---

THE following pages have been written in connection with my lectures upon Assyrian philology, which were commenced in the early part of 1875 under the auspices of the Society of Biblical Archæology, and through the exertions of Mr. W. R. Cooper, the Secretary of the Society. An endeavour has been made for the first time to smooth over the difficulties which beset the entrance to the study of the Assyrian inscriptions, and so attract students to this new and important branch of research. When my "Assyrian Grammar" was published, three years ago, a knowledge of the language was still confined to the few, and there seemed little prospect that the small band of Assyriologues would be much increased for a long while to come. My work was therefore addressed to two classes of readers; to those who were already able to read the inscriptions, and could appreciate a grammar which entered into details and points of scholarship, and to those who were acquainted with the better-known Semitic languages, but wished to learn something of the new dialect which had been so unexpectedly revealed, and promised to throw such a flood of light on Semitic philology in general. The prospect, however, that three years ago seemed so distant has been more than realised. Assyrian has become a "popular" subject; and the world of scholars which once looked with distrust upon the labours of

the decipherers, has at last awakened to their interest and importance. Students are flocking in from all sides, and elementary grammars and progressive reading-books, like those which initiate the pupil into Hebrew or Greek, are needed and called for.

The present volume is intended to meet this demand. The cuneiform type which has been freely used throughout will accustom the eye of the reader to the forms of the characters, and as all transliterated words are divided into syllables, even where the Assyrian text is not added, he will be able to reduce them into their original forms. Care has been taken not to burden the memory with unnecessary matter; and practical experience has proved that tabular lists of nouns, verbs, and particles, such as are given in the second part of the book, are the best means for impressing the rudiments of a new language upon the mind. A separate chapter on the syntax has been omitted, since any attempt to enter into details would be inconsistent with the plan of the Grammar, while it has been found more convenient to state those few cases of importance in which Assyrian differs from the syntactical usage of other languages in those places of the accidence to which they naturally belong. The notes appended to each of the reading-lessons are designed to lead the student on to a more advanced and independent acquaintance with the language, and so complete the work of a practical and elementary grammar.

The main difficulty is the Syllabary, the larger part of which will sooner or later have to be learnt by heart. The beginner is advised first to commit to memory the characters which express open syllables, given in pp. 46 and 47, as well as the Determinative Prefixes and Affixes given in p. 48, and then to work at the *monosyllabic* closed syllables. Experience alone can show him what are the commoner and more favourite values with which a character is used; and he must be content to be continually a learner, keeping the Syllabary constantly at his side for purposes of reference, and remembering that any endeavour to learn

the *whole* Syllabary is a needless and useless task. He will soon come to know what characters and what values are most frequently employed, and what ideographs are most likely to occur in the inscriptions.

The hieroglyphic origin of the Syllabary, and its adaptation to the wants of a foreign language, will give the key to many of the difficulties he will meet with. Its Accadian inventors spoke an agglutinative dialect; and each hieroglyphic, which in course of time came to be corrupted into a cuneiform character (like the modern Chinese), originally expressed the sound of the word denoting the object or idea for which it stood. The same picture could stand for more ideas than one, and might therefore be pronounced in more than one way, so that when the Semitic Assyrians (or rather Babylonians) borrowed the cuneiform system of writing, using what were words in Accadian as mere phonetic values, polyphony became inevitable, and the same character represented several phonetic powers. Even in Accadian the characters could be employed phonetically as well as ideographically; and the Assyrians, while turning the dictionary of the Accadians into a huge syllabary, did not forget the hieroglyphic origin of the writing, but reserved to themselves the power of using a character not only as the representative of a syllabic sound, but also as an ideograph to which of course a Semitic pronunciation was attached.

Many of the characters exhibit their primitive form at the first glance;  for instance, clearly standing for "the tongue of a balance." In other cases the resemblance to the objects originally signified is not very visible in the simplified forms of the characters as used in Assyria, and we have to go back to the archaic Babylonian type to detect the likeness. Thus  has lost all resemblance to "the sun;" and it is not until we remember the archaic  that we discover the circle which stood for the great luminary of day. A large number of characters are compound, and when they are used ideographically their meaning can often be determined by considering what is the meaning of the

separate characters of which they are made up. Thus  $\rightarrow\left\{\begin{array}{l} \text{Y} \\ \text{Y} \end{array}\right\}$  is "a mouth," and  $\left\{\begin{array}{l} \text{Y} \\ \text{Y} \end{array}\right\}$  "a drop of water;" the compound  $\rightarrow\left\{\begin{array}{l} \text{Y} \\ \text{Y} \end{array}\right\}$  therefore naturally denotes the act of "drinking." So, again, the Assyrian  $\rightarrow\left\{\begin{array}{l} \text{Y} \\ \text{Y} \end{array}\right\}$  "a month" is the simplified form of the archaic  $\left\{\begin{array}{l} \text{Y} \\ \text{Y} \end{array}\right\}$ , where  $\lll$  the numeral 30 (expressing the 30 days of the month), is placed within the circle of the sun.

The use of polyphones no doubt increases the difficulty of decipherment, but the student will find that practically it is not so embarrassing as it would seem at first sight to be. The Assyrians intended their inscriptions to be read (at all events except in the case of texts like those of the astrological tablets, which were addressed to the initiated only), and accordingly adopted all possible means of obviating the disadvantages of a polyphonic system of writing. The following rules should be observed by the student in selecting one of the many values a given character may bear :—

- (1) The existence of an ideograph should never be assumed, unless it is indicated by a phonetic complement, or unless the inscription (like the astrological ones generally) is written throughout ideographically rather than phonetically.
- (2) Where two characters come together (such as *ca* and *ac*), the first of which ends with the same vowel as that with which the second begins, we may infer that they form one closed syllable (as *cac*).
- (3) If a character expresses an open syllable (as *ri*) as well as a closed one (as *tal*), the open is to be preferred to the closed (unless contra-indicated).
- (4) Those values are to be selected which offer a trilateral (or biliteral) root, and not a plurilateral one.

