/my mood is directed towards such and such”), the future form of the Adverbial Sentence was preserved for a certain period (cf. also § 3.1.2).

In Demotic and Coptic, a new analytic form within the syntactical framework of the Adverbial Sentence (First Present) emerged for statements concerning the future. Its Late Egyptian precursors were — not yet paradigmatised — constructions with the preposition *m* + the infinitive of the verb of motion *n c y* — *tw=ī m n c y r īr=f* “I am on the way to do it” > “I am going to do it” (cf. French *en train de faire*). By way of the Demotic “Progressive” this construction became the Coptic First Future **ϣⲛⲁϥⲟⲩⲧⲙ**, the functional — and to a certain extent even morphological — heir of the former future form of the Adverbial Sentence.

First Future as a new form

- history of the form The Third Future sentence conjugation is preserved in Demotic as *ỉw=f(r) sdm*, which is the linguistic precursor of the Coptic Third Future ⲈⲚⲈⲘⲚⲓⲙⲓ. The negative *bn ỉw=f sdm* is likewise present in Demotic, with a less common parallel, *bn=f sdm*, both corresponding to the Coptic Negative Third Future ⲚⲚⲈⲘⲚⲓⲙⲓ. The alternative conjugation bases (a) *ỉw-* before pronominal subjects and (b) *ỉr-* before nominal subjects are also preserved in Demotic and Coptic (Ⲉ- und ⲈⲢⲈ-). The graphic reappearance of the preposition *r* before infinitives from Dynasty XXV² on is paralleled in some Demotic texts (the Setna-Khamwas story, the Myth of the Eye of the Sun), suggesting that phonetically it remained in existence. The “old” *ỉw-*sentence disappears completely, however.
- terminology The term “Third Future” is taken from Coptic grammar. There, the following terms are in use: (a) the future form of the Adverbial Sentence = First Future, (b) the converted nominal form or Second Tense of the First Future = Second Future; and (c) the “real” future tense = Third Future. The term Third Future is maintained here although this is the only form for future statements in Late Egyptian.

3.3 The nominal *sdm=f* or the emphatic sentence

3.3.1 Forms and functions

(1) Verbal forms as the subject of the sentence

The role of the subject in the bimembral Adverbial Sentence can be assumed by certain conjugated verbal nouns in Late Egyptian (cf. supra § 2.3.[1]), as in Middle Egyptian, Demotic and Coptic. Semantically, the significance of the verbal message can thus take second place to the predicate expression of the Adverbial Sentence. Although the adverbial adjunct seems to specify the verb on the sentence surface, it is in fact the emphasized predicate of the complex sentence.

ỉ.ỉr=k ỉy hr ỉh n shn ...

ỉ.ỉr=ỉ ỉy m-s3 ỉ3 ỉ.t n p3 wỉ3

(*Wenamun 2,3-4*)

“Because of what orders have you come here?”

“It was because of the wood for the Bark that I have come” (for the hieroglyphic text, cf. supra, § 2.3.2[1]).

Note:

structure *ỉ.ỉr=k ỉy* is the form of the verb *ỉy* as a nominal subject in an Adverbial Sentence; *hr ỉh* and *m-s3 ỉ3 ỉ.t* are adverbial phrases functioning as predicates.

These forms of the verb have gained some importance in the history of Egyptology as emphatic forms. They are frequently designated the Second Tenses, following the terminology of traditional Coptic grammars. In Coptic all simple tenses of the sentence conjugations can be converted into a second, nominal, tense through the addition of the morpheme ϵ - or ϵPE -. Outside the paradigms of late Demotic and Coptic, there is, however, no “first tense”, so that this form is termed the nominal *sdm=f* here (called the “that-form” by Frandsen).

Second Tenses

Adverbial phrases play the role of predicate. There are, however, far fewer Late Egyptian adverbial phrases than in Middle Egyptian. Remaining are only (a) adverbs, (b) phrases with preposition + noun or nominal phrase, and (c) phrases with the preposition *r* + infinitive, with the meaning “in order to”. Prepositional infinitives, Old Perfectives and other such forms were no longer used directly, but rather as corresponding circumstantial clauses or conjunctive clause conjugations (cf. supra §§ 2.3.2[2] and 2.3.3[3]).

Late Egyptian adverbial phrases

The nominal *sdm=f* has the form *ỉ.ỉr=f-sdm* in the textual registers and categories of Late Egyptian proper, or the form *ỉ.sdm=f/r.sdm=f* with the verbs *ỉr* “to make”; *rd* “give”; *qd* “say”; *ỉn* “bring”; *sm* “go”; *ỉy* “come” (and a few others). The periphrastic *ỉ.ỉr=f-sdm* form covers the functions of a past, a present, and, increasingly, a future tense;

ỉ.sdm=f/ỉ.ỉr=f-sd^m

it still has a simple passive *sdm.tw=f*, too. The meaning of the simple form is, however, one of a prospective or future tense:

(LRL 19, 7-8)

 *i.îw=i îw tšy=f md.t m gs m dr.t=i* “When I (shall) get back, his affairs will be halfway in my hand”

Notes:

i.îw=i form of the prospective nominal *sdm=f*;*îw tšy=f md.t*+AP Circumstantial First Present;

structure **‘it is his affairs being in my hand that I shall come back’.

Schematically the usage of forms is represented in the following table:

Subject expression	Predicate expression
<i>i.sdm=f/</i> <i>i.îr=f sdm</i>	prep. + noun/noun phrase prep. <i>r</i> + infinitive <i>îw</i> + sentence conjugation clause conjugation

(2) Negation and adverbial subordination

negation by *bn*
... *în*

A sentence with a nominal *sdm=f* — being a complex variation of the Adverbial Sentence — is negated with the discontinuous morpheme *bn ... îwnš/în* as is the Adverbial Sentence occasionally (§ 3.1.1[4]):

(RAD 55, 11)

 *yš bn î.îr=n zš n ḥqr=n îwnš* “Surely it is not because we were hungry that we went on strike”;

Note:

zš/znl abbreviated from *znî/zš tš 5 lnb.t/nš lnb.t* ‘to pass the (five) control points’ (of the *mdjy*-police on the way from Deir el-Medineh) > ‘to stop work’, ‘to strike’.negation by *tm*

Using the nominal *sdm=f* of the negative verb *tm*, a negative statement can be made the subject, just like any other verbal noun (infinitives, participles, relatives). The affirmation of the statement remains, so that the statement somehow makes an affirmation about a negative content:

(HorSeth
15,12-13)

i.îrw=k tm dî.t wd^c.tw=tn ḥrîḥ îw=k nḥm n=k tš îšw.t n Ḥrw “Why did you prevent judging you by taking up the office of Horus?”

Notes:

tm d̄.t wḡ^c.tw=tn a kind of semantic nullification of “causing”: *‘‘a non-compulsion that you be judged’’. In English this can be matched with the appropriate verb, e.g., ‘‘prevent’’; construction: infinitive of *tm* preceding the infinitive of *d̄* (Middle Egyptian: negative complement), followed by subjunctive-prospective *sdm=f* of *wḡ^c*;

structure despite the subject with ‘‘negative content’’ (*l̄l̄r=k tm d̄.t wḡ^c.tw=tn*), the predication remains affirmative (*hr l̄h*): a negative ‘‘why do you prevent?’’ would correspond to the syntactically identical positive ‘‘why do you cause?’’.

Like all other sentence conjugations, and simple sentences, the complex Adverbial Sentence with a nominal *sdm=f* can be converted into a circumstantial with *l̄w*:

subordination
by *l̄w*

(pMayer A
6,18-19)

d̄d=f nhy n ht d̄^cb p̄̄ n ḥtp.w-nṯr n̄̄ nty w̄̄h m p̄̄ w̄̄̄̄

l̄w l̄.l̄r=l̄ w̄̄h=w l̄m n-̄by z̄̄w t̄̄y ḥt

‘‘He said, ‘It was some firewood and charcoal meant for the divine offerings which lay in the storeroom, and it was in order to preserve this seal that I put them there.’’’

Notes:

- main sentence Late Egyptian Pseudo-Cleft Sentence: noun (*ht d̄^cb*) + defined relative phrase (*n̄̄ nty w̄̄h*) ‘‘This is what is such and such’’. Note the determination structure: *nhy n ht ... n̄̄ nty w̄̄h*;
- p̄̄ n ḥtp.w-nṯr* writing for *p̄̄ n ḥtp.w-nṯr* ‘‘which belongs to the divine offerings’’ (< *‘‘that of the divine offerings’’, cf. § 2.1.2[2]), in apposition here;
- nty w̄̄h* relative clause with Old Perfective; its actor expression is identical with the antecedent of *nty*;
- n-̄by z̄̄w* compound preposition (like *n-mrw.t-n*) with infinitive (*‘‘because of the desire to keep’’).

(3) Notes on linguistic evolution

Being remnants of the Middle Egyptian conjugated verbal nouns, the nominal *sdm.n=f* and nominal *sdm=f* (*mrr=f* and prospective) will still be found in the higher layers of texts in the register hierarchy (Late Middle Egyptian, Medio-Late Egyptian). Verbs of motion in particular³ clearly display the morphosyntactical changes of the (nominal) *sdm.n=f* to the Late Egyptian *sdm=f* — Middle Egyptian nominal *sdm.n=f* constructions with verbs of motion employ a *sdm=f* in Medio-Late Egyptian:

nominal
sdm.n=f/sdm=f

l̄y=k tnw p̄̄ šr̄ nfr ‘‘Where did you

(Doomed
Prince 5,10-
11)

come from, handsome boy?’’.

3 As well as the verbs *sḡr* and *wr̄̄*

semantic
differentiation

Use of the Late Egyptian *ỉ.ỉr=f-sdm* for both past/perfective and present/imperfective neutralized the Middle Egyptian distinctions of tense, aspect and mood. In some verbs, the prospective/future component is clearly indicated as *ỉ.sdm=f*. It is only with the appearance of the nominalization converter *ỉ.ỉr* (from the *ỉ.ỉr=f-sdm* conjugation) that lines are clearly demarcated: in Demotic there are not only *ỉ.ỉr=f-sdm* forms, but also *ỉ.ỉr* converted forms of the Third Future and the Aorist. In Coptic this is extended to the entire conjugation system (Ⲭ-/ⲬⲦⲬ-/ⲚⲦⲦ- + sentence conjugation).

reduction of
use

In Middle Egyptian, the syntactical structures of *sdm=f* nominal forms varied widely, although not always according to clearly describable patterns: (a) as conjugated verbal nouns following prepositions and with prepositional nisbe forms (indirect genitive), (b) as the object of certain verbs, (c) in balanced sentences, and (d) as the nominal phrase acting as a subject in an Adverbial Sentence. These structures still appear in the registers of the literary and liturgical texts, as well as in decorum texts. In Late Egyptian proper, however, the use of the nominal form of the verb has been reduced that it is used almost exclusively as the noun phrase serving as subject in complex Adverbial Sentences. Cf. Frandsen, *Outline*, § 90.

3.3.2 Usage

questions for
specification

In terms of their structure and meaning, these sentences play an important role in questions for specification and their replies (cf. supra § 2.3.2[1] & 3.3.1: Wenamun 2,3-4 & HorSeth 15, 12-13). In Egyptian, questions for specification generally construct the interrogative expression adverbially (an “empty” set), and the answer follows in exactly the same syntactical position (“filled” set). An example of a question for specification:

(oDM 580 rt.
4-5)

ỉ.ỉr=k ỉt3 3h.t=i hr ỉh “Why did you take my property?”

emphasis

Using this type of sentence allows the speaker to play with emphasis and the relative significance of information. The emphatic sentence is however also well suited for repartee, dialogues, and argument:

(pNaunakhte I
4,2-3)

bn ỉw=w r ʿqr pš.t m p3y=i r-3 ỉ.ỉr=w ʿqr p3 r.wy n p3y=w ỉt “They (the children) won’t get a share of my third; but rather they are admitted to the two-thirds of their father.”

Notes:

ʿqr pš.t “to enter into the division”;

r-3 way of writing fractions, here “ $\frac{1}{3}$ ”;

r.wy writing for “two parts” (of three): “ $\frac{2}{3}$ ”; cf. Gardiner, *Grammar*, § 265.

A predicate expression using a circumstantial clause indicates the degree to which a Late Egyptian nominal *sdm=f* sentence assumes the character of a complex sentence. The form itself appears as a kind of minimal sentence, as if it serves as the main sentence to the dependent circumstantial clause. This segmentation does not, however, play a role in linguistic evolution, as the form loses its conjugated character, becoming a mere converter.

circumstantial
clause as
predicate

(LRL 21,8-10)

ỉ.ỉr=ỉ h3b n=tw t3 šc.t ỉ. h3b=ỉ n=tw hr n3 nỉwy ỉw bw ỉr.t t3y=tn h3b ỉy n=ỉ "It turned out that I had sent the letter which I sent to you about the spears before your message reached me."

Notes:

h3b n=tw variation of *n=tn* "to you";

ỉw bw ỉr.t NP ỉy circumstantial form of the "not yet/before" form; (cf. §§ 2.3.2[3]; 5.1.1[2]);

t3y=tn h3b for *p3y=tn h3b* "your epistle".

This type of sentence can, however, be a part of a compound sentence, as in *inn*-sentences (conditional sentences) or oaths, where, to be sure, the construction reflects the construction of the Middle Egyptian balanced sentences in Late Egyptian:⁴

in balanced
sentence
structures

(RAD 72,11-73,1)

w3h ʾImnw w3h p3 hq3 mtw=tw gm 3h.t h3-(n)-t3 ỉw sk3=ỉ sw m ỉw n Nby.t r.šdỉ=tw n3 ỉt m.dỉ=ỉ "As long as Amun and the Ruler endure and leasehold shares of Crown Land which I have tilled on the 'island' of Ombo should be found, then the corn should be exacted from me.";

Notes:

w3h ʾImnw w3h p3 hq3 introductory line of an oath: *sdm=f* forms derived from the Middle Egyptian balanced sentence variations, which have become fixed and standard expressions in Late Egyptian (cf. Oath Formulas, *infra* Appendix § 7.1);

writing of *hq3* with cartouche: note the *s* at the end, which closes the hieratic abbreviation of 'nh wđ snb';

mtw=tw gm Conjunctive as a form which continues the oath introduction;

3h.t cultivated field, here specifically "leasehold field";

h3-t3 registered land at the king's disposal, which he can lease out, whether it belongs to the Crown or to other institutions (cf. Gardiner, *The Wilbour Papyrus* II, 166);

4 For the construction of these compound sentences cf. Junge, "Emphasis" and Sentential Meaning in Middle Egyptian, Wiesbaden 1989, 89f(2).

- lw* “island”, corresponding to the Arabic *jazira*: land with an elevation lying between the extremes of high and low water, so that only a high inundation would cover it;
- Nby.t* name of the city called Kom Ombo today;
- r.šdl=tw* form of the passive nominal *sdm=f*;
- structure the formula of the oath precedes the independent emphatic sentence as a verbally constructed noun phrase.

noun phrase in anticipation

As a noun phrase, the nominal *sdm=f* itself can precede another sentence. This may be considered another realization of the balanced sentence in Late Egyptian:

(*pD'Orb 3.1*)

p3-wn i.īr p3y=i sn <š> s:īn n=i m-dy.t wdf=w “(Get up and pray give me seed corn so that I can go to the field), since my big brother is waiting for me, don’t delay things.”;

Notes:

- p3-wn* conjunctive particle preceding sentence conjugations, “for”, “because”;
- <š> emendation because the written *šr* is excluded, as the younger brother is speaking;
- m-dy.t* negated Causative Imperative (cf. supra § 2.2.2[3]);
- wdf=w* subjunctive-prospective *sdm=f* “that they delay, be slow” > “that one delays, is slow” (cf. for passive supra § 2.3.2[4]);
- structure *p3-wn* introduces a sentence consisting of a negated Causative Imperative which is preceded by a noun phrase in anticipation; this noun phrase on its part is a nominal *sdm=f*.

3.3.3 Bibliography

- form and usage Winand, *Études*, §§ 405-457; 487-494; Frandsen, *Outline*, §§ 85-92; Černý/Groll, *Late Egyptian Grammar*, § 26; Groll, *Negative Verbal System*, 172; Cassonnet, *Les Temps Seconds*

3.3.4 Exercise: From a tale of Dynasty XX (HorSeth 5,6-6,2)

Passage from a literary narrative dating to the reign of Ramesses V, published by A. H. Gardiner, *The Library of A. Chester Beatty. Description of a Hieratic Papyrus with a Mythological Story, Love Songs, and other Miscellaneous Texts* (London, 1931), and idem, *Late-Egyptian Stories, Bibliotheca Aegyptiaca I* (Brussels, 1932). The passage cited here is from *LES* 43-44. The “Contendings of Horus and Seth” is a story about gods similar to the mythical comedies of Aristophanes.

Purpose: Example of a literary text of Dynasty XX; use of Circumstantial First Present, emphatic forms and Third Future.

Notes:

- 5,6 *wn.ln* (with *hr* + infinitive) is a traditional form of narrative texts; similar *ḥ^c.n* in line 5,12;
ḥ.n.ty, the “clawed one” is a reading making sense in the course of the tale, as his toe-nails are removed as a punishment later. The alternative reading is *Nm.ty*. Either reading applies to a cult manifestation of the Hawk god of the 12th Upper Egyptian nome, with its capital at Per-Anti/Nemti - the “House of Anti/Nemti House”. The tombs at Deir el-Gebrawi belong to the Overseers of the priests of Anti/Nemti;
spr r: “arrive at”, “turn to”; for the use of *ḥmsl* as an auxiliary verb “to be doing something”, cf. supra § 2.2.3(3);
- 5,7 “boat”: probably to be read *lmw*;
lw lry=s: circumstantial of preterite *sdm=f* (here as characteristically relative past);
w^c n lḥw.t n nmḥ: “an old human lady”; note the traditional construction with *w^c* and *n*;
m ksks: “bent, crooked” (Lichtheim, *Literature*, derives it from *ksl* “to bend”);
- 5,8 *r-ḡr.t=s*: “(jewelry, bonds are) on her hand”;
r ḡd ḡy=k: prospective *sdm=f* after *ḡd*; there are two alternative interpretations: either *ḡd* with direct address, literally “(I came to you) to ask, ‘Could you ferry me to the middle-island?’” or understand *r-ḡd* as the conjunction (Coptic ⲬⲄ) “so that you could ferry me”; cf. infra § 3.4.2(1);
- 5,8-9 the preposition *r* is written twice (dittography at the line break);
- 5,9  an abbreviated writing of  *lw* “island”; *lw hr.l-ḥ* “island in the middle”, “middle-island”, perhaps even then a designation for a strip of land in the Delta surrounded by branches of the river and canals, as it meant later;
pḥ-wn: conjunction “for” + sentence conjugation (cf. Erman, *Neuägyptische Grammatik*, § 679);
ḥb < ḥḥb: vessel in the form of a situla;
- 5,10 *Sr pḥhrw*: absolute use of a noun indicating time (cf. Gardiner, *Grammar*, 88): “since five days” (or, “five days until today” < *“five up to today”);
- 5,11 *ḡd.twn=l*: passive of preterite *sdm=f*;
- 5,12 *ḡy.tw=*: passive prospective *sdm=f* as a purpose clause, “that”, “in order to” (circumstantial form of the Late Egyptian independent prospective *sdm=f*, cf. infra § 3.4.2[2]);
- 5,13 *lw=s (r) lḥ n=l tḥy=t whḥ.t*: “What is it to me, your cake?!”; use of a *lw*-sentence or Third Future variation (*r* + noun), where the preposition is not graphically noted, as in the normal writing of the Third Future (cf. for the apposition, supra § 2.1.4[1]);
- 5,13-14 *ḡḥ* in *ḡy.tl* is written twice, being repeated because of next line; the *.tl*-ending can be the infinitive ending, but it could also be a writing for the infinitive with object suffix *ḡy.t=* (<=t) “ferry you (f.) over”;
- 5,14 *lw ḡd.twn=l m-ḥr ḡy Y*: circumstantial of preterite *sdm=f* with following content clause (direct address); a translation using indirect speech is probably preferable in these cases: “... although I have been told not to ferry over Y”;
 read *tḥy=’ whḥ.t* (< *tḥy=t whḥ.t*): the 1st pers. sing. pronoun referring to a woman, written  is here the 2nd pers. sing.: the same grapheme and the same phoneme, but different morphemes.

3.4. Request sentences: Imperative and Prospective

3.4.0 Areas of meaning and means of expression

(1) Request, wish and command: anticipated and expected actions

As in other languages, Egyptian had several means of expressing that the speaker wants something. There are suitably phrased declarative sentences, but in particular there are specific types of sentences formed with (a) the imperative (cf. supra § 2.2.2) or the infinitive; (b) the Third Future (cf. supra § 3.2.2); or (c) a modal form of the *sdm=f*. This latter *sdm=f* form is the so called prospective *sdm=f*, which can be an independent sentence, but can also be subordinate. When referring to this form here apart from its role and syntactic position (independent, subordinate), it will be termed “Prospective”.

Expressing a wish, a request or a command is by definition restricted to direct forms of speech. Generally, the imperative is thought to be the form used to express a command, while the other forms are taken to express varying degrees of desire, extending to gentle compulsion. This is however not the entire story, for the power of the wish is actually expressed by means of particles, adverbs or tone, rather than through specific grammatical forms. Stylistically and historically imperatives and imperative infinitives, the prospective *sdm=f* and the future forms are complementary, but in use they tend to merge into each other in various ways.

 *hn=tn s:mtr=s* (or *s:mtr st*) “Hurry and question them”; (pJud. Turin 2,5)

Notes: *hn=tn* prospective *sdm=f* 2nd pl. (*hn* is quite often used to introduce requests — as in English, to “hurry up” and do this or that);

s:mtr imperative or imperative infinitive.

Characteristic of the imperative is direct address to listeners in a speech situation: the form implies the presence of the “2nd pers.” (sing. or pl.). The independent Prospective as a form of the *sdm=f* conjugation (prospective *sdm=f*), however, can include both the 1st and 3rd persons as well; in function it can be compared to the English, German and French Subjunctive, the Greek Optative or the Jussive/Cohortative of the Afro-Asiatic languages (for Arabic, it is termed the Apocopat). This function will here be called the Optative also with reference to Egyptian.

In forcefully expressed wishes (“should”, “want”), especially those obliging oneself or another (in the 2nd pers. — but also those expressed in the 3rd pers.), the Prospective can assume the role of an instruction or utterance of future intent: “I want to” or “I will” may change to “I am going to” or “I shall”. In such cases, the prospective *sdm=f* can be distinguished from the Third Future as a subjective or volitional future — a future depending on the speaker’s will (cf. Winand, *Études*, § 349).

future of
possibility

Concerning future situations which the speaker considers to be conceivable or desirable, doubts as well as probability can be expressed in Late Egyptian by using the Prospective in the 3rd pers.: “He probably will...”, “He could...”.

Potential

To make the distinction clearer, the independent prospective *sdm=f* expressing statements about the future — the future of volition or possibility — will be called the Potential here, reflecting one use of the Optative in Greek.

(2) The subordinate imperative

The languages into which we translate Egyptian do not allow the use of the imperative in subordinate clauses, because our grammar does not permit the logical association of a super-ordinated situation while addressing the listener directly. In the prohibitive (negated imperative), Egyptian does allow this, however. This is made possible by the specific features of the circumstantial converter *l̄w*, since it (a) expresses subordination only in a general way and does not require expression of logical relationship, and (b) includes simultaneously English co-ordination (“and”; “or”; “but”).

(LRL 62,10)

l̄mm šd̄l.tw=w l̄w m-ir sdm md.t “Let them (the bread rations) be saved, and don’t pay attention to (other) instructions.”

Notes:

l̄mm šd̄l.tw=w imperative of *d̄l* followed by subjunctive-prospective *sdm=f* as an object clause;

l̄w m-ir sdm subordinated prohibitive (negated imperative): “and don’t listen to talk”.

conjunctive

The function of any conceivable subordinated non-negated imperative is fulfilled by the Conjunctive. This follows an introductory imperative, and links wishes and requests into long chains: “Do this and that, and then you should do something else”.

(3) The variants of the Late Egyptian *sdm=f*

Late Egyptian has two forms of independent *sdm=f* sentence: the prospective *sdm=f* and the preterite *sdm=f*. In principle — and aside from established combinations and grammatical constructions (*bw sdm=f/sdm.t=f*; *r sdm.t=f*; nominal *sdm=f*) — every use of the *sdm=f* form can be reduced to the Optative/Potential or the Preterite, and thus be clearly restricted to (a) wishes or future-oriented utterances and (b) past propositions.

register
dependency

The correct appreciation of the *sdm=f* forms depends however — even more than for other forms — on being conscious of the registers of texts and their position in the hierarchy of norms. Those texts (a) bearing considerable socio-ideological weight (royal or political texts), (b) used in an educational context, or (c) of religious import (such as hymns and liturgies) all tend to maintain the Middle Egyptian usage of the *sdm=f*. During

the long history of the New Kingdom, however, the usage of texts of lower register categories and of literature tended to seep into the higher categories. We can thus find that (*iw*) *sdm.n=f* and *sdm=f* (preterite) appear in one and the same text. Even syntactic markers which seem mutually exclusive will be encountered side by side, e.g., the Middle Egyptian *iw*, which marked independence, and the Late Egyptian circumstantial converter *iw*, or the circumstantial converter *iw* and circumstantial *sdm=f*. While this is to be considered interference of earlier usage in the case of preterite *sdm=f* (§ 3.5), it is however still part of the Late Egyptian system with regard to the prospective *sdm=f*.

3.4.1 Forms and functions of the prospective *sdm=f*

Prospective/Subjunctive: Following J. P. Allen, a "prospective *sdm=f*" is distinguished from a "subjunctive *sdm=f*" for Old Egyptian (Old Kingdom Egyptian). "Prospective *sdm=f*" shows a *-w* ending for some classes of verb and is used as a nominal/emphatic and future form, "subjunctive *sdm=f*" has a *-t* ending on some irregular verbs and is used to express wishes, to form object-clauses following other verbs, and to form final clauses (for an overview cf. W. Schenkel, *Tübinger Einführung in die klassisch-ägyptische Sprache und Schrift*, Tübingen 1994, pp. 168-174). Even in Middle Egyptian the morphological and functional distinctions are difficult to grasp and in Late Egyptian all that can be said is that the nominal *i.sdm=f* form could be the functional successor of the earlier Prospective (cf. Winand, *Études*, § 343). The notion "prospective *sdm=f*" (or "Prospective") is thus meant to refer firstly to a form with a prospective meaning, expressing future statements, wishes and intentions; secondly to the form representing an independent sentence conjugation performing the functions of the "Prospective". Where the form is dependent on prepositions or verbs, it is termed "subjunctive-prospective *sdm=f*" (or "Subjunctive"), while the form as a circumstantial clause expressing intent or purpose is termed "final-prospective *sdm=f*".

In contrast to the preterite *sdm=f*, the prospective *sdm=f* can be used for any verb with a suitable meaning. It is not possible to form sentences using the periphrastic construction to indicate the optative-future notion: only in Demotic does the *ir=f sdm* periphrasis appear in dependent, subjunctive-prospective *sdm=f*. The conjugation base (*sdm=*) of strong verbs is immutable, while the 3ae inf. verbs frequently display a stem with *-ḳ*: *ir=f* *ir=f* "he may/should/will act". The same applies to those verbs whose second root consonant is *-w*, *-ṣ* or *-ḥ*. *iw* and *iy* "come" use both *iw=f* and *iw.t=f* "he may/should/will come". The passive — better: the form in which the actor remains unidentified — uses the infix or suffix *-tw*: *sdm.tw=f* "he ought to be heard", *sdm=tw* "one should listen" (cf. § 2.3.2[4]).

The prospective *sdm=f* still displays the syntactical features of Middle Egyptian *sdm=f* usage more distinctly than any other *sdm=f* forms of Late Egyptian. The same form appears independently as a sentence — as the Optative/Potential — and dependently, as a subordinate clause. In subordinate clauses the form can be (a) nominal, serving as an object

sentence forming and dependent

clause, the subjunctive following *rdi*, and after certain prepositions (conjunctions), such as *m-dr*, *m-ht*; or it can be (b) adverbial, serving as a circumstantial clause of purpose — without being marked with the *iw*-converter: asyndetical subordination in contrast to the prevailing syndetical. If placed alongside the prospective emphatic *sdm=f* (*i.sdm=f*; § 3.3.1[1]), it resembles a closed paradigm of the Middle Egyptian kind.

negation by *bn*

The same syntactical status can be read in the form of the negations. Optatives are negated with  *bn*, the successor of the Middle Egyptian  with *sdm=f*, which still appears in the higher textual registers. The subordinate prospective *sdm=f* takes the *tm*-negation: *tm=f sdm* “that he may not listen” (“lest he listen”).

(RAD 75,6)

bn di=i q=f “I will not let him enter”.

Notes:

bn di=i negated sentence forming prospective *sdm=f* “I do not want to give” (with verbal object clause > “to cause”): negated Optative, Vetitive;

q=f subordinate prospective *sdm=f* in an object clause following *di* “give” (> “cause”).

The forms can be summarized as in the following table:

		Form	Function	Meaning paraphrase
Independent	complementary to	Imperative/Third Future		
		<i>sdm=f</i>	Optative	“he may/shall/should listen”
	negated	<i>bn sdm=f</i>		“he may/must not listen”
	with bound morpheme	<i>ih-sdm=k</i>		“would you please listen”
		<i>hr-sdm=f</i>	“contingency”-form	“he will inevitably listen”/“usually he will listen”
Dependent (nominal)	on verbs (as object)	<i>di sdm=f</i>	Subjunctive	“cause that he listen”
	on prepositions	<i>dr/m-dr sdm=f</i>	Temporal	“when he listened”
	(conjunctions)	<i>m-ht sdm=f</i>		“after he has listened”
		<i>r-tnw sdm=f</i>		“whenever he listens”
(adverbial)		<i>sdm=f</i>	Finalis	“so that he may listen”
	negated	<i>tm=f sdm</i>	Circumstantial	“so that he may not listen”
	complementary to	<i>r</i> + infinitive		“in order to listen”

combination with *ih* and *hr*

As the table shows, the sentence forming (independent) prospective *sdm=f* enters established combinations with the particle *ih*, and less commonly with *hr* and *k3*. All three

of these particles are closely related to their Middle Egyptian precursors, and the *hr* in particular should not be confused with the widely used Late Egyptian proclitic particle *hr*: *iḥ-sdm=k* is a form of polite request generally used with the 2nd pers. (but occasionally also with nominal actors). *hr-sdm=f* indicates that something follows from previous conditions, that it has a dependent existence, so to speak, or is “contingent” (being the successor of the Middle Egyptian *sdm.hr=f*); it is limited to the higher categories of texts, particularly literary pieces. The same applies to *k3-sdm=f*. The latter two forms disappear in the course of the New Kingdom and (*iḥ-sdm=f*) the Third Intermediate Period.

3.4.2 Use of the prospective *sdm=f*

(1) Requests, wishes, and desired or planned actions

The use of the Prospective as an Optative or a volitional future is familiar in Late Egyptian, especially in combination with *iḥ*. In comparison with Middle Egyptian, however, usage has declined:

— In wishes and self-obligations

in wishes

nfr snb=k “May your health be good” (a common phrase in letters, and hardly limited to the passage cited);

(LRL 28,7)

(HorSeth 10,12-11,1)

i.sm sdm.tw p3 dd=i n=tn wnm=tn swi=tn htp.w n=n rwi=tn mi.n3 tttt r'w-nb zp-2 zp-2
(The All-Lord speaks:) “Come and listen to what I have to say to you: ‘You may eat and drink, but leave us in peace; pray put an end now to this endless strife’”;

Notes:

sdm.tw interpreted as imperative, but it would also be possible to read a prospective *sdm=f* as purpose clause, “(Come), that one may hear what is said to you”;

htp.w n=n imperative: “Be so friendly to us...”;

iḥ dī=k hr=k r ṛ zh3.w “Please turn your attention to

(pAnast. III 5,5-6)

becoming a scribe!”

and especially in formal expressions

w3ḥ ʾImnw w3ḥ p3 ḥq3

(HO pl. 71,1 vs.3)

bn thi=i “As long as Amun and the Ruler endure, I will not fail”;

Notes:

- w3h 'Imnw w3h p3* prospective *sdm=f* in the introductory line of the oath (cf. infra, § 7.1), more literally,
hq3 “as truly that they will endure”;
bn thl=l negated Optative (Vetitive).

in predictions

— As a Potential Prospective in predictions

(Doomed
Prince 4,3-4)

iw=sn hr dd mwt=f n p3 mzh m-r3-pw p3 hf3w ml.t p3iw (At birth, the Hathors have come)
 “and they said: ‘He may well die by the crocodile, the snake, or the hound.’”

Notes:

- mwt=f* prospective *sdm=f* at the very beginning of the sentence (“direct indicator of initiality” *dd*) as a form expressing that something is likely to happen;
p3 mzh the determination by the definite article (*p3 hf3w, p3 iw*) specifies explicitly that the entire class is meant in each case. Neither “crocodiles” in general nor specifically “a crocodile” are a threat: he is menaced by the entire class of “crocodilish” beings (the threat to him is the whole category of “crocodilicity” — following Jan Assmann);
m-r3-pw adverb with the function of disjunctive co-ordination (cf. supra § 2.2.4[1]: “or”;
ml.t adverbially employed noun: “the same”, as a co-ordinating conjunction, as “and likewise”. One could translate literally: “by the crocodile or the snake and likewise the hound”.

One can compare

(HorSeth 5,8-9)

l.ir=l iy n=k r dd d3y=k r {r} p3 iw hr.y-ib “I have come to you so that you may cross over to the Isle in the Middle” (for the hieroglyphic text, cf. supra, exercise § 3.3.4):

Notes:

- l.ir=l iy* nominal *sdm=f* of *iy* with the adverbial predicate *r dd d3y=k*;
r dd d3y=k while the conjunctive role of *r-dd* (X€) is already superficially decisive, the connection to the role of speech introducing *dd* is still perceptible: “in order to say: ‘Would you cross over!’” In the course of reinterpretation (by the speaker or in the course of linguistic evolution) the syntactical independence of the Optative *d3y=k* following *dd* (the independent prospective *sdm=f*) is not changed.

Observation:

The phrases *r dd d3y=k* and *iw=sn hr dd mwt=f* illuminate the interaction of direct speech and formulations with content clauses. The transformation of *dd* as a form that introduces direct speech into a conjunction (*r-dd*, Coptic X€) reflects an analogically comparable process in European languages: the punctuation-mark (or speech pause) that marks the following direct speech as syntactically independent (i. e., “:”) can be transformed into a content clause introduced by the conjunction “that” (indirect speech). This means in practice that rather than translating, “and they said, ‘he will probably die (young)’”, one could just as well translate “and they said, that he would probably die (young)”.

(2) Nominal and adverbial subordination

The prospective *sdm=f* is most commonly used as a Subjunctive. If a noun is the subject in the Adverbial Sentence, it is substituted by the nominal/emphatic *sdm=f* form (supra § 3.3.1[1]); any other noun can be replaced by a noun clause in the form of the prospective *sdm=f*. In Late Egyptian this applies primarily to the objects of transitive verbs, such as *dī* “give; cause”. For historical reasons, the *sdm=f* can be considered to be “subjunctive” also in certain prepositional combinations (*m-dr/m-ht/r-tnw sdm=f*). These combinations were however already fixed conjunctive clauses so that the prospective *sdm=f* was no longer used freely after any given preposition.

— Subjunctive as the object of verbs

as an object

(LRL 23,14-15)

īh dī=k twī.tw n3 rm̄ n p3 hr nty īm m Nw.t mtw=k dī.t īn.tw=w n=ī r t̄y rī.t “Please have the men of ‘the Tomb’ who are there in the City assembled, and have them brought to me on this side”;

Notes:

- twī.tw* passive Subjunctive (subjunctive-prospective *sdm=f*), dependent on the 2nd sing. masc. Optative of *dī* (or *twī=tw*). This is the grammatical interpretation suggested by the writing, but it would also be possible to read *twī n3 rm̄* “that the men assemble”,
- Nw.t* “the” City = Thebes (on the East Bank: the writer of the letter was at the temenos of Medinet Habu);
- mtw=k dī.t* Conjunctive: continuation form for the co-ordination of imperatives, Optatives, etc. (“hypotactical co-ordination”);
- īn.tw=w* passive Subjunctive (of *īn* “bring”), dependent on infinitive of *dī*.

— As component of the Temporal conjunctive clause

as Temporal

(pAbbott 5,1)

īw=tw dī.t n=ī r̄.t=f m-dr ph̄=f st (A commission has bound a man’s eyes and taken him to the plundered tombs) “And his sight was given to him after he had reached them”;

Note:

- m-dr ph̄=f* Temporal (“when/after something was done”); subjunctive-prospective *sdm=f* of *ph̄* as morphological component of what was formerly a prepositional phrase.

An independent prospective *sdm=f* — the Potential/Optative — is not subordinated as a circumstantial clause with the converter *īw*: it is the prospective *sdm=f* itself that is subordinated, as a “final” *sdm=f* in a circumstantial clause that specifies result or purpose (“in order to”, “so that”). This differs significantly from the other sentence conjugations.

final circumstantial

(HorSeth
10,11-12)

wn.ỉn t3 psd.t hr dd ỉmm ʕš=tw n Hr w hnʕ Stš wpl.t.w=w wn.ỉn=tw ỉn.t=f m-b3h t3 psd.t
 “And then the Ennead announced: ‘Let Horus and Seth be summoned, that they may be judged!’ And thus they were brought into the presence of the Ennead.”

Notes:

ỉmm ʕš=tw no one is specifically addressed with this imperative which is meant as a general instruction;

wpl.t.w=w passive, final-prospective *sdm=f*, “that they be judged”;

wn.ỉn=tw (hr) note the identical writings of the passive (*wn.ỉn=tw*) and the status pronominalis of the infinitive (*ỉn.t=f*).

The Subjunctive following *ỉmm* generally applies to all persons, except for the 2nd, indirect speech where the simple imperative is employed. If the 2nd pers. is used, as in the introductory paragraphs of letters, with *ỉmm ʕnh=k* etc., it is a form characterizing “indirect speech”:

(LRL 21, 7-8)

r.nty tw=ỉ dd n Hnmw St.t ʕnq.t ỉmm ʕnh=tn ỉmm snb=tn “The following: I pray to Khnum, Satis and Anukis that you be well and healthy” (** “I pray to Khnum, Satis and Anukis: ‘cause — you gods — that you — recipients of the letter — live’”, etc.).

Note:

r.nty (Middle Egyptian *r-nt.t*) conjunction preceding sentence conjugation, introducing the actual content in letters and messages, or preceding justifications, explanations, etc. This can be translated as a colon “:”, or “furthermore”, “the following”, etc.).

Observation:

In such constructions (generally: “I say to god So-and-So *ỉmm n=k ʕnh*, that he give you life”, etc.) it is impossible to translate getting all of the various persons addressed literally “right”. One has to decide to translate either “I pray — concerning you — to god NN, ‘give him life/cause that he lives’”, or “I pray — concerning you — to god NN, that he may give life to you/that he may cause that you live”.

The negative counterpart of the Causative Imperative is *m-dy.t sdm=f* (“don’t let him negation listen”; “prevent him from listening”). It is formed with the Prohibitive *m* and a form of *dỉ*, which is probably best considered to be the infinitive, although it assumes a graphic appearance which varies considerably from the conventional forms of the infinitive (; ; etc.; cf. Winand, *Études*, §§ 192; 154-155)

(oDM 613,3)

“Don’t let him wait around when he reaches you”;

Notes:

m-dy.t ʕhʕ=f Prohibitive (negated imperative) of *dỉ* with subjunctive *ʕhʕ=f*;

m p̄ly=f spr preposition with defined infinitive (*“at his reaching you”); cf. supra § 2.3.3[2];

r=tn the doubling of *r* in *r.r=tn* is a writing of the status pronominalis (Coptic ⲄⲢⲠⲟⲩⲛⲧⲛ).

The Prohibitive form *m-īr* also appears with *dī*. In its periphrastic form (*m-īr dī.t īr=f sdm* “Don’t let him hear!”), the construction is a precursor of the Coptic Vetitive ⲠⲛⲓⲢⲧⲣⲉⲘⲘⲧⲙ.

(Wenamun
2,53)

 *m-īr dī.t ptr=ī sw* “Don’t make me look at it”.

The negated Causative Imperative can also be used with the circumstantial converter *īw* (cf. also § 3.4.0[2]). In such cases the form is in a way a paradigmatic substitute for the subordinated negative Third Future.

(LRL 19,11-
12)

 *mtw=k dī.t īw=f n=ī 3s īw m dī*
“And have him come to me quickly, without permitting him to stay” (< “and don’t let him stay”);

Notes:

mtw=k dī.t Conjunctive, here as a member in a chain of conjunctives, which continue an introductory imperative;

dī.t īw=f Causative Infinitive followed by Subjunctive;

īw m dī *h̄=f* subordinated, negated Causative Imperative (Causative Prohibitive).

(2) Finalis and Causative Infinitive

Finalis

As with the prospective *sdm=f* in general, the prospective *sdm=f* of *dī* as a causative followed by a Subjunctive can also be used as a circumstantial clause. In the form of the 1st pers. sing. prospective *sdm=f* (*dī=ī sdm=f*) in the clause of purpose, it was very long lived (*dī=ī īr=f sdm > TAP̄ĒC̄W̄T̄M̄*). As the causative-final circumstantial of the 1st pers. following an imperative sentence (i.e., addressed to the 2nd pers.), the emphasis that the speaker is causing something to be accomplished (standardized in Coptic) makes the normal expression of purpose or intention retreat slightly, leaving a shade of promise or prospect:² “Soek and ye will find”.

2 One could occasionally even say the speaker promises a “reward” for an act requested; combined with its syntactical function of continuative > conjunctive, the form has thus a function that justifies terming it a causative-promissive Conjunctive in Coptic; cf. Polotsky, *Grundlagen des Koptischen Satzbaus* I, 163f (§ 38).

(HorSeth 1,9-10)

imm h3^c.tw=f r bl im=ī dī=ī ptr=k dr.t=ī iw=f t3y.t=f dr.t=f m-b3h t3 psd.t “Have him sent out together with me, and I will let you see my hand grasp his in front of the Ennead.”

Notes:

- imm h3^c.tw=f* Causative Imperative with passive prospective *sdm=f* (“Cause that he be sent forth”);
- dī=ī ptr=k* Finalis or “promissive conjunctive”: prospective *sdm=f* of *dī* as final circumstantial clause. Thus one could of course also translate: “Send him out so that I may let you see my hand doing such-and-such”;
- dr.t=f* apposition to *=f*; explicatory addition: “how it grasps it, his hand”.

As a causative-final circumstantial, the Finalis is in a relation of paradigmatic substitution to the Causative Infinitive, the construction of the preposition *r* + infinitive of *dī* “cause” followed by a Subjunctive: (*r dī.t sdm=f*; *r dī.t ir=f sdm* > ⲈⲧⲢⲈⲘⲚⲤⲚⲓ). This corresponds to the relationship between the final-prospective *sdm=f* and the preposition *r* + infinitive. Like all infinitives the Causative Infinitive is also negated with *tm*: (*r tm dī.t sdm=f*).

causative infinitive

(pAbbott 6,13-14)

hr iw=ī h3b hr=w m-b3h Pr-3 p3y=ī nb r rdī.t wdl.tw rm t Pr-3 r ir h3w=tn “And I will send to my Lord Pharaoh about it, in order to have one of Pharaoh’s men sent to deal with you directly.”

Notes:

- hr=w* note the writing of the status pronominalis of the 3rd. pl.;
- r rdī.t wdl.tw* Causative Infinitive with passive subjunctive *sdm=f* (*wdl.tw*; the person not mentioned in the passive form is, as often, Pharaoh — thus the semogram).

3.4.4 Notes on linguistic evolution

The Late Egyptian causative constructions have been given particular attention in this section because they are forms which are preserved in Coptic — by way of Demotic — in two different fashions:

causatives in Coptic

1. lexicalized, as a class of verbs, the so-called causative verbs such as ⲧⲀⲛⲁⲟⲩⲉⲓ “to keep him alive” corresponding to Ⲙⲛⲁⲟⲩ “live” (from *dī.t nh=f* “cause that he lives”);
2. as a grammatical sub-system where the use of the subjunctive-prospective *sdm=f* and its relationship to the verb *dī* “cause” is completely preserved or even reorganized. This took place via forms of *dī* in the three morphological patterns of infinitive,

lexicalized as a sub-system

imperative and circumstantial, which were essential components of the Egyptian-Coptic sentence structure. As infinitives, the causative constructions can either (a) appear as constituent phrases of the sentence conjugation or (b) extend the sentence. In either case they are, however, no longer so much causatives as conjugated infinitives. As imperatives, they express commands and wishes, with a continuative form of its own, the promissory conjunctive.

development

The development of these causative constructions from Late Egyptian to Coptic via Demotic can be summarized thus:

	Late Egyptian	(Roman) Demotic	Coptic
Caus. Infinitive in			
Sentence conjugations			
e.g. Preterite	<i>dī=ī sdm=f</i>	<i>dī=ī lr=f-sdm/lr=ī dī lr=f-sdm</i>	ⲁ=ⲓ- T- ⲢⲈ=ⲑ-Ⲙⲱⲧⲙ
e.g. Present	<i>tw=ī dī.t sdm=f</i>	<i>tw=ī dī sdm=f/tw=ī dī lr=f-sdm</i>	ⲧ- T- ⲢⲈ=ⲑ-Ⲙⲱⲧⲙ
Circumstantials	<i>... r dī.t sdm=f</i>	<i>... r dī sdm=f/r dī lr=f-sdm</i>	Ⲉ- T- ⲢⲈ=ⲑ-Ⲙⲱⲧⲙ
Neg. Imperative	<i>m-dy.t sdm=f/ ...m-lr dī.t sdm=f</i>	<i>m-lr dī sdm=f</i>	ⲙⲛⲡ- T- ⲢⲈ=ⲑ-Ⲙⲱⲧⲙ
Caus. Imperative	<i>īm sdm=f</i>	<i>my lr=f-sdm</i>	ⲙⲁ- ⲢⲈ=ⲑ-Ⲙⲱⲧⲙ
Finalis	<i>... dī=ī sdm=f</i>	<i>... dī=ī lr=f-sdm</i>	...ⲧⲁ- ⲢⲈ=ⲑ-Ⲙⲱⲧⲙ

Late Egyptian
causatives

Exploring the role of the Late Egyptian causatives is thus motivated by the linguistic evolution, rather than by Late Egyptian syntax. While in Coptic this whole subset of constructions was completely limited to use with *dī*, i.e. to causatives, in Late Egyptian the constructions with the verb *dī* and subjunctive-prospective *sdm=f* are still part of a larger framework of similar constructions belonging to the framework of conjugation building and subordination — they are not yet a subsystem of their own.

trends of
development

It is only after the end of the language history and in overview that some specific phenomena of the linguistic system can be recognized as tendencies of development. Accompanying the emergence of the causative system are

— the disappearance of fixed combinations of the prospective *sdm=f* with particles (*ih*, etc.) towards the end of the New Kingdom;

— the gradual disappearance of the independent prospective *sdm=f* as an Optative and a Volitive Future. This started in the hierarchically lower registers but then appeared also in formal usage during Dynasty XXI;

— the shift of the optative functions of the independent prospective *sdm=f* to (a) the imperative constructions (both are already used in parallel in Demotic) and (b) the Third Future.

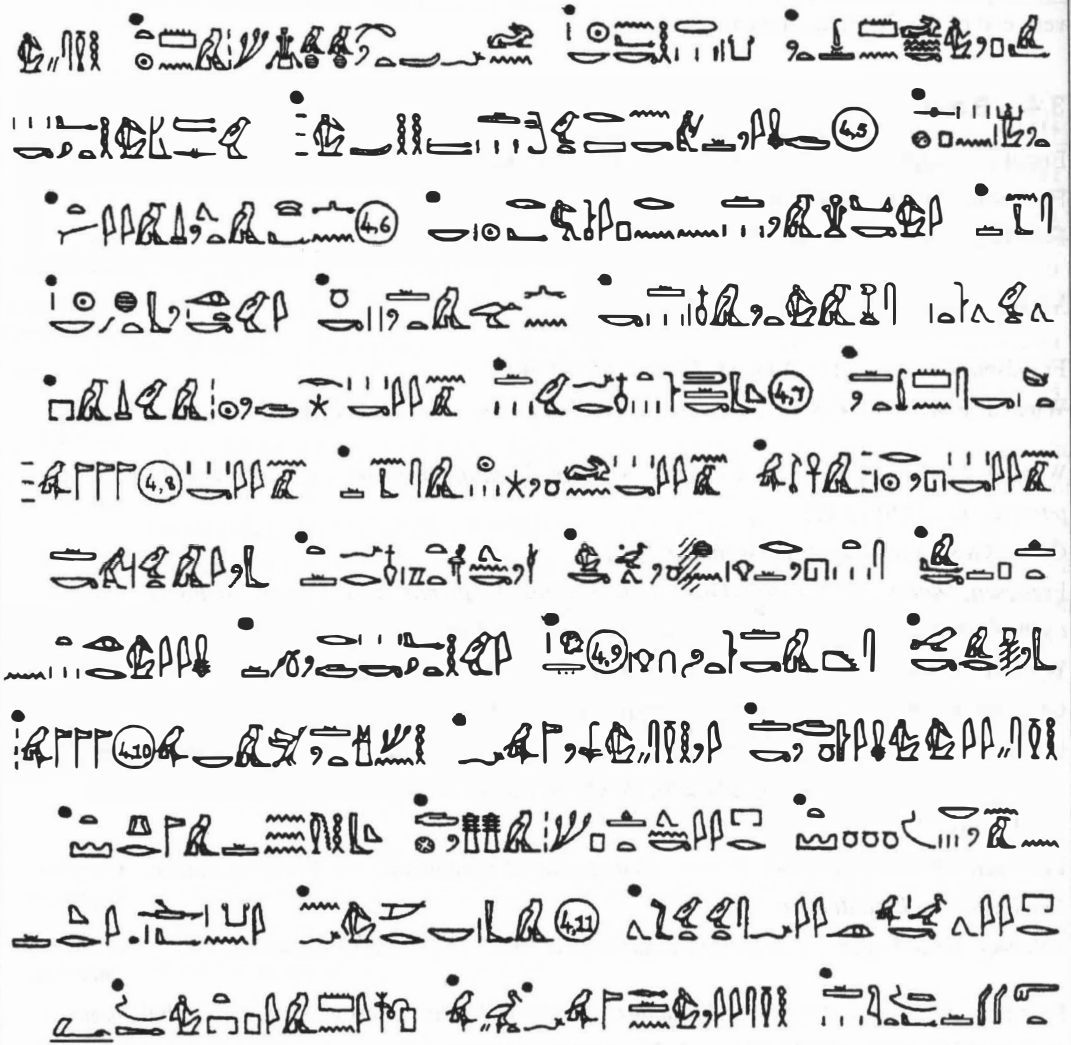

The Late Egyptian sentential system for the expression of intention or possibility was thus not merely complex in itself, but this complexity is also clearly maintained in the subsequent development of the language. The independent forms, imperative and imperative infinitive, *bw ṛ.t=f sdm*, the prospective *sdm=f* and the future forms are complementary, and allow the expression of fine nuances in moving from one to the other. This is supplemented by the extreme variety of continuative forms: infinitive + *r*; Conjunctive, Finalis or promissive conjunctive; *bw ṛ.t=f sdm*; Prohibitive; Third Future with the circumstantial converter *ṛw*; and the š^c -*ṛ.t=f sdm*. The expression of commands, wishes, requests and declarations of intent could be expressed through a very elaborate system, a modal system (cf. infra § 5.4.3.[2]) which proved stable until the very end of the Egyptian language.

3.4.6 Exercise: A small piece with blessings (pAnast. III 4,4-11)

A short text from the reign of Merenptah with blessings dedicated by a scribe to his teacher, Amenemope, a “Fan Bearer on the Right of the King”, “First Charioteer” and “Royal Envoy to Syria”. It is one of a number of texts preserved on Papyrus Anastasi III, today pBM 10246, published in Gardiner, *Late-Egyptian Miscellanies*, pp. 24-25. pAnast. III has a number of other texts well suited for practice in the linguistic norms of the various forms of expression appropriate for each register. These include another hymn praising the delta residence (cf. supra, § 3.1.5[1]), some impressions concerning the life of the soldier, and a hymn to Thoth.

3.4.6 Exercise: pAnast. III 4,4 - 11

Purpose: Example of Dynasty XIX elevated education: style, textual forms and (Medio-Late Egyptian) textual norms; use of the Prospective and expressions of wish.

Notes:

- 4,4 *m-pw*: in principle this is a *pw*-sentence with the interrogative pronoun *m* “who is it?”, but as elsewhere in Late Egyptian, it occasionally appears as a form of address: “Whoever it is” > “Dear Sir”, or similar;

wnn=k mn.tl: “Live on!” (< “Be, in carrying on”), cf. also Gardiner, *Grammar*, § 326;

k}hn^c=k^cw-nb a Middle Egyptian type of construction, i.e., an Adverbial Sentence used in apposition to pronominal *=k*: “(Live you on,) bread being with you daily”, “you being supplied with bread daily”;

wnf.tw/}h}h.ø/hzl.tw: Old Perfectives used in parallel to *mn.tl*, in the manner of Middle Egyptian construction;

- 4,6 *nn h^cm tw d}y.t*: traditional form of the negated Prospective, “evil shall not come near you”;

mp.t sh} = tw m nfr.w = k: “the year in which your good will be recalled” (< * “the year concerning which: one will think of your good in it”), indirect, impersonal relative form without resumptive pronoun in the case of indications of time. Just as nominal indications of time are expressed directly, as absolute nouns used adverbially (e.g. *tr n rwh} “in the evening”*, cf. Gardiner, *Grammar*, § 88), they do not require resumption as antecedents of relative clauses; *sh}* here takes the preposition *m* (prepositional object), rather than a direct object, to indicate what is recalled;

sn.nw = k “Your equal” (< “Your second”);

- 4,7 *n}y = k }bd.w m w}d}*: Adverbial clause used to refer to the pronominal *=k* of *qb = k* as in line 4,4; *w}d}* means “prosperity” although written as “store room” — a common way of writing in the Miscellanies;

- 4,8 *h}tp m-^c*: unusual compound preposition, meaning “to be satisfied through someone” (or “to be satisfied with someone”, for *h}tp m*);

w}d n = k l}mnt.t: “the West is promised to you”, passive *sdm.w*;

bw l}w(t) = k: “you do not age”, negative Aorist in non-periphrastic form (cf. supra § 2.3.2[3]);

- 4,9 one hundred and ten years with a body in good health — as becomes a highly honoured person (< “according to what ought to be done to somebody highly honoured”);

- 4,10 the following *sdm = f* forms with the twin reeds are forms of the final-prospective *sdm = f*;

- 4,11 read: *l}n k} n w^c l}qr*, note that the divine name Thoth is separated with its own verse points.

dd n=f ^c*nh* *n nb* ^c*nh* *wḏ3 snb* “An oath by the Lord

(pBM 10052, 4, 22 and *pas-sim*)

was administered to him” (“he was compelled to swear by the Lord”).

