PREFACE

The complete destruction of the villages of Barwar in northern Iraq in 1988 brought to an end the world of an Assyrian Christian community that spoke a dialect of neo-Aramaic. The dispersal of the villagers to the Iraqi towns and to a diaspora outside Iraq has considerably threatened the survival of their dialect. Many of its distinctive morphological features and numerous items of vocabulary relating to the traditional agricultural life of the community are in danger of being lost. Also endangered is the rich tradition of oral folklore that existed in the community in former times but, for the most part, is now falling into oblivion.

Over the last five years I have worked with informants who grew up and lived in the villages. In this book I attempt to capture the world of their community as they knew it in former times. It has been my privilege to have met some of the oldest surviving members of this community who still remember well their neo-Aramaic dialect and the oral folkloric traditions. On the basis of the material gathered from numerous fieldtrips, I present here a detailed linguistic description of their dialect, an extensive corpus of transcribed recordings and a glossary of lexical items.

I am grateful to the British Academy which generously offered me a Research Readership for two years (2005–2007), during which period the majority of the book was written.

Finally I should like to thank my family for their constant support as I worked long hours on this project.

Geoffrey Khan

INTRODUCTION

0.1. Barwar and Its Assyrian Christian Communities

This work is a description of the neo-Aramaic dialect spoken by Assyrian Christians from a district in the Dihok province of Iraq lying adjacent to the border of Turkey known as Barwari Bala. It is a Kurdish name meaning 'Upper Barwar', the epithet being used to distinguish it from a region known as Bawari Žēr 'Lower Barwar', which lies further to the south. The Assyrians frequently use the shorter term Barwar rather than Barwari Bala to refer to this district and regularly refer to those whose families originate from there as *Barwarnaye*. The shorter term will be used throughout this book.[1]

Barwar borders to the North on the Turkish province of Hakkari, from which it is separated by the Širani chain of mountains. To the South it borders on the district of Ṣapna, from which it is separated by the Matina mountain chain. On the East it borders on the district of Nerwa-w Rekan, from which it is separated by the Great Zab river. On the West it is bounded by the Xabur river, a tributary of the Tigris, which divides it from the district of Gulli-w Səndi. The mountain chain North of Barwar was called by the Assyrians 'the one in shadow' (*ṭalana*) and the one to the South 'the one in the sun' (*ba-roža*). This was because when the sun rose it would strike first the southern mountains, leaving the northern mountains in shade.

Two rivers run through the area. The river Nənne flows from South-East to North-West into the Xabur. To the North of this the river Be-Xelape flows North-West to South-East into the Great Zab. The land is fertile and wooded.

In the twentieth century the life of the Assyrians of Barwar underwent a series of devastating upheavals. The greatest physical destruction took place in the 1970s and 1980s, when the Iraqi army destroyed all of the Kurdish and Assyrian villages of the area, as well as hundreds of other

---

[1] The word *barwār* is a Kurdish common noun meaning 'slope (of a hill)', spelt 'berwar' according to the conventional Kurdish orthography (Chyet 2003: 45). It is used in association with several other geographical names, all of which are in south-eastern Turkey, e.g. Barwar of Qudshanes, Barwar of Sevine, Barwar of Shwa'uta (Fiey 1964: 446).

villages along the Turkish border region, as part of the so-called *ʾAnfāl* campaign against the Kurds. The final wave of destructions took place in 1988, which included the Assyrian village of ʾƐn-Nune ('Spring of Fishes'), also known as Kani Masi, the administrative centre of the district, lying approximately ten miles North-North-West of Amedia. All the Assyrians of the area were evacuated to refugee camps and subsequently they either settled in the Iraqi towns or left Iraq and joined the Assyrian diaspora communities in North America, Europe and Australia. When the 'No-Fly-Zone' was established in northern Iraq in 1991 after the Gulf War, some Assyrians began to return to the site of their villages and rebuild them. The majority of the Assyrian families who originated in the villages, however, remain to this day scattered around the world.

Before the *ʾAnfāl* campaign the major upheavals suffered by the Assyrians of Barwar took place during the Kurdish rebellion against the Iraqi government by Muṣṭafa Barzani from 1961 to 1970 and during the massacre and displacement of the Assyrians during the First World War.

In the Kurdish—Iraqi war beginning in 1961 large numbers of the Assyrians in Barwar abandoned their villages and fled to the Iraqi towns. A few villages were permanently taken over by the Kurds at this time, but in 1970 the majority of the Assyrian population returned.

In the First World War the Assyrians of Barwar suffered the fate of the Christian communties of south-eastern Turkey. The Assyrians sided with the Russians against the Turks. In 1915 the Turks undertook an ethnic cleansing of the Hakkari. The vali of Mosul, Haydar Bey, was put in charge of operations. His force consisted of Turkish reserves and local Kurdish tribes. The Kurdish chief of Barwar, Rashid Bek, was given the task of marching on the villages in the local area with Turkish troops. The majority of the Assyrian villages of Barwar were destroyed and many of their inhabitants were massacred. The villagers with their antiquated rifles were unable to withstand the modern weaponry with which the Turks and Kurds were supplied. Those who managed to escape fled into the mountains. The Assyrians from Barwar joined the thousands of Assyrian refugees from Hakkari and sought safety behind Russian lines in the region of Salamas and Urmi.[2] At the end of the war in 1918, decimated further by starvation and disease, they were transferred under the protection of the British from Iran to a camp in Baquba, North of Baghdad. In 1920 most of the surviving families from Barwar returned to their villages,

---

[2] Gaunt (2006: 142–145).

where they remained after Barwar was incorporated into the territory of the newly founded state of Iraq in 1925. They did not suffer the same degree of displacement at this period as the surviving Assyrians of Hakkari who could not continue to live in their original villages after the fixing of the borders between Iraq and Turkey. As a result of this continuation of life in their native villages after the end of the First World War, the neo-Aramaic dialect of the Assyrians of Barwar has been fully preserved by the older generation of speakers who are alive today.

During the Ottoman period before the First World War the Assyrians of Barwar were nominally subject to the Turkish government. They did not have the independence of the Assyrian mountain tribes of the Hakkari, but were under the overlordship of a local Kurdish chief. They suffered at various periods from the aggression of these local Kurdish chiefs. In the first decade of the twentieth century they were subject to the oppression of Rashid Bek, the Kurdish emir of Barwar. In 1907 they were relieved from this by the intervention of the Ottoman vali of Mosul, Xalil Pasha, after the intercession of the Chaldean patriarch of Mosul, Mar 'Ammanu'el.[3] At a time of Ottoman weakness in the 1840s Badr Khan Bek, the Kurdish emir of Bohtan, led a confederation of Kurdish tribes that attempted to eliminate the independent Assyrian tribes of Ṭiyare and Hakkari in a series of devastating massacres. Although not belonging to these tribes, the Assyrian villages of Barwar were also the victim of these attacks[4] and, according to the testimony of the bishop of Barwar to Badger in 1850, one half of the population was either slaughtered or driven away from their homes.[5]

There were close relations between the Assyrian communities of Barwar and the independent Assyrian tribes (*'aširatte*) of Ṭiyare before the First World War. The connections with Ašiθa in Lower Ṭiyare were especially close. A large proportion of the trade of Ašiθa was with Barwar. Furthermore, due to lack of sufficient fodder in the mountains, each Spring the people of Ašiθa would bring down their flocks to graze in Barwar and Ṣapna. The Assyrians of Barwar shared many of the customs of the Ṭiyare communities. Indeed a large number of the villagers had family

[3] Pennacchietti (1976: 649).
[4] Binyamin (1982: 12).
[5] Badger (1852: vol. 1, 381–382).

ties with Ṭiyare and people alive today tell stories of their ancestors migrating from there.[6]

The livelihood of the Assyrians of Barwar was largely based on agriculture and the grazing of sheep and goats. The fertile lands of the area sustained crops in corn, such as wheat, barley, millet, sorghum, maize, paddy fields of rice, various vegetables, tobacco and numerous fruit trees. After the Kurdish—Iraqi war in the 1960s the growing of corn and rice became uneconomical and the villagers concentrated on the cultivation of fruit, especially apples.

Until the First World War there were approximately thirty-five villages in Barwar that were inhabited by Assyrians. A large proportion of these continued to have Assyrian inhabitants after the return of the Assyrians to the area in 1920 down to their final destruction in the Iraqi campaign against the Kurds in the late 1970s and the 1980s. The material for this book was gathered from informants who were inhabitants of a group of villages that were situated in close proximity to one another along the Be-Xelape river. These include the largest village of Barwar and administrative capital ’Ɛn-Nune, and the neighbouring villages of Dure, Dɛrəške, Bəšmiyaye, ’Iyyət, and Maye. At the time of their destruction the Assyrian Christian population of these villages was as follows:[7]

	Year of destruction	Number of families
’Ɛn-Nune	1988	140
Dure	1978	100
Dɛrəške	1988	50
Bəšmiyaye	1978	50
’Iyyət	1978	40
Maye	1978	35

The villages of ’Ɛn-Nune, Dure, Bəšmiyaye and ’Iyyət were inhabited only by Assyrian Christians. Parts of Dɛrəške and Maye, known as Dɛrəške Islam and Maye Islam, were populated by Muslim Kurds.[8]

MAP OF BARWAR

The majority of the Assyrians of Barwar belong to the Church of the East. In the first half of the twentieth century a few families became Catholic, following the adoption of Catholicism by their bishop, Mar Isho Yawalaha in 1904.[9]

The villages had churches that were built with solid fortifications since they were intended for defensive purposes as well as worship. They were dedicated to various saints, whose annual festival (*šera*) was celebrated in the village. In ʾⲈn-Nune stood the church of St. Sawa, which, according to informants, was an old structure that was probably built between 600 to 800 years ago. According to tradition St. Sawa was an Iranian convert to Christianity who was buried in Upper Ṭiyare in the church of Čamba d-malək on the Great Zab.[10] The foundation stone of the church dedicated to him in ʾⲈn-Nune is said to have been taken from his original sanctuary in Ṭiyare.[11] In Dure there were four churhes, viz. those of Saint Qayyoma, Saint George, Saint Apius and Saint Mary. The first two of these continued in use until the destruction of the village in 1978. According to local tradition the church of Saint George was built in the middle of the first millennium A.D. The church of Saint Qayyoma, which was believed to be the earliest Christian sanctuary in the area, was the seat of the bishops of Barwar. It was built into a rock in the hillside overlooking the village and housed a tomb containing the bodies of the bishops.[12] The churces of St. Apius and St. Mary were only visited on memorial days of the saint. Bəšmiyaye had two churches, the church of Bne Šmoni and that of St. Aprəm. The village of ʾIyyət had a church dedicated to St. George. All of the churches of the villages were razed to the ground by the Iraqi army in the ʾAnfāl campaign. Since 1991 a few have been rebuilt by Assyrians who have returned to the site of their villages.

0.2. The Neo-Aramaic Dialect

This grammar is a description of the neo-Aramaic dialect spoken by the Assyrian Christian communities in the group of villages ʾⲈn-Nune, Dure,

---

Tašiš, Čaqala, Čamməkke, Ḥayyis, Margajiya, Mamadoka, Zəvinge, Maglana, Dargale, Musăka, Čammət Bəllo, Tuθe Šemaye, Bāz, Kani Balave, Čam Dastine, Hurke, Tərwanəš, Bazive, Bekozanke, Betanure (also inhabited by Jews).

[9] Mar Aprem Mooken (2003: 111).
[10] According to Fiey (1964: 443–445) he should be identified with a monk called Sawa Gūshnazdād who died in 485 or 488 A.D.
[11] B6:27–32.
[12] Grant (1841: 51–52), Badger (1852: vol. 1, 381–382).
The village of ʾƐn Nune before its destruction in 1988

ʾIyyət, Dɛrəške, Bəšmiyaye and Maye, which are situated along the river Be-Xelape. There are a few differences in the neo-Aramaic spoken in these villages, mainly in the lexicon, but they are very minor and the speech of the villages should be treated as a single dialect, which will be referred to as Christian Barwar (henceforth abbreviated to C. Barwar).

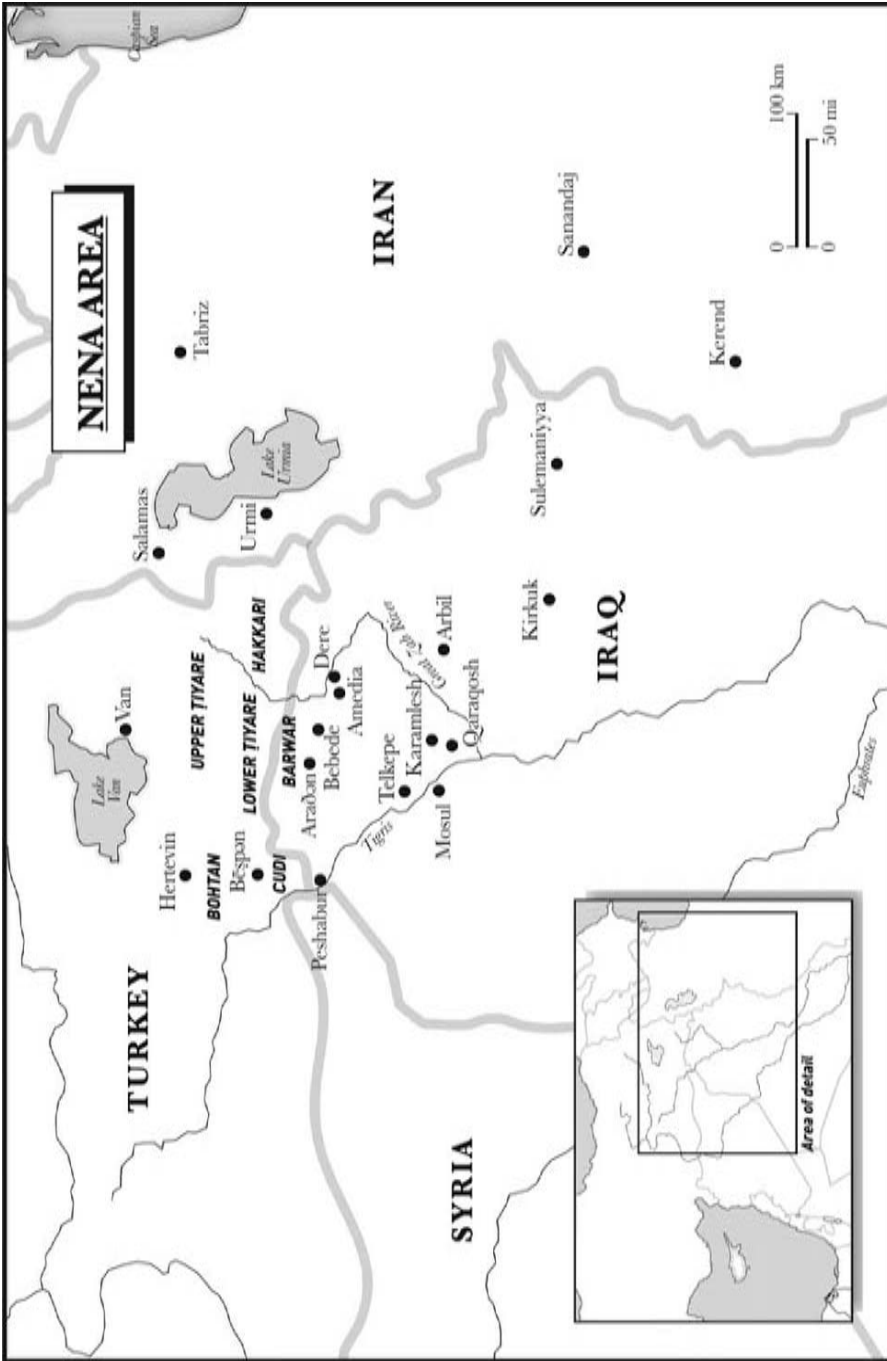
The C. Barwar dialect belongs to North-Eastern Neo-Aramaic (NENA), which is a very diverse group of dialects spoken by Christians and Jews in an area lying to the East of the Tigris river that includes northern Iraq, south-eastern Turkey, north-western and western Iran. There are differences among these dialects not only according to geographical region but also according to religious community, in that Christians and Jews of the same geographical area spoke different dialects. In what follows an assessment will first be made of the position of the C. Barwar dialect among the Christian dialects of the group and subsequently the features that distinguish it from the neighbouring Jewish dialects will be examined.

0.2.1. *The Position of the C. Barwar Dialect among the Christian NENA Dialects*

In general the degree of relationship of the C. Barwar dialect to other Christian NENA dialects depends on geographical proximity. It shares more grammatical and lexical features with the dialects of the neighbouring region than with those that were spoken at more remote locations. Its closest relations are the Christian dialects of the Ṭiyare region to the North of Barwar, in south-eastern Turkey, and those of the region of Amedia in northern Iraq to the South of Barwar. In many cases the dialects from these regions share features that differ from what is found in other NENA dialects. This situation is not, however, completely clear-cut since these dialects share some features that are not general to NENA also with more remote dialects. Of particular significance for establishing affiliation to sub-groups is the sharing of features that can be identified as innovations.

In the tables below a selection of grammatical and lexical features are presented from, on the one hand, the dialects of C. Barwar, Ṭiyare and the region of Amedia, and, on the other hand, more remote dialects lying on the periphery of the NENA area. The first of these groups includes, in addition to C. Barwar, the dialects of Ašiθa in Lower Ṭiyare,[13] Bne Rumta

---

[13] Source: R. Borghero, *The Neo-Aramaic Dialect of Ašiθa*, Ph.D. thesis, Cambridge, 2006.


MAP OF THE NENA AREA

in Upper Ṭiyare[14] and Bebede,[15] which lies two miles West of Amedia. In the following tables these will be referred to, for the sake of convenience, as 'local dialects'. The second group, which will be referred to as 'peripheral', includes the Christian dialects of Qaraqosh near Mosul on the south-western periphery of the NENA area,[16] Peshabur near the Turkish–Iraqi border on the Tigris,[17] Bēṣpən in the Cudi area of south-eastern Turkey,[18] various other dialects of south-eastern Turkey including Bohtan,[19] Hertevin[20] and Van,[21] Urmi in north-western Iran[22] and Sanandaj in western Iran.[23]

The C. Barwar dialect preserves the interdental realization of the fricative consonants *t and *d. It shares this feature with most local dialects and dialects in the south-western zone of the NENA area such as Qaraqosh. The interdental realization has, however, been lost in other peripheral dialects, as shown in Table 1:

Table 1

		Interdental reflex of *t	Interdental reflex of *d
Local	Barwar	θ	$\eth$
	Ašiθa	θ	$\eth$
	Bne Rumta	θ	$\eth$

[18] Source: Sinha (2000).
[19] Source: S. Fox (p.c.).
[20] Source: Jastrow (1988) and fieldwork by G. Khan.
[21] Source: Fieldwork by G. Khan (NENA database, nena.ames.cam.ac.uk).
[22] Source: Fieldwork by G. Khan (NENA database, nena.ames.cam.ac.uk).
[23] Source: Panoussi (1990).

In Table 2 various affixes are compared. These include the 3ms. and 3fs. pronominal suffixes that are attached to nouns and prepositions, the 3pl. L-suffixes and the indicative habitual particle that is prefixed to the present base of verbs.

Table 2

		3ms. suffix	3fs. suffix	3pl. L-suffix	indicative particle
Local	Barwar	*-e*	*-a*	*-lɛ*	*i-*
	Ašiθa	*-e*	*-a*	*-lɛ*	——
	Bne Rumta	*-e*	*-a*	*-lɛ*	*i-*
	Bebede	*-e*	*-a*	*-lɛ*	*i-*
Peripheral	Qaraqosh	*-əḥ*	**-aḥ**	*-lhən, -hən*	*k-*
	Peshabur	*-əḥ*	*-aḥ*	*-lɛy*	*k-*
	Bēṣpən	*-u*	*-aw*	*-lɛhən*	*i-*
	Bohtan	*-əw*	*-aw*	*-lā*	*i-*
	Hertevin	*-əw*	*-o*	*-lehən*	——
	Van	*-ə*	*-a*	*-le*	*i-*
	Urmi	*-u*	*-o*	*-lun*	*či-*
	Sanandaj	*-e*	*-e*	*-lu*	*k-*

It can be seen that there is considerable diversity in the forms of the suffixes across the NENA area. Outside of the local area, C. Barwar exhibits a close relationship in the 3ms. and 3fs. suffixes with Van, *-ə* being a phonetically reduced form of *-e*. In Sanandaj the *-e* has been generalized also to the 3fs. The proto-forms of these suffixes can be reconstructed as **-eh* and **-ah*, so the forms *-e* and *-a* would have arisen by loss of the final /h/. In Qaraqosh and Peshabur the original final /h/ has been strengthened to a pharyngal and in other dialects innovative forms have developed by adding a labial element.