- (5) Notice must be taken of the final or initial consonant of the character which precedes or follows the one we are considering, as the Assyrians frequently doubled a consonant to show what value is to be chosen in a doubtful case. Thus  $\text{𐎠𐎢𐎢𐎠}$   $\text{𐎠𐎢𐎢}$  must be read *dan-nin*, as *dan* alone out of the many possible values of the first character ends with *n*.
- (6) A character which denotes a syllable beginning with a vowel is very rarely used after one which ends with a consonant.
- (7) Words and lines end together, and proper names, &c., are pointed out by Determinative Prefixes and Affixes.
- (8) Variant readings and variant forms of the same root must be carefully observed, as they often decide the pronunciation of a word where all other means fail.
- (9) Experience will show that common use had set apart one or two values of a given character which were preferably employed to all others.
- (10) Those values must be adopted which bring out a correct grammatical form, or enable us to compare the Assyrian word (should the context determine its meaning) with a similar root in the cognate languages.

It is not so much the existence of polyphones, however, that forms the chief defect in the Assyrian mode of writing. The phonology of the inventors of the writing was not the same as the phonology of the Assyrians, and sounds which were distinct in Assyrian had to be represented by one and the same sign.  $\text{𐎠𐎢𐎢}$  is both *hu* or *u* ( $\text{𐎠𐎢}$  and  $\text{𐎠𐎢}$  and  $\text{𐎠}$ ) and *yu* ( $\text{𐎠𐎢}$ ),  $\text{𐎠𐎢}$  *za* and *tsa*,  $\text{𐎠𐎢𐎢}$  *da* and *dha*,  $\text{𐎠𐎢}$  *di* and *dhi*,  $\text{𐎠𐎢}$  *e* ( $\text{𐎠𐎢}$ ) and a modified  $\text{𐎠𐎢}$ ,  $\text{𐎠𐎢}$  *bu* and *pu*. Similarly the same characters denoted both *m* and *v*, and no distinction was made between final *d*, *dh*, and *t*; *b* and *p*; *g*, *c*, and *k*; and *z*, *s*, *ts*, and even *s*; while closed

syllables might begin as well as end with any of these doubtful letters. The uncertainty which results from this as to the initial or final letter of a syllable would naturally not press upon the Assyrian; but it is the main difficulty against which the modern decipherer has to contend, and can only be overcome by the examination of new texts and the comparison of numerous passages.

# ASSYRIAN GRAMMAR.

## SYLLABARY.

The characters of the Assyrian Syllabary were originally hieroglyphics, representing objects and ideas. The words by which these were denoted in the Turanian language of the Accadian inventors of the cuneiform system of writing became phonetic sounds when it was borrowed by the Semitic Assyrians, though the characters could still be used ideographically as well as phonetically. When used ideographically the pronunciation was, of course, that of the Assyrians.

In the following table only the forms of the characters found on the majority of the Assyrian monuments are given. Sometimes the so-called Hieratic characters were employed (*e.g.*, in the Cyprian Stele of Sargon) which differ but slightly from the Babylonian. Ancient Babylonian varied again in the forms of several characters. The Elamite or Susianian characters have the same form as the ancient Babylonian, while the Protomedic are modified from the Assyrian.

The Assyrian word in the right-hand column is a translation of the Accadian word (used in Assyrian as a phonetic value) in the left-hand column, and was the sound given to the character in the Assyrian inscriptions whenever it was read as an ideograph.

N.B.—A Star (\*) signifies that one or more characters have been lost by a fracture of the tablet. *Khi*, a value of No. 180, has been accidentally omitted.

The following is a list of the characters which express the open or simple syllables of the Assyrian alphabet. The beginner is advised to commit it to memory before advancing further in the study of the language. The letters of the Hebrew alphabet are added in order to explain the transliteration adopted for Assyrian sounds.

An ideograph is often indicated by a *phonetic complement* which gives the first or last syllable of the Assyrian word which is to be read. Thus is to be rendered by some part (according to the context) of the aorist *acsud* "I acquired."

Three main rules to be observed in selecting the value of a character are (1) that that power is to be chosen, the first or last consonant of which is the same as the consonant which ends the preceding syllable or begins the next; (2) that no Assyrian word, as a general rule, ought to contain more than three radical letters; and (3) that values consisting only of a consonant and a vowel are to be preferred to those in which the vowel is enclosed between two consonants.

An open syllable (that is, one which begins with a vowel) only exceptionally follows a character which terminates in a consonant; and all words end with the line. Determinative Prefixes (D.P.) are a great assistance to the reader. These are unpronounced ideographs which are always set before certain classes of persons and objects; so that their presence enables us to tell with certainty the nature of the following word. There are also Determinative Affixes (D.A.) which serve the same purpose.

The determinative prefixes and affixes are as follows :

## PREFIXES :—

→  (ilu)	denotes a god or goddess.
or →→→→	„ a man.
♀-	„ a woman.

## THE NOUNS.

Nouns substantive and adjective do not differ in form in Assyrian.

The adjective always follows its substantive, and has neither comparative nor superlative.

Nouns are of two genders, masculine and feminine, and abstract nouns take the feminine form. Many words are both masculine and feminine, and may take the terminations of both genders.

There are two numbers, singular and plural; and a dual is found in the case of those nouns which denote doubles, like "the eyes." Adjectives as well as substantives admit the dual form.

There are three cases, the nominative, ending in *-u*; the genitive, ending in *-i*; and the accusative, ending in *-a*; but great laxity prevails in the use of these forms.

The case-terminations have a final *m* (or *v*), termed the *mim*mation. This was usually dropped in the later Assyrian inscriptions, though the Babylonian dialect preserved it to the last.