(2) Negation and adverbial subordination

The negative counterpart of the affirmative preterite *sdm=f* is the analytical *bw.pw=f-sdm* negation form “he did not hear”. The conjugation base *bw.pw=f* can be written in many ways (generally,  or , but also  followed by later abbreviations such as , and then in Demotic ). In contrast to the preterite *sdm=f*, the morpheme which bears meaning (meaning expression) can also be an intransitive verb.

Alongside the *bw.pw=f-sdm*, *bw sdm=f*, the successor of the Middle Egyptian *n sdm=f*, *bw sdm=f* is still used as a form of negation for the preterite *sdm=f* (cf. infra § 3.5.1[3]).

Still another form, the rare *bw sdm.t=f/bw ṛ.t=f-sdm* form and its passive *bw ṛy.t + bw ṛ.t=f-sdm* noun phrase (cf. supra § 2.3.2[3]) can be considered negative forms of the preterite *sdm=f*, or of the First Present + Old Perfective. This is used to indicate that an act has not been carried out in the past, but is still expected, i.e. a “not yet” form. It is thus a form of the perfect or preterite (being the negative counterpart to the perfect *w3h=f sdm* in Demotic), but the statement formulated with this negation remains in the balance in the moment of utterance, being neither past nor future: something has not yet been done, but one expects that it will be done, yet this remains uncertain:

p3-wn bw ṛ.t p3 ^c*dd gm.t=f*

(oDM 123 r.2)

“for the boy hasn’t found it yet”;

Note:

pn writing of *p3* (both *pn* and *p3* are only *p* by now).

Like all sentence conjugations, the preterite *sdm=f* and the *bw.pw=f-sdm/bw ṛ.t=f-sdm* adverbial subordination can also be subordinated to another sentence using the *ṛw* converter, as a rule, but not necessarily, conveying relative past tense (pluperfect).

(pAbbott 5,5-6)

bw.pw=tw gm.t=f ṛw rh=f s.t nb ṛm “He wasn’t convicted of having known any place there”;

Notes:

ṛw rh=f adverbially subordinated, or circumstantial, preterite *sdm=f*;

gm.t=f ṛw rh=f a typical construction with the verb *gm*: *gm* followed by object and adnominal (appositional) circumstantial clause. This is very often better translated using an object (that-) clause rather than some form analogical to the circumstantial construction the Egyptian language uses (thus “One hasn’t found that he knew any place there” instead of *“One hasn’t found him having/to have known any place there”).

(3) Notes on linguistic evolution

sdm=f and
sdm.n=f

The precursor of the Late Egyptian preterite *sdm=f* was the Middle Egyptian *ỉw sdm.n=f*. To be more precise, the Late Egyptian *sdm=f* is the successor of the *sdm.n=f*, which evolved as an independent preterite form in the system of sentence conjugations, when *ỉw* became the circumstantial converter by boundary shifting (“rebracketing”) in sentential structure and change of function (cf. supra § 3.0.2). As an occasional alternative (allomorph) of the preterite *sdm=f* to which it gave birth, this *sdm.n=f* was used until well into Dynasty XIX in both colloquial and administrative texts — compare the following occurrence from the reign of Ramesses II with the letter quoted above (LRL 57,7):

(pAnast. IX, 1-2)

 *sdm.n=f* *n3 md.t ʕh3 h3b=k*
hr=w “I have taken notice of the disputed matter, concerning which you sent a letter”.

ʕh^c.n sdm.n=f

In association with *ʕh^c.n*, the *sdm.n=f* was still used in the relevant textual categories (stories and legal texts) during Dynasty XXI, although far less widely than the *sdm=f* (the combination *ʕh^c.n sdm=f* is at first used only with nominal actor expressions).

dependency
on registers

The hierarchically higher text registers are naturally subject to interference from the use of the Middle Egyptian *sdm=f* forms. It must be assumed that not only the *sdm.n=f* and the preterite *sdm=f* were in use, but also the nominal and prospective forms of *sdm=f*, along with the *sdm=f*-balanced sentences.⁴ In the Neo-Middle Egyptian categories of text, this parallel usage prevailed (as preterite forms, both the *sdm.n=f* and the preterite *sdm=f* remained allomorphs into the Roman era). They even brought back to life those forms which had been reduced or lost in the other textual categories, and these included the *sdm.w* passive, the *ʕh^c.n sdm.n=f/sdm=f*, and finally the *sdm.ỉn=f*, which in Late Egyptian proper was used only in association with *dd* “say”.

bw sdm=f
bw.pw=f sdm

It is easier to follow the evolutionary development of the negations. The clearly recognizable graphophonemic successor of the Middle Egyptian preterite negation *n sdm=f* is the *bw sdm=f*, a form which must be distinguished from the negative Aorist (supra § 2.3.2[3]) *bw rh=f/bw ỉr=f-sdm*. *bw sdm=f* appears in literary texts until the end of the New Kingdom, when it is completely replaced by *bw.pw=f-sdm*. The precursor of *bw.pw=f-sdm*, the earlier *n p3w=f sdm* “he did not hear”,⁵ was clearly a marginal form. Just why such a marginal form moved as *bw.pw=f-sdm* into the core of the system is explained by the analytic tendency, which makes the relationship between form and function less ambiguous.

4 Apparent present usage, cf., e.g., Korostovtsev, *Grammaire*, p. 246.

5 Cf. Gardiner, *Grammar*, § 484.

development
to Coptic

Like the prospective forms, the preterite *sdm=f* resisted periphrasing with *ir̄*. Aside from verbs with four and five radicals, the *ir̄=f sdm* form did not appear until Late Demotic texts of the Roman period (to be precise, mostly in the London-Leiden Magical Papyrus), whence it reached Coptic as ⲁⲓⲚⲓⲛⲓ. The Late Egyptian negation *bw.pw=f sdm* > Demotic *bn.p=f sdm* is the precursor of the Coptic Negative Perfect ⲙⲛⲉⲓⲚⲓⲛⲓ, and the *bw ir̄.t=f sdm* of the Coptic ⲙⲛⲁⲧⲓⲛⲓ.

3.5.2 Usage

The preterite *sdm=f* and its negations describe acts and events which took place in the past with regard to the speaker. It can thus either represent the speech attitude of the narration (“I heard”) or the present perfect (a past event whose effects last into the present: “I have heard”). In its circumstantial form (*iw sdm=f*) it frequently expresses the relative past time of an event. With some verbs (*mr̄* “love”; *msḏi* “hate”; *ini* “bring”; *rḥ* “know”, etc.) the present perfect meaning has a clearly present effect (e.g., “to have fetched something” = “to bring it”).⁶

Characteristic of the use of the preterite *sdm=f* is that it expresses the beginning of a chain of events, defining the absolute time. This is then continued with the First Present Circumstantial *iw=f ḥr sdm* — in this usage termed the “narrative” or “non-initial main sentence” (NIMS).

— In independent statements, also in long chains of the same forms (co-ordination); the independence is easily recognized within content clauses, in the introduction of direct speech or after *r-dd* (cf. also § 5.3.1(2) *infra*). Introduced direct speech:

independent
statements

dd=f bw.pw=i šm “He said, ‘I didn’t go’”.

(pBM 10052,
10, 4)

Content clause introduced with *r-dd*:

(LRL 23, 9-11)

sdm={t}n i.dd tw=k iy.ti

ph=k r Nw.t p3 dmi

šzp tw ʾImnw m šzp nfr

iry=f n=k nfr nb

“We have learnt that you have come, and that you reached the City, your (<the) home town; that Amun received you with favour, and that he treated you well”;

⁶ Cf. Frandsen, *Outline*, 198; Johnson, *Demotic Verbal System*, 71 n.70.

Notes:

ỉ.đđ graphic variation of *r-đđ* (Coptic ⲄⲈ), here indicating a content clause formed by a First Present (“You have come”);

Nw.t p3 dmi it would also be possible to translate “No, the city” (*Nw.t* as “name” for Thebes);
šzp m šzp nfr “to receive with a good reception”, the so-called complementary infinitive (cf. Gardiner, *Grammar*, § 298 Obs.).

tense defining — Tense defining in the introductory passages of longer paragraphs, frequently followed by First Present Circumstantial clauses as narrative “non-initial main sentences”:

(pAdoption rt.
16-17)

r.nty in=n hm.t Dī-n=ī-Hw.t-īr.y r sw.n.t iw=s ms p3y hmt.w hrd.w “The following: we have paid for the servant Dinaihayera by indemnification, and she bore these three children”.

Notes:

r.nty < *r-nt.t*; the typical introductory particle in letters and records; “direct indicator of initiality”;

inl r sw.n.t “to purchase something for its price”. House personnel may not really have been “bought”, so that it is not a purchase in the strict sense, so much as an indemnity settlement between the previous employer and the future employer;

Dī-n=ī-Hw.t-īr.y proper name in sentence form: “Hat(hor) gave me a companion”; *dī* is also a preterite *sdm=f*; *Hw.t* is an abbreviation for *Hwt-Hrw* “Hathor”.

(pJud.Turin
6,2)

“This punishment was stipulated for him, and he was left to himself” (and he committed suicide).

subordinated — Subordinated, the preterite *sdm=f* frequently expresses relative past tense:

(pD’Orb 8,2)

īstw īr sh3y=k wC n bīn

īstw bw īr=k sh3y wC n nfr m-r3-pw wC nk.t iw īry=ī sw n=k

“If you recall an evil deed, can’t you recall anything good — or anything else — that I have done for you?”;

Notes:

īstw particle marking a tone question, introducing doubt, cf. supra § 2.2.4(1);

īr sh3y=k *īr* as particle of topicalization (“as for”) followed by a *sdm=f*; because *īr*-constructions cling to linguistic surroundings where older forms continue to be used, a Middle Egyptian form of *sdm=f* here follows *īr* (cf. also Satzinger, *Neuägyptische Studien*, 46ff);

bw īr=k sh3y negative Aorist;

lw lry=ł circumstantial preterite *sdm=f* adnominally related to the indefinite determined noun *nk.t*.

3.5.3 Bibliography

- Winand, *Études*, §§ 317-324; Frandsen, *Outline*, §§ 1-6; Černý/Groll, *Late Egyptian Grammar*, § 14 active

- Frandsen, *Outline*, §§ 101-102; 106 converted
- Winand, *Études*, §§ 292-312 *sdm.n=f*

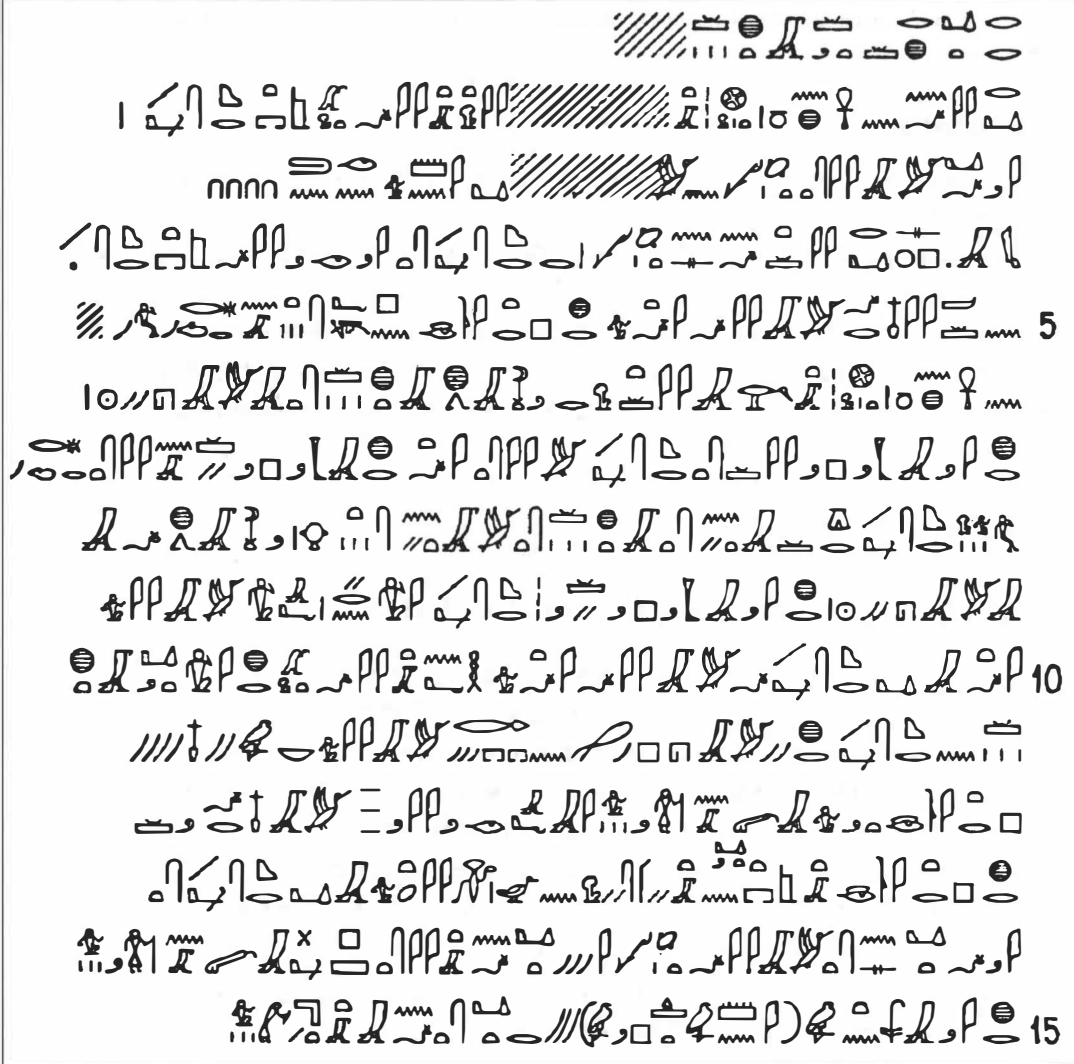

3.5.4 Exercise: A legal document (pBoulaq 10 rt. 1-15)

The recto of Papyrus Boulaq 10 (= pCairo 58092) dates from early in the reign of Ramesses III (Regnal Year 8). Published by J. J. Janssen & P. W. Pestman, *Burial and Inheritance in the Community of Workmen at Thebes*, in: *Journal of the Economic and Social History of the Orient (JESHO)* 11, 1968, 137ff, with this text p. 144; cf. also *KRI V*: 449-450. A court record with the plaintiff *Hṣy* son of *Hwy* (cf. vs. 1) contesting claims concerning his father *Hwy*, his grandfather *Hwy-nfr* and his grandmother *T3-gmy.t*. The dispute is among the brothers and sisters of his father, and it centres around inheritance rights, which are related to burial expenses.

Purpose: Example of a Dynasty XX private legal document, use of affirmative and negative preterite *sdm=f*; *sdm.n=f*.

Notes:

- line 1 *r-dl.t-rḫ.tw*: “to let it be known” (causative infinitive) is a nominalization which is best rendered with “list”, “register”, “record”, etc. (cf. Erman, *Neuägyptische Grammatik*, § 425);
- line 2 *rdy.n=f*: *n*-relative form (cf. Winand, *Études*, § 616), related to the contents of the list (*ḫ.t/lḫ.t* frequently masc.): “(the items....) which he gave” (cf. line 4);
ḥḫ n nw.t (< *nḫ.t n.t nw.t*): “Citizenship”. The title is used for married women above the social level of service personnel;
T3-[gmy.t]: name (to be restored *pace* line 6) of the grandmother of the plaintiff: proper name of the appellative type, “The ‘Finder’” as a designation of the “Black Ibis”;
s.t-qrs: probably the use of *s.t* for forming abstract nouns, “funeral”, rather than for forming localities, “burial-place” — but both certainly make sense;
- line 3 *Pṣ-[ṭw-m.]dl-’Imnw*: proper name of the sentence type: “The Breath of Life belongs to Amun”;

3.5.4 Exercise: pBoulaq 10 rt. 1 - 15

ir.w n dbn 40 “amounted to 40 deben” (passive *sdm.w*);

line 4 *wḥm zp*: “to repeat the matter” (infinitive + object), going over it again: “(1 Funeral, after he had given her coffin to P3-[*ḫw-m*.] *dl-’Imnw* — it amounted to 40 deben all together.) To repeat the matter: what he gave to her was 1 coffin to bury her”;

line 5 *Hwy-nfr*: name of the grandfather of the speaker (the plaintiff);

ḫr: here, and in the following, a kind of opposition to the preceding propositions is expressed (with the following statement “contingent” because it depends upon the previous one). *ḫr ptr* serves to state that something contrasting is well known in the speech situation: “it is, however, the case that” (*ptr = mk*);

pn^c X: “to dispute, contest X”;

- line 7 written *st* in *ḥr lw mbw.pw=s qrs* is possibly (1) the suffix of the 3rd pl.: “they, the children of Tegamya, did not”, (2) the 3rd sing. fem. suffix “she, Tegamya, did not”. Against (1) is the fact that the 3rd pl. suffix is otherwise written *=w*, as is usual in this type of text register;
ḥr mbw.pw nḥy=s ḥrd.w qrs=(s): note that this second *bw.pw=f sdm* is not introduced by *lw*, and is therefore sentence initial — forming an independent sentence;
- line 8 *qrs=(s)*: “bury her, Tegamya”;
gr mnt.s (< in group writing, *m-nty-st*): the particle *gr* placed after the phrase + the independent pronoun 2nd sing. fem. (earlier *nt.s*) is used to emphasize the preceding pronominal reference: “she too”, negated, “she didn’t either” (cf. Černý/Groll, *Late Egyptian Grammar*, § 2.1.6; Erman, *Neuägyptische Grammatik*, § 682);
pḥ nty st ḥr whḥ=f: First Present nominalized relative clause with its own subject and resumptive pronoun. *ḥt.t=s pḥ nty st ḥr whḥ=f* is a Late Egyptian nominal sentence, type Pseudo-Cleft Sentence: noun phrase + nominalized relative clause: “her property is what they claim”;
- line 10 *m-ḡr qrs=f*: Temporal: “when he buried”;
- line 10-11 *l.dl.tw ḥt.t n qrs*: passive nominal *sdm=f* of *dl*, with prospective, anticipatory function: “the goods should be given to the one who buries” (cf. Frandsen, *Outline*, § 87 Ex. 11);
- line 11 *ḥr*: probably the postposed speech marker here, “so-and-so says”; the preposition *ḥr* “by”, “through” should not however be excluded;
pḥy=l nb nfr: apposition to previously mentioned “Pharaoh”;
- line 12 *lmm ḥry=w pḥ nfr*: probably impersonal, “They may do the appropriate” (cf. § 3.4.3[1]);
- line 13 *ḥr ptr dl.tw ḥt.s.t*: the verb *dl* was added in above the line later;
Tḥy-nḥsy and *Zḥ-wḥdy.t* are proper names of the appellative type: “The Nubian Woman” and “Son of Uto”. The precedent mentioned is in oPetrie 16, rt. 6-vso.6 (HO pl.21,1);
m-ḡr: here preposition before noun, “because of something”, cf. Erman, *Neuägyptische Grammatik*, § 664;
- line 14 for the writing of *n=s* cf. § 2.1.2(1);
- line 15 “King Amenhotep”: the blessed King Amenhotep I, who was, together with his mother Ahmes-Nefertari, worshipped by the residents of the Theban West Bank as a kind of “saint”, an intermediary with God;
m A r.dl.t st n=f: a type of the Late Egyptian Cleft Sentence: *m* + noun phrase + participle (*r.dl.t* for *l.dl.t*): “A is the one who gave it to him”. For the use of the dative *n=f* following the object, cf. Erman, *Neuägyptische Grammatik*, § 693.

3.6 The preterite converter *wn*

3.6.1 Converting tense in the sentence conjugations

The circumstantial converter *lw* converts independent sentences — both sentence conjugations and nominal sentences (cf. infra Chapter 4) — syntactically to adverb clauses. A  *wn* preceding a sentence transforms it semantically. It is transformed to refer to a time anterior to that of the surrounding utterances, its cotext, and occasionally

the preterite
habitual

to point out the customariness of activities (“such-and-such is generally done”, “we used to do such-and-such”).

effects

This means that, with the tense converter

— the preterite *sdm=f* becomes an independent past perfect statement (often of custom, habitual): “(he did this, after) someone had done such-and-such”.

— the Third Future indicates future perfect tense: “someone will have done such-and-such (by evening)”.

— the First Present as the form of a proposition which is presented as evident, as an act proceeding in the very moment of speaking (“is doing”) or as a description of a state is transferred into the past: “someone was doing such-and-such”.

— an “emphatic sentence” (sentence with nominal *sdm=f*) can likewise be transferred to past time.

(pBM 10403,
3, 28)

 *b.py=i ptr hn wn
ptr=i wn iw=i dd.t=f n=k* “I did not look. Had I looked, I would have told you”;

Notes:

hn particle which is apt to mark a following sentence as a conditional sentence (cf. supra § 2.2.4[1]);

wnptr=i tense converted preterite *sdm=f*, “I had seen”, adjusted to suit the conditional construction;

wn iw=i dd.t=f tense converted Third Future, “I will have said it”, adjusted to suit the conditional sentence construction.

wn=f with
First Present

The Egyptological term converter refers to a morpheme which bears a specific syntacto-semantic meaning, but does not alter the syntactic structure — with the exception of the First Present. Converting First Present, *wn* assumes the guise of that verbal form in which it was used in earlier periods: the *sdm=f* (for an example of the subjunctive form of *wn*, cf. infra § 5.3.2[2]).

(Wenamun
2, 78-79)

 *iw=i dd n=f i.dd n t3y=i hnw.t*

wn=i sdm š3c Nw.t r p3 nty ʾImnw im r-dd

i.ir.tw grg n dm3 nb i.ir.tw m3c.t n p3 t3 n ʾa-r-s

“And I said to him: “Tell my Lady:

“I have heard as far away as No, where Amun is: Even if evil is done in every city, justice is done in the Land of Cyprus””;

Notes:

- p3 nty 'Imnw lm* nominalized relative clause of First Present (*'Imnw lm*): "the (place) where Amun is";
- l.lr.tw ... l.lr.tw* two nominal *sdm=f* forms in mutual relationship, the Late Egyptian variant of the balanced sentence;
- n p3 t3* *n* for *m* before a noun.

The change in the status of the converter to the *sdm=f* form of *wn* is also reflected in the syntax of the negations. While the negated Third Future is converted in the usual fashion (*wn bn iw=f r sdm*), the negating morpheme appears with the First Present before the whole expression:

bn wn=f im=i iw n3 "He was not with me"; (pMayer A rt. 3,25)

In terms of both matter and syntax, the Late Egyptian sentence-conjugation tense conversion based on *wn* (Demotic *wn-n3w*) is the precursor of the Coptic imperfect converter using **NE-**, **NEPE-** (with First Present, **NE4CWTM**). Coptic does not permit the conversion of the Third Future.

3.6.2 *wn* in relative constructions

Just as the First Present tense conversion still employs the *sdm=f* form of *wn*, using participles and relative forms of *wn*, the First Present can be transformed into a relative clause with relative past meaning (constructions both with and without the *i*-prefix).

wn=k m n3 sm i.wn=k im=w "You were thus pursuing those things with which you were occupied"; (pBM 10052, 1,6)

Notes:

- wn=k m n3 sm* tense converted First Present;
- i.wn=k im=w* relative form of *wn* with resumptive pronoun.

lmm d3.tw p3 htr wn hr pr n=s n t3y=i sn.t wn dy m h3r.t hr mn n rnp.t r t3y
 "Let the income which used to go to her be given to my sister who has been a widow here for years, up to now."

Notes:

- wn hr pr n=s* participle of *wn* followed by preposition *hr* + infinitive;
- wn dy m h3r.t* participle of *wn* followed by an adverb and a prepositional phrase.

The distinction between the other preterite participles and relative forms and the *wn* relative phrases with the First Present is that the latter expresses a customary activity in the past.

As the ancient Egyptian participles and relative phrases are not preserved in Coptic, *wn*-relative phrases disappeared as well. Coptic Relative constructions are formed with the **NE-** (**Ε-NE-**) converter, i.e., they are tense-converted sentence conjugations converted to relative phrases.

4. The Nominal Sentence

4.1. Structure and morphology

4.1.1 Defining the nature and role of the Nominal Sentence

Late Egyptian sentence-forming and independent conjugations exist alongside another type of sentence, the Nominal Sentence. By nature, the Nominal Sentence is a sentence formed by two noun phrases (in the following: first term and second term) which are directly linked without the help of a verb.

In Late Egyptian the simplest form of Nominal Sentence — noun + noun — is used far more frequently than in Middle Egyptian, where this type of sentence was virtually never encountered except in religious texts. While being more common, in Late Egyptian it is likewise more frequent in texts of the higher levels of the register hierarchy.

 *hsbd m3^c šnī=s* “Her hair is real lapis lazuli”.

(Beatty Love
Songs vs C
1, 4)

This quotation illustrates the basic principles of the Nominal Sentence, where at least one of the two terms must be a specified or modified noun. If a pronoun fills one of the positions, it must be an independent pronoun (cf. infra § 4.1.2). The kind of modification determines the classification of the Nominal Sentences:

classification
of Nominal
Sentences

— Adjectival Sentence: the first term is a participle, adjective or adjectival construction; Adj. Sentence

— *p3y*-Sentence: the second term is a demonstrative from the *p3y*, *t3y*, *n3y* series; *p3y*-Sentence

— Cleft Sentence: the second term is an undefined relative phrase. Where the relative phrase is defined by a definite article or a demonstrative, the sentence can be distinguished from the narrowly defined Cleft Sentence and termed a Pseudo-Cleft Sentence; Cleft Sentence

— Nominal Sentence proper: subsumed under this title are all the remaining forms of sentence consisting of two noun phrases. At least one of the two parts is specified, either (a) with a definite article, or (b) as an independent pronoun, (c) a proper name, or (d) an identifying (e.g. relative) phrase. Nominal Sentence proper

sentence
meaning

This classification of Nominal Sentences remains, however, a superficial one, being less analytical than descriptive. Altogether, the sentence is morphologically defined as being constructed with two noun phrases; the meaning of the sentence ultimately depends on the degree and type of definition of the two noun phrases. If only one element is defined or specified, a classification or characterization takes place: "this object is 'tree'/belongs to the category of 'tree'". If both elements are definite or specified, the sentence expresses identification: "This is my tree".

use of article

Understanding the meaning of the sentence depends on whether the nouns forming the sentence are associated with articles or not. In analysing a

Nominal Sentence, it is thus important to note the register of the text in question: the article system commonly used in Late Egyptian (and discussed in the previous chapters) is used widely only in the lowest text registers.

subordination

Like the sentence conjugations, all forms of the independent Nominal Sentence can be converted into syntactically adverbial subordinate clauses with *ỉw*.

Identification, Classification, Characterization are concepts for the description of the semantic relations between the two noun phrases (terms) joined in a nominal sentence. "Identification" generally signifies that the first and second terms are identical ("A is B"). This usually implies that both are individual objects — specified, named or characterized (e.g. by relative clauses). Pronouns, demonstratives and relative phrases carry out this specification. "Classification" means that what is signified by one term can be placed into the semantic class signified or exemplified by the other term ("B is an A"). A particular object is classified: "this object is a tree"; "the tree is a plant". Since a class is defined by its characteristics ("the tree is a botanic object/an object with the quality of being a plant"), an assignment of this type characterizes the assigned object. Cf. Junge, "Nominalsatz und Cleft Sentence im Ägyptischen," in: *Polotsky-Studies*, pp. 443ff; idem, *Syntax*, §§ 5.1.3; 5.1.4; 5.2.2.

4.1.2 The pronouns of the Nominal Sentence

(1) The forms of the independent pronouns

While the dependent pronouns (§ 2.2.1) can fulfil a pronominal function as the second noun phrase of the Nominal Sentence, the position of the first noun phrase is filled by a special form of personal pronoun, traditionally termed the independent pronoun. Among all other Egyptian pronouns, it is the only strong form, i.e. one which can stand alone without being "attached" to any other morpheme. Graphically these pronouns differ only marginally from those of Middle Egyptian, the primary change being the addition of the grapheme *m* to the 2nd and 3rd persons.

1. s.c.	<i>īnk</i>		ANOK ; ANI
2. s.m.	<i>mnt.k</i>		N̄TOK ; N̄TK̄
f.	<i>mnt.t</i>		N̄TO ; N̄TE
3. s.m.	<i>mnt.f</i>		N̄TOY
f.	<i>mnt.s</i>		N̄TOC
1. pl.c.	<i>īnn</i>		ANON ; ANN̄
2. pl.c.	<i>mnt.tn</i>		N̄TWTN̄ ; N̄TETN̄
3. pl.c.	<i>mnt.w</i>		N̄TOOY

Observation:

Compare this table with that of Černý/Groll, *Late Egyptian Grammar*, § 2.1. It should be observed that the Coptic unaccented variants in the table above do not correspond to the variants of the hieroglyphic writings!

(2) Specific usage

Their prosodical independence allows these pronouns to be isolated, assuming positions both before and after the main sentence — pronominal extraposition: isolation

mnt.k īh p̄ īn=k n=ī gr īnk “And you: (Wenamun 2,8)

what then did you bring me?!”;

Notes:

mnt.k independent pronoun preceding a Nominal Sentence;

īh p̄ īn=k Pseudo-Cleft Sentence with interrogative pronoun as the first term, and a defined relative sentence as the second: “what is it that you have brought?”;

gr īnk postposed particle *gr* followed by 1st pers. sing. independent pronoun emphasizes the preceding pronominal reference, “me too”; cf. supra § 3.5.4, note to line 8.

They can indicate or emphasize possession (for example, *w^c pr īnk* “a house of mine”), indicating possession either (1) through appositional modification of unspecified nouns or those which cannot otherwise be specified or (2) as first term of a Nominal Sentence proper. A special series of possessive pronouns performs this function for the 2nd and 3rd persons sing. — *twt* and *swt* respectively¹ — as late as Dynasty XXI, when they were replaced by *mnt.k* and *mnt.f*: *p̄y šr̄ twt* “this son of yours”; *p̄y swt nb* “all of his”.

¹ Despite their appearance, these are still the Old Egyptian independent pronouns *twt* and *swt* in Late Egyptian guise.

4.1.3 Types of Nominal Sentences

The following sections are mainly concerned with classifying Nominal Sentences by specific elements (such as the *p̄y*-Sentence) or construction methods (such as Cleft Sentence); the synopsis in the following table is meant to show how determination and specificity of the first and second noun phrases affect the proposition — the statement made by the respective Nominal Sentence.

First Term	Second Term		
Specified Noun/ Independent Pronoun	Specified Noun/ relative phrase		
<i>n̄m</i>	<i>p̄z z̄l</i>	“Who is the man?”	Nom. Sentence proper
	<i>p̄z nty l̄m</i>	“Who is that one?”	(Pseudo-Cleft Sentence)
<i>mnt.f</i>	<i>n̄m</i>	“Who is he?”	Nominal Sentence proper
	<i>p̄y=k l̄l̄</i>	“He is your father”	
	<i>mnt.k</i>	“He is you”	
	<i>p̄z nty l̄m</i>	“He is that one”	(Pseudo-Cleft Sentence)
<i>p̄y=k l̄l̄</i>	<i>p̄z nty l̄m</i>	“Your father is that one”	<i>p̄y</i> -Sentence
	<i>p̄y</i>	“It is your father”	
Unspecified Noun, Adjective/Participle			
<i>z̄l</i>	<i>p̄y</i>	“It is a man”	<i>p̄y</i> -Sentence
	<i>p̄z nty l̄m</i>	“That one is ‘male’”	(Pseudo-Cleft Sentence)
<i>nfr</i>	<i>p̄y=k l̄l̄</i>	“Your father is perfect”	Adjectival Sentence
	<i>sw</i>	“He is perfect”	
Independent Pronoun/Specified Noun			
<i>mnt.f</i>	<i>sw</i>	“He is his”	adjectival
	<i>p̄y=k l̄l̄</i>	“Your father is his”	Nom. Sentence proper
	Unspecified Noun, Adj./Part.		
<i>mnt.k</i>	<i>z̄l</i>	“You are ‘male’”	Nominal Sentence proper
	<i>nfr</i>	“You are perfect”	
<i>l̄n/m p̄y=k l̄l̄</i>	<i>l̄r sw</i>	“It is your father who did it”	Cleft Sentence
<i>mnt.f</i>		“It is he who did it”	

Observation:

Specified nouns are those designating specific objects (in a variety of ways, meaning that this includes not only defined nouns, but also designations, characterizations, proper names, pronouns, etc.). The continuing scholarly debate about the meaning and nature of Nominal Sentences centres around the question of whether it is possible to harmonize the use of forms and meaning (cf., e.g., Neveu, *La langue des Ramsès*, §§ 39-42). This pragmatic survey suffices for an understanding of the texts, but the nuances of meaning conveyed in any specific text would need to be reflected by adjusting the translation to fit the way information is presented in the Egyptian sentence (this is partially attempted in the following treatment of the types of sentences).

4.2 The simple Nominal Sentence**4.2.1 The Nominal Sentence proper**

The sentence with two nouns, which is in a way the basic form of the Nominal Sentence — *ḥsbd m3^c šnī=s* “her hair is real lapis lazuli” (cf. supra § 4.1.1) — is uncommon and basically restricted to texts higher up in the register hierarchy. The type appears mostly with specific substitutes of the noun phrases, which can be summarized as follows:

— The first term is an interrogative pronoun and the second a defined noun or a designation (such as, e.g., *rn* “name” or proper name);

interrogative
pronoun +
noun

 *ih p3 šhr n šm l.īr=k* “What was the thing you were up to?”;

(*pBM 10052*,
4,6)

Notes:

ih first term (interrogative pronoun “what?”);

p3 šhr second term (defined noun with nominal modification *n šm*);

šm l.īr=k construction of infinitive and agent, the infinitive undefined and general (“going about that you have done”) > “Your movements”, cf. supra § 2.3.3(2).

— The first term is an independent pronoun and the second is (1) a noun without article or a nominalized adjective (classification in both cases: for the use of an adjective, cf. the Adjectival Sentence in the following section), or (2) an interrogative pronoun or a defined noun (identification);

personal
pronoun +
noun

 *mnt.k šrī nīm* “Whose son are you?” (“Of whom are you the son?”);

(*Blinding of
Truth 5,3*)

 *y3 mnt.k nfr hr mnt.k p3y=ī* 16)

(*LRL 48,15-*
16)

īī “Truely, you are perfect, and you are a father to me”;

(pD'Orb 1,1)

ir mnt.f hr=tw sn.w 2 n w^c mw.t n w^c it³ Inpw m p³ ʕ³ iw Bt³ m p³ šr³ “Once, it is said, there were two brothers of a mother and a father; Anubis was the name of the elder and Bata the name of the younger”;

Notes:

ir mnt.f ... sn.w 2 literally “As far as it is concerned, [there were] two brothers ...”;

hr=tw parenthetic speech marker;

Inpw m p³ ʕ³ Sentence with designation (proper name) in first position and *m=f* (*rn* + noun phrase) in the second;

iw Bt³ the same type of Nominal Sentence, subordinated with *iw*.

The Nominal Sentence proper is negated — like the First Present/Adverbial Sentence — with the discontinuous negation *bn ... iw³*: negation

(oBerlin P.10627, 6-8)

bn mnt.k rmt iw³ i.y³ bw ir=k d³.t iw³ t³y=k hm.t ml-qd p³y=k ir.y “You are not a man; hey, you can't even get your wife pregnant like your fellow”;

Notes:

bn mnt.k rmt iw³ negated Nominal Sentence “You are not man”;

bw ir=k d³.t negative Aorist (cf. supra § 2.3.2[3]) followed by subjunctive *sdm=f*;

p³y=k ir.y literally *“Your companion”.

4.2.2 The Adjectival Sentence

(1) The characterizing Nominal Sentence

Those variations of the Nominal Sentence where (a) the first term is a participle, adjective or adjectival construction (*ns-sw A* “he belongs to A”), and (b) the second is generally a determined noun (if pronominal, a dependent pronoun), a noun without article, or a determined relative phrase, are termed Adjectival Sentences. The second term is classified or characterized by the first term (predicative adjective).

(pD'Orb 1,10)

nfr p³ sm.w n s.t hmn.t “The fodder plants of such-and-such a place are excellent”;

Notes:

nfr p³ sm.w Adjectival Sentence;

n s.t hmn.t for *m s.t hmn.t*.

ns-
“belonging to”

The Middle Egyptian adjectival construction *n.y-sw* A *‘‘it belongs to A’’ is preserved in a form where *n.y-sw/si/st* is condensed to *ns-* ‘‘he/she/it belongs to’’. The sentence can be composed without overt pronoun — *Ns-Hnsw* ‘‘He/she/it belongs to Khons’’ — but also with one — *Ns-sw-B3-nb-ḏd.t* ‘‘He belongs to the Ram of Mendes’’ (‘‘Smendes’’). Such forms are common in proper names.

particle *-wswy*

The Middle Egyptian exclamatory particle *-wswy* continues to appear in Adjectival Sentences in literary texts, and closely related genres, such as the miscellanies, but it appears in the form of the enclitic particle *-wswy*. This is a combination of *-wswy* and the following dependent pronoun in an Adjectival Sentence, *-wswy-sw/si* (as in *nfr.wswy-sw* ‘‘How perfect he is!’’).

(*pAnast. I 28,*
2-3)

ḥḏl.wswy pr nb ḥr ns=k wḏwḏ.wswy tẓ.w=k ‘‘How slanderous is everything which passes your tongue! How ineffectual are your utterances!’’

Notes:

ḥḏl.wswy pr nb participle with exclamatory particle and nominalized participle as the second term; in principle it could be analysed as *ḥḏl.wy-sw* with an appositional *pr nb* ‘‘How slanderous is it, everything which comes out!’’;

wḏwḏ.wswy tẓ.w=k the same grammatical form with a noun as the second term.

bn ‘‘without’’

The Middle Egyptian type of adjectival negation, *nn* + noun (generally an infinitive), was actually used only adverbially, as in *nn 3bw* ‘‘without stopping’’ or the like. In Late Egyptian this appears as *bn* + noun, but is generally explicitly subordinated with *ḏw*, as in *ḏw bn mš^c* ‘‘without army’’.

nfr + relative
phrase

Throughout the history of the language, the Adjectival Sentence persists in a form with nominalized relative phrase as the second term (as a type of Pseudo-Cleft Sentence, cf. *infra*). In Coptic, this form is reduced to relative clauses with *nty*, but in Late Egyptian (and Demotic) the nominalized relative phrase is still represented by relative forms also. The first term can be an adjective, but also — as in Coptic — an unspecified noun; in Late Egyptian this is characterized by the lack of an article.

(*pBM 10052,*
14,7)

ḏḏ pḏy ḏd=f nb ‘‘Everything which he has said is wrong.’’

Notes:

ḏḏ first term, the noun ‘‘untruth’’, ‘‘wrong’’ without an article;

pḏy ḏd=f demonstrative *pḏy* + relative form;

translation more literally ‘‘Untruth is everything which he has said’’. In contrast to Coptic, where the noun is to be translated as an adjective, the Late Egyptian qualitative noun can usually be translated as such.

mnt.f sw

Possession can be expressed with the aid of the independent personal pronoun or the possessive pronoun (§ 4.1.2[2]) in first position — *mnt.f tw, swt tw* ‘‘You belong to him’’

(< “You are his”). Formally this clause bears an apparent resemblance to the Nominal Sentence type *mnt.k p3y=i iu* “You are my father”, but it does not identify so much as characterize. As a result of the sentence construction itself, the personal pronoun becomes a possessive pronoun, by being as it were awarded to an object as a property:

(Wenamun 2, 23-24)

mn imw nb hr-tp irw iw bn ns-st 'Imnw

mnt.f p3 ym hr mnt.f p3 l-b-l-n nty tw=k dd ink sw

“There are not any boats on the river which do not belong to Amun: the sea belongs to him, as does Lebanon of which you say, ‘It belongs to me’”;

Notes:

mn + noun negated “quality of existence”: “there is none”, “it does not exist”;

iw bn ns-st 'Imnw subordinated negated Adjectival Sentence with *ns-*;

mnt.f p3 ym classifying/characterizing Nominal Sentence with possessive independent pronoun = Adjectival Sentence;

ink sw the same, a variation of *nfr sw* with a possessive pronoun.

The Adjectival Sentence is negated with *bn*, occasionally with *bn ... iwn3*, particularly in the case of one-member Nominal Sentences, or correspondence ellipses:

bn nfr iwn3 p3y gb3 m-b3h t3 psd.t “This lapse is not good at all, in front of the Ennead.” (HorSeth 4,9-10)

Nominal Sentences with adjectival second terms show similar traits:

(LRL 2,1)

hr ink p3y=tn nfr bn “Your appreciation is mine; your disapproval assuredly not!”;

Note:

p3y=tn nfr literally “your good”, as *p3y=tn bin* “your evil”.

Both the affirmative and the negative Adjectival Sentence can be adverbially subordinated with *iw*. The passage from Wenamun (2, 23-24) quoted above illustrates both negation and subordination: *mn imw nb hr-tp irw iw bn ns-st 'Imnw* “There is no boat on the river which does not belong to Amun”.

With the exception of bound expressions, the Adjectival Sentence is generally in linguistic retreat during the New Kingdom. The simplest form (*nfr sw/noun*) continues to appear in selfconsciously traditional texts, but it is generally being replaced by other forms of the Nominal Sentence: *mnt.f nfr* and the Cleft Sentence, each having a qualitative noun in the first or second position. This still appears in Early Demotic, but usually in Demotic it is replaced with *sdm=f* forms and nominal verbs (adjective verbs with the *n3*-prefix — cf. Spiegelberg, *Demotische Grammatik*, §§ 445; 117).

linguistic evolution

(2) Existence as quality: the Existential Sentence

To emphasize existence, Late Egyptian uses a form of  *wn*, followed by an undefined noun and an adverbial (that cannot, however, be an Old Perfective or *hr* + infinitive):

(pD'Orb 3, 5-6)

 *wn ph.ty ʕ3 im=k* "There is great strength in you";

Notes:

wn ... im=k "There is/there is in you";

ph.ty unspecified noun without an article.

In terms of linguistic evolution this is a *sdm=f* of *wn* (or still more precisely of Middle Egyptian *iw wn* + noun phrase). In the Late Egyptian system *wn* + adverbial phrase can best be grasped as an adjective in the position of the first term, related to an undefined second term; a pronoun — or a suffix pronoun — would be excluded because of the degree of specification implied. This type of sentence tends to become complementary to the First Present/Adverbial Sentence, as occurs in Coptic. The First Present construction requires a specified subject: *p3 zħ3.w m nw.t* "The scribe is in the city". Where the subject is unspecified or undefined, the speaker falls back on the existential sentence: *wn zħ3.w m nw.t* "There is a scribe in the city".

In contrast to the negated First Present, the negative counterpart to *wn* is used instead of the *nn/bn* + noun constructions:  *mn*, the adjective describing non-existence. The word emerged out of *nn* + prospective *wn=f*. The latter form itself will still be found in texts like pLansing 10,8 *nn wn w^c* "There is not one".

(Wenamun 2, 23-24)

mn imw nb hr-tp irw iw bn ns-st ʕImnw "There are not any boats on the river which do not belong to Amun" (hieroglyphic text, supra § 4.2.2[1]).

(LRL 28,11)

 *mn bt3 r=s* "She suffers no harm" (< *"There is no harm against her").

The existential adjective form *wn* + the preposition *m.dī* (and its negative counterpart *mn m.dī*) forms the precursor of the Coptic *ΟΥΝΤΕ-/ΟΥΝΤΑ=* or *ΜΝΤΕ-/ΜΝΤΑ=* respectively. The preposition can already follow *wn/mn* directly, but it need not.

(LRL 19,15)

 *wn hmti im m.dī=k* "You have copper there" (< "There is copper there with you").

mn m.dī=ʷ btꜣ “They have not suffered” (*“There

(LRL 3,6)

are no damages with them”); cf. the passage from LRL 28, 11, supra).

4.2.3 The *pꜣy*-Sentence

In Middle Egyptian, Late Middle Egyptian and even Medio-Late Egyptian, the second term of a Nominal Sentence can be the demonstrative *pw*; in Late Egyptian proper, this role is accomplished by one of the demonstrative pronoun series *pꜣy*, *tꜣy*, *nꜣy* (Coptic ΠΕ, ΤΕ, ΝΕ). In contrast to Middle Egyptian, but as in Old Egyptian, the pronominal second term agrees in gender and number with the first term. In all stages of the language, this form of sentence is more dependent on the context than any other sentential form, because the pronominal second term always requires either an earlier reference or a reference specifically designated in the speech situation.

In contrast to the Middle Egyptian *pw*-Sentence, the Late Egyptian bimembral *pꜣy*-Sentence cannot be enlarged to a trimembral one; there can be no further appositional specification of *pꜣy*: *dmꜣ pw* “This is a home”, for example, cannot be transformed into an independent sentence of the type *dmꜣ pw imnt.t* “This, the West, is a home” > “The West is a home”. The *pꜣy*-Sentence is thus always completely dependent upon context or cotext already mentioned.

bimembral
sentence

Observation:

Where the appositional third term of a Middle Egyptian trimembral *pw*-Sentence is a relative phrase, in terms of specification, sentential structure and phrase construction the Late Egyptian Pseudo-Cleft Sentence can be regarded as its successor form. Following the logic of the analytic tendency, the appositional relationship between *pw* and the following noun phrase is paradigmatised as the basic relationship of the article to the following noun phrase (nucleus — satellite, cf. supra § 2.1.1): (Noun phrase 1) + *pw*, (Noun phrase 2) is re-interpreted as (Noun phrase 1) + *pꜣ* (Noun phrase 2).

The functional properties follow from the structure of the sentence. On the one hand, the demonstrative second term becomes a highly specified subject which is completely identified — either from an earlier reference, or in the course of the discourse. On the other hand, because it cannot be enlarged with a third element, its dependence on the context is absolute. It thus possesses no meaning beyond reference, and its meaning is restricted to its reference to something already mentioned, without any lexical meaning of its own. This type of sentence is thus frequent in answers to real or rhetorical questions, making it particularly suitable as a form of clarification, explanation or exposition.

sentence
meaning

Just how the explanation or exposition is accomplished depends upon the specificity of the first term (noun, infinitive, relative phrase, independent pronoun). Without any article the intent is explanatory classification. With a definite article it is explanatory

first term

identification. The indefinite article cannot be used. Because it is explanatory, the explanatory identification should rather be understood as classification by example.

— Explanatory classification:

(Doomed
Prince 4,8-9)

$\dot{\imath}h p\dot{s} nty hr \dot{s}m.t m-s\dot{s} p\dot{s} z\dot{\imath} \text{ } \text{ } nty m \dot{\imath}y.t hr t\dot{s} m\dot{\imath}.t$

$jw=f [hr] \dot{d}d n=f \dot{\imath}sm p\dot{s}y$

[The young prince has become older and gone up to the roof of his house, whence he has seen a greyhound pursuing an adult man, and said to the servant beside him,] “What is that going after the adult who is coming on the way?” And he said to him: “That is a greyhound.” (For the cotext, cf. supra § 2.1.3[1]).

Note:

$\dot{\imath}sm p\dot{s}y$ $p\dot{s}y$ -Sentence with first term unspecified, without article; one could translate, “That is of the class ‘greyhound’”.

— Explanatory identification:

(Blinding of
Truth 5,7-8)

$tw=k ptr p\dot{s}y k\dot{s}mn nty hms r-gs p\dot{s} sb\dot{s}$

$p\dot{s}y=k \dot{\imath}t\dot{\imath} p\dot{s}y$

“You see that blind beggar sitting beside the door. He is your father.”

Notes:

$tw=k ptr$ First Present expression (as in the translation), or as a tonal question (question for corroboration): “Do you see that blind beggar?”;

$nty hms$ relative phrase without its own agent (agent = antecedent);

$p\dot{s}y=k \dot{\imath}t\dot{\imath} p\dot{s}y$ $p\dot{s}y$ -Sentence with a first term specified with the possessive article.

This kind of identification carries the nuance of characterization in the sense of providing an example. This is also true when the first term is a proper noun or a personal pronoun:

(LRL 67,16-
68,2)

$(\dot{\imath})n p\dot{s} m \dot{\imath}.\dot{\imath}r=k p\dot{s}y m t\dot{s}y 20 n mp.t \dot{\imath}.\dot{\imath}r=\dot{\imath} m p\dot{s}y=k pr$

$\dot{\imath}nk p\dot{s}y$

$p\dot{s} zbt \dot{\imath}.\dot{\imath}r=\dot{\imath} \dot{\imath}rm=k p\dot{s}y$

(The letter writer is irritated because of a joke and strives to justify himself with an anecdote: You are just like a woman who was blind in one eye and lived for twenty years in a man's house, and when he found another woman, he said to the first woman: "I am leaving you because you are blind in one eye". She responds:) "This is what you have learnt after these twenty years that I have spent in your house?" (And the letter writer continues:) "This is the way it is with me. That is the joke I have made with you!"

Notes:

(*l*)*n* interrogative marker starting sentential questions (questions for corroboration; cf. supra § 2.2.4[1]);

p3 m l.l-r-k p3y *p3y*-Sentence with a determined infinitive (agent introduced by relative form, cf. supra § 2.3.3[2]) as first term: "This is the discovery which you have made"; but also "This is the kind of discovery that you have made";

lnk p3y *p3y*-Sentence with independent pronoun as first term: not identification but rather a kind of classification/characterization by example: "It is like me", "It is like mine";

p3 zbt p3y *p3y*-Sentence with a determined infinitive as before; it is likewise less identification than characterization by example: "Of this kind is my joke".

It does not appear to be possible to negate the *p3y*-Sentence as such. It is possible that negated phrases such as *bn* + noun + *lwn3* are a kind of substitute construction: *bn t3y=3 hm.t lwn3* "(she is) not my wife".

4.3 The forms of the Cleft Sentence

4.3.1 Participles, relative forms and relative clauses with *nty* as parts of a sentence

By far the most common type of Nominal Sentence in Late Egyptian is the form where the second term is a nominalized relative phrase: nominalized participles, relative forms or relative clauses.

(oDM 126,3)

ih n3 nty tw=tn hr dd.t=w “What is it that you are talking about?”;

Notes:

- ih* interrogative pronoun as first term;
- n3 nty tw=tn hr* determined nominalized relative clause in the plural as second term: First Present following *nty*; reference (“those things” which are spoken about) and subject of the relative clause (“you”) differ, thus requiring the resumptive pronoun *=w* (“**those things which: you are talking about them”).

relative clauses

Relative phrases are termed relative clauses when they are independent sentences transformed into adjectival modifications of nouns (the reference terms/antecedents of the relative phrase) with the relative morpheme *nty*. If the form of such a sentence is the affirmative First Present — as in oDM 126,3 cited supra — the relationship between the modified noun/antecedent and the internal structure of the relative clause is the same as that of participles and relative forms to their antecedents, as follows:

reference term and agent

Where the agent (actor expression) of the relative phrase and its reference term (antecedent) are the same, they do not need to be represented in the relative phrase: The sentence *st hr sdm* “she listens” becomes the relative clause *t3 nty hr sdm* “she who listens”; the sentence *sdm=s* “she listened” becomes the participle *t3 (i.)sdm* “she who listened”.

Cleft Sentence is a term specifying a sentence construction in which one part with a particular weight in the statement is separated or “cleft” off and placed at the beginning of the sentence, where it is then framed by introductory formulas and relative phrases: “It was John who saw him”. In Egyptian, “participial statements” (Gardiner, *Grammar*, §§ 227.3; 373) are equivalent to this type of sentence: the separated element is introduced with *ih* (in Late Egyptian also *m*) and followed up with undefined participles and *sdm=f* forms (the participles are immutable and do not agree in gender and number with the cleft-off sentential element). Where this element is un-introduced, but accompanied by defined participles, relative forms or relative clauses which agree with it, then the construction is often termed a “Pseudo-Cleft Sentence”: “John was the one who saw him”. The form is the precursor of the Cleft Sentence in Coptic. The notion itself was introduced into Egyptology by Polotsky, *Nominalsatz und Cleft Sentence im Koptischen*.

Where the agent of the relative phrase and the antecedent differ, the relative clause requires its own agent, and resumption of the antecedent is necessary (except for the direct object after relative forms): The sentence *st hr sdm=f* “she hears him” becomes the relative clause *p3 nty st hr sdm=f* “he whom she hears”; the sentence *sdm=s sw* “she heard him” becomes the relative form *p3 (i.)sdm=s* “he whom she heard” (but *p3 i.ir=s sdm=f* with periphrasis!). Where resumption is necessary, the sentence *st hr sdm n=f* “she listens to him” becomes the relative clause *p3 nty st hr sdm n=f* “he to whom she listens”; or the sentence *sdm=s n=f* “she listened to him” becomes the relative form *p3 (i.)sdm=s n=f* “he to whom she listened”.

Conversion into relative clauses with *nty* can take place with the sentence conjugations (a) First Present/Adverbial Sentence, (b) Third Future, (c) sentence with nominal *sdm=f*, and (d) Adjectival Sentence. Only the preterite *sdm=f* cannot be converted thus: the preterite relative phrases are the participle and the relative form.

In every case — including Preterite and First Present when the agent and the reference noun are identical — the negative forms of the sentence conjugations are turned into a relative clause using *nty*, whether as *p3 nty bn sw hr sdm* “he who does not hear” or as *p3 nty bwpw=f sdm* “he who did not hear”.