The form of the 3pl. L-suffix *-lɛ* in the local dialects is a contraction of the proto-form **layhən* (§8.3.1.). Several of the other dialects exhibit various degrees of contraction of the same proto-form. The suffixes in Qaraqosh, Urmi and Sanandaj, on the other hand, must have a different historical background.

The prefixed indicative particle *i-*, which is common to most of the local dialects, is found also in some other dialects of south-eastern Turkey, such as Bēṣpən and Van. Other dialects have suffixes containing a /k/ element (palatalized to *č* in Urmi), or no preverbal indicative particle (Hertevin).

The C. Barwar dialect has two types of compound verbal forms. One combines the resultative participle (*qṭila*) with the copula to express the perfect (§15.4.1.). The other combines the infinitive with the copula to express progressive aspect (§8.8.5.–8.8.7.). Both of these constructions are innovative developments in NENA that appear to have been induced by contact with other languages. C. Barwar shares these features with the local dialects and also some other dialects in the peripheral group. The compound verbal forms, however, exhibit different properties across the subgroups of dialects that possess them. One difference is the way the pronominal object is expressed. In C. Barwar and the local group of dialects it is expressed with suffixes that are used to mark the object on other verbal forms (§8.19.4.1., §8.19.4.4.). Most other dialects use the form of suffix that is attached to nouns. Table 3 shows the distribution of the compound forms and the form of pronominal object across the dialects.

Table 3

		Perfect compound	Progressive compound	pronominal object
Local	Barwar	yes	yes	verbal
	Ašiθa	yes	yes	verbal
	Bne Rumta	yes	yes	verbal
	Bebede	yes	yes	verbal
Peripheral	Qaraqosh	yes	no	nominal
	Peshabur	yes	yes	nominal
	Bēṣpən	yes	yes	verbal
	Bohtan	no	no	—
	Hertevin	no	no	—
	Van	yes	yes	nominal
	Urmi	yes	yes	nominal
	Sanandaj	no	no	—

The expression of the perfect by a compound construction consisting of the resultative participle (*qṭila*) and the copula is widespread across the NENA group, but is not found in the north-western periphery (Bohtan and Hertevin) or in the south-eastern periphery (Sanandaj). This suggests that it is an innovation of the other dialects. The compound verbal construction consisting of an infinitive and copula for the expression of the progressive aspect is also an innovation that is not found in Bohtan, Hertevin and Sanandaj. Its distribution, however, is less widespread than

the resultative participle construction. It is not found in Qaraqosh, nor in various other dialects in the southern half of the NENA area in the Arbīl and Sulemaniyya provinces of Iraq (e.g. Ankawa, Shaqlawa, villages in the region of Aqra, Bədjəl, Koy Sanjak, Sulemaniyya), all of which express the progressive with constructions based on the present base of the verb (*qaṭəl*).[24]

The close relationship of C. Barwar with the local group of dialects is reflected also in shared lexical items that are not used across the entire NENA group. A few representative examples are given in table 4:

Table 4

		'tomorrow'	'to descend'	'to speak'
Local	Barwar	*təmməl*	*ṣly*	*ṣwθ* II
	Ašiθa	*təmməl*	*ṣly*	*ṣwθ* II
	Bne Rumta	*təmməl*	*ṣly*	*ṣwθ* II
	Bebede	*təmməl*	*ṣly*	*ṣwθ* II
Peripheral	Qaraqosh	*ršoma*	*šṭr*	*ḥky* I, III
	Peshabur	*ṣapra*	*nxt*	*ḥky* III
	Bēṣpən	*ṣapra*	*nxt*	*xky* III
	Bohtan	*speda*	*nxt*	*xky* III
	Hertevin	*kidamta*	*nḥt*	*ḥky* III
	Van	*təmmal*	*ṣly*	*hmzm*
	Urmi	*qudme*	*ṣly*	*hmzm*
	Sanandaj	*qome*	*kwš*	*ḥky* III

Among these lexical items, the extension of the semantic range of the form *təmməl/təmmal* to include not only its original meaning of 'yesterday' but also the meaning of 'tomorrow' is a clear innovation.

In general, outside the local region C. Barwar has a greater affiliation with dialects in the region of the north-eastern and south-western peripheries than with those on the north-western and south-eastern peripheries. It exhibits the greatest affiliation with dialects in the region of the north-eastern periphery. These relationships are reflected most clearly in the distribution of shared innovations, such as the development of compound verbal forms and the innovative lexical features.

---

[24] For further details see Khan (2007).

0.2.2. *The Relationship of the C. Barwar Dialect with Other Christian Dialects in the Local Region*

The Christian dialects in the Ṭiyare and Amedia areas are closely related to the C. Barwar dialects but exhibit a number of differences. The alignment of the C. Barwar dialect with the other dialects differs across various structural features and so its relationship with the surrounding dialects is complex. A few selected differences within the group are presented below. In addtion to C. Barwar, the dialects in the tables include Lower Ṭiyare dialects (Ašiθa, Mne Maθa and Mne Be-laθa),[25] Upper Ṭiyare dialects (Bnerumta and Walṭo),[26] and various dialects in the Amedia area (Araðən,[27] Bebede,[28] Dere[29]).

Various words that exhibit phonological differences across the dialects are brought together in Table 5:

Table 5

	'land'	'hand'	'bed'	'stomach'	'soul'	'summer'	'fast'
Barwar	ʾaθṛa	ʾiða	šwiθa	kʸasa	gʸana	qeṭa	ṣawma
Ashitha	ʾaθṛa	ʾiða	šwiθa	časa	jana	qeṭa	ṣoma
Mne Maθa	ʾaθṛa	ʾiða	šwiša	časa	jana	qeṭa	ṣoma
Mne Belaθa	ʾaθṛa	ʾiða	šwiša	časa	jana	qayṭa	ṣawma
Bne Rumta	ʾaθṛa	ʾiða	šwiša	časa	jana	qeṭa	ṣawma
Walṭo	ʾatṛa	ʾida	šwiša	časa	jana	qeṭa	ṣawma
Araðən	ʾaθṛa	ʾiða	šwiθa	kʸasa	gʸana	qeṭa	ṣawma
Bebede	ʾaθṛa	ʾiða	šwiθa	kʸasa	gʸana	qeṭa	ṣawma
Dere	ʾaθṛa	ʾiða	šwiθa	kʸasa	gʸana	qeṭa	ṣawma

The first two columns containing the forms corresponding to C. Barwar *ʾaθṛa* 'land' and *ʾiða* 'hand' illustrate the fact that the interdentals are generally preserved throughout all dialects of the region. It is significant to note, however, that in the Upper Ṭiyare dialect Walṭo, spoken on the eastern side of the Ṭiyare region, the interdentals in these words have shifted to stops.

---

[25] Sources for Mne Maθa and Mne Be-laθa: Fieldwork by G. Khan (NENA database, nena.ames.cam.ac.uk).

[26] Source: Talay (2008).

[27] Source: Krotkoff (1982).

[28] Source: Fieldwork by G. Khan (NENA database, nena.ames.cam.ac.uk).

[29] Source: Fieldwork by R. Borghero (NENA database, nena.ames.cam.ac.uk).

The reflexes of the C. Barwar form *šwiθa* 'bed' show that in many Lower and Upper Ṭiyare dialects a *ṯ* after a high vowel has shifted to /*š*/. C. Barwar does not have this feature and so aligns with Ašiθa and the dialects of the Amedia area.

In C. Barwar the velar stops /*k*/ and /*g*/ are often pronounced with a palatalized offset before non-rounded front vowels, as in *kʸasa* 'stomach' and *gʸana* 'soul'. It aligns in this respect with the dialects of the region of Amedia. In the Ṭiyare dialects, including Ašiθa, the palatalization is further advanced in this environment resulting in the shifts *k > č* and *g > j*.

The C. Barwar forms *qεṭa* 'summer' and *ṣawma* 'fast' illustrate the typical reflex of the diphthongs **ay* and **aw* in nouns as /*ε*/ and /*aw*/ respectively. This feature is shared with some Ṭiyare dialects and also Araðən. Other dialects exhibit other sets of reflexes.

Table 6 presents various morphological features that exhibit differences across the group:

Table 6

	3pl. suffix	genitive particle	'what is it?'	'he wants'	'he knows'
Barwar	*-ăy, -εy, -ey*	*diye*	*modileʔ*	*băye*	*yăðe*
Ashitha	*-εha*	*diye*	*modileʔ*	*băye*	*yăðe*
Mne Maθa	*-aha*	*diðe*	*modileʔ*	*p̂e*	*če*
Mne Belaθa	*-eya*	*dide*	*modileʔ*	*^p̂e*	*če*
Bne Rumta	*-εha*	*diðe*	*modileʔ*	*^p̂əʔe*	*če*
Walṭo	*-εha*	*dide*	*modileʔ*	*pəʔe*	*če*
Araðən	*-εhən*	*diye*	*mεleʔ*	*baye*	*yăðe*
Bebede	*-ay*	*diye*	*mandileʔ*	*băye*	*yăðe*
Dere	*-ehi, -ehən*	*diye*	*ma-məndileʔ*	*yəp̂pe*	*yăðe*

There is considerable diversity in the form of the 3pl. pronominal suffix. The closest to C. Barwar in this feature is Bebede in the Amedia area. The C. Barwar form of the genitive particle *diye* corresponds to the form found in all dialects in the Amedia area but differs from the form that is used in the Ṭiyare dialects (*diðe, dide*) with the exception of Ašiθa. In the form of the interrogative 'what', on the other hand, C. Barwar aligns with the Ṭiyare dialects rather than with those in the Amedia area. The verbs 'to want' and 'to know' conjugate regularly in C. Barwar whereas they have an irregular inflection in several other dialects. In these verbs C. Barwar aligns most closely with Ašiθa, Bebede and Dere.

There are a few features that are exclusive to the C. Barwar dialect and not found in neighbouring dialects. These include the raising of /a/ to /ɛ/ before /r/ in non-emphatic environments (§2.5.3.), e.g. *dawɛra* 'mule' (other dialects: *dawara*), and the augmentive suffixes *-ga, -gən, -gena* that are attached to imperative forms (§8.6.5., e.g. *pluṭga!* 'Go out!') and the existential particles (§8.20.1., e.g. *ʾiθga* 'there is').

0.2.3. *The Relationship of the C. Barwar Dialect with the Jewish NENA Dialects in the Local Region*

Until 1951 there were various Jewish communities who spoke NENA dialects in and around the Barwar region. One such community was that of the village of Betanure, which was situated immediately adjacent to the Christian villages of Barwar on the river Be-xelapa. There were also Aramaic speaking Jews in Amedia and the nearby village of Nerwa. Despite the geographical proximity of these communities, their NENA dialect exhibited numerous differences from that of C. Barwar and the other Christian dialects of the area. The three aforementioned Jewish dialects (distinguished in what follows by the prefix J.), on the other hand, are all closely related to each other. This communal cleavage is reflected by the fact that the Assyrian Christians use the term *surəθ* to refer to the NENA spoken dialect of the Assyrian Christian communities but the Jews of Betanure refer to their dialect as *lišana deni* 'our language' or *lišān huðaye* 'language of the Jews'. Some examples of differences between the Christian and Jewish dialects in grammatical and lexical features are as follows:[30]

	C. Barwar	J. Betanure	J. Amedia	J. Nerwa
laryngal	*balota* 'throat'	*baloʾta*	*baloʾta*	*baloʾta*
*ay	*lɛša* 'dough'	*leša*	*leša*	*leša*
*aw	*tawra* 'ox'	*tora*	*tora*	*tora*
2s independent	*ʾati*	*ʾahət* ms.	*ʾahi*	*ʾahət* ms.
pronoun		*ʾahat* fs.		*ʾahat* fs.
3pl. pron. suffix	*-ay, -ɛy, -ey*	*-u, -ohun*	*-u, -ohun*	*-u, -ohun*
genitive particle	*diye*	*dide*	*dide*	*dide*
reciprocal pronoun	*ġðaðe*	*ʾəxðe*	*ʾəġde*	*ʾəxde*

(*continued on next page*)

Table (*cont.*)

	C. Barwar	J. Betanure	J. Amedia	J. Nerwa
deictic copula	*hole*	*wəlle*	*wəlle*	*wəlle*
indicative prefix	*i-*	*k-*	*k-*	*k-*
'tomorrow'	*təmməl*	*bənhe*	*qadöme*	*qadome*
'now'	*diya, hadiya*	*ʾatta*	*ʾatta*	*ʾatta*
'last year'	*šetət wirra*	*šətqel*	*šətqel*	*šətqel*
'quickly'	*jalde*	*hayya*	*hayya*	*hayya*
'big'	*goṛa*	*ʾəṛwa*	*ʾuṛwa*	*ʾuṛwa*
'to descend'	*ṣly*	*kwš*	*kwš*	*kwš*
'to stand'	*kly*	*ḥml*	*ḥml*	*ḥml*
'to sleep'	*ṭlʾ*	*ṭwʾ*	*ṭwʾ*	*ṭwʾ*
'to grow up'	*qrn* II	*ṛwy*	*ṛwy*	*ṛwy*
'to speak'	*swθ* II	*ḥky* II	*ḥky* II	*ḥky* II
'he wants'	*băye*	*gbe*	*gbe*	*gbe*
'he knows'	*yăðe*	*kiʾe*	*kiʾe*	*kiye*

0.2.4. *Influence on the Dialect from the Koine Language and the Language of Literature*

The dialect spoken by some by the Assyrian Christian informants from Barwar occasionally exhibits features that originate in the C. Urmi NENA dialect. These may have entered the speech of the families of the informants when they were refugees in Urmi during the first half of the 20th century. Alternatively they may have come from the koine dialect of the Assyrian Christian refugee communities of the Iraqi towns, which was based on the C. Urmi dialect. The inhabitants of Barwar had close contact with these towns during the 20th century, especially during the Kurdish uprising in the North during the 1960s.

This influence is reflected by several lexical items distinctive of the C. Urmi dialect that are used side by side with the original C. Barwar forms, e.g. *gšq* II 'to look' (= C. Barwar *xyr* I) (see §20.1.2.1. for further details).

The influence from C. Urmi is seen also in some phonological and morphological forms that are occasionally used by C. Barwar speakers. These include:

(i) A historical **ay* diphthong is sporadically contracted to /e/, as in C. Urmi, rather than /ɛ/, which is normal in C. Barwar, e.g. *mxurdéθa* 'surrounded' (B1:15).

(ii) The omission of initial /m/ in first /ʾ/ verbs in stem II, e.g. *ʾŭjəble*
      'He was amazed' (A40:13 = C. Barwar *mŭjəble*).

(iii) The 3pl. L-suffix *-lun* or *-lu* rather than the normal C. Barwar form
      -lɛ / -la, e.g. *plìṭlun* 'They went out' (B1:17), *ʾíθwalu qənyàne*ˈ 'They
      had cattle' (B3:13).

Certain forms that are used by educated C. Barwar speakers are clearly
taken from the literary neo-Aramaic language known as *swadaya*. This
language, which is widely used in the Assyrian Christian communities, is
based on the C. Urmi dialect, but contains many elements from Classical
Syriac that do not occur in vernacular speech. One example of this is
the ending *-ayiθ*, which is occasionally used by educated speakers to form
adverbials, e.g. *prišáyiθ* 'specifically' (B1:10), *šotapayìθ*ˈ 'socially' (B15:72)
(§13.2.).

    It has been shown above that the C. Barwar dialect is closely related
to the dialects of Ṭiyare, but exhibits several points of difference. Distinc-
tively Ṭiyare forms are, however, found in some popular songs that were
sung in the Barwar communities, since they were originally composed in
Ṭiyare, e.g. *pawa* (C2:23) 'she wanted' (= C. Barwar *băyawa*), *lali* (C2:38)
'to me' (= Ĉ. Barwar *ṭlali*).

0.2.5. *Influence from Other Languages*

The Assyrian Christians of Barwar spoke in addition to their NENA dia-
lect also Kurdish and Arabic. Kurdish was the language of the Muslim
population in the Barwar region. Arabic was spoken in the Iraqi towns
and was the language of school education.

    The influence from the Iranian language Kurdish has been particularly
extensive. There are numerous features of the NENA dialect that exhibit
parallels with Kurdish and appear to be the result of borrowing and
convergence. The high degree of Kurdish influence on the lexicon of the
dialect is reflected by its large stock of Kurdish loanwords in all gram-
matical categories (nouns, verbs and particles). All the verbs and many
of the nouns have been adapted to Aramaic inflectional morphology (for
further details see §20.1.2.2.).

    Also several features of phonological and grammatical structure appear
to have developed under the influence of Kurdish. In most cases these
are calques that imitate Kurdish but use NENA grammatical material.

Some examples of features that have parallels in Kurdish and are likely to have arisen under its influence are the following:[31]

(i)   In the Kurdish dialects of the area the consonants /k/ and /g/ are palatalized before a following front vowel (Mackenzie 1961: 32) as is the case in the C. Barwar dialect (§1.2.1.)

(ii) In vocative expressions in Kurdish the stress shifts to the beginning of the word (Mackenzie 1961: 157). The same shift is found in C. Barwar nouns when used vocatively (§5.3.), e.g.

Kurdish	kúṝīnô	'boys!'
C. Barwar	ʾálaha	'God!'

(iii) A particle that is in origin the cardinal numeral 'one' is used to express indefiniteness of a noun in Kurdish. This structure is paralleled in the C. Barwar dialect in the use of the cardinal numeral with the same function (§14.1.):

Kurdish	C. Barwar	
mirôv-ak	xa-gawṛa	'a man'

This indefinite particle is used in indefinite numerical expressions (Mackenzie 1961: 152) as is the case with the corresponding particle in the C. Barwar dialect (§14.12.):

Kurdish	C. Barwar	
čār p̄ēnǰ dafʿa-kā	xa ʾarba xamša gaye	'four or five times'

Kurdish	C. Barwar	
čand ṝôž-akā	xa-kma yome	'some days'

(iv) The common Kurdish practice of forming compound adjectives by combining the preposition p with a noun (MacKenzie 1961:216) has a direct parallel in compounds in the C. Barwar dialect with the NENA preposition b-, e.g.

---

[31] The main source for the Kurdish material presented here is the description of the Kurdish dialects of north-western Iraq in MacKenzie (1961). I have adopted his transcription rather than convert it into the conventional orthography of written Kurdish.

Kurdish	C. Barwar
p-čak 'armed'	*b-šrara* 'truthful'
p-hawas 'happy'	*b-xamme* 'worried'

(v) In both the C. Barwar and Kurdish dialects the copula verb 'to be' is expressed by an enclitic that is inflected for person and number like a verb. Although there are signs of the emergence of such a clitic in earlier Eastern Aramaic, its full development and acquisition of verbal inflection are apparently due to the influence of Kurdish:

Kurdish	C. Barwar	
aw kurd-a	*ʾaw qurðayεle* (< *qurðaya-ile*)	'He is Kurdish'
tô kurd-ī	*ʾati qurðayεwət* (< *qurðaya-iwət*)	'You (ms.) are Kurdish'

Kurdish inflectional morphological material is occasionally incorporated into Aramaic words. This is the case, for example, with hypocoristic vocative forms of names. In the C. Barwar dialect these take the endings *-o* and *-e*, the latter being characteristic of female names (§20.2.22.), which are the Kurdish inflectional endings of vocatives (MacKenzie 1961: 156).