When one substantive governs another, the governing noun loses the case-endings (and *mim*mation), and the governed noun which immediately follows commonly assumes the termination of the genitive. Thus *bil* is "lord," but *bil nuri*, "lord of light."

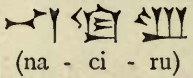

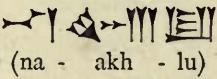

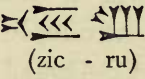

The feminine singular changes the *u* of the nominative masculine into *-ūtu*, *-ātū*, and *-ētū* (or *ētū*). The last two forms (*ātū* and *ētū*) might elide the vowel, unless the root is a "surd" one, like *šar*, when the final letter is doubled, producing *šarrātū*, "queen." In the plural the feminine ending became *-ātū* and *-ētū* or *-ētū*.

The oldest form of the plural masculine was in *-ānu*, which was originally used for both genders. We also find traces of a reduplicated plural, like *māmī*, "waters," and of a plural in *-ānu*, like *dilūnu*, "buckets." Another form of the plural masculine was in *-ūtū* (carefully to be distinguished from the feminine singular in *-ūtū*). This is the form of the masculine plural adopted by all adjectives. The most common termination of the masculine plural was in *-e* or *-i*. These plurals are in many cases indistinguishable from the genitive case of the singular. The ending of the dual was *ā*.

There is a curious plural in *-tan*, which combines the feminine and masculine terminations. It expresses a *collection* of anything, e.g., *e-bir-tā-an*, "a ford."

THE NUMERALS.

The cardinals have two forms, masculine and feminine; but from 3 to 10 the feminine form is used for the masculine, and the masculine form for the feminine.

When the numerals are expressed in symbols ¶ signifies "one," ¶¶ "two," and so on. < stands for 10, <¶ for 11, << for 20, &c. ¶- is 100, and <¶- (= 10 × 100) is 1000.

The cardinals are denoted by adding < to the ordinal; thus ¶ < is "first."

Sixty was the mathematical unit: the single wedge (¶) accordingly stands for the *soos*, or *sixty*, as well as for *one*. In fractions it is the understood denominator; thus, ¶¶ <<< (3.30) is  $3 \frac{30}{60}$ , i.e.  $3\frac{1}{2}$ .

EXAMPLE: 𐎠𐎵𐎠𐎵 𐎠𐎵𐎠𐎵 𐎠𐎵𐎠𐎵𐎠𐎵 𐎠𐎵𐎠𐎵𐎠𐎵 = "2,451 oxen."

In writing "one" we sometimes find the phonetic complement added to the cipher to denote whether it has the masculine or the feminine form. Thus, 𐎠𐎵 (EST-en) = *estin*, 𐎠𐎵𐎠𐎵 (IKH-it) = *ikhit*.

Fractional numbers are as follows:— 𐎠𐎵𐎠𐎵 𐎠𐎵𐎠𐎵 𐎠𐎵 *su-un-nu* (ideographically written 𐎠𐎵) = "one-half," 𐎠𐎵𐎠𐎵 𐎠𐎵𐎠𐎵 𐎠𐎵𐎠𐎵 𐎠𐎵𐎠𐎵 𐎠𐎵 *su-us-sa-a-nu* = "one-third," 𐎠𐎵𐎠𐎵𐎠𐎵 𐎠𐎵𐎠𐎵 *si-ni-bu* = "two-thirds," 𐎠𐎵𐎠𐎵𐎠𐎵𐎠𐎵 𐎠𐎵𐎠𐎵𐎠𐎵 *pa-ra-pu* = "five-sixths," 𐎠𐎵𐎠𐎵𐎠𐎵𐎠𐎵𐎠𐎵 *ru-bu* = "one-fourth," 𐎠𐎵𐎠𐎵𐎠𐎵𐎠𐎵𐎠𐎵𐎠𐎵 *su-du* = "one-sixth," 𐎠𐎵𐎠𐎵𐎠𐎵𐎠𐎵𐎠𐎵𐎠𐎵𐎠𐎵 *su-ma-nu* = "one-eighth," and 𐎠𐎵𐎠𐎵𐎠𐎵𐎠𐎵𐎠𐎵𐎠𐎵𐎠𐎵𐎠𐎵 *su-us-su* = "a sixtieth."

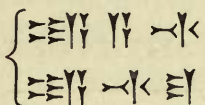

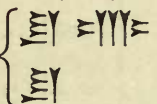

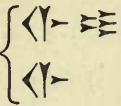

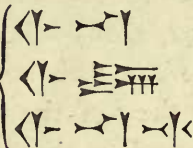

The adverbial numerals were formed by the termination *yānu*, as 𐎠𐎵𐎠𐎵𐎠𐎵𐎠𐎵 𐎠𐎵𐎠𐎵 𐎠𐎵𐎠𐎵 *sa-ni-e'ā-nu*, or 𐎠𐎵𐎠𐎵𐎠𐎵𐎠𐎵𐎠𐎵 𐎠𐎵𐎠𐎵𐎠𐎵𐎠𐎵 𐎠𐎵𐎠𐎵 *sa-ni-ya-a-nu* "a second time" ("twice"), *sal-si'a-nu* or *sal-si-ya-a-nu* "a third time." 𐎠𐎵𐎠𐎵𐎠𐎵𐎠𐎵 *sa-ni-tu* ("repetition") was used for "once," and in the later inscriptions it took the place of the adverbial numerals, e.g., *sa-ni-ti sal-sa* "the third time." *Sal-sa* is expressed in the Behistun inscription by the compound ideograph 𐎠𐎵𐎠𐎵𐎠𐎵.