Now, there is no significant structural difference between the Cleft Sentence in question and the ordinary Nominal Sentence (§ 4.2), as can be concluded from this table:

	First Term	Second Term		
(oDM 126,3)	<i>lh</i>	<i>n3 nty tw=tn hr</i> <i>gd.t=w</i>	“What is it that you are talking about”	
(pBM 10052,14,7)	<i>‘d3</i>	<i>p3y qd=f nb</i>	“Everything which he has said is wrong”	Adjectival Sentence
(pBM 10052,4,6)	<i>lh</i>	<i>p3 shr n sm llr=k</i>	“What was the thing you were up to?”	Nominal Sentence proper

The type of sentence which takes a relative phrase in second position is nevertheless distinguished from the others as a Cleft Sentence. The reasoning behind this is partly that translations usually take a form that is so termed: “It is this that he does” or “It is he who did it”. It is also partly that the Late Egyptian Cleft Sentence can function as the precursor of the sentence that is called Cleft Sentence in Coptic, such as **Π-NOYTE Π-ΕΤ-COOYN** “It is God who knows” (< *p3 ntr p3 nty s:wn*).

The sentences can be classified according to the type of the first term and the explicit determination and the form of the relative phrase of the second term as:

1. The “earlier form”, the Cleft Sentence proper: the first term is introduced with *ln* or *m* and the relative phrase is an active participle (without article) or the prospective nominal *sdm=f* (§ 4.3.2);

Pseudo-Cleft Sentence

2. The Pseudo-Cleft Sentence: the second term is a relative phrase with a definite article or a demonstrative (§ 4.3.3).

4.3.2 The Cleft Sentence proper

One of the forms of the Cleft Sentence used in Late Egyptian corresponds to the “participial statement” (Gardiner, *Grammar* §§ 227,3; 373): [*in* + noun phrase/*ntf*] + [participle/prospective *sdm=f*]. This was still used in literary and religious texts, but a Late Egyptian version was more common, introduced with *m* rather than *in*, with Late Egyptian participles or prospective emphatic *sdm=f*:

Traditional Form		“Late Egyptianized” Form		
<i>in</i> NP	<i>sdm</i>	<i>m</i> NP	<i>l.sdm</i>	past
<i>ntf</i>	<i>sdm</i>	<i>mt.f</i>	<i>l.lrsdm</i>	present
	<i>sdm=f</i>		<i>l.l=f sdm</i>	future

Observation:

The first term is frequently the interrogative pronoun *ntm*, which is an amalgamation of the particle *in* which introduces Cleft Sentences with the interrogative pronoun *m* “who?”, “what?”.

sentence
meaning

The first term of the Cleft Sentence generally belongs to an identifiable group of nouns, which can be characterized as follows: (a) proper names and pronouns representing names; (b) inalienable objects (social designations like “name” or “title”, kinship terms like “mother”, or parts of the body like “arm”); (c) semantic classes with a single member (like “sun”); (d) general class designations, abstractions, and terms for materials. Objects and actions expressed by the relative phrases in second position are identified with the first term by isolating them from other categories.

— Examples of the traditional form:

(*HorSeth* 6,14-7,1)

in šš.w-hr=k wpt tw.k ds=k “It is your own cleverness that has judged you”;

Notes:

in šš.w-hr=k wpt participial statement/Cleft Sentence;

tw.k 2nd sing. masc. of a developing new object pronoun: the final *-t* of the 3ae inf. verbs followed by a pronoun becomes independent and is transferred also to other verbs. The form is not status pronominalis with an object suffix because the participle requires a dependent pronoun as object (cf. next example, and supra §§ 2.2.1; 2.2.3[1]).

— Late Egyptianized form with personal pronoun as the first term:

(*HorSeth* 7,11-12)

hr mk ptr mnt.k i.wpt tw ds=k “So it is indeed you yourself who have judged yourself!”

Notes:

mnt.k l.wpl tw Cleft Sentence with independent pronoun and participle with prefix;
 translation more literally: *‘‘You yourself are indeed the one who has judged yourself’’.

Or with *m* + noun in first position:

 *m p3y=n nb rrd.t* (LRL 45, 10-11)

iw=n r p3 nty tw=tn im ‘‘It was our Lord who sent us to where you are’’;

Notes:

m NP rrd.t iw=n Cleft Sentence ‘‘It was A who caused that we come ...’’;
rrd.t graphic variant of the participle *ld* ‘‘who caused’’;
r p3 nty tw=tn im First Present nominalized relative clause as indication of location following preposition *r* (*‘‘to that [place] which: you are at it’’).

The earlier type of Cleft Sentence — in either its traditional or its Late Egyptian guise — is negated with *bn*. And, like all forms of the simple sentence, this form can also be subordinated with *iw*: negation and subordination

hr iw m nzw (Imnw-htp) r.d.t st n=f m t3 qnb.t (and someone gave him her share before the judges) ‘‘because it was King Amenophis who gave it to him in court’’ (for the hieroglyphic text, cf. supra § 3.5.4). (pBoulaq 10 r.15)

4.3.3 The sentence with noun plus defined relative phrase: the Pseudo-Cleft Sentence

The most common Nominal Sentence is the one in which the second term is a relative phrase defined by a definite article or a demonstrative which agrees with the first term. The relative phrase can consist of active or passive participles, relative forms or relative clauses formed with *nty*, in which case the relative clause itself can be converted from any of the available sentence forms: First Present, Third Future, Emphatic, Adjectival or even Existential Sentences (for the negations, cf. supra § 4.3.1). In terms of structure and content this type of sentence resembles the Pseudo-Cleft Sentences of the European languages.

The first term can consist of specified or unspecified noun phrases — proper names, personal or interrogative pronouns, defined nouns and participles, but also adjectives, infinitives without article and nouns without article or with the indefinite article. The specificity of the first term is decisive for the meaning of the sentence: a noun determined in a specific way identifies while an undefined noun classifies or characterizes. The indefinite article can specify one individual as the representative of its class: first term and sentence meaning

(RAD 73,1-2)

w^c 3h.t n nhy nmh.w f3l nbw r pr-hd n Pr-^{c3} p3 sk3 n3 nmh.w “A holding of some private people who pay directly to Pharaoh’s treasury is what those private people have tilled”;

Notes:

w^c 3h.t ... p3 sk3 Pseudo-Cleft Sentence. The first term is undefined, the second a relative form: what was ploughed was a member of the class of “fields which were ploughed by a specific class of peasants”;

nmh.w “freeholders” who are obliged to pay “taxes” only to Pharaoh (and not to the temples);
f3l participle.

Actions can also be organized or classified by an infinitive:

(pBM 10052,
10,8-9)

mnt.k i3w 333

ir.t i3 p3y i.ir=k

(The father has been silenced with hush money from thieves; he is admonished by his wife, the mother of the speaker:) “You are a foolish old man: what you have done is to act like a thief!”;

Notes:

mnt.k i3w 333 characterizing Nominal Sentence with pronoun as the first term and noun without article as the second;

ir.t i3 first term of the Pseudo-Cleft Sentence in the form of an infinitive with object: “become a thief”, “act as a thief”.

A classifying first term without article, the second being a relative phrase introduced with a demonstrative:

(pD’Orb 15,4)

b3y.t 3t t3y hpr.t “A great miracle is what has occurred”;

Notes:

b3y.t group-writing variant of b3l.t “miracle”, cf. pD’Orb 14,8;

t3y note that the determination of the relative phrase agrees with the first term;

hpr.t earlier form of the participle.

Identification, the second term being a relative clause where the antecedent and the agent of the relative clause are identical:

(pMayer A rt.
2,15)

inn nwl=tw nbw mnt.w n3 nty rh
“If gold was collected, they are the ones who know (it)!”

Notes:

inn nwl=tw Protasis in the form of a Preterite introduced with inn;

mnt.w n 3 nty rh first term a pronoun, second a relative clause with First Present (Old Perfective) where antecedent and agent of the transformed sentence are identical (*st rh* “they know”).

Antecedent and agent of a relative clause not the same, with First Present:

 *ih m sm.w p3 nty* (HorSeth 11,9-10)

Stš hr wnmī=f dī m.dī=k “Which greens is it that Seth eats here with you?”

Note:

Stš hr wnmī=f First Present with object pronoun as resumption of antecedent of relative clause.

or Third Future:

 (HorSeth 2,13)

ih p3 nty iw=n r ir=f n p3 rmt 2 nty 80 n mp.t r t3y iw=sn m t3 qnb.t “What are we going to do for the two fellows who have been in the court for 80 years?”

Notes:

iw=n r ir=f Third Future in relative clause with resumptive object pronoun;

80 n mp.t r t3y First Present in relative clause, “eighty years it is until this [year]”;

iw=sn m t3 qnb.t Circumstantial First Present related to preceding First Present clause: it is only in this circumstantial clause that the reference to the antecedent occurs (=w);

construction literally “Eighty years it is until this (year) that they are at court”. This is a typical form of grammatical organization of a sentence where the circumstantial is used.

The Pseudo Cleft Sentence of this type is negated in two ways: (1) *bn NP iw n3 p3 negation and*
ī.sdm=f is the form used with classifying or characterizing function; (2) *bn NP ī.sdm=f subordination*
iw n3. Like all independent sentences, these can also be subordinated with *iw*.

4.3.4 Bibliography

- Černý/Groll, *Late Egyptian Grammar* § 53; Frandsen, *Outline*, § 117 relative clause

Neveu, Vraie et Pseudo Cleft Sentence en Néo-Égyptien, in: *Lingua Aegyptia* 4, 1994, 191ff; Loprieno, *Ancient Egyptian*, § 5.9; Cassonnet, *Les Temps Seconds*, 261ff (§ 19)

4.4 Notes on linguistic evolution

4.4.1 Tendencies

While it could be constructed grammatically, the “pure” Nominal Sentence was virtually never used in Middle Egyptian, except in balanced sentences. Most of the Nominal Sentence formations which appear in Late Egyptian can be found in Coptic as well: **ANOK OYΨΩC** “I am a shepherd”, **ANΓ OYAGΛΘOC** “I am good” (< “a good one”). There is one significant contrast: the use of the articles increases, with the indefinite article being used more widely.

Middle
Egyptian
Nominal
Sentences

The real Middle Egyptian Nominal Sentence types are thus (a) the fixed participial statements or Cleft Sentences and (b) the *pw*-constructions. The latter form appears as both the bimembral type, which strongly depends upon a preceding context (*dmi pw*), and the context-independent trimembral type (*dmi pw, imn.t*). Middle Egyptian noun phrases are also very often nominalized relative phrases (participles: *mrr.w ntr pw, sdm* * “it is what God loves, he who hears” > “the one who listens is the one God loves”; and relative clauses: *ĩs.t pw, nty im* “What is it that is there?”). These forms evolved roughly as follows:

Cleft Sentence

The Middle Egyptian type of Cleft Sentence remains essentially the same in Late Egyptian, carrying out the same function, although morphologically adapted. Since the connection with the Old Egyptian Nominal Sentence such as *in Hr w z3 hz3.t* (“Horus is the son of the wild cow”) had been lost, this type of sentence was actually already alien to the Middle Egyptian sentence structure. Although there was a limited degree of overlap with the *pw*-sentences, the Cleft Sentence itself still had a specific role in “identification by isolation”. In Late Egyptian, the form, having become still more alien to the system, gradually loses its functions to the new type of Cleft Sentence, the Pseudo-Cleft Sentence. The form disappears after the end of the New Kingdom.

pw-sentences

The position of the *pw*-sentences is different. Morphologically adapted, the bimembral *pw*-sentence survives into Demotic and Coptic — **OYΨΩC ΠE** “he is a herdsman”. The trimembral *pw*-sentence, however, underwent an adjustment characteristic of the analytic tendency. The appositional semantic specification which was given to the second term *pw* by the third was re-interpreted as a nucleus-satellite group, and thus as a variation of the type of specification where the definite article becomes the nucleus of its appositional satellite. Instead of the form [noun phrase]₁ *pw*, [noun phrase]₂, we have [noun phrase]₁ [*p3* [noun phrase]₂] which is the new type of Cleft Sentence, which is used as such in Demotic and Coptic, *nm p3 nty iw=f sdm*, **NIM ΠEΤEΨEΩT̄M** “who is it who will listen?”

In Late Demotic (Roman Demotic) and Coptic a new trimembral Nominal Sentence appears as a striking late parallel to Middle Egyptian. The second term is again $p\dot{y}$ ($\Pi\epsilon$) which is again further specified with an appositional and by now defined third term: the Cleft Sentence $\text{OYME T}\epsilon\text{†}\chi\omega\ \bar{\text{M}}\text{MOC}$ “It is truth that I am speaking” had another counterpart in the trimembral Nominal Sentence: $\text{OYME PE PE}\epsilon\text{†}\chi\omega\ \bar{\text{M}}\text{MO}\epsilon$ “What I say is true”.

trimembral
Nominal
Sentence

4.4.2 Bibliography

Polotsky, *Nominalsatz und Cleft Sentence*; T. Ritter, On Cleft Sentences in Late Egyptian, in: *Lingua Aegyptia* 4, 1994, 245ff; Simpson, *Demotic Grammar*, p.167ff (11.3).

4.5 Exercise

An interrogation protocol (pBM 10052 5,2-23)

Page 5 of papyrus no. 10052 in the British Museum, published by T. Eric Peet, *The Great Tomb-Robberies of the Twentieth Egyptian Dynasty* (Oxford 1930), pls. 28-29; cf. *KRI* VI: 779,2-781,7. The papyrus belongs to the records of the investigation of the tomb robberies, recording the interrogations in Year 1 of the “Repeating of Births” era — *wḥm-msw.t* — which corresponds to Regnal Year 19 of Ramesses XI.

Purpose: Example of a Late Ramesside administrative text with judicial phraseology; use of pass. *sdm.w*, preterite converter *wn*, types of nominal sentences.

Notes:

- line 2 (*r*) *mḥ hrw* 2: “the second day” (< “to fill two days”);
ḥ.ty: during this period of the reign of Ramesses XI the Vizier was *Nb-mḥ.t-Rḥw-nḥt* (clause-type name: “Ramesses VI is mighty” — “Amenophis III is mighty” is also possible, but unlikely);
- line 3 *nḥ sḥw n tḥ s.t s:mḥ*: the council of the investigatory body is composed principally of the Vizier, the chiefs of the treasury and grain silo administration and two “butlers” of Pharaoh — who are essentially the highest officers of the secular executive. The two scribes of the Tomb Building Administration were also members (cf. lines 14 & 17);
dym hr=w: “who were authorized” (passive participle with resumption: the members of the council *of whom could be said: put under their authority”);
- line 4 *psḥ-s:nḥr ... n pr-ḥmnw*: “Incense-burner of the Estate of Amun” (title or designation for a kind of ministrant who prepared the incense burners, etc.);
Ns-ḥmnw: proper name (cf. supra § 4.2.[1]);
ḡd.tw n=f: (an older) relative form which has become fixed — A “to whom it is said: B”;

dd.tw n=f ^ḥ*nḥ n nb* ^ḥ*nḥ wḏḏ snb*: “He was made to swear an Oath of the Lord” (< *^ḥ“An oath was imposed on him^ḥ”);

line 5 *mtw=ḥ ḏd*: Conjunctive as introduction of shortened oath (cf. infra § 7.1.3[2]); “[As long as Amun and the Ruler endure] and I say such-and-such” > “if I say such and such”;

ḥw=f ḥḥb ḏd: *ḥw*-clause with future senses with parallel Old Perfectives (cf. supra § 3.2.2[2]), “He will be mutilated and handed over”. The change of person from *mtw=ḥ ḏd* to *ḥw=f ḥḥb* is typical for the rendering of indirect speech: it can be translated in two different ways: “he swears, saying, should I lie, I should be mutilated”, or “he swears, saying, if he should lie, he should be mutilated”;

Kḥ: ḥw=f ḏd Kḥ “He will be taken to Upper Nubia” (more elaborately: “be stationed in Upper Nubia”, cf. supra § 3.2.2[2]); the location noun is used absolutely as an adverb, thus more precisely: “he will be placed ‘Cushwards’”;

ḏd n=f: passive *sdm.w* “it was said to him”;

line 7 *ḥrl ḥw=f*: “to take possession of it”;

line 8 *pḥ A n B*: “to divide A among B”;

m pḥ 5 mḥt: adverbial apposition to suffix *=n*, “for the five (of us) men”, “we, who were five men”;

m b-ḏ-n: characteristically without article (cf. supra § 2.1.3[2]): *^ḥ“He was interrogated by club”;

bpy=ḥ ptr nty nb ḡr: cf. supra § 4.2.1;

line 9 *wḥ*: here specifically, “to leave something alone”, “to leave off doing something”;

ḏd n=f ḥḥty: originally *ḏd.w n=f* “it was said to him” (cf. line 5); on the papyrus, *ḥḥty* was later added above the line, to specify the speaker (cf. line 11); it has simply been taken into the line here to save space;

line 10 the answer of the suspect is not specifically separated from the question of the Vizier (quick dialogue: “Which vessels?” — “These and those”);

rr n nbw: golden “bands” attached to furniture and equipment (Coptic ληλ);

line 11 *ḥḏd=ḥ ḡ*: “(the treasure) the very same I just mentioned” (< “which I named/mentioned correctly”);

line 12 *Mr-wr*: “Miwer”, name of a large settlement at the entrance to the Fayyum, south of *Il-Lāhūn* (today called *Kōm Madinet Ghurāb* - “Gurob”), where there was an also economically significant portion of the Memphite Court, the “Harem Palace” (cf. B. Kemp, *ZĀS* 105 [1978] 122ff.);

ḏd m zp-2 (rnrn, rn.w): “to go through a list of names”;

line 13 *swḥ.t*: designation of the mummy case (a figurative “egg”), usually of cartonnage (here *n ḥḏ* “of silver” or rather probably covered with silver); *ḥnl* is passive *sdm.w*; restore: *ḥw=n ḏl.t=s[tn]mstḥ*;

line 14 *zhḥ.w n pḥ ḥr*: the chiefs of the Gang of the Royal Tomb Building Administration included both foremen and the Secretary of the Tomb Building Administration, as well as a second secretary. From the reign of Ramesses XI until Dynasty XXI, this is the famous Thutmose (whom we met above in the Turin Taxation Papyrus, supra § 2.1.7[3], line 4, 1, with Nes-Amenope, line 4,4, who was temporarily his assistant as second secretary); cf. infra § 7.4 and Černý, *Community*, 339ff;

line 15 *r mḥ s.t sn.wt*: “comes to two spots!” (< “to complete two spots”);

line 16-17 *nḥ ḏnn pḥ mnn* (in group writing *ḏḥ-nḥ-zp2-zp2 > ḏ-n-nn > Ḑλλλ*, and *m^ḥ-nl-nl* as nominal derivative of the verb *m^ḥn/m^ḥnn/mnn* “to be wound up”, “twisted”): “the rods and the wrist-twisters” as instruments of torture;

line 18 *d.y n=w*: passive participle with resumptive pronoun; that the verb *dḥ* is used without an object, intransitively, here and elsewhere (*dd=tw* and lines 19 & 20), with the propositional rection *n* is semantically significant: it is not something specific that is

“given”, but something general: someone is “given a share”, is “rewarded” or “bribed” (with the preposition *m*: “with”);

t3-zp2-šr > *T-t-šr*: proper name (“Tetisheri”);

hr.y-(lr.y)ʿ3: “Chief Door Keeper”, “Chief Porter”; the abbreviated writing ʿ3 for *lr.y-ʿ3* “Porter” is common, cf. supra § 2.1.7(3);

line 19 *m-ḡr sdm(=w) sw*: “when they learnt it”; Temporal (cf. infra § 5.4.2[1]) with 3rd pers. pl. suffix restored. At the end of the line, the scribe has lost track of his subject (*lṛn=f* and *lṛm=n*); cf. Frandsen, *Outline*, § 102 Ex.10 with notes 6 & 7;

line 20 *βl šr*: “small weight”;

construction: *lṛ [wʿ N P p] dḷ=n n=w lṛ=f*], subordinated Pseudo-Cleft Sentence;

m.lṛ=f: status pronominalis of *m* (as such and as *n.lṛ=f* precursor of Demotic *n.lṛ=f* and Coptic $\overline{\text{M M O 4}}$);

bn p3 lṛ ʿ3 l.pš=n m.lṛ=f lṛn3: “(a small weight was the one used before), not the large stone with which we divided it up!” — negated one-member Nominal Sentence, since an otherwise possible Pseudo-Cleft Sentence requires a defined relative form as the second term;

line 21 *t3 s.t lḡd=k lṛ(=l)/lṛn n3 tḃw ... lṛm*: “the place from which you said that I took the vessels” (< * “the place, concerning which is true: You said that I took the vessels from it”) or without the restored 1st pers. sing.: “the place from which you mentioned the taking of the vessels”. This is a good example of the possibility of complex deep packing of indirect references to antecedents: the resumptive pronoun appears only as an adverb of the object clause (*lṛ(=l)*) of the relative form of *ḡd*;

line 21-22 construction: *lṛ* + noun phrase, preceding a *p3y*-Sentence;

ktl s.t mḥ snw.t: “another, second place”;

line 22 *r-w3.tw*: “aside from”, here, “distinct from” (adverb or compound preposition of uncertain etymology; cf. Černý/Groll, *Late Egyptian Grammar*, p. 124 with note);

ḡ3: absolute noun, here “Wrong!”, “Untrue!”;

lḷr n3 tḃw r p3y ḡd: almost “it is precisely that treasure to which the vessels belong” (* “to which the vessels are”). This is one of the earliest examples of the use of the nominal converter *lḷr* (cf. infra § 5.5.1) before the Adverbial Sentence/First Present (with preposition *r* before noun), and here already in the “autofocal” variant (the adverbial of the Adverbial Sentence is itself the adverbial predicate of the Emphatic Sentence), as in Demotic (cf. Johnson, *Demotic Verbal System*, 104 [Ex. 167A-B; D]; 109). In Late Egyptian, the Nominal *sdm=f* (cf. supra § 3.3) is commonly used as a substitute for the nominalized First Present;

(line 24) this is not reproduced here, but — as in line 8 — a closing statement is made: “he did not assent to anything more than what he had already said”.

5. Clause conjugations and forms of complex sentences

5.0 The syntax of subordination in Late Egyptian

In principle, the Middle Egyptian system of subordination is still present and recognizable in Late Egyptian — the adverbial subordination accomplished through prepositional phrases and certain forms of *sdm=f*; the nominal subordination through subjunctive and nominal *sdm=f*; the attributive subordination through participles, relative forms and relative clauses with *nty*. In spite of the clear link to the Middle Egyptian precursors, the methods and morphology of subordination are, however, among the significant differences separating Middle and Late Egyptian: the preference for (a) unambiguous rather than ambiguous forms, (b) consistent and uniform methods of construction, and (c) clear-cut semantic fields — i.e. the preference for analytic rather than synthetic expression. Linguistic evolution thus reveals shifts in the specific processes and in the web of their interrelated usage. The decisive differences can be summarized as follows:

effects of the
analytic
tendency

(1) The normal simple Middle Egyptian sentence gives the impression that its form is determined primarily by the possibilities of combining together various nominal, adverbial and verbal phrases. Its meaning appears to be derived from the various meanings of its component elements. This wealth of phrases and clauses also provided precisely those small elements with which the simple sentence could be extended (cf. supra § 3.0.1). In Late Egyptian however, it is the “minimal sentences” themselves which are the smallest possible units to be combined, taking over a large part of the role of the repertoire of phrases previously available: minimal sentences as the smallest self contained minimal constructions of a language — in Late Egyptian either sentence conjugations or simple Nominal Sentences. The composition of the Late Egyptian minimal sentence is basically firmly fixed and its declarative power clearly defined:

Late Egyptian
minimal
sentences

— The First Present with infinitive or prepositional phrase is a sentence form indicating the present or relative present time, while combined with the Old Perfective it can also refer to past time (cf. supra § 3.1.2);

— the Third Future with preposition *r* and infinitive indicates future time, announcements and predictions (cf. supra § 3.2.2);

- preterite *sdm=f* describes past events;
- prospective *sdm=f* formulates wishes;
- the Nominal Sentence either characterizes or specifies, depending on the construction.

bound
sentence
structures

The forms of the sentences have become morphologically fixed, and they make up a paradigm (cf. supra § 3.0.1). In the course of linguistic evolution, via Demotic into Coptic, the forms will become still more fixed. The “old” *iw*-sentence disappears, or rather shifts into the First Present and Third Future (so that the Old Perfectives and prepositional phrases are no longer employed with the Third Future). This is accompanied by (a) the lexicalization of the Old Perfective, which becomes a mere word-form parallel to the infinitive, (b) the emergence of the Aorist and the First Future, and (c) the disappearance of the Prospective. On the other hand, the repertoire of phrases has been greatly reduced, so that — apart from the exceptions which follow — the possibilities extending a minimal sentence are reduced to adverbs and prepositional phrases.

Parataxis, Hypotaxis/ Subordination are concepts used to describe sentence extensions and complexes. Several independent sentences or sentence conjugations are linked together to build a compound sentence. The individual sentences can be joined to one another by coordination or “parataxis”. Where the sentence-parts are linked in such a way that at least one of them is not independent, the sentence is complex. Such sentences have at least one independent main sentence and at least one dependent clause. These dependent clauses are related to their main clauses by subordination or “hypotaxis”. Subordinate clauses can be classified (a) according to their form — as conjunctive clauses or relative clauses, (b) according to their role in the main sentence — as subject clauses, object clauses, or circumstantial clauses, or (c) semantically according to the value of the relationship between main sentence and dependent clause — as causal, conditional, purpose or result clauses.

hypotaxis by
conversion

(2) Following the loss of various elements of the repertoire of phrases, these minimal sentences assume the role of the smallest element of sentence enlargement, by subordination. With the exception of the Prospective, they are all subordinated by morphemes: *iw* subordinates the sentence conjugations and nominal sentences adverbially; *nty* subordinates them as relatives. Because these morphemes basically transform or “convert” minimal sentence forms into clause conjugations, i.e. circumstantial and relative or attributive clauses, they are called “converters”. The nominal converter *r-dd* potentially belongs to the same group (cf. infra § 5.3.2[2]), but *r-dd* is not usually called a converter because it is actually an adverb belonging to the subordinating sentence, and not to the transformed clause like the other converters.

iw, nty, llr

Late Egyptian subordination with *iw* is thus organized as in Coptic. The role of *nty* as a converter had, however, not yet reached its final role. Relative clauses with *nty* and participles and relative forms still have the same relationship as in Middle Egyptian, so that designating *nty* as a converter can only be justified by a comparison to the *iw*-system

and from a historical linguistic point of view. The participles and relative forms were destined to be eliminated in the course of linguistic evolution, so that the relative converter ultimately preceded all forms. It is however only with the appearance of the “nominal converter” *ỉ.ỉr* (infra § 5.5.1.) in Demotic that the converter system reached the form which ultimately prevailed in Coptic.

(3) The reduction of the repertoire of phrases left (a) the subjunctive-prospective *sdm=f* in the role of an object clause (supra § 3.4.2[2]), (b) the adverbial *sdm=f* in the form of the Finalis, and (c) a few combinations of prepositions with subjunctive and nominal *sdm=f* or *sdm.t=f*. These combinations must be regarded as bound (infra § 5.4), since (with the exception of the use of the Prospective, §§ 3.4.1; 3.4.2) neither these *sdm=f* forms, nor any of the prepositions in question, could be replaced with other forms of their respective paradigm. Although they are, viewed narrowly, the last remnants of a diachronically older system of syntax, they did survive into Coptic.

conjunctive
conjugations

The Conjunctive, one of the most important Late Egyptian subordinating conjugations, was likewise originally a fixed prepositional combination based on the preposition *hn^c* with the infinitive (cf. supra §§ 2.3.3[3]; 5.4.3), and is hence ultimately a non-finite form, which is slowly transformed into a conjugation (*hn^c nt.f sdm > mtw=f-sdm*).

Conjunctive

5.1. The system of syntactic conversion

5.1.1 The circumstantial converter *ỉw*

(1) The constructions and their functions

With few exceptions, the sentence constructions and nominal sentences — and their negated forms — can all be subordinated to another clause as adverbials by means of the *ỉw*-converter. This can produce (a) an adverbial at sentence level (sentence adverb, adverbial adjunct of a sentence), (b) an adnominal adverbial, i.e. a qualification of a noun — commonly termed a “virtual” relative clause — or (c) the essential component of an emphatic sentence (any sentence where the subject is a nominal *sdm=f*).

The sentence-forms which *ỉw* converts are the following:

		Converted Sentence Conjugations/ Nominal Sentences	
First Present	affirmative	<i>iw</i>	noun/pronoun <i>≠f</i> <i>hr sdm</i> <i>sdm.w</i> <i>m pr</i>
	negated (Aorist)	<i>iw</i>	<i>bn sw hr sdm/sdm.w/m pr</i> <i>bw-ir=≠f sdm</i>
Preterite active passive	affirmative	<i>iw</i>	<i>sdm=≠f</i> <i>sdm.w noun</i>
	negated	<i>iw</i>	<i>bwpw=≠f sdm</i>
	‘not yet’	<i>iw</i>	<i>bw ir.t=≠f sdm</i>
Third Future	affirmative	<i>iw</i>	<i>iw=≠f r sdm</i> <i>ir noun r sdm</i>
	negated	<i>iw</i>	<i>bn iw=≠f r sdm</i>
Emphatic Sentence		<i>iw</i>	<i>i.ir=≠f sdm m pr</i>
Nominal Sentence		<i>iw</i>	<i>m nzw i.di.t st n=≠f</i> <i>mn m.di=≠f šri</i>
Negated Imperative		<i>iw</i>	<i>m-ir sdm</i> <i>m-dyt sdm=≠f</i>
Vetitive (cf. pD’Orb 7,4)		<i>iw</i>	<i>nn sdm=k</i>
Tense Conversion		<i>iw</i>	<i>wn + sentence</i>

translating the forms

The interplay between the function and tense of the main, subordinating, sentence and the function and tense of the subordinated *iw*-clause, produce a wide range of possible forms of expression. Pragmatically, when translating the clauses subordinated with the *iw*-morpheme, one should not forget that it is an all-purpose subordinating particle, which has its clearest equivalent in the gerund and participle constructions of English, Italian, Latin or Greek:

(LRL 45, 10-11)

tw=n iy.ti

m p3y=n nb r.rdi.t iw=n r p3 nty tw=tn im iw di=f in=n w^c š^c.t

“We have returned. It is our lord who has caused us to come to the place where you are, he having caused us to bring a letter” (Translation by Frandsen, *Outline*, 194 Ex.1; cf. also Wentz, *Late Ramesside Letters*, p.60); similarly

ptr st īw=w nꜥy r qbḥw “Look at them, (they) going to the cool waters” (Translation by Frandsen, *Outline*, p.208 Ex.3; cf.

(*Wenamun* 2,66)

Lichtheim, *Literature*, 229: “Look at them travelling to the cool water!”).

As an all-purpose subordinating particle, however, it also embraces the functions of many of the conjunctions of the standard European languages. Hence it is sometimes advisable to use a combination of both styles in translation, as in the following passage:

(*LRL* 20,3-6)

ḥr mdw=ī m.dī Ḥr-n-ꜣImnw-pnꜥ=f ḥr n pꜣ šḥn n pꜣy=k ḥr.y

īmnw mdw=f m.dī=k gr mnt.f

īw=tn ḥꜣp.t=f r=ī

īw m-īr mdw m-bꜣḥ ky

īw ī.īr=k ršw n pꜣy=k tm mdw īrm wꜥ ī.īr.t(=ī) īy

“Now, I have talked to Harnamanapnaf about the orders of your superior. Make him talk to you himself, (but) keeping it secret concerning me without talking in anybody else’s presence, since you’ll be happy if you haven’t spoken with anyone until I come back!”;

Notes:

ḥꜣp.tw=f hypercorrected form of status pronominalis with 3-rad. verbs;

m-īr mdw negated imperative (Prohibitive);

ī.īr=k rš nominal *sdm=f* followed by adverbial complement;

n pꜣy=k tm mdw negated conjugated infinitive after preposition *n*: “because of your not-talking”;

ī.īr.t(=ī) īy *r-sdm.t=f* as adverbial complement to conjugated infinitive.

As the examples may have shown, the English *ing*-ending performs about the same function in English as the Egyptian circumstantial converter since it signals subordination or co-ordination without indicating further logical relations. But whenever suitable or advisable, those conjunctions that express logical relations, such as “when”, “while”, “as”, “after”, “although”, “since”, “because”, “but”, etc., can of course also be used in translation even when Egyptian does not express those relations specifically. And — finally — there is the conjunction “and” which belongs to the group of translational devices that may be used to express the meaning of *īw*: although it is not subordinating but co-ordinating, it shares with *īw* and the gerund-constructions the faculty of combining propositions while leaving their logical connections unexpressed.

connection with motion (“come after having gotten something” > “come having got something”; cf. Frandsen, *Outline*, 198f, and Johnson, *Demotic Verbal System*, 71 n.70).

(pD'Orb 9,4-5)

īn.īw=k dy w^c.ī īw h³=k nw.t=k r-ḥ³.t t³ ḥm.t n īnpw p³y=k sn 3 “Are you here alone having abandoned your city because of the wife of Anubis, your older brother?”

Note:

īn.īw=k possibly form of First Present following *īn* (cf. D. Silverman, *Interrogative Constructions with jn and jn-jw in Old and Middle Egyptian*, Malibu 1980, 112ff).

(LRL 1,9-10)

ī īh tw=ī dī.t īn.tw n=tn p³y ḥmn n š^c.t īw bw pwy=tn dī.t īn.tw w^c “So, why am I sending you all these letters without your sending (/although you have not sent) a single one?!”

Notes:

ī īh interrogative pronoun *īh* with interjection *ī*, in this combination before nouns and First Present in the sense of an indignant (rhetorical) question: “What is this all about?!” (cf. Erman, *Neuägyptische Grammatik*, §§ 687; 740);

construction First Present with negated relative past Preterite.

m p³y=n nb r.r.dī.t īw=n r p³ ntī tw=tn īm īw dī=f īn=n w^c š^c.t “It is our lord who made us come to you, by making us bring a letter” (for the hieroglyphic text, cf. supra § 5.1.1[1]). (LRL 45,10-11)

— When subordinated, the “not yet” clauses indicate relative future in a peculiar way: the independent sentence *bw īr.t=f sdm* means that an action has not been accomplished prior to being mentioned (i.e., in the past), but that its execution can still be expected for the future at the time of being mentioned, even though its actual execution must remain in doubt (“he has not yet come”, cf. supra § 3.5.1[2]). When the “not yet” clause is grammatically subordinated to a main sentence, however, it is anchored in the time of the superordinate main sentence, and what had still not occurred at the time of the main sentence has since occurred and is confirmed as fact for some point thereafter (“I went when he had not yet come”). In translating, the conjunction “before” can be employed, since it subordinates the clause and affirms it, but simultaneously shifts the main sentence into the relative past with regard to the dependent clause (“I went before he came”):

(pJud.Turin 5,4)

īw=w mwt n=w qz=w īw bw īry.t t³y r=w “And they killed themselves before anyone acted against them” (“before they could be executed”; cf. also following example, LRL 21,8-10);

Notes:

İw bw İr.t İÿ subordinated passive of *bw İr.t=f sdm*;

statement here (in recording the verdicts and sentencing in the files of the Harem conspiracy against Ramesses III), the subsequent expression cannot be a fact but the suicide is considered to anticipate a punishment, which would most certainly have been carried out.

subordinated
vetitive

— Exceptionally, a negated Vetitive (negated Prospective/Optative/Potential) can be used as a circumstantial, corresponding to the negated imperatives (supra § 3.4.0[2]), if the effect of a negated final circumstantial (*tm=f sdm* “that not”) is desired:

(pD'Orb 7,4)

İh pÿy=k İy.t m-sÿ=i r hdb(=i) m grg İw nn sdm=k rÿ=i hr md.t “What is it, your coming after me to kill me unjustly, without listening to my part of the story?” (< “while you won’t hear my mouth speaking”);

Note:

nn sdm=k negation of the independent prospective *sdm=f* in more traditional genres of text, rather than *bn sdm=f*.

circumstantial
clause as
predicate

— It is worth noting that it is far from uncommon to find circumstantial clauses used as the “predicate” of a nominal *sdm=f*. This example again reveals the subordinated *bw İr.t=f sdm*:

(LRL 21,8-10)

İ.İr=i hÿb n=tw tÿ ÿ^c.t İ.hÿb=i n=tw hr nÿ nÿwy İw bw İr.t tÿy=tn hÿb İy n=i “I sent the letter about the spears to you (at a time) when your letter had not yet reached me.” (For the hieroglyphic text, cf. supra § 3.3.2.)

virtual relative
clause

— A circumstantial clause used adnominally is traditionally described as a “virtual relative clause”. A noun which is not specified by a definite article — use of the indefinite article is possible — can be provided with additional characteristics by a circumstantial; usually it is not necessary, however, to translate the circumstantial as a relative clause:

(Wenamun
2,62-63)

İw=i nw r 11 n br İw=w n İw n pÿym “And I saw 11 ships (which were) coming from the sea” (or else “11 ships, as they were coming from the sea”);

Note:

İw=w n İw First Present, for *m İw.t* (preposition *m* with infinitive for verbs of motion).

The following example shows that an adnominal circumstantial clause — like any other circumstantial — can be used to extend the sentence as an adverbial, without having to follow its antecedent noun directly:

 (Wenamun 1,10)

iw w^c rmt̄ n t̄y=i br w^c r̄ iw t̄y=f nbw [tbw 5] “And a man of my boat who had taken [five vessels of] gold fled” (or else “And a man of my boat fled, after taking [five vessels of] gold”).

The antecedent is specified (and thus analogous to something grammatical defined) if it is a pronoun, to which the adnominal circumstantial clause can be related in the same way as apposition (cf. supra § 2.1.4[1]):

 (LRL 27,10)

iw=k wd̄t̄.tw “And may Amun of the Throne of the Two Lands bring you back safely”.

—Characteristic of circumstantial clauses is also their ability to create complex sentences:

 (HorSeth 6,6-7)

wn.īn St̄š hr dwn=f

iw=f h̄ms hr wnm^c qw r.hn^c t̄ psd̄ t̄

iw=f šm r īr.t n-h̄t̄.ty=s

iw bw.pwy.t w^c ptr=s hrw=f

“And then Seth — who had been in the middle of eating food together with the Great Ennead — got up and went to meet her, whom none had noticed except him.”;

Notes:

iw=f h̄ms circumstantial clause which goes beyond the preceding pronoun *=f* to the noun *St̄š* itself, “Seth was involved in eating” (*h̄ms* as auxiliary verb, cf. supra § 2.2.3[3]);

iw=f šm circumstantial clause related to *hr dwn=f*: “Seth got *himself* up, he going”;

iw with negated Preterite circumstantial clause of relative past time, dependent on the preceding Present Circumstantial!

5.1.2 The relative converter *nty* and attribute conversion

(1) The system of attribute or relative phrases

Like those of many other languages, Egyptian relative phrases offer a highly developed method of systematically (a) qualifying nouns not only in terms of properties but also by providing more detailed information on the syntactic role of properties; and (b) creating nouns expressing properties, as nominalized relative phrases. Beyond that, relative phrases are so common in the texts of all periods and registers that they can themselves

be termed a stylistic typological feature of the Egyptian language. As a means of expression, they are at once flexible and compact:

- They supplement the designations of properties by adjectives or adjective verbs, in bringing fientic verbs or complex expressions into attributive or appositional function — “(the man,) who guards the children”;
- they can themselves also form complex nouns (nominalized relative phrases) — “he who guards the children”;
- they are transformed (converted) or embedded forms of sentences — “the man guards the children” — so that they represent every kind of utterance in a single function, that of attribute.

participles,
relative forms
and relative
clauses

Participles, relative forms and relative clauses with *nty* are mutually complementary, both morphologically and functionally. Participles and relative forms correspond to *sdm=f* forms. Relative clauses with *nty* correspond to the adverbial and nominal clauses. In Middle Egyptian three basic participial forms (simple, reduplicating/geminating and *sdm.ty=fy*) — each with two active/passive variants — and three relative forms (simple, reduplicating, *sdm.n=f*) served to cover the fields of tense and aspect. In Late Egyptian, active and passive participles and the relative forms were each in principle reduced to one basic form, which was primarily intended to formulate qualities developed in the past (participle and relative form thus correspond attributively to the preterite *sdm=f*). The participle in the *iri*-periphrasis occasionally has a general or customary meaning (custom, aorist: “everything, which she says” or “always says” or “used to say”). Present and future qualities are assumed by the *nty*-relative clauses with the First Present and Third Future.

word order

In principle, all of the relative phrases mentioned directly follow the noun to which they refer — the “antecedent”, or “reference noun”, of the relative clause. There can be variations, particularly where the length of the relative phrase would severely affect the construction of the sentence. On the other hand, relative clauses can themselves break up syntactic dependencies (as in the infinitive construction of § 2.3.3[2] *supra* and § 5.4.2[3] *infra*):

Relative form, relative phrase, relative clause are concepts for elements of sentences enabling the attributive modification of a noun in the form of complex constructions. “Relative form” is the traditional designation for that form of the verb which approaches participles in function but has its own subject or agent (for “the woman whom he sees” a relative form is used, for “the woman who sees” a participle). “Relative phrase” designates all kinds of attributive qualifications. This includes adjectives and participles, relative forms, and expressions transformed by a relative pronoun or a relative particle, usually *nty*. Those relative phrases introduced by *nty* form a subgroup of relative phrases, which are here termed “relative clauses”.

(LRL 10, 13-14)

mtw=k tm dī.t h3c n3 cdd šrī nty m t3 c.t-sb3 qd.r.t=w m zh3 “And you should not permit the children who are in the school to leave off writing.”

Notes:

mtw=k tm dī.t Conjunctive with negated infinitive (negated Conjunctive);

h3c A qd.r.t=f m B “A takes his hands away from B”; in the example, the relatively long relative clause specifying the agent A separates the object (*qd.r.t=w*) from its verb.

The evolutionary trend to reduced linguistic forms is also operative in the negations: negation participles and relative forms are no longer negated with the corresponding forms of the negative verb *tm*. Instead, negation takes place using relative clauses with *nty* and negated clause forms.

Observation:

As with the other syntagmas, forms similar to those of the Middle Egyptian relative phrases (imperfective participles and relative forms, *sdm.ty=fy* and *-.n-*relative forms) were maintained in bound expressions and in the hierarchically higher textual registers. In the course of the New Kingdom, while the use of the newer forms increased, the use of the earlier ones declined, or they lost their former function: reduplicating and simple forms, and later even the *-.n-* forms, became simple variants of the relative function.

(2) Antecedents and relative phrases

The noun that is qualified by a relative phrase is called its antecedent. Relative phrases and antecedents are grammatically related to one another in a clearly defined way: the antecedent is always also a nominal element of the relative phrase:

- as agent/subject of the relative phrase: “the man, who guards the children”;
- as object: “the children, whom the man guards”;
- as part of the adverbial complement: “the house in which the man guards the children”; or with other qualifications. Which element of the relative phrase is represented defines the form and construction of the relative phrase:

Where the antecedent is identical with the agent or subject of the relative phrase, the form assumes the guise (a) of an active participle or (b), in case of a converted First Present, that of a relative clause with *nty*, where the antecedent is not again mentioned (cf. supra § 4.3.1). This is of course only possible in the 3rd pers. (with interlocutive objects of speech):

p3 rmt ī.dī t3 šc.t n sn.t=f “the man who gave the letter to his sister”;

p3 rmt nty hr dī.t t3 šc.t n sn.t=f “the man who is giving the letter to his sister”. This is actually *p3 rmt ntī [∅] p3 rmt hr dī.t t3 šc.t n sn.t=f*.

antecedent is agent

Relative phrases can, however, have their own agents even if they are identical to the antecedents, if inclusion of them is required by the construction itself. This applies to *nty*-conversions which have their own conjugation bases (Third Future, Emphatic construction) and all negated sentential forms; in principle, this is also a form of resumption:

p3 rmt nty iw=f r dī.t t3 šc.t n sn.t=f “the man who is going to give his sister the letter”;

p3 rmt nty bn sw hr dī.t t3 šc.t n sn.t=f “the man who is not about to give his sister the letter”.

antecedent is
object

Where the antecedent is identical to the object of the relative phrase, in the case of preterital attribution this assumes the form of the passive participle or the relative form. The passive participle syntactically corresponds to a relative form without agent. A resumptive pronoun is generally not necessary with participles and relative forms; the relative clause with *nty* has its own nominal agent and refers back to the antecedent:

t3 šc.t ī.dy n sn.t=f “the letter which was given to his sister”; (passive participle). It is also possible to introduce the agent with *in*: *t3 šc.t ī.dy n sn.t=f in p3 rmt* “the letter which was given to his sister by the man”;

t3 šc.t ī.dī p3 rmt n sn.t=f “the letter which the man gave to his sister”;

t3 šc.t nty p3 rmt hr dī.t=s n sn.t=f “the letter which the man is giving to his sister”. Here, the resumptive pronoun serves as the object of the verb, in contrast to the passive participle or relative form where the antecedent itself serves as the object.

with
in-periphrasis

The *in*-periphrases of participles and relative forms (cf. supra § 2.3.1) also require resumption. It is, however, not the antecedent but the infinitive of the lexical element which is the direct object of the form (*ī.īr/ī.īr=f*), while the antecedent takes its place only in the relative clause as the object of the infinitive (*sdm*, cf. the following paragraph).

īh.t ī.īr=tw gm.t=w m.dī=f “the things which were found at his place” (literally “with him”; cf. the passage in P. Salt 124 rto. 1,6 and the hieroglyphic text, supra § 2.3.1): the resumptive pronoun is the object suffix *=w* of the infinitive of *gmī*.

antecedent is
another
member of the
clause

Where (a) the verb of the relative phrase is intransitive, or where (b) the antecedent of a transitive verb is identical with another element of the relative phrase, then this also assumes the form of the passive participle, relative form, or relative clause with *nty*, with its own agent; the resumption is, however, now grammatically mandatory:

sn.t=f ī.dy n=s t3 šc.t “his sister, to whom the letter was given”;

sn.t=f ī.dī n=s p3 rmt t3 šc.t “his sister, to whom the man gave the letter”;

sn.t=f nty p3 rmt hr dī.t n=s t3 šc.t “his sister, to whom the man is giving the letter”.

Such resumption relationships can lead to very complex relations, a series of clauses forming a series of frames:

t3.s.t l. qd=k in(=i) n3 t bw ... im: “the place from which you said I had brought the vases”. (pBM 10052,

The resumptive pronoun only appears as the adverb (*im*) of the content or object clause (*in=i*) of the relative form *qd* (cf. supra § 4.5 line 21 for the hieroglyphic text).

5,21)

Such complicated constructions are often difficult to grasp. Tricks can be used to try to understand them by separating the parts (as here, *“the place, of which it is true: you said, ‘I took the vessels out of it’”), but these constructs of convenience should then be transformed into translations!

Observation:

The regular use of resumptive pronouns does not apply when the antecedent is an expression of time. Since the nominal expression of time is used absolutely as an adverbial (*iy=f tr n rwh3* “he came in the evening”), the resumption is somehow an “absolutely set zero-position” (*tr n rwh3 l. iy=f iy ø* “the evening, at which time he came”).

Generally, the meaning of a noun is clarified and limited by relative phrases (“only those of whom the following can be said”; “all those of whom it can be said”; cf. infra § 5.1.2[4]); to such a high degree that this specification is grammaticalised in the form of definition or else the noun itself has the character of a designation. For this reason, antecedents are mostly either proper names (designations) or determiners (articles, demonstratives), or nouns qualified by articles (including *nb*, “each”, “every”), demonstratives, possessive articles, or pronominal suffixes. Note that personal pronouns themselves, however, cannot be used as antecedents (in nominal sentences the independent pronouns are not the antecedents of the relative phrases!).

determination
of the
antecedent

Relative phrases follow the same pattern as the adjectives and hence no longer agree in number and gender with their antecedents.

Nominalized relative phrases — complex nouns — differ from attributive or appositional relative phrases in that an article or demonstrative takes the place of the antecedent. While Middle Egyptian nominalized constructions were grammatically feminine — *qd.t.n=f* — they are of masculine gender in Late Egyptian: *p3 l. qd=f* “what he said”.

nominalized
relative
phrases

(3) The attribute conversion of the sentence conjugations

Many of the simple sentence conjugations can be transformed into attributes with the converter $\overline{\text{nty}}$ (which is also occasionally written *r.nty*). Like Late Egyptian attributes in general, *nty* does not agree with its antecedents, remaining the same for all genders and numbers. In morphology and usage, it is the precursor of Coptic €T(€) .

The *sdm=f* sentence forms are, however, excluded from being converted with *nty*. In earlier usage both the Preterite and the Prospective were represented by participles and

prospective
and preterite

relative forms. In Late Egyptian this is still true of the preterite *sdm=f*. Prospective forms in attributive function still appear in the earlier type of Cleft Sentence (cf. supra § 4.3.2), and in late Dynasty XVIII they appear as negated Prospectives after *nty* —

(Boundary
Stela U, Z. 11-
12)

p3y=i' c nḥ n (<m) m3'c.t nty ḥb=i' r ḡd=f nty bn ḡd=i' sw m cḡ3 r nḥḥ ḡ.t “(As truly as my father lives ...) is this my oath true, which I wish to swear and which I will not swear wrongfully for everlasting eternity” (cf. the hieroglyphic text, supra § 2.1.7);

Notes:

p3y=i' c nḥ m m3'c.t literally “my oath is truth” (cf. commentary supra § 2.1.7, line 11);

nty ḥb=i' r ḡd=f relative clause with form originally that of the future of the Adverbial Sentence (“my heart is directed towards ‘saying it’”). In Late Egyptian, however, this has reached the status of a bound expression (and can no longer be analysed in terms of Late Egyptian syntax);

nty bn ḡd=i' sw negated Optative/Potential “I will not say” (cf. supra § 3.4.1) in a *nty* relative clause;

construction observing the semantic connections, the relative clause does not immediately follow its antecedent (cf. supra § 5.1.1[1]).

During the history of the language the prospective forms were ultimately filtered out of usage but the *nty*-conversion became attached to the Preterite at the expense of the participles and relative forms. The origins of this shift can already be followed during the New Kingdom.

(LRL 14, 8-9)

nty hn=k n=f3.t=k “(... Amun of the Throne of the Two Lands ...) against whom you have leaned your back”.

Nominalized relative forms with *nty* (relative clauses) have the definite article. While *nb* (“each”, “every”, “all”) usually follows the antecedent — *p3 rmṯ nb nty sdm* “every man who hears”, the nominalized form has the *nb* after *nty*: *p3 nty nb sdm* “anyone who hears”; an alternative writing as appears from around the end of Dynasty XX.

The sentence conversions can be systematically summarized as follows:

		Antecedent and Agent	
		identical	different
First Present	affirmative	<i>nty</i>	<i>hr sdm</i> <i>sw hr sdm</i> <i>sdm.w</i> <i>sw sdm.w</i> <i>m pr</i> <i>sw m pr</i>
	negated (Aorist)	<i>nty</i>	<i>bn sw hr sdm.w/sdm/m pr</i> <i>bw-ir=f sdm</i>
Preterite	affirmative	participle <i>i.ir sdm/(i.)wn m pr</i>	relative form <i>i.ir=f sdm/(i.)wn=f m pr</i>
	negated	<i>nty</i>	<i>bwpw=f sdm</i>
Third Future	affirmative	<i>nty</i>	<i>iw=f r sdm/ir noun r sdm</i>
	negated	<i>nty</i>	<i>bn iw=f r sdm</i>
Emphatic Sentence		<i>nty</i>	<i>i.ir=f sdm m pr</i>
Nominal Sentence (Adjectival Sentence)		<i>nty</i>	<i>nfr p3 sdm</i>

(4) Usage

In the general conditions of communication between speaker and listener, the context of the speech situation, relative phrases fulfil two purposes which should be kept apart:

- descriptive relative clauses: These permit the speaker to recall an object which is generally familiar — either because it is a matter of common knowledge or because it was discussed earlier — and describe it in passing: “those tools I mentioned, which were stolen”. Such a characterization is not necessarily essential in order to be understood, and could thus be omitted: “the tools mentioned must be returned”; for the listener, however, it eases identification of the thing meant: “the tools mentioned — which were stolen — must be returned”. types of specification
- restrictive relative clauses: These permit the speaker to introduce something at the very moment of talking, and name it explicitly: “those tools which were stolen”. Such relative phrases specify in the same fashion as the determiners: “these tools”. They establish familiarity in the very speech situation where the objects are mentioned. Such specified relative phrases cannot be omitted without completely changing the statement, or rendering it incomprehensible: “those tools which were stolen must be returned”. Nominalized relative phrases — complex nouns — and relative phrases with *nb* can only be used to specify.

definiteness/
specification

Both these functionally different types of relative clauses enable things talked about to be regarded as familiar, either because they are already co- or contextually known or because they are introduced explicitly. They are always either (a) marked with the definite article or *nb*; or (b) proper names or an article or demonstrative itself. Under certain circumstances, class designations (“thieves”, “gold”) can be understood as playing the role of proper names, and then they do not require the definite article.

frequency of
use

According to the relative frequency of the various convertible sentence forms, besides the preterite conversions (participle and relative form) the relative clauses most commonly used are First Present conversions, and forms with the Third Future are not uncommon. The use of all other forms is marginal.

First Present

— Present specification through the converted First Present adverbial sentence, where antecedent and agent differ:

(pSalt 124 vs.
1,2-3)

$\dot{\imath}w=f \dot{\imath}\dot{\imath} \dot{\imath} \dot{\imath} s.t-s\dot{d}r nty \dot{h}r=f$

$\dot{\imath}w=f \dot{h}r \dot{\imath}n n\dot{\imath} \dot{\imath}h.t nty tw=tw \dot{h}r d\dot{\imath}.t=w n nm\dot{\imath} \dot{\imath}w=f mwt$

“And he (Paneb) stole the bier which was under it, taking the things which are given to a man when he is dead”; the resumptive pronoun is object of the verbal form of the relative clause;

Notes:

$\dot{\imath} s.t-s\dot{d}r nty \dot{h}r=f$ relative First Present with the agent and antecedent identical: “the bier which was under it (the coffin of the workman Nakhtmin)”;

$n\dot{\imath} \dot{\imath}h.t nty tw=tw \dot{h}r d\dot{\imath}.t=w$ relative First Present where the agent (unnamed, =*tw* “one”) and antecedent (*\dot{\imath}h.t*) differ. The resumptive pronoun (=w) is the object of the verb *d\dot{\imath}.t* of the relative clause;

$nm\dot{\imath} \dot{\imath}w=f mwt$ adnominal circumstantial clause (so-called virtual relative clause) with undefined antecedent which is a class designation, “man, when he is dead”, “men, when they are dead”, “the deceased” in general (cf. Coptic ΠΕΨΜΟΟΥΤ).