In some cases there is a convergence of the phonetic form of an item in the NENA dialect with a corresponding item in Kurdish without there necessarily being a borrowing of morphological material. Such phonetic convergence is found, for example, in the demonstrative pronouns. In C. Barwar there are three categories of demonstrative, viz. near to speaker, in the distance, and absent. The Kurdish dialects of the region not only have the same tripartite demonstrative system but also have demonstrative pronouns of a strikingly similar form. Those from among the sets listed by MacKenzie (1961: 174) that are of the greatest similarity are shown in the following table. Despite this resemblance, the pronouns in C. Barwar can be explained as having an internal Aramaic etymology (§7.4.):

C. Barwar		Kurdish
ʾawwa	'this (ms.)'	*awa*
ʾăwaha	'that (ms.) over there'	*awēhē*
ʾaw	'that (absent)'	*aw*

The verbal system of C. Barwar and the NENA dialects in general has undergone fundamental changes from what is found in the earlier literary forms of Aramaic. The two finite verbal forms of earlier Aramaic, known as the suffix conjugation (*qṭal*) and the prefix conjugation (*yiqṭol*,

liqṭol, niqṭol) have been completely replaced by participles, which have acquired verbal properties and verbal inflection. Broadly speaking, the erstwhile active participle serves as the base for verbal forms expressing present and future tenses or the past tense with an imperfective aspect whereas the erstwhile passive participle serves as the base of past tenses with a perfective aspect.

Several features of the verbal system that is found in C. Barwar have parallels with Kurdish and must be considered to be contact induced. These include the ergative type of construction of the perfective past verbal base *qṭil-*, whereby past actions are expressed by a passive construction with the patient being presented as the grammatical subject rather than by an active construction with the agent as the grammatical subject (§8.3.), e.g. *baxta qṭila-le* 'He killed the woman' (literally 'The woman was killed by him'). This type of ergative construction with perfective past verbs, which is common to the whole NENA group, has parallels in Kurdish (MacKenzie 1961: 193–194). Another innovation of C. Barwar, which is found only in a subgroup of NENA, is the use of a compound construction consisting of the combination of an originally passive participle *qṭila* (referred to in this grammar as the resultative participle) and the verb 'to be' to express the perfect (§15.4.1.). Again, this appears to have arisen by influence from Kurdish, which has a parallel type of compound construction (MacKenzie 1961: 187–189).

It is important to observe, however, that there are some differences between the C. Barwar dialect and the local Kurdish dialects in these two verbal forms. In Kurdish the ergative type construction of the past perfective with the patient of the action being the grammatical subject and the agent expressed by an oblique agentive phrase ('by X') is naturally restricted to transitive verbs. In the C. Barwar dialect and most other NENA dialects, however, the ergative type of inflection with an agentive phrase ('by X') expressed by the preposition *l-* has been extended by analogy to intransitive verbs, e.g. *qim-le* 'He has risen'. This has not happened in Kurdish or any other Iranian language in the NENA area. In fact, in some Iranian languages the precise opposite has happened, namely the active intransitive construction with the verb agreeing with the grammatical subject has been extended by analogy to the transitive past conjugation. This is the case, for example, in Modern Persian. The extension of the ergative inflection to intransitives seems, rather, to be a development internal to NENA. Vestiges of the original system in which the ergative inflection is restricted to transitive verbs has survived in a

few Jewish dialects on the eastern periphery of the NENA area (e.g.
J. Sulemaniyya, J. Kerend and J. Sanandaj).[32]

Another difference between C. Barwar and Kurdish is the fact that in
C. Barwar the compound perfect construction is not ergative. The gram-
matical subject of transitive verbs is the agent rather than the patient. In
Kurdish, on the other hand, the corresponding compound construction,
which appears to have been the model for the NENA construction, is
ergative in form when the verb is transitive. The loss of the ergative inflec-
tion in C. Barwar and most other NENA dialects is again a development
internal to NENA. The original ergative type of construction has survived
only in a few Jewish dialects on the eastern periphery.[33]

These developments suggest that the influence from Iranian on the
Aramaic verbal system must have had a considerable time depth. In fact,
traces of ergative inflection of past tense verbs is found in Aramaic as early
as the 5th century B.C. and also in the main literary languages, Syriac,
Babylonian Talmudic Aramaic and Mandaic, in the first millennium A.D.
This must have arisen by contact with earlier forms of Iranian, such as
Old Persian and Middle Persian, where ergative constructions are found.
It is significant that in Classical Syriac texts a number of cases are found
where the ergative inflection is used with intransitive verbs, e.g. *qīm l-eh*
(Nöldeke 1904, §279). This is presumably the result of interference from
the vernacular and shows that the analogical extension of the ergative
inflection to past intransitives had taken place many centuries ago in the
vernacular.[34]

The influence of Arabic on the C. Barwar dialect is largely restricted to
the lexicon (§20.1.2.2.) and has not had a discernible effect on the phono-
logical and grammatical structure. In the twentieth century the speakers of
C. Barwar were immersed in an Arabic speaking environment, both due
to their residence in the Iraqi towns and also due to the use of Arabic in
schools. The fact, however, that Arabic influence has not penetrated the
grammatical structure of the dialect in the same way as Kurdish and its
Iranian predecessors suggests that this intensive contact with Arabic is a
relatively recent phenomenon. Indeed many of the Arabic loanwords that
are established in the lexicon entered the dialect through Kurdish rather
coming directly from contact with Arabic (§10.11., §20.1.2.2.).

---

[32] Hopkins (1989), Khan (2004: 6–7, 85–93).
[33] Hopkins (2002), Khan (2007).
[34] For further details see Khan (2004; 2007a).

Only a relatively small number of Turkish loanwords can be identified in the lexicon of the C. Barwar dialect. They are much less numerous than the Turkish loanwords in NENA dialects of north-western Iran that are in intensive contact with Azeri Turkish. It appears, however, that Turkish has had some influence on the structure of the C. Barwar verbal system. This applies to the use of a compound construction consisting of an infinitive and copula to express progressive aspect (§8.8.5.–8.8.7.).

Such progressive constructions are used in several dialects in the northern region of the NENA area whereas in dialects in the southern region of this area the progressive aspect is express by constructions consisting of the present base of the verb. It is not found, however, in the dialects of Bohtan and Hertevin in the north-western periphery. It is an innovation that extends from the north-eastern periphery, in dialects such as Urmi, Salamas and Van, through the Hakkari, Ṭiyare and Cudi mountainous regions and into the villages of north-western Iraq as far South as Telkepe. The geographical location of the dialects correlates to some extent with differences in the relative degree of use of the infinitive based progressive in the dialects. In some dialects in the southern NENA area the construction is available, but is used far less regularly than in dialects further North. This applies, for example, to J. Sulemaniyya and C. Karamlesh which make only marginal use of the infinitive based progressive.

The original form of the progressive construction based on the infinitive was locative, with the locative preposition *b-* being attached to the infinitive (*b-grašaɛle* 'He is in the state of pulling'). No clear parallels to this are found in the Kurdish dialects of the region or in Arabic but equivalent progressive constructions based on an infinitive are used in Turkish, e.g. *almak-ta-sın* 'You are taking' (TAKING-IN-BE.2s.). Similar constructions are found also in Eastern Armenian[35] and some Iranian dialects belonging to the Tati group spoken in north-western Iran (e.g. Chali),[36] which indicates that it is an areal feature that has influenced not only NENA but also other languages of the region.

Since in the Barwar region in northern Iraq NENA speakers have not had in recent times the intensive contact with Turkish that would be necessary for it to influence the grammatical structure of the dialect in this way, the development of this contact induced feature must have a

---

[35] Cf. Pennacchietti (1988: 101), Chyet (1995: 246), Goldenberg (2000: 84), Heinrichs (2002: 259–60).
[36] Cf. Yar-Shater (1969: 225).

very considerable time depth. Indeed it is likely that there never was a
sufficiently intense exposure to Turkish in situ and the feature was brought
into the NENA speech of the area by migrations, the ultimate origin of
which is likely to have been in the north-eastern periphery areas.

Another possible influence of Turkish on the C. Barwar verbal system
can be identified in the narrative usage of the compound present perfect,
which appears to be an imitation of the use of Turkish verbal forms with
the -*miş* affix in fictional narratives (§15.4.1.3.). Again, it is likely that the
time depth of the development of this feature is considerable and that
the feature was brought into the NENA speech of the Barwar region by
migrations.

0.3. INFORMANTS AND TEXTS

The material for this grammar was gathered from informants who were
born in the Barwar villages of ʾƐn Nune, Dure, Dɛrəške, ʾIyyət, Bəšmiyaye
and Maye, the majority coming from ʾƐn Nune and Dure. All left Iraq
after the destruction of their villages in the late 1970s and 1980s and have
now settled in Europe, North America and Australia, where I conducted
my fieldwork. They are men and women, most over 60 years old, who
lived and worked in the villages when they were younger. The majority
spent some time in the Iraqi towns, especially during the Kurdish upris-
ing in the 1960s. Both in the Iraqi towns and also in their new places of
residence outside Iraq they have always lived in family groups in close
proximity to other speakers of the C. Barwar dialect. The informants,
therefore, have preserved the original form of the dialect in their speech.
Most of them still remember almost the full stock of vocabulary relating
to the life, agriculture and natural surroundings of the Barwar villages
and this has been collected together in the lists of semantic fields (§20.2.)
and in the glossaries.

Some received no formal education in Iraq. Those who did attend
schools in Iraq were taught for the most part in Arabic. A few informants
learnt to read and write the modern literary form of language that is widely
used today by educated Assyrians (known as *swadaya*). Within the last few
decades there has been an increase in the production of literature written
in this literary language, which is largely due to two developments. Firstly,
in 1972 the government of Iraq granted cultural rights to the Assyrian
Christians to publish literature in their own language. These cultural rights,
however, were rather short-lived. Secondly, since the end of the Gulf War

in 1991, Assyrians in northern Iraq under Kurdish control have been free to publish in their own literary language.

This language is based on the C. Urmi dialect and sporadically interferes in their C. Barwar speech. Such interference from the high register literary language, however, is only minimal and largely occurs in factual expository texts rather than popular folktales. There is no tradition of recording the C. Barwar dialect in written form.

The texts that were recorded are divided into four categories: stories (A), history and culture (B), songs (C) and riddles and proverbs (D).

The stories in section A are all folktales and fables that used to be told in the Barwar villages, especially during the long winter evenings. Many of these stories belong to the common popular culture of the region and exist in versions in a variety of different languages. Several were originally composed in Kurdish, in some cases in the form of songs. In the Assyrian villages storytellers told several such stories in their original Kurdish versions as well as in the NENA dialect. The majority of the folktales in the corpus are told in prose form, with occasional poetic sections that were sung. The stories from the Qaṭina legend contain a large number of sung sections since this was originally transmitted almost entirely in poetic form. The oral tradition of folktales that is documented in this section is now on the verge of oblivion and is not being transmitted by younger generations.

The texts in section B contain descriptions of the life and culture of the Assyrian communities of the Barwar villages and narratives of historical events, some relating to the personal experiences of the informants.

Section C presents a selection of songs that were sung in Barwar. Some of these were originally composed elsewhere, notably in the Ṭiyare region, and this is reflected by the occasional occurrence of forms that are distinctive of the Ṭiyare dialects. This applies especially to the *lɛliyana* wedding songs and the *rawe* songs, which existed in rich oral traditions in the Ṭiyare region before the destruction of the communities in the First World War. The *lɛliyana* songs (C1) were sung by women at various points in the celebrations of a wedding, such as the washing of the groom and the selling of the tree to raise money for the bride and groom. The *rawe* songs (C2) are largely amorous in nature and are traditionally sung by men in two competing groups, usually at weddings, in alternative stanzas. Each stanza consists of three monorhyme verses.[37] As is the case with the

---

[37] Pennacchietti (1976: 646–648). The corpus of *rawe* songs brought together in section C2 include those originally published by Pennacchietti in this article.

folktales, also the traditional songs collected in this corpus are now in the process of falling into oblivion.

The riddles and proverbs in section D exhibit a few linguistic peculiarities, some of which are due to the fact that they use lexical items that are not commonly used in conversational speech.

The original recordings of some of the texts can be heard at the website of the NENA database project in Cambridge (nena.ames.cam.ac.uk).

0.4. The Grammar and Lexicon

The grammar follows the general format of my previous grammars of NENA dialects (J. Arbel 1999, C. Qaraqosh 2002, J. Sulemaniyya 2004). Sections are devoted to a description of the phonology, morphology and syntax of the dialect. The syntax is largely based on material published in the text corpus. As in my previous grammars, the transcription of the texts indicates intonation group boundaries and distinguishes between nuclear and non-nuclear stress. In many cases these details are necessary to understand the syntax fully. Volume 2 contains chapters on the lexicon, as is found in my grammars of C. Qaraqosh and J. Sulemaniyya. Chapter 21 arranges a selection of the lexicon into semantic fields to facilitate future comparative research on the lexicon of the NENA dialects. Full glossaries of all recorded lexical items from the dialect are found in the remainder of the volume. These include all material that was gathered during the fieldwork. Verbs are presented in a glossary arranged by root and the remaining lexical items are put in a general glossary arranged alphabetically. Where possible, the origin of loanwords is indicated, this being mainly Kurdish or Arabic. In some cases, however, their origin cannot be identified in available dictionaries of Kurdish, Arabic or Turkish and no source is indicated, even where from their form they appear not to be of Aramaic origin. The size of the lexicon that has been gathered is greater than in my previous grammars. This is due to the large size of the text corpus and long periods of fieldwork among speakers with a rich lexical knowledge the dialect.

PHONOLOGY

CONSONANTS

1.1. Phoneme Inventory

	Labials	Dental/ Alveolar	Palato- alveolar	Velar	Uvular	Pharyngal	Laryngal
Stops/affricates							
Unvoiced aspirated	p	t	č	k	q		ʾ
Unvoiced unaspirated	p̭	ṱ	č̭	k̭			
Voiced	b̭	d	ĵ	g			
Emphatic	p̣	ṭ	č̣				
Fricatives							
Unvoiced	f	θ		x		ḥ	h
		s	š				
Voiced	v	ð					
		z	ž	ġ			
Emphatic		ṣ					
		ẓ					
Nasal							
Plain	m	n					
Emphatic	ṃ						
Lateral							
Plain		l					
Emphatic		ḷ					
Tap		r					
Trill		ṛ					
Approximant	w		y				

Some of these consonants occur predominantly in loanwords or loan verbal roots. These include the following:

/v/, which is found in loans from Kurdish, e.g. *šăvana* 'shepherd', *dərvana* 'frying pan', *kerova* 'storm', *zvara* 'to turn', *vădo!* 'Move aside!', *ʾažvana* 'miller'.

/ž/, which is found in loans from Kurdish, e.g. *bažər* 'town', *qareže* 'sweepings, rubbish', *mgežone* 'to be dizzy', *mpaqože* 'to clean'.

/č/, which is found in loans from Kurdish, e.g. *čol* 'countryside', *čamča* 'spoon', *čangəl* 'fork', *čale* 'pit'.

/f/, which is found in loans from Kurdish and Arabic, e.g. *maxfurta* 'carpet', *šəftiya* 'watermelon', *fãqira* 'poor', *farquθa* 'difference', *ləhefa* 'duvet'.

/j/, which is found in loans from Kurdish and Arabic, e.g. *dăbanja* 'pistol', *ʾojəx* 'tribe', *julla* 'cloth', *jmaʾa* 'to gather', *mjarobe* 'to try'.

The unaspirated stops /p̭/, /ṱ/, /ḵ/ and the unaspirated affricate /č̭/, which are found in loans from Kurdish, e.g. *sopa* 'stove', *qoṱiya* 'mirror', *ḵoma* 'crowd', *č̭ənnəḵɛr-* 'around'.

A number of consonants in this list, however, are occasionally found in words of Aramaic origin, where they have developed by phonetic processes, no doubt facilitated by their existence in the contact languages. This applies, for example, to the affricates /č/, e.g. *măčoxe* 'to find', *čeri* 'autumn' (§1.4.6.), and /j/, e.g. *jawətta* 'chopping tool' (< *gʿd < *gdʿ 'to hew off'). It should be noted also that there is a certain degree of overlap between the unaspirated series of unvoiced stops and the emphatic stops. This often results in emphatic stops in words of Aramaic origin losing their velarization and being pronounced as simple unaspirates (§1.2.3.).

1.2. Notes on the Phonetic Realization of the Consonants

1.2.1. *Palatalization of* /k/ *and* /g/

The stops /k/ and /g/ are often palatalized before non-rounded vowels. This results in their being articulated in the region of [c] and [ɟ] respectively and having a clearly audible palatal offset /y/ before the following vowel segment e.g. *kʸasa* [ˈcʸæːsæ] 'stomach', *kʸalo* [ˈcʸæːlo] 'bride', *kʸɛrma* [ˈcʸɛɾmæ] 'vineyard', *kʸepa* [ˈcʸeːpæ] 'stone', *gʸawṛa* [ˈɟʸæwræ] 'man', *gʸɛrma* [ˈɟʸɛɾmæ] 'bone', *pragʸe* [ˈpræːɟʸe] 'millet', *zawgʸe* [ˈzɑwɟʸe] 'pairs'. This palatalization does not, however, regularly occur in these contexts and the velar stops in the words in the foregoing list are sometimes articulated without a palatal offset: *kasa, kalo, kɛrma, kepa, gawṛa, gɛrma, prage, zawge.*

The variability of palatalization is sometimes exploited to distinguish between two otherwise homophonous words, e.g.

  kʸasa 'stomach'   *kasa* 'chalice'

This distinction is not, however, made regularly by all speakers and the pairs are often pronounced as homophones.

The articulation of the stops is occasionally fronted to that of palato-alveolar affricates by a more advanced degree of palatalization, e.g. *čalo* 'bride', *čɛrma* 'vineyard'. This advanced palatalization, which is regular in some NENA dialects, is a relatively rare allophonic variant in Barwar. The voiced palato-alveolar affricate */j/* resulting from fronting of a velar *g is, however, a fixed feature of a few isolated words, e.g. *jawda* 'water skin' (< *gawda), *jawətta* 'chopping tool' (< *gᶜd < *gdᶜ 'to hew off'), *jwina* 'side (in a game)', *jlw* 'to abduct (a woman)'. The first two may possibly be loans from neighbouring dialects in Lower Ṭiyare, where such advanced palatalization is a more widespread feature. The */j/* in the last two words may have arisen as a means of distinguishing them from homophonous, or near homophonous, words containing the velar */g/*:

  jwina 'side'   *gwina* 'eyebrow'
  jlw 'to abduct'   *gnw* 'to steal'

1.2.2. *Unaspirated Stops*

The unvoiced stops */k/*, */p/* and */t/* are pronounced with a certain degree of aspiration when they stand at the beginning of a syllable before a vowel, e.g. *koma* [ˈkʰoːmæ] 'black', *pele* [ˈpʰeːle] 'he baked', *tela* [ˈtʰeːlæ] 'fox'. Unvoiced unaspirated stops and also the unaspirated affricate */č̭/* occur in this position in a number of loanwords from Kurdish. These sometimes contrast phonemically with aspirated stops in Aramaic words that are otherwise homophonous, e.g.

  koma 'black'   *k̭oma* 'pile'
  kura 'furnace'   *k̭ura* 'one year old goat'
  kawe 'window'   *k̭awe* 'may it be'

In some cases the Kurdish loanword with the unaspirated stop in such pairs is listed in Kurdish dictionaries as having an aspirated stop, e.g. *k̭oma* 'pile' < Kurd. k'om (Rizgar 1993, Chyet 2003). In such a case the unaspirated

articulation may have arisen within the Aramaic dialect as a means of distinguishing it from an otherwise homophonous native Aramaic word.