Among the indefinite numerals may be reckoned 𐎠𐎵𐎠𐎵𐎠𐎵 *ca-lu*, 𐎠𐎵𐎠𐎵𐎠𐎵 *ca-la*, 𐎠𐎵𐎠𐎵 *cal*, 𐎠𐎵𐎠𐎵𐎠𐎵 *cul-lat* "all," 𐎠𐎵𐎠𐎵𐎠𐎵 *gab-bu* "all," 𐎠𐎵𐎠𐎵𐎠𐎵𐎠𐎵 *gim-ru* "the whole," 𐎠𐎵𐎠𐎵𐎠𐎵𐎠𐎵𐎠𐎵 *ma'du-tu* "much," and 𐎠𐎵𐎠𐎵𐎠𐎵𐎠𐎵𐎠𐎵𐎠𐎵 *ca-bit-tu* "much."

*Yā-ti* (*yā-ti-ma*) and *cātu* (*cā-ta*) are more substantival in their use than the other forms of the first two personal pronouns, and are generally met with as the first words of a sentence. Besides *yā-ti* we also find  $\Xi\Xi\Upsilon\Upsilon$   $\langle\Upsilon\rangle$ - *yā-si* and  $\Upsilon\Upsilon$   $\langle\Upsilon\rangle$ - *ai-si*.

The Possessive Pronouns are suffixed to the Nouns and Verbs. The following is a list of them :—

1. <i>Sing. Com. Gen.</i> ...	$\Xi\Xi\Upsilon\Upsilon$ , $\Upsilon\Upsilon$	<i>ya, ā</i> ... .. = <i>my</i> ; also <i>i</i> , as $\Upsilon\Upsilon$ $\Xi\Xi$ to be read 'āb-i, <i>my father</i>

*Ya* and *ā* were used as the pronoun suffix of the first person if the noun terminated in a vowel, *i* if it terminated in a consonant.

When the noun ends in *d*, *dh*, *t*, *s*, *ś*, *z*, or *ts*, the third person suffix becomes *śu*, *ša*, &c., as *khi-ri-it-śu* "its ditch," *bit-śu* "his house." The last letter of the noun is very frequently assimilated to the *ś* of the suffix, as *khi-ri-iś-śu*, *biś-su*; and then the reduplication may be dropped, so that we get *khi-ri-śu*, *bi-śu*.

In the later period of the language, the possessive pronouns are attached to the substantive *at-tu* "being" or "essence," and the compound is then used as an emphatic repetition of the pronoun; thus  $\text{𐎠𐎢𐏁 𐎠𐎢𐏁 𐎠𐎢𐏁 𐎠𐎢𐏁 𐎠𐎢𐏁 𐎠𐎢𐏁 𐎠𐎢𐏁 𐎠𐎢𐏁 𐎠𐎢𐏁 𐎠𐎢𐏁 𐎠𐎢𐏁 𐎠𐎢𐏁} \text{ } zir\text{-}ya$  *at-tū-a* = "my own race" (literally "my race (which is) mine"),  $\text{𐎠𐎢𐏁 𐎠𐎢𐏁 𐎠𐎢𐏁 𐎠𐎢𐏁 𐎠𐎢𐏁 𐎠𐎢𐏁 𐎠𐎢𐏁 𐎠𐎢𐏁 𐎠𐎢𐏁 𐎠𐎢𐏁 𐎠𐎢𐏁 𐎠𐎢𐏁} \text{ } at\text{-}tu\text{-}u\text{-}à, a\text{-}bu\text{-}u\text{-}a$  "to me (was) my father."

When the accent fell on the last vowel of the noun to which the possessive pronoun was suffixed, the initial consonant of the second and third pronoun suffixes were often doubled, as  $\text{𐎠𐎢𐏁 𐎠𐎢𐏁 𐎠𐎢𐏁 𐎠𐎢𐏁 𐎠𐎢𐏁 𐎠𐎢𐏁 𐎠𐎢𐏁 𐎠𐎢𐏁 𐎠𐎢𐏁 𐎠𐎢𐏁 𐎠𐎢𐏁 𐎠𐎢𐏁} \text{ } cir\text{-}bu\text{-}us\text{-}su$  "its interior," for *cirbū-su*.

THE DEMONSTRATIVE PRONOUNS.

	<i>Sing.</i>		<i>Plural.</i>
<i>Masc.</i> ...	𐎶 𐎶 𐎶	su'atu, su'ati, su'ata = <i>this, that</i> ...	𐎶 𐎶 𐎶 𐎶 𐎶 𐎶 su'atunu, su'atun, sātunu
<i>Fem.</i> ...	𐎶 𐎶 𐎶	si'atu, ...	} 𐎶 𐎶 𐎶 𐎶 𐎶 su'atina, satina, sinatina

<i>Masc.</i> ...	𐎶 𐎶 𐎶	sa'asu, or sāsu = <i>this, that</i> ...	𐎶 𐎶 𐎶 sāsunu, sāsun
<i>Fem.</i> ...	𐎶 𐎶 𐎶	sa'asa or sāsa, sa'asi ... or sāsi	𐎶 𐎶 𐎶 𐎶 sa'asina or sāsina

Three demonstratives are used to determinate distance, 𐎶 𐎶 𐎶 *ammu* or 𐎶 *ma* (“hic”) “this by me;” 𐎶 𐎶 *annu* (“iste”) “that by you;” and 𐎶 𐎶 𐎶 *'ullu* (“ille”) “that by him.” Of *ammu* we find only the sing. fem. 𐎶 𐎶 𐎶 *ammāte*, and *mā* (𐎶 𐎶) or *ma* the contracted form of the sing. masc. *amma*, and the pl. masc. *ammūta*, which is used as a suffix. Thus we have *šar Assur-ma*, “king of this same Assyria;” *anni-ma* or *an-ma*, “myself” (literally, “this person here”); 𐎶 𐎶 𐎶 𐎶 *ina sanati-ma si'ati* “in this very year.” This suffix is especially common at the end of the astrological tablets.