(LRL 9,4-5
and passim)

$tw=\dot{\imath} \dot{d}d n \dot{\imath}m\dot{n}w-R^c w \dot{H}r\dot{w}-\dot{\imath}h.ty \dots n\dot{t}r nb n\dot{t}r.t nb nty tw=\dot{\imath} zn\dot{\imath} \dot{h}r=w$ “I implore Amun-Re-Harakhte ... and every god and every goddess whom I pass”; resumption in the adverbial phrase (*\dot{h}r=w*);

Notes:

$tw=\dot{\imath} \dot{d}d n$ GN First Present “I say to god A”: a common formula in letters;

$\dot{h}r-\dot{h}r=w$ status pronominalis writing of the preposition *\dot{h}r*.

negation

Relative First Present, negated:

(HorSeth 3,2-3)

m-ṛ ṛ.t n3 zp.w ʿy n grg nty bn st r s.t=w “Don’t commit the great injustice, which is inappropriate”;

Notes:

m-ṛ ṛ.t Prohibitive of *ṛ* “do”;

n3 zp.w ʿy n grg lit. “these great deeds of injustice”;

nty bn st r s.t=w the negated relative clause has its own agent even when it is identical to the antecedent. Here, it is the converted negated Adverbial Sentence, **“they (the deeds) are not at their (proper) place”.

The following examples have already been quoted elsewhere:

ṛw=ṛ dṛ.t n=k p3 ḥtm n nbw nty m dṛ.t(=ṛ) “I give you the seal of gold which I wear” (for the commentary and hieroglyphic text, cf. supra § 2.1.4[3]); the antecedent and the agent are identical, with the relative phrase (relative First Present/Adverbial Sentence) separated from antecedent; (HorSeth 6,1)

ḥr tw=n dṛ ḥms.tṛ m t3-Ḥw.t ṛw=k rḥ.tw p3y=n šḥr ḥms nty tw(t)=n ṛm=f “We are now living here in ‘the mansion’, and you know what it’s like” (for the commentary and hieroglyphic text, cf. supra § 3.1.3[2]); antecedent and agent differ, the resumption is accomplished through the adverbial phrase of the relative First Present; (LRL 23,11-12)

ṛḥ p3 nty ḥr šm.t m-s3 p3 zṛ nty m ṛy.t ḥr t3 mṛ.t ṛw=f dd n=f tsm p3y “What is that going after the adult who is coming on the way? And he said to him: ‘That is a greyhound’” (for the commentary and hieroglyphic text, cf. supra §§ 2.1.3[1]; 4.2.3); nominalized relative clause (First Present with *ḥr* + infinitive) opposed to an attributive relative clause (First Present with *m* + infinitive), where the antecedent and agent are identical in each case; (Doomed Prince 4,8-9)

tw=k ptr p3y k3mn nty ḥms r-gs p3 sb3 p3y=k ṛṛ p3y “You see that blind beggar sitting beside the door — he is your father.” (for the commentary and hieroglyphic text, cf. supra § 4.2.3); relative First Present with Old Perfective, antecedent and agent are identical. (Blinding of Truth 5,7-8)

— Preterital specification with participles and relative forms:

preterite

(pLeAm 4,9)

dmḏ ṛṛ.w wn m p3 mr n p3w nṛ

s:wḏ n p3w ḥm-nṛ tpy n ʾImnw m hrww pn

zṛ-3

“Total: Thieves who were in the tomb of that god, and who have been turned over to that High Priest of Amun this day, 3 men”; antecedent and agent are identical:

relative clause): “the crimes which he heard, but did not report”; or (2) adnominal, parallel to the relative form: “the crimes, which he heard, which he did not, however, report”;

tm ḡd possible negation of infinitive with *lw=f ḥr ḡd* (cf. infra § 5.2).

If the relative Preterite is negated, the relative clause with *nty* with a negated Preterite replaces participles and relative forms: negation

(pNaunakhte 2,7)

ir p3 nty bw.pw=f dī.t n=i bn lw=i r dī.t n=f m 3h.t=i “As for him who did not support me, I shall not make provision for him from my property”; nominalized relative *bw.pw=f sdm*; as expected, the agent of the relative clause appears despite the identity of antecedent and agent;

Notes:

bw.pw=f dī.t n=i intransitive *dī.t* “make a gift to someone”. The testatrix Naunakhte is referring to her children, who are to be considered in her will only if they carried out their filial obligations;

bn lw=i r dī.t n=f negated Third Future: **“I shall not give to him”*.

The following examples have already been quoted elsewhere:

sdm=i md.t nb i.h3b=k n=i ḥr=w “I have taken notice of everything you sent to me about it” (for the commentary and hieroglyphic text, cf. supra § 3.5.1[1]); the antecedent (with *nb*) and the agent differ, and the antecedent is not the object of the relative form (*i.h3b=k*), hence the presence of the resumptive pronoun in the adverbial phrase (*ḥr=w*).

[*iḥ.t n*] *wḡ3 n nzw* (Sts.y Mr.n-Pth) *C.w.s i.ir=tw gm.t=w m.dī=f ḥr-s3 zm3-t3* “[the things] from the storehouse of King Seti I, which were found in his possession after the burial” (for the commentary and hieroglyphic text, cf. supra § 2.3.1); the restored antecedent and the agent differ and the relative form (*i.ir=tw gm.t=w*) is morphologically an *irī* pariphrasis, with the semantic element (infinitive of *gmī*) as the object of *irī*: the resumption is hence accomplished via the object suffix of the infinitive.

— Future qualification by converted Third Future (the agent is must be given, even when identical with the antecedent): Third Future

(LRL 32,9-10)

rh3 p3 imw p3 rmt r.nty lw=k dī.t n=f t3y sc.t mtw=k ir.t m=f ḥr=s “Find out where the boat and the man to whom you should give the letter are, and put his name on it”; the antecedent (*p3 rmt*) is the “indirect object” of the verbal form, and thus the reference is made with the preposition *n=i*;

5.2 Non-initial main sentence and “old” *ḥw*-sentence

5.2.1 Usage

The Present Circumstantial consisting of *ḥr* + infinitive is apt to express a “natural course of events”¹ quite easily, thanks to its temporal (relative present) and logical-semantic openness (“and”). This use might be illustrated by a sequence of the following kind: “She got up, took her coat, went downstairs, opened the door and went downtown”. The *ḥw=f ḥr sdm* form is thus a kind of basic form for continuing narrative, hence the most commonly used form of narrative texts and passages. It is the nature of such texts (reports and narratives, etc.) that they are mostly related in the past tense; the style of several literary stories, such as Wenamun, the Two Brothers, and Horus and Seth, is dominated by this form.

Such passages are introduced by an independent verbal form, which is preterital or otherwise congruent with a cotextual preterite. The construction then continues with a long chain of *ḥw*-clauses:

wn.ḥn=sn ḥr ḥt.t p3 ḥrd r p3y=sn pr

ḥw=sn ḥr w^cb=f

ḥw=sn ḥr dī.t wnm n p3y=f ḥtr

ḥw=sn ḥr ḥr.t ḥt.t nb n p3 ḥrd

ḥw=sn ḥr sgn=f

ḥw=sn ḥr wt rd.wy=f

ḥw=sn ḥr dī.t^c qw n p3y=f šmsw

ḥw=sn ḥr dd n=f m shr.w n s:dd

“Then they took the boy to their house, washed him, fed his team, and did everything for the boy, anointed him, took care of his feet, gave food to his retainers, and conversed with him, saying...”;

Notes:

situation the “Doomed Prince” is received by the Syrian princes who are competing for the hand of the daughter of the King of Mitanni;

¹ cf. Frandsen, *Outline*, § 82[2], quoting Jespersen, *The Philosophy of Grammar*.

wr here actually “to bandage” or “wrap” the feet hurt by the journey.

(pJud. Turin
6,2)

iw.w n=f t3y sb3y.t iw=tw w3h=f iw=f mwt n=f ds=f “This sentence was carried out, and he was left alone, and he died by his own hand.”

Notes:

iw.w preterite passive *sdm.w*;

iw=f mwt n=f ds=f literally: “and he took his life himself”.

5.2.2. Formal criteria

designation of
function

This continuative or sequential function has led to designations such as “*séquentiel*” (Winand), “*Narrativ*” (Satzinger) or “non-initial main sentence” (NIMS) or non-initial main clause.² The term non-initial main sentence emphasizes its property of appearing to be an independent sentence in the textual flow while never being used initially. The effect of continuity and co-ordination (“and”) while presenting the “natural course of events” results from the structure where each individual clause is only related to the verb of the base sentence, but not to its other members: an ad-verbal clause in the strictest sense of the word.

formal criteria

Now, by its very nature a dependent — circumstantial — clause cannot be initial; it is, however, less natural for our languages, the languages of translation, to make use of circumstantial clauses to build long chains of co-ordinated utterances, as is done with the Late Egyptian Present Circumstantial. The mere length of the chains is also occasionally a hindrance to keeping track of the chain-building itself for the analysing observer — hence apparent “main sentences”. As it is, this use of the circumstantial clause with its specific function has been regarded as a specific form. It is argued that, along with the functional properties of a “continuous narrative” in relative past time, but also occasionally in the future, these clauses supposedly also have the morphological properties of being formed with (a) a specific *iw* which is neither the converter, nor the *iw* of the Third Future, and (b) *hr* + infinitive only, and not Old Perfective or adverbials. It is likewise alleged that the Present Circumstantial is negated *iw bn sw hr sdm*, while the NIMS is negated with *iw=f hr tm sdm*.

in bound
combinations

A final characteristic claimed for the NIMS is its use in certain grammatical contexts, (a) following nouns with or without *ir*, (b) following adverbs preceded by (*hr*) *ir* or *hr*

² Černý/Groll, *Late Egyptian Grammar*, § 38: “*iw.f (hr) stp.f* of the Past”.

m.dī, or (c) in association with (*hr*) *wnn=f hr sdm*. An example of such a syntactically closed complex:

(LRL 39, 10-12)

wnn *šy=i š^c.t spr r=k iw=k tm rwl=k h3b n=i ^c=k m.dī p3 nty-nb nty iw=f iy m ht* “When my letter reaches you, you should not refrain from sending word to me about yourself by anyone who is coming north.”

Notes:

construction *wnn=f hr sdm* — *iw=f hr (tm) sdm*; within the frame-work of Late Egyptian this is a vestige of Middle Egyptian syntax: a balanced or emphatic sentence of the [*wnn=f hr sdm*]_{NP} [*mdw=f*]_{AP} type. *wnn=f* is a nominal *sdm=f* followed by an adverbial or nominal *sdm=f* which is remodelled into a Present Circumstantial (cf. the systematic treatment of these sentences infra § 6.2.2). The results are sentence complexes of the “iff/whenever — then” type;

tm rwl=k (hr) h3b negative verb *tm* followed by infinitive *rwl* and reflexive object suffix (=k), to which *n=i* the infinitive (*hr*) *h3b* is related: “to restrain someone from doing something”;

p3 nty-nb nty the most probable explanation (following Wente’s comment on this passage, *Late Rameside Letters*) is the lexicalization of *nty-nb* as a term for “everyone”, and thus, “everyone who”;

nty iw=f iy relative Third Future.

Both the usage and the forms can, however, be recognized primarily as those of the Present Circumstantial, whether in the sense of “continuous sequence” (supra §§ 5.1.2; 3.1.2 note), or in certain bound expressions, or constructions which can be recognized as vestiges of Middle Egyptian syntax. And, secondarily, many uses of the Late Egyptian Present Circumstantial betray a relation to the “old” *iw*-sentence (cf. here infra § 5.2.3). The *tm* negation is furthermore not a useful feature for the identification of a sentence, because it is a form of negation which works within the nominal phrase and not at sentence level: *tm* negates not only the infinitive, but every kind of verbal noun (participles and nominal *sdm=f*). *iw=f hr tm sdm* is thus an affirmative construction (with negative infinitive) and not complementary to the negative construction *iw bn sw hr sdm*.

identity with circumstantial First Present

Observation:

Although the explanation here is different, it must be stated that important analytic achievements have been gained in the debate about the role and form of the NIMS in Late Egyptian Grammar, especially by P. J. Frandsen and S. I. Groll. Lately, partly corresponding to and partly diverging from the explanation given here, G. S. Greig has raised a new argument on the basis of the differences of the negative constructions (cf. *Fs-Lichtheim*, pp. 264ff).

5.2.3 The descendants of the “old” *iw*-sentence

(1) Definitions and usage

Generally, it can be said that the NIMS is the Present Circumstantial, used apparently independently or under circumstances where two dependent forms support one another mutually (closed complex type). Aside from the Third Future and *iw=f hr tm sdm* there are, however, other forms of *iw*-sentence which follow initial expressions with or without *ir*. Within the framework of Late Egyptian, they can only be understood as Present Circumstantials (NIMS), but in fact they are in a regular substitutional — paradigmatic — relationship to proper independent main sentences:

(Doomed
Prince 5,5-6)

ir p3 nty iw=f r ph p3 ssd n t3y=š šri.t iw=s n=f r hm.t “The one who reaches my daughter’s window shall have her as wife.”

Notes:

nty iw=f r ph relative Third Future “who shall reach the window”;

iw=s n=f “She ‘is’ to him, belongs to him”; independent *iw*-sentence with *n* prepositional phrase (rather than *hr* + infinitive in the NIMS role): formally it is a Present Circumstantial, but functionally it is sentimentally independent.

the Middle
Egyptian
independent
iw-sentence

Following an *ir*-anticipation there should be either an independent sentence (sentence conjugation) or *iw=f hr sdm* in the NIMS-role. Formally this is a Present Circumstantial in future time (“shall receive her as wife”) and used in a fashion which can be ascribed to the NIMS role. Since this form is in substitutional relation to the sentence conjugations, the construction of this group may best be sought in Middle Egyptian syntax: *ir* + noun phrase + *iw*-sentence. Hence in such constructions the Middle Egyptian independent *iw*-sentence has survived at least into Late Egyptian (cf. supra § 3.2.2[2]), and in them *iw=f hr sdm* is therefore merely a sub-variety of that type of sentence. It is characteristic for remnants of this type that they are maintained in particular sentence structures (cf. infra § 6), such as:

(pAdoption rt.
23-24)

inn iw=s ms bn šri bn šri(.t) iw=w m rmt-nmh.w n p3 t3 n Pr-š3 “If she gives birth — whether to a son or a daughter — they will be free citizens of the land of Pharaoh” (for the hieroglyphic text and comments, supra § 3.2.2[2]);

Notes:

inn iw=s ms Third Future with conditional particle *inn*;

iw=w m independent *iw*-sentence.

rmt-nmh.w

Although this vestigial type of sentence cannot be assigned to the clause conjugations, it is similar to the Present Circumstantial — as NIMS — in not filling an initial position. Instead, it is used either to continue the narrative or as an integral component of

combinations. The “old” *iw*-sentence and the Present Circumstantial as NIMS are thus not fundamentally different, and can be distinguished only in the context of their usage (cf. *infra* § 6).

(2) Notes on linguistic evolution

Within the Late Egyptian linguistic system, the old *iw*-sentence bears a formal resemblance to both (a) the subordinated Present Circumstantial and (b) the independent Third Future sentence conjugation. Functionally, in terms of the force of its statements and the type of its context, it is similar primarily to the First Present sentence conjugation, along with the Present Circumstantial functioning as NIMS, and occasionally the Third Future. It is along these lines that it decomposes linguistically: where formally and functionally neither the Circumstantial nor the Third Future take its place, it merges into the First Present. This coalescence of the two sentence types can still be grasped in the pronominal forms of Demotic and Coptic. For the insufficiently differentiated forms of the 3rd pers. sing. (*sw*; *st*), the pronominal forms *iw=f* and *iw=s* come into use in weakened forms (*iw* as sign for an initial vowel or a syllabic pronunciation) — and later on also *iw=k* in the 2nd pers. sing. for *tw=k*. It can be summarized thus:

	Late Egyptian		Demotic	Coptic
	<i>iw</i> -Sentence	First Present	First Present	First Present
1. s.c.	<i>iw=l</i>	<i>tw=l</i>	<i>tw=l</i>	†-
2. s.m.	<i>iw=k</i>	<i>tw=k</i>	<i>tl=k</i> <i>iw=k</i>	κ-
f.		<i>tw(=t)</i>	<i>tw(=t)</i>	TE-
3. s.m.	<i>iw=f</i>	<i>sw</i>	<i>iw=f</i>	ϣ-
f.	<i>iw=s</i>	<i>st</i>	<i>iw=s</i>	C-

Observation:

Cf. Johnson, *Demotic Verbal System*, pp. 32ff. In the plural, the transition from the Late Egyptian present tense forms to the Demotic and Coptic is quite regular (cf. *supra*, § 3.1.1[2]).

5.3 Nominal and adverbial conjugations

5.3.1. Conjunctions and synthetic forms of subordination

(1) Definitions: clause conjugations as nouns

The analytic conversion of sentence conjugations has a significant role in the syntax of subordination — hypotaxis. In certain contexts, however, synthetic forms of subordination were still used, particularly in the form of those conjugations (a) which replace nouns in a superordinate sentence, (b) which express the intention, purpose or goal of an action. Subject nouns can be replaced with a nominal or emphatic *sdm=f* (*ỉ.sdm=f/ỉ.ỉr=f sdm*; §§ 2.3.2; 3.3), object nouns with a subjunctive-prospective *sdm=f* (§ 3.4.2[2]). Intention or goal is expressed with a final prospective *sdm=f* (§ 3.4.2[2]). The use of the prospective *sdm=f* as an object noun is in the lower registers of the textual hierarchy already restricted to the object of the verb *đ* “cause”.

verbal form
and noun
clause

Even if the borderline between (a) the nominal forms of verbs and (b) the genuine clausal constructions created from them cannot be adequately described or defined,³ certain indications of the transformation of nominal forms into noun clauses can be recognized. The indicators can be (a) the parallels between clause conjugations and sentence conjugations (Prospective), (b) the sententiality of nominal *sdm=f* and necessary adverbials in the subject noun clause and (c) the interchangeability of the dependent (subjunctive-prospective) *sdm=f* with object noun clauses of other kinds such as *lw*-clauses and those naming the content of the verb *đđ* “speak”, “talk”: grammatically every form of direct speech is the object of the verb introducing it. Such speech constructions develop into indirect speech and conjunctive noun clause constructions.

conjunctions
of noun
clauses: *r-đđ*;
r.nty; *hn' đđ*

With the “nominal converter” *r-đđ*, it can be clearly recognized how a conjunction or converter produces noun clauses out of introductions to speech, because the conjunctive function (“that”; “:”) and the actual meaning (*r* + infinitive, “in order to say:” or “the following”) were used side by side. The conjunction $\overline{\text{𓂏}}$ *r.nty* (< Middle Egyptian *r-ntt/hr ntt*) belongs to this category (Erman, *Neuägyptische Grammatik*, § 680), but it no longer forms noun clauses, being employed to introduce new subjects or paragraphs

3 since the nominal forms of verbs are already complexes with verbal nuclei and semantically complementary agents, objects and rection or necessary adverbial qualifiers.

in a text (generally in letters). *hn^c dd* performs a similar role, although the phrase has a different origin (being preposition + infinitive) and grammatically the form is to be taken as the continuation of a real (as when following *tw=i dd* “I say to/ask of”) or fictive speech or letter introduction.

The realm of the subordinate clauses functioning as adverbials in superordinate clauses was in principle already covered by the circumstantial conversion of the sentence conjugations (*iw*-conversion). Other constructions are, however, also formed out of prepositions with nominal conjugations and generally become bound conjugational syntagmas (cf. infra § 5.4). By analogy with the circumstantial clauses and the conjunctive conjugations, the final-prospective *sdm=f* can also be considered a final circumstantial clause (“so that”), even if the form itself is a synthetic remnant of earlier stages of the language. In the form of its combination with *di* (*di=s sdm=f* “that she permits him to hear”, Finalis) the circumstantial clause of purpose — the final clause — remains part of the linguistic system.

circumstantial
clause of
purpose

(2) Forms and Usage

For the most part, the forms and their usage have already been presented, and the discussion here is intended to recapitulate the system of set out clause conjugations. The pattern can be as follows (see the table on the following page):

Noun Clauses	Form		Meaning Paraphrase
as subject to adverbials	$\dot{\imath}\dot{\imath}r=f sdm + AP$	nominal $sdm=f$	“that he listens is AP”
negated	$\dot{\imath}\dot{\imath}r=f tm sdm + AP$		“that he doesn’t listen is AP”
in the Cleft Sentence	$mnt.f + \dot{\imath}\dot{\imath}r=f sdm$	prospective nom. $sdm=f$	“It is he who will listen”
as object of verbs	$d\dot{\imath} sdm=f$	Subjunctive	“cause that he listens”
	$gm\dot{\imath} \dot{\imath}w=f sdm$	$\dot{\imath}w +$ sentence conjugation	“note that he listens”
	$sdm r-\dot{d}d sw sdm$	“obj.-converter” + sent. conjug.	“perceive that he listens”
circumstantial $sdm=f$	$sdm=f$	final clause	“so that he listens”
	$d\dot{\imath}=\dot{\imath} sdm=f$	Finalis	“so that I cause that he listens”
negated	$tm=f sdm /$ $tm=f d\dot{\imath}.t sdm=s$		“so that he does not listen”/“so that he does not allow that she listens”
complementary to	$r +$ infinitive	adverbials	“in order to listen”
	$r-\dot{d}d +$ sentence		speech introduction

In Late Egyptian synthetically constructed noun clauses are in decline. The subjunctive $sdm=f$ object clause after $d\dot{\imath}$ was still widely used, but uncommon after other verbs — as was the case with its use within noun clauses after prepositions (with the exception of the bound groups, cf. *infra* § 5.4). The nominal $sdm=f$ as the subject of a bimembral sentence (adverbial sentence; emphatic sentence) was still widely used, but no longer appears in the lower stages of the register hierarchy as object, after prepositions or in the balanced sentences of the earlier type.

preposition
with $sdm=f$

Some expressions (apparently preposition + $sdm=f$) could conceal earlier usage, but they can also be analysed otherwise, as in some letter formulae:

(LRL 27,5-6)

$tw=i \dot{d}d n \dot{I}mnw-R^c w Hrw-3hty m wbn=f m htp=f \dots$ “I ask of Amun-Re-Harakhte at his rising and setting ... (that he give Life, Prosperity and Health)”;

Note:

$m wbn=f$ either — as understood here — preposition + noun (*nomen actionis*, cf. also WB s.v. $h\dot{t}p$) with a suffix pronoun (for the Late Egyptian method of construction, cf. the example pBologna 1086 1,2-3 in § 5.4.2[3]), or preposition + nominal $sdm=f$ (cf. Frandsen, *Outline*, 166).

In other cases, such an expression can also appear in more conventional Late Egyptian forms, as a “conjugated” infinitive (cf. *infra* § 5.4.2[3]), or as a circumstantial:

tw=i dd n ʾImnw-R^cw Hrw-3h.ty iw=f wbn htp m-mn.t “I ask Amun-Re-Harakhte, when he raises and sets daily” (the same *ibid.*, 4-5). (LRL 39,15-16)

5.3.2 Noun clauses and content clauses

(1) Subject noun clauses

Aside from the customary use in emphatic sentences, a nominal *sdm=f* can also occasionally be encountered in a subject-noun function in constructions with *hpr* “happen” (similar constructions with *hpr* will be found in Middle Egyptian, cf. Gardiner, *Grammar*, §§ 188,1; 486 Obs.1; Westendorf, *ZÄS* 79, 66 n.1.:

 | *mtw hpr i.ir=i sm im r šd ht* (pMayer A vs. 6,13)

“And it happened that I went there to get wood”;

Note:

mtw hpr unusual form of an impersonal conjunctive (rather than the expected *mtw* + noun + *hpr*). This can probably best be understood in terms of the construction with *i.ir=i sm*, which could hardly follow *mtw* without making the whole form unclear. Similar deferment is found with *=tw* constructions. But cf. for the construction Cassonnet, *Les Temps Seconds*, 105ff (§ 9, specifically § 9.1.2), and Mark Collier, A note on the syntax of *hpr* and omitted impersonal subjects in Late Egyptian, in: *Wepwawet* 2, 1986, 15ff.

A characteristic modification occurs in the structure of the bimembral sentence (Adverbial Sentence/First Present) where the position is filled by nominal *sdm=f* — *i.ir=f sdm* + adverbial phrase, since the clause conjugations now also belong to the sentence-forming (“stressed”) adverbial phrases. In opposition to these, which are themselves transformed sentences and primarily forms of sentence extension, the character of the nominal *sdm=f* in subject-noun position is shifted to a kind of sententiality in itself. Compare the constructions with nominal *sdm=f* followed by an adverbial phrase in a question for specification:

[i.ir=k it3 3h.t=i]NP [hr ih]AP “Why did you take my property?” (for the hieroglyphic text, cf. *supra* § 3.3.2), (oDM 580 r. 4-5)

with the sentence structure of:

[i.iw=i]NP [iw t3y=f md.t m gs m dr.t=i]AP “As soon as I get back, his affairs will be halfway in my hand” (alternatively, “When I come, his affairs will be halfway mine”, for the hieroglyphic text, cf. *supra* § 3.3.1[1]). The adverbial centre of the expression in the form of a circumstantial clause operates far more independently than the simple adverbial, and thus tinges the noun clause too with an appearance of independency. (LRL 19,7-8)

beginning
conversion

This seeming sententiality of the noun clause can lead to a reanalysis of the verbal periphrasis *ỉ.ỉr* + noun phrase + infinitive as the nominal converter *ỉ.ỉr*, which then can be recognized by the absence of the infinitive:

(pBM 10052,
5,22)

đđ=f^c đđ ỉ.ỉr n3 ỉbw r pỳ hđ 3 ỉ.đđ(=ỉ) n=tn^c n
“He said, ‘Wrong! It is that those vessels belong to that great treasure which I have already mentioned to you’” (for the hieroglyphic text, cf. supra, § 4.6);

Notes:

- n3 ỉbw r pỳ hđ 3* Adverbial Sentence (with preposition *r* before the noun), **“the vessels are to that great treasure”*;
ỉ.ỉr nominal converter before an Adverbial Sentence (rather than the expected *ỉ.ỉr n3 ỉbw* infinitive *r pỳ hđ*).

Observation:

This is one of the earliest examples of the use of the nominal converter *ỉ.ỉr* before the First Present/Adverbial Sentence (with preposition *r* before noun), in this case in the autofocal variant (the adverbial of the Adverbial Sentence is itself the adverbial predicate of the emphatic sentence), as in Demotic (cf. Johnson, *Demotic Verbal System*, p. 104 [Exx. 167 A-B; D]; 109) and Coptic (cf. Polotsky, *Coptic Conjugation System*, § 30).

Noun clause, content clause are terms describing specific forms of subordination. “Noun clause” refers to a subordinate clause that replaces a nominal element of a sentence (where the translation is typically with a “that” clause). Noun clauses commonly represent the subject or object noun in a larger sentence. Subject clauses: “*Whether he will come is uncertain*”; “*That you will write to me is cheering*”. Object clauses: “*I do not know whether she is coming*”; “*He knows that you are ill*”; “*She said, ‘I was ill’*”. The semantic relationship between the main sentence and such subordinate clauses can be described as “content relationship”. Such “content clauses” convey the object or content of a superordinate expression of assertion, perception, feeling, thinking or wanting.

in the Cleft
Sentence

In the Late Egyptian Cleft Sentence of the earlier type (cf. supra § 4.3.2) the nominal *sdm=f* of the prospective mood can be used as a complementary form of the participle in expressions concerning the future:

(LRL 13, 6-7)

 *m 3Imnw P3-R^cw Pth ỉ.ỉr=*
ptr^c=k “It is Amun, Pre and Ptah who will check into your state”.

(2) Object-noun clauses

subjunctive
sdm=f as
object clause

The object-noun clause makes the semantic relations between the superordinate proposition and the subordinate clause particularly clear. In the earlier phases of the language, a noun clause serving as an object after a series of verbs was formed with a different kind of nominal *sdm=f*: the dependent, subjunctive-prospective *sdm=f*. Except in the more traditionally minded registers, this object clause construction is used only with the verb *dỉ* in Late Egyptian, but in this construction it occurs at least as frequently if not more so. The object clauses of the following example from the introductory formulae of letters

display both (a) forms of the intransitive and adjective verbs and (b) the use of the prospective *sdm=f* of *wnn*:

(LRL 39,15-40,2 and *passim*)

tw=i dd n 'Imnw P3-Rcw Hrw-3h.ty ... imm nh=k imm snb=k imm wnn=k m hs.t ntr.w
mt r'w-nb zp-2 "I ask Amun and Preharakhte [...] every day that 'they' let you live and be healthy, and that 'they' keep you in the favour of gods and men";

Notes:

- structure cf. sub § 5.3.2(3): the content of the request following *tw=i dd n* god may be phrased in translation as indirect speech: either "I ask them: Let 'him' live" or "I ask them that 'they' let you live";
- wn(n)=k* subjunctive-prospective *sdm=f* (like *nh=k*, *snb=k*) of *wnn* in an object clause following the imperative of *dl*.

Although the governing verb *dl* is widely employed either as an imperative *imm* or as an infinitive *dl.t* followed by object clauses, it can appear in any other form of the verb:

Preterite *sdm=f*:

(Wenamun 2,26-27)

hr ptr dl=k iry p3y ntr c3 p3y hrw 29 iw=f mnj ty=k mr "But you have had this great god spend these 29 days moored in your harbor."

Notes:

- iry p3y ntr ... hrw* subjunctive-prospective *sdm=f* in an object clause following preterite *dl=k*, "that this god (should) do 29 days";
- iw=f mnj* Present Circumstantial as an adverbial to the prospective *sdm=f* von *irj* (and thus being part of the object noun clause!): "to cause the god to spend 29 days being moored";
- ty=k mr* absolute noun as a locative adverb (an unusual but possible use), to be understood as "in your harbor".

Relative form:

(Wenamun 2,22)

"What is all this silly wandering which they have made you do?"

Notes:

- ih n3 msC* Nominal Sentence proper with the interrogative pronoun *ih* as the first noun (< "What are/signify these travels?"), cf. § 4.2.1;
- i.dl=w iry=k* relative form 3rd pers. pl. with subjunctive *sdm=f* as an object noun clause.

Participle:

Notes:

gmy passive preterite *sdm=f*;

iw bw.pw=w rh circumstantial of negated Preterite as an adnominal qualification of the object *n3 mḏ*.

(LRL 7,11-12)

Ḳ Ḳ.ḲḲ=Ḳ ḡm Ḳw ḏḲ=f Ḳw wᶜ tzm r Ḳḏy=Ḳ Ḳw=w ḡm=Ḳ (m) Ḳ3 mt n ḏb3 “But I only discovered that he had sent a boat to get me when they found me in the middle of Edfu”;

Notes

Ḳ.ḲḲ=Ḳ ḡm nominal *sdm=f* of *ḡmḲ* without object;

Ḳw ḏḲ=f Preterite Circumstantial (as a substitute object noun) followed by Subjunctive (*Ḳw wᶜ tzm ...*);

Ḳw=w ḡm=Ḳ Present Circumstantial of *ḡmḲ* with object;

(m) Ḳ3 mt adverbial expression of place, “in the middle”: the hieratic sign is read, with Wente (LRL, p. 25 n. b) *contra* Černý (LRL, note on passage), as Ḳ3 rather than m, with m restored. The restoration is, however, not necessarily required, as in Late Egyptian locative adverbials (like those of time) are occasionally used absolutely.

Such constructions with content clauses are opposed to conjunctive clauses which can also be interpreted as being “converted”:

Ḳw=w ḡm r-ḏḏ Ḳry=f st “And they found out that he did it”;

(pJud. Turin 4,2)

Notes:

Ḳw=w ḡm Present Circumstantial clause (NIMS) without object;

r-ḏḏ “converter” of the content clause (“that”; “:”);

Ḳry=f st the independent Preterite sentence conjugation (after the “direct indicator of initiality” *r-ḏḏ*), *“(they found: He did it”.

(pMayer A rt. 1,14-15)

sdm(=Ḳ) r-ḏḏ n3 mḏ ḡn r ḲḲ.t ḡ3w m pḏy pr n st3 “I noted that the people proceeded to take possession of this funerary equipment”;

Notes:

sdm=Ḳ r-ḏḏ “I heard: (The people ...)”;

n3 mḏ ḡn First Present with Old Perfective.

(pBologna 1086, 6-7)

pḏy=Ḳ ᶑḏḏ pḡ r=k “But I did not know that my boy would get to you”;

Notes:

bw rh=Ḳ negative Aorist;

ḲḲ pḏy=Ḳ ᶑḏḏ pḡ Third Future with nominal agent.

direct speech

r-dd can also be used in its literal sense (being the preposition *r* with the infinitive of *dd* “speak”, “talk”, “say”) to introduce direct address. In contrast to the object clauses, (a) an imperative or vocative can appear in direct speech, (b) the conjunctive syntagmas (§ 5.4) can also be used at the beginning of direct speech, and (c) the pronouns are related to the context of speech (not the report or the narrative outside the speech itself).

(3) Indirect speech

Both direct speech and noun clauses (particularly content clauses) share the characteristic of not belonging immediately to the discourse to which they are attached; they either add a note or cite another speech situation. They also share the characteristic of being embedded at the level of the main text, and belong therefore to another text level. They differ in that noun clauses are dependent upon the main text both grammatically and semantically (being adjusted to a speech situation: “He realised that he was late”), but direct speech is marked by a break in dependency (with pragmatic signals like a pause, break or punctuation: “He realised: ‘I am late’”) — the principle being that a verb initiating speech is not followed by the expected object clause, but rather by a clearly marked independent sentence. Late Egyptian indirect speech is roughly between the two: grammatically independent, but influenced by the speech situation of the main text, while diverging from the speech situation of the speech quoted.

single actor
adjustment

Characteristic of indirect speech is the “single actor adjustment”. While in noun clauses all roles and all actors related to an action or a process match the actors of the main text, in indirect speech only a single actor is matched. In particularly clear cases it is for example stated (cf. supra *LRL* 39, 15ff. sub § 5.3.2[2]), “Concerning you, I say to god so-and-so, *imm n=k nh*, that he give you life” < *“(Give (you, god) you (correspondent) life”): The quoted speech situation of the request-address to the god is changed by the speech situation of the letter into an address to the correspondent. The translation cannot immediately reproduce this, but can represent it in two different ways: translating, (a) “I say — about you — to god so-and-so, ‘give *him* life’/‘let *him* live’” or (b) “I say — about you — to god so-and-so ‘that *he* give you life’/‘that *he* let you live’”. Compare the observations to §§ 3.4.2(1) & 3.4.3(1).

The oaths are equally clear: e.g. (for the hieroglyphic text, cf. 7.1.3[1])

(oGardiner
104,1-4)

dd.t.n in-mw P3-3-m-B-in.t wsh 7Imnw wsh p3 hq3 mtw=i mdw m p3y 3.t iw=f hr 100 n sh.t

“What the water-carrier Pa’amtone said: ‘As Amun and the Ruler endure, and I should bring up the affair of this donkey, *I* will be subject to 100 blows’”.

Or: “What the water-carrier Pa’amtone said was that as Amun and the Ruler endure, and *he* would bring up the affair of this donkey, *he* will be subject to 100 blows”.

Where all the actors are referred to in the 3rd pers., the adjustment will not be noticed, and the translator can reproduce the text using either direct or indirect speech — *ḥr ḏd mwt=f* “And they said: ‘he will (probably) die’” or “And they said that he would die” (cf. also § 3.4.3[1] Observation).

5.3.3 The final circumstantial clause

The prospective *sdm=f* was another synthetic form of clause conjugation which had become alien to the Late Egyptian linguistic system, but nevertheless remained very stable throughout the evolution of the language (cf. §§ 5.3.1[1]; 3.4.4; 3.4.2[2]). Viewed systematically, it is the circumstantial of the sentence conjugation “independent prospective *sdm=f*” — Optative/Potential — as the *ḥw*-conversions are the circumstantials of the other sentence conjugations. The main clause can have any form, but it is frequently an Imperative or Optative Sentence:

(Wenamun
1,21)

ḥr nhy hrww ḏi qḥl-n=i whj=i sw “Spend a few days here with me, so that I can seek him”;

Notes:

- ḥr nhy hrww* independent, superordinate Imperative Sentence;
- qḥl-n=i* compound preposition (cf. supra § 2.2.4[3]), “with someone”;
- whj=i sw* final circumstantial clause.

(HorSeth
10,11)

ḥm ḥt.w n Ḥrw ḥnᶜ Stš “Let Horus and Seth be summoned that they may be judged”;

Notes:

- ḥm ḥt.w* independent, superordinate Imperative Sentence;
- ḥp.t.w=w* final circumstantial with passive prospective *sdm=f*.

Functionally this form with its own agent is complementary to the constructions with the preposition *r* + infinitive. Where the agent of the intentional or purposeful action is identical with that of the main sentence, the infinitive phrase appears; where these are different, the final *sdm=f*:

complementary
to *r* +
infinitive

(LRL 70,1-2)

ḥm ḥn=w r ḥn nṣ ḥt tm nṣ rmtḥ ḥqr “Let them hurry off to get the grain so that the people don’t starve”;

Notes:

- ḥn=w r ḥn* “may they go to get”: indication of purpose with identical agents (rather than the technically equally possible **ḥn=w ḥn=w nṣ ḥt* “may they go so that they fetch grain”);

tm n3 m1 qqr negated final circumstantial clause (prospective *sdm=f* of *tm*) with nominal agent (*n3 m1*): indication of purpose with different agents.

Traces of the earlier linguistic system can also be recognized in these interactions. The transformation of the syntax of subordination rendered the identification of the agents redundant in the rest of the system (cf. *infra* § 5.5), but morphologically it was necessary to name the actors, although semantically superfluous.

The following examples have already been cited earlier (cf. *supra* § 3.4.2[2]):

(*Beatty Love Songs vs. C2,3*) *m1 n=i m33=i nfr.w=k* “Come to me so that I may behold your beauty” (for the hieroglyphic text, cf. *supra* § 2.2.6 exercise [1]);

(*HorSeth 14,9*) *ih h3b=k n=n p3 nty iw=n r ir=f n Hr w hn^c Stš tm=n iri shr m hm=n* “Please send us word about what we should do for Horus and Seth, so that we don’t make uninformed plans” (for the hieroglyphic text, cf. *supra* § 3.4.2[2]).

Finalis In the form of the prospective *sdm=f* of *d1* followed by a Subjunctive, the circumstantial clause of purpose still has a long history to come — as the “Finalis” or “causative-promissory conjunctive” (*d1=i ir=f sdm > TAPETCWTM*); cf. *supra* §§ 3.4.3[2]; 3.4.4). Example:

(*HorSeth 1,9-10*) *imm h3^c.tw=f r bl irm=i d1=i ptr=k dr.t=i iw=f ty.t=f dr.t=f m-b3h t3 psd.t* “Have the two of us sent out, and I will let you see my hand grasp his in front of the Ennead” (for the hieroglyphic text, cf. § 3.4.3[2]);

Notes:

imm h3^c.tw=f imperative main sentence (Causative Imperative, “cause that one sends”);

d1=i ptr=k Finalis/promissory conjunctive: prospective *sdm=f* of *d1* in the circumstantial clause of purpose.

causative
infinitive

Like the final circumstantial clause with the preposition *r* + infinitive, the causative final circumstantial clause is complementary (a) to the Causative Infinitive, (b) to the construction with preposition *r*, and (c) to the infinitive of *d1* “cause” followed by a Subjunctive (*r d1.t sdm=f*); cf. *supra* § 3.4.3(2).

5.4. The conjunctive clauses

5.4.1 Forms of explicit subordination

As has been repeatedly mentioned, sentence conjugations and nominal sentences (and the associated negative forms) can be subordinated as adverbial clauses using *īw*. These subordinate clauses have an adverbial function as adverbial adjuncts of a superordinate clause, or as sentence extensions or basic elements of an Emphatic Sentence. *īw* is, however, exclusively a morpheme of subordination as such (cf. supra §§ 5.1.1[1]; 3.1.3[2]), and thus so to speak the “zero level” of hypotactic constructions. It subordinates adverbially, but leaves the logical relationships between the main and subordinate clauses implicit, and thus does not explicitly identify the subordinate clauses as causal (“as”, “because”), temporal (“when”, “after”), concessive (“although”, “despite”), or modal (“(just) as”, “how”) relationships — notwithstanding that the internal conditions of our languages may necessitate us now and then to insert those conjunctions in our translations. implicit hypotaxis

Like other languages exploiting implicit hypotaxis (participles, gerunds), Late Egyptian also offers the possibility of rendering the logical relationship between main and subordinate clauses explicit. This is accomplished using particular prepositional combinations; almost free combinations of the Middle Egyptian style are still common in the hierarchically higher registers of text while in literary texts and documents from daily life these prepositional combinations are sometimes still productive, but have become mostly morphologically bound forms and are sometimes recognizable only etymologically. One example of the older types of prepositional combination: explicit hypotaxis

(pD'Orb 14,3)

A line of Egyptian hieroglyphs representing the sentence. From left to right: a seated man (hr), a lotus flower (h), a seated man (pr), a seated man (ml), a seated man (wnn), a seated man (iw), a seated man (h3), a seated man (ty), a seated man (f), a seated man (hc), a seated man (r), a seated man (s), a seated man (t), a seated man (f).

iw h3.ty=f hc r s.t=f
iw=f hr h pr ml wnn=f “And his heart rested at its place, and he became as he had been”;

Notes:

hc r s.t=f “to stand at its correct place”, Old Perfective;

hpr ml wnn=f traditional construction: prepositional rection of *hpr* with nominal form of verb *wnn*, “to be as before”.

preposition
with verbal
form

The majority of such combinations can be traced back to the possibilities available in Middle Egyptian where, besides from nouns and infinitives even nominal verb forms (cf. § 5.3.1) could also depend on prepositions (as in *hr m33=f*; *m mrr=f*; *hft sdm.n=f*). As such constructions were no longer usual (cf. supra § 2.3.3), the prepositional combinations which do appear must be understood in the context of the Late Egyptian system as bound combinations. In principle the fixed combinations formed with the earlier prepositions and nominal verbal forms acquired the status of conjunctive conjugations: these are the combinations of the preposition *m-dr* with the subjunctive-prospective *sdm=f* — termed Temporal — and the preposition *r/r-š3c* with *sdm.t=f* — termed Terminative (cf. supra § 2.3.32[2]).

Combinations with the prepositions *ml*, *m-ht* und *r-tnw/r-tnw* still occasionally appear with *sdm=f*. Where they do appear it is generally with verbs which, like *wbn* and *h3i*, have religious connotations; hence they are clearly dropping out of use. The combination with *hft* appears only in the epistolary expression *hft spr t3y=i šc.t r=k*, “when my letter reaches you”:

(pKoller 3,5)

A line of Egyptian hieroglyphs representing the sentence. From left to right: a seated man (hft), a seated man (spr), a seated man (t3y), a seated man (i), a seated man (sc), a seated man (t), a seated man (r), a seated man (k), a seated man (iw), a seated man (k), a seated man (hr), a seated man (dl), a seated man (t), a seated man (grg), a seated man (p3), a seated man (inw), a seated man (m), a seated man (ih), a seated man (t), a seated man (f), a seated man (nb).

hft spr t3y=i šc.t r=k iw=k hr dl.t grg p3 inw m ih.t=f nb “When my letter reaches you, you should take care of the tribute in every detail.” (LEM 118,17 - 119,1);

Notes:

iw=k hr dl.t “old” *iw* clause or NIMS;

m ih.t=f nb the tribute “in all its things, details”.

preposition
with infinitive

Functionally, the other possible Middle Egyptian construction are replaced with combinations of preposition + infinitive, and are thus adjusted to the features of the Late Egyptian language. In the broadest sense these include infinitive combinations like *r-dd*, *hn3 dd* + clause (cf. supra § 5.3.1[1]). In the narrow sense include combinations with “conjugated” infinitives — whether only etymologically recognizable like the Conjunctive (< *hn3 sdm ntf*), or still productive like the combinations of infinitive with possessive pronoun (*p3y=f sdm*) or infinitive with article and relative form (*p3 sdm i.ir=f*).

anticipation

Reinforced with the particle *ir*, conjunctive clauses can now also occasionally precede the superordinate sentence; they can also form the initial phrase of clause

complexes which do not include independent elements, consisting rather of a series of mutually supportive phrases (as in Middle Egyptian in general, cf. supra § 5.1 and infra § 6). Sentences beginning with adverbials became normal in Coptic, but not with any of the earlier circumstantial forms, whether in the form of adverbs or of prepositional combinations or circumstantial clauses; and in Late Egyptian too the position following the main clause is still the more common.

Conjunctive clauses are primarily forms indicating temporal subordination; they can be summarized as follows (cf. supra § 3.4.1):

	Form	Function	Meaning paraphrase
(preterital)	Preposition + infinitive <i>m p3y=f sdm</i>		*“on his hearing” > “when/while he hears”
	negated <i>m p3y=f tm sdm</i>		“when he does not hear”
	<i>m p3 sdm i.l.r=f</i>		*“on the hearing which he did” > “when/because he heard”
	negated <i>m p3 tm sdm i.l.r=f</i>		“when he did not hear”
Conjunctive combination with infinitive	<i>mtw=f sdm</i> (<i><hn^c ntf sdm</i>)	Conjunctive	“and he will hear”
	negated <i>mtw=f tm sdm</i>		“and he will not hear”
Conjunctive combination with <i>sdm=f</i>	<i>qr/m-qr sdm=f</i>	Temporal	“when he (had) heard”
	<i>m-hy sdm=f</i>		“after he (had) heard”
	<i>r-tnw sdm=f</i>		“whenever he hears”
	<i>(hft spr=f)</i>		“when he arrived”
Conjunctive combination with <i>sdm.t=f</i>	<i>i.l.r.t=f sdm/</i> <i>s3^c-i.l.r.t=f sdm</i>	Terminative	“until he hears”

Observation:

m-qr compound preposition (earlier form *qr* “as”, “since”, “because”), with the usual writing , as well as the following alternatives , , , and even occasionally ; ;

r-tnw compound preposition formed with the preposition *r* and the nominal *tnw/tnw* “every one” (+ noun or *sdm=f*; *tnw mp.t* “every year”) meaning “every time that”, “as often as (he hears)”;

i.l.r.t=f sdm < *r + sdm.t=f/i.r.t=f sdm*.

Examples of the rarer conjunctive clauses:

(pLansing
13a, 8-10)

mnt.k^c n dr.t hr.s:htpy r-ḥ3.t nb ntr.w r-trw ḥ^c=f “You are someone who handles the censor gracefully before the lord of the gods whenever he appears.”

Notes:

structure Nominal Sentence proper (cf. § 4.2.1) extended with conjunctive conjugation;

n dr.t participle of an adjective-verb (*n*) with a qualifying noun, “someone who is fine-handed” > “someone with graceful movements”;

hr to be “under” something = to carry or hold it;

r-trw ḥ^c=f conjunctive conjugation as sentence adverbial.

(Graffito KRI
III 437, 3-5)

iy in zh3.w Pth-m-wi3 ḥn^c ity=f zh3.w Yw-p r m33 šw.t mr.w m-ḥt iw.t=sn “(Year 50, 1. pr.t day 6,) Visit of Secretary Ptahemwiya and his father Secretary Yupa in order to view the pyramid fields, after they came” (Reign of Ramesses II);

Notes:

iy in zh3.w infinitive of *iy* “come” with agent, *“(Coming by the scribe”;

m-ḥt iw.t=sn preposition with subjunctive *sdm=f*: conjunctive conjugation as sentence adverbial.

5.4.2 Temporal circumstantial clauses and the conjugated infinitive

(1) The circumstantial clause of anteriority: the Temporal

function and
meaning

The conjugation form *m-dr sdm=f* is the most common of the conjunctive conjugations (the various written forms in which it appears are given in the table and observation, supra § 5.4.1). The form implies an unspecified past time relative to the temporal position of the main sentence to which it is subordinated. According to the context, this can be translated with conjunctions like “after”, “when”, “as”, “since”, etc. This can occasionally also be done quite specifically, expressing an act as past if it began before the time of the main clause but is still continuing (“he went while I was still eating”). The form continued to play this role and is preserved in Coptic: (*m-dr sdm=f* > Demotic *n-t3y sdm=f/n-drt ir=f sdm* > NTETPE4CWTM).

(Wenamun
2, 76)

iw=i gm.t=s m-dr pr=s n p3y=s w^c pr

iw=s n^c q m p3y=s ky

“I found her as she was leaving one of her residences and entering the other.”

Notes:

=s the city-princess Hatiba of Alasia;

m-qr pr=s Temporal;

n p3y=s w^c pr preposition n < m; w^c is the nucleus of the nominal phrase, pr the satellite: *‘‘from her one house’’, i.e. ‘‘the (first) one of her (two) houses’’;

lw=s n^c q Present Circumstantial (preposition n < m with verbs of motion), as the continuation of the Temporal.

 wr r p3 hrw m-qr (Wenamun 1, 50-51)

lw=k n p3 nty ’Imnw lw “How long has it been until today since you came from where Amun is?”;

Notes:

occurrence Wenamun 1,50-51 = 1,x+15-x+16;

wr r p3 hrw Adverbial Sentence with NP (nominal interrogative pronoun wr ‘‘how much?’’) and preposition r + NP;

lw=k n NP lw=k m (>n) place ‘‘come from a place’’.

The nuance of m-qr as ‘‘since’’, as in this sentence, can occasionally be strengthened ‘‘since’’ with a preceding (r-)s3^c, s3^c-m-qr sdm=f ‘‘since he heard’’.

The Temporal can stand at the beginning of a sentence if this is not a ‘‘closed complex’’ sentence initial (cf. infra § 6). In contrast to other conjunctive sentences, it does however require the support of the particle lw ir:

 (pD’Orb 5,1)

lw=m-qr (>n-qr.ty) lw.t=f r lw n=k pr.t lw=f gm=l hms.kw w^c ‘‘When he came to get the seed corn for you, he found me sitting alone’’;

Notes:

lw=m-qr lw.t=f Temporal introducing a sentence; the grapheme n-qr.ty for m-qr already adumbrates the Demotic/Coptic writing NT-; the decision to make any particular transliteration is purely pragmatic and the conventional transliteration simplifies its recognition here;

lw=f gm=l Present Circumstantial as NIMS (cf. supra § 5.2);

w^c ‘‘seated woman’’ is used as a semogram of the 1st pers. sing. fem. (here moreover symbolically for the ending of the Old Perfective 1st pers.);

structure none of the elements is an independent sentence (sentence conjugation or Nominal Sentence), so that the sentence is constructed out of a series of mutually supportive phrases (Temporal & Circumstantial). Such forms will be treated below (cf. infra § 6).

The following examples have already been cited elsewhere (particularly in the earlier exercises):

(Beauty Love
Songs vs.
C4,2)

gmḥ=f r=i m-dr znny=i “He looked at me as I passed” (for the hieroglyphic text, cf. supra § 2.2.6 Exercise [2]);

(pAbbot 5,1)

īw.tw dī.t n=f īr.t=f m-dr pḥ=f st (A commission has bound a man’s eyes and taken him to the plundered tombs) “And his sight was given to him after he had reached them” (cf. hieroglyphic text supra § 3.4.2[2]);

(pBoulaq 10
rt. 9-10)

ḥr īw mbw.pw=w qrs īm pḥy=i īty m-dr/m.dī qrs=f pḥy=f īt ḥn^c tḥy=f m^w.t “... although they did not do the burying together with my father when he buried his father and mother” (for the hieroglyphic text, cf. supra § 3.5.4 Exercise);

(pBM 10052,
5,18-19)

dd.tw n zhḫ.w T-t-šrī ḥr.y-(īr.y-)^{c3} P3-k3.w-m-p3-wb3 īw ī.īr=n dī.t n=w m-dr sdm(=w) sw īw bpy=w šm r tḥy s.t īm=n “We included the scribe Tetisheri and the Porter Pkaumap-waba, and we included them again when they heard about it, although they did not come with us to that place” (for the hieroglyphic text, cf. supra § 4.5 Exercise).

(2) The circumstantial clause of posteriority: the Terminative

In order to limit the temporal range of validity of the statements made by main clauses, Late Egyptian uses the conjunctive conjugation *ī.īr.t=f-sdm* (<*r-īr.t=f-sdm*) with its variant *š^c-ī.īr.t=f-sdm*, from Dynasty XX (further abbreviated to Demotic *š^c.tw=f-sdm*, Coptic **Ⲡⲁ(N)ⲧⲒⲐⲠⲓ**; cf. supra § 2.3.2[2]); it limits the validity “until” a point in time following the time of the main clause. This form of the circumstantial thus combines relative future time with a condition or demand:

(pTurin 1977
rt. 7-8)

īmm sw n=s ī.īr.tw=i īy mtw=i ptr p3 š3w nb īr.t=f mtw=i īr.t=f n=s “Give it to her until I come and see what must be done, and do it for her”;

Notes:

- īmm sw n=s* pronominal reference: *sw* “it” refers to the income of the deceased mother; *n=s* “her” means the sister of the recipient of the letter;
- ī.īr.tw=i īy* Terminative indicating the temporal limits of the validity of the preceding instruction;
- mtw=i ptr* NP Conjunctive (like *mtw=i īr.t=f*) as continuation-form of the Terminative;
- p3 š3w nb īr.t=f* nominalized participle of the function verb *š3* + infinitive (“to specify or instruct what is to be done”), “everything that has to be decided to do” (= *f* is the resumptive pronoun referring to the antecedent, cf. supra § 5.1.2.[2]).

sentence initial

Like the Temporal, the Terminative can also occasionally be the initial phrase in a complex sentence.