The unaspirated stops /k̂/, /p̂/ and /t̂/ are pronounced with a greater degree of muscular tension than the corresponding aspirated stops. This is sometimes accompanied by a certain amount of velarization and consequent backing of the point of articulation, resulting in their pronunciation as emphatic consonants, e.g., *laṭṭa* 'shallow' (Kurd. lat), *saqqaṭ* 'crippled' (Kurd. seqet), *ṭanga ~ ṭanga* 'saddle-girth' (Kurd. teng), *čanga* 'leather gloves used in harvesting' (Kurd. çeng).

By the aforementioned process, the point of articulation of unaspirated /k̂/ is sometimes moved back to that of the uvular stop /q/, e.g. *qaška* 'cake of dried yoghurt curds' (Kurd. keşk), *gisqa* 'young male goat' (Kurd. gîsk). This development, which appears to be internal to the Aramaic dialect, does not occur regularly. Conversely an original uvular /q/ in Kurdish is sometimes brought forward to a velar /k̂/, e.g. *k̂aška* 'wheat husk' (Kurd. qaşik). In this case the stimulus for the shift may have been the need to distinguish the word from *qaška* 'cake of dried yoghurt curds', which acquired the /q/ by a backing of the place of articulation.

The unaspirated unvoiced stops contrast phonemically with the corresponding voiced stops, as shown by such pairs as:

k̂wina 'tent'	*gwina* 'eyebrow'
k̂oma 'pile'	*goma* 'basement'
k̂awe 'may it be'	*gawe* 'in it'
t̂-awra 'that she enters'	*dawra* 'wooden bolt'

1.2.3. *Emphatic Consonants*

The emphatic consonants /č̣/, /ṛ/, /ṣ/, /ṭ/, /ḷ/, /ṃ/, /p̣/ and /ẓ/ are in principle pronounced with velarization rather than pharyngalization, i.e. the back of the tongue is moved towards the velum during the articulation of the consonants rather than being moved back further into the pharynx. In the case of the consonants /ṣ/, /ṭ/ /č̣/ and /ḷ/ the place of the primary articulation by the tongue is retracted slightly in comparison to that of their non-emphatic counterparts. The emphatic /ṛ/ is articulated as a trill with a slight retroflexion of the tongue tip. This differs from non-emphatic /r/, which is realized as non-retroflexed tap [ɾ] or a trill with a shorter duration. All of the emphatics are pronounced with greater muscular tension than the corresponding non-emphatics. The unvoiced stops /ṭ/ and /p̣/ and the affricate /č̣/ are unaspirated.

Minimal pairs can be identified that demonstrate that /ṣ/, /ṭ/, /ṛ/ and /č̣/ contrast phonemically with their non-emphatic counterparts, e.g.

/s/ : /ṣ/
    srapa 'to slurp'   *ṣrapa* 'to smart, to sear'
    swaʾa 'to be sated'   *ṣwaʾa* 'to colour'
    msaya 'to wash clothes'   *mṣaya* 'to be able'
    ʾəsər 'ten (f.)'   *ʾəṣər* 'intense cold'

/t/ : /ṭ/
    tura 'stick'   *ṭura* 'mountain'
    tare 'it gets wet'   *ṭare* 'he drives'
    tlele 'he hung'   *ṭlele* 'he slept'
    mate 'his grape'   *maṭe* 'he arrives'

/r/ : /ṛ/
    ʾamra 'she says'   *ʾamṛa* 'wool'
    ʾamure 'thickly planted'   *ʾamuṛe* 'tools'
    bera 'well'   *beṛa* 'light'
    dare 'he puts'   *daṛe* 'generations'
    dɛre 'he puts'[1]   *dɛṛe* 'he returns'
    dwara 'threshing'   *dwaṛa* 'rest area for sheep'
    gawra 'she marries'   *gawṛa* 'man'
    gwara 'to marry'   *gwaṛa* 'to become big'
    mara 'to say'   *maṛa* 'spade'
    mare 'he patches'   *maṛe* 'he pastures'
    nera 'river'   *neṛa* 'vision'
    para 'bran, fine dust'   *paṛa* 'lamb'
    sera 'moon'   *seṛa* 'goat's hair'

/č/ : /č̣/
    čara 'solution'   *č̣ara* 'black bird'
    čita 'type of fabric'   *č̣ita* 'cream of yoghurt'
    čəčča 'breast'   *č̣əč̣ča* 'shoulder-blade'
    čappe 'left hand'   *č̣appe* 'applause'
    ʾəčča 'nine' (f.)   *ʾəč̣ča* 'nine' (m.)

---

[1] The forms *dare* and *dɛre* are variants of the same form (see §2.5.3.).

The phonemic status of the emphatic consonants /ṗ/, /ḷ/ and /ṃ/ is marginal. A minimal pair can be identified for /p/ : /ṗ/:

    pǝqqa 'frog'   *pǝqqa* 'crack'

Elsewhere /ṗ/ occurs in contrastive pairs together with /ṛ/ or /ḷ/:

    prama 'to slaughter'   *pṛama* 'to understand'
    parma 'she slaughters'   *paṛma* 'type of oak tree'
    mpǎloye 'to share'   *mpǎḷoye* 'to imitate'

In these pairs it is not clear whether /ṗ/ should be regarded as having the status of a primary emphatic or as having arisen secondarily by the suprasegmental spread of emphasis (see below). It is worth noting that speakers are conscious of the fact that the emphatic /ṗ/ is one of the features that distinguish the second members of the pairs from the first.

    Emphatic /ḷ/ occurs in some words independently of other emphatic consonants, e.g. *ḷaya* 'upper', *ʾuḷḷuḷ* 'above'. It is, however, only found in minimal pairs in association with other emphatic consonants, e.g.

    ma-leʔ 'What is the matter with him?'   *maḷe* 'he fills'
    t-la 'without'   *ṭḷa* 'three'

The only minimal pair containing emphatic /ṃ/ is the first of the two just cited, where it occurs together with emphatic /ḷ/.

    The emphatic consonant /ẓ/ is found only in a few loanwords from Arabic, e.g. *ẓlama* 'to act unjustly'.

    The velarization that is associated with emphatic consonants tends to spread to other segments in the syllable in which the consonant is situated. In some cases this suprasegmental spread of emphasis extends beyond the syllable to the entire word. As a result of the velarization, the vowel phonemes are realized with allophones that lie further back than the allophones that are characteristic of non-velarized articulation, e.g. *paṛa* [ˤpɑːrɑ] 'lamb' vs. *para* [ˈpʰæːræ] 'dust', *ʾǝčč̣a* [ˤʾǝčːɑ] 'nine' (m.) vs. *ʾǝčča* [ˈʾɪčʰːæ] 'nine' (f.).

    The velarization of the emphatic consonants is sometimes weakened, in that the back of the root of the tongue is retracted with lessened approximation to the velum. A certain degree of muscular tenseness is retained and unvoiced stops continue to be unaspirated, e.g. *ṭaxǝn* [ˤtɑːxǝn ~ tɑːxǝn]

'he mills'. In cases of weakening of velarization, emphatic /ṛ/ usually retains some degree of its trilled retroflex character, which distinguishes it from the tap /r/, e.g. paṛa ['pɑːrɑ] 'lamb'. This articulatory difference between the two rhotic segments is not, however, always clearly discernible. In general, the most perceptible residual feature of velarization is the retracted quality of the vowel allophones and this often becomes the clearest distinctive feature in minimal pairs, e.g.

para ['pʰæːɾæ] 'dust'   paṛa ['pɑːrɑ] 'lamb'
ʾamra [ˡᵓæmɾæ] 'she says'   ʾamṛa [ˡᵓɐmrɐ] 'lamb'
ʾəčča [ˡᵓɪʧʰːæ] 'nine' (f.)   ʾəčča [ˡᵓətʃːɑ] 'nine' (m.)
pəqqa ['pʰɪqqæ] 'frog'   pəqqa ['pəqqɑ] 'crack'
ʾəsra [ˡᵓɪsɾæ] 'basket'   ʾəsṛa [ˡᵓəsrɑ] 'ten'

There is a particular tendency for velarization to be weakened in the pronunciation of emphatic /ṛ/. This has led to the levelling of minimal pairs in the speech of some speakers. Some of my informants, indeed, pronounced both members of several of the pairs for /r/ : /ṛ/ listed above in the same way and judged them to be homophonous. This was the case with the pairs *dwara* 'threshing': *dwaṛa* 'rest area for sheep' and *sera* 'moon': *seṛa* 'goat's hair'.

In the transcription the marking of the emphatic consonants has been normalized for the sake of orthographic consistency and does not reflect the suprasegmental spread of velarization or its intermittent weakening. Where a word contains an emphatic consonant in earlier Aramaic, it is this consonant that is marked as emphatic in the transcription, even though the velarization may spread to other segments of the word, e.g. *mtaṛəṣ* [ˡˠmtɑːrəs] 'he repairs' (cf. Syr. *mṭāreṣ*), *ṣliwa* [ˡˠsliːwɑ] 'cross' (cf. Syr. *ṣlīwā*). In words in which there was no emphatic consonant in earlier Aramaic, the primary emphatic consonant is marked, as far as this can be determined, but not secondary emphatics that may have acquired emphasis by suprasegmental spread of velarization, e.g. *paṛa* [ˡˠpɑːrɑ] 'lamb', *ʾəčča* [ˡˠᵓətʃːɑ] 'nine' (m.). In the few cases where the primary emphatic cannot be established with any certainty, more than one consonant is marked as emphatic. This applies to words containing /p̣/, /ṃ/ and /ḷ/, e.g. *puṛmeḷi* [ˡˠpʊrmɛːli] 'I have understood', *ṃḷele* [ˡˠmleːle] 'it became full'. The marking of emphatic consonants in the way just described is applied consistently in the transcription and does not reflect the occasional weakening of velarization.

1.2.4. *Affricates*

The offset of the unvoiced affricates /č/, /č̣/, /č̣/, is usually the palato-alveolar sibilant [ʃ], e.g. *čeri* [ˈtʃʰeːri] 'autumn', *č̣ənnək̇ere* [ˈtʃənːəkɛːɾe] 'around him', *ʾəč̣č̣a* 'nine' [ˈʾətʃːɑ]. Some speakers pronounced the offset of the emphatic affricate /č̣/ as an alveolar sibilant, e.g. *č̣lapa* [ˈᵗˠtslɑːpɑ] 'to tear apart', *mač̣moye* [ˈᵗˠmɑtsmoye] 'to extinguish'.

1.2.5. /n/

The phoneme /n/ is normally realized as an alveolar nasal. When in contact with a velar consonant, however, it is sometimes realized as a velar nasal [ŋ], e.g. *pə̀nxa* [ˈpɪŋxæ] 'mill-stone' (B5:90).

1.2.6. /m/

Before /u/ the consonant /m/ sometimes has an offglide /w/, e.g. *mù* [mʷuː] *y-oðíwa?* 'What were they doing?' (A8:28)

1.2.7. /w/

The consonant /w/ is generally realized as a bilabial glide [w]. The labio-dental sound [v] is largely restricted to Kurdish loanwords, where it is represented by /v/ in the transcription. The word *jvoṭa* 'straight', which has an Aramaic etymology (§1.4.6.), is exceptonal in that it is regularly pronounced with a labio-dental. In the words *niwa* 'molar tooth' and *gawana* 'boundary', which also are of Aramaic stock, the /w/ is realized as either a bilabial or a labio-dental: [niːwɑ] ~ [niːvɑ], [gɑːwɑːnɑ] ~ [gɑːvɑːnɑ].

1.3. Phonetic Processes

1.3.1. *Assimilation*

Various types of assimilations take place between consonants. Not all of these are represented in the transcription.

There is a certain tendency for an unvoiced consonant to become voiced when in direct contact with a following voiced consonant by a process of partial regressive assimilation, e.g. *xzáda* [ˈɣzæːdæ] 'harvesting' (B5:95), *xzátta* [ˈɣzættæ] 'harvest' (B5:141), *xðìrtɛla* [ˈɣðiˑɾtɛˑlæ] 'she searched'

(A25:37), *xzì* [ɣziː] 'see!' (A24:27), *xðàyɛle* [ˈɣðæːyɛˑle] 'he is happy' (A46:8), *muxbə̀rtəlle* [mʊɣˈbəɾtəlle] 'she notified him' (A12:53), *léla ṣbára* [ˈ᷃ᶦᵛzbɑːrɑ] 'they do not dare' (A27:40), *kut-qálma ʾìθba* [ˈ᷃ᶦˑðbæ] 'every louse that was in it' (A28:17), *š-zeðàye* [ˈʒ-zeˑðæːye] 'on the flat breads' (A30:21).

Similarly voiced consonants are sometimes devoiced when in direct contact with unvoiced ones, e.g. *šàbθa* [ˈʃæpθæ] 'week' (B5:46), *bšìle* [ˈpʃiːle] 'ripe' (A43:2), *krìbta* [ˈkɾiˑptæ] 'angry' (A51:10), *dúka mruzágta* [mruˑˈzæktæ] *qa-sə̀twa* 'a place prepared for the winter' (B5:98), *ʾáy blìgtela* [ˈbliˑktɛlæ] 'she is busy' (A26:78), *madqárre* [mætˈqɑrːe] 'he values him' (A10:13), *b-šatéxi* [p-ʃæˑˈtʰɛːxi] 'we shall drink' (A15:28).

These processes sometimes take place across word boundaries, e.g. *páyəš gòra* [ˈpæːyɪʒ ˈɡoːrɑ] 'he becomes great' (A27:5), *brátux zìlla* [ˈbræːtʊɣ ˈzilːæ] 'your daughter has gone' (A27:30).

Such partial assimilation between two contiguous consonants is generally not marked in the transcription. The justification for this is that in some cases it does not occur, e.g. *mubsə́mli* [mʊbˈsəmli] 'I enjoyed myself' (A2:8). Marking it would, therefore, introduce an orthographic inconsistency into the transcription. Moreover in most cases the voicing or devoicing of the consonant concerned has not been extended by analogy to all morphological inflections of the word or root in all contexts, e.g. *blíga* [ˈbliːgæ] 'busy' (m.)—*blígta* [ˈbliˑktæ] 'busy' (f.), *bášəl* [ˈbæːʃəl] 'it ripens'—*bšíla* [ˈpʃiːlæ] 'ripe', *šábθa* [ˈʃæpθæ] 'week'—*šabbáθa* [ʃæbˈbæːθæ] 'weeks', *brátux zìlla* [ˈbræːtʊɣ ˈzilːæ] 'your daughter has gone'—*brátux θèla* [ˈbræːtʊx ˈθeːlæ] 'your daughter has come'. For the sake of clarity, therefore, the consonant is transcribed consistently in all inflections.

This type of partial assimilation has, however, become a fixed feature of some words in all inflections, so that a transcription that represents the historically original form without assimilation would be artificially archaizing. This applies, for example, to *kθeθa* 'chicken' (cf. Syr. *kḏaytā*), *ġðaðe* 'each other' (< *xðaðe, cf. Syr. *ḥḏāḏē*), *gəsta* 'fleece' (< *gəzta, cf. Syr. *geztā*) and *gupta* 'cheese', which is derived historically from the root *gbn (cf. Syr. *gḇettā* < *gḇentā). In some verbal roots, moreover, a partial assimilation that originally took place between two contiguous consonants has been extended by analogy to all inflections of the root, including those where the consonants concerned are not contiguous. This applies, for example, to *spr* 'to wait' (< *sbr), in which the devoicing of the second radical arose historically by contact with the unvoiced first radical /s/ in forms such as *spára* 'to wait'. It now, however, occurs in all inflections, e.g. *sápər* 'he waits', *sápri* 'they wait'. Another case is *txr* 'to remember' (< *dkr), in which the unvoiced /t/ has been fixed lexically. Note also the

verbal root *xzd* 'to harvest' (< **ḥṣd*), in which the voicing of the second
radical due to contact with the voiced final radical has been extended to
all inflections of the form, e.g. *xázdi* 'they harvest', *xázəd* 'he harvests'. All
such cases of regularization of partial assimilation are represented in the
transcription.

The alveolar nasal continuant /n/ is sometimes realized as a labial nasal
continuant [m] by partial assimilation to a following labial consonant, e.g.
npílle [ˈmpiˑlːe] 'fell' (cf. *nápəl* [ˈnæːpəl] 'he falls'). This often occurs across
word boundaries, e.g. *ʾu-ʾan-baxtàθa* [ˈæm-bæxˈtæːθæ] 'and those women'
(B5:85), *qa-t-yámṣən xázən* [ˈxæːzəm] *bər-našúθa* 'so that I may see people'
(A24:2), *lán-mṣaya* [ˈlæm-ˈˀmṣɑyɑ] 'I cannot' (A26:21), *bắyən* [ˈbæyəm] *pálxən
kə̀slux* 'I want to work with you' (A24:4). Conversely, the labial nasal /m/
is occasionally realized as an alveolar nasal [n] when in contact with a
following alveolar consonant, *taqríban mṭéle* [ˈnṭẹːle] 'he has almost reached'
(A24:1), e.g. *nāš-díyən mtúnyela* [ˈntʊnyelæ] 'our people have told' (B4:3).
In these examples this process has no doubt been facilitated by the pres-
ence of /n/ before the /m/ at the end of the preceding word. These
cases of assimilation affecting the nasals /n/ and /m/ are not marked in
the transcription. In some sporadic cases, however, the assimilation has
become a fixed feature of the word and so is marked, e.g. *dambusta* 'small
tail' (< **danb-usta*).

Total assimilation sometimes occurs between two adjacent consonants,
resulting in a geminated consonant. In contexts where this is a sporadic
phenomenon and does not occur systematically, it is not represented in the
transcription. One such context is the affixation of L-suffixes to verbs. The
/l/ of these suffixes does not generally assimilate to the final consonant
of the verbal root with which it is in contact, unless this is /n/ or /r/. In
fast speech, however, such regressive assimilation to consonants other than
/n/ and /r/ does sporadically occur, e.g., *píšla* [ˈpiˑʃːæ] 'it has become'
(B10:94), *píšlε* [ˈpiˑʃːɛ] 'they have become' (A38:22), *b-nayə̀sli* [bnæˑˈyəsːi]
'it will bite me' (A1:17). When the final consonant of the verb is /n/ or
/r/, the assimilation regularly occurs and so it is marked in the transcrip-
tion, e.g. *kpínne* 'he became hungry', *gamárre* 'he tans it'. In contexts where
assimilated and unassimilated forms occur more or less in free variation
both are represented in the transcription. This applies, for example, to
L-suffixes on the 1pl. verbal suffix *-əx*: *qaṭláxle* ~ *qaṭláxxe* 'we kill him', e.g.
nabláxle 'we shall take him' (A4:3), *y-amráxle* 'we call it' (B10:100), *šɛráxxe* 'we
shall stoke it up' (A34:12), *maqimə̀xxe* 'we shall resurrect him' (A4:48).

Total regressive assimilation also occasionally takes place across word boundaries, e.g. *ʾan-zòre* [ˈæzˈzoːɾe] 'the small ones' (B10:83), *ʾap-míya* [ˈæmˈmiːjæ] 'even water' (B16:15), *rḗš-ṣàwma* [ɾę˙ʂˈʂɑwmɑ] 'the beginning of the fast' (B16:7). This is not represented in the transcription.

Occasionally assimilation takes place not between adjacent consonants but rather between adjacent syllables, in that a syllable assimilates some of the properties of the following syllable. This typically takes place where the two syllables already share some properties and the assimilation increases their resemblance. It can sporadically be found across word boundaries, e.g. *ríqən qam-màmi* [ˈɾiːqəm qəm-ˈmæːmi] 'I ran before my uncle' (A25:42), *zílla ta-t-máθya kθéθa* [tætˈmɛːθæ ˈkθɛːθæ] 'She went to fetch a chicken' (A47:7). This occurs only in a few isolated instances in this context and is not marked in the transcription. In some contexts, however, it takes place regularly. This is the case, for example, in the plural form *ʾiθaθa* 'hands' (< **ʾiðaθa*), where the first /θ/ can be explained as arising by the assimilation of the syllable */ða/ to the following syllable /θa/. Since this is a fixed feature of the word form, it is marked in the transcription.