<i>Sing. Masc.</i> ...	an-nu ... ..	<i>Plural, Masc.</i> ...	an-nu-tu, an-nu-tav, an-ni-e
„ „	... an-ni-i, an-ni, a-an-ni ... ..	„ „	... an-nu-ti

„ <i>Fem.</i> ...	an-nā-tu, a-a-na-ti ... ..	„ <i>Fem.</i> ...	an-na-a-ti, an-nā-tav, an-ni-ti

„ <i>Masc.</i> ...	ul-lu ... ..	„ <i>Masc.</i> ...	ul-lu-tu

„ „	... ul-la ... ..		
„ <i>Fem.</i> ...	ul-lā-tu ... ..	„ <i>Fem.</i> ...	[ul-la-a-tu]

From *ullu* was formed in later times the adj.  $\llcorner\imath\lrcorner \llcorner\imath\lrcorner \text{𐎶} \text{𐎶}$  *ullnai* "on the further side."

In the Persian period we find a new demonstrative *'aga*, or *haga*, or *hagat* :

*Sing. Masc.* ...  $\text{𐎶} \text{𐎶} \text{𐎶} \text{𐎶} \text{𐎶}$  *'aga*, *'a-ga-a*, *a-ga-h* ... *Com. gen.* ...  $\text{𐎶} \text{𐎶} \text{𐎶} \text{𐎶} \text{𐎶}$  *'a-ga-a*  
 „ *Fem.* ...  $\text{𐎶} \text{𐎶} \text{𐎶} \text{𐎶} \text{𐎶}$  *'a-gä-ta*

This pronoun was further compounded with *annu* and the personal pronouns, so as to strengthen the determinative idea ; thus :

*Singular, Masc.* ...  $\text{𐎶} \text{𐎶} \text{𐎶} \text{𐎶} \text{𐎶}$   $\text{𐎶} \text{𐎶}$  *'agannu*, *'aganna*  
 „ „ ...  $\text{𐎶} \text{𐎶} \text{𐎶} \text{𐎶} \text{𐎶}$   $\text{𐎶} \text{𐎶}$  *'aga-su'u*, *he namely*  
*Plural, Masc.* ...  $\text{𐎶} \text{𐎶} \text{𐎶} \text{𐎶} \text{𐎶}$   $\text{𐎶} \text{𐎶}$   $\text{𐎶} \text{𐎶}$  *'agannutu*, *aganutu*  
 „ *Fem.* ...  $\text{𐎶} \text{𐎶} \text{𐎶} \text{𐎶} \text{𐎶}$   $\text{𐎶} \text{𐎶}$   $\text{𐎶} \text{𐎶}$  *'agannitu*, *aganet*  
 „ „ ...  $\text{𐎶} \text{𐎶} \text{𐎶} \text{𐎶} \text{𐎶}$   $\text{𐎶} \text{𐎶}$  *'aga-sunu*, *they namely*

Instead of *'aga-sū*, *sū-aga* also occurs, and *aga* is frequently used like a mere article.

## RELATIVE PRONOUNS.

The Relative Pronoun is 𐎗 *sa*, of all numbers and genders, which was originally a demonstrative. It may be understood, as in English, "the man I saw" for "the man *whom* I saw." It is often used to express the periphrastic genitive, when instead of the construct state, the full form of the first noun with the case-ending is given followed by *sa*, which then means exactly our "of." Thus 𐎗𐎗𐎗 𐎗 𐎗𐎗𐎗 *šarru sa matâti* "king of the world." Sometimes the first noun was omitted, as *ina sa Garganis* "according to (the maneh) of Carchemish."

The Interrogative Pronoun is 𐎗𐎗 *man-nu*, 𐎗𐎗𐎗 *mā-nu*, or 𐎗 *man*, "who?" "what," "which." Sometimes it is contracted into *ma-a*. *Mi-e* or *mi* also signified "who," and may be suffixed to *mannu*, forming 𐎗𐎗𐎗𐎗 *mannu-me*, "who."

The Indefinite Pronouns are the indeclinable 𐎗𐎗𐎗𐎗 *ma-nam-ma*, *ma-na-ma*, *man-ma*, *ma-am-man*, *ma-am-ma*, or *ma-num-ma*, "anybody," and 𐎗𐎗𐎗𐎗𐎗 *mi-im-ma*, "anything." The negative 𐎗𐎗𐎗 *la* or 𐎗𐎗𐎗𐎗 *ul*, joined in the same sentence with these pronouns, gave them a negative meaning, "nobody," "nothing." This negative meaning might be retained even when the accompanying negative was dropped, like *personne*, &c., in French. 𐎗𐎗𐎗𐎗𐎗𐎗 *ai-um-ma* or *ya-um-ma*, with the negative understood, and 𐎗𐎗𐎗𐎗 *nin* also, signified "nobody." 𐎗𐎗𐎗𐎗𐎗 *matina* was "at any time," or "in any place." The indeclinable 𐎗𐎗𐎗𐎗 *mala* = "as many as." "Some, others," was expressed by 𐎗𐎗𐎗𐎗𐎗 *ā-nu-te*—*ā-nu-te*, and 𐎗𐎗𐎗𐎗𐎗𐎗 *a-kha-di*—*a-kha-di*. *A-kha-ri-tu* = "other," *sa-num-ma* = "another," *estin ana estin* = "one to another."

The Reflexive Pronoun is 𐎗𐎗𐎗𐎗𐎗 *ra-ma-nu*, *ra-ma-ni*, *ra-ma-na* "self," to which the possessive pronouns were suffixed, as *ra-ma-ni-ya* "myself," *ra-ma-nu-ca* or *ra-ma-nu-uc-ca* "thyself," *ra-ma-ni-su-un* "themselves." 𐎗𐎗𐎗𐎗𐎗𐎗 *gadu* also was used for "individual," and "myself" might be expressed by 𐎗𐎗𐎗𐎗𐎗𐎗 *an-ni-ma* or 𐎗𐎗𐎗𐎗𐎗 *an-ma* (literally "this (man) here").

THE VERB.

Assyrian Verbs are for the most part trilateral, that is to say, the root consists of three consonants or semi-consonants.