(Wenamun
2,66)

š^c.tw ih īy iw=i dy ḥ^c.tw “How long am I supposed to stay here, being left behind?” (*“Until what comes am I left here?”);

Notes:

- context the preceding sentence is given supra § 3.1.3(2), “Look at them (the birds) going to the marshes!”;
- $\text{š}^{\text{c}}.tw \text{ } \dot{\text{h}} \text{ } \dot{\text{y}}$ abbreviated form of $\text{f} \text{ } \text{š}^{\text{c}}-\dot{\text{h}}.t=f-sdm$ placed first with the nominal interrogative pronoun $\dot{\text{h}}$ as agent;
- $\dot{\text{h}}w=\dot{\text{h}} \text{ } dy \text{ } \text{h}^{\text{c}}.tw$ Present Circumstantial with adverb and Old Perfective; for the form of the Old Perfective ($\text{h}^{\text{c}}.tw$), cf. supra § 2.2.3(2);
- structure none of the elements is an independent sentence (sentence conjugation or nominal sentence); the sentence is thus constructed with mutually supportive phrases (Terminative + Circumstantial): such constructions are treated at length infra, § 6.

The following examples have already been quoted elsewhere:

$\dot{\text{d}}\dot{\text{d}} \text{ } \dot{\text{t}}\dot{\text{s}}.ty \text{ } \dot{\text{h}}.t\dot{\text{y}} \text{ } t\dot{\text{y}} \text{ } s.t-\dot{\text{h}}m.t \text{ } \dot{\text{h}}mm \text{ } sw \text{ } m \text{ } rm\dot{\text{t}}-s\dot{\text{s}}w \text{ } \dot{\text{h}}.t\dot{\text{r}}.tw=\dot{\text{h}} \text{ } gm \text{ } \dot{\text{h}}\dot{\text{t}}\dot{\text{s}}w-rm\dot{\text{t}} \text{ } r \text{ } s.^{\text{c}}\dot{\text{h}}^{\text{c}}=s$ “The Vizier said, ‘Seize this woman. Put her under guard until a thieving person is found to raise a claim against her.’”;

(pBM 10052, 15,8-9)

$\dot{\text{h}}mm \text{ } \dot{\text{h}}n.tw=f \text{ } \text{š}^{\text{c}}-\dot{\text{h}}.t\dot{\text{r}}.tw=\dot{\text{h}} \text{ } \dot{\text{s}}m \text{ } r \text{ } rsy \text{ } mtw=\dot{\text{h}} \text{ } \dot{\text{d}}\dot{\text{h}}.t \text{ } \dot{\text{h}}n.tw \text{ } n=k \text{ } p\dot{\text{y}}=k \text{ } gb \text{ } nb.t \text{ } m-r\dot{\text{s}}^{\text{c}}$ “Deliver it until I go South and send all your expenses back” (for the hieroglyphic texts of both examples, cf. supra § 2.3.2[2]).

(Wenamun 2,36-37)

(3) Infinitive constructions as conjugations

Middle Egyptian sentences could be extended with constructions using prepositions and nominal verb forms. In Late Egyptian this role was taken over by syntagmas where the infinitive, as a defined and “conjugated” verbal noun, was dependent on the prepositions. Aside from fulfilling a nominal position after a preposition, infinitives could in principle appear in several different nominal positions in the sentence (e.g., as object, in nominal sentences, as apposition, etc.), and the same is true of this defined and conjugated infinitive. It has the form of

preposition + $p\dot{\text{y}}=f \text{ } sdm/p\dot{\text{y}} \text{ } sdm \text{ } \dot{\text{h}}.t\dot{\text{r}}=f$

— an infinitive qualified with the possessive article: $m \text{ } p\dot{\text{y}}=f \text{ } sdm$, used as a present or future tense (cf. supra § 2.3.3[1]); negated $m \text{ } p\dot{\text{y}}=f \text{ } tm \text{ } sdm$;

— an infinitive qualified with a relative form of $\dot{\text{h}}\dot{\text{r}}\dot{\text{t}}$: $m \text{ } p\dot{\text{y}} \text{ } sdm \text{ } \dot{\text{h}}.t\dot{\text{r}}=f$, used as a past tense (cf. supra § 2.3.3[2]); negated $m \text{ } p\dot{\text{y}} \text{ } tm \text{ } sdm \text{ } \dot{\text{h}}.t\dot{\text{r}}=f$. A pronominal object is used as the suffix of the infinitive ($p\dot{\text{y}}sdm=s \text{ } \dot{\text{h}}.t\dot{\text{r}}=f$ “the hearing of her that he did”), a nominal object follows the relative form ($p\dot{\text{y}} \text{ } sdm \text{ } \dot{\text{h}}.t\dot{\text{r}}=f \text{ } sn.t$ “the sister-hearing that he did”).

The prepositions with which the conjugated prepositional phrases are formed determine the logical relationship to the sentences which they extend: the relations are thus as multi-faceted as the prepositions. These references can be more or less faithfully reproduced in translation with the corresponding verbal nouns ($m-s\dot{\text{y}} \text{ } p\dot{\text{y}}=f \text{ } \dot{\text{s}}m$ “after his going”), but it is frequently more appropriate to translate using a subordinate clause, usually temporal or causal:

the logic of subordination

Temporal connotation:

(pBologna
1086, 2-3)

tw=i hr dd n p3 R^cw Hrw-3h.ty m p3y=f wbn m p3y=f htp ... “I ask Pre-harakhte at his rising and his setting ..., (that he give health, life and prosperity)” (or alternatively, “when he rises and when he sets”);

(pKairo 58056
rt. 6-7)

iw=i r di.t in.tw n=k p3 kr m p3y=i spr “I will send you the boat on my arrival” (or, “I will send you the boat when I arrive”; for the hieroglyphic text, cf. supra § 2.3.3[1]);

(pBM 10052,
4,7-8)

iw=k in p3y hq im r-bnr (m-)s3 p3 sm iw r n3 iw “And you brought this silver out of there after the thieves had gone” (for the hieroglyphic text, cf. supra § 2.3.3[2]).

As a causative:

(LRL 18, 4-5)

m dy.t h3.ty=tn m-s3=i n-3bw p3y iy iw n3 dd iw n3 im=i “Don’t worry about me just because the children who were with me came back” (or “just because of this return by the little ones who were with me”);

(LRL 20, 5-6)

iw m-ir mdw m-b3h ky iw iw iw=k rsw n p3y=k tm mdw im w^c iw.t(=i) iy “... without talking in anybody else’s presence, for you’ll be happy, if you haven’t spoken with anyone until I come back!” (*“for you’ll be happy about your not talking”; for the hieroglyphic text, cf. supra § 5.1.1[1]).

(pAnast. VI 33-
34)

iw iw=w r=k ... hr p3 iw iw iw=k n3 hbs.wt n t3 mr.t m-b3h im.y-r3 pr-hq “It happened that they acted against you ... because of your seizure of the garments of the weavers in the presence of the Superintendent of the Treasury” (for the hieroglyphic text, cf. supra § 2.3.3[2]).

An example of a concessive reference, where the subordinated clause concedes something, or specifies insufficient counter-justification:

(pAnast. V
21, 6-7)

hr bw h^c=f r di.t in.tw n=f sm m p3 hsp

m-s3 p3 tm di.t iw=f m=i m^c m n rwh3 iw=f iy n=i

“He could not even wait to have the greens sent to him from the garden although he didn’t let me know which evening he would be coming to me”;

Notes:

bw h^c=f Negative Aorist;

- ‘*m=l m ‘m* construction with the complementary infinitive (cf. Erman, *Neuägyptische Grammatik*, § 421); ‘*m=l* is the object noun clause of *dj.t*;
- n r-w < m rwhj* (*r-w-h*);
- rwhj l.lr=f ly n=l* relative phrase (relative form) without the otherwise necessary resumption, since the reference noun is a temporal expression (“absolute” or “zero-reference”), cf. supra § 5.1.2(2) Observation.

5.4.3 The Conjunctive

(1) Construction and usage

Structurally, the Conjunctive is an analytic form of conjugation, formed with the conjugation base *mtw* followed by an agent/subject and a meaning expression in the form of an infinitive (cf. supra § 2.3.3[3]). As with other conjugations of this type, the infinitive can be preceded by the prepositions *hr* or *r*, which is systematically inconsistent — the prepositions have become mere markers of the meaning expression. Although the morphological origin of the conjugation as a bound prepositional syntagma can no longer be recognized, the Conjunctive is here classified along with the Temporal and the Terminative as a conjunctive sentence.

Along with the sentences converted with *iw* — particularly the Present Circumstantial as NIMS (cf. supra § 5.2) — the Conjunctive *mtw=f sdm* is the most important form of subordination in Late Egyptian (and Demotic and Coptic). Together, the *iw*-conversions and the Conjunctive were used to express nuances in a subtle interactive fashion. The conditions governing the use of the Conjunctive can be defined as follows:

1. Basically, it co-ordinates verbal nouns (*hn^c* as a nominal coordinator); by means of grammatical joining, verbal nouns/infinitives acquire the same functional role as the preceding verbal nouns/infinitives. Thus, according to the principle, from *iw=f r sdm iw=f r md.t* “He shall hear; he shall speak” comes **iw=f r sdm hn^c md.t ntf > iw=f r sdm mtw=f md.t* “He shall listen and speak” —

(Wenamun 2, 54-55)

istw bw ir=k rš mtw=k dī.t iry.tw n=k w^c wdy mtw=k dd hr=f hšb n=ī ’Imnw-R^cw ... ’Imnw-tš-mī.t “Can’t you rejoice, and make yourself a stele and say on it, ‘Amun-Re ... sent me Amun-of-the-Route?’”;

Notes:

- bw ir=k rš* Negative Aorist, “You are not capable of rejoicing”;
- mtw=k dī.t iry.tw* Conjunctive as substitute for **bw ir=k dī.t iry.tw* “You aren’t capable of having something done”;

Imnw-t3-m1.t “Amun of the Route”, a form of Amun as patron of travellers.

verbal form
coordination

2. Like the Present Circumstantial as a co-ordinating clause (in “and”-function — NIMS, cf. supra § 5.2), the Conjunctive expresses a natural course of events by coordinating its meaning-expression infinitive with the meaning expression of the reference sentence. If not used in their co-ordinating role, *iw*-conversions can, however, affect other members of sentences, while the Conjunctive can affect only the verbal content of the main clause. Unlike the *iw*-conversions, the Conjunctive co-ordinates actions which are semantically related (such as “eat and drink”). As a sentence extension it is strictly ad-verbal, and never ad-nominal: it can express only processes or actions.

(LRL 47,3-5)

(*r-dd*) *hn* = <*t*> *n* *ir* *n=i* *w^c* *shn*

iw bwpwy=tn sm n=f ^n

mtw=tn wh3=f i.ir.t=i spr r=tn

“Hurry up, and carry out a task for me, which you have not yet done, and keep at it until I reach you!”;

Notes:

iw bwpwy=tn sm n=f ^n Negative Preterite Circumstantial in adnominal use, “(a task), for which you have never gone”;

mtw=tn wh3=f Conjunctive as the continuation of an initial prospective *hn=tn* “You should hurry”, with imperative *ir*.

imperative-
prospective
co-ordination

3. Generally, the main clause which the Conjunctive continues is a sentence built by an Imperative, Prospective or Third Future, or another type of sentence concerning the future. Although this function is characteristic of the Conjunctive, it is not immediately derived from the origin of the form, but conditioned by the framework of the system within which the Conjunctive fulfils its role — what might be termed the “mood” system of Late Egyptian.

(LRL 32,9-10)

rḥ p3 imw p3 rmt r.nty iw=k dī.t n=f t3y š^c.t mtw=k ir.t rn=f hr=s “Discover the boat and the man to whom you should give the letter, and put his name on it” (For the hieroglyphic text, cf. supra § 5.1.2[4]).

(2) The Conjunctive as a “mood”

The Conjunctive and the Present Circumstantial — particularly in its function as non-initial main sentence (NIMS) — are complementary in three ways: (a) in terms of the types of sentence which they extend; (b) in terms of the forms with which they share the function of sentence extension; and (c) finally in that they are both the least specific

forms within their respective arrays of forms, that they form the “zero”-level of the array. These connections can be summarized as follows:

The Present Circumstantial is primarily used to extend those sentence-forms which describe, state and declare — sentences which make statements about reality: First Present, Preterite, Emphatic Sentence, Nominal Sentence. It works together with the various *iw*-conversions, and the analytic forms, the *m-dr sdm=f* Temporal and the conjugated infinitives (supra § 5.4.2[3]). It is the form most commonly used and least specific in meaning in this category of sentence extension. The category is that of the forms of the “indicative mood” — those which permit the formulation of statements about reality. The other forms make various kinds of logical relationships explicit; the Present Circumstantial (NIMS) leaves them implicit.

indicative mood

The Conjunctive form *mtw=f sdm* is primarily used to extend those sentences which request and predict, express desires or intentions — sentences which makes utterances about considered or reflected, unreal or as yet unreal situations: Imperative, Causative Imperative, Prospective, Third Future, Negative Aorist, and the “not yet” form. It also includes sentences and constructions discussing the future, without being request or future forms in the strict sense. The Conjunctive functions together with the relevant *iw*-conversions (*iw* + Third Future or negative Imperative), final *sdm=f*/Finalis or *r* + infinitive. It is the most commonly used form and the least meaningful in this category of sentence extension. The category here is that of the forms of the “subjunctive mood” — those which are used to reproduce opinions or demands: where wish, possibility, uncertainty, and the unreal are expressed. While other forms make various logical relationships explicit, the Conjunctive conveys them implicitly. This can be summarized as in the table on p. 234.

subjunctive mood

For the complementarity of explicit and implicit forms and the modal component of the Conjunctive, compare:

imm in.tw mtrw mtw=f s:c h^c=i “Bring a witness, and let him accuse me!” (for the hieroglyphic text, cf. supra § 2.3.3[3]) with

(pMayer A vs. 8,18-19)

imm in.tw mrt r s:c h^c=i “Bring someone to accuse me!”

(pMayer A vs. 8,24 and passim)

me!”

— The Third Future and other forms of future expression.

Beyond these usages, the following co-ordination syntagmas can also be formed:

— Continuation of the initial phrase of an oath (prospective *sdm=f* and similar conditional in oaths constructions (e.g., *ḫr*-phrases):

(Doomed
Prince 6, 15)

wšḫ p3 R^cw mtw=tw sm3=f

ḫtp p3 šw ḫw=i mwt.kw

“As Pre endures, if he should be executed, I will be dead when the sun sets” (<***“As Pre endures, and he is executed, (the following is true): when the sun sets, I am dead”);

Notes:

mtw=tw sm3=f actually *mtw=tw{tw r} sm3=f*;

ḫtp p3 šw drawn from Middle Egyptian, a slightly Late Egyptianized extraposition (topicalization) formed from a noun phrase followed by an earlier independent *ḫw*-sentence (cf. infra § 6). The preceding, topicalized noun phrase consists of the nominal *sdm=f* of *ḫtp*.

From this derived an apparently independent use of the Conjunctive — by the abbreviation of the initial formula of the oath (without *wšḫ p3 R^cw*, etc; cf. infra § 7.1.3[2]).

(pBerlin P.
10496 vs. 11-
12)

ḫw t3 qnb.t ḫr dī.t ḫry=f ^cnḫ n nb ^c.w.s. r-ḡd

mtw=j ^cq r p3y m-ḫ-y jw=f ḫr 100 n šḫ.t 5 wbnw

“And the tribunal made him swear an oath of the Lord as follows: ‘If I enter this burial chamber, [I] will be subject to 100 blows and 5 lacerations!’”;

Notes:

mtw=l^cq after the initial *r-ḡd*, “independent”, but only apparently, since resulting from abbreviation;

ḫw=f ḫr 100 n šḫ.t old *ḫw*-sentence or Present Circumstantial (in NIMS-function) with the preposition *ḫr* “he will be under 100 blows” (cf. supra §§ 3.2.2[2] and 5.2.3, and Frandsen, *Outline*, § 115,3[2e]);

pronoun change =*l*/*=f* for the change of the personal pronoun as a structural element of indirect speech, cf. supra § 5.3.2(3).

— Continuation of the Negative Aorist:

following
Neg. Aorist

(Wenamun 2,
54-55)

mtw=k dī.t īry=tw n=k w^c wd “Can’t you rejoice, and make yourself a stele?” (cf. supra, sub [1]);

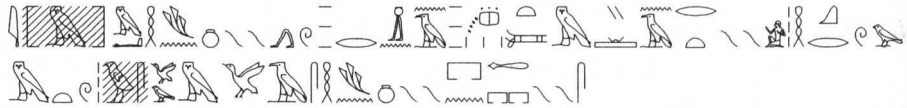

Note:

īst indication of tonal questions.

following
prosp. *sdm=f*

— Continuation of final-prospective *sdm=f*:

(LRL 70,1-3)

īmm ḥn=w r īn n3 īt tm n3 rmt ḥqr

mtw=w ws(f) m p3 sḥn n Pr-^{c3} w.s

“Have them go to fetch grain so that the people do not become hungry and neglect Pharaoh’s affairs”;

Notes:

tm n3 rmt ḥqr negated final *sdm=f*;

m p3 sḥn n Pr-^{c3} “(to be occupied) on Pharaoh’s business”.

following the
Terminative

— The continuation of the Terminative (“until”) reveals the characteristic “prospective” function expressing anticipatory thought (naming a situation which at the moment of speaking exists only in thought):

(Wenamun
2,36-37)

īmm īn.tw=f š3^c-ī.īr.tw=ī šm r rsy mtw=ī dī.t īn.tw n=k p3y=k gb nb.t m-r3^c “Deliver it until I go South and have all your expenses paid” (for the hieroglyphic text, cf. supra § 2.3.2[2]);

(pTurin 1977,
7-8)

īmm sw n=s ī.īr.tw=ī īy mtw=ī ptr p3 š3w nb īr.t=f mtw=ī īr.t=f n=s “Give it to her until I come and see what must be done, and do it for her” (for the hieroglyphic text, cf. supra § 5.4.2[2]).

In texts with a high proportion of instructions — generally letters from superiors — the Conjunctive can be employed at completely different levels of text structure: continuing immediately preceding statements, but also those which lie further back. Compare as an example pLeiden I 370:

(LRL 9,4) ... *tw=ī d d n 3Imnw-R^cw-Hrw-3ḥ.ty* ... “... I ask Amun-Re-Harakhte ...”

(LRL 9,6) ... *ḥ[n^c d d] r.nty sdm=ī mdw.t nb* ... “... And (I) say furthermore: I have taken notice of everything ...”

(LRL 9,16) ... *wn(n) p3 mw mḥ īw=k šzp n-ḥ3.t n t3y^c q3y* ... “... If the inundation rises, you should requisition that barge, ...” ... (LRL 10,1) ... *mtw=k dī.t sw n n3 wḥ^c* ... “... and give it to the fishermen ...”

(LRL 10,9) ... *mtw=k ptr n3* ^c*dd šrī* ... “... and you should look to the children”;

Note:

mtw=k ptr the last conjunctive listed is not in a chain with the others, but goes back to the text organizing infinitive *ḥn^c dd r.ny*.

Observation:

Those uses of the Conjunctive which have been described as “independent” should be mentioned here (cf. Frandsen, *Outline*, § 83; M. Lichtheim, Notes on the Late-Egyptian Conjunctive, in: *Studies in Egyptology and Linguistics in Honour of H. J. Polotsky, The Israel Exploration Society, Jerusalem 1964*, 4ff): the Conjunctive in these cases is independent only of the immediately preceding forms, and actually dependent on forms appearing earlier in the text.

While the modal component of the Conjunctive remains implicit in the texts cited, modal nuance being already present in the forms which the conjunctive continues, it becomes clear in contexts which do not belong to the genuine context of the Conjunctive:

— Continuation of forms of essentially tenseless character, e.g., special infinitive constructions:

(pSalt 124
rt.2, 13)

sh3r p3y=f in t3 md3.t 3.t n p3 r3-b3k mtw=f z3w=s m t3y=f mch.t “Accusation concerning his having taken the great spike of the ‘Worksite’ and (allegedly) broken it in his tomb”;

Notes:

construction for constructions of this type cf. Wente, in: *Polotsky-Studies*, 535ff.;

sh3r “Accusation concerning something”; for the hieroglyphic version of the hieratic ligature and reading, cf. Černý, in: *Studies presented to F.Ll. Griffith*, London 1932, 49f n. 1;

r p3y=f in conjugated infinitive (with object *t3 md3.t*) after preposition *r*, *“(concerning his taking (the spike))”; *r3-b3k* literally “work-in-progress”, used to refer to the royal tomb currently under construction, and hence “worksite”;

mtw=f z3w=s Conjunctive in “subjunctive” mode, “and that he supposedly broke it”.

— Continuation of narrative or reporting statements, particularly where these can be described as habitual, customary, or common. The situation expressed by the Conjunctive is “foreseen” but has not yet become “real” at the time of the utterance. As elsewhere, the Conjunctive interacts with the Present Circumstantial:

(pD'Orb 1,4-7)

hr ṛ m-ht hrww qnw s3 nn

ṛw p3y=f sn šr m-s3 n3y=f ṛ3w.t m p3y=f šhr.w nty r^cw-nb

mtw=f wh^c r p3y=f pr r-tnw rwh3

ṛw=f 3p m sm.w nb n sh.t ...

mtw=f w3h=w m-b3h p3y=f sn ^{c3}

ṛw=f hms hn^c t3y=f hm.t

mtw=f zwr

mtw=f wnm

“Now, when many days had passed, his younger brother kept his cattle, according to his daily custom, and he would return home every evening, loaded with all the plants of the field ..., would lay them before his elder brother, when he was sitting with his wife, would drink and would eat”;

Notes:

hr ṛ m-ht hrww a variation of the “day formulae” which often — written in red, as rubrics — combine
qnw s3 nn the marking of text divisions with narrative “quick-motion” effects. Where adverbials are anticipated (m-ht + noun) as here, the grammatically necessary ṛr can often be left untranslated: “after many days after this”;

s3 customary abbreviation of the compound preposition hr-s3;

ṛw NP m-s3 NP independent ṛw-sentence as apodosis when a ṛr-clause precedes (NIMS; as grammatical structure a remnant of Middle Egyptian grammar);

nty r^cw-nb strange, but fairly common attributive construction of r^cw-nb — nty being a variant of the phrase conjunction n/n.t;

ṛw=f 3p/ṛw=f hms Present Circumstantial (with Old Perfective) as adnominal characterization, contrasting with “subjunctive” narrative expressed by the Conjunctive.

5.5 Notes on linguistic evolution

5.5.1 Features of an intermediate position

The clause conjugations clearly demonstrate that Late Egyptian is a link between Middle Egyptian and Demotic/Coptic in terms of linguistic evolution. Chronologically, this statement may appear to be self-evident. Hitherto, however, this has not been widely grasped empirically because linguistically compatible typological systems for both Middle Egyptian and Demotic/Coptic had to be developed, before the evolution could be recognized: Late Egyptian usage combines the systematic methods determining Demotic/Coptic forms of expression with methods governing Middle Egyptian linguistic forms (cf. supra § 5.0).

On the one hand there is the conversion system — the analytic transformation of simple sentence forms into clauses — which is characteristic of the later linguistic phases, but not yet completely established in Late Egyptian. Subordination of clauses with *ḏw*/€- (cf. supra § 5.1.1) is already highly developed but also marks an absolute reversal of the functional role of *ḏw*, yet the independent *ḏw*-sentences of Middle Egyptian remain in use in certain fixed combinations. A position mid-way between Middle Egyptian and the later linguistic phases is even clearer in the conversion of relative phrases (cf. supra § 5.1.2). Although in Middle Egyptian *nty* was already a means of transforming clauses into relative phrases, this usage increases in Late Egyptian. At the same time, however, it was still competing with participles and relative forms, which ultimately disappear completely in Coptic (although occasionally still recognizable in lexicalized form). conversion system

nominalization
converter

The central nominalization of the verbal sentence, the nominal *sdm=f*, is also related to Middle Egyptian. In this case one can recognize how the “nominalization-converter” *ỉ.ỉr* crystallized out of the Late Egyptian conjugation *ỉ.ỉr=f-sdm* (cf. supra § 5.3.2[1]). In the patterns of emphatic clauses of the type [*ỉ.ỉr=f sdm*]NP [*ỉw=f md.t*]AP, *ỉ.ỉr=f sdm* appears (a) analogous to the construction “sentence + [*ỉw [f md.t]*]_{First Present}AP” as a sentence conjugation and (b) analogous to *ỉw [f md.t]*_{First Present} as a converted sentence of a type *ỉ.ỉr [f sdm]*_{First Present}. The differentiation continues in Demotic — where the *ỉ.ỉr=f-sdm* appears along with forms of the Third Future and Aorist converted with *ỉ.ỉr* — and in Coptic, the use of this converter is expanded to cover the entire conjugation system (€-/€T€-/NT- + sentence conjugations).

noun clauses
and
conjunctions

On the other hand, the use of the synthetic forms of nominal and adverbial clauses declines. To a certain degree Middle Egyptian was typologically determined by the possibility of substituting nominal and adverbial phrases with forms of *sdm=f*. In Late Egyptian, this possibility was severely limited, being reduced to certain specific constructions, or firmly anchored in bound forms (cf. supra §§ 5.3.; 5.4). The combinations of prepositions with the subjunctive *sdm=f* become conjunctive clauses, constructed in an analogous way to the sentence conjugations with conjugation bases, actor and meaning expressions (cf. supra § 2.3.0). Noun clauses are already analytically marked as such (*r-dd > X€*) or, in the form of the subjunctive *sdm=f* have become so specific and so limited to certain usages, that the development has already begun by which in Coptic, they either disappear completely or were reduced to the T-causatives in lexicalizations. The circumstantial forms of the *sdm=f* are reduced to those with final function, and appear in Coptic merely in the form of the Finalis (promissory conjunctive, future conjunctive of result).

5.5.2 Development of the forms

systematic
balance

It is thus clear that Late Egyptian occupies a middle position, but it is only as an outside observer that one can follow the lines back to Middle Egyptian and on to Coptic. Within the system, of course, assuming for a moment the ability to adopt the position of one speaking the language, Late Egyptian is internally consistent and completely balanced. Normative limitation of certain older uses on the one hand and the extension of other usages (such as the converter or the continuative functions, NIMS and Conjunctive) on the other are merely the results of the speaker’s choice and preference for specific syntactic possibilities.

sentence
orientation

It is thus easier to grasp the sentence orientation of the Late Egyptian system — as opposed to the phrase orientation of Middle Egyptian (cf. supra §§ 3.0, 5.0) — which is perhaps its most striking characteristic: the necessity of maintaining the elements of the

sentence completely, even where they are actually redundant in particular contexts. A Middle Egyptian chain of forms like:

mꜥn b3=i hr thꜥ.t=i ...

(Leb 11-13)

hr st3=i r mwt ...

hr h3^c(=i) hr ht ...

“Look, my Ba is injuring me ... pulling me to death ... throwing me into the fire” —

would look something like this in Late Egyptian:

**ptr b3=i hr thꜥ.t=i ...*

iw=f hr st3=i r mwt ...

iw=f hr h3^c(=i) hr ht ...

The obligatory designation of person in the Late Egyptian subordinate clause is one of the characteristic peculiarities of the later stages of the evolution of Egyptian: the explanation must be sought in the structure of the syntax of minimal sentences.

The linguistic evolution of the most significant forms discussed here can be summarized as in this table:

	Late Egyptian	Demotic	Coptic
Adverbial converter	<i>iw + sentence</i>	<i>iw + sentence</i>	Є + sentence
e.g.	<i>iw=f (hr) sdm</i>	<i>iw=f sdm</i>	ЄԿԿԿԿԿԿԿ
negated	<i>iw bn sw (hr) sdm</i>	<i>iw bn iw=f sdm</i>	ЄԸԿԿԿԿԿԿԿ ԶԸ
Relative converter	<i>nty + sentence</i>	<i>nty + sentence</i>	ЄԿ(Є)-/ЄԸԿ- + sent.
e.g.	<i>nty tw=i (hr) sdm</i>	<i>nty iw=i sdm</i>	ЄԿԿԿԿԿԿԿ
	<i>nty (hr) sdm</i>	<i>nty sdm</i>	ЄԿԿԿԿԿԿԿ
negated	<i>nty bn tw=i (hr) sdm</i>	<i>nty bn iw=i sdm</i>	ЄԿЄ ԸԿԿԿԿԿԿԿ
Conjunctive clauses			
Temporal (“when”)	<i>m-dr sdm=f</i>	<i>n-dr.t sdm=f/n-tꜥy sdm=f/ n-dr.t lr=f sdm</i>	ԸԿԿԿԿԿԿԿԿԿԿ
Terminative (“until”)	<i>r-lr.t=f sdm/ꜥ3^c-l.lr.t=f sdm</i>	<i>ꜥ^c(m)tw=f sdm</i>	ԿԿԿ(Ը)ԿԿԿԿԿԿԿԿԿ
Conjunctive	<i>mtw=f sdm</i>		ԸԿԿԿԿԿԿԿԿԿ
Final clause	<i>final-prospective sdm=f</i>		
e.g.	<i>dꜥ=i sdm=f</i>	<i>dꜥ=i sdm=f/dꜥ=i lr=f sdm</i>	ԿԿԿԿԿԿԿԿԿԿԿ
Conjugated infinitive	prep. + <i>pꜥy=f sdm</i> <i>pꜥ sdm l.lr=f</i>	prep. + <i>pꜥy=f sdm</i> <i>pꜥ sdm l.lr=f/ pꜥ dꜥ.t lr=f sdm</i>	ԶԿԿ-ԸԿԿԿԿԿԿԿԿԿԿ

5.6 Exercises

5.6.1 Model letter for a woman (pBologna 1094, 9,7-10,9)

A model letter from a letter-writer's guide written during the reign of Merenptah, preserved on a papyrus in the museum of Bologna. The transcription is that published by Gardiner, *Late Egyptian Miscellanies (LEM)*, pp. 9-10. A woman requests one of her servants to relieve another one — whom she has sacked — of his duties, his "oath of office".

Purpose: Example of the epistolary style and conventions of Dynasty XIX (cf. infra § 7.2); the use of clause conjugations (Conjunctive, NIMS, conjunctive clauses, noun clauses; $hn^c \underline{dd}$; $r-\underline{dd}$)

Notes:

- 9,7 $Sj-kt > Sk$, Sake: an appellative name ("ass-foal"); the title $šms.w$ is given to a higher level of servants ("retainers") who have voluntarily entered the service of still higher members of the social hierarchy (including Pharaoh); specifically it refers to messengers;
- 9,7-8 $m \text{ } ^c nh \text{ } w \underline{d} \text{ } snb$; $m \text{ } hz.t$ god NN: typical initial formulae of epistolary style — the recipient of the letter should be "in life, prosperity, health, and the grace of Amonrasonther". Grammatically, these phrases are vestiges of the principle governing the construction of Middle Egyptian requests and wishes: a marked absence of the NP (for the addressee) in the adverbial clause (cf. Junge, *Syntax*, § 8.4.1);
- 9,8-9 $tw=\underline{d} \text{ } n$ god NN $lmn \text{ } snb=k$: the characteristic formula of greeting in epistolary style; the expression can be translated in two ways: either as "I ask god NN that [he] (the god) let you (the addressee) be well" or as "I ask god NN, 'Let [him] be well'". In either case, the pronominal references must be adjusted to the context. The Egyptian form can not be "translated" literally without punctuation: this is characteristic of indirect speech;
- 9,9 $ptr(=l) \text{ } tw \text{ } snb.tl$: "that I see you healthy";
 $mtw=\underline{l} \text{ } m \text{ } t$: Conjunctive as form of continuation, related to the preceding subjunctive $s \text{ } m \text{ } =f$ (cf. supra § 5.4.3[3]);
 $hn^c \underline{dd}$: introductory formula for the actual content of the letter: can be translated "to the effect that", "now", etc., but need not necessarily be translated. Grammatically, this prepositional combination can be related to a preceding verb whether real or fictive: "I have done — or said — this-and-that, $hn^c \underline{dd}$ and say now:" — here related to the First Present in line 9,8 ("I said to God: 'Do this-and-that', and say now ..."). To a certain extent, $hn^c \underline{dd}$ is a formal predecessor of the Conjunctive which continued to be used;
- 9,9-10 $llr=t \text{ } h^x \text{ } p \text{ } m \text{ } r-bl$: nominal $s \text{ } m \text{ } =f$, "that you have sent the man away";
- 9,10 $r-nfr-n=l$: "for my benefit";
 ls/ls : particle, introducing parenthetical remarks and particularly common before tonal questions (formal statements transformed into questions by tone: "You have shut the door?"), here roughly ($lstw \text{ } bw \text{ } lr.t=k$ X) "Have you still not done X?";
- 10,1 bn as negation of Nominal Sentence; here a rhetorical tonal question: "Am I not a woman?";
- 10,1-2 structure: lr + NP (protasis), Negative Aorist (apodosis) in tonal question;
- 10,3 construction: the initial conjunctive clause ($hft \text{ } spr$ NP) is continued with a First Present Circumstantial functioning as NIMS, in a syntactically closed combination of

two non-independent clauses — cf. infra § 6. The Middle Egyptian *lw*-sentence stands at the origin of this form;

‘*pr-bʿy*: abbreviated form of the sentence name (Adjectival Sentence) ‘*pr-bʿl* (“Ba^{ca}al is well provided” (< *^{ca}“An equipped one is Ba^{ca}al”));

10,4 *mk sw lw.w*: here actually “he has in fact come”;

10,5 *bw-lr=t tʿy(=l)*: roughly “You can’t strip me altogether, can you!”;

(10,1-5) situation: together with a witness, Amankhau should (1) take a servant to court, whom Sake has sacked, to “liberate” him officially, and (2) provide him with a “pension” because he came to her and complained about her being too hard on him;

10,6 *Nn-nzw m hʿb*: sentence name (“Herakleopolis Magna is in festival”);

suffixes, 1st sing. and 2nd sing. fem.: here, the 1st sing. (*=l > =ʿ*) and the 2nd sing. fem. (*=t > =ʿ*) are also not graphically distinguished, as both have been reduced to a secondary aleph (glottal stop);

10,8 *dl.t tʿy n=f NN*: “to cause NN to criticize him”, “to let NN find fault with him”;

hrʿ pʿy=l ʿqw: “so that my income is endangered” (< “is distant”);

10,9 *wn m.dl=f k.t hrw[=t] mnt.t*.

5.6.2 An Original Letter (pTurin 1975 = *LRL* 37, 4-14)

A short business letter from the office of General Piankhi to the Secretary of the Tomb Building Administration, Thutmose, called *Tjaroy*. It is from the last years of the “Renaissance era” of Ramesses XI, and thus the end of Dynasty XX and the New Kingdom. It was transcribed and published by J. Černý, in his collection of *Late Ramesside Letters (LRL)*, p. 37.

Purpose: Example of the epistolary style and conventions of Dynasty XX (cf. also infra § 7.2); use of clause conjugations (relative phrases, final clauses, Conjunctive, closed complexes and *lw*-clauses; *hnʿ dd*; *r-dd*)

Notes:

rt. 1 (= *LRL* 37,4) Typical epistolary form, naming both the writer and the recipient of the letter (*A n B*, “A to B”); both names are also inscribed on the outside of the folded letter (and thus will be found at the bottom of the verso of the opened letter — here, vso. 4, *LRL* 37, 14; cf. supra, § 0.3.2.;

pʿ lm.y-rʿ mʿ n Pr-ʿʿ n hʿ wqʿ snb: “The” general of Pharaoh in Upper Egypt at this time was Herihor’s successor Piankhi, the High Priest of Amun and Viceroy of Nubia during regnal years 25-29 of Ramesses XI (corresponding to years 7-11 of the *Whm-msw.t*, “Renaissance” era). He was the supreme commander in the campaign which lasted until year 10 of the *Whm-msw.t* era, against the rebel Panehsy, the Viceroy of Nubia who had been relieved. The high position of the writer of the letter is expressed by the fact that he goes straight to the point without any of the usual blessings and obliging phrases. This type of hasty writing and expression (vs. 1, *pʿ* rather than *pʿy*; vs. 2 semogram reversals and abbreviations; vs. 3 abbreviations) is characteristic of other letters from his office too;

T-r-l-ya (imprecise for *T-r-ya*): nickname of the “Scribe of the Necropolis” Thutmose. A large proportion of the Late Ramesside Letters were written either to or by him (for biographical information, cf. Černý, *Community*, pp. 339ff);

rt. 3-4 construction: the First Present *sw m ʿs* is the main sentence, which is preceded by a noun with extensions (*pʿ hʿb*) — thus: “as far as the message is concerned” — which is repeated afterwards, more simply;

address:

5.6.2 Exercise: LRL 37, 4-14

rt. 3 *wḏ^c=f*: final clause;

rt. 4 (= 37,6-8) *l.n=k*: “thus you said”, speech marker placed after the quote (cf. supra § 3.5.1[1]);

rt. 5 *Pn-ḥw.t-nḥt.w*: proper name; Pentahutnakht is *zh̄j.w mš^c* “Secretary to the Army” or more precisely, *zh̄j.w mš^c n ḥw.t nzw Wsr-mj^c.t-R^cw Mr̄-’Imnw m pr ’Imnw* “Secretary to the Division of the Mansion of King Wasmuaria-Maiamana in the Estate of Amun” (today the temple of Medinet Habu);

p̄jy zh̄j.w: apposition to preceding proper name;

vs. 1 (= 37,9) *p̄jy ḥm-nw*: probably for *p̄jy ḥm-nw* — the article would be most unusual preceding a proper name. The “affair” of Akhmenu: General Piankhi is referring to provisions for the Libyan mercenaries (Meshwesh) of the Egyptian army, who must have had a camp on the Theban West bank (cf. LRL 35, 2-8);

nty lw=f ḏd n=k l̄lr sw: relative Third Future with a deeply embedded resumption, back to *ḥm-nw* “the affair”, “which he will ask you to carry out” (or, reflecting direct speech: “of which he will say to you, ‘Do it!’”); the agreement should be noted: *sw* (which can be either masc. or fem.) refers to the fem. *ḥm-nw*, which is in turn referred to later in the “reference-neuter” with the suffix *=f*;

the Conjunctions continue the *l̄w*-clause of the parenthetic clause of rt. 4-5;

vs. 2 *ḡd*: abbreviation of *r-ḡd*;

l̄mm dl.tw ḥn.t n p̄y ḥmtl.y(?) / bḡ.tl(?) ḥrw.y: note the absence of the article with *ḥn.t* (an idiomatic expression *rdl ḥn.t* “to issue an order”); the reading for “coppersmith”/“metal-worker” is unclear, the semogram of the title follows the name here. The coppersmith Hori was involved in the production of copper knives, spear-heads and vessels during the period of the correspondence between Thutmose and Piankhi (cf. *LRL* 20,10ff; 21,11-12; 51,4ff; 72,10ff);

vs. 3 the hieratic dot following *ḥḥb* is the 1st. pers. sing. suffix: read *ḥḥb=l <n > zh̄j.w NN (r) dl.t dl=f n=f*; intransitive *dl* with preposition *n* here, something like: “to provide him” (with a task).

5.6.3 A criminal charge (pSalt 124, rt. 2,5-18)

Part of a list of complaints against the Foreman of the Gang of the Tomb Building Administration, Paneb, preserved in pSalt 124 (now pBM 10055). These accusations were made at the end of Dynasty XIX, during the reign of Siptah, and recorded by Amunnakht, the brother of the former Foreman Neferhotep. J. Černý was the first to edit and publish the text (*JEA* 15, 1929, 243ff), and the passage reproduced here is from the recto of the papyrus.

Purpose: Example of an administrative text of late Dynasty XIX; prepositional combinations, circumstantial and relative conversions, Conjunction.

Notes:

- use of Conjunction note that the Conjunction is used to continue both (a) immediately preceding statements and (b) the series of complaints in general: “Charge that he did this *and* (Conjunction) that, *and that* (Conjunction) he also did such and such”;
- 2,5 *sh̄j r*: “accusation concerning”; for the hieroglyphic transliteration of the hieratic ligature (*-r* rather than *-t*) and the reading, cf. J. Černý, in: *Studies presented to F. Ll. Griffith* (London, 1932), p. 49f n. 1 (“reminder concerning”); *sh̄j r p̄y=f dl.t NN r* + infinitive “accusation that he caused NN to do this-and-that”;
- ḥr-ḡḡḡ-n*: compound preposition (> 𓂏𓂏𓂏, 𓂏𓂏𓂏), here probably “at,” “by”;
- Sḥ.y Mr.n Pth*: King Seti II (personal, or Son-of-Re, name);
- 2,5-6 *l̄w=w ḥr ḥt*: Present Circumstantial as qualification of an undetermined antecedent (*l̄nr*): he caused the people to break stones, taking (them) away > he caused the people to break stones **which** they took away;
- 2,7 read: *zn̄l ḥr w̄r.t*: “to pass by the Necropolis” (*w̄r.t* is a part of the Necropolis: here, the site of the tomb under construction);
- 2,8 *mtw=w sdm ḥrw=w*: “and they (the ones passing by) heard their noise” (the noise of the masons);
- 2,9 *n̄ ḥnr n Pr-ḥ*: the copper pickaxes belonging to the state which were normally issued to the team specifically for the work;
- 2,10-12 a list (*r-dl.t-rḥ.tw*) of the stone-masons (the six names in line 11 have been omitted from the exercise): *ḥ-ph.ty* (appellative name “Great of standing” > “whose standing is high”); *Ks I* und *Ks II* (son of Ramose); *Ḥrw-m-wl̄ḥ*; *Qn-ḥr-ḥp̄ḥ=f*; and in line 12: *Ḥnsw*; *Nḥt-Mnw*; *P̄-y m* (!); *Wnn-nfr*; *ḥ-nḥt=w*;

6. Complex sentences and simple clause groupings

6.0 Outline of the subject

Although text syntax is dominated by the complex sentences formed with minimal sentences (sentence conjugations and Nominal Sentences) and subordinate clauses, there are other types of pattern. These can be reduced to two formal types: (1) those where a dependent phrase precedes an independent main sentence (anticipation), and (2) those where two sentences and/or clauses are bound together.

Sentence structures which begin with a dependent phrase identifying the topic of the discourse (“topicalization”) are generally opened with the help of the particle *ĩr*. The

anticipation

Sentence, clause, phrase are terms describing larger units of meaning which have specific syntactic forms. A sentence is an independent proposition, a sequence of words capable of standing alone to make an assertion, ask a question, or give a command. A clause — as understood here — is a group of words that contains all structural elements of a sentence but does not constitute an independent proposition (a sentence), and thus is usually a subordinate clause, with an adjectival, adverbial, or nominal function in another (superordinate) clause or sentence. A phrase is a group of words forming an immediate syntactic constituent of a clause.

As understood here, complex sentences contain one independent proposition (sentence) and one or more subordinate clauses; clause combinations are specifically bound combinations of clauses and phrases; and clause groupings are groups of several clauses which belong together.

main independent sentence follows the anticipated phrase with *ĩr*. This can be a sentence conjugation, a Nominal Sentence, or a complex sentence.

The other type is that of the clause combination or clause grouping, and can be further classified into (a) loosely bound sentences, with two independent clauses semantically bound together, grammatically tied with a particle (such as *ĩnn* or *hn*); and (b) closely bound “closed complexes” in which neither of the parts could stand independently.

clause binding

This division is not, however, unproblematic. Particularly in those sentences opening with an adverbial or a clause, the second position is usually occupied by a formally dependent but semantically independent clause of the *ĩw=f* *hr sdm* type (or *ĩw=f* + Old Perfective or *ĩw=f* + preposition + NP, as the case may be), i.e., those sentences which have been termed “non-initial main sentences” and have been taken to

ĩw-clause in second position

Notes:

tw=tw s:hpr=f First Present;

p3 šr noun phrase preceding the sentence conjugation.

On a general level it can be stated that the expression placed at the start of the sentence defines the tenor of the following sentence, naming the conditions which restrict the validity of that sentence. The manner in which this is accomplished depends upon whether the initial phrase is a nominal phrase or an adverbial clause.

functions of
anticipation

Anticipatory nouns indicate the topic of discussion, identifying it as something already familiar to the listener or introducing it into the discourse as something about which the following sentence will make a statement (“As far as this-and-that is concerned: it is such-and-such”). Where these nouns are qualified with a prepositional infinitive, the Old Perfective or other adverbial phrases, they are formally identical with the First Present and will be reinterpreted as such by “rebracketing” even in pronominal form. In effect then, these constructions move into the role of initial adverbials (“As far as this-and-that is concerned under these circumstances: it was such-and-such”).

nouns in
anticipation

Initial adverbials indicate the conditions limiting the validity of the following sentence. On the one hand, they define temporal scope (“As far as the circumstance is concerned, that you came yesterday: it was such-and-such”). On the other hand, they can give a possible reason for the validity of a statement (“As far as the circumstance is concerned, that you have done wrong: it is such-and-such” > “If you have done wrong, it was such-and-such”).

adverbials in
anticipation

In a comprehensive sense, anticipation either (a) singles out a certain specific item from a chain of related things or events, identifying or marking a possible topic of discourse; or (b) establishes the temporal relationships of a chain of related situations. Anticipation is a morphological means of textual organization. Such a means of introducing topics in a text is called “topicalization” here.

topicalization

(2) Forms and combinations

The basic rule governing the topicalization structure is that (a) nouns or noun phrases used in anticipation can be introduced with the particle *šr*, but need not; while (b) adverbials — prepositional combinations or circumstantial clauses — must be introduced by the particle *šr*, or sometimes by *hr*. The particles *šr* and *hr* can also be used together. Describing the grouping as a sentence, the initial expression can be called the “first member” or “protasis”, and the following independent sentence the “second member” or “apodosis”. The sentence types *šw=f hr sdm* (NIMS), *šw=f* + Old Perfective or *šw=f m NP* etc. used in the apodosis will be classified as *šw=f*-sentences. They can have past, present or future meaning; where the statement concerns the future, the form cannot be distinguished from the Third Future. Along with Late Egyptian independent sentences in

the apodosis, earlier types of sentence were also used in the higher registers of the textual hierarchy.

Anticipation without *îr* is relatively rare, being encountered mostly in the higher registers. Anticipation with *îr* can be viewed in tabular form like this (OP = Old Perfective)

	First member/protasis		Second member/apodosis	
Topicalization of nouns with extension	<i>(hr) îr</i> noun noun	+ qualification (relative/adverbial phrase)	preterite <i>sdm=f</i> First Present Third Future	establishing topics
		+ inf./OP/adverb = "First Present" <i>(sw hr sdm)</i>	<i>îw</i> -sentence (NIMS)/ <i>(îw=f hr tm sdm)</i>	
Topicalization of adverbials of circumstantial clauses	<i>(hr) îr</i> Ø	<i>hr-s3/hr/m</i> + noun <i>m-ht</i> + noun + OP <i>m-qr sdm=f</i>	<i>îw</i> -sentence (NIMS) <i>wn.în=f hr sdm</i> <i>(sdm pw îr. n=f hr. n sdm=f)</i>	organization of time
		<i>îw=f hr sdm</i> <i>(îw=f hr tm sdm)</i> <i>sdm=f</i> (including <i>wnn</i>)	Third Future Imperative/Prop. First Present/ <i>bw sdm=f</i> <i>îw</i> -sentence (NIMS) Nominal Sentence/ Emphatic Sentence clause complexes	

Observations:

Groupings In principle, any form of sentence in the apodosis can follow any form in the protasis. The grouping here is supposed to reflect the usual combinations.

Noun Noun + qualification signifies that in principle complex noun phrases can be topicalized. "Noun" is used as a notion in the table in order to be systematically clear.

Topicalization of adverbials What can be described as the use of an anticipatory, topicalized noun accompanied by an infinitive, Old Perfective, or adverb cannot be distinguished from the First Present in Late Egyptian in terms of linguistic evolution. *îr* + First Present must thus be understood as a temporal expression. The term "Ø-noun" (zero-noun) refers to a reference noun whose syntactic slot is present but which is not realized as a word (as in the nominalized relative

phrases), and which on the other hand demonstrates the parallelism of the constructions.

m-ḥt + noun + Adverbials of this construction are limited to literary works, like the older Old Perfective forms of the apodosis (*wn.ṯn=f ḥr sdm; sdm pw ṯṯ.n=f ḥ^c ḥ^c.n sdm=f*).

Circumstantial clauses Semantically, the topicalization of circumstantial clauses results in the so-called conditional clauses with *ṯr*. By analogy with the Circumstantial Present after *ṯr*, the *sdm=f* can be recognized as a Middle Egyptian circumstantial form, preserved here as a linguistic remnant.

clause complexes In principle, the apodosis can accommodate all possible independent constructions, and therefore not merely simple sentence forms, but also complexes and combinations of the most different types.

6.1.2 The topicalized noun phrase

(1) Functions

With or without an initial *ṯr*, the noun phrase in anticipation indicates the matter under discussion. Either a topic can be marked expressly, or a change of the current topic signalled. Where the new topic is adverbially specified (sentential appearance as First Present), the effect is similar to that of a temporal expression.

Anticipation is thus used to identify the subject of discourse when the topic is shifted topic shifting

- where a topic is introduced anew, is recovered after having been discussed earlier (“Concerning that-and-that which we already discussed, such-and-such is the case”);
- or to introduce a topic explicitly which was already implicit in the speech situation (“Concerning what you have thought all along, such-and-such is the case”);
- where a specific item needs to be discussed again or given special treatment, having been introduced earlier along with a number of other things (“Regarding A, B and C, as far as B is concerned, one can say such-and-such”);
- or where the situation demands clarification of various possible topics (“Regarding A, B, and C, as far as C is concerned, one can say such-and-such, but concerning B one can say so-and-so”). This is quite common in contexts like letters, in which mention is made of the topics of letters received previously.

On the other hand, such specifications can also be understood in a figurative sense: the topic is identified at the moment where it is first explicitly mentioned — as with the specifying relative phrases (cf. supra § 5.1.2[4]), and often by means of them. In the organization of texts it can thus sometimes even be used to identify new subject matter. introduction of topics

It is clear that in every case, the object of discourse is either known in principle or rendered explicit in the course of the dialogue before actually being discussed. It is thus grammatically marked as definite or defined. determination

(2) The employment of topicalization

The initial expression, the protasis, can be either a simple noun, or one specified in detail. If it is an independent personal pronoun the effect is more formal (on the lines of, “But me, I do such-and-such”). The nucleus of the protasis is generally — but not necessarily — resumed in the independent reference sentence, the apodosis.

meaning shifts

Topicalization is a process which in origin is more a decision made by the speaker than a grammatical construction (which it then secondarily becomes). There are thus cases where it must be noted that the content of the apodosis does not follow from the content of the protasis but rather that the content of the protasis merely allows the apodosis to be uttered. For the understanding of such constructions it is often advantageous — or even necessary — to introduce the level of the speaker using a paraphrase (thus: “Concerning that-and-that, there is reason to say: such-and-such”), but this must not be confused with a translation (i.e., the paraphrase is to be rewritten to a translation):

(pBM 10052,
4,24)

îr p3 m3^c nty îw=i dd.t=f bn dd=i rm̄ nb î.ptr=i îrm Bw-h3^c=f “Since what I say is true — should I not name all those whom I have seen with Bukhaf?” (< * “Concerning the truth which I will state — there is reason to say: Shall I not name all people whom I saw ...”);

Notes:

structure *îr*-phrase as protasis of a tonal question;

nty îw=i dd.t=f relative Third Future as qualification of the definite noun;

bn dd=i negated prospective *sdm=f*.

The following examples will illustrate some conventional uses of topicalization:

recovering
topics

— The following example may show how a topic is recovered. In letters, the sender mentions things which the recipient mentioned in his own letter:

(LRL 15,7-9)

hr îr p3y=k dd m-îr nn̄ m h3b n=i^c=n

îr wn-îh̄ h̄pr r=n îw=k^c h̄t.tw

“As for your writing that [we] shouldn’t neglect writing to [you] about our condition — what could possibly happen to us while you are there?”;

Notes:

structure *îr*-protasis with Third Future apodosis (without explicit resumption); NP of *îr* is the nominalized infinitive of *dd* “say” + the “object” of the verb — the statement as a quote;

- indirect speech a rendering of the literal: “Concerning your statement: ‘Don’t neglect to write to me about “our” condition’”;
- $\epsilon=n$ adjustment of pronoun to the surrounding text in indirect speech, cf. § 5.3.2(3);
- wn-ih* nominal *sdm=f* of *wn*, with the interrogative pronoun *ih* as agent (“that what is?”), as nominal subject of the Third Future: *“(What existing will happen to us?”);
- ir* NP *hpr* Third Future form with nominal subject; cf. for the grammatical analysis also Wentz, *LRL*, p. 36, n. m;
- r-r'=nn* status pronominalis writing of *r=n*; cf. Coptic ΕΡΟ=Ν.

— In order to make it absolutely clear what is being discussed:

clarifying topics

(pNaunakhte 2,6-7)

ir p3 w3h nb dr.t=f hr dr.t=i im=w

iw=i r dt.t n=f 3h.t=i

ir p3 nty bw.pw=f dt.t n=i

bn iw=i r dt.t n=f m 3h.t=i

(A testatrix says of her children:) “To every one of them who cared for me, I will give my property; but for those who did not provide for me, I will not make provision from my property” (cf. also supra § 5.1.2[4]);

Notes:

structure repeated *ir* protasis with Third Future apodosis (with resumption), affirmative the first time, negative the second time;

p3 w3h dr.t=f hr dr.t=i nominalized participle, “he who put his hand on mine”;

p3 nty bw.pw=f dt.t n=i nominalized relative phrase with negative preterite of intransitive *dt.t* “to make a gift to someone”.