1.3.2. *Devoicing of Word Final Consonants*

In some cases a word final voiced consonant is devoiced. This is the case with the genitive/relative particle *D*, which is devoiced when cliticized to the end of a word, e.g. *ʾánna waríðət qðàle* (< *wariðe d-qðale*) 'these veins of his neck' (A26:81), *ṣáwθa gu-púmmət màrɛle šəklánta¹* (< *pumma d-marɛle*) 'A word is beautiful in the mouth of its owner' (A26:40).

Kurdish loanwords that have final voiced /z/ in the source language often have voiceless /s/ in the Aramaic dialect, e.g.

dūs 'right, true'	Kurd. dûz
marrəs 'hair of angora goat'	Kurd. merez

The final consonant remains unvoiced when clitics are added, e.g. *dūs-iwət* 'you are right'. When, however, morphological affixes are attached and the consonant is no longer word final, the original voicing is maintained, e.g. *duzuθa* 'truth'.

1.4. HISTORICAL BACKGROUND OF THE CONSONANTS

1.4.1. *The* BGDKPT *Consonants*

1.4.1.1. *b
The reflex of the fricative allophone of *b* in earlier Aramaic is the semi-vowel /w/. This is found after both vowels and consonants, e.g.

genawa	'thief'	< *gannāḇā
sawa	'grandfather'	< *sāḇā
ṣliwa	'cross'	< *ṣlīḇā
ʾərwa	'sheep'	< *ˁerḇā
šwawa	'neighbour'	< *šḇāḇā
dawa	'gold'	< *dahḇā
gʸawṛa	'man'	< *gaḇrā
zawna	'time'	< *zaḇnā
xawra	'friend'	< *ḥaḇrā
šawqa	'she leaves'	< *šāḇqā

When *ḇ* was preceded by *u*, the sequence *uḇ contracted to /u/, e.g.

gure	'men'	< *guḇrē
tuna	'straw'	< *tuḇnā
duša	'honey'	< *duḇšā
ruta	'Friday'	< *ˁaruḇtā

On some occasions the sequence /aw/ that derives from *aḇ or *āḇ contracts to /o/ before a consonant, e.g.

gota	'side'	< *gaḇtā

In a number of words of native Aramaic stock, the stop /b/ occurs after a vowel. These may be classified as follows:

(i) Cases where the /b/ was originally geminated, e.g.

xabuša	'apple'	< *ḥabbūšā
dabaša	'bee'	< *dabbāšā
šabθa	'week'	< *šabbʾṯā
mzabən	'he sells'	< *mzabben

In the word *ṣabota* 'finger' the stop /b/ may have arisen by secondary gemination of an original *b in order to prevent the elision of the preceding vowel after the insertion of an epenthetic vowel after it: *ṣabota* < *ṣabbəʾtā* < *ṣabʿəṭā*. Compare J. Amedia *ṣaboʾta*, Qaraqosh *ṣubəʾθa*. The gemination has been preserved in some dialects, e.g. Dɛre *ṣəbbota*.

(ii) When the preceding vowel is an epenthetic, e.g.
    kaləbθa   'bitch'   cf. *kalba* 'dog'

(iii) Where a word beginning with /b/ has been bonded with a preceding element that ends in vowel, e.g.
    xo-bɛθa   'under the house'
    gu-bɛθa   'in the house'

We can include here verbal roots that have /b/ as their first radical. The stop remains through all inflections, including when prefixes that end in a vowel are attached to it, e.g. *brq* 'to shine', *barəq* 'it shines', *mabrəq* 'it causes to shine'; *bny* 'to build', *bane* 'he builds', *mabne* 'he causes to build'. This invariability is also exhibited by most noun forms, e.g. *kalba* 'dog', *kaləbθa* 'bitch'. The plural form of this word constitutes an exception to this principle: *kalba* 'dog' vs. *kalwe* (< *kalḇē̆) 'dogs'.

(iv) Where the /b/ was originally preceded by a vowelless consonant, which has now been elided, e.g.
    sebuθa   'old age'   < *saʾbuθa*
    mšaboðe   'to enslave'   < *mšaʿboðe*

(v) Forms arising by analogy with words that have preserved /b/ for one of the reasons listed above. Examples of this include *dabəš* 'it sticks', which is a stem I verb and so the middle radical would not have been geminated historically, and *zəbla* 'manure' (cf. Syr. *zeḇlā*). In both cases the source of the analogy appears to have been stem II verb forms (historical *paʿʿel*), in which the middle /b/ was originally geminated, viz. *mdabəš* 'he makes stick' (originally 'he makes like honey') and *mzabəl* 'he lays manure'. Elsewhere a stop /b/ occurring as the middle radical of a stem II verb is not extended by analogy to stem I forms that belong historically to the same root. This is found mainly where there is considerable semantic distinction between the two stem forms, e.g.

zwana 'to buy'	*mzabone* 'to sell'
gwaya 'to beg'	*mgaboye* 'to elect'
qwaya 'to scoop'	*mqaboye* 'to swell'

Likewise, the stop of stem II is not elsewhere extended by analogy to nominal forms as in the case of *mzabole: zəbla*; cf. *mšaboxe* 'to glorify' vs. *šuxa* 'praise'.

(vi) In some cases the stop /b/ rather than the expected /w/ occurs as the second radical of a stem I verbal root apparently in order to avoid homophony between two roots, e.g.

ṭbele 'he sank' (< *ṭbʿ)	*ṭwele* 'it roasted' (< *ṭwy)
gbaya 'to froth' (< *gbb)²	*gwaya* 'to beg' (< *gby)

A historical *b is sometimes devoiced to /p/ when it has been adjacent to a laryngal *ʾ, which often, but not always, derives historically from pharyngal *ʿ, e.g.

ʾarpa	< *ʾarbʾā < *ʾarbʿā	'four'
ṣəppa	< *ṣəbʾā < *ṣəbʿā	'finger'
p-aqle	< *b-ʾaqlē < *b-ʿaqlē	'by foot'
p-ape	< *b-ʾappē	'beyond'

The first two of these examples have alternative forms without devoicing, viz. *ʾarba* 'four' and *ṣabota* 'finger'. It is possible that the forms with devoicing have entered the speech of some informants under the influence of the Christian dialect of Urmi, in which this process of devoicing is regular.

As remarked in §1.3.2., devoicing has sometimes been conditioned by an adjacent unvoiced consonant, e.g. *gupta* 'cheese' (cf. Syr. *gbettā* < *gbentā).

1.4.1.2. *p
The reflex of *p is, as a general rule, the stop /p/, including in post-vocalic positions, e.g.

kepa	'stone'	< *kēp̄ā
ʾupra	'soil'	< *ʾap̄rā
səpθa	'lip'	< *sep̄θā

---

² Cf. Syr.. *gbīb̄ā* 'gibbous'.

ṭəpra	'fingernail'	< *ṭep̄rā
xəp̄yaya	'barefoot'	< *xep̄yāyā
napəl	'he falls'	< *nāp̄el

A few exceptions to this are found, e.g. *ṭlawxe* 'lentils' (< *ṭlap̄ḥē), *ruša* 'shoulder, arm' (< *rup̄šā* cf. Syr. *rap̄šā* 'shoulder blade') in which a post-vocalic *p̄ behaves like a post-vocalic *ḇ. Note also *ṭusa* 'example', which has an original stop *p deriving ultimately from Greek *pi* (< *ṭupsā* < Greek τύπος). A further case may be *swana* 'projecting edge of a roof', which appears to be cognate with Ṭuyoro *ṣfarno* of the same meaning, both being derived from Syr. *ṣp̄ārā* 'edge' (cf. Tezel 2003: 238).

The stop /p/ often appears in Arabic and Kurdish loanwords where the source language has the fricative /f/, reflecting a process analogous to that of hardening the fricative *p̄ in Aramaic words, e.g.

šapra	'large knife'	< Arab. *šafra*
mtalope	'to ruin'	< Arab. *tallafa*
pərṣət	'opportunity'	< Arab. *furṣa*
qəppo	'foam'	< Kurd. *kef*

Some loans exist in two variant forms, one with the original /f/ and one with /p/, e.g.

feka ~ peka	'fruit'	< Arab. *fākiha*

1.4.1.3. *t

The original interdental fricative allophone of this consonant has been preserved as an independent phoneme and is represented in the transcription by the symbol /θ/. The phonemic contrast between /θ/ and /t/ is demonstrated by minimal pairs such as:

θela	'she came'	*tela*	'fox'
maθa	'village'	*mata*	'grape'
marθa	'mistress'	*marta*	'saying'

The fricative /θ/ occurs in all positions, after both vowels and consonants, and also at the beginning of a word, e.g.

ʾaθṛa	'land'
xaθa	'sister'

xmaθa	'mother-in-law'
kθawa	'book'
šabθa	'week'
qarθa	'cold'
θele	'he came'

When /θ/ occurs as a radical consonant in a root, it is used throughout all inflections of the root, irrespective of the phonetic environment, e.g. *rθx* 'to boil': *raθəx* 'it boils', *marθəx* 'he causes to boil'; *kθw* 'to write': *kaθwa* 'she writes', *kθawa* 'book', *kaθawa* 'writer'.

In a few isolated cases the articulation of the fricative /θ/ is weakened after a vowel and is elided. This applies to the numeral *ṭla* 'three', which is a variant of the form *ṭlaθa*. It also sporadically occurs in the inflections of the verb *m-θy* 'to bring', e.g. *mayέwa* 'They used to bring' (< *mεθέwa*, B5:157), *mεyə́nna* 'I shall bring her' (< *mεθə́nna* A4:9).

On some occasions the stop /t/ is found after vowels in words of native Aramaic stock. The occurrences may be classified as follows:

(i) Cases where the /t/ was originally geminated, e.g.

brata	'daughter'	< *brattā*
mδita	'town'	< *mδīttā* < *mδīntā*
šeta	'year'	< *šattā* < *šantā*

(ii) Where the /t/ was originally separated from the preceding vowel by a pharyngal or a laryngal, which have now been elided, e.g.

qaṭota	'break in channel'	< *qaṭoʾta* < *qāṭōʿtā*
garruta	'pile of leaves'	< *garruʾta* < *garruʿtā*
beta	'egg'	< *beʾta* < *bē̌ʿtā*
šmita	'heard (fs.)'	< *šmiʾta* < *šmī̌ʿtā*
tata	'crest' (of bird)	< *taʾta* < *taḡtā*
nita	'(party until) dawn'	< *nḡīhtā*

(iii) Where the stop /t/ was originally preceded by the consonant *ḇ*, which has subsequently become contracted

gota	'side'	< *gaḇtā*
šwota	'neighbour (f.)'	< *šḇāḇtā*
ruta	'Friday'	< *ʿaruḇtā*

The sequences *aḇ* and *āḇ* more frequently develop into the diphthong /aw/ than contract completely to /o/. The stop /t/ occurs after /aw/

diphthongs with this background, in contrast to /aw/ diphthongs containing an original /w/, which are followed by the fricative /θ/:

sawta	'old woman'	< *sā<u>b</u>tā
xlawta	'milking'	< *ḥlā<u>b</u>tā
kaθawta	'writer (f.)'	< *kaθθā<u>b</u>tā
mawθa	'death'	< *mawθā
ṣawθa	'voice, sound'	< *ṣawθā

(iv) The fricative /θ/ shifts to the stop /t/ when it is in contact with a following /l/ or /n/. This is abundantly attested in verbs with a final /θ/ radical when they have a pronominal suffix beginning with /l/ (L-suffix) attached to them, e.g.

mitle	'he died'	< *myθ*
qitle	'he hit'	< *qyθ*
ditle	'he sweated'	< *dyθ*
ṭpitle	'he sneezed'	< *ṭpθ*
muṣyǝtle	'he listened'	< *m-ṣyθ* III
mxuθxǝtle	'he renewed'	< *m-xθx θ*

It takes place when an L-suffix is added to the existential particle ʾiθ 'there is', e.g. ʾitle 'he has' (< ʾiθ + le).

It also occurs when /θ/ comes into contact with /l/ within a root, e.g.

ṗatli	'they turn'	< *ṗθl*

Examples of the shift of the fricative /θ/ before /n/ include:

xǝtna	'groom'	< *xǝθna
ʾašitnaya	'man from Ashitha'	< *ʾAšiθa*

This shift of alveolar fricatives before /l/ and /n/ occurs regularly.

(v) Various cases of the stop /t/ after a vowel that cannot easily be explained by the historical phonology of the word have apparently arisen by analogy with cases of the stop that can be explained historically.

A few verbal roots contain the stop /t/ throughout all inflections, even when occurring after vowels, e.g. *šty* 'to drink', *ʾtw* 'to sit'. The explanation for the existence of the stop /t/ in these seems to be that at an earlier

historical period the stop allophone was used in some of their inflections where there was no preceding vowel and that this was then generalized by analogy to all inflections. In the case of *šty*, the initial sequence of sibilant + stop in certain inflections of the verb, such as the imperative or forms derived from the past base, is pronounced with ease as a cluster, without an intervening epenthetic, e.g. *šti* 'drink!', *šteli* 'I drank'. This is reflected by the prosthetic vowel that is indicated in the orthography of some forms of earlier Aramaic, e.g. Syr. *ʾeštī*. After the distinction between /t/ and /θ/ had become phonemicized, the stop would have been generalized to all inflectional forms, including those where it was preceded by a vowel, e.g. *šate* 'he drinks'. The stop in *ʾtw* 'to sit' may have been generalized from inflections of this verb that have initial /t/, e.g. *tiwle* 'he sat down', *tiwa* 'sitting'. Mention should also be made of the noun *sətwa* 'winter', where the stop /t/ occurs after a vowel. It is likely that here also the explanation is the initial sequence of *s* and *t*. These would have formed a cluster in the absolute form **staw* at some earlier historical period.

The feminine singular resultative participle of the verb *hwy* 'to be' is *wita* with the stop /t/, whereas other final /y/ verbs have /θ/ in the corresponding form, e.g. *xziθa* (*xzy* 'to see'). The stop seems to have arisen by analogy with final /ʾ/ verbs, where the stop is historically explicable by the original presence of a preceding pharyngal. This is due to the resemblance between the masculine singular resultative participles:

	Resultative participle ms.	Resultative participle fs.
šmʾ 'to hear'	*šmiya*	*šmita*
hwy 'to be'	*wiya*	*wita*

In the inflection of verbs and the existential partial *ʾiθ* a stop /t/ resulting from contact with /l/ is sometimes extended by analogy to inflections where they are not in direct contact with /l/, e.g.

patli	'they turn'	*patəl ~ paθəl*	'he turns' (*pθl*)
mitle	'he died'	*mitwale ~ miθwale*	'he had died' (*myθ*)
ʾitle	'he has'	*ʾitwale ~ ʾiθwale*	'he used to have'

1.4.1.4. *d

The original interdental fricative allophone of this consonant has been preserved as an independent phoneme and is represented in the transcription by the symbol /ð/. The phonemic distinction of /ð/ from /d/ is demonstrated by minimal pairs such as:

guða 'churn' guda 'wall'

The consonant /ð/ occurs after both vowels and consonants, and also at the beginning of a word, e.g.

ʾiða 'hand'
huðaya 'Jew'
qðala 'neck'
mðita 'town'
rawðana 'earthquake'
ðile 'he knew'

When /ð/ occurs as a radical in a root, it is used in all inflections of the root, irrespective of the phonetic environment, e.g. rqð 'to dance': raqəð 'he dances', raqði 'they dance', rəqða 'a dance'; šðy 'to card (wool)': šaðe 'he cards', šðele 'he carded', šaðaya 'carder'.

   A diphthong /aw/ in which the /w/ is the reflex of an original *ḇ is followed either by the stop /d/ or the fricative /ð/, e.g.

kawda 'liver' < *kaḇdā
ʾawða 'she does' < *ʿāḇḏā

The fricative /ð/ in ʾawða occurs since it has been generalized throughout the root from contexts where it occurs after a vowel, e.g. ʾawəð 'he does'.

   On some occasions the stop /d/ is found after vowels in words of native Aramaic stock. The occurrences may be classified as follows:

(i) Words that originally contained geminated /d/, e.g.
guda 'wall' < *guddā
šlada 'corpse' < *šladdā
bədra 'threshing-floor' < *be + ʾəddʾrā
mšadər 'he sends' < *mšaddər

In some cases the gemination was a secondary development consequent upon a resyllabification. This explains, for example, the /d/ in the form xadə́ssər 'eleven', which appears to have been secondarily geminated in order to allow an /a/ vowel to follow the initial letter, presumably by force of analogy with the form for one, xa: xadə́sser < *xaddə́ʾsər < *ḥəḏaʿsar.

(ii) The stop /d/ occurs after a vowel when it is in contact with a follow-ing /l/ or /n/, e.g.

ridle	'he darned'	< *ryð*
qidle	'he burnt'	< *ʾqð*
gridle	'he scrubbed'	< *grð*
mpuqədle	'he commanded'	< *m-pqð* II
gadləx	'we plait'	< *gðl*
gədla	'plaited fence'	< *gðl*
yadli	'they lay (eggs)'	< *yðl*
mugədla	'frozen'	< *m-gðl* III
kawədna	'ass'	cf. *kawðənta* 'she ass'

This shift of alveolar fricatives before /l/ and /n/ occurs regularly, with only very few exceptions (e.g. *mù wiðléxuʔ* 'What have you done' B5:2). In a number of verbs a final stop /d/, which originally arose by this phonetic process by contact with the /l/ of L-suffixes, has become generalized to all inflected forms of the root, e.g. *xzada* 'to plough', *rgada* 'to tremble', *mxazode* 'to blame, reproach', *mašxode* 'to congratulate'.

(iii) The fricative /ð/ occasionally shifts to the stop /d/ by a dissimila-tory process when the fricative /θ/ occurs at the beginning of the next syllable, e.g.

xaduθa ~ *xaðuθa*	'joy'	< *xðy* 'to be joyous'
mamodiθa	'baptism'	< *m-mð* 'to baptize'

(iv) The stop /d/ after the vowel in the word *didwa* 'fly' appears to have developed by a form of syllabic assimilation. The syllabification of the word is evidently *di-dwa* and the onset of the second syllable has been assimilated to the initial stop /d/ of the first. Similar developments are found in other NENA dialects, e.g. C. Qaraqosh *deda* 'breast' (cf. Syr. *tʾḏā*), *didi* 'mine' < **dili*.

(v) The stop /d/ occurs as the second radical in the verbal roots *zdy* 'to throw' and *zdʾ* 'to fear', where it does not seem to be derived historically from a geminate /d/. In the case of *zdy*, which is cognate with Syr. *šḏā*, the /d/ is likely to have originated in an initial cluster *zd-* in certain inflec-tions and was extended to all inflections by analogy. The verb *zdʾ* appears to be derived historically from **ʾizdawwaʿ*, the *ʾetpaʿal* form of the root *zwʿ* in earlier Aramaic (cf. Nöldeke 1868: 195).

(vi) When the stop /d/ is the first radical of a root, it is retained in all inflections, including cases where the first radical is preceded by the vowel of a prefix, e.g. *dmx* 'to sleep': *daməx* 'he sleeps', *madməx* 'he puts to sleep'.

(vii) When the vowel preceding /d/ is prosthetic, it remains a stop. In some cases a prosthetic vowel has become a fixed feature of the word, as in the forms *ʾə́dyo* (< **dā-yōm*) 'today' and *ʾə́dlɛle* (< **dā-laylyā*) 'tonight' where it bears the stress.

(viii) A /d/ at the beginning of a word is not affected by a vowel at the end of a preceding word. This includes the subordinating particle *D*, e.g. *xóna d-o-málka* 'the brother of that king' (A25:1), *málka d-áyya bàžɒr* 'the king of this town' (A32:5), *réša-reša d-o-gàre* 'onto that roof' (A23:14). This particle may be cliticized to the preceding word, but it still remains a stop and is generally devoiced, e.g. *bábət bráta* 'the father of the girl' (A29:43), *tằrət gə̀ppa* 'entrance of the cave' (A31:7), *šáklət bər-náša* 'the form of a human' (A8:31), *ʾu-garšíle b-ó-qɛsət y-áwe bi-dìye*| 'and they pull it with the (handle of) wood that is attached to it' (B5:194).