If the root consist of three consonants the verb is called *complete*; if one or more of the three radical letters are semi-consonants which easily pass into vowels (*h* or *ḫ* becoming *a*; *v* or *ṽ* becoming *u*; *y* or *ṽ* becoming *i*; and *e* or *y* losing its guttural sound), the verb is called *defective*.

There are four principal Conjugations :—

- (1) Kal, the simplest form, with an active (more rarely a neuter) signification, as  $\text{𐎧𐎢𐎣}$   $\langle \text{𐎢𐎣𐎢} \rangle$  *ictum* “he concealed.”
- (2) Niphal, the passive of Kal, formed by prefixing *n*, which may be assimilated to the following vowel, as  $\text{𐎧𐎢𐎣}$   $\text{𐎠𐎢𐎣}$   $\langle \text{𐎢𐎣𐎢} \rangle$  *iccatum* “he was concealed” (for *incatum*).
- (3) Pael, with an intensive (and hence, sometimes a causative) signification, formed by doubling the second radical letter of the root, and conjugating the persons with an inserted *u*, as  $\text{𐎧𐎢𐎣}$   $\text{𐎠𐎢𐎣}$   $\langle \text{𐎢𐎣𐎢} \rangle$  *yucattum* (= *i-u-cattum*) “he did conceal.”
- (4) Shaphel, with a causative signification, formed by prefixing *s(a)* to the root, and conjugating the persons with inserted *u*, as  $\text{𐎧𐎢𐎣}$   $\text{𐎠𐎢𐎣}$   $\langle \text{𐎢𐎣𐎢} \rangle$  *yusactum* “he caused to conceal.”

Instead of Shaphel, concave verbs [see below] have *Aphel*, *s* having been changed into *h* and lost, as  $\text{𐎧𐎢𐎣}$   $\text{𐎠𐎢𐎣}$   $\langle \text{𐎢𐎣𐎢} \rangle$  *yudhib* “he caused to be good.”

Each of the four principal conjugations has two secondary forms made by inserting *t* and *tan* after the first consonant; thus :—

- (1a) Iphtéal from Kal, as  $\text{𐎧𐎢𐎣}$   $\text{𐎠𐎢𐎣}$   $\langle \text{𐎢𐎣𐎢} \rangle$  *ic-ta-tum*.
- (1b) Iphtanéal from Kal, as  $\text{𐎧𐎢𐎣}$   $\text{𐎠𐎢𐎣}$   $\langle \text{𐎢𐎣𐎢} \rangle$  *ic-tan-tum*.

- (2a) Ittaphal from Niphal, as it-ta-ctum (for in-ta-ctum).
- (2b) Ittanaphal from Niphal, as it-tan-accatum (for in-tan-accatum).
- (3a) Iphtaal from Pael, as yuc-ta-ttum.
- (3b) Iphtanaal from Pael, as yuc-tan-attum.
- (4a) Istaphal from Shaphel, as yus-ta-ctum or yul-ta-ctum.
- (4b) Istanaphal from Shaphel, as yus-tan-actum or yul-tan-actum.

From the Aphel of concave verbs is formed an Itaphal, as yu-ta-dhib.

These secondary conjugations have a reflexive force.

Niphal and Shaphel (and also probably Aphel) admit also of *Paelised* conjugations, (2c) Niphael, as iccattum, and (4c) Shaphael, as yuscattum.

From Niphal, Pael, and Shaphel, other intensive conjugations could be formed by repeating the last radical : thus (2nd) Niphalel, as iccatumim ; (3rd) Palel, as yucatumim ; and (4th) Shaphalel, as yusactumim.

Except Kal and Niphal, which stood in the relation of active and passive to one another, the other conjugations had passives formed by changing the vowels of the root into *u*, thus :

- (3) Pael makes yucuttum (permansive, *cuttum*).
- (4) Shaphel makes yus-cutum (permansive, *sucutum* or *sucutum*).
- Aphel makes yudhub.
- (4a) Istaphal makes (permansive) sutactim.

The MOODS are five in number—(1) the indicative, (2) the subjunctive, (3) the imperative, (4) the precative, and (5) the infinitive.

The indicative possesses two primary and three secondary TENSES—(1) the permansive or perfect; (2) the aorist or imperfect; (3) the present, a modified form of the aorist; (4) the perfect or pluperfect, the older form of the aorist; and (5) the future, the older form of the present.

The original tenses of the verb were (1) the perfect (permansive) and (2) the imperfect (aorist); but under the influence of Accadian, the imperfect split itself into two forms, one shorter (as  $\text{𐎶𐎵} \text{ } \text{𐎶𐎵} \text{ } \text{𐎶𐎵}$  *iscun* "he made") and one longer (as  $\text{𐎶𐎵} \text{ } \text{𐎶𐎵} \text{ } \text{𐎶𐎵}$  *isaccin* "he makes"), which came to be used with a real tense-distinction of meaning (as in Ethiopic). The longer and more primitive form of the present (*isaccinu*) came further to be used with a future force; and the longer and more primitive form of the aorist (*iscunu*), from its being adopted after words like "when" or "who," came to have generally a perfect or pluperfect sense.

The permansive (perfect) has grown out of the close attachment of abbreviated forms of the personal pronouns to nouns and participles into a true tense.

Besides the apocopated or ordinary aorist (*iscun*) and the pluperfect aorist (*iscunu*), there exists (1) a conditional or motive aorist (*iscuna*) formed by the attachment of *a*, "the augment of motion," to the apocopated aorist, and (2) the energetic aorist formed by the retention of the original mimmation, *iscunum(ma)*, *iscunim(ma)*, *iscunam(ma)*. There was also another form of the aorist which ended in *-i* (as *iscuni*).