Sentential combinations can become very complex, especially where the anticipated noun phrase is extended and the apodosis is itself already a complex sentence — as may be illustrated by the conjunctive sentence of the letter formula in the next example:

complex sentence as apodosis

(HorSeth 8,3-5)

ir p3 dd 2

iw=tn dt.t s:km=w h'cy=w m t3 qnb.t

hft spr p3y=i wh3 r-r'=tn

iw=tn dt.t hqt hr tp n Hrw z3 'Is.t

mtw=tn tnh3.t=f (< dhn) r t3 s.t n it'i=f Wsir

(Re wrote to the Council of Gods:) “Concerning those two boys whom you are forcing to spend their lives at court: as soon as my decision arrives, you should put the white crown on the head of Horus Son of Isis, and assign him the throne of his father Osiris”;

Notes:

- structure *ir*-protasis with a qualified noun, apodosis a complex sentence with initial conjunctive clause (*hft spr NP*) followed by NIMS (*iw=tn dl.t*): “then, when this has happened, you should do this-and-that”, with the NIMS continued with the Conjunctive (*mtw=tn*);
- p3 qd 2* note the singular determination with numbers (cf. supra § 2.1.4[6]);
- iw=tn dl.t s:km=w* adverbial phrase (circumstantial clause) in the adnominal qualification of the “boys” (example of the use of defined nouns too with the so-called virtual relative clauses);
- hft spr p3y=l wh3* protasis of the complex sentence relating to the *ir*-phrase; for this conjunctive syntagma, cf. supra § 5.4.1;
- iw=tn dl.t hq.t hr* *iw*-sentence (NIMS) as apodosis of the complex sentence: “you should put the crown on the head”; the mood of result follows from the type of protasis (Third Future is not attested in constructions with *hft spr*);
- tp*
- mtw=tn dhn=f* Conjunctive continuing the apodosis.

ellipses

In just this type of role it can also happen that an apodosis in the form of a Nominal Sentence is reduced to a single noun because the required information is “included in the package” (correspondence ellipse):

(LRL 36, 12)

hr ir Pr-3 hr.y n3m m-r3-c “And as for Pharaoh — whose master still?” (for the hieroglyphic text and commentary, cf. supra § 4.2.1).

introducing topics

— Introducing a new topic — to a certain degree, the figurative use of topicalization — with the *iw*-sentence (*iw* + First Present or NIMS, as the case may be) as the apodosis:

(VerwPrinz 5,5-6)

ir p3 nty iw=f r ph p3 s3d n t3y=l 3r3.t iw=s n=f r hm.t “The one who shall reach my daughter’s window shall have her as wife”;

Notes:

nty iw=f r ph relative Third Future;

iw=s n=f “She is to him”, “belongs to him”, *iw*-sentence (NIMS, Circumstantial Present); structurally it acquires future meaning, but in itself remains a relative present.

Occasionally, the introduction of a new topic makes the protasis so detailed that it outweighs the actual sentence — the apodosis — in both length and content:

(LRL 47,7-9)

ir p3y zh3.w i.wn di h3.t={t}n

iw mnt.f p3 nty di

iw=f rḥ w^c ḥy
iw=f m mnt ʕ
iw mtr st pḏy=f iṯ
sw ṯm=k

(The chief workmen of the Tomb Building Administration writes to the General Piankhi, the son of Herihor, in Nubia:) “As for the scribe who was here before us, and who was the one who was appointed, and who knew an inspector who was an influential man, and whose father testified to it — he is with you.”

Notes:

ḥḏ.t=tn a frequently used abbreviation for the compound preposition *r-ḥḏ.t*, here used in status pronominalis (and thus *=tn* rather than *=n*, cf. table supra § 2.1.2[1]);

iw mnt.f pḏ nty dī converted Pseudo-Cleft Sentence continuing the relative phrase *iw:n; pḏ nty dī* relative clause with Old Perfective, “he who was placed (appointed)”;

iw=f m mnt ʕ Circumstantial Present as attributive qualification of *w^c ḥy*;

sw ṯm=k First Present as apodosis of the anticipated *ṯr*-phrase.

(3) Sententially extended noun phrases

An anticipatory noun can also be specified in a vestigial Middle Egyptian fashion with adnominal adverbials, i.e., Old Perfective, *ḥr/m* + infinitive, or other prepositions (usually *m*) + nouns (cf. supra § 2.2.3[2]). The circumstances governing whatever is designated by the noun thus assume central importance: from *ṯr z.t ṯy.tī* *‘‘Concerning the woman who came’’ or *‘‘Concerning the woman when she came’’ we have *‘‘Concerning when the woman came’’. The result is that semantically the anticipated noun with adverbial specification becomes an anticipated temporal clause. The protasis defines the temporal position of the apodosis:

ṯr +
anticipated
temporal
clause

(RAD 73,7)

ḥr ṯr ṣmw ḥpr.w iw=w ṯn n=i 40 n ḥḏr n ṯt-m-ṯt ṯm=f “And when harvest time came round, they brought me 40 sacks of barley from there” (*‘‘Concerning the time of the harvest, when it happened, (there is reason to say:) they brought me 40 sacks of barley’’);

Notes:

ṣmw ḥpr.w noun with Old Perfective;

iw=w ṯn *iw*-sentence (NIMS).

Or:

(pD'Orb 5,7-8)

ḥr ṯr pḏ ṣw ḥr ḥtp

iw=f ḏtp=f <m> sm nb n ṣḥ.t m pḏy=f ṣḥr nty-r^cw-nb

îw=f hr îy.t

“And as the sun was setting, he loaded himself with all the greens of the field as he always did, and came”;

Notes:

p3 šw hr htp noun with prepositional infinitive;

îw=f šp=f *îw*-sentence (NIMS);

šhr nty-rw-nb for *šhr n-rw-nb*, cf. supra § 2.1.4(3) end.

This type of construction does not only have the effect of a sentence used in anticipation, but was also reinterpreted within the Late Egyptian system by rebracketing (*îr* [noun] + [adverbial] > *îr* [noun + adverbial]) as the sentence form First Present, as the pronominal forms clearly show:

(pMayer A vs. 6,21-23)

hr îr tw=i m îy r-hrî îw=i gm w^cb T3-šrî z h3.w P3-b3kî îw=w ^ch^c ph^h m pšy wd3 “When I came down, I found the consecration priest Tasherî and the scribe Pabaka occupied in walking around in this storehouse”;

Notes:

tw=i m îy First Present with verbs of motion (with a grapheme *m-n* for *m*);

îw=i gm NN îw=w ^ch^c for the construction of object or content clauses after *gmî*, cf. supra § 5.3.2;

îw=w (hr) ^ch^c (hr) for this construction, with the auxiliary verb ^ch^c, cf supra § 2.2.3(3).
ph^h ph^h

(pD'Orb 16, 7-8)

hr îr hr-s3 îw=tw hr dî.t m3^c.t=f

hr îr sw hr rmn n3 n rmt îw=f hr ktkt m nhb.t=f

“Now after he was slaughtered for sacrifice, but while he was on the men’s shoulders, he shook his neck” (and two drops of blood fell to the earth; referring to the younger of the Two Brothers, Bata, as a bull, being carried off after slaughter);

Notes:

hr îr hr-s3 protasis to the following *îw*-sentence, being a prepositional phrase used in anticipation, cf. infra § 6.1.3(1);

dî.t m3^c.t=f status pronominalis of the compound infinitive *dî.t m3^c* “to sacrifice, to slaughter ritually”;

sw hr rmn First Present/Adverbial Sentence.

6.1.3 Topicalized adverbials

(1) Prepositional expressions organizing time relations

The anticipatory noun phrase sententially extended by adverbial phrases, that is, the First Present form after (*hr*) *ir* in the first member, can also be reduced in another fashion: the reference noun of the adverbial phrase is itself represented by “zero” (that is, it exists as a syntactic slot but not semantically; cf. the table supra § 6.1.1[2], and the structure of the nominalization in relative phrases). With the aid of *ir*, both adverbials and certain clause conjugations can thus precede the sentences to which they are semantically tied. Being syntactically necessary, the initial *ir* makes anticipation of the adverbial phrase possible, but it is nearly impossible to recreate this in translation. The second member, the independent follow-up clause, is frequently formed from a *iw*-sentence, the construction itself thus being a closed complex within the structure of Late Egyptian syntax.

The framework defined by the protasis thus sets the circumstances that limit the validity of the apodosis. In general, these are expressions which make a statement about the time related, or can be understood as such.

— The apodosis is a *iw*-sentence or a form of narrative; the protasis is an adverb or a prepositional phrase:

ir + adverbial phrase
as temporal framework
protasis is prepositional phrase

(oNash 1, 4-5)

hr ir hr-s3 hrww qnw iw n-nw.t Nbw-m-nhm hr ir r dd n-i b3.w ntr hpr “And a couple of days later citizenship Nabamanhama came to tell me that the might of the god had become manifest” (as she had seen so-and-so as she was stealing the chisel);

Notes:

hr ir hr-s3 hrww qnw prepositional phrase as protasis “after many days” (“Concerning this: after many days”);

iw NN hr ir *iw*-sentence (NIMS) as second member;

Nbw-m-nhm sentence-name (“The gold is in the lotus bud”; gold = Hathor);

r dd speech introduction; the content of the speech is given as indirect speech (more literally, *‘in order to say to me: ‘a proof of god’s power has happened; I saw so-and-so as she ...’”).

For the use of corresponding prepositional adverbs (here, *hr-s3.y* — etymologically transliterated), the passage pD’Orb 16,7(-8) can be cited: *hr ir hr-s3 iw=tw hr di.t m3c.t=f* “Afterwards, however, he was sacrificed”.

A characteristic fixed use of such constructions will be found in literary works, in the so-called day formulae:

or adverb

day formulae

(pD'Orb 1,4-7) *hr ir m-ht hrww qnw s3 nn*

iw p3y=f sn srt m-s3 n3y=f i3w.t m p3y=f shr.w nty r^cw-nb

mtw=f wh^c r p3y=f pr r-tnw rwh3 iw=f 3tp m sm.w nb n sh.t ...

mtw=f w3h=w m-b3h p3y=f sn 3 iw=f hms hn^c t3y=f hm.t

“When now many days had passed after this, his younger brother kept his cattle, according to his daily custom, and he would return every evening, loaded with all the plants, and he would lay them before his elder brother, as he was sitting with this wife” (for the hieroglyphic text and commentary, cf. supra § 5.4.3[3]).

organizing the narrated time

Such day formulae can assume complex forms, and are generally used more as a means of organizing a text temporally than to be taken literally (quite often “many days” refers only to brief intervals). It is generally advisable to render these with “some time later” or “after a while”, etc. The following example reveals such a complex protasis (extension of the adverbial temporal expression using circumstantial clauses), with an apodosis characteristic of the co-ordinating forms in narration (*wn.in=f hr sdm*, constructions with *h^c.n* or the earlier Nominal Sentence form *sdm pw ir.in=f*)

(pD'Orb 2,7-9)

hr ir m-[ht hrww] qn.w hr-s3 nn iw=sn m sh.t iw=sn h^c n pr.t

wn.in=f hr h3b p3y=f sn srt ...

“Quite a bit later, when they were in the fields, and they were short of seed-corn, he sent his younger brother off”;

Notes:

hrww qn.w hr-s3 good example of the qualification of a noun (*hrww*) by a prepositional attribute (*hr-s3 nn*). Note that this can no longer be read — as in Middle Egyptian texts — *ir m-ht hrww qn.w sw3.w hr-s3 nn* (“after many days after this had passed”), although one occasionally encounters this in the translations (cf. also Hintze, *Neuägyptische Erzählungen*, 16ff). What appears to be *sw3* is a semogram for *qr*;

iw=sn ... double extension of the preceding adverbial phrase by a circumstantial clause;

wn.in=f hr h3b classic form of narration organization.

adjusting the translation

It is common for the point of these arrangement formulae to be lost in overly literal translations: *hr ir m-ht t3 h3d 2.nw hrww hpr* should be rendered as “after the world brightened and the next day came” (or even “after dawn the next day”) and not “after the world brightened and the second day happened”.

— The apodosis is a *iw*-sentence, and the protasis an anticipated conjunctive phrase (such as the Temporal):

(pBM 10052,
13, 24-25)

dd=s ir m-dr iry.tw p3 hrwy n p3 hm-ntr tpy iw p3 rmt i3 ht n p3y=i i3i “She said, ‘While the uprising of the High Priest was going on, the man stole some of my father’s property’”;

Notes:

m-dr iry.tw Temporal with passive subjunctive *sdm=f*, “when (the rebellion) was made”;

p3 hrwy n p3 the rebellion of Amenhotep the High (or First) Priest of Amun in the Thebaid (in about regnal year 11 of Ramesses XI), which was defeated by Panehsi, the Viceroy of Nubia, in the service of the king, before he too fell into disgrace and was driven back to Nubia by Herihor and his son Piankhi;

iw p3 rmt i3 *iw*-sentence (NIMS).

ir m-dr iw.t=f r i3 n=k pr.t iw=f gm=i hms.kw w^c “When he came to get seed corn for you, he found me sitting alone” (for the hieroglyphic text and commentary, cf. supra § 5.4.2[1]).

(pD’Orb 5,1)

(2) Conditions and possible reasons

The effect of topicalization as an indication of the circumstances which govern the follow-up clause reaches its fullest extent where the anticipatory first member consists of *ir* + Circumstantial Present or *ir* + *sdm=f* (metaphorically to be described as the adverbial qualification of a “zero-noun”, cf. supra § 6.1.3[1]). This no longer usually convey the temporal circumstances of an action, but identifies the conditions relevant to the follow-up clause: the protasis names a possible basis for the validity of the apodosis. In translation, this is generally best done using clauses of condition or concession to reproduce the topicalized Egyptian phrase, using conjunctions like “if”; “if not”; “unless”; “provided that”; “in so far as”; “supposing” etc., or “though”; “while”; “when”; sometimes, however, it will be more advisable to use appropriate abridgements (of the type “Born in better times, he would have done well”; “Strictly speaking, that is not true” etc.), or two sentences linked by “and” (such as “Give him an inch and he’ll take a mile”).

Two points must be borne in mind, however. (a) Even where the protasis defines the conditions of use or validity pertaining to the expression in the apodosis, the correspondence to the temporal relationships can remain fluid; thus an absolute participle or other nominative absolute in English may sometimes serve better than a “if”-clause (“Conditions being favorable, he might succeed” — either temporally, “when conditions are favorable”, or conditionally “if conditions are favorable”). (b) The restrictions imposed by the protasis can be either factual or hypothetical, and the validity of the limits may only be clear from the context, being otherwise unstated. Compare the use of “if” in an

English sentence like “If she comes, we can go”, which can be either a factual restriction (“Whenever/once she comes, we can go”) or a hypothetical restriction (“If she were to come, we could go”). In English such distinctions can be made clear (but need not be); in Egyptian they remain unsignalled — except that they do become clear in the case of clausal extensions: a hypothetical condition is continued with the Conjunctive, and a factual one with a Circumstantial Present (cf. supra § 5.4.3[2]).

(3) Forms of conditionality

ir +
circumstantial
clause

A construction frequently used in the colloquial registers has a protasis *ir* + Circumstantial Present (*ir iw=f hr sdm*), and an apodosis formed with a sentence conjugation expressing anticipated or expected actions. Often this is the Third Future, which is precisely the form used to emphasize that one event or action follows logically from another (cf. supra § 3.2.2[1]), although it cannot always be formally distinguished from the “old” *iw*-sentence in these clause groupings:

(pBM 10052,
3,16-17)

ir iw=k hd .tw iw=k h3^c.tw r mw iw n3m wh3=k “Supposing you are killed and thrown into the water, who will look for you then?” (*“Concerning what happens if you are killed: who will look for you?”)

Notes:

iw=k hdb.tw Circumstantial Present after *ir* as protasis, here with Old Perfective; *iw=k h3^c.tw* is parallel;

iw NP wh3=k Third Future with the interrogative pronoun *n3m* as agent.

Other possibilities include the Imperative and the Prospective (Potential/Optative, cf. supra § 3.4.2):

(pBM 10052,
8,21-23)

ir iw ky iy mtw=f s:^ch^c=k iry=i

dd=f ir iw ky iy mtw=f s:^ch^c(=i) iw=k ir.t n=i sb3y.t nb.t b3n

(The vizier said to the delinquent:) “‘If someone else came and accused you, then I would act.’ He said, ‘(Yes,) if someone else came and accused me, then you should enforce every severe punishment against me!’”

Notes:

mtw=f s:^ch^c=k Conjunctive as a continuation form of a hypothetical protasis;

iry=i Prospective (independent prospective *sdm=f*) in the sense of a self-imposed commitment, cf. supra § 3.4.0(1);

dd=f the delinquent responds;

iw=k ir.t Third Future.

In expressions and textual registers heavily influenced by tradition — but also elsewhere — *ir* is frequently followed by a *sdm=f* form which is thus employed as a parallel to the Circumstantial Present. This form could thus be identified as a circumstantial *sdm=f*, but has generally been termed a nominal *sdm=f* (cf., e.g., Satzinger, *Neuägyptische Studien*, § 1.3.2.1). Like the “old” *iw*-sentence, its use in these constructions should be understood as a remnant of Middle Egyptian ways of expression.

hr ir dī=k^c nh=f iw=i r mwt n=i “If you let him live, I will kill myself”; or “You will let him live and I shall kill myself”. (pD’Orb 5,3)

ir wnn ib=k iry zh3.w “If you are intelligent, become a scribe!” (pLansing 7,5)

Notes: *wnn ib=k* **“If your heart/mind exists”*; in these constructions *wnn* can also be written *wn*;

ir i zh3.w *ir i* with title or profession as object: “to perform an office”, more literally: “Perform the office of scribe!” or “Act as a scribe!” (“Do a scribe!”).

Thus, forms of prediction or anticipated action are common among the sentence forms of the apodosis (as in the examples), but there are also “present” — better: not temporally fixed — forms of expression, particularly characterizations and statements of general validity: forms of the present, *iw*-sentence, Nominal Sentence forms, etc. For example, First Present:

iry-t3 sw g3b.w m mš^c “If he survives, he suffers from marching” (< **“Concerning the case in which he emerges as a survivor, he is weakened”*), describing the soldier’s fate; (pLansing 10,6)

Negative Aorist:

ir iry=i h3 n bt3
bw ir=i w^c nfr dī.t s:mh=w (LRL 1,11-2,1)

“If I had done a million evil deeds, could I not do one good one so as to let them be forgotten?”;

Notes:

mood of the translation a clear example of a hypothetical protasis as expressed in translation;

dī.t for *r dī.t*, an abbreviated writing which is not restricted to the Third Future, but also occasionally appears with *r* + infinitive.

istw ir sh3y=k w^c n bīn (pD’Orb 8,2)

istw bw ir=k sh3y w^c n nfr m-r3-pw w^c nk.t iw iry=i sw n=k

“If you recall an evil deed, can’t you recall anything good or anything else that I have done for you?” (for the hieroglyphic text and commentary, cf. supra § 3.5.2).

An Emphatic Sentence as apodosis:

(pAnast. I
10,5-6)

îr nfi=k r gs=f îw=f m znny

î.îr=f hÿy wÿw mÿ gÿb qbÿw

“If you exhale beside him when he passes by, he will fall far off like a leaf” (the speaker is referring to a lightweight colleague);

Notes:

îw=f m znny Circumstantial Present (with *m* with verbs of motion) as continuation of a protasis stated as factual;

î.îr=f hÿy nominal *sdm=f*; “it is like a leaf that ...”.

complex
structures

In the appropriate types of text, these constructions can assume a high degree of linguistic complexity. In the following example, the protasis is so extended that it outweighs the apodosis, but without infringing on the structure:

(pD'Orb 8,4-6)

hr îr ṣd.t.w pÿ ṣ

mtw=f hÿy.t r îwtn

mtw=k îy.t r whÿ=f

îr îry=k 7 rnp.wt n whÿ=f

m-dy.t fy hÿ.tî=k

hr îr îw=k gm=f

mtw=k hr dî.t=f r w^c n gÿy n mw qbÿkÿ n hÿ=î^c n-wÿb=î^c n pÿ thw=î

“And if the cedar is felled, and falls to the ground, and you come to seek it (the heart) — even if you spend seven years looking for it, do not give up! And if you find it, and put it in a bowl of cool water, then I shall come to life so that I may take revenge on the evildoer.”;

Notes:

ṣd.t.w pÿ ṣ example of a passive *sdm=f* in the protasis;

- mtw=f h3y.t* Conjunctive as continuation of a hypothetically couched thought (note that, although these later will happen as described — one could translate “when” rather than “if” — they are nevertheless conjectures at this point in the text);
- ir iry=k* the protasis gets, so to speak, a new start, before the apodosis comes (7 *mp.wt* is written in red);
- mp.wt n wh3=f* literally “years of seeking it”;
- m-dy.t fy (< fi)* Negated Causative Imperative (cf. supra § 3.4.3[1]) as apodosis;
- ir iw=k gm=f* another *ir*-sentence, this time with Circumstantial Present as protasis;
- d3r* usually *d3r* means “to apply something to something”; sometimes, however, a meaning “to put something into something” (a pot, bowl) is possible (cf. von Deines/Westendorf, *Wörterbuch der Medizinischen Texte* I, Berlin 1960, p. 548 IIIb);
- k3 nht=l* contingent form with the prospective *sdm=f* (“in that case I shall live”) rare in Late Egyptian, cf. supra § 3.4.1 and Winand, *Études*, § 371;
- n-w3b=l n X < n-w3bt=l*; final-prospective *sdm=f*, “so that I may return an answer to X”;
- p3 thw (< p3 th3.tw)* “the trespasser/transgressor”.

This type of protasis is a conditional construction with two grammatically different forms of expression (*ir iw=f sdm* and *ir sdm=f*), but differences in the function can hardly be distinguished: *ir iw=f sdm* can be understood as a Late-Egyptianized form of *ir sdm=f*. notes on linguistic evolution

6.2 Bound expressions

6.2.1 Clause combinations with conditional force

(1) Form and semantic structure; consequence relations

Topicalization constructions with an independent sentence (apodosis) preceded by an initial dependent clause (protasis) provide one means of expressing conditionality. There are also constructions where the protasis is also formally an independent sentence, which generally has an initial particle (such as *inn* or *hn*). Comparable to the topicalization

Notes:

tw=k dd “interrogative” First Present;*n3* a rare use of the demonstrative as adverb, “here”, “from here”;*iw=l m nmḥ.w* *iw*-clause.

Where the particle *ḥ3/ḥnr* is used, the sentences are joined by the expression of a wish the result of which — should it be fulfilled — is expressed in the second sentence:

(Doomed
Prince 6,2-3)

ḥnr [bn] tw=i ḥr šn.t rd.wy=i iw=i ḥr šm.t r pwy.t m.dī=tn “If my feet didn’t hurt, I would join you in jumping”. < * “Would that my feet did not hurt so much! (If this were not the case:) Then I would go to jump with you.”

(2) Combinations with initial particles (*inn*; *hn*)

Consequence relations and the semantic binding of clauses are not restricted to sentences with initial particles, such as *inn* or *hn*. They are, however, clearly marked as such in this form. Altogether, these combinations are not very common. Sentences with *inn* will be encountered only in texts from daily life. These clause combinations can be presented thus in tabular form:

First member/protasis	Second member/apodosis	
<i>inn</i> First Present <i>wn m.dī=f</i> Emphatic Sentence	First Present <i>iw</i> -clause	
<i>inn</i> pret. <i>sdm=f</i> <i>bw.pw=f sdm</i>	Third Future (Causative) Imperative Cleft Sentence	
<i>inn</i> Third Future	Prospective	
<i>hn</i> pret. <i>sdm=f/bw sdm=f</i> Nominal Sentence First Present <i>wn m.dī=f</i>	<i>wn</i> + Third Future <i>iw</i> -clause	“counter to reality” form

Observation:

The analysis as an *iw*-clause is certain in the apodosis of the *inn*-combinations, where it is formed with an Old Perfective or prepositional phrases. Where the form is *iw=f* (*) sdm*, it can be understood within the Late Egyptian linguistic system as either a Third Future or a vestigial

- lw=w s:ptr lw=w* extension of the apodosis with two Circumstantial Present clauses with Old Perfective,
mḥ “it being completely recorded” < **“it being recorded, it being complete”*; good example of the typical chains of circumstantials;
- mtw=k s:q=w* Conjunctive as continuation of the statement in the apodosis, “and you should enter it into the granary”.

hn and similar particles

According to the type of their composition, clause combinations with initial *hn* express desired or supposed presuppositions and conditions for desired or supposed situations, in other words they express wishes and their imagined or perceived consequences. Almost all the sentence forms are represented in the *hn*-protasis. It is typical of the apodosis that apart from *lw*-clauses the commonest form used is the Third Future with the preterite converter, *wn lw=fr sdm*, literally “he was going to hear”, but in translation a conditional perfect tense (“he would have heard”) usually conveys the required nuance of conjecture and uncertainty.

— Protasis with preterite *sdm=f*, apodosis in the form of Third Future with preterite converter:

(pBM 10052, 4,11-12)

ḏd=f bw.pw=i ptr rmt nb

hn ptr=i wn lw=i ḏd.t=f

“He said, ‘I did not see anyone; if I had, I would have said so’” (< “I did not see any person. If I had seen, I would have said it!”)

Notes:

ptr=i preterite *sdm=f*;

wn lw=i ḏd.t=f preterite-converted Third Future.

The protasis can also show preterite conversion: compare

bpy=i ptr hn wn ptr=i wn lw=i ḏd.t=f n=k “I did not look. Had I looked, I would have told you so” (for the hieroglyphic text and comments, cf. supra § 3.6.1). (pBM 10403, 3,29)

— Protasis with (negated) preterite *sdm=f*, apodosis in the form of a *lw*-clause:

(HorSeth 15,2-3)

hn bw hpr=k

hn bw mst=k

lw it bty hpr m-rs^c

(Re is speaking to Osiris:) “If you had not come to exist, and you had not been born, emmer and barley would exist all the same”;

Notes:

bw hpr=k *bw sdm=f* as a more traditional variant of the negative Preterite, cf. supra § 3.5.1(3);

bw mst=k like *bw hpr=k*, but a negation of the passive *sdm.w* with suffix;

lw NP hpr *lw*-clause (NIMS);

m-rj^c adverbial expression of concession, cf. § 2.2.4(1).

— Protasis with First Present, apodosis in the form of a *iw*-clause:

(Beatty Love
Songs v.s. C
4,3)

hn mw.t rh.ti ib=i iw=s q.ti n=s r nw “If only mother knew my heart, it would have occurred to her before” (for the hieroglyphic text, cf. supra § 2.2.6[2]);

Notes:

mw.t rh.ti ib=i First Present with Old Perfective (*rh* with object);

iw=s q.ti n=s *iw*-clause with Old Perfective “then it would have entered her” (the knowledge that the speaker loves so-and-so).

6.2.2 Closed complexes

(1) The balanced sentence with *wnn*

In the linguistic framework of Late Egyptian syntax, constructions like those mentioned above with initial adverbials or clauses, with a sentence of the *iw=f hr sdm* (or *iw=f* + Old Perfective or *iw=f* + preposition + NP) type in the second position, basically belong to the category of closed complexes — neither the *ir*-phrase nor the *iw*-sentence without the *ir*-phrase can stand alone. The justification for the division preferred here is that this *iw=f hr sdm* (cf. supra § 6.0) is mutually interchangeable with the sentence conjugations and Nominal Sentences: the *iw*-sentence is in a paradigmatic or substitution relationship to the sentence conjugations and thus belongs to the independent sentence paradigm in these combinations. It must thus be understood as the linguistic remnant of the Middle Egyptian independent *iw*-sentence. Closed complexes in the narrow sense can thus only be those where the form of the second term (apodosis) cannot be substituted with an independent sentence.

the pure
balanced
sentence

Closely bound expressions of this kind are, however, usually linguistic remnants of Middle Egyptian sentence constructions just as much as the *ir*-sentences². In them, fossilized and occasionally adapted to Late Egyptian morphology, survives the earlier balanced sentence (*Wechselsatz*), whether of the Emphatic-Sentence type, with a nominal *sdm=f* followed by an adverbial *sdm=f*, or of the type *mrr=f irr=f* “If he wishes, he acts”. Such real balanced sentences with a nominal *sdm=f*, both in protasis and apodosis, certainly still appear in Late Egyptian form, as in:³

2 Cf. Junge, *iw=f hr (tm) sdm*, 122ff; id., “Emphasis” and Sentential Meaning in Middle Egyptian, *GOF* IV 20, Wiesbaden 1989, 88ff (§ 6.2.3).

3 For further examples cf. Johnson, *Demotic Verbal System*, 248 n. 57.

ỉ.ỉr.tw grg n dmỉ nb ỉ.ỉr.tw m3^c.t n p3 B n²I-r-s “(As far away as No, the city of Amun, I have heard:) ‘Evil is done in every city, but justice is done in the Land of Cyprus’” (for the hieroglyphic text and commentary, cf. supra § 3.6.1). (Wenamun 2, 78-79)

It is, however, generally the type with a nominal *sdm=f* in the protasis and an adverbial *sdm=f* in the apodosis that is transformed and widely used. They appear with forms of *sdm=f* in the protasis position, primarily *wnn=f*, and a *ỉw*-clause in the apodosis position. As a result of linguistic evolution, the form in the apodosis become the Circumstantial Present: from **wnn=s hr mdw.t sdm=f* “Whenever she speaks he hears” emerges *wnn=s hr mdw.t ỉw=f hr sdm*. In such combinations, the Circumstantial Present can thus become an element of the Late Egyptian balanced sentence, one that nevertheless displays a semantic independence vis-à-vis the initial clause. wnn-sentence

In accordance with their character, these balanced sentence constructions convey the mutual dependence of two statements — “if this, then that”. In practice, the effects resemble those of consequence relations (cf. supra, § 6.2.1[1]): the mutual dependence may be represented by any logical dependence relationship, especially a temporal one (“when(ever) this, then that”) or a conditional one (“if this, then that”). As a rule, the meaning typically oscillates between temporal and conditional circumstances. In the case of related or reported circumstances, the closed complex has an initial particle *hr*. Where the circumstances are predicted or expected, the initial *hr* can appear, but it need not. structure of the utterance

In the construction of the protasis, a change by rebracketing can be observed. The original nominal *sdm=f* was transformed into a structure of the type with a particle or even converter before an independent sentence, which may itself then in turn admit a circumstantial clause (*wnn ỉw=f hr sdm*; the reference situation is not clear). The transformation takes place as with topicalization (cf. supra § 6.1.2[3]) — the *sdm=f* form of *wnn* with adverbial specification becomes a sentence: $[[wnn NP]_{NP} [hr sdm]_{AP}]_{protasis}$ becomes $[wnn [NP hr sdm]_{clause}]_{protasis}$. The end result is that the sentence is adapted to the structures of the consequence relationships with semantic binding. forms

The forms of the closed complexes can be presented thus in tabular form:

First member/protasis	Second member/apodosis	continuation
<i>sdm=f</i>	<i>ỉw</i> -clause	Conjunctive (imagined situation)
<i>(hr) wnn =f hr sdm</i>		
<i>sw hr sdm</i> (First Present)		<i>ỉw=f hr sdm</i>
<i>wnn</i>	<i>ỉw=f hr sdm</i>	

Observation:

Occasionally, imperatives assume the role of the apodosis. In these cases, a balanced sentence relationship is reinterpreted as an consequence relationship: “If this, then that” becomes “If this, then do that!”.

(2) Usage

The temporal dependency relationships are illustrated in the following examples:

— Expected situation, temporal-conditional statement; in a very common expression with many variations in letters:

(LRL 12, 7-8)

wnn t3y=i š^c.t spr=k iw=k dd n 'Imnw in wi iw=i cⁿh.k “When my letter reaches you, pray to Amun that he bring me back alive”;

Notes:

t3y=i š^c.t the hieratic form of this expression is frequently very abbreviated. The possessive article can be written more or less completely, as in the same letter later (LRL 12, 13), or as here reduced to strokes and dots;

in wi Imperative with object pronoun: to be read either thus, or (with imperative infinitive and object suffix) *in=i* “Bring me!”. This is a typical device for fitting in pronouns with indirect speech (translations can thus be either “pray to Amun: ‘Bring him back alive’” or “pray to Amun that he bring me back alive”).

Similarly:

(LRL 39, 10-12)

wnn t3y=i š^c.t spr r=k iw=k tm rwi=k h3b n=i c=k m.dī p3 nty-nb nty iw=f iy m ht “When my letter reaches you, you should not refrain from sending word to me about you by anyone who is coming north” (for the hieroglyphic text and comments, cf supra § 5.2.2).

— As a three-part construction of a temporal-conditional form of statement, conceived as expected (hence the continuation of the apodosis with the Conjunctive):

(pD'Orb 6, 9-7, 1)

wnn p3 itn hr wbn iw=i hr wpl.t hn^c=k m-b3h=f mtw=f hr dī.t p3 c^d3 n p3 m3^c.ū “At the rising of the sundisk, I will litigate with you in its presence, and it will hand over the wrong-doer to the just one”.

— With initial *hr* in a predicted or expected dependence relationship:

(LRL 21, 11-12)

hr wnn zh3.w P3-n-b3-hw.t-nht iy n=tw r-dd imm sw Hr.wy dd b3k=f iw=tn tm dī.t=f n=f

“When the Scribe Panthunakhte comes to you saying that you should deliver him, Hori, who was put to work, you shall not give him to him” (cf. Neveu, *La particule hr*, 70 [3 4.2 ex. 176], but compare Wentz, *Letters*, 196, for another rendering);

Notes:

$n=tw$ for $n=tn$;

$r-dd \text{ } \dot{lm}n \text{ } sw$ “in order to say, ‘Give him, Hori’”. Even where there is no need to translate a text as indirect speech, it can be rendered thus;

$Hrw.y$

$dd \text{ } b^3k=f$ passive participle with object clause: “who was caused that he work” (<“He, concerning whom it may be said: it was caused, that he work”).

— Transformation of the $sdm=f$ of wnn with following adverbial to a sentence conjugation with initial converter wnn :

 $hr \text{ } wnn \text{ } tw=tw \text{ } hr \text{ } in.t=w \text{ } n=k \text{ } iw=k$ (pBerlin P. 11239, 6-7)

$hr \text{ } mh \text{ } im=sn$ “When they were brought to you, you took possession of them” (the reference is to pieces of copper);

Notes:

wnn written wn , which must be understood as merely a graphic variant of wnn in these combinations;

$tw=tw \text{ } hr \text{ } in.t=w$ First Present with unspecified agent.

Similarly (wnn + First Present and nominal agent with Old Perfective; the form of expression reveals the special “if — then” dependence relationship of the balanced sentence):

 $wnn \text{ } w^c \text{ } nh \text{ } iw \text{ } 1000 \text{ } hr \text{ } mwt$ “While one stays alive, thousands die”; (pTurin A vs.3,10)

thousands die”;

Notes:

context those who go to the audience can be compared to the waves of surf striking the coast: one remains, the others perish;

$wnn \text{ } w^c \text{ } nh$ NP with Old Perfective after wnn : either nominal agent of wnn ($wnn=f$) or First Present with converter wnn ; after nh there is a group (seated man with plural strokes) which has been crossed out in red, but this is not reproduced here.

In association with the wnn -constructions — in the corresponding textual categories — variations of the earlier type of balanced sentence with the $sdm=f$ of other verbs can appear in the protasis:

 (pSallier I 7,1)

$pr \text{ } p^3 \text{ } rmt \text{ } n \text{ } mw.t=f \text{ } iw=f \text{ } m \text{ } pd \text{ } n \text{ } hry=f$

$wnn \text{ } p^3 \text{ } \dot{s}r^3 \text{ } n \text{ } \dot{s}ms \text{ } n \text{ } w^c \text{ } w \text{ } iw \text{ } p^3 \text{ } mn^h \text{ } r \text{ } mg^3$

“When the man comes forth from his mother, he runs to his superior; when the boy serves a soldier, the stripling will be a warrior”;

Notes:

pr p3 rmt (nominal) *sdm=f* of *pr* “to come forth” as protasis to an *iw*-clause as apodosis (Circumstantial Present as form of a Late Egyptian balanced sentence);

n mw.t=f < *m mw.t=f (pr) m mw.t=f*, the parallel passage in pAnast. II 7, 3 has *pr m h3.t n mw.t=f* “come out of the body of his mother”;

m pd preposition *m* with infinitive of a verb of motion;

n šms < *m šms*, preposition *m* with infinitive of a verb of motion; the parallel passage in pAnast. II 7, 3-4 employs the verb *šms* “follow” in the Old Perfective;

iw p3 mnḥ r mg3 *iw*-sentence of the type *iw* NP *r* NP: “someone becomes something”.

(3) Balanced sentences in the oath formulae

Despite its widespread use in Late Egyptian, the syntax of the *wnn=f hr sdm* — *iw=f hr sdm* balanced sentence construction is a remnant of Middle Egyptian. The balanced sentence forms of the oaths must be understood in the same fashion (cf. the appendix § 7.1). With an initial prospective *sdm=f* of the verb *w3ḥ* and a *iw*-sentence, which is paradigmatically interchangeable with an independent sentence, it is structurally derived from the Middle Egyptian topicalization construction and not from the balanced sentence. It is therefore syntactically related to the passage from pSallier I 7,1 cited above. Following the initial *sdm=f* is a Conjunction, which is the actual content of the oath:

(oGardiner
104, 2-4)

w3ḥ ʾImnw w3ḥ p3 ḥq3

mtw=ī mdw m p3y ʿ3.t

iw=f hr 100 n šḫ.t

“As long as Amun and the Ruler shall endure, and I talk about this donkey, [I] shall be subject to 100 lashes.”

Notes:

mdw m p3y ʿ3.t in the sense of: to contest the affair of the donkey;

iw=f hr 100 < *iw=ī*; pronominal adjustment as characteristic of indirect speech; *iw*-clause of the type *iw* NP *hr* NP.

The following example with an Emphatic Sentence (apodosis) and an oath formula in anticipation (Protasis) illustrates that there are also authentic topicalization constructions in Late Egyptian which are constructional parallels to the foregoing example:

(RAD 72, 1-

w3ḥ ʾImnw w3ḥ p3 ḥq3

73, 1)

mtw=tw gm šḫ.t h3-(n-)t3 iw sk3=ī sw m iw Nby.t

r.šdī=tw n3 īt m.dī=ī

“As long as Amun and the Ruler endure, should fields of Crown Land which I have tilled on the island of Ombo be found, then the corn should be exacted from me.” (For the hieroglyphic text and comments, cf. supra § 3.3.2).

A new kind of balanced sentence could be said to have evolved out of this formula by omitting the *sdm=f* phrase of the protasis (which happens quite often). Thus the oath is formed with an initial Conjunctive and a following *iw*-clause or Circumstantial Present (NIMS; cf supra § 5.4.3[3]). The form of such constructions corresponds in a way to that of the closed complexes like those discussed above: a dependent form (Conjunctive) as protasis and a dependent form as apodosis (or, in the case of the “old” *iw*-sentence, a form which was no longer used independently, because it was preserved only in such contexts) semantically bound together in an “if — then” relationship.

(oKairo
25553, rt.5)

mtw=i tm db3 n3 cw iw=w r=i m q3b (Someone was caused to swear an oath of the lord with the words) “If I do not pay for the loaves, they will be charged double to me”;

Note:

iw=w r=i m q3b *iw*-clause or Circumstantial Present as apodosis, literally, “they are against me doubly”.

Understanding the evolution of this construction, however, saves the necessity of considering them as sentence types by themselves. The following examples have already been mentioned elsewhere:

iw b3 qnb.t hr dī.t iry=f nh n nb c.w.s. r-dd mtw=i cqr p3y m-h-y iw=f hr 100 n sh.t 5 wbnw (pBerlin P. 10496 vs.11-12)
“And the court made him swear an oath of the Lord to the effect that, ‘If I enter this burial chamber, [I] should be subject to 100 lashes and five lacerations!’” (For the hieroglyphic text and comments, cf. supra § 5.4.3[3]).

m3c.t p3 dd=i nb mtw=i pn c r3=i c n m dw3.w s3 dw3.w iw=i dī.k b3 iwcy.t Kš (pBM 10053 vs. 2,18)
“‘(He swore an oath of the lord as follows:) ‘Everything which I have said is true, and if I reverse my statement at any time in the future, may I be stationed in the garrison of Cush’” (For the hieroglyphic text and comments, cf. supra § 3.2.2[2]).

6.3 Forms of co-ordination in narrative

6.3.1 The classic forms of textual organization

Mainly in literature — and rarely in other textual genres — the sequence of events is formulated using constructions with *wn.ỉn* and *ḥ^c.n*. These are linguistic forms of Middle Egyptian which have been preserved in the literary registers. In the framework of Late Egyptian grammar, they can be understood as a morphological sub-type of the auxiliary verb constructions (cf. supra § 2.2.3[3]).

forms and variations

Of the formal variants of the Middle Egyptian *wn.ỉn* constructions (cf. Gardiner, *Grammar*, §§ 469-473), only *wn.ỉn=f ḥr sdm* remained, being more widely used than the *ḥ^c.n* construction.

The Middle Egyptian *ḥ^c.n* construction betrays both tradition and adaption in equal measure. On the one hand, *sdm.n=f* in association with *ḥ^c.n* remains in use in the relevant textual categories — narratives and legal texts — until Dynasty XXI (cf. supra § 3.5.1[3]). On the other hand, the Middle Egyptian *ḥ^c.n sdm.n=f* is re-formed, in accordance with the development of the language, into the Late Egyptian *ḥ^c.n sdm=f* (notably with nominal agents at first). The form *ḥ^c.n* is also occasionally adapted into *ḥ^c* in the same way (e.g. pD'Orb 4,10; 6,5; 18,6; HorSeth 1,5). A final characteristic is that the variant *ḥ^c.n=f* + Old Perfective has largely disappeared, but the *ḥ^c.n=f ḥr sdm* form occurs more frequently in Late Egyptian than it did in Middle Egyptian texts.

function

Functionally, the differences between the *wn.ỉn* and *ḥ^c.n* constructions dwindle. Their use is related to the Circumstantial Present in the NIMS-role. They serve above all to express the natural course of events (cf. supra § 5.2.1), they have an “and” function like the Circumstantial Present, and can serve together with the Circumstantial Present as elements in narrative chains. They are, however, independent sentence forms, in contrast to the Circumstantial Present clause. Like the “old” *ỉw*-sentence, they can be used as the main clause (apodosis) in topicalization or consequence constructions. They can also, however, introduce a paragraph or a smaller textual unit. Together with the Circumstantial Present in the NIMS-role, they can form long chains, but at the same time they organize these chains. They link earlier statements with later ones, as does the NIMS, but they accomplish this in a marked form, so to speak (and this marking is frequently highlighted in writing by the use of red ink). In translation, this nuance can be expressed

with conjunctions like “and then”, “then”, “thereupon” etc., but need not, if their use would appear clumsy (note that it is hardly necessary to use the same translation device all the time merely because the Egyptian uses the same form: languages differ in style).

(HorSeth 4,1-4)

hr ṛ s3 ṛ3d.t ʕ3.t wn.ṛn Hw.t-Hrw nb nh.t ršḏ hr ṛy

ṛw=s hr ʕh^c m-b3h ṛtṛ=s nb-r-dr

ṛw=s kfi k3.t=s r-hr=f

ʕh^c.n p3 nṛ ʕ3 zbi ṛm=s

wn.ṛn=f hr dwn=f

ṛw=f hms r.hn^c t3 psd.t ʕ3.t

ṛw=f hr dd n Hrw hn^c Stš ṛ.ḏd r=tn

wn.ṛn Stš ʕ3 ph.ty z3 Nw.t hr dd

“Now after some time, there came Hathor, Lady of the Southern Sycamore; she took her stand before her father, the Lord of All, and exposed herself in front of him. And the Great God laughed at her. But then he got up, sat with the Great Council of Gods, and said to Horus and Seth: ‘Speak for yourselves!’ Thereupon Seth, Great of Strength, the Son of Nut, said ...” (italics here indicate red ink in the original);

Notes:

wn.ṛn Hw.t-Hrw as apodosis of an ṛr-sentence construction organizing the narrative. The apodosis continues the main line, being twice complemented with a Circumstantial Present in the NIMS-role;

ʕh^c.n p3 nṛ the preceding activity has a result (ʕh^c.n), which in turn has a consequence which is marked as such (wn.ṛn). This sets them off from the unmarked consequences, which are expressed by two Circumstantial Clauses continuing the content of the wn.ṛn construction;

r-r3=tn status pronominalis writing of r=tn (> ʕP(U)=TN);

wn.ṛn Stš continuation of the main line of the narrative.

Such relations between the wn.ṛn and ʕh^c.n constructions are common. The following ʕh^c.n - wn.ṛn example is the continuation of the text from the exercise of § 3.3.4 supra (and the relationship of the forms there should be recalled). The preceding passage is “(6,2; hr ṛ sw m n^cy) And as she walked along under the trees, (wn.ṛn=s nw) she looked around, (ṛw=s) seeing (6,3) the Council of Gods (ṛw=sn) eating bread in the presence of the

Lord-of-All in his hall. (^ch^c.n Stš nw) Then Seth looked up (6,4; *iw=f ptr=s iw=s di iy.ti*) and saw her coming”:

(HorSeth 6, 5-7)

wn.în=s hr šnti m hk3=s

iw=s ir hpr.w=s m w^c šr^c nfr.t n h^c=s

iw nn wn m²-qd=s m p3 t3 r-dr=f

^ch^c.n=f mr.ti=s r dww^c3 n wr

wn.în Stš hr dwn=f

iw=f hms hr wnm^c q.w r hn^c t3 psd.t^c3.t

iw=f šm.t r ir.t n-h3.ty=s

iw bw.pwy.t w^ciw ptr=s hrw=f

“And she did her magic and turned herself into a girl, with a body so beautiful that the like of her had never been in the entire land. Thereupon he desired her very badly indeed. And so Seth got up — as he had been sitting eating food with the Great Council of Gods —, and went to meet her, whom no one apart from him had seen.”

Notes:

nn wn *nn* with the participle *wn*, “the one who is such-and-such does not exist”; the strengthening of the negation with *m p3 t3* will become very common in the Demotic Setna-Khamemwese story;

iw=f hms circumstantial complementing the *wn.în*-construction, by providing the necessary background: it thus does not lie on the same logical level as the following circumstantial (*iw=f šm.t*);

ir.t n-h3.t < *ir.t m-h3.t* “to meet someone”;

iw bw.pwy.t note the form of the expression *iw bw.pwy.t w^cyw ptr=s hrw=f* * “not one having seen her except him”.

Occasionally, the *wn.în* constructions can be used to formulate the text linking parts of a dialogue (just like the circumstantial clause in NIMS-function):

(HorSeth 10,11-12)

wn.în t3 psd.t hr dd imm^c š.tw n Hr w hn^c Stš wpt.tw=w wn.în=tw in^c.t=w m-b3h t3 psd.t

“And then the Council of Gods announced: ‘Let Horus and Seth be summoned, so that they may be judged!’ Thereupon they were brought before the Council of Gods”. (For the hieroglyphic text and comments, cf. supra § 3.4.3[1]).

The *sdm.ḫn=f* — which should be considered as the systematic origin of the *wn.ḫn* form *ḏd.ḫn=f* — still appears, but quite rarely, in the literary genres, after the verb *ḏd* “say”, and occasionally in other registers (particularly where the person speaking is of unusual importance socially).

6.4 Notes on linguistic evolution

6.4.1 The evolution of the forms

The constructions studied in this chapter could all be described as morphological units, but they also exceed the limits of the sentence as a Late Egyptian morphological unit. Late Egyptian sentence types are components of these constructions, but the principles of their construction cannot be understood solely in terms of Late Egyptian syntax. These principles — particularly those of the balanced sentences — can be more easily understood in terms of the Middle Egyptian system (cf. supra § 3.0). These constructions preserve forms which have otherwise largely fallen out of use, particularly the independent *ḫw*-sentence. It is, however, worth noting that the basic changes reflecting the Late Egyptian system also affect these relic forms syntactically and morphologically.

One area affected by this is topicalization. An earlier *ḫr + sdm=f* does occasionally appear in the protasis, but it is generally replaced by an updated form, *ḫr + Circumstantial Present* (cf. supra § 6.1.3[3]). What had been the qualification of an initial topicalized noun + infinitive, Old Perfective or Adverb (adnominal adverbial) in terms of linguistic evolution, can no longer be distinguished from the First Present in Late Egyptian. *ḫr + First Present* thus appears as a new form of temporal expression (cf. supra § 6.1.2[3]).

Another area affected by this is the balanced sentence. There are examples which can be understood as the precise reproduction of this type (cf. supra § 3.3.2). In terms of linguistic history, the *wnn*-construction reflects the multi-faceted nature of the *ḫw*-sentence even more than the other combinations of which it forms the second member. This multi-faceted nature comes to the fore (1) in those combinations where it is the remnant of the independent Middle Egyptian *ḫw*-sentence, and (2) because in the framework of

Late
Egyptianizing
older
constructions

balanced
sentence

Late Egyptian, the *ḥw*-clause as Circumstantial Present is the most common form of subordinated clause — where it is the heir of the Middle Egyptian circumstantials (particularly the *sdm=f*). It is thus possible to claim two Middle Egyptian sentence constructions as the precursors of the *wnn*-construction:⁴

1. The anticipation with a noun in the form of a nominal *sdm=f* of *wnn* preceding an independent *ḥw*-clause — [*wnn=f ḥr mdw.t*]_{noun} [*ḥw=s ḥr sdm*]_{clause} —; the sententiality of the initial expression (including those where an initial noun is specified in detail) reveals its proximity to the balanced sentence.
2. The Emphatic Sentence formed of the nominal *sdm=f* of *wnn* + an adverbial predicate (whether prepositional infinitive or circumstantial *sdm=f*) — [[*wnn=f ḥr mdw.t*]_{noun} [*ḥr sdm*]_{adverbial phrase}]_{sentence} OR [[*wnn=f ḥr mdw.t*]_{noun} [*sdm=f*]_{adverbial phrase}]_{sentence} — the second type being simultaneously a variation of the balanced sentence. In the course of Late Egyptianization both variants coalesce into [*wnn=f ḥr mdw.t*]_{noun} [*ḥw=s ḥr sdm*]_{adverbial phrase}]_{sentence}.

system
alienation and
disappearance

Despite their superficial adaption (“Late Egyptianization”), these constructions were not really integrated into the Late Egyptian system. Since they did not undergo the decisive changes, and thus remained alien to the system, they eventually disappeared. They were linguistic remnants and thus lost in the course of the evolution of the Late Egyptian-Demotic system: traces remain where the adaption was complete, but they disappear where they could not be integrated.

lines of
disappearance

In Demotic and Coptic, the *ḥr* and balanced sentence constructions are no longer present, as the system ultimately reduced the independent *ḥw*-sentence into the Third Future and the Circumstantial Present (and in some respects First Present, cf. supra § 5.2.3[2]). Topicalization allows some of the lines of the disappearance to be followed:

dropping of *ḥr*

Dropping the *ḥr* in the protasis left no other marking for the topicalization constructions except the absolute initial position: the use of a noun or adverbial in anticipation of an independent sentence. Anticipatory use of a noun is only superficially distinguished from the constructions with initial use of nouns in Middle Egyptian by the different nature of the sentence forms which they precede. Where the protasis is a First Present or extended noun which has been reinterpreted into First Present, there develops a clause grouping of the First Present and other sentence types which cannot be distinguished from other conventional chains of sentences.

anticipation of
adverbials

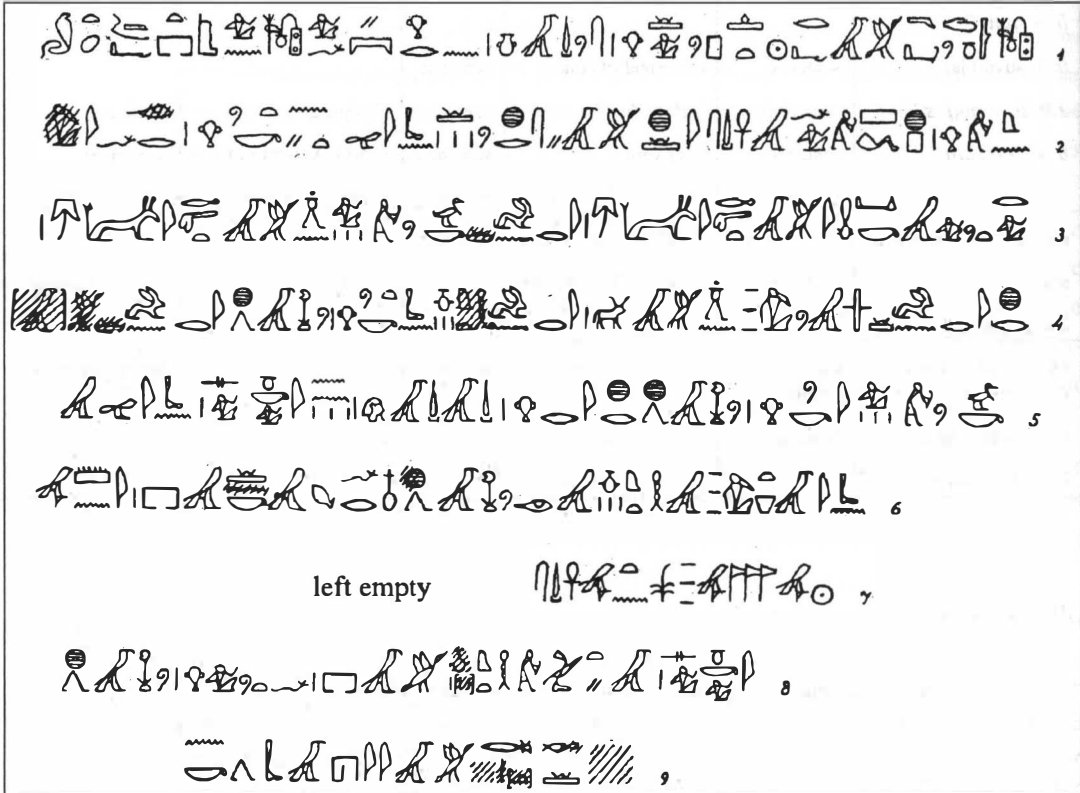

The initial adverbials which thus became possible led to new forms of construction without precursors in Middle Egyptian. Temporal expressions need no longer follow the

4 Compare F. Junge, “Emphasis” and Sentential Meaning in Middle Egyptian, GOF IV 20, Wiesbaden 1989, § 6.2.3.

6.5 Exercises

6.5.1 An ostracon letter (oDM 303)

Short, letter-like note with a teasing complaint sent by a draughtsman of the Tomb Building Administration to his chief, the secretary Qenhikhapshaf. Transcribed and published by J.Černý, *Catalogue des ostraca hiératiques non littéraires de Deir el Médineh*, vol. 4, number 303.

6.5.1 Exercise: oDM 303

Purpose: Example of the text of an ostracon of Dynasty XIX; *ir*-constructions.