The occurrence of the stop /d/ in words such as *hadiya* 'now' and *hodəx* 'beyond' may have a similar explanation, in that these can be analysed historically as composite units, the first syllable of which is a presentative element, i.e. *ha-diya*, *ho-dəx*. The form *diya* 'now', without the initial *ha-* is, in fact, also used in the dialect. We can include here also the form *hatxa* 'thus', in which the /d/ has become devoiced due to contact with the following unvoiced /x/ (cf. the related word *hadəx*).

1.4.1.5. **k*
The fricative allophone of **k* has been preserved in many cases, e.g.

ʾaxəl	'he eats'	< **ʾāk̲el*
baxe	'he weeps'	< **bāk̲ē*
naxraya	'stranger'	< **nak̲rāyā*
buraxa	'blessing'	< **burrāk̲ā*
kuraxa	'shroud'	< **kurrāk̲ā*

The fricative /x/ occurs also where a diphthong has contracted to a vowel, e.g.

kəxwa	'star'	< **kawkʾb̲ā*

The stop /k/ sometimes occurs after a vowel in words of Aramaic stock. These cases may be classified as follows:

(i) Where the consonant was originally geminated, e.g.

kaka	'tooth'	< *kakkā*
ʾakara	'farmer'	< *ʾakkārā*
rakixa	'soft'	< *rakkīḵā*
səkθa	'ploughshare'	< *sekkʾθā*
dukθa	'place'	< *dukkʾθā*

(ii) When the preceding vowel is an epenthetic, e.g.

maləkθa	'queen'	cf. *malka* 'king'

(iii) When the preceding vowel belongs to an originally separate particle that has become bonded onto a word beginning with /k/, e.g.

xakma	'some'	< *xa + kma*

The word *ʾɛka* 'where' may possibly fall into this category (< *ʾay-kā*). Compare the variant form *kɛleʾ* 'where is he' (§8.20.4.).

(iv) In various verbal roots, e.g.

raku	'he rides'	< *rāḵeḇ*
rakəx	'it softens'	< *rāḵek*
lakəx	'he licks'	< *lāḵeḥ*
gaxək	'he laughs'	< *gāheḵ*
xakək	'he laughs'	< *gāḥeḵ*

The /k/ has been generalized throughout all inflections of these verbal roots. The /k/ in the first two roots may have arisen by analogy. In the root *rkw* 'to ride' the stop may have arisen by analogy with the form *rakawa* 'rider', in which the /k/ is a reflex of an originally geminated consonant (< *rakkāḇā*). The /k/ in the root *rkx* 'to soften' is likely to be based on the analogy of the adjective *rakixa*, in which the medial /k/ was originally geminated (< *rakkīḵā*). Another possibility is that the stop arose originally in inflections of the root where the /k/ clustered with the initial /r/ without an intervening vowel, e.g. in the past form *rkule* 'he rode'. It is worth noting that such consonantal clustering took place in Syriac in words with initial /r/, as is reflected by the writing of prosthetic *alaph* in the orthography in words such as ܐܪܚܝܡܐ = ܪܚܝܡܐ 'beloved ones' and ܐܪܕܝܐ = ܪܕܝܐ 'upper garment' (Nöldeke 1904: 37). The stop /k/ in the

other roots appear to have arisen by a dissimilation process preventing the sequence of two velar fricatives. In *xkk*, a variant of *gxk*, there has been metathesis and subsequent devoicing of the initial /g/.

1.4.1.6. *g
The velar fricative allophone of *g has in most cases been weakened to zero when in contact with another consonant, e.g.

nări̯a	'axe'	< *nārḡā (cf. Syr. nārḡā)
zări̯a	'yellow'	< *zarḡā (cf. Syr. zārḡā)
lena	'furrow'	< *lḡena (cf. Syr. lḡettā)
lina	'jar'	< *lḡina (cf. Syr. lḡīnā)
nita	'party until dawn'	< *nḡīhtā
pela	'radish'	< *paḡlā (cf. Syr. puglā)
laməkka	'jaw of an animal'	< *laḡma + əkka (cf. Syr. luḡmā)

When it occurred between vowels, it is generally replaced by the glide /y/ or, when the following vowel is rounded, by the glide /w/, e.g.

ṛayəš	'he wakes up'	< *rāḡeš
šayər	'he stokes'	< *šāḡer
rawola	'valley'	< *rāḡōlā

When it occurred between two /a/ vowels, its reflex is either the laryngal /ʾ/ or the glide /y/, e.g.

syaʾa ~ syaya	'fence'	< *syāḡā
plaʾa ~ playa	'to divide'	< *plāḡā
šraʾa ~ šraya	'oil-lamp'	< *šrāḡā

The laryngal /ʾ/ is occasionally found between other vowels, e.g.

yaʾisa	'wife's sister's husband'	< ʾaḡīsā

As shown by Tsereteli (1990), the passage of the velar fricative *ḡ to /ʾ/ or zero underwent an intermediate stage in which *ḡ shifted to the pharyngal fricative *ʿ. A vestige of this pharyngal can be identified in the emphatic /ṛ/ of ṛayəš 'he wakes' (< *ṛaʾəš < *ṛaʿeš < *rāḡeš). Some NENA dialects preserve an emphatic articulation also in other words, e.g. C. Urmi ⁺lina [ˁluːnɑ] 'jar'. The pharyngal consonant is preserved in a number of words

in a few NENA dialects, e.g. J. Amedia *ṛaʿola* 'valley', *jaʿoda* 'hatchet (cf. C. Barwar *rawola, jawətta*).

The velar fricative realization is preserved in a few isolated words. There is a tendency to devoice this to /x/, though the original voiced realization /ġ/ is preserved in some words:

paxra	'body'	< *paḡrā*
sxaða ~ sġaða	'to worship'	< *sḡāḏa*
šxaša ~ šġaša	'to be disturbed'	< *šḡāšā*
ləxxawa	'bit, bridle'	cf. Syr. *lḡāmā*, J. Amedia *laġma*

A similar devoicing of an original voiced velar fricative /ġ/ to /x/ takes place in loanwords from Arabic, many of which may have entered the language through Kurdish, where this devoicing also occurs, e.g.

xam	'worry'	< Arab. *ġamm*
xădaya	'lunch'	< Arab. *ġadāʾ*
xulama	'servant'	< Arab. *ġulām*
xəlṭa	'mistake'	< Arab. *ġalaṭ*
xerətta	'zeal'	< Arab. *ġēra*
xlaqa	'to lock'	< Arab. *ġlq*

The stop /g/ is retained after a vowel in the following circumstances:

(i) When the consonant was originally geminated, e.g.

zaga	'bell'	< *zaggā*
nagara	'carpenter'	< *naggārā*
daglana	'liar'	< *daggᵊlānā*
magla	'scythe'	< *maggᵊlā*
prage	'millet'	< *praggē*

(ii) When the preceding vowel is an epenthetic, e.g.

xurəgθa	'stepdaughter'	(cf. *xurga* 'stepson')

(iii) When the /g/ originally stood at the beginning of a word that has become bonded with a preceding word that ends in a vowel, e.g.

be-gwina	'eyebrow'	< *be-gḇīnā* ('place of the eyebrows')

The stop /g/ occurs after the diphthong /aw/, e.g. *zawga* 'pair'. In many NENA dialects where this diphthong contracts to /o/ the reflex of

the original *g in this word is that of a fricative rather than a stop, e.g. C. Qaraqosh, J. Sulemaniyya *zoʾa*, J. Urmi *zoa*.

1.4.2. *Pharyngals and Laryngals*

1.4.2.1. *ḥ

The unvoiced pharyngal fricative *ḥ has in most cases shifted to the velar fricative /x/, e.g.

xmara	'ass'	< *ḥmārā
xawra	'friend'	< *ḥaḇrā
ʾurxa	'road'	< *ʾurḥā
pθx	'to open'	< *ptḥ
šlx	'to strip'	< *šlḥ

The pharyngal has been retained in the environment of /q/ in the word *rǝḥqa* 'distant', but the articulation of this as a pharyngal is not consistent and speakers sometimes pronounce it as a velar fricative *rǝxqa*. The original pharyngal is likewise sporadically retained in *ḥawla* 'rope' (< *ḥabla) as a variant of the normal form *xawla*. Here the preservation of the pharyngal is likely to have been conditioned by the fact that the other consonants of the word have an intrinsic tendency to attract an emphatic articulation. A further case where a pharyngal is occasionally retained is in the verbal root *gxk ~ gḥk* 'to laugh'.

Elsewhere the pharyngal appears only in Arabic loanwords, a large proportion of which are likely to have come into the language through Kurdish. In many of these, however, the pronunciation of the pharyngal is often weakened to the laryngal /h/, e.g. *ḥeywǝn ~ heywǝn* 'animal', *ḥajǝtta ~ hajǝtta* 'tool, instrument', *ḥawše ~ hawše* 'sheep-pen', *ḥuta ~ huta* 'whale', *ḥyr ~ hyr* 'to be confused', *ḥammam* 'wash-room', *ḥakima* 'doctor', *lǝḥefa* 'quilt', *taḥela* 'spleen', *ḥaqquθa* 'right'. In a few Arabic loanwords a /ḥ/ has shifted to the velar fricative /x/ as in words of Aramaic stock, e.g. *mazaxa* 'area below millstones in a water-mill' < Arab. *masāḥa*, *xmy* 'to keep, to guard' < Arab. *ḥmy*.

The presence of /ḥ/ in Arabic loans may give rise to minimal pairs in which the /ḥ/ constrasts phonemically with a /x/ that derives historically from *ḥ, e.g.

ḥyr 'to be confused' : *xyr* 'to look'

An exceptional development of *ḥ > /h/ is found in the Aramaic words *həšše* 'senses' (< *ḥaššē̮*) and *hašya* 'chive' (cf. Syr. *ḥaššā*, *ḥāšā*). This has probably come about in order to distinguish them from the word *xašša* 'suffering' (< *ḥaššā*), which appears to be a doublet of *həšše*.

1.4.2.2. *ˁ

The voiced pharyngal fricative *ˁ has been weakened to the pharygnal /ʾ/ before a vowel at the beginning of words, e.g.

ʾupra	'soil'	< *ˁap̄rā*
ʾalma	'people, world'	< *ˁalmā*
ʾazola	'weaver'	< *ˁāzōlā*
ʾawəð	'he does'	< *ˁāḇeḏ*

This applies also to words containing /q/ or an emphatic, which in some NENA dialects condition the preservation of the pharyngal, e.g.

ʾaqərwa	'scorpion'	< *ˁaqrʾḇa*
ʾaqla	'leg'	< *ˁaqlā*
ʾaṗṣa	'gallnut'	< *ˁaṗṣā*
ʾaṭma	'side, thing'	< *ˁaṭmā*

The original phonemic contrast between *ˁ and *ʾ in the pair *ˁamra 'wool' and *ʾamra 'she says' has been replaced by a contrast between emphatic /ṛ/ and non-emphatic /r/:

ʾamṛa	'wool'	*ʾamra*	'she says'

Even in Arabic loanwords, an initial pharyngal before a vowel is generally weakened to the laryngal /ʾ/, e.g.

ʾaṣərta	'evening'	< Arab. *ˁaṣr*
ʾašəq	'in love'	< Arab. *ˁāšiq*
ʾaskar	'army'	< Arab. *ˁaskar*
ʾălīq	'fodder'	< Arab. *ˁalīq*

The pharyngal *ˁ in all other positions is generally reduced to zero, e.g.

raqa	'to run'	< *ˁrāqā*
pala	'workman'	< *paˁlā*

saṛe	'barley'	< *saʿrē*
baloṭa	'throat'	< *bālốṭā*
tǎra	'door'	< *tarʿā*
ʾarbe	'four (f.)'	< *ʾarbaʿ*

When it is elided between vowels it is usually replaced by a glide. If one of the vowels is /i/ and the other is /a/, the glide is /y/, e.g.

mriya	'ill'	< *mrīʿā*
ṭliya	'asleep'	< *ṭlīʿā*

If one of the vowels is /o/ and the other is /a/, the glide is generally /y/, e.g.

mayoya	'bar of a churn'	< *māyốʿā*
layosa	'jaw'	< *lāʿốsā*
ṣawoya	'painter'	< *ṣāḇốʿā*
loyaθa	'cheeks'	< *lốʿāṯā*

Occasionally the glide is /w/, e.g.

mṭawole	'to play'	< *mṭaʿʿốlē*

If one of the vowels is /u/ and the other is /a/, the glide is /w/, e.g.

garuwa	'pile of sticks'	< *gārūʿā*
nabuwa	'spring (of water)'	< *nāḇūʿā*
ṭabuwana	'tick'	< *ṭāḇūʿānā*
lawusta	'jaw'	< *lāʿūstā*

If the pharyngal *ʿ occurred between two /a/ vowels, it is either weakened to the laryngal /ʾ/ or is replaced by the glide /y/. Forms with the laryngal and forms with the glide often exist in free variation, e.g.

draʾa ~ draya	'span'	< *drāʿā*
šmaʾa ~ šmaya	'to hear'	< *šmāʿā*
zaraya	'cultivator'	< *zarrāʿā*
qulaya	'clod (of earth)'	< *qūlāʿā*
maʾarwa	'West'	< *maʿarḇā*

The lack of a variant form with a glide for the word *maʾarwa* is no doubt on account of the fact that this word is only used by educated speakers under the influence of the modern literary language.

An original pharyngal **ʿ* in many loanwords from Arabic are weakened in the same way as it is in Aramaic words, e.g.

šắma	'wax'	< Arab. *šamˁ*
majəb	'he is astonished'	< **maˁəb* < Arab. *ˁjb*
leba	'trick'	< Arab. *ləˁb*
šera	'poem'	< Arab. *šəˁr*
jmeta	'gathering'	< **jmaˁta* < Arab. *jmˁ*
jmaʾa ~ jmaya	'to gather'	< **jmaˁa* < Arab. *jmˁ*

Some, presumably more recent, loans from Arabic preserve the pharyngal. This applies not only to Arabic words that are unadapted morphologically to the Aramaic dialect, but also to some verbal forms that are given Aramaic inflection, e.g.

mˁắqəm	'he sterilizes'	< Arab. *ˁaqqama*
mˁajəz	'he becomes senile'	< Arab. *ˁajaza*

1.4.2.3. /h/

The laryngal **h* is elided when in contact with another consonant, e.g.

dawa	'gold'	< **dahwā*
saða	'martyr'	< **sāhðā*
nera	'river'	< **nahrā*
sera	'moon'	< **sahrā*
ṣewa	'thirst'	< **ṣahwā*
ṭera	'noon'	< **ṭahrā*
qiya	'blunt'	< **qhīyā*

The word *dawa* 'gold' has an alternative form *dawha*, which is peculiar both on account of the metathesis of the /w/ and the /h/ and also on account of the preservation of the /h/ after the consonant.

Between vowels **h* is sometimes preserved, e.g.

šaharta	'vigil'
sahaða	'witness'
ʾawahaθa	'parents'

On some occasions it is elided and replaced by a glide, e.g.

duwana	'oil, fat'	< **dūhānā*

The /h/ in many Arabic loanwords undergoes the same weakening, in that it is elided when in contact with a consonant, e.g.

sama	'portion'	< Arab. *sahm*
qawa	'coffee'	< Arab. *qahwa*

An exceptional development of **h > /x/* is found in the word *ṭuxma* 'type, kind', which appears to be the reflex of Syr. *ṭuhmā* 'race, stock'. It is possible that this word was taken from Syriac rather than being an original vernacular word and that the /x/ arose out of an effort to preserve the consonantal /h/.

1.4.2.4. /ʾ/

Laryngal /ʾ/ is elided when in contact with a consonant in word initial position, e.g.

θaya	'to come'	< **ʾθaya*
sara	'to bind'	< **ʾsara*
xille	'he ate'	< **ʾxille*

The stop /ʾ/ interchanges freely with the fricative /h/ at the beginning of some words. As far as the etymology of such words can be established, the stop /ʾ/ is primary and the /h/ is a secondary development, e.g.

ʾarnuwwa ~ harnuwwa	'rabbit'	< **arnᵊḇā*
ʾurwa ~ hurwa	'raven'	< **urḇā*
ʾuðala ~ huðala	'pile of grass'	

1.4.3. *Emphatic /ṭ/ and /ṣ/*

The emphatic consonants /ṭ/ and /ṣ/ in words of Aramaic stock are mostly reflexes of original **ṭ* and **ṣ* Some cases of /ṭ/ and /ṣ/, however, have arisen by secondary development. This is found, for example, in the words *pᵊrṭana* 'flea' (< **purtaʿnā*), *ṭlaθa* 'three' (< **tlāṭā*), *ʾᵊṣra* 'ten' (< **ʿesrā*) in which they have developed, it seems, due to an adjacent pharyngal or emphatic.

In a few words, an originally emphatic letter is regularly pronounced without velarization, e.g. *kawsa* 'hair' (cf. Syr. *qawṣtā* 'curl'), *ʾəsra* 'storage basket' (cf. Syr. *ʾawṣrā*). The loss of emphasis in *ʾəsra* may have been motivated by a desire to distinguish the word from *ʾəṣra* 'ten', in which, as we have seen, the emphasis is an innovation.

1.4.4. *Emphatic /ṛ/*

A phonetic explanation can be found for the development of emphatic /ṛ/ in some words.

It has sometimes arisen due to the original presence of the pharyngal *ˤ, e.g.

ʾamṛa	'wool'	< *ˤamrā*
seṛa	'goat's hair'	< *saˤrā*
ṛayəš	'he wakes'	< *raˤəš* < *raḡeš*

It can also arise adjacent to a labial, e.g.

bəṛ-naša	'human being'
daṛmana	'medicine'

In some minimal pairs in which /ṛ/ contrasts with /r/, the emphatic /ṛ/ is a reflex of an originally geminated consonant, whereas the non-emphatic /r/ is a reflex of a ungeminated consonant, e.g.

paṛa	'lamb'	< *parrā*
para	'dust'	< *ʾpārā*
maṛa	'spade'	< *marrā*
mara	'to say'	< *ʾmārā*

In several cases, however, the emphatic /ṛ/ is not motivated primarily by a phonetic cause but rather has developed as means of distinguishing a word from a homophone with a different meaning, e.g.

bera	'well'	< *bəʾrā*
beṛa	'light'	< *bəhrā*
nera	'river'	< *nahrā*
neṛa	'vision'	< *nahrā*

dare	'he puts'	< **dārē*
daṛe	'generations'	< **dārē*
parma	'she cuts'	< **pārmā*
paṛma	'type of oak tree'	

The is no phonetic reason why one member of these pairs should develop the /ṛ/ rather than the other. Indeed some such pairs have a common etymological root, e.g.

gawra	'she marries'	< **gāḇrā*
gawṛa	'man'	< **gaḇrā*
prama	'to slaughter'	< **prāmā*
ṛrama	'to understand'	< **prāmā*

A trend is discernible with regard to the distribution of this type of emphatic /ṛ/ across word categories. Where a verb and a noun are being distinguished by this means, it is the noun rather than the verb that acquires the emphatic /ṛ/:

Verb		Noun	
dare	'he puts'	*daṛe*	'generations'
parma	'she cuts'	*paṛma*	'oak tree'
gawra	'she marries'	*gawṛa*	'man'
dwara	'threshing'	*dwaṛa*	'rest area for sheep'

1.4.5. *Emphatic* /p̣/ *and* /ḷ/

The development of the marginal emphatic phonemes /p̣/ and /ḷ/ has in some cases been motivated by an etymological pharyngal *ˁ in the word in question, e.g.