These terminations of the aorist in *-u*, *-i*, *-a*, answer to the three case-endings of the noun, the apocopated aorist corresponding with the construct state, and go back to a time when but little distinction was made between the noun and the verb. The subjunctive mood is used in relative and conditional clauses, and is denoted by the addition of the particle *ni*, which may be placed after the possessive pronoun suffix, as  $\text{𐎶𐎵} \text{ } \text{𐎶𐎵} \text{ } \text{𐎶𐎵} \text{ } \text{𐎶𐎵}$  *ci ikabu-su-ni* "when he had called it."

PARADIGMS.

*The Strong or Complete Verb.*

KAL.

The second vowel of the aorist may be either *a*, *i*, or *u*, as *iscun* “he placed,” *ipdhir* “he freed,” *itsbat* “he took,” but *u* is most common.

The third vowel of the present may similarly be either *a*, *i*, or *u*, as *inaccar* “he estranges,” *isaccin* “he places,” *idammum* “it passes away,” but *i* is, by far, the most common vowel.

The first person singular of the aorist sometimes has *e* in Babylonian instead of *a*, as <<< 𐎶-𐎶𐎵 *esnik* for *asnik*, and verbs 𐎶𐎵 (see *infra*) in Assyrian might adopt the same vowel.

From its intensive signification Pael comes sometimes to be used in a causative sense. When Kal is intransitive, Pael is transitive.

*N.B.*—The present and aorist of Pael are distinguished from the present of Kal by the vowel *u* in the first syllable.

The reduplication is often neglected in writing. It is sometimes replaced in the case of labials and dentals by *mb* (*mp*) and *nd* (*ndh, nt*).

THE WEAK OR DEFECTIVE VERBS.

If one of the radicals of a verb is *n*, *á*, *h*, *u* (*v*), *i* (*y*) or *e*, it differs in many particulars from the conjugation of the Strong Verb, owing to the assimilation of these letters to other vowels or consonants.

Verbs which begin with these letters are called verbs פ'פ', א'פ', ה'פ', ו'פ', י'פ', and ע'פ'; verbs which end with them are called verbs ל'ל', א'ל', ה'ל', ו'ל', י'ל', and ע'ל'; verbs which have one of these letters as a second radical are called verbs ע'פ', א'ע', ה'ע', ו'ע', י'ע', and ע'ע'. The last class of verbs are also called Concave Verbs.

Verbs פ'פ'.

*N* is assimilated to the following letter; though in some few instances we find it irregularly retained. Before *b* or *p* it may be changed to *m*.

*N.B.*—All these verbs are greatly confounded with one another, and had also a tendency to adopt forms borrowed from verbs 𐎶'𐎵, consequently the same verb (e.g. *asabu*) might have some forms which presupposed a verb 𐎶'𐎵, others which presupposed a verb 𐎶'𐎵 (*usabu*), others which presupposed a verb 𐎶'𐎵 (*nasabu*), &c. Thus the precativ *lusib*, *lusibu* given above comes not from *asabu* (verb 𐎶'𐎵), but from *usabu* (verb 𐎶'𐎵).

## THE ADVERBS.

The most common mode of forming the adverb in Assyrian was by attaching the termination *-is* to the construct-state of a noun (whether sing. or pl.); as *rab-is* "greatly," *el-is* "above," *sallat-is* "for a spoil," *caccab-is* "like a star," *sadan-is* "like mountains." The accusative case of the noun, with or without the mimmation, might also be used adverbially, as *palcā* "amply," *rubam* "greatly."

The genitive also, with or without the mimmation, is sometimes found; as *batsti* "in ruin," *labirim* "of old."

The most common adverbs of place and time are the following:—

1. 	a-gan-na ...	<i>here</i>	11. 	ci-ha-am ...	<i>thus</i>
2. 	a-di ...	<i>till</i>	12. 	lu-ma(h)-du	<i>much</i>
3. 	ai-um-ma,	<i>never</i>	13. 	makh-ri ...	<i>formerly</i>
	ya-um-ma,		14. 	ma-te-ma...	<i>in times past</i>
	um - ma		15. 	e-nin-na ...	<i>again</i>

4. 	al-lu, al-la, al-la sa	<i>then, afterwards</i>	17. 	pa-na-ma...	<i>formerly</i>
5. 	ar-ci ...	<i>afterwards</i>	18. 	tsa-tis ...	<i>in future</i>
6. 	u-di-na ....	<i>at the same [time]</i>	19. 	sa... ..	<i>when</i>
7. 	um-ma ...	<i>thus, that</i>	20. 	sa-num-ma,	<i>in a foreign</i>
8. 	ul - lā - na, ultu ulla	<i>from that time, from of old</i>		sa - nam- ma	<i>land, else- where</i>
9. 	zi-is ...	<i>as of old</i>	21. 	ina yumi	<i>at that time</i>
10. 	ca-la-ma ...	<i>of all kinds</i>		suma	
			22. 	um-ma-as-su	<i>because</i>

DERIVATION OF NOUNS.

A large proportion of Assyrian nouns are derived from different forms of the verb. Thus from Kal we have the infinitives  $\text{𐎠𐎢𐎵 𐎠𐎢𐎵 𐎠𐎢𐎵}$  *ra-kha-a-tsu* "to inundate,"  $\text{𐎠𐎢𐎵 𐎠𐎢𐎵 𐎠𐎢𐎵}$  *ni-ci-i-su* "to cut off," and  $\text{𐎠𐎢𐎵 𐎠𐎢𐎵 𐎠𐎢𐎵}$  *su-mu-u-ru* "to keep;" the participle passive  $\text{𐎠𐎢𐎵 𐎠𐎢𐎵 𐎠𐎢𐎵}$  *da-li-i-khu* "troubled," and the active participle  $\text{𐎠𐎢𐎵 𐎠𐎢𐎵 𐎠𐎢𐎵}$  *ma-a-li-cu* "ruling" where the long *ā* of the first syllable serves to distinguish it from *mā-li-cu* "a king," which is derived from the Permansive.