Notes:

- line 1 cf. appendix § 7.2 for the introductory lines of letters. *zh3.w n s.t-m3.t* — rarely used in hieratic — is the more official version of the title *zh3.w n p3 hr*. Note the stylistic interplay between the very formal introduction and the tone of the letter itself;
- lines 2-3 *l.r3* as a variant writing of the status pronominalis of *r* (here as rection of *l3* “to act with regard to me”);
- line 3 *m.dl* “with someone”, cf. French *chez*; here nearly “for you”;

lr wn(n) b3k: sdm=f after *lr* (cf. supra § 6.1.3[3]), “if there is work” (note the absence of article); *ln*: passive *sdm*;

line 4 the bull-logogram should probably be read *lh*;

lines 4-5 *lr wn [p3] b3k*, now: “but if the work is available”;

line 5 *lr hr-d3d3-n=n*: roughly: “Between us: ...”; for the construction of *lr* with an adverbial phrase, cf. supra § 6.1.3(1), here not temporal;

bln m bl.t m hnq.t “(someone) who has bad manners with beer”, “who is bad with beer”;

lines 5-6 construction: *lr* + AP as protasis, a clause grouping with Nominal Sentence (tonal question) and Prohibitive as apodosis; the apodosis is a very good example illustrating the structure of such apparent conditional sentences, resulting from question-answer relationships (cf. supra § 6.2.1[1]): “Am I a man who can’t behave himself?! (If that is the case:) Then don’t invite me!” > “If I am indeed a man who cannot behave himself, then you really should not invite me!” The *zl* without article is a reference to the class name (which nevertheless remains grammatically specific!);

line 6 the terminal phrase in the letter, *nfr sdm=k* “good reading!” (prospective *sdm=f* of *nfr* with nominal *sdm=f* as agent/subject, literally “may your reading be agreeable”). This is an example of the use of *sdm.n=f* as an allomorph of *sdm=f* (also with nominal *sdm=f*);

line 8 construction with the negative relative adjective *3l < lwty*: “a man who does not dispose of the beer which is due to his household” (< “without beer from the one belonging to his household”. Note the construct combination *hnq.t p3 (n) pr=f** “beer of the one of his house”; for the form of the possessive prefix, cf. supra § 2.1.2[2]);

line 9 nothing should be missing in the lacuna at the beginning of the line (*wh3 mh h3.t=l* “to seek to fill my body”). The end is probably an abbreviated form of *<m> p3y=l h3b n=k*.

6.5.2 A passage from a Late Ramessid story (Wenamun 2,26-37)

Excellently written literary text dating to the end of the New Kingdom. The text includes a date to Year 5 of the “Renaissance-Era” which is Regnal Year 24 of Ramesses XI. Political power over Upper Egypt is in the hands of Herihor, while Smendes and Tentamun rule Lower Egypt. The papyrus was found in el-Hiba and is now in the Pushkin Museum in Moscow. It was published by Gardiner, *Late Egyptian Stories*, pp. 61ff.: the passage reproduced here is pp. 69f. The following passage contains the decisive speech of Wenamun which finally convinces Tjekerba’al, the ruler of Byblos, to deliver the desired wood.

Purpose: Example for the advance of the Late Egyptian of the lower hierarchical registers into literature; clause groupings (*lr*- and *hn*-constructions).

Notes:

2,26-27 This passage is preceded by: “It was Amun-Re, the King of the Gods, who ordered Herihor, my Lord, to send me, and he had me come with this great god (Amun-of-the-Way)”;

2,27 read *lw=f mn3 <m> t3y=k mr*, although the occasional adverbial use of locational expressions as absolute nouns should be borne in mind;

l̥w bw r̥h̥=k l̥n sw d̥l̥: example of an object clause following *r̥h̥*, which can be understood as an indirect question: “without your knowing whether he is there” (< “although you could not know: ‘is he here?’”);

2,27-28 interrogative negated Adverbial Sentence (First Present) omitting preposition *m̥*: *l̥n bn sw <m̥> p̥3 n̥ty wn̥=f* “Is he no longer what he was?” (a Nominal Sentence should be: **l̥n bn m̥nt.f p̥3 n̥ty wn̥=f* or **l̥n bn m̥nt.f l̥wn̥3 p̥3 n̥ty wn̥=f!*); for the construction of *nty* with preterite *sdm̥=f* cf. § 5.1.2(3);

2,28 read *m̥.d̥l̥* rather than *m̥-ḏr* (as there is a writing *m̥.d̥l̥* for *m̥-ḏr*, *m̥-ḏr* can also be a writing of *m̥.d̥l̥*);

2,29 *wn̥-d̥l̥=w* (> *wn̥.t̥=w*) is a phonetic writing (with assimilated *m̥*) for the existential sentence *wn̥ m̥.d̥l̥=w NP* “NP belongs to them”, “they possess NP”, in which Coptic OYNT̥=OY is already apparent;

construction: *l̥r*-protasis with complex apodosis itself consisting of a *hn̥*-clause grouping: “As for this-and-that — if they had had this, they would not have had to bring that!”;

2,34 restore: *l̥mnw-R̥w <nzw> n̥tr.w*;

h̥.t̥=f: note the change in the form of the determination of *h̥.t̥* here and in lines 2,29 and 2,30, *n̥3 h̥.t̥* “the things”, but *h̥.t̥=f* “his things” meaning “his (inalienable) possessions”;

Ns-sw-B3-nb-ḡd.t̥: sentence name: “He belongs to the Ram of Mendes”, Hellenized as Smendes; *T3-nt- l̥mnw* is an appellative name: “She of Amun”;

2,36 *mt̥w=w d̥l̥.t̥ l̥n.tw p̥3 n̥ty-nb*: Conjunctive as continuation of the final prospective *sdm̥=f* (*h̥3b̥=l̥ sw*) following an imperative;

l̥mm l̥n.tw=f: resumption of *p̥3 n̥ty-nb*; here and in the following, the person being addressed is changed (speech within speech), and Tjekerbaʿal is no longer addressed, but rather Smendes (although hitherto Smendes and Tentamun were always referred to in the plural); the messenger should assure Smendes that Herihor will guarantee Wenamun’s expenses after his return (the assurance is effective, as the text following this passage indicates).

6.5.3 A letter concerning tax demands (pValençay I)

This letter was written by the mayor of Elephantine Maryana to the Chief Taxing Master Manmuarianakht, probably during the reign of Ramesses XI. In a very elegant fashion, the mayor attempts to deny an obligation to pay what appears to him to be an unjustified demand. Gardiner published the letter in *RAD* 72-73 and *RdÉ* 6 (1951): 115-127.

Purpose: Example of an official letter to a very high ranking official of the central administration; *l̥r*-constructions; use of oaths

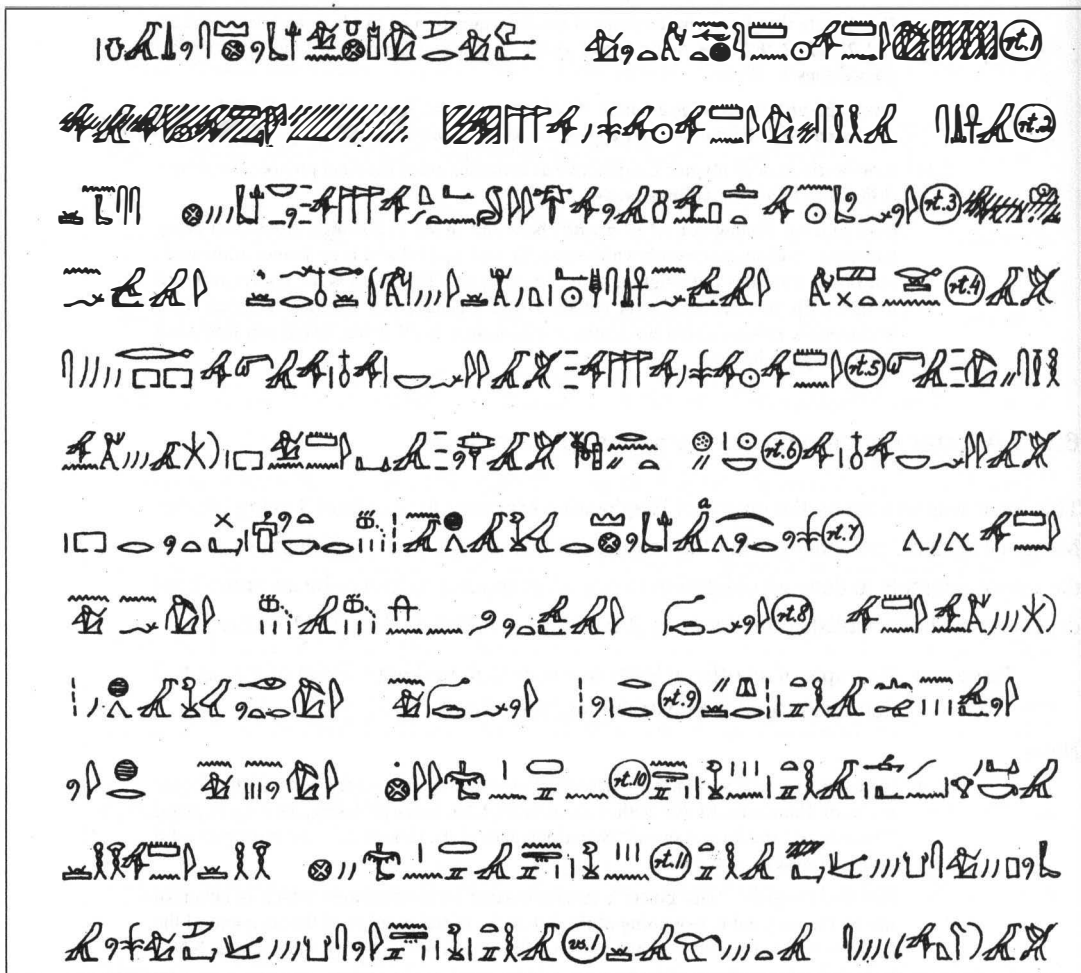

Notes:

rt. 1 the name of the “Chief Taxing Master” *Mn-m̥3̥.t-R̥w-n̥h̥t.w* is formed with the throne name of Ramesses XI (or Sethos I). A little later he is probably, as *l̥m.y-r3 pr-ḡḡ* “Treasurer” and *l̥m.y-r3 snw.t̥l̥* “Superintendent of the Granaries”, the most powerful financial official in the land;

NN (hr) s:wḡ3-ib: “NN greets”, an abbreviated form of address which is balanced out by the very polite beginning of the letter: the initial position of the recipient of the letter — before the writer — and the letter introduction with “May Amun praise NN”;

rt. 2 restore: *[tw̥=l̥ ḡḡ] n̥ [l̥mnw-R̥w]-Ḥrw-3̥h̥.t̥y*; the request is to Amun-Re and the gods of Elephantine;

- rt. 3 abbreviated writing *ḥbtw* for Elephantine;
- rt. 4 *pḥ n št*: the “Chief Taxing Master” is the head of the office responsible for tax assessments on the basis of the land survey. pWilbour is one of the reports of this office (cf. Gardiner, *The Wilbour Papyrus*, Vol.II: 10, 150, § 200);
- rt. 6 *ḥw-nb zp-2*: “day-in-day-out”, best understood as an adverb related to the introductory *tw=i dd n 'Imnw* (a reference which in other cases often does not appear to be possible, however);
- Pḥ-ḥw-m.dl- 'Imnw*, sentence name (“The Breath of Life is Amun’s” < “with Amun”);
- dwḥ.t-nṯr n 'Imnw*: at this time the “Divine Adoratrice of Amun” (also *ḥm.t-nṯr n 'Imnw* “Divine Consort of Amun”) still was a high-ranking position held by queens and princesses (liturgical representation of the goddess Mut), with its own administration (*pr*) and income;
- rt. 7 *nḥ t r.tks=tw*: “the grain assessed”; for the grain terminology, cf. *infra* § 7.3.2(3);

6.5.3 Exercise: pValençay I, rt.1-vs.1

6.5.3 Exercise: pValençay I, vs. 1-11

- rt. 8-9 *lw mn 3h.wt hr=w*: “but there aren’t (any) fields with that much” (< *‘‘although there are no fields with them’’, the 100 sacks); note the writing of the status pronominalis of *hr* (*hr-r-r3=w* > 2ΔΡΟ=ΟΥ);
- rt. 9-10 *hr w^c 3h.t n b3-(n-)t3 n (<m) lw n Nby.t*: “because of a leasehold of Crown Land on the ridge of Kom Omba” (for the individual words, cf. the glossary § 9); note the writing of *hr*: the transliterated *n* should be read only as a meaningless stroke;
- rt. 10 *ln=w n=l*: “they said to me”, change of the pronoun from sing. to pl. (the secretary of the Divine Adoratrice has a group of men with him to collect duties);
- rt. 11-vs. 2 up to this point a situation has been described; with the oath, the author of the letter has now addressed himself to the recipient of the letter; for this part of the text, cf. supra § 3.3.2;
- vs. 23 for the main clause (Pseudo-Cleft Sentence) of this longer sentence cf. supra § 4.3.3; note that *3h.t* “field (on lease); leasehold estate” is construed as a grammatical masculine;
- vs. 34 *lw=w h^c s.wd p3y=f nbw r pr-hd n Pr-3*: “and they go about transferring its gold (the gold which is assessed for the leasehold) to the Treasury of Pharaoh”; for the use of *h^c* as an auxiliary verb, cf. supra § 2.2.3(3);

- vs. 5 *m sw}w n qb}*: “in the region of Edfu”;
4 s}t-}h.t: “4 arouras of fields”; note the aroura-specific numeral;
- vs. 5-6 construction: converted Pseudo-Cleft Sentence, which — concerning the preceding phrase — can be rendered as: “(it is not irrigated) — or rather, it is only 4 arouras of it that were irrigated”;
- vs. 6 *htr*: here “ox team”;
- vs. 7 *p}nkt n }h.t*: “the bit of field”;
- vs. 8-9 *lw bw.pw=l hn n w^c lp.t lm=f*: it is possible (but not necessary) to understand this sentence as anterior to the preceding phrase, “not having touched one oipe of it” > “without touching one oipe ...”;
 for the grain measures here and in the following note, cf. infra § 7.3.1;
- vs. 10 for the construction of content clauses, cf. supra § 5.3.2(2) (here with a “binding” oath which as such is not discussed in the appendix, § 7.1);
- vs. 11 *w^c h}r 0 (lp.t) 1/2*: “(not) even one half of a n oipe” (< * “a zero sack, 1/2 [oipe]”);
 for the terminal formula (and other elements of the epistolary style), cf. infra, § 7.2.3.

7. Appendix

7.1. The New Kingdom oath

7.1.1 Characteristics

Oaths are of two kinds: (1) the “simple” oath and (2) the “extended” version. Both share the same formula (compare the English “I swear” or “So help me God”). The simple oath is followed by a statement of what is to be sworn. The extended oath includes the facts which are sworn to, and the following statement specifies the sanctions facing the oath-taker (“such-and-such will happen to me”).

simple and extended oaths

The oath itself is grammatically an independent prospective *sdm=f* form of the verbs *ḥnh* “live” (with occasional extensions with *mri*, *hzi*) or *w3h* “endure”. One swears by the Ruler, gods (generally Re or Amun), or both. The facts asserted in the simple oath, and the sanctions specified in the extended oath, are formulated as independent sentences, generally *iw*-sentences, Adverbial Sentences (First Present) or sentences using second tenses.

the oath formula

On the basis of their contents a distinction can be drawn between assertory oaths (“this-and-that is/is not so”) and promissory ones (“I will/will not do this-or-that”).

facts sworn to

7.1.2 The simple oath

(1) The earlier type: the *ḥnh*-oath

The basic pattern of the simple oath is: *ḥnh n=i NN dd.n=i m m3^c.t* “As NN lives for me, I have spoken truly” (cf. Gardiner, *Grammar*, § 218). Oaths of the period extending down to the early New Kingdom follow this pattern. In the Ramessid Period, they still appear in the higher textual registers (Qadesh Poem). With extensions (which can be numerous, with many variations):

(Urk.IV 751,17-752,4)

ḥnh n=i mry w3 R^cw
hzi w3 lty=i 'Imnw

ḥwn fnd=i m ḥnh wšs
iw ir.n=i nn [r mš^c.t]

“As Re lives for me and loves me, and as my father Amun favours me, and my nose is rejuvenated with life and prosperity, I have truly done this.” (Statement: *iw sdm.n=f* sentence). Similarly

(Urk. IV 776, 6-9)

ḥnh n=i [mry wī] R^cw ḥzī wī ity=i ḥImnw nn r šw ḥpr r wn-[mš^c] “As Re lives for me and loves me, and as my father Amun favours me, all of this truly is.” (Statement: Adverbial Sentence with Old Perfective).

(2) The Ramessid type: the *wšh*-oath

In the Ramessid period, the formula of the oath is transformed through the use of *wšh* :

(pAnast. I 7, 6-7)

wšh kš n Dḥwtī (< dd.w) ir.n=i ḥr-tp=i iw bw ḥš=i n zhš.w r dī.t mtr=f “As the Ka of Thoth endures, I have acted on my own, without calling a scribe so as to have him present.” (Statement: *sdm(.n)=f* sentence; the scribe Hori emphasizes that he himself is competent enough to write a letter).

The most common version in this period is the oath *wšh ḥImnw wšh pš ḥqš* “As Amun endures and the Ruler endures”:

(oDM 58)

ḥnh n nb ḥ.w.s. ir.n A wšh ḥImnw wšh pš ḥqš i.dī=i ḥpr r-šš^c 10 iw dī=[i] p šy wrs n B “Oath of the Lord sworn by A: ‘As Amun and the Ruler endure, I will let no more than 10 days pass until I shall have given this head-rest to B’” (statement: Second Tense with adverbial *sdm=f*).

7.1.3 The extended oath

(1) The detailed version

In the Ramessid Period, the oath generally consisted of three parts: (1) the fixed oath formula *wšh ḥImnw wšh pš ḥqš*; (2) the formulation of what is sworn (in the form of the Conjunctive); and (3) the statement of the sanctions to which one will be subjected in case of non-compliance (in the form of an independent sentence, frequently the old *iw*-sentence!):

(oGardiner 104, 2-4)

(1) *wšh ḥImnw wšh pš ḥqš*

tied and sealed (cf. supra § 0.3.2). The names of recipient and writer were written on the outside of the resulting packet (cf. Bakir, *Epistolography*, pp. 24-29).

conventions of letters

Like letters everywhere, Egyptian letters reveal culturally specific conventions which at the same time reflect social stratification and the individual's virtuosity in manipulating the conventions. Although these are very clear, we should not assume that they were very strictly observed, however, precisely because they leave room for personal idiosyncrasies, and can even be completely ignored on occasion. They change over the years, but are also included in instructions (one of the letter writer's guides, pSallier I — *LEM* 79-88 — has the heading *ḥ3.t-ᶜ m sb3y.t šᶜ.wt* "Beginning of Epistolary Instruction"). Within the conventional framework of letters, the language is rather colloquial, and they are representative of the linguistic norms of ordinary communication, so that their expressions have played a very important role in grasping the linguistic forms of the new Kingdom.

7.2.2 Structure of a letter

A Dynasty XX letter can be structured as follows (text in imitation of *LRL*, 27-28):

letterhead

(1) *zh3.w* Thutmosis *n zh3.w* Amenophis

Letterhead: "The secretary Thutmosis to the secretary Amenophis";

salutation

(2) *m ᶜnh wḏ3 snb*

m ḥs.t ʾImnw-Rᶜw nzw-nṯr.w Mwt Ḥnsw nṯr.w nbw n w3s.t

Salutation: "(Be) in life, prosperity and health; in the favour of Amun-Re, king of the gods, of Mut and Khons, and all the gods of Thebes";

introductory address

(3) *tw=ī ḏḏ n ʾImnw-Rᶜw-ḥrw-3ḥ.ty* (+ additional epithets; additional gods)

īm m n=k ᶜnh wḏ3 snb ᶜḥᶜ.w k3 ī3w.t 3 nṯr

īm m n=f ḥzī m b3ḥ ʾImnw (+ epithets)

mtw ʾImnw īn.t=k

mtw=n mḥ qnī=n īm=k rᶜ-nb

Introductory address, requesting blessings: "I ask Amun-Re-Harakhte . . . that [he] give you life, prosperity, health, a long life, and good old age, and that [he] grant [you] favour in the presence of Amun; and that Amun [of the Thrones of the Two Lands] may return you safely, so that we may embrace you daily";

subject matter

(4) *ḥnᶜ ḏḏ r.nty*:

sdm=ī md.t nb ī.ḥ3b=k n=ī ḥr=w

p3 ḥ3b ī.īr=k ... st m sš

...

Subject matter: “and I now say: ...”

Typical introductory formulae: “I have taken note of everything that you wrote to me about. Concerning what you wrote (whether so-and-so are well): they are well”;

...

(5) *nfr snb=k*

closing line

Closing line: “May you be in good health” < “May your health be good”;

(6) *ky dd n zh3.w NN n p3 hr ...*

postscriptum

Postscript: “Another communication for Secretary NN of the Tomb Building Administration”.

7.2.3 Summary of conventions used in letters

(1) Letterhead

The Dynasty XX letterhead names the writer (W) and the recipient (R) as: *W n R* “W to R”, where the preposition *n* need not be understood as more than a mere separator. Where the intention is to honour the recipient, his name comes first. This letterhead is an abbreviation of the earlier and more formal type (which appears frequently in the model letters of the miscellanies), with three principal variations. (1) A formula honouring the recipient, *W (hr) s:wd3-ib n (nb=f) R*, “W addresses himself to his Lord R” (< “W gladdens the heart of his Lord R”) — or likewise placing the recipient first: *R W (hr) s:wd3-ib (n nb=f)*. (2) The more familiar form *W hr nd-hr.t (n) R* “W inquires after the state of R”. (3) The businesslike abbreviated form: *W dd n R* “W informs R”, or else *dd(.n) W (n R)*.

(2) Salutation

The recipient is initially greeted with *m Cnh wd3 snb m hz.t* god NN: may he be “in life, prosperity, health and in the favor of god NN”; in tenor, these formulae correspond to our own greetings (like wishing someone “good morning”, but are closer to those in use some time ago, such as “God bless you”). Grammatically, these are relics that follow the principle governing the construction of Middle Egyptian requests and wishes, which could be marked by the omission of the NP (of the recipient) in the adverbial clause (cf. Junge, *Syntax*, § 8.4.1). The salutation is comprehensively extended in the addresses to gods which usually follow.

Where the writer has a very high status, or where the letter is particularly businesslike, the writer begins without any of the usual greetings, blessings, or small-talk, and goes straight to the point.

(3) Address with requests for blessings

The writer makes it clear that it is his concern to get the gods to bless the recipient. These pleas are mostly formulated as *tw=i dd n god NN imm snb=k*. This can be translated in two ways: either as “I pray to god NN that [he] give you (recipient) health”, or “I pray to god NN: Let [him] (recipient) be healthy”. In either case, the pronominal references have to be adjusted, and it is impossible to reproduce the Egyptian construction in translation. This necessity of adjusting the pronouns is a characteristic of indirect speech (cf. supra § 5.3.2[3]).

individual
variations

The contents of the requests can show personal variations, such as “(I pray to Ptah and the gods) *imm ptr=i tw snb.ti mtw=i mh qni im=k* that [they] let me see you again in health, and let me embrace you”. They can also establish that the recipient is a very highly placed individual, with forms like “I pray to Amun: *s:snb R* ‘keep R healthy’”.

(4) Subject matter

The actual subject of the message is introduced with *hn^c dd* with or without *r.ny* — or occasionally with only *r.ny*. This can confirm the receipt of a letter, assuring that everything has been understood, and certain things can be emphasized by topicalization constructions (e.g., with an initial *p3 h3b i.ir=k/iir p3 h3b i.ir=k* with a quotation from the letter in question, “as for what you mentioned, saying that ...” The following main clause can be much shorter than the protasis, e.g., in the form of a First Present *sw m ss*, “he is well”, etc.).

questions
about health

Questions about the correspondent’s health and remarks about one’s own are common: *tw=tn mi ih* “How are you?”, *ih h3b=k n=i hr^c=k* “Please let me know about the state of your health”, or else *mk tw=i m sš* “I am well”, or *tw=i m sš m p3 hrww dw3w hr^c.wy p3 ntr* “I’m well today, tomorrow is in the hands of god” (earlier versions also: *tw=i m sš m p3 hrww bw rh=i^c=i n p3 dw3w* “..., but I do not know the state I shall be in tomorrow”).

wishes and
instructions

Wishes and instructions can be introduced with the formula *wnn t3y=i s^c.t spr r=k* (earlier version: *hft spr t3y=i s^c.t r=k*) “When my letter reaches you”, and be expressed by *iw=f hr sdm* forms. Other wishes and further advice can follow in the Conjunctive. In letters to servants or letters from high-ranking individuals, the Imperative is common, continued with a Conjunctive. Many of these letters thus contain a very high proportion of Conjunctive formulations.

Other topics can be introduced — even after the closing line, as in the example, supra § 7.2.2(6) — with *ky dd* “another message”.

(5) Ending the letter

The closing formula is brief and expresses the wish that the recipient may enjoy good health, *nfr snb=k* “May your health be good!” (compare “Farewell”, earlier “Fare thee well!”). What was probably an earlier variation is *nfr sdm=k* “May your reading be enjoyable!” (< * “may your hearing be pleasant”). This closing line can occasionally be followed by *iw=i h3b r di.t c m=k* or something similar: “I have written to inform you/let you know”. Very businesslike letters are terminated with the formula: *i h rh=k sw* “Please note this”.

7.3 Measures and indications of value

7.3.1 Measures of capacity and weight

Amounts of metals (silver or copper, rarely gold) are in the New Kingdom measured in deben (*dbn*) terms of ingots weighing one *dbn* (91 grammes), fractions being measured in  *qd.t*

(kite, Coptic **KITE**) being $\frac{1}{10}$ of a *dbn*. During Dyn. XIX,

1 *dbn* of silver was worth 100 *dbn* of copper, while during

Dyn. XX, 1 *dbn* of silver was worth 60 *dbn* of copper.

Grain was mostly measured in “sacks” ( *h3r*; 76.88 litres) and fractions thereof: a quarter sack was termed an

ip.t (oipe, Coptic **OIPE**; 19.22 litres), which in turn

consisted of four *hq3.t*. The fractions of the oipe or “quadruple *hq3.t*” were written with signs previously used for the simple *hq3.t*, using the elements of the “Eye of Horus”, as shown in the diagram.

It is important to note how the measure signs were used: the usual hieratic writing for *ip.t* is a dot (or a small circle like Gardiner’s sign N33); the sign for $\frac{1}{2}$  is reversed in hieratic, , and is thus identical to the sign for $\frac{1}{16}$, ; the sign  for $\frac{1}{8}$ is written . Units of measure are generally preceded by the “sack” sign, and where this is not immediately followed by a digit, it means “zero sacks”, and the following fractions are to be understood as oipe-measures, which are generally rendered in terms of quantities of sacks in translation (and must thus be multiplied by $\frac{1}{4}$). Examples:

writing and use of fraction signs

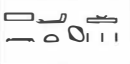

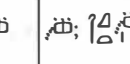

𐎏 𐎏 𐎏 𐎏 𐎏 𐎏 > $h\dot{s}r$ 5, ($\dot{i}p.t$) $2 \frac{1}{2}$ "5 sacks, $2 \frac{1}{2}$ oipe" means "5 $\frac{5}{8}$ sacks" ($< 5 + 2 * \frac{1}{4} + \frac{1}{2} * \frac{1}{4} = 5 + \frac{1}{2} + \frac{1}{8} = 5 + \frac{4}{8} + \frac{1}{8}$);

𐎏 𐎏 𐎏 𐎏 𐎏 𐎏 𐎏 $h\dot{s}r$ 0, ($\dot{i}p.t$) $3 \frac{1}{4} \frac{1}{8}$ "0 sack, $3 \frac{1}{4} \frac{1}{8}$ oipe" means " $\frac{27}{32}$ sacks" ($< \frac{3}{4} + \frac{1}{16} + \frac{1}{32}$).

7.3.2 Units of value

(1) Calculation of value

In all relatively complex economies a value must be specified for goods and services if these are to be exchanged. This requires abstract units of value, permitting the value of different things to be calculated and compared. Even without minted coins, such units of value approach those of a "monetary economy". In the New Kingdom, these units of value take the form of grain and metal. Their "monetary" value can be presented in tabular form thus (*dbn* of copper):

 šnꜥ.t/(znḏw)	 $h\dot{s}r$	 <i>dbn</i>	 $\dot{i}p.t$	 <i>double hq3.t</i>	 $h\dot{q}3.t$	 <i>hnw</i>	
1	2	4	8	(16)	32	320	
$\frac{1}{2}$	1	2	4	(8)	16	160	= 76.88 l
$\frac{1}{4}$	$\frac{1}{2}$	1	2	(4)	8	80	=91g copper
$\frac{1}{8}$	$\frac{1}{4}$	$\frac{1}{2}$	1	(2)	4	40	= 1 artabe
$(\frac{1}{16})$	$(\frac{1}{8})$	$(\frac{1}{4})$	$(\frac{1}{2})$	(1)	(2)		
$\frac{1}{32}$	$\frac{1}{16}$	$\frac{1}{8}$	$\frac{1}{4}$	$(\frac{1}{2})$	1	10

Observations:

šnꜥ.t/(znḏw) The reading znḏw is Janssen's in *Commodity Prices*; the unit goes out of use during the reign of Ramesses III;

dbn/ḏp.t as a rule, lower prices are indicated in grain, higher ones in deben;

$h\dot{q}3.t$ an earlier unit which drops out of use in the New Kingdom. It is presented here in order to convey the relationship of the various values. This is even more true of the "double $h\dot{q}3.t$ ".

(2) Comparison

To understand the Egyptian value system, it seems necessary to compare it with our own value systems, but this is not easy. It may help to give some indication of income and the cost of living to get an overall impression of the economic background in which the value system functions:¹

The ordinary members of the Gang of the Tomb Building Administration (*rmꜥ-ḫz.t n* wages *pꜣ ḥr*) who lived at Deir el-Medina had a monthly wage of four sacks of emmer (*bd.t*) and 1 1/2 sacks of barley (*ḫt*), which (at the rate of 5 kg of bread a day) was quite sufficient for a large family, apart from its value as a means of exchange. Beyond that, they received regular deliveries (*ḥtr*) of vegetables, fish, oil, pottery, firewood, and water. These were occasionally supplemented with wine, meat, cakes, beer, clothing and sandals. Altogether it amounted to an income of about 25-30 deben a month. The foreman (*ꜥꜣ n ḫz.t*) received 5 1/2 sacks of emmer and 2 sacks of barley.

A goat could be purchased for 1-3 deben, a donkey for 25-40, a head of cattle for prices 20-50 or 100-120; sandals cost about 2 deben a pair; a bed 12-25; a coffin 20-40. The value of the loot from a tomb could amount to 150, 222, 1100 or 1200 deben (pBM 10383).

(3) Graphemes and terms in the grain measure

The grain mentioned in accounts and similar documents is mostly *bd.t* (Coptic **ⲃⲟⲧⲈ**) “emmer; spelt”, and *ḫt* (Coptic **Ⲉⲓⲟⲧ**) “barley”. Both together are *šš* (< *šsr*) “grain”. As *ḫt* has very often already taken on the meaning of *ḫt* “grain” (e.g., *m nꜣ ḫt n NL* “of the grain of [the] town NL), “barley” is then called *ḫt-m-ḫt*, “‘grain’ in the form of barley”. When the scribes used both red and black ink, from Dynasty XVIII on red was used for *bd.t* “emmer” and black for *ḫt(-m-ḫt)* “barley”.

7.4 Titles, offices and functions in Deir el-Medina

7.4.1 The Tomb Building Administration

p3 hr

As with the construction of pyramids in earlier times, in the New Kingdom, too, the construction of the royal tomb involved a large organization, under the supervision of the office of the *β.ty* (“Prime Minister” or “Vizier”), and later of the High Priest of Amun (the *pr-ʾImnw* was the main administrative authority on the west bank). Financially, the *im.y-β pr-ḥd n Pr-ʿ3* (“Superintendent of the Treasury”) was responsible for it. The organization took its name, *p3 hr*, “The Tomb”, from the tomb of the reigning king, which would be the one under construction at the time (abbreviation of *p3 hr ʿ3 šps n ḥḥw m mp.wt n Pr-ʿ3 ʿ.w.s. hr imnt.t W3s.t* “the Great and Noble Tomb of Millions of Years of Pharaoh in the West of Thebes”). In this book, *p3 hr* is mostly rendered “Tomb Building Administration”.

t3 iz.t n p3 hr

The workmen of the *hr*, the Tomb Building Administration, were organized into a team or Gang (literally “crew”, *iz.t*). Although in general the number of workers averaged out at somewhere between 40 and 70, the number of members of the Gang fluctuated substantially even during individual reigns, so that, e.g., Ramesses IV and Ramesses V increased its strength to 120. The members of the Gang lived together with their families in a common settlement, called *p3 dmi* “the village” — today called Deir el-Medina, “the monastery of the city” — in a small wadi (*t3 in.t*) in the western mountains, with access to the plain and, across a mountain ridge, to the Valley of the Kings (*sh.t ʿ3.t*).

ḥwtwy n p3 hr

The Gang was directed by a collective body (*ḥwtwy n p3 hr*). They were supported by “auxiliary workers from outside” the settlement (*smd.t bnr*). The Tomb Building Administration was assigned a detachment of police, which generally consisted of two officers (*hr.y-mḏḏy n p3 hr*) each with three policemen (*mḏḏy*).

7.4.2 The organization

(1) The Gang

“The Gang of The Tomb” (*t3 iz.t n p3 hr*) is a collective appellation for the body of craftsmen and workers of the Tomb Building Administration, their officials, and superiors. Regardless of their specific responsibilities, the men are all termed “the men of the ‘Gang’” (*n3 rmt iz.t*), or “workmen”; in hieroglyphic inscriptions this title is rendered as *sdm-ʿš n s.t m3ʿ.t* “servant of the place of truth”. They are also occasionally called *rmt ḥmww* “craftsmen” or, figuratively, *wʿw* “soldiers”. Their women bear the title *ʿnh.t n nw.t n p3 hr* “citizenship of The Tomb”.

The members of the Gang were also distinguished according to specialization: as *hmww* “carpenter”, or *hmww h3* “excavator” (“chiseller”), *hr.tyw-(ntr)* “stonemason”, *t3y md3.t* “(relief) sculptor”, or *q-d-y* “stucco worker”, “plasterer”. Among them, the *zh3.w-qdw.t* “draughtsmen” or “painters” ranked higher: they were “scribes” who were not employed in administration, but created the decoration, being literate (occasionally they helped with administrative tasks). When the title is abbreviated to *zh3.w*, the difference between their position and that of the real administrative secretaries is not always clear. The draughtsmen were headed by a “chief” (*hr.t zh3.w-qdw.t*), who belonged to the managerial body of the Tomb Building Administration.

The apprentices were either appointed (being then termed *mnh.w*, “youths” or “striplings” in the older literature), or recruited from the families of the members of the Gang (*ms.w hr* * “children of The Tomb”).

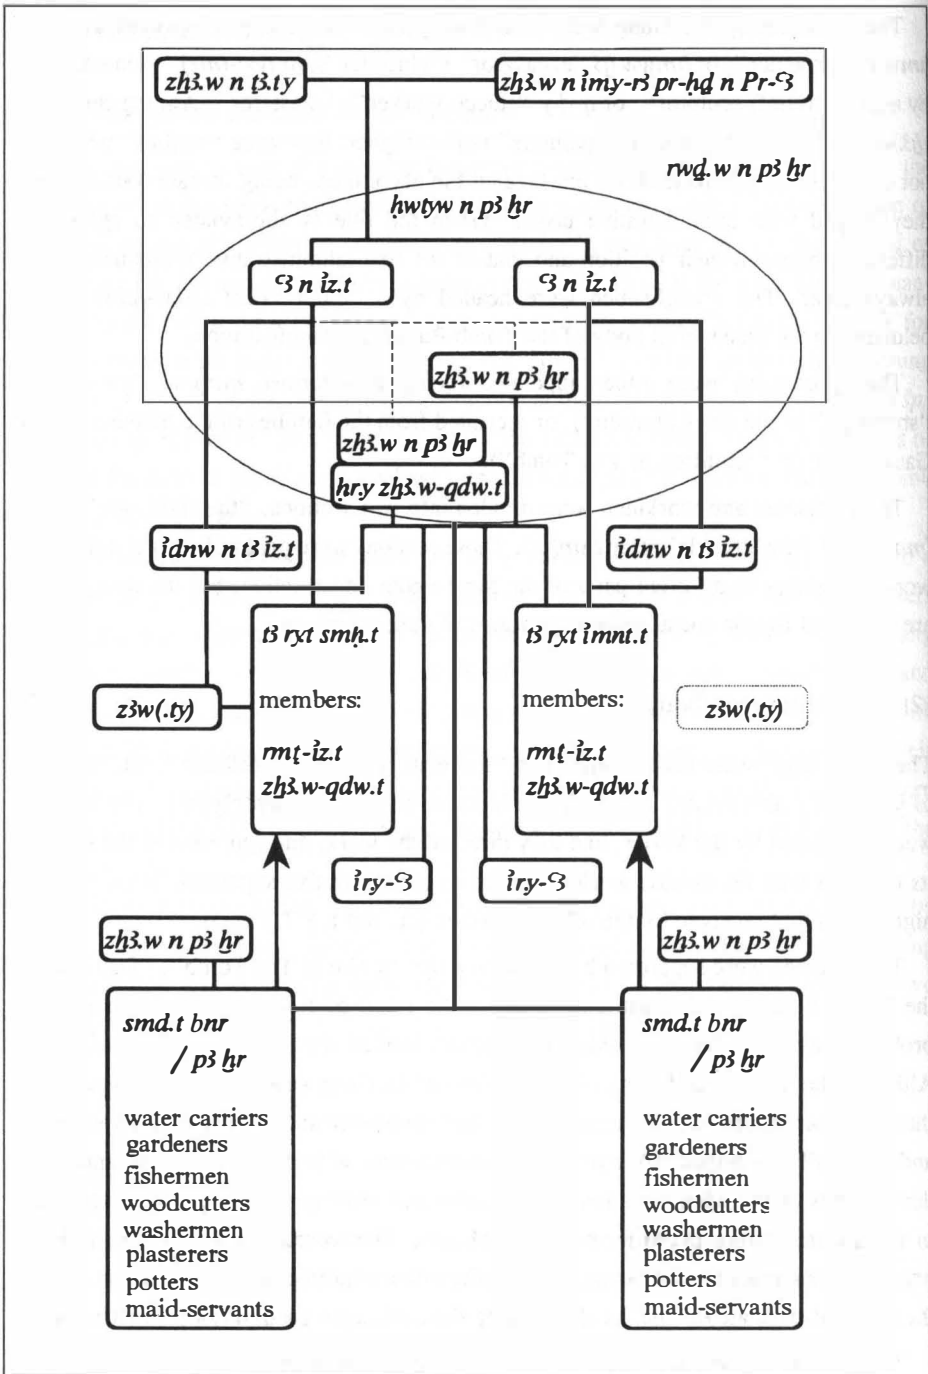

The craftsmen and workmen were divided into two sections, “the right side” (*t3 ry.t imnt.t*) and “the left side” (*t3 ry.t smh.t*). These sections were primarily work-units, who worked together in different parts of the tomb under construction, but the designations are also used for the social reference groups of their members.

(2) The managerial body

The two “sides” were each headed by a “foreman” or “chief-workman”, the *3 n iz.t n p3 hr* (usually abbreviated to *3 n iz.t* in hieratic, *hr.y iz.t* in hieroglyphs). The foremen were nominated by the Vizier, and they directed the work, and represented the Gang in its relations with the outside world and with its administrative superiors. Their pay was higher than that received by the other workmen (cf. supra § 7.3.2[2]).

The foremen were supported by a *zh3.w n p3 hr* “scribe of The Tomb”, “Secretary of the Tomb Building Administration”. From the reign of Ramesses III on there were probably two, one for each side. Two others headed the support staff (*smd.t bnr*). Although the foremen and many of the members of the Gang were literate, it was generally these secretaries who kept the records, recorded attendance and events, kept the accounts, and generally managed all written communications with their superiors and other departments of the administration. These notes and records make up a high proportion of the documents preserved from Deir el-Medina. The secretaries were responsible for organizing supplies for the Gang — and quite often went to collect the relevant dues in the name of the state — and for distributing the equipment used in tomb construction.

The longest-serving secretary of the “right side” was called simply *the* Secretary of the Tomb Building Administration. Together with the two chief-workmen, and the chief draughtsman of the “left side”, they formed the body in control, the group known as “the captains” (or “chiefs”) “of The Tomb” (*hwtyw n p3 hr*).

7.4: "Organigram" of the Tomb Building Administration

The top level of the administrative hierarchy was termed the *rwḏ.w n p3 hr*, the “administrators” or “controllers of The Tomb”. This group consisted of the on-site “captains”, i.e., the foremen and the longest-serving secretary, together with the secretaries of the central administration (distinguished as the *rwḏ.w n bnr*): the “secretary to the Prime Minister/Vizier” (*zh3.w n t3.ty*) and the “secretary to the Superintendent of the Treasury of Pharaoh” (*zh3.w n im.y-r3 pr-hḏ n Pr-ḳ*).

(3) Minor officials

One member of the Gang on each side was the “deputy” (*idnw*, abbreviated from *idnw idnw n p3 hr*) of the foreman. The deputies were frequently the sons of the foremen. They were not numbered among the “officers”, and were only assigned specific tasks (receiving supplies, accepting messages, and serving on the adhoc local courts and investigative committees).

Two “door-keepers” or “porters” (*ir.y-ḳ*) were assigned to the secretaries. They were specifically responsible for the supplies of food, and also served as messengers or ushers, particularly for tax collecting and courts. A porter could be promoted to “guardian” (*z3w/z3w.ty*), an office which appears not to have been twinned. The guardian was responsible for looking after the tools (particularly the valuable copper ones) and other accessories (oils, fat, work clothing, raw materials for pigments).

7.4.3 The support staff

Given its location and the peculiar professional situation of its inhabitants, Deir el-Medina had to be provisioned from outside. The residents traded the specialized items they manufactured with one another and their neighbours in the region, but they were unable to provide for their own sustenance. Both sections thus had to be supplied with a constant flow of provisions — including water — from outside. This represented a part of their income over and above the regular monthly grain deliveries of their wages. They also benefited from numerous services. The personnel providing these services were called the “serfs” or “support staff from outside” (*smd.t bnr*) or the “support staff of The Tomb” (*smd.t p3 hr*), and were generally accountable to a secretary of the Tomb Building Administration. The support staff included five water carriers (*in-mw*) with a leader (*hr.y in-mw*), three vegetable gardeners (*k3ty*) with their journeymen (*hr.y-ḳ*), three fishermen (*whḳ*) with their leader (*hr.y whḳ*), three woodcutters (*ḳḳd ht*), a plasterer (*nty hr ir qd*, later on *qdy*), washermen (*rhty*), potters (*qd*) and five maid-servants (*hm.t*), who moved from house to house, and occasionally a coppersmith (*hmti.y[?]*), boatmen (*nfw*), or a physician (*zwnw*).

8. Bibliography

8.1 Sigla and abbreviations

It is rather difficult to be consistent when using abbreviations and text symbols. Thus, abbreviations will be found which are common or have been common in the secondary literature, alongside those which are used only here. They are, whenever possible, linked via cross-references. Papyri and ostraca are marked by initial “p” or “o” in the cross-references, otherwise by a following “P” or “O” in parentheses. Generally speaking, papyri cited here will also be found in the *Lexikon der Ägyptologie* under “Papyrus/Papyri” (LÄ IV: 672-750). Texts published by K.A. KITCHEN, *Ramesseide Inscriptions*, are indicated as such by a parenthetical note including volume and page number (e.g. KRI VI 57ff).

9. Glossary

The purpose of this glossary is to aid in understanding the examples and translating the exercises so that those words appearing in the examples and exercises are included. Words which were generally transcribed according to their writing in the main text — such as *sdm*, *ir*, *di* — appear in their traditional forms here: *sdm*, *ir̄*, *rdi*. Similarly, the 3ae inf verbs appear with *-i*, although this was not consistently used in the text, where they may appear without ending or with a *-y*. References of a type such as “Gardiner A1” refer to the sign-list in Gardiner’s *Egyptian Grammar*. *z* and *s* are distinguished to facilitate search in the Erman/Grapow *Wörterbuch*, but are arranged as a single sign.

- ʒ.t* see *ʒ.t* back, backbone
- ʒ.t* noun: time, period; moment, instant; *m km n ʒ.t* in an instant (“in the completion of a moment”); *m ʒ.t=f* in a moment favourable to him
- ʒ^c* noun (fem. *ʒ^c.t*): vessel, container; cf. supra § 1.1.1
- ʒb* verb **intrans.**: to stop; take a break; **trans.**: cease, desist, stop doing something (with infinitive as object); part from someone
- ʒbl* verb **trans.**: to wish, long for, covet, desire something; with infinitive as object (also with preposition *n/r* + infinitive): to wish to do; to enjoy (with preposition *m*: be happy about something); *n-ʒb y* for the sake of; with infinitive: in order to do something (“because of the desire to do”)
- ʒbd* noun:  month; *ʒbd n hrw* “an entire month”, “a whole month” (“a month of days”), in group writing ; semogram transfer from *dwʒ.w*, q.v. and supra § 1.2.1(2)
- ʒbdw* toponym (also abbreviated *ʒbtw*): Abydos
- ʒpd* noun: bird, fowl (goose, duck)
- ʒh.t* noun (fem., also masc.): field, land, soil; also: cultivated fields, arable land, agricultural land, fertile land; **specifically**: holding, leased land, tenancy, tenanted parcel, plot (*ʒh.t ʒʒ-tʒ n Pr-ʒ* “leased crown land”)
- ʒh* see *ih*
- ʒh* adjective verb: to be useful, beneficial; to be transfigured, to exist in a state of blessedness, be fit for the world of the divine; thus: to be sacred, holy, splendid
- ʒht* noun: “Inundation” = first season of the Egyptian calendar (according to the agricultural lunisolar calendar it began at the end of June; during the Late Ramessid period it began roughly a month earlier)

- 3h.t noun: horizon, either in the human or in the divine world (primarily: the places where the sun rises and sets); figuratively: tomb, temple
- 3h.t noun (with semogram $\frac{\text{---}}{\text{---}}$, etc.): possessions, property; see *lh.t*
- 3h3h verb **intrans.**: to be or become green: to bloom, be verdant; to prosper, flourish, grow; **trans.**: make green; improve one's self
- 3s verb **intrans.**: hurry; as an adverb: quickly, hurriedly, in a hurry, in haste; right away
- 3tl (with following noun) writing of the negative relative adjective *lwt* (> Coptic ⲗⲧ-), q.v.
- 3tl verb: writing of *3d* to lack, be short of, q.v.
- 3tl verb (< *3t*): assure that; attend to, pay attention to, be heedful of (with preposition *n*)
- 3tp verb **trans.** (< *3p*): to load someone or something; to carry, bear (with preposition *m/hr*: with something)
- 3tw title, see *3tw*
- 3tw noun: administrator, district officer; quartermaster; "inspector", investigatory official (cf. McDowell, *Jurisdiction*, pp. 55ff.; Ventura, *City of the Dead*, p. 183)
- 3d see also *3tl*
- l* see *l.n*
- l* (𐩧𐩨) as an allograph for *r* and *lw*; see supra § 1.1.3(2)
- l3 𐩧𐩨𐩩 particle, interjection: truly, indeed! (or the like), Coptic ⲘⲚ; cf. Černý/Groll, *Late Egyptian Grammar*, § 9.4; see *lh*
- l3.t noun: backbone, back; also metaphorically
- l3wl verb **intrans.**: to age; to grow, be or become old or aged; **nominal derivatives**: *l3wl/l3w.t* age; *l3w/l3w.t* aged ones; old man; old woman; elderly; *lrl l3wl* to spend one's old age; *rdl l3wl* assign, determine age
- l3w.t noun: rank, dignity; office, profession, job; *lrl l3w.t* exercise, perform, fill (the functions of) an office
- l3w.t noun, collective: herds, flocks, cattle; game; animals, domesticated or wild
- l3b see also sub *3b*
- l3b.ty adjective: eastern; left; **nominal derivatives**: *l3bt.t* (< *l3b.ty.t*) East; left side, left-hand side
- l3d (*3tl*) verb **intrans.**: be miserable, wretched; be lacking, suffer shortages (with preposition *hr*: of something); **trans.**: to cause misery, injure, torture or injure someone; lack; **nominal derivatives**: *l3d* the wretched, miserable, poor one; evil-doer; *l3d.t/3tl* need, lack; desperation, despair, misery, woes, calamity, dire affliction; mischief; wishes, requirements
- l3d.t noun: see *3.t* time, moment
- il verb: to come (see *lw*)
- l3 see *l3*
- l.y3 see *l3*
- ȩr verb **intrans.**: ascend (with preposition *n/r* to someone, somewhere); reach someone, something (with preposition *n/m/hr*); to get away

- ḫw/īī* verb **intrans.**: come; with preposition *r*: to a place, a person; for the sake of something; with preposition *m*: from a place; into a place; as someone; with preposition *ḫr*: from a country; on a path; because of something; with preposition *ḫr*: to god, in his presence; **specifically**: to come along, arrive, return; “occur in the future”; be delivered; cf. supra §§ 1.1.1 (for writing); 2.1.4(5); 2.1.7(3); 2.2.3(3)
- ḫw* (𐩧𐩨) circumstantial converter; cf. supra § 5.1.1
- ḫw* (𐩧𐩨) as allograph of *r* and *l* (𐩧𐩨); cf. supra § 1.1.3(2)
- ḫw* noun: island (in a river or sea); **specifically**: “island” in the sense of Arabic *gezira* “ridge of land” (land with a height between the high-water and the low-water marks which is not normally covered by the waters of the inundation except at their highest; cf. *ḫw ḫr.y-ḫb* “island-in-the-middle” (designating bits of land between canals and Nile branches in the Delta)
- ḫw* noun: a kind of dog
- ḫwṣ* noun: cattle, cow; ox; also as sacrificial animal; in association with *wḡd.w*-cattle (“short-horned cattle”) perhaps “long-horned cattle”
- ḫwʕ* see also *ḫwʕy.t*
- ḫwʕy.t* noun: garrison; *rdl B ḫwʕy.t* “assign B to garrison” (cause to serve in the military abroad)
- ḫwnw-ṣmʕy* toponym: “Upper Egyptian Heliopolis”, Thebes; occasionally also used for *ḫwny*
- ḫwny.t* toponym: Esna
- ḫwr* verb **trans.**: to conceive or be with child; **intrans.**: to conceive, to be pregnant (with preposition *m*: with child)
- ḫwty* “who is not ...”, “who is without ...” (Coptic ⲬⲦ-); with following noun and suffix (“someone who does not have his ...”): *ḫw.ty sn.nw=f* who has no one like him, unique; *ḫw.ty-ḫb=f* (Coptic ⲬⲦ-ⲚⲢⲦ) “foolish” (< “(someone) who is out of his mind”)
- ḫwtn* noun: ground, earth, land; dust, soil
- ḫwd* verb **trans.**: to separate from, to distinguish something from something (with object and preposition *r*); as element in compound prepositions: *r-ḫwd A r B* between A and B; particularly *r-ḫwd=s* to lie between; to be between observer and object, “covering it”; to be entrusted, charged with
- ḫwdn* see *ḫwtn*
- ḫb* noun: heart; intelligence, mind, sense; thought, reflections; passion; **specifically**: as subject noun with suffix in Adverbial Sentence (*ḫb=ḫr ...*; also omitting preposition *r*): “my heart is directed towards something” > I am inclined to(wards), I desire (“my thinking strives after something”); *rdl ḫb m-sʕ* “to set one’s heart after something” > to be concerned about, attend to; *ḫr-ḫb* in the midst of
- ḫp* verb **trans.**: count, examine, inspect, reckon, review; size up, assess (person correctly), recognize (someone as something, with preposition *m*); **nominal derivative**: *ḫp.t* count, account, (particular) number; see supra § 2.1.4(2); **specifically**: to be capable of judging (with preposition *m*: in or with something); clever, intelligent, perceptive (frequently of Thoth); cf. supra § 1.3.3
- ḫp.t* noun: something that closes or is closed; **specifically**: (1) clasps, trimming, inlaid or overlaid appliqué elements (metal, on furniture, vessels, carrying staves); (2) closed parts of buildings (magazines, “cellar”); (3) Harem
- ḫp.t* noun (Coptic ⲠⲓⲠⲉ): “oipe”, a measure of capacity (cf. Appendix, supra § 7.3.1; 7.3.2[1])
- ḫpw.t* noun: message, report; mission; business, work, service, assignment, commission; *ḫrl ḫpw.t* to deliver a message; perform an assignment; attend to business; *ḫṣb ḫpw.t* to send a message; *ḫṣb r ḫpw.t* to send to work