ḷaya	'upper'	< **ˁlāyā*
p̣əqqa	'crack'	< **pəqˁā*
mp̣aḷoye	'to imitate'	< **m-p̣lˁ* < **m-p̣lḡ*

The word *p̣əqqa* 'frog' appears also to be derived from a form with an original pharyngal (cf. Syr. *peqˁā*, NENA C. Qaraqosh *pəqʾa*). The verb *mp̣aḷoye*, furthermore, appears to be a doublet of *mp̣aloye* 'to share' (< *m-p̣lḡ*). The absence of emphasis in these words is likely to be moti-

vated by the desire to distinguish them from ṗəqqa 'crack' and mṗǎḷoye 'to imitate' respectively.

The emphatic /ṗ/ in ṗaṛma 'type of oak tree' and ṗrama 'to understand' has developed as a means distinguishing the word from homophones of different meaning, as is the case with the /ṛ/ in these words (cf. §1.4.4.).

1.4.6. Affricates /č/, /ç̌/ and /j/ in Aramaic Words

As has been remarked in §1.2.1., the non-emphatic /č/ occasionally occurs in words by an advanced form of palatalization of /k/, e.g. čalo 'bride' < kalo, čɛrma 'vineyard' < kɛrma. This, however, takes place only sporadically and is not the normal form of these words, which are usually pronounced with an initial palatalized velar, viz. kʸalo, kʸɛrma.

The non-emphatic /č/ in the verb čraxa 'to surround' may be derived by advanced palatalization, if this root is derived historically from *krk (cf. Syr. krak̠). Unlike čalo and čɛrma, the /č/ here is a stable, fixed feature. The development of the affricate may have been stimulated by the presence of an affricate at the beginning of the preposition č̌ənnəḳɛr- 'around', although the latter is of Kurdish origin. Another possible case of a /č/ deriving by affrication from *k is the verb č̌yd 'to invite'. This is likely to have developed from a form with the preverbal particle k-, viz. *k-ʕyd, the root of this being ultimately related to Syr. waʕʕed 'to invite'. This would be a fossilized vestige of the k- prefixed particle, the ʾi- prefix being the normal indicative habitual particle in the C. Barwar dialect. In several Ṭiyare dialects other verbs have similar fossilized vestiges, e.g. č̌e 'He knows' < *k-yaḏəʕ, č̌azəl 'He goes' < k-ʾazəl.[3]

Some cases of the non-emphatic affricate /č/ have developed from a fusion of *t and *š. This applies to čeri 'autumn' < *tšeri < *tešri and ʾəčča 'nine' (f.) < *ʾətšaʕ < *tšaʕ. The /č/ in the verb nčala 'to pick (fruit, flowers), to tear off' may also fall into this category, if the historical root of this is identified as ntš (cf. Syr. ntaš 'to pluck, to tear') with the addition of a non-etymological /l/. The affricate also in the verb mǎčoxe 'to find' should be explained in this way, although the *š clustered originally with a *k rather than with a *t in the root (cf. Syr. ʾeškaḥ). It must be assumed that the cluster *šk shifted to *št by partial assimilation of the velar *k to the palato-alveolar *š. This is, indeed, what is found in the J. Urmi form of

---

[3] See Talay (2008).

this root, viz. *maštoxe*. The cluster *št would then have been metathesized to /*tš*/ resulting in *măčoxe*.

The emphatic /*č̣*/ has developed by affrication of an original *ṭ or emphatic palato-alveolar **ṣ̌*.

Verbs containing /*č̣*/ deriving from an etymological *ṭ include *nč̣apa* 'to drip', *qč̣aʾa* 'to cut' and *qč̣apa* 'to cut down, harvest', all of which have doublets with the same meaning that preserve the original emphatic stop, viz. *nṭapa*, *qṭaʾa* and *qṭapa*. It can be identified in *mxač̣xoč̣e* 'to poke, prod' < *ḥṭḥṭ* (cf. Syr. *ḥaṭ* 'to dig out', *ḥaṭṭeṭ* 'to excavate, gouge') and in *zrač̣a* 'to draw a line, to scribble', which derives from *sraṭa (cf. Syr. *sraṭ*). The stop /*ṭ*/ is preserved in the doublet of the same root *sraṭa* 'to tear, lacerate'. The verb *grač̣a* 'to scratch' has possibly developed by a lexical blend between *zrač̣a* and *graða* 'to scratch, scratch off'. Note also *mqarmoč̣e* 'to crumple', which has the doublet *mqarmoṭe* with the original /*ṭ*/. To be included here are also the verbs *č̣yama, č̣maya, č̣aya* (*ʾč̣m*), *măč̣ome* and *mač̣moye* 'to close', all of which have an etymological connection with Syr. *ṭam* 'to close' and *ʾaṭīm* 'closed'. The stop is preserved in C. Qaraqosh *ṭym* 'to close'. The verb *mč̣alboxe* 'to beat (with a stick)' appears to be related to Syr. *ṭḅaḥ* 'to strike' with an /*l*/ augment. The word *boč̣a* 'seed (eaten as snack), stone in a fruit' appears to be cognate with Jewish Babylonian Aramaic בועתא 'abcess' (Mutzafi 2005). The original non-emphatic stop /*t*/ is preserved in J. Amedia *boʾta*. It must be assumed that this shifted to *ṭ under the influence of the adjacent pharyngal *ʿ before shifting to /*č̣*/ in the C. Barwar form.

In other words emphatic /*č̣*/ derives historically from the palato-alveolar **ṣ̌*. The velarization of the consonant had various causes.

In some cases it was brought about by contact with an adjacent pharyngal *ʿ, which can be reconstructed in the word. This applies to *č̣uwa* 'smooth' < **ṣ̌ʿū̌ā*, *č̣ita* 'cream of yoghurt' < **ṣ̌ʿī̌tā*, *măč̣oye* 'to smooth' (< **mašʿōyē̌*), all of which are connected historically with the root **ṣ̌ʿ* (cf. Syr. *šaʿ* 'to smooth'), and *ʾəč̣č̣a* 'nine' (m.) < **təṣ̌ʿā* (contrast the f. form *ʾəčča*, where the **ṣ̌* was not in contact with the pharyngal: *tšaʿ). The etymology of the word *č̣ena* 'mosquito' is uncertain. It may have originally denoted the sound the insect made and be connected with the verb *mč̣anč̣one* 'to whine; buzz'. This verb is connected etymologically with Arab. *ṭanṭana* with the same meaning, which indicates that the /*č̣*/ is a reflex of an etymological *ṭ.

In other cases the velarization derives from an adjacent labial and/or /*l*/, which have a tendency to develop this feature. This applies to *pč̣ala* 'to be crooked', *pč̣ila* 'crooked', which are derived from *pšl (cf. Syr. *pšal*

'to twist'), *člapa* 'to tear off (meat)' < **šlp* (cf. Syr. *šlap̄* 'to pull out', Jewish Babylonian Aramaic *šallep̄* 'to tear off'). The verb *člaxa* 'to flay, tear apart' can be identified as a doublet of *šlaxa* 'to tear out, pull up' and *mšaloxe* 'to strip', the historical root of all of which being **šlḥ*. The verb *mrača* 'to crush' can be connected with Syr. *mraštā* 'pestle'. The root of the Syriac word is *ršš* 'to crush', the initial */m/* being a prefix, which has become part of the verbal root in the later dialect. The second */č/* in the verb *čmača* 'to wither' is derived from the palato-alveolar **š* in its etymological root **kmš*. The initial */č/* has developed by palatalized fronting of the velar stop **k*, no doubt stimulated by the affricated third radical.

It has been shown in §1.2.2. that the voiced affricate */j/* occurs in a few words by palatalization of an original **g*, e.g. *jawda* 'water container' (< **gawda*), *jawətta* 'chopping tool' (< **gʿd* < **gdʿ* 'to hew off'). In a few cases, however, it appears to have arisen by affrication of a sibilant. This applies to *nqaja* 'pinch, peck' < **nqz* (cf. Syr. *nqaz* 'to peck'), *jvoṭa* 'straight' (cf. Syr. *šabbeṭ* 'to straighten') and *rəjba* 'crawling creature' < **rəšpa* (cf. Syr. *rušpā*). Other possible cases are *mjaloye* 'to extract (roots)', which may be derived historically from the root **šly* (cf. Syr. *šlā* 'to draw out', *mašlyā* 'extracting fork'), *jalla nune* 'fish-eating bird, stork', the first element of which is possibly derived from the same root (< **šālyaθ nune* 'extractor of fish'), *myaja* 'to crush with the hands', the etymological root of which may be **mʿas* (Syr. *mʿas* 'to bruise, crush') and *jwaja* 'to move', which may be derived from **šwš* (cf. Syr. *šawweš* 'to disturb').

1.4.7. /n/

In a few words the nasal consonant */n/* is the result of a shift from an original labial **m* by a process of partial dissimilation from a labial consonant at the onset of the following syllable, e.g. *nabəl* 'He takes away' < **mabəl* < **mawbəl* (cf. C. Qaraqosh *mobəl*), *nepoxta* 'raisin syrup' < **mepoxta* (cf. J. Amedia *mepuxta*).

CHAPTER TWO

VOWELS

2.1. Phoneme Quality Oppositions

The following vowel qualities are distinguished in the transcription:

/i/   /u/

     /e/   /ə/   /o/

          /ɛ/

               /a/
These qualities contrast phonemically, as is demonstrated by minimal pairs such as the following:

/i/ : /e/
     ʾiða   'hand'
     ʾeða   'festival'

     ṛkiwa   'ridden'
     ṛkewa   'stirrup'

     šati   'they drink'
     šate   'he drinks'

/i/ : /ə/
     nixla   'she rested'
     nəxla   'sieved bran'

     pixla   'she became cold'
     pəxla   'uncastrated sheep/calf'

     ṭaxin   'tahini'
     ṭaxən   'he mills'

/e/ : /ɛ/
    deθa   'sweat' (noun)
    dɛθa   'she sweats'

    ṭema   'taste' (noun)
    ṭɛma   'she tastes'

    šate   'he drinks'
    šatɛ   'they drink'

/e/ : /ə/
    gera   'arrow'
    gəra   'hill'

/ɛ/ : /a/
    bɛza   'she pours'
    baza   'jump'

    mɛθa   'she dies'
    maθa   'village'

    ʾɛna   'eye'
    ʾana   'I'

/a/ : /ə/
    qaṭlənne   'I (m.) kill him'
    qaṭlanne   'I (f.) kill him'

    qaṭlətle   'you (m.) kill him'
    qaṭlatle   'you (f.) kill him'

    qəpla   'lock'
    qapla   'bundle'

    qərša   'refuse'
    qarša   'strip of wood'

    məra   'she said'
    mara   'to say'

/ɛ/ : /ə/
    pɛrma   'she cuts'
    pərma   'thurible'

/o/ : /u/
    koza   'shelter for sheep'
    kuza   'red herb'

    qopa   'hunchback'
    qupa   'basket'

    boṭa   'wooden channel'
    buṭa   'penis'

/u/ : /ə/
    gusta   'ball of dough'
    gəsta   'fleece'

    quršа   'frozen snow'
    qərša   'refuse'

/u/ : /i/
    šuša   'glass'
    šiša   'bar'

In closed unstressed syllables both */e/* and */a/* tend to be replaced by */ə/*. The vowel */ə/* in unstressed closed syllables, therefore, stands in complementary distribution with */e/* and */a/* in open syllables. This can be seen in pairs of inflected forms of the same word such as the following:

    qáṭlət   'you (ms.) kill' (short form)
    qáṭleti   'you (ms.) kill' (long form)

    qáṭlət   'you (fs.) kill' (short form)
    qáṭlati   'you (fs.) kill' (long form)

    qáṭlən   'I (m.) kill' (short form)
    qáṭlena   'I (m.) kill' (long form)

qáṭlən	'I (f.) kill' (short form)
qáṭlana	'I (f.) kill' (long form)
ʾatnábəl	'car'
ʾatnabéle	'cars'
ʾótəx	'room'
ʾotáxe	'rooms'

In general the vowel /*e*/ tends to be restricted to open syllables and the vowel /*ə*/ to closed syllables. Also in closed stressed syllables, therefore, /*e*/ tends to be replaced by /*ə*/, e.g.

bə́nta	'time'	< **benta* (cf. *bena* 'time')
qaṭlə́tle	'you kill him'	< **qaṭlétle*
qaṭlə́nne	'I kill him'	< **qaṭlénne*

This complementary distribution between open and closed syllables is, however, a tendency and not an absolute rule. The vowel /*e*/ is occasionally found in closed syllables, e.g. *ténta* 'fig', *hémza* 'an edible herb', and the vowel /*ə*/ is found in open syllables, e.g. *mtămə́ma* 'she completes', *šə́mu!* 'Hear! (pl.)'. On account of this it is possible to find some isolated minimal pairs for the qualities /*e*/ : /*ə*/, such as *gera* 'arrow' : *gəra* 'hill', which is cited above.

The vowel /*a*/ regularly occurs in closed syllables that are stressed and may contrast phonemically with /*ə*/ in this position, as seen in the examples for /*a*/ : /*ə*/ above.

The vowel /*o*/ tends to be restricted to open syllables and is frequently replaced by /*u*/ in a closed syllable, e.g. *dəbbora* 'hornet' vs. *dəbburta* 'horse-fly'. It has not been possible, therefore, to identify minimal pairs for /*o*/ and /*u*/ in closed syllables. The vowel /*o*/ does, however, occasionally occur in closed syllables, e.g. *romta* 'hill', *xaṭorta* 'washing board', *šə́lloxta* 'shed skin (of a snake)'.

2.2. Vowel Length

The length of vowels is determined by various factors. It is conditioned to a large extent by syllable structure and stress position. Another important

factor is the speed of utterance and the position of the word in an intonation group or sense unit. The length of vowels in all words is reduced as the speed of delivery is increased. At the end of an intonation group (marked in the transcription by the symbol ˈ) or sense unit there is often a tendency to slow down the speed of delivery, which results in an extension of the length of the vowels, especially the one in the final syllable of the word. It should be noted that there is no clear-cut distinction between short and long vowels in terms of their physical duration, which can be measured instrumentally in milliseconds. The short vowels have a typical duration of 50–70 milliseconds. They are rarely less than 50 milliseconds. When a vowel is pronounced longer than this, its duration is anything from 70 milliseconds to around 300 milliseconds. The typical duration of a long vowel, however, is from about 120 to 180 milliseconds.

2.2.1. *Open Syllables*

2.2.1.1. *Stressed Non-Final Open Syllables*
A vowel in a stressed open syllable that occurs within a word tends in principle to be pronounced long. In the following examples the figure after the vowel indicates its duration in milliseconds that has been measured instrumentally. Since there is a certain amount of overlap between the physical articulation of a vowel segment and an adjacent consonant segment, these measurements must be regarded as approximations.

(1) *péšən* [ˈpɛː(100)ʃə(60)n] 'I shall remain' (A24:4)
(2) *zíleke* [ˈziː(105)lɛ(70)le(70)] 'he went' (A24:6)
(3) *xázən bə̣r-našúθa* [ˈxæː(110)zə(55)m bə̣(45)r̩-næː(110)ˈʃuː(110)-θæ(55)] 'I see people' (A24:2)
(4) *ʾo-góṛa* [ʾoː(130)-ˈgoː(120)r̩ɑ(50)] 'the elder one' (A24:5)
(5) *xzóli* [ˈɣzoː(140)li(70)] 'find for me' (A24:2)
(6) *bnóneˈ* [ˈbnoː(150)neː(115)] 'sons' (A24:1)
(7) *ʾo-gòṛaˈ* [ʾoː(130)ˈgoː(160)rɑː(240)] 'the elder one' (A24:4)
(8) *smèliˈ* [ˈsmeː(165)li(70)] 'I have become blind' (A24:2)
(9) *ʾèniˈ* [ˈʔɛː(190)niː(140)] 'my eyes' (A24:2)
(10) *hàleˈ* [ˈhæː(220)leː(110)] 'circumstances' (A24:2)

As can be seen from these examples, the duration of the stressed syllables tends to be longer in words occurring at the end of an intonation group (5–10) than in those occurring before the end of the intonation group

(1–5). The duration of the vowel in words in the middle of an intonation group is, indeed, sometimes considerably reduced, e.g.

(11) *píšele* [ˈpi(65)ʃɛ(70)le(40)] *ʾo-zòra*ˈ 'the young one remained' (A24:7)
(12) *šuréle* [ʃʊˑ(110)ˈɾeˑ(80)leˑ(80)] 'he began' (A24:19)

2.2.1.2. *Stressed Final Open Syllables*
When stress falls on a final open syllable of a word that is not at the end of an intonation group, the vowel tends to be short. This includes words bearing the stress that are combined with a following word in a stress group (chapter 6):

(1)   *kəmà t-yátli?*ˈ [kʰə(25)ˈmæ(55) ˈt-yæ(55)tliː(140)] 'How much will you give me?' (A24:5)
(2)   *là-šoqət* [ˈlæ(65)-ʃʊˑ(115)qə(35)t] 'do not allow' (A24:11)
(3)   *gu-ðá* [gʊ(60)ˈðæ(70)] *mðìta*ˈ 'in a town' (A24:4)
(4)   *(ʾu)mmà* [—ˈmːæ(85)] 'hundred' (A24:3)
(5)   *tərtè bnáθa*ˈ [tə(35)ɾˈte(65) ˈbnæː(130)θæ(65)] 'two girls' (A24:13)
(6)   *mò ṭ-óðət?*ˈ [ˈmoː(85) ˈtoː(105)ðə(50)t] 'What will you do?' (A24:4)
(7)   *tmanì-šənne*ˈ [tmæˑ(100)ˈni(60)-ʃə(35)nːe(80)] 'eighty years' (A24:9)
(8)   *ʾarbí* [ˈæ(100)ɾˈbiˑ(90)] *malàpe*ˈ 'forty sheets' (A24:17)

In some cases, however, they have a longer duration, e.g.

(9)   *mənná* [mənˈnæː(110)] 'from them' (A24:3)
(10) *ʾəsrì ʾotáxe*ˈ [ʾəsˈɾiː(170) ʾoː(140)tɑː(140)xeˑ(125)] 'twenty rooms' (A24:16)

When the word occurs at the end of an intonation group, there is a greater tendency for the stressed final vowel to be long, e.g.

(11) *hé qá-mo là?*ˈ [ˈheː(105) ˈqɑˑ(75)moˑ(75) ˈlæː(240)] 'Yes, why not?' (A24:4)
(12) *ʾan-trè*ˈ [ˈæn-ˈtɾeː(190)] 'those two' (A24:5)
(13) *ṭằyela*ˈ *ʾal-d-ô*ˈ [ˈælˈdoː(315)] *daṛmána* 'they search for that remedy' (A24:3)

2.2.1.3. *Posttonic Open Syllables*
Vowels in syllables following the stressed syllable tend to be short in words occurring in the middle of an intonation group. This applies both to syllables at the end of the word and also to those in penultimate position, e.g.

(1) *láxxa* [ˈlæ(60)xːæ(60)] 'here' (A24:4)
(2) *ʾána* [ˈʾæː(120)næ(60)] 'I' (A24:4)
(3) *mə́ndi* [ˈmə(50)ndi(65)] 'thing' (A24:2)
(4) *zílela mə́ṭye* [ˈm̩ə̣tye(70)] *gu-ðá mðìta¹* 'they went and arrived at a town'
     (A24:4)
(5) *píšle* [ˈpi(50)ʃle(75)] 'he remained' (A24:5)
(6) *mέθo* [ˈmɛː(130)θo(90)] 'bring' (A24:3)
(7) *qímela* [qiː(120)me(70)læ(60)] 'they got up' (A24:3)
(8) *mbáqrena* [ˈmbɑqre(75)næ(55)] 'I shall ask' (A24:6)
(9) *zílεle* [ˈziː(105)lɛ(70)le(70)] 'he went' (A24:6)
(10) *šqílεle* [ˈʃqiː(100)lɛ(80)le(65)] 'he took' (A24:21)

Vowels in the final syllable of words occurring at the end of an intonation group are often pronounced long, e.g.