From Pael we have nouns like  $\text{𐎠𐎢𐎵 𐎠𐎢𐎵 𐎠𐎢𐎵}$  *kar-ra-du* "war-like," *lim-mu-nu* "injured."

From Palel,  $\text{𐎠𐎢𐎵 𐎠𐎢𐎵 𐎠𐎢𐎵}$  *nam-ri-ri* "bright."

From Iphtéal and Iphtaál,  $\text{𐎠𐎢𐎵 𐎠𐎢𐎵 𐎠𐎢𐎵}$  *cit-ru-bu* "a meeting," *lat-bu-su* "clothed," *git-ma-lu* "a benefactor."

From Shaphel,  $\text{𐎠𐎢𐎵 𐎠𐎢𐎵 𐎠𐎢𐎵}$  *sap-sa-ku* "an opening," *sum-cu-tu* "a slaughter."

From Niphál,  $\text{𐎠𐎢𐎵 𐎠𐎢𐎵 𐎠𐎢𐎵}$  *nab-kha-ru* "collected," *nab-ni-tu* "offspring," *num-kha-ru* "a receipt."

From the weak verbs come words like  $\text{𐎠𐎢𐎵 𐎠𐎢𐎵 𐎠𐎢𐎵}$  *mi-ru* "offspring" for *ma'iru*, *sa-hu* "summit" from *nasu*, and from verbs  $\text{𐎠𐎢𐎵}$ , *lit-tu* (for *lid-tu*), *li-du*, *li-i-tu*, *li-da-a-tu*, and *lit-tu-tu*, all meaning "offspring." Also forms which repeat the second radical, as *li-lic-cu* "a going," *lil-li-du* "a birth," *dadnu* "man," the Heb. *adam* אדם.

When a monosyllable is repeated the last consonant of the first syllable is generally assimilated to the first consonant of the second syllable, as  $\text{𐎠𐎢𐎵 𐎠𐎢𐎵 𐎠𐎢𐎵}$  *kak-ka-du* (for *kad-kadu*) "a head," *ca-ac-ca-bu* (for *cab-cabu*) "a star."

The prefix *M* denotes the instrument, action, or place, as  $\text{𐎠𐎢𐎵 𐎠𐎢𐎵 𐎠𐎢𐎵}$  *man-za-zu* a "bulwark."

The prefix *T* (another form of Iphtéal) builds abstracts, as  $\text{𐎠𐎢𐎵 𐎠𐎢𐎵 𐎠𐎢𐎵}$  *tas-me-a-tu* "a hearing," *te-ni-se-tu* "mankind," *tu-ku-ma-tu* or *tuk-ma-tu* "opposition." Also adjectives as *Tas-me-tu* "she who hears" (the wife of Nebo).

Roots may be increased by prefixing a vowel, as  $\text{𐎠𐎢𐎵 𐎠𐎢𐎵 𐎠𐎢𐎵}$  *al-ca-cat*

or *il-ca-cat* "stories," *e-da-khu* "warrior," *im-mi-ru* "youngling," *u-ta-a-ma* "lawgiver."

A word might be lengthened by affixing *ānu* (also *īnu* or *innu* and *ūnu*) to the construct;  $\text{𐎶𐎵𐎶} \text{ 𐎶𐎵} \text{ 𐎶} \text{ 𐎶}$  *cir-ba-a-nu* "an offering,"  $\text{𐎶𐎵} \text{ 𐎶𐎵} \text{ 𐎶} \text{ 𐎶}$  *sil-dha-a-nu* "a king,"  $\text{𐎶𐎵} \text{ 𐎶𐎵} \text{ 𐎶} \text{ 𐎶}$  *te-er-din-nu* "a descent,"  $\text{𐎶𐎵} \text{ 𐎶𐎵} \text{ 𐎶} \text{ 𐎶}$  *a-gu-nu* "a crown." Words so formed were collectives.

Gentile nouns were formed by the termination *ai* (fem. *aitu*), as  $\text{𐎶𐎵} \text{ 𐎶𐎵} \text{ 𐎶} \text{ 𐎶}$  *ti-(h)am-ta-ai* "a sailor,"  $\text{𐎶𐎵} \text{ 𐎶𐎵} \text{ 𐎶} \text{ 𐎶}$  *Ba-bi-la-ai* "a Babylonian," *Dur-Sar-ci-na-ai-ti* "she of Dur-Sargon."

Quadrilaterals are occasionally found, as well as quinqueliterals, as *a-sa-ri-du* "first-born," *khar-pa-su* "vehemence," *kha-mi-luhk-khi* "stores," *kha-ba-tsi-il-la-tu* "a lily."

Many Assyrian words are borrowed from Accadian.

## PHONOLOGY.

The chief phonetic rules to be remembered are the following :—

1. A sibilant before a dental generally becomes *l*, as *kha-mil-tu* "five" for *kha-mis-tu*.
2. A dental followed by *s* is (together with the sibilant) resolved into *śś* or *ś*, as  $\text{𐎶𐎵} \text{ 𐎶𐎵} \text{ 𐎶} \text{ 𐎶}$  *ka-aś-su* or  $\text{𐎶𐎵} \text{ 𐎶𐎵} \text{ 𐎶} \text{ 𐎶}$  *ka-śu* for *kat-su* "his hand."
3. A dental preceded by a sibilant is assimilated to the latter, and when the sibilant is *s* the last rule takes effect, as *its-tsa-bat* for *its-ta-bat* "he is taken," *iś-sa-can* and *i-sa-can* for *is-ta-can* "he dwells."
4. After a guttural, the *t* of the secondary conjugations may change to *d* or *dh*, as *ik-dha-rib* for *ik-ta-rib* "he approached."
5. *Kh* in the other Semitic idioms, is frequently replaced in Assyrian by *h*, or lost altogether.
6. Instead of *k* the Babylonian dialect often has *g*, as *ga-tu* for *ka-tu* "hand;" and this change of letter sometimes makes its way into the Assyrian dialect.