- ipt* (with bird semogram) see *3bd*
- imy-r3* noun: title of the heads of administrative departments, "director", "manager", commander, keeper, superintendent (usually rendered as "overseer"); **specifically:** *imy-r3 pr wr* "High Steward", "Lord Chamberlain" ("Comptroller of the Royal Household", manager of the royal properties); *imy-r3 pr hqd* "Superintendent of the treasury" (minister or manager of finance, depending on which treasury)
- imw* see also *im3w*
- imw* noun: bark, vessel, ship (mostly a river transport vessel)
- im3w* noun: tent (bedouin; military); also: hut, booth, pavilion, house; *im3w n ps3.t* "mat tent" (traveling tent made of mats)
- im3mw* see *im3w*
- imn.t* noun: right side; west (as cardinal direction and figuratively for the realm of the dead); **derivatives:** *imn.ty* western, west side (specifically: west wind, westerners); *imn.t.t* (nominalized nisbe, same meaning as *imn.t*) the west, west side; *imn.t/imn.t.t w3s.t* (oder *nw.t*) "the west of Thebes/the City" used for the Theban west bank
- (j)n* form of the interrogative particle (also *n; nn; n3*); cf. pp. 90f; 186; 205
- in* verb: with suffix: "said so-and-so" as postposed speech indicator (cf. supra § 3.5.1[1] and pp. 89; 161; 260; 306)
- in/m* conjunction introducing the Cleft Sentence (cf. supra §§ 2.2.4[2]; 4.3.2)
- in* preposition: by
- in2* verb **trans.:** to bring, carry, fetch, bring back, return, obtain, remove; *in2 A r swn.t* "to buy A" (< to purchase something for a price); **nominal derivatives:** *in-mw* "water-carrier", "water-bearer" in the service of the Tomb Building Administration; *inw* (also sing.) deliveries, tribute, goods, trade goods (< "what is brought")
- in.t* noun: wadi; **specifically:** *3 in.t* "the Wadi" used for the wadi of Deir el-Medina and *r3t3 in.t* as its northern approach (cf. Ventura, *City of the Dead*, p. 168)
- inb.t* noun: wall, fortification, fort; figuratively: watch-post, guard-post
- inn* particle preceding clause complexes: if (cf. supra §§ 2.2.4[1]; 6.2.1[2])
- inr* noun: stone, mineral
- ir* abbreviated writing of *ir2* to do, to act, q.v.
- ir* particle of topicalization (see Index 10.4)
- iry* (fem. *ir.t*) noun: associate ("someone belonging to"), comrade, companion, mate, accomplice, partner, relative, friend; "fellow human being"; in titles: *iry-3* door-keeper (cf. pp. 78; 320)
- ir.t* noun (also grammatically masc. in Late Egyptian): eye; figuratively: sight, ability to see
- ir2* verb **intrans.:** to act; with preposition *r*: act against someone (and preposition *hr*: because of something); with preposition *hr-tp*: act independently (< "I act for myself, according to my head"); **trans.:** to do something, to perform something; with object and preposition *m*: to make something out of something, to make something into something; with object and preposition *n*: to make something for someone, because of someone; to prepare something for someone; with object of an office or profession: to exercise, perform, execute a function/an office; to be something (*ir2 nzw* perform kingship, be king); with object of time: to spend days, years; **specifically:** *iry=i* "Yes" (< "I will act!"); *ir2.w n A* "it amounts to A"/"it makes A" (in calculation and indications of value); *ir2 m-h3.t* to meet someone; *ir2 w3 im NN* "to get together with NN" (< "to make union with NN"; with preposition *hr*: because of something); for the use in the periphrastic verbal constructions, cf. supra §§ 2.3.0; 2.3.1)
- irw* see *irw*

- ἰrp* noun: wine
- ἰrm* preposition: (together) with, along with, and (cf. supra § 2.2.4[3]; for writing cf. § 1.2.2[3])
- ἰhy* (see also *ἰhhy*) noun: joy, joyous mood; enthusiasm, applause, acclaim, exaltation, jubilation, rejoicing
- ἰhw* (also in group writing *ἰ-h-y*) noun: camp; corral, stall, stable
- ἰhhy* noun: acclamation, enthusiasm, applause, acclaim, rejoicing; *ἰhhy n B* “acclaim B”; *m ἰhhy* (adverbial) with applause, feeling; (to do something) with joy, enthusiasm, feeling; (to be) jubilant, enthusiastic
- ἰḥ* (fem.; Coptic ⲬⲚⲎ) cow, ox
- ἰḥwn* youth, child (see *ḥwn*)
- ἰḥ* particle (cf. Index 10.4)
- ἰḥ* nominal interrogative pronoun (cf. Erman, *Neuägyptische Grammatik*, §§ 740-742): please, may what?, what means?, what?, with prepositions *m/ḥr/r ἰḥ*: because of what?, why?, for what?; *mḥ ἰḥ* how?; with nominalized attribute (genitive): which? (“what on this and that?”); as element in nominal sentence with *ḥ* in the (indignant) question: “what is this about?”, “what is this!?”
- ἰḥ.t* noun: affair, matter, thing, someone’s concern; goods, wealth, things, property, possessions, products (of a country)
- ἰs* particle (see *ḥstw*)
- ἰz* (*ḥzy*) tomb; **specifically**: tomb chamber, tomb shaft, tomb robber’s pit (cf. Baer, in: *Orientalia* 34, 1965, 428ff.)
- ἰzt* noun: troop, crew, company, team (of soldiers, workers, sailors); **specifically**: the Gang of the Tomb Building Administration (*ḥr*, q.v.), (see Černý, *Community*, pp. 99ff.); titles: *ḥ n ἰzt* foreman, chief-workman (of the “left” or “right side”; in hieroglyphic also *ḥr.y-ḥz.t*); *rmḥ-ḥz.t* workman, worker; *n ḥ rmḥ-ḥz.t* “the workmen” (of the Tomb Building Administration)
- ἰsb.t* noun: chair, throne; folding stool; **specifically**: socle for statues or stele; also used for the huts on the ridge between Deir el-Medina and the Valley of the Kings
- ἰsbr* (< *ḥs-b-r*) noun: whip
- ἰstw* particle (earlier *ḥsḥ*; similar to *ḥs*): now, while; used initially introducing independent sentences, marking parenthetical notes or tonal questions (see supra § 2.2.4.[1])
- ἰqr* adjective verb: to be excellent; clever, knowledgeable, educated; worthy, precious; as adverb (also with preposition *r*): very; properly, correctly, excellently
- ἰkm* noun: shield (either as defensive weapon or metaphorically)
- ἰt* noun: (six-row) barley; also grain or corn in general, thus *ḥt-m-ḥt* barley; see supra § 7.3.2(3)
- ἰtt* noun: father; in plural: forefathers, ancestors
- ἰtn* noun: sun-disk, the solar disk; **specifically**: the sun as a heavenly body, and also deified as such: Aten, the god of Akhenaten/Amenophis IV
- ἰtrw* noun: river, Nile (for the writing cf. supra §§ 1.1.1; 1.1.2; 1.1.3.[3])
- ἰth* verb **trans.**: to pull, draw, drag, haul something; to pull someone up; **specifically**: to bend a bow; to pull a net; to let in air; to tie up
- ἰṯṯ* verb **trans.**: to take, take away, to carry off; to plunder, grasp, acquire or take possession of something; to seize someone, take someone prisoner (with preposition *r*: to take someone somewhere; with preposition *n*: to take someone to someone); to surpass, excel; **intrans.**: to rob, conquer

- ḫḫ** verb **trans.**: to take or bring something or someone (with preposition *n*: to someone; with preposition *r*: to a place, e.g. a court), to take something away from; to deprive, carry off, steal, capture, confiscate, seize something; guide animals; with adverb *r-bnr*: to relieve (workers of their positions), to remove; **nominal derivative**: ḫḫ the thief. **Observation**: ḫḫ is in principle a Late Egyptian variant writing of ḫḫ
- ḫnw** noun, title: deputy; lieutenant, adjutant; deputy director of an organization; ḫnw n pḫ hr “Deputy of the Tomb Building Administration” (cf. supra Appendix § 7.4.2[4])
- yḫ** see ḫ (interjection)
- ym**  noun: the sea (see West Semitic *yam*, cf. supra § 1.2.2[2])
- ʿ** noun: state, condition (of a person)
- ʿ.t** noun: chamber, room; then the usual term for “house, dwelling house” (> Π-III the house); **specifically**: ʿ.t-(n)-sbḫ “school” (Coptic ἈΝΖΗΒΕ); title: ʿḫ-n-ʿ.t “chamberlain”
- ʿḫ** adjective verb: to be great, large, big, long; plentiful; old; to grow up, be elated; adverb: very; ʿḫ-ḫb “great-hearted”, arrogant; **nominal derivatives**: ʿḫ great one, old man, grand one, town councillor, chief; ʿḫ/ʿḫ.w greatness, power; **specifically**: ʿḫ foreman, chairman (see under ḫt “troop”)
- ʿḫ** noun (semogram ): leaf of a door; door; in titles: ḫr.y-ʿḫ door-keeper, porter (cf. supra appendix § 7.4.2[4]); also abbreviated (ḫr.y-)ʿḫ (written )
- ʿḫ** noun (Coptic ΕΙΩ): donkey, ass; ʿḫ.t she-ass; load of a donkey
- ʿḫb.t**  noun: libation, sacrifice; ḫ.t-mʿ ʿḫb.t to sacrifice
- ʿb** noun: horn (of cattle and sheep, also as decorative elements of crowns and head-gear, e.g. ḫrw ḫnty ʿb.w “Horus of the Horned Crown”) (<***“Horus, who has horns in front”; so-called reversed *nisbe*)
- ʿmḫm** see ʿm
- ʿm** verb **intrans.**: to know, be knowledgeable, certain; **trans.**: to understand, know, comprehend, perceive, find out, take cognizance of, hear about, learn something (with object or preposition *m* of the thing perceived); with preposition *m* also: to learn about something
- ʿn** verb (with semogram ) **intrans./reflexive**: turn, turn round, turn away; return, turn back, come back, retreat (with preposition *hr* from); **trans.**: give someone something, devote something to someone; **specifically**: ʿn wšb to give an answer, reply; call someone to account for something; **as adverb**: again, once more, all over again; already; (bring or go) back; further; **with negation**: never again; not again
- ʿn** adjective verb: to be beautiful; beautiful to behold; friendly, amusing (with preposition *n/hr*: to); pleasant for someone (with preposition *n*)
- ʿnh** verb **intrans.**: to live, be alive (with preposition *m*: live on something, e.g., food, Maat); in the initial line of oaths, ʿnh n=ḫ NN “As NN lives for me” (cf. supra appendix § 7.1); **nominal derivatives**: ʿnh life; ʿnh/ʿnh.t living person; **specifically**: as title ʿnh/ʿnh.t n nw.t citizen/citizenship (title of independent free town dwellers — cf. Černý, in: JEA 31: 44 with n.2 — perhaps specifically for “residents of Thebes”)
- ʿnh** noun: oath (< the initial formula of the oath: ʿnh n=ḫ NN “As NN lives for me”); **specifically**: ʿnh n nb oath of the lord; ḫnʿnh, ḫd ʿnh take an oath; ḫd.w ʿnh n A “A was put on oath”
- ʿr** see ḫr verb: ascend, to get away

- ʿr.t noun: roll of papyrus or leather; scroll, list; see *supra* § 0.3.2
- ʿʿr verb **trans.**: to carry out, to execute, effect (a task); provide, produce, supply, employ (people)
- ʿʿq (Coptic ⲬⲠⲕ) verb **intrans.**: to swear (with preposition *m/n*: in the name of someone); abjure, forswear, renounce something, someone (with preposition *hr*); **trans.**: swear to something, swear by someone; **specifically**: (with reflexive object) bind oneself by oath (with preposition *r*: concerning; with preposition *n*: by god); also: by an oath (*m* ʿnh); cf. McDowell, *Jurisdiction*, pp. 33ff..

- ḥwn** verb **intrans.**: to become young, youthful; **trans.**: to make someone young; **nominal derivative**: *ḥwn* childhood, youth, youthfulness, rejuvenation; *ḥwn m nḥ w3s* to be full of life (of the nose); *ḥr ḥwn/ḥwn* to be rejuvenated
- ḥwnt3.w** (*ḥ-n-ty*) see *ḥwtyw*
- ḥwnt3.w** (*ḥ-ty*) noun: chief, boss, commander, head; **specifically**: *ḥwtyw n p3 ḥr* the chiefs of the Tomb Building Administration
- ḥbs** verb **trans.**: to clothe, wrap, cover; **nominal derivatives**: *ḥbs* clothing, garment, wrapping, cloth; *ḥbs.wt* clothing, clothes, wrappings, coverings, attire, things
- ḥpt** noun: arm, an armful of something (also as a unit of measure: fathom = 4 cubits); group writing also:  (HorSeth 8,12)
- ḥpt** verb **trans.**: to embrace someone; to hold, encircle, encompass with the arms (also with preposition *m*)

- h̄f̄β.w* noun: serpent, snake
- hm* noun: “majesty” in address or reference to king, related to the following word “servant” (really meaning not the “majestic” but the human manifestation of the ruler; cf. Prussian King as “first servant of the state” or the pope as “servus servorum Dei”)
- hm* noun (fem. *hm.t*): servant, domestic: the meaning varies from prisoners of war without rights to “trusted household servant” (who could even have been born into the household), subject or acolyte (of a god); the rendering “slave” is socially misleading, for the “purchase” of a “servant” must be understood more as an indemnification of a previous master/employer (or the soldier-master, in the case of prisoners of war) than a purchase in the narrow sense
- hm-n̄r* noun: used for the professional priest (derived from *hm*, as “servant of god”), as opposed to the part-time priest (*w̄b*); *hm-n̄r tpy* High Priest (First Priest in a hierarchy limited to the first three or four office holders)
- hm.t* noun: female spouse, wife; woman; *hm.t-nzw* queen
- hmww* noun: craftsman, artist, artisan, carpenter, handworker; *hmww h̄* chiseller, stonemason (see *h̄nr*, *h̄*, q.v.)
- hmn* noun: variation of *mn/mn.t* (q.v.): fashion, way, manner; so-and-so, such-and-such; *hmn n* so many, such-and-such a number
- hmsl̄* verb intrans. to sit, sit down, take a seat; stay, live, reside; reflexive: be seated, to seat oneself; *hmsl̄l̄m* to live with someone; common as auxiliary verb (with *hr* + infinitive or Old Perfective, see supra § 2.2.3[3]): to be engaged in doing
- hnty* noun: copper, metal ore; nominal derivative: *hnty.y* (?), smith, coppersmith, metal worker
- hn* verb trans.: to organize, command, regulate, control, put in order, equip, provide, supply (with preposition *m*: with something); to command, order something (with preposition *n*: someone; with *r* + infinitive: to do something); to assign, appoint, entrust, order something to someone (with preposition *n*); nominal derivative: *hn.t* task (see following entry)
- hn.t* noun: orders, task, job, profession, business, professional activity, service (official or commercial affairs; religious ceremonies; legal affairs, lawsuit, civil suit); specifically: someone’s concerns, affairs
- hn* (with semogram *Δ*) verb intrans.: hurry, go, journey, reach, hasten to (with preposition *r*: go to place; with preposition *n*: go to someone; with preposition *m*: to come from a place; with preposition *l̄m/hn^c*: go together with; also with preposition *r* + infinitive: go to do); trans.: to enter, pass through a place; for writing, see supra § 1.1.3(4)
- hn^c* preposition: (together) with, and (see supra § 2.2.4[4])
- hnw* see also *hn.t*
- hnw* noun: (1) vessel (for liquids, grain, cooking; of clay, stone or metal); (2) things, chattels, household goods, furniture, furnishings (in the sense of movable property, as opposed to *lh̄.t*, immovables), see also *hn.t*
- hnw.t* noun: mistress, lady, ruler of something, someone; also the most noble, distinguished among others (“a princess among women”)
- hnr* see *h̄*
- hnq.t* noun: beer (for the writing, see supra § 1.1.3[3])
- hr* noun: face (of people and animals; figuratively of things); *r-hr* before someone, on something; as adverb: forwards; *rdl̄ hr r/m/hr* to pay attention, turn the face to, something; turn to someone; take up a matter; *rdl̄ m-hr* to set someone a task (draw to someone’s attention); *rdl̄ hrr r* + infinitive: to begin to, to be about to do something

- ḥr* (writing also with the group with the Gardiner Z5 stroke and apparent *n*) preposition: on, at, with; due to, because of, on account of, concerning, and, from, about, upon, by, toward (for the phonematic preservation, see supra § 1.1.2[2]; for the status forms, supra § 2.2.4[3]; for use and preservation, supra § 3.1.1[3]); in compound prepositions with *tp*, *q.v.*
- ḥr.y* prepositional *nisbe*: above, over, on, physically above; *ḥr.y-t* “someone living on earth”, living, survivors
- ḥr.y* noun: the superior; common in titles: master, chief, boss, captain, overseer, director or manager of a department, group or division, e.g., *ḥr.y-ḥ* stable master; *ḥr.y-ḫ.t* foreman (in hieroglyphic, corresponds to hieratic *ḥ n ḫ.t*); as military rank also: colonel, commander
- ḥr* verb **intrans.**: to be distant, far off, far away, away, gone; to go off, away; to keep a distance, stay away (with preposition *r*: from someone, something); **trans.**: to remove someone or something
- ḥrw* (with or without the preposition *ḥr/r*) adverb: apart from, except
- ḥrr* noun: flower (in group writing, see § 1.2.2[3])
- ḥḥ* noun: million; great number (of persons, years); with article or demonstrative: *pḥy ḥḥ n mp.wt* (“this million of years”) era, eon, epoch
- ḥḫ* verb **trans.**: to praise or favour someone, show favours; (officially) recognize someone (with preposition *ḥr*: because of something); to approve (of) something; **nominal derivatives**: *ḥzy* the one who is praised, favoured, respected, appreciated, treasured; the favorite; *ḥzw.t* (also written without *-t*), kindness, favor (either expected or received), proof of favor (appreciation, etc.); praise (either spoken or received); *rḏl ḥzw.t/ḥḫ* to do a favor
- ḥs* verb **intrans.**: sing; **nominal derivatives**: *ḥs.w* male singer; *ḥs.t* female singer; in titles: *ḥs.t n 'Imnw*, Chantress of Amun
- ḥsb* verb **trans.**: count, reckon; see Arabic *ḥasaba*; in titles *zh} ḥsb šsr*, grain accountant
- ḥsbwpt* see *ḥsp* vineyard
- ḥsp* noun: vineyard; garden bed (also written in partial group writing , HorSeth 11,9)
- ḥq* noun: ruler
- ḥq}.t* noun: earlier unit of capacity (see appendix supra §§ 7.3.1; 7.3.2[1])
- ḥqr* (Coptic *ⲉⲕⲐ*) verb **intrans.**: to be hungry; also: to have an appetite for, be greedy for (with preposition *r*); **nominal derivative**: *ḥqr* hunger; *n ḥqr* (to die, etc.) because of hunger, out of hunger
- ḥk* noun: divine or other-worldly power to exercise influence on earth (“magic”)
- ḥtp* verb **intrans.**: to be satisfied, content, pleased (with preposition *ḥr/m*: with someone or something); to be merciful, generous (with preposition *r*: to someone); to be peaceful, to stay, reside, rest (with preposition *ḥr/m*: in or on something); to set (of heavenly bodies); **trans.**: *ḥtp A* “to satisfy A”, “to make A content”; **nominal derivatives**: (*p*) *ḥtp* the setting, (sun-)set; peace; *ḥtp(.t)* offerings (specifically: *ḥtp-ntr* divine offerings; temple property; administration of offerings)
- ḥtp.w* noun: flowers, flower offerings
- ḥtr* noun: team, yoke, span (of horses, oxen); the team of horses; also (pl.): horses, cavalry, charioteers
- ḥtr* (semogram ) noun: levy, assessment, income, revenue; supplies, rations, contributions; **specifically**: the extra rations (as opposed to *dl.w*) of fish, beer, vegetables, etc., for the workmen of Deir el-Medina (Warburton, *State and Economy in Ancient Egypt*, Freiburg 1997, pp. 263ff.)

- ḥd** noun: silver (as material, as means of payment — in the form of rings — and abstract means of assessing value, “money”); also as concept for a totality of valuable things: *p3 ḥd* wealth, capital, treasure; *pr-ḥd* see under *pr*
- ḥd.t** noun: white crown of Upper Egypt
- ḥd̄l** verb **trans.:** to damage, injure someone; to slander someone; to mar, disturb, destroy something; **intrans.:** to be reduced, minimized; to be missing, unaccounted for
- ḥdn** verb **intrans.:** to be vexed, unwilling, opposed to something
- ḥ.t** noun: fire; *rd̄l ḥ.t* to light, set on fire (with preposition *m/r*: something); *ḥ.t-s:nṯr* incense flame; title: (*ḥ.ty-s:nṯr*): incense burner
- ḥ3** noun: pick, spike (see *ḥnr*)
- ḥ3-t3** noun: a unit of 10 *sḫ3.t* “arouras” = 10 * (100 * 100) cubits = 1000 * 100 cubits (“Thousand of Land”); **specifically:** piece of land, parcel, plot; *ḥ3-t3 n Pr-3* Crown Land, tenanted Crown Land (surveyed land subject to the king, who can lease it, even if it belongs to other institutions, see Gardiner, *The Wilbour Papyrus*, Vol. II, p. 166)
- ḥ3y.t** noun: illness, disease; suffering, pain, hurt; complaints
- ḥ3ꜥ** verb **trans.:** to throw, let loose, reject, disregard something; lay something down (with preposition *ḥr/r*: at or on a place; on the ground, into water); to leave, abandon, quit someone or something (with compound preposition *r-ḥ3.t* because of something or someone); to leave someone alone; omit, neglect, leave off something; **specifically:** *ḥ3ꜥ ḏr.t m A* “leave off A” (< “to leave the hand off A”): with adverbials: *ḥ3ꜥ r-bnr/bl* dispatch, send someone off (also meaning “divorce”), dismiss, relieve, sack, fire someone; kick someone out (with preposition *m*: from a place); send them off or out; *ḥ3ꜥ ḥr w3.t* not to finish something; leave something unfinished, incomplete; **intrans.:** to be abandoned.
- ḥ3r.t** see *ḥ3r.t* widow
- ḥ3s.t** noun: foreign land, hill-country, mountain, desert; sometimes in general: abroad
- ḥꜥl̄** verb (3ae inf.) **intrans.:** to rise, go up, appear, reveal oneself; with prepositions *m*: to appear as, in (a place); *ḥr* in a chariot, **specifically:** *ḥr ssm.t ḥr wrj.t* with horse and carriage (the second *ḥr* is co-ordinating and not rection!) **specifically:** to go out in a procession, parade, with *m*: from a place; with *r*: to a place
- ḥꜥw** noun: the “splendid appearance”, manifestation (of heavenly bodies, divinities in festivals, kings at accession to the throne, kings at appearances); **specifically:** the crowns; *nb ḥꜥw* “lord of crowns” (royal epithet)
- ḥꜥm** (with semogram Δ) see *ḥꜥm*
- ḥꜥw** noun: place of fire, “purgatory” (see supra § 3.1.5[2])
- ḥl̄** interjection before nouns (“oh how!”, etc.); also interrogatory particle (*ḥl̄ꜥ* “How is the state, condition?” > “How are you?”)
- ḥw** noun: fan (also as standard of military unit or symbol of dignity)
- ḥpr** verb **intrans.:** to become, emerge, appear, come into existence, develop, transform (with preposition *m*: to develop out of something; to become something); to begin; to happen, occur, arrive (with prepositions *m/m-ꜥ/m.dl̄*: with or through someone); something happens to someone (with preposition *r*); to be, to exist (with preposition *m.dl̄*: with someone); **specifically:** with preposition *m̄l̄*: to behave, to become like, to be like someone or something; for writings, see supra §§ 1.1.2(2); 1.1.3(3)
- ḥpr.w** noun: being, form, appearance, “transformation”, manifestation; *l̄r̄l̄ ḥpr.w* to assume a form; to transform oneself, be transformed (with preposition *m*: as, in, into)

- hps̄* noun: sword, falchion (scimitar)
- hmn* (semogram 𐎎) verb **trans.**: to fail to recognize someone; not to know someone or something; to forget someone or something; not to consider, not to have regard for; (with object; from Dynasty XIX on, also with preposition *r*); **intrans.**: to be ignorant, not to know; without someone's knowing, to be unknown; as infinitive after *m*: *m hmn(=f)* unknowingly, unwittingly; without someone's approval, permission, agreement, knowledge
- hmnw* toponym: Hermopolis (Hermupolis magna), capital of the 15th Upper Egyptian Nome with a Thoth temple (Coptic 𐩮𐩣𐩬𐩰𐩪, modern el-Ashmunein)
- hmt* (with semogram 𐎎) see *hmn*
- hn* noun: speech, statement, expression; affair, matter
- hnr* noun: the so-called "harem" and its members (actually the institution responsible for the provisioning and accommodation of the women and children of the royal court); *pr-hnr* "office of the Harem"; property and property management/administration of the Harem
- hnr* (*h3/hl*) noun: copper pick, chisel, spike, pickaxe (occasionally called "large pick", as a tool used by a group which is state property and issued only for specific purposes)

- t.t* noun (fem.): lumber, building wood for boats; woodwork; dining table of ruler or god
- t3.ty* noun: title of the highest official in the central administration (prime minister, vizier); during the late New Kingdom there were mostly two *t3.ty*, one being responsible for the north and another for the south
- t3̄l* (Coptic Χ1) verb (3ae inf.) **trans.**: to seize, grasp, acquire, lay hold of, take something; to take something away; to steal something; to rob someone (for *t3̄w*); **specifically**: *t3̄l m md3.t* chisel, engrave with a burin; **nominal derivative**: *t3̄l* bearer (of something; in titles: *t3̄l hw* fan-bearer; *t3̄l md3.t* sculptor)
- t3̄l* (*t3̄y*) verb **trans.**: to find fault with, reproach, criticize (with preposition *n*: someone; with object and preposition *r*: criticize someone about something, punish someone for something); *t3̄y A r B* "to criticize A about B", "punish B for A"; *dl.t t3̄y n=f NN* "cause that NN criticize him"; **nominal derivative**: *t3̄y* criticism, damage, injury

- tʒw** (Coptic ⲬⲓⲐⲮⲉ) verb **trans.**: to steal something, steal something from someone; *m tʒw* (1) thievishly; (2) by stealth; stealthily; **nominal derivative**: tʒ(y) thief, robber
- tʒw** noun: air, wind, breeze, breath
- tʒb** noun: vessel, beaker, bowl (of metal, stone, clay, in form of narrow-mouthed bucket: with lip, low centre of gravity and round bottom, “situla”) as container for foodstuffs, liquids; also used as a unit of measure
- tʒhw** (tʒhw) see tʒhw.t
- tʒfy** (Coptic ⲬⲐⲐⲮⲉ) noun: papyrus, papyrus thickets; reed swamps
- tʒbw** see tʒb
- tʒm** see *mm* to cry; for variant writings, see *LES* 45a n. b
- tʒnl** (Coptic ⲐⲐⲎ) interrogative pronoun: where?, where from? where to?; also used adverbially as an absolute noun, e.g.: *ly=k tʒnl* “Where did you come from?”
- tʒnw** noun: numeral, number (for the writing, see supra § 1.1.2[3])
- tʒnw** (noun, followed by noun) each, every, every time that, whenever); adverbial: *r-tʒnw hrw* every day
- tʒ-n-r** adjective verb: to be strong, powerful, mighty, successful (see Accadian *dananu* “to be strong”, Görg, *GM* 68 [1983]: 53f.)
- tʒhw** see tʒhw.t
- tʒhn** verb (**in**)**trans.**: to meet, encounter, engage with, grapple with someone (with object or preposition *n/r*); *tʒhn hn^c* to meet someone (in battle), clash with
- tʒhw.t** noun: joy, applause, acclaim, exultation, delight (in group writing also *tʒ-h-w*, *tʒ-hw*)
- tʒ** noun: spell, words, speech, statement, saying, expression; sentence
- tʒl** verb **trans.**: to raise, lift, exalt; **intrans.**: to mount, ascend, climb, go up
- tʒm** noun: hound, dog
- tʒtt** verb **intrans.**: to argue, quarrel, dispute (with preposition *lm*, *m.dl*: with someone); **nominal derivative**: *ttt* argument, dispute, conflict
- dl** adverb: here, there (Late Egyptian for Middle Egyptian ʕ); see supra § 2.2.4(4)
- dl** abbreviated writing for *rdl*, q.v.
- dl.w**  noun: income, wages (for employees and workers)
- dwʒ** verb **trans.**: to praise, revere, respect, worship, adore someone; **nominal derivatives**: *dwʒ.w* paean, hymn; *dwʒ.t nʒr* Divine Adoratrice (parallel to *hm.t nʒr* Divine Consort) as title of queens and princesses serving in liturgical functions (*dwʒ.t nʒr n Imnw* as human representative of the goddess Mut)
- dwʒ.w** noun: morning, dawn, early morning; in adverbial use: in the morning, mornings; *m dwʒ.w* in the morning; (*hr-*)*sʒ dwʒ.w* after tomorrow; also: *m dwʒ.w sʒ dwʒ.w* in the future
- dwn** verb **trans.**: to stretch something out, extend; reflexive: to raise oneself, get up, stand up
- db.t** see *db.t*
- dbn** noun: unit of weight, unit of value; see appendix supra § 7.3.1; 7.3.2[1]
- dmi** (Coptic ⲐⲬⲐⲎⲉ) verb (3-rad.!) **trans.**: to touch someone or something; to lay, join, stick (with preposition *n*: on, to someone); **intrans.**: to touch around something, feel (with preposition *n/r*); something fits itself to something, touches something; sticks, affixes itself to something (with preposition *r/m/hr*); to join someone (with preposition *n/r*)

- dmī* noun (occasionally also fem., *tī dmī*): town, locality, place (also figuratively: home); landing place, harbour, port; city; *n̄y.w tī dmī.t*, urban dwellers, city people; **specifically**: “the village” = Deir el-Medina
- dm̄* verb **trans.**: to unite, assemble, collect, put things together, fix together, combine, unite, join; to join something with something (preposition *n/hn̄*); to be united, joined, together (as Old Perfective); **nominal derivative**: *dm̄* totality; total; sum; also as expression for the sums in calculations, etc. (also abbreviated \equiv): sum; together; altogether
- dns*  verb **intrans.**: to be burdensome, weighty, heavy (for writing, see supra § 1.2.1[2])
- dr* verb **trans.**: to subdue, deter, repel, expel, overwhelm, remove, drive off; **specifically**: to keep enemies down; destroy, eliminate, defeat, beat them, cast down
- dhn* (also partly in group writing *tn-h*) verb **trans.**: to name, appoint, assign, promote (with preposition *r*: to an office)
- dḥ* verb **trans.**: to defeat, subdue, beat someone; reflexive: to surrender, yield oneself up, concede defeat
- dqr* noun: fruit, fruits (general expression for edible fruits)
- dḡ* see *dqr*
- dd* form of *rdl*, q.v.
- d̄.t* noun: eternity
- d̄.t* noun: remainder, balance or deficit in accounts
- d̄l* verb **intrans.**: to ferry across, cross, traverse, ferry over (for writing, see supra § 1.1.3[3])
- d̄y.t* noun: transgression, violence, evil
- d̄hy* toponym: name of the Phoenician and Palestinian coastal region (later “Land of the Philistines”, Palestine)
- d̄d̄* noun: head, summit; in compound prepositions: *ḥr-d̄d̄-n* on, over, at, by, for, through, from (> Coptic ⲉⲓⲬⲚ-, ⲉⲓⲬⲱⲛ; see Westendorf, *Handwörterbuch*, pp. 443; 408)
- d̄d̄.w* noun (fem.): jar, vessel, pot (as container for honey, as a drinking vessel)
- d̄ḥ.t* noun: charcoal, black pigment; derivatives: *d̄ḥ.t* (coal-)soot; *d̄ḥ* verb **trans.**: to blacken (with soot)
- d̄m* noun: white gold, electrum (a gold-silver alloy), common for gold foil fittings
- d̄w* (< *d̄w.t*) noun: bad, evil; **specifically** (in negative superlatives): *mrl r d̄w ḥ̄ n wr* “to love in the worst, most desperate fashion”
- d̄w* noun: mountain, hill
- db̄.t* (*db̄.t*) brick; for writing see § 1.1.2[3])
- db̄* (*d̄by*) name of the modern city of Edfu
- db̄* (Coptic ⲧⲟⲟⲃⲉ) verb **trans.**: to replace, substitute for something; to reimburse, provide compensation for something, perform substitute service; to make up for, to repay, to pay for, to pay back (with preposition *m*: with, through something; with preposition *r*: to someone); to clothe someone, equip, provide (with preposition *m*: with something); **nominal derivative**: *db̄.w* substitute, replacement, payment; in compound preposition: *r-d̄b̄.w* (> Coptic ⲉⲧⲃⲉ, ⲉⲧⲃⲏⲏⲧ; also in abbreviated writing *db̄*) instead of something; in place of, in lieu of, as substitute for; because, for something; for someone
- db̄.w* noun: leaf

- db^c* noun: finger, toe
- df̄* noun: food, nourishment, sustenance, provisions, victuals, reserves, stores (also plural)
- dnn* (group writing *df̄-n̄-zp2-zp2* > *d-n-nn*) see *dnr*
- dnr* (Coptic Ⲭⲗⲗ) noun: branch, twig; baton, bat, rod (as instrument of torture)
- dr* preposition: since (temporal); from, where, from there (spatially); with infinitive: since, when; as conjunction with *sdm=f*: since, when, while, because; *dr-ntt* because, since; *m-dr* (with noun) because of something (see pD'Orb 8,1; Wenamun 2,67)
- dr.t* noun (Late Egyptian frequently masc. also): hand; many combinations with prepositions: *m-dr.t* (to do something) with the hand; in (someone's) hand(s); to be (someone's) responsibility, in (someone's) property; through someone; (to send something) through someone; (to receive something) through or from someone; *hr-dr.t* to be under someone's direction, in his care
- dr̄* (with semogram ^{ba}𐎠) adjective verb: to be firm, strong; to be excellent (as synonym of *mnḥ*); to be difficult, harsh, tough, painful, severe; adverb: (investigate, tend) suitably; entirely, very
- ds* noun: self (independent or appositional noun); with suffix: so-and-so himself
- dd* verb *trans.*: to speak, talk, say, relate, converse (with preposition *n/hn^c*: to, with someone); to name someone (passive: be named; with preposition *n/r*: "called, named")
- dd.w* toponym: Busiris; the modern Abusir Banna, south of Samannud

10. Indexes

(Abbreviations in the indexes: AP = adverbial phrase; NP = noun phrase; bib. = Bibliography; PP = prepositional phrase; emph. = emphatic; nom. = nominal; prosp. = prospective; pret. = preterite; M.E. = Middle Egyptian; L.E. = Late Egyptian; imp. = imperative; inf. = infinitive; prep. = preposition; pres. = present; fut. = future; neg. = negative/negated; m. = marginal note)

10.3 Coptic words, morphemes and conjugations

(conjugations are listed separately at the end)

ΛΜΟΥ; f. ΛΜΗ (< *mū*) "come!" 78

ΛΝΓ ΟΥΛΓΛΘΟC "I am good" 182

ΛΝΟΚ ΟΥΨΩC "I am a shepherd"
 182

ΛΠΙ- (< *ī.īr*) "do (it)!" 78

ΛΤ-2ΗΤ (< *īwty-īb=f*) "foolish" 94

ΛΥΩ/ ΟΥΟ2 "and" (< *ī.wʒh* "add!")
 78

Λ2ΡΕΥ (< *hrw*) "days" 35

ΛΙΧΙΜΜΟC ΝΑΙ Ν̄C2ΙΜΕ "I took her
 to wife" 58

ΛΧΙ- (< *ī.dd*) "speak!" 78

ΒΕΡΕ6ΩΥΤ (< *mrkbt*) "chariot" 43

ΒΩΤΕ (< *bd.t*) "emmer" 35; 297

Ε- (< *īw*; circumstantial converter) 241

Ε-/ΕΡΕ- (< *īw/īrī*; Third Future) 96;
 128; 129

Ε-(< *ī.īr*)/ΕΤΕ-/Ν̄Τ- plus sentence con-
 jugation (second tense converter) 132;
 240; 241

Ε- (< *r*; prep.) 144 (Ε- + inf.); status
 pronominalis ΕΡΟ=Ν (< *r=n*) 255;
 ΕΡΩ=ΤΝ (< *r=tn*) 146; 277;
 ΕΡΟ=ΟΥ (< *r=w*) 89

ΕΒΟΛ (< *r-bnr*) "outside" 44; 91

ΕΤ(Ε) (< *nty*; relative converter) 67; 200

Ε2ΟΥΝ (< *r-hnw*) "into, inside" 91

ΕΙΟΜ (< *ym*) "(the) sea" 43

ΕΙΟΡ (< *ītrw*) "river" 35

ΕΙΩΤ (< *īt*) "barley" 297

Κ- (First Present pronoun 2nd masc.
 sing.) 112; 211

ΚΕ-; 6Ε/ΚΕ, ΚΕΤ, f. ΚΕΤΕ, pl.
 ΚΟΟΥΕ (< *ky/kt/ky.wy*) "others"
 44; 61

ΚΙΤΕ (< *qd.t*) 295

ΛΗΛ (< *rr*) "ribbons" 185

Μ̄ΜΛΥ (< *īm*) "there" 91

Μ̄ΜΗΝΕ (< *m-mn.t*) "daily" 91

Μ̄Ν-, Ν̄ΜΜΑ= (< *irm*; prep.) 89; 118

- ΜἸΝΤ-ΡΩΜΕ** (< **md.t-rmt*) “man-kind” 61
- ΜἸΝΤΕ-/ΜἸΝΤΑ=** (< *mn m.dī*) 172
- ΜἸἆ-** (< *nn wn*) “there aren’t...” 118
- ΜἸΠΟΟΥ** (< *m-p3-hrww*) “today” 91
- ΜἸΠἆ-** (< *m-īr*; Prohibitive) 79
- ΜΙΣΕ** (< *ms.t*) “bear”; forms of verbal state **ΜΕΣ-/ΜΑΣΤ=** (< *ms.t=ī* “to bear me”) 52; 81
- ΜΕΣΟΡΗ** (< *msw.t-R^cw*; name of month) 48
- ΜΕΨΑΚ** (< *bw rh=k*) 100
- ΜΟΟΥΕ** (< *ms^ctī*) “march, travel” 39
- Ἰἆ-** (< *m*; prep.); status pronominalis **ἸἸΜΟ=ϸ** (< *n.īm=f*) 89; 186; **ἸἸΜΩ=ΤἸ** (< *n.īm=tn*) 118
- Ἰἆ-** (< *bw/n*; negation) 100
- Ἰἆ-** (< *bn*; First Present negation) 113
- Ἰἆ ... ἸἸΝ** (< *n ... īwn3/īn*) 113
- Ἰἆ-** (article) 53
- ἸἸΝ-** (possessive prefix) 53
- ἸἸἸ/ἸἸἸ** (demonstratives) 53
- ἸἸἸ-** (possessive article) 53
- ἸἸἸ-/ἸἸἸ-** (relative converter) 161
- ἸἸἸ-, ἸἸἸἸ-** (imperfect converter)/**ἸἸἸἸΩΤἸ** (imperfect) 161
- ἸἸἸἸἸ-/ἸἸἸἸἸἸ** “beautiful” 66
- ἸἸἸἸἸ-/ἸἸἸἸἸἸΩΤἸ/ἸἸἸἸἸἸΩΤἸἸ** (< *mtw=f sdm*; conjunctive) 104

- tional fut. (subjective/volitional) 137; 141; fut. of *iw*-sentence 127
- Gang of the Tomb Administration** 298-299
- gender 34; 52; 63; 65
- Genitive, Direct/Indirect, see modification; nominal attribute
- genitive *n*, see phrase conjunction *n*
- grain measures, graphemes and terms with 297
- grapheme, see writing system
- graphophonemics, relations between written and spoken language (bib.) 40; language of graphemes 37f; see also writing system
- group writing 41-45; (bib.) 45; uses of 43-44; purpose 43; elementary graphemes (uniliteral signs) 42; see also writing system
- Habitual**, preterite (*wn*) (m.) 159f; see also preterite converter *wn*
- hierarchy of norms/registers, see norms (hierarchy of)
- hieratic 27-28; comparison, hieroglyphic-hieratic (bib.) 30
- hypercorrection and hypercharacterization 39f; 112
- hypotaxis 188; implicit (*iw*) (m.) 223; explicit by conjunctive clauses 223-226; hypotaxis by conversion (m.) 188; see also conversion; subordination
- Identification** (as semantic function) 164; 174; 179; 182
- image-writings (nearly incomprehensible hieroglyphic writings) (m.) 34
- imperative 78-80; 137-138; 144f, 148; 222; (bib.) 91f; forms 78; stem extension prefix *i-* 78; usage 79; in the apodosis of *ir*-constructions 262f; 268; neg. (Prohibitive) 79f; 96; 138f; 191; Prohibitive subordinated 138f; 232-234; (bib.) 149; imp. and Optative (m.) 137; imp. prospective co-ordination (m.) 232; imp.s of "come" and "give" (m.) 78; combinations of imperatives (m.) 79; continuation with the conjunctive 232-234; see also causatives
- imperfect conversion, see preterite converter
- imperfective/perfective (m.) 66
- independent *iw*-sentence of M.E. 210; 279f
- indication of material 63
- indicative, Present Circumstantial/non-initial main sentence as 232f
- indirect genitive, see nominal attribute
- indirect speech, see speech
- infinitive 29; 39; 80-81; (bib.) 92; status pronominalis 37; 39; 77; 78-81; 89; 92; 97; 124; 145; following auxiliary verbs 83-85; auxiliary verbs as (m.) 84; of verbs of motion 81; after *tm* 85f; as Negatival Complement (m.) 85; prep. *r* with 81; forms of inf. vs. imp. (m.) 78; defined/determined 103f; 175; in the Adverbial Sentence/First Present 114; in the Circumstantial First Present 116; inf. constructions as conjugations ("conjugated" inf.) 117; 191; 215; 229-231; 233; 237; linguistic evolution 241; inf. coordination (m.) by the Conjunctive 231f; see also causatives
- interjections, see particles
- isolation (anticipation/postposition) of independent pronouns (m.) 165; 182; see also anticipation
- Knowledge**: common knowledge (pragmatic/semantic) 54; 56; see also specificity/specification

- Language:** vs. script/writing (m.) 21; relations between written and spoken (bib.) 40f; traditional use of (m.) 20; L.E. vs. M.E. 22f
 — linguistic evolution/development (bib.) 23; revision of (bib.) 23; meaning of structural boundary shifts 109; development of the L.E. linguistic system out of the M.E. system 108-110; trends of ling. dev. (m.) 148; of the Adjectival Sentence 170f; of the Third Future 127f; (bib.) 128; of causative constructions 147-149; (bib.) 149; of conjunctive clauses 239-241; of noun modification 69; (bib.) 69f; of the nominal *sdm=fli.îr=f sdm* 131f; (bib.) 134; of the Nominal Sentence 182f; of the non-initial main sentence (NIMS) and “old” *îw*-sentence 211; of the preterite *sdm=f* 154f; of preterite conversion by *wn* (m.) 161f; of clause combinations 279-281; see also system alienation
 — linguistic norms, see norms (hierarchy of); registers; linguistic hierarchies and linguistic evolution 20-23; (bib.) 23; language stages and their terminology (m.) 17
 — linguistic system 21; 224; 240; synthetic and analytic types of language 49; language change (m.) 21f
- language: spoken/colloquial vs. written (m.) 20f
- Late Egyptian 17f; “real” L.E. (m.) 17f; texts and textual genres 18-20; linguistic hierarchies and evolution 20-23; principles of sentence construction (m.) 107f; sentence orientation of 240f; “Late Egyptianizing” older constructions in the linguistic evolution of the *îr*-construction (m.) 279; “Late Egyptianisms” (m.) 22; see also Middle Egyptian.
- Late Middle Egyptian 23; 70f; 173
- letters 242-246; as a genre of text 291-295; technique of writing (m.) 25; *hn^c* as formula of 90; structure of letters 244; 292f, epistolary conventions 242; 244; 292; 293-295; questions about health (m.) 294
- line columns, as style of monumental texts (m.) 28
- listener (addressee in the speech situation) 57; 137; 251
- locative adverbs/locational adverbs 83; loc. nouns uses absolutely as loc. adv. 185; 217; 219; 283
- M**arginal inscriptions 28
- marking of grammatical gender (m.) 34
- meaning expression 49; 231
- meaning shifts in *îr*-constructions (m.) 254
- measures and indications of value 295-297
- measures of capacity and weight 295-297
- Medio-Late Egyptian 23; 70; 74; 131; 151; 173
- Middle Egyptian: vs. Late Egyptian (m.) 22f; 108f; 131f; principles of sentence construction (m.) 107; independent *îw*-sentence (m.) 210; Nominal Sentences (m.) 182; transformation of M.E. sentence structure into a paradigm 107-110
- minimal sentence, see sentence
- modification of nouns (determination) 51-70; in the Nominal Sentence 163; attributive 59-69; appositional 60f; 182; by direct nominal attributes (m.) 59; by indirect nominal attributes (m.) 59f; by adjectives and relative clauses (m.) 60; by relative phrases 201f; forms of determination 51-57; (bib.) 69; determination by articles and demonstratives 54-57; through suffix pronouns 57-59; determination of the antecedent of relative phrases (m.) 199; of the initial

- noun 254; 279f; of the second term of the Cleft Sentence 178; defined inf. after prepositions (bib.) 106, linguistic evolution 69; (bib.) 70; see also adjectives; apposition; article; demonstratives; *nb* “every”; rectum; relative phrases; nominal attribute
- mood 118; of conditional clauses 261f; prosp. *sdm=f* as a modal form 137; 216; Conjunctive as a modal form 232-234; indicative mood (m.) 233; subjunctive mood (m.) 233; (bib.) 239; modal system (m.) 149; see also Conjunctive
- morphology; morpheme 28f; 34; 49; 82; 104; morphology of the First Present 111-112; of the Third Future 122-124; (bib.) 128; of the imp. 78; of conjunctive clauses 223-226; of the Conjunctive 104f; of the nom. *sdm=f* 129-132; of the Nominal Sentence 166f; of noun clauses 213f; of the non-initial main sentence 208; of passive forms (m.) 101; of the pret. *sdm=f* 152-153; of the prosp. *sdm=f* 139-141; of *ir*-constructions 251-253; stem formation of participles and relative forms (m.) 66; prefix *l̄*- in relative forms (m.) 66; with the imp. (m.) 78
— morphosyntactic features and peculiarities of L.E. 49-105; appearance of more explicit features (m.) 49; transfer of marking and “conversion” (m.) 50; morphology of subordination 187; prefix 38
- multilateral verbs, periphrasis 96
- Narrated time:** organization of by day formulae (m.) 260; *iw=f hr sdm* 207; *ḥ^c.n-* and *wn.in-* forms 260; 276-279
- narrative, see non-initial main sentence
- necropolis administration, see Tomb Building Administration
- negated imperative (Prohibitive), see imperative
- negation: of Adjectival Sentences (m.) 171; of Adverbial Sentences/First Present 113; (bib.) 119; of Cleft Sentences (m.) 179; of Third Future 123f; (bib.) 128; of imp 79f; of the Causative Imp. (m.) 145f; of inf. 86; of Nominal Sentences (bib.) 175; of the Relative First Present 202f; of Circumstantial First Present (m.) 115; 117f; of the preterite *sdm=f* 153; (bib.) 157; of the Relative Preterite 205; of preterite conversion with *wn* (m.) 161; of Pseudo-Cleft Sentences (m.) 181; of relative phrases (m.) 197; of relative clauses (m.) 177; of sentences with nominal *sdm=f/l̄.ir=f sdm*, by *bn...in* (m.) 130; (bib.) 134; of the Nominal Sentence proper (m.) 169
— negation by *bn*: of First Present 113; of Circumstantial First Present 117f; of Optative/Potential (m.) 140; of Third Future (m.) 123f
— negation by *tm* 85f; (bib.) 92; of infinitives/nominal forms of the verb (m.) 85; of the nominal *sdm=f* (m.) 130f; of the finalprospective *sdm=f* (m.) 86
- Negative Complement 85
- Negative Aorist, see Aorist
- Neo-Middle Egyptian 23; 154
- NIMS, see non-initial main sentence
- Nisbe/Nisbe*-adjectives (m.) 65
- nominal attribute: direct nom. attr. (“direct genitive”) 59; 59f; 61-63; disappearance of (m.) 69; indirect nom. attr. (“indirect genitive”) 63-64; (bib.) 69; see also modification
- Nominal Sentence 163-183; defining nature and role 163f; types 166f; subordinated (converted) 164; 179; 181;

- 248; 257; one-membral Nom. Sent. (m.) 168; 170; 186; bi-membral Nom. Sent. (m.) 173; *p3y*-sentence 56; **173-175**; Nominal Sentence proper (m.) 163; 166; **167-169**; 177; negation (m.) 169; (bib.) 175; characterizing Nom. Sent. (Adjectival Sentence) **169-171**; 180; (bib.) 175; formulation of statements 233; M.E. Nom. Sent. (m.) 182; relative conversion of Nom. Sent. (m.) 206; the late tri-membral Nom. Sent. 74; (m.) 183; linguistic evolution **182f**; see also Adjectival Sentence; Existential Sentence; Cleft Sentence; Pseudo-Cleft Sentence
- non-initial main sentence (NIMS) 56; 118; 123; 156; **207-212**; 227; 242; 276; formal criteria **208f**; usage **207f**; 232-234; as apodosis of an *îr*-construction **251f**; 256-261; negation 86; identity with Circumstantial First Present 210; (bib.) 211f
- norms, hierarchy of (linguistic and textual norms) 18f; 20f; 33; 40; 63; 81f; 151; register hierarchy 97; 163; 167; 197; 283; see also registers
- “not yet/before”-form, see *bw îr.t=f sdm*
- noun clauses **215-220**; 242; forms (m.) 212f; **213f**; (bib.) 223; linguistic evolution of noun cl. and conjunctions (m.) 240; Nominal Conjugations **212-220**; forms **213f**; conjunctions forming noun cl. (*rdd/r.nty/hn^c dd* (m.) 212f; see also object
- nouns/noun phrases 164; specified 166f; anticipated 250f; after *îr* (bib.) 265; topicalized NP, see topicalization; inf. as nominal form of the verb (m.) 80; nominal *sdm=f* as nominal form of the verb 129; “nominal(ization) converter” *î.îr* (m.) 240; “nominal converter” *r-dd* 212; (Demotic) Nominal Verbs 171
- modification of nouns **51-70**; noun plus noun as simple sentence (m.) 168; nominalization of relative phrases 65; (m.) 199; nominal, adverbial and adjectival satellites of the noun **59-69**; absolute nouns as adverbials (m.) 91 see also adjective; antecedent; first noun term; second noun term
- nucleus (of a clause/phrase) 50; 56; 59
- number, see designation; agreement
- numbers, numerals and numeral constructions 34; **68**; 75f; (bib.) 70; fractions 295; 132; numeral constructions (m.) 68
- Oath** 74; the simple oath **289 f**; the extended oath **290f**; Conjunctive in oaths (m.) 235; the New Kingdom oath **289-291**; Balanced sentences in oath formulae **274-275**
- oath formula 133f; (m.) 289; see also oath
- object 102; use of the prospective *sdm=f* as obj. of verbs (“Subjunctive”) (m.) 143; 212; 214; obj. of relative phrases identical to antecedent (m.) 198; object pronouns 77
- object clause (object-noun clause) 140; **216-220**; 285; forms **218**
- office: official titles, occupational titles, offices 62, 298-302
- old *îw*-sentence, see *îw*-sentence
- Old Perfective (“Stative”/“Qualitative”/“*Pseudopartizip*”) 65; 80; **81-84**; 224; 238; 251; 257; 262; conditions of usage (m.) 82f; auxiliary verbs as Old Perf. (m.) 84; following auxiliary verbs **83-85**; (bib.) 92; in Adverbial Sentences/First Present 113f; Old. Perf. in Circumstantial First Present 115-8; Old. Perf. in fut. forms 123; 125
- omission of *hr* (m.) 112

- one-phoneme signs, see writing system
- Optative: Opt. (like Greek) 137f; neg. Opt. ("Vetitive") 140; "Vetitive" subordinated by *iw* (m.) 194; independent Prospective as Optative/Potential (m.) 138; 139; **140**; **141f**; (bib.) 149; see also *sdm=f*, prospective; predictions; wish; Potential/Optative
- ordinal numbers (m.) 68
- organization of the Tomb Building Administration **298-302**
- orthography, see writing system
- ostraca **26**
- Papyrus**: production, preparation, method of writing (m.) 24f; see also verso
- paradigm, transformation of M.E. sentence structure into a 107-110
- parataxis 188; see also co-ordination
- part of speech ("Wortart") 65f
- participle construction, see Cleft Sentence
- participle, see relative phrases
- particles: and interjections **87f**; (bib.) 91f; *-wsy* in Adjectival Sentences (m.) 170; combinations of prospective *sdm=f* with (*ih*; *hr*; *ks*) 140f; 148; 265; (bib.) 149
- parts of the body, absence of articles with 58
- passive: forms 76; **101f**; peculiarities of the pass. ending *-t* (m.) 102; pass. endings of the participles (m.) 66; passive forms of the preterite *sdm=f* (m.) 152f; (bib.) 157; relative frequency of the pass. (m.) 101; see also *sdm*, passive
- perfect active *sdm.f* 152 (fn.)
- Perfective and Imperfective 66
- periphrasis with *in* (m.) 66; 152; 155; principles of and spread of **95f**; of relative phrases 66; **96f**; of roots of multiliteral verbs (m.) 96; antecedent of relative phrases with periph. as object (m.) 198; see also conventions; transliteration
- person (change of), see single actor adjustment
- personal pronouns: of the First Present/Adverbial Sentence **111f**; enclitic (dependent) pron. **77**; 164; independent pron. 163; 164f; 167; isolation/extrapolation (m.) 165; independent pron. indicating possession **166**; 170f; suffixes/suffix pron. **52f**; (bib.) 69; pers. pron. plus noun as simple sentence (m.) 167; linguistic evolution 211

Friedrich Junge's pioneering introduction to the grammar of Late Egyptian, the language of the New Kingdom, principally the Ramessid Period (ca. 1350–1000 BCE), fills a longstanding gap in teaching works for Ancient Egyptian. This English translation of the second German edition is the first of the work available to a wide audience.

The author devotes special attention to the language of papyrus and ostraca – texts and documents of everyday life – without neglecting the style and language of belles lettres and monumental inscriptions. Through copious examples, exercises, and bibliographical information, the reader is familiarized with all the major text categories. The book assumes some knowledge of Middle Egyptian.

The presentation moves from the distinctive features of Late Egyptian writing and orthography, through morphology and the structures of the simple and compound clauses and sentences, to larger linguistic units. Throughout, the forms of Late Egyptian are set in context in the history of the language, relating them to Middle Egyptian forms on the one hand and to Demotic and Coptic forms on the other. Detailed comments are given both for the examples and for the exercises that close the main chapters.

An appendix offers a preliminary synthesis of formulas in oaths and letters, units of value including weights and measures, and the organization of the necropolis administration at Deir el-Medina, the workmen's village at Thebes from which vast numbers of sources were recovered. An extensive apparatus of bibliography, vocabulary, and indexes provides easy access to the content of the grammar and to factual information.

In this second English edition the author has made numerous corrections to the text while incorporating where possible points raised by reviewers.

Friedrich Junge is Professor of Egyptology at the University of Göttingen and the author of numerous works on the ancient Egyptian language.