(11) *xa-šùla¹* [xæ(75)-ˈʃuː(140)læː(190)] 'a job' (A24:4)
(12) *kut-yàrxa¹* [kʊ(35)d-ˈyæ(70)ɾxæː(150)] 'every month' (A24:5)
(13) *làxxa¹* [ˈlæ(55)xːæ(170)] 'here' (A24:6)
(14) *mðìta¹* [ˈmðiː(150)tʰæː(220)] 'town'(A24:4)
(15) *zùze¹* [ˈzuː(150)zeː(140)] 'money' (A24:3)
(16) *kəmà t-yátli.ʔ¹* [kʰə(25)ˈmæ(55) ˈt-yæ(55)tliː(140)] 'How much will you
     give me?' (A24:5)

In some cases, however, the final vowel remains short at the end of an intonation group, e.g.

(17) *gu-d-áyya mðìta¹* [ˈmðiː(110)tɐ(40)] 'in this town' (A24:4)
(18) *ʾummà dináre¹* [diː(100)ˈnæː(115)ɾe(65)] 'a hundred dinars' (A24:3)
(19) *ʾέnət bàbi¹* [ˈʾɛː(150)nə(50)d ˈbæː(160)bi(50)] 'the eyes of my father'
     (A24:4)

Where the final vowel is lengthened, a penultimate posttonic vowel is sometimes also lengthened, e.g.

(20) *zìlela¹* [ˈziː(165)leː(130)læː(110)] 'they went' (A24:3)

On other occasions, however, a penultimate posttonic vowel remains short when the final vowel is lengthened, e.g.

(21) *xòzyεle¹* [ˈxə(60)zyɛ(60)leː(180)] 'he found' (A24:6)
(22) *zìlela¹* [ˈziː(110)le(80)læː(210)] 'they went' (A24:3)

Vowels in unstressed final syllables occurring in words attached to a following word in a stress group are usually pronounced with relatively short duration, e.g.

(23) *xa-šùla*ˈ [xæ(75)-ˈʃuː(140)læː(190)] 'a job' (A24:4)
(24) *la-hàru*ˈ [læ(70)-ˈhæː(170)ɾuː(180)] 'it will not speak' (A24:18)
(25) *tre-pánxe* [tɾe(75)-ˈpə(55)ŋxe(80)] 'two mill-stones' (A24:13)
(26) *xo-réša* [xo(90)-ˈɾeː(110)ʃæ(70)] 'under her head' (A24:17)
(27) *qu-dùqle* [qʊ(60)-ˈdʊ(75)qle] 'get up and seize him' (A24:25)
(28) *so-méθo* [soː(100)-ˈmɛː(130)θo(90)] 'go and bring' (A24:3)

The duration of these vowels is, however, sometimes extended, especially in words at the end of an intonation group, e.g.

(29) *ʾo-gòṛa*ˈ [ʾoː(130)-ˈɡoː(160)ɾɑː(240)] 'the elder one' (A24:4)

2.2.1.4. *Pretonic Open Syllables*
Vowels in pretonic open syllables, immediately preceding the stressed syllable, are generally pronounced long, e.g.

(1) *ʾatíqta* [ʾæː(110)ˈti(55)qtæ(70)] 'ancient' (A24:6)
(2) *manìxəx* [mæː(115)ˈni(115)xə(50)x] 'let us rest' (A24:24)
(3) *šuréla* [ʃʊˑ(115)ˈreː(105)læ(70)] 'they began' (A24:26)
(4) *xabùše* [xæː(120)ˈbuː(120)ʃe(85)] 'apples' (A24:24)
(5) *guṛùθux*ˈ [ɡuː(120)ˈṛuː(140)θuː(160)x] 'your bravery' (A24:21)
(6) *ʾixàla*ˈ [ʾiː(150)ˈxæː(150)læː(180)] 'food' (A24:16)
(7) *ʾarbí ʾotàxele*ˈ [ʾoː(150)ˈtɑː(160)xeː(130)le(60)] 'it is forty rooms' (A24:14)

In words occurring in the middle of an intonation group, however, the duration of the vowel is often reduced somewhat, e.g.

(8) *muθélɛxu* [mʊˑ(80)ˈθeː(110)lɛ(90)xu(60)] *ṭèra*ˀˈ 'Have you brought the bird?' (A24:26)
(9) *moθéli* [moˑ(90)ˈθeː(100)li] 'I have brought' (A24:21)

Vowels occurring in syllables two places before the stressed syllable tend to be pronounced relatively short, though their duration is usually slightly greater than short vowels in closed syllables, e.g.

(10) *mapəlxə̀tli'* [mæ(75)pʰə(25)l'xə(50)tli(200)] 'you employ me' (A24:4)

(11) *paloxáye'* [pʰæː(90)loː(80)'xæ(50)j] 'workers' (A24:5)

2.2.2. *Closed Syllables*

Vowels in closed syllables are in principle pronounced short, both when they are stressed and also when they are unstressed, e.g.

(1) *làxxa'* ['læ(55)xːæ(170)] 'here' (A24:6)

(2) *màlkɛle'* ['mæ(65)lkɛː(130)leː(190)] 'he is the king' (A24:9)

(3) *plúx* ['plʊ(55)x] 'work!' (A24:5)

(4) *yaqùrta'* [yæˑ(100)'qʊ(65)ɾtæː(220)] 'pregnant' (A24:13)

(5) *píšle* ['pi(50)ʃle(75)] 'he remained' (A24:5)

(6) *ʾatíqta* [ʾæː(110)'ti(55)qtæ(70)] 'ancient' (A24:6)

(7) *pə́nxe* ['pə(55)ŋxe(80)] 'mill-stones' (A24:13)

(8) *kúlle skinyàθɛle'* [ski(55)n'jæ(200)θɛː(110)le(88)] 'it is all knives' (A24:11)

(9) *pɛ́šən* ['pɛː(100)ʃə(60)n] 'I shall remain' (A24:4)

(10) *bud-daṛmána* [də(45)ṛ'mæː(110)næ(80)] 'concerning a remedy' (A24:4)

The duration of a vowel in a closed syllable is sporadically increased in the final syllable of a word at the end of an intonation group. This increased in duration, however, is far rarer than it is in final open syllables in this position, e.g.

(11) *gu-čàntux'* ['tʃæ(55)ntuː(180)x] 'in your bag' (A24:18)

(12) *gurùθux'* [guː(120)'ɾuː(140)θuː(160)x] 'your bravery' (A24:21)

On some occasions the duration of the vowel is lengthened by various degrees before /r/, e.g.

(13) *mən-d-án-parre* [pʰæ(80)rːe(60)] 'from those feathers' (A24:9)

(14) *ʾàrya'* [ˈʾæ(100)ɾjæː(200)] 'a lion' (A24:15)

(15) *ʾarbí* [ʾæ(100)ɾ'bi(125)] 'forty' (A24:14)

(16) *ʾàrbi* [ˈʾæː(150)ɾbi(70)] 'forty' (A24:17)

2.2.3. *Transcription Conventions*

It may be stated, therefore, that a vowel in all types of open syllable is either regularly pronounced long or, at least, has a tendency to be pronounced long in certain conditions, whereas a vowel in a closed syllable is in principle pronounced short.

In sum, vowel length is in principle conditioned by syllable structure and position in the word. On account of this high degree of predictability of vowel length it is possible to adopt an economical type of transcription that minimizes the use of diacritical marks. Vowels in open and closed syllables with the vowel length that is described above are transcribed without diacritics. This can be regarded as the default, predictable, type of vowel length. Another justification for dispensing with diacritical marks is that, as shown above, the physical duration of vowels in similar syllable structures varies considerably according to the speed of utterance and position within an intonation group. This especially applies to the duration of long vowels, which is reduced to what is characteristic of a short vowel in some contexts. Likewise the duration of short vowels in closed syllables is in some rare cases extended.

Exceptions to the general principles of vowel length described above are found in some words of the dialect. Such cases, which deviate from the default, are marked in the transcription with diacritics. These include the following.

2.2.4. *Exceptions to the General Principles*

2.2.4.1. *Short /a/ in Open Syllables*
Short /a/ occurs in a stressed open syllable in a number of nouns and verbs of Aramaic stock that originally contained a pharyngal *ˁ after a closed syllable. After the elison of the pharyngal at the onset of the following syllable, the first syllable became open, but the vowel remained short, as if it were still in a closed syllable, e.g. *tăra* 'door' < *tarˁa*, *šăma* 'she hears' < *šamˁa*. Where the pharyngal originally closed a syllable, on the other hand, its elision resulted in the lengthening of the vowel of the syllable, e.g. *nala* 'horseshoe' < *naˁlā*, *ṭana* 'load' < *ṭaˁnā*.

In verbs the short vowel in forms such as *šăma* has been extended by analogy throughout the paradigm so that it occurs also in 3ms. forms such as *šăme* 'he hears', in which the syllable was never closed (< *šamaˁ*). The existence of several minimal pairs demonstrates that this short vowel contrasts phonemically with long /a/, e.g.

bǎza	'she bores, punctures'
báza	'type of fabric'
gáre	'roof'
gǎre	'he shaves'
mǎra	'illness'
mára	'master'
mǎxe	'he revives'
máxe	'he hits'
nǎwe	'it emerges'
náwe	'nits'
pǎla	'she divides'
pála	'workman'
qǎre	'tops of gourds'
qáre	'chickencoop'
šǎma	'wax'
šáma	'mole (on skin)'
xǎme	'it ferments'
xáme	'he dwells'
zǎde	'he fears'
záde	'he throws'

Short /a/ occurs in an open syllable in a number of verbal forms after an originally closed syllable has been opened by the insertion of an epenthetic vowel. As in the previous category of words, the vowel remains short by a historical drag effect, behaving as if it were still in a closed syllable, e.g. *mtǎmə́ma* 'she completes' < *mtamma*, *mǎlə́pa* 'she teaches' < *malpa*, *mnǎwə́li* 'they shoe (a horse)'. This short vowel is extended by analogy into the 3ms. where there is no inserted epenthetic: *mtǎmə̆m* 'he completes', *mǎləp* 'he teaches', *mnǎwəl* 'he shoes'.

Short /a/ regularly occurs in open pretonic syllables before /w/ in the plural form -ăwaθa, e.g. ʾeðăwaθa 'festivals', xonăwaθa 'brothers', bɛθăwaθa 'houses'.

Short /a/ occurs in open syllables in several loanwords, e.g. ʾăraq 'arak', ʾəškăra 'clear', băṭăna 'inner side of a wall', došăka 'mattress', kamăra 'woman's belt'.

2.2.4.2. *Short /u/ in Open Syllables*

Short /u/ occurs in an open syllable in the past base and resultative participle of several verbal forms after an originally closed syllable has been opened by the insertion of an epenthetic vowel, e.g. mtŭməmíle 'he completed them' < mtummíle, mtŭməmɛle 'he has completed' < mtúmmɛle. The short /ŭ/ has then been extended by analogy to forms where there is no inserted epenthetic, e.g. mtŭmə́mle 'he completed' < mtumə́mle, mtŭmámtɛla 'she has completed < mtumámtɛla.

Short /u/ is found in open syllables in a few loanwords, e.g. tŭ́tun 'tobacco', tŭ́tur 'a type of insect'.

2.2.4.3. *Short /ə/ in Open Syllables*

The vowel /ə/ occasionally occurs in open syllables of words of Aramaic stock. In these contexts it is pronounced short, as it is in closed syllables. Since /ə/ is pronounced short in all contexts, a breve mark is dispensed with in the transcription when this vowel occurs in an open syllable.

The vowel /ə/ sometimes occurs in an open syllable as an epenthetic vowel. This is found in several verbal forms, many of which have been cited already above, viz. mtămə́ma 'she completes', mălə́pa 'she teaches', mtŭməmíle 'he completed them'. Further cases include maplə́xa 'she uses', mkankə́ša 'she drags'.

It may be left in an open syllable after resyllabification. This applies to the enclitic genitive suffix -əd/-ət, the consonant of which is often syllabified with the following word, e.g. bábə d-o-yàla 'father of that boy' (A9:3), ʾiðə d-áy-baxta 'the hand of that woman' (A10:10), ʾán-naθyáθə d-àn hambišáye 'the ears of those giants' (A12:16). When the following word begins with a consonant, the consonantal element is often elided, e.g. ða-kə́rtə qésa 'a bundle of wood' (A10:6), ʾotáxə gàwṛəx 'the room of your husband', (A10:13), ʾɛ́nə mìya 'the spring of water' (A11:17). The elision of a pharyngal from the middle of a word may open up a syllable containing /ə/, e.g. šə́mu 'hear (pl.)!' < *šə́mʿu. We may also include in this category the irregular past form of the verb 'to say', which contains /ə/ in an open syllable,

VOWELS

e.g. *mə́re* 'he said'. This has developed by weakening the gemination of the */r/ < *mirre < *mirle*.

The vowel */ə/* is also sporadically found in an open syllable in loan-words, e.g. *gəra* 'hill'.

Minimal pairs can be found in which short */a/* and */ə/* contrast in open syllables, e.g.

gắra	'she shaves'
gəra	'hill'

The vowel */ə/* only contrasts with */e/* when there is a difference in length, e.g. *gəra* 'hill' : *gera* 'arrow'. The vowel quality */e/* is in principle always long. It occurs as a short vowel in an closed syllable in a few rare instances. These are all forms with the feminine ending *-ta*, e.g. *tenta* 'fig', *kepta* 'small stone', *telta* 'vixen', where the */e/* quality may be retained by analogy with forms of the word without the ending (cf. *tene* 'figs', *kepa* 'stone', *tela* 'fox'). There are, in fact, some cases where */ə/* in an open syllable becomes lengthened, but in all such cases the vowel changes to */e/*, e.g. *mére* 'he said' < *mə́re* (A49:6). It has been shown above, however, that */ə/* in an unstressed syllable also exhibits a certain degree of complementarity with short */a/* in a stressed syllable and with long */a/* in an open syllable, e.g.

qáṭlət	'you (fs.) kill' (short form)
qaṭlátle	'you (fs.) kill him' (short form)
qáṭlati	'you (fs.) kill' (long form)

Taking all this into account, it has been decided to transcribe the vowel as */ə/*, reflecting closely its phonetic realization, rather than treating it simply as a short form of */e/*.

2.2.4.4. *Long Vowels in Closed Syllables*

The vowels */a/*, */ɛ/*, */e/*, */i/*, */o/* and */u/* on some occasions are long in closed syllables. In words of Aramaic stock this is sometimes found when an originally open syllable has been closed by the elision of the vowel in the following syllable. The vowel remains long as if it were still in an open syllable. Examples of this are annexed nouns or prepositions that have lost a following genitive clitic *-ət* or at least the vowel of this clitic (§10.16.), e.g.

brōn-málka 'the son of the king' < bronət malka (A14:43)
xāṣ-sùsux 'the back of your donkey' < xaṣət susux (A14:67)
bēl-d-ánna dèwe¹ 'between these wolves' < belət 'anna dewe (A14:49)
ʾĒn-Nune 'the Spring of Fishes (name of village)' < ʾƐnət Nune.

Long vowels are found in closed syllables of various loanwords, e.g. glás
'glass', párzūn 'back-pack', qumárčă 'gambler', dūs 'truth, true', dēm 'unir-
rigated land'.

   A minimal pair exists in which a long /u/ in the closed syllable of
a loanword stands in opposition to a short /u/ in a word of Aramaic
stock:

       dus   'thrust!'
       dūs   'truth'

Taking into account quality and quantity, the phonemic inventory of
vowels may be summarized as follows:

Long		Short	
/i/	/u/		/ŭ/
/e/	/o/		
			/ə/
/ε/			
/a/		/ă/	

2.3. The Phonetic Quality of the Vowels

2.3.1. /i/

This is in principle realized as a high front vowel [i]. In a closed syl-
lable it is short, although derived historically from a long vowel, e.g. píšle
[ˈpi(50)ʃle)] 'he remained' (A24:5), ʾatíqta [ˈʾæːti(55)qtæ] 'ancient' (A24:6).
In the environment of back and emphatic consonants, its articulation
is sometimes retracted to the region of [ɨ] or [ɯ], e.g. dmíxta [ˈdmɨxtɐ]
'sleeping' (A26:11), čǐmtəlle [ˈtʃɯm̩təlle] tắra 'she closed the door' (A22:30),
ṭína [ˈṭɯːna] 'mud' (A27:28).

2.3.2. /ə/

The phonetic realization of /ə/ is generally in the region of [ə], [ɵ] or
[ɪ]. The centralized quality [ə] is characteristically found in the environ-
ment of emphatic consonants, e.g. *pàləṭ* [ˈpɑːləṭ] 'it is coming out' (A8:6).
When the velarization of emphatics is weakened, the vowel still retains its
centralized quality. This can result in pairs in which the central realization
contrasts with the higher realization [ɪ], e.g.

  pəqqa [pʰɪqqæ] 'frog'   *p̣əqqa* [pəqqɑ] 'crack'

In the transcription, the difference between such words is represented as
the presence or absence of emphasis, even if it is only vestigial (§1.2.3.).
When followed by a sibilant, the realization of /ə/ is particularly high,
sometimes even in the region of [i], e.g. *gəšra* [gɪʃɾæ] ~ [giʃɾæ] 'bridge',
məšxa 'oil' [mɪʃxæ] ~ [miʃxæ], *ʾəšta* [ˈʔɪʃtæ] ~ [ˈʔiʃtæ]. Such words are tran-
scribed consistently with /ə/ despite this occasional overlap with the allo-
phonic spread of /i/. In the environment of labials /ə/ sometimes has
a rounded realization in the region of [ɵ], e.g. *xa-qáṣṣət rába mapšəmàntɛla*ˈ
[mɑpʃɵˈmɑntɛlæ] 'It is a very sad story' (A4:31). Before the consonant /r/,
where the duration of vowels tends to be extended somewhat (§2.2.2.1.),
the realization /ə/ is sometimes fronted to the region of [e], e.g. *ʾə̀rbe*
[ˈʔeɾbe] 'sheep' (A25:26). This is in conformity with the general tendency
of /ə/ to shift to /e/ when it is lengthened (§2.1.).

2.3.3. /e/

This vowel is generally realized with a front close-mid quality [e]. When
shorted in final unstressed syllables it is occasionally centralized to [ɵ] or
[ə], e.g. *wírre* [ˈwirːɵ] *b-ʾùmṛa*ˈ 'he became advanced in age' (A24:1), *ʾímət
pìdle* [ˈpidlə] *ṭúra*ˈ 'when he passed the mountain' (A24:12). The centraliza-
tion is only a sporadic phenomenon in this position. When word final /e/
is preceded by the glide /y/, the vowel occasionally merges with the glide,
e.g. *mən-d-ànna paloxáye*ˈ [pʰæːloːxæ(ɵ)j] 'with these workers' (A24:5). The
transcription is normalized in these cases of centralization and attenuation
and such words are represented with final /e/.

2.3.4. /ɛ/

This is generally realized with an open-mid quality [ɛ]. When the vowel is derived historically from the diphthong *ay*, which applies to most occurrences of it (§2.4.1.), there is a tendency to lower it to the region of [æ] if its duration is reduced. The realization [æ] belongs to the allophonic spread of /a/. This lowering takes place in posttonic open syllables, e.g. *xìlɛle*¹ [ˈxiːlæle] 'he ate' (A14:76), *ʾɛ̀kɛle*¹ [ˈʔɛːkæle] 'where it is' (A12:37), *bas-lè-y-yənna bnáθi-llɛxu*¹ [ˈbnæːθilˑæxu] 'but I shall not give you my daughters' (A12:17). The lowering is especially common when the vowel occurs in a word final open syllable. This is because it is the norm for a vowel in such syllables to be short when the word occurs in the middle of an intonation group (§2.2.1.3.), e.g. *šáta* 'they drink' < *šátɛ, ʾə́θyela* 'they have come' < *ʾə́θyelɛ, xazéla* 'he sees them' < *xazélɛ, bέθa* 'their house' < *bέθɛ*. Since the lowering is very frequent in this context, such final syllables are transcribed with /a/ rather than /ɛ/ when the lowering takes place. In posttonic non-final syllables, such as *xílɛle, ʾékɛle* etc, where the shortening and lowering is less regular, the /ɛ/ has been normalized in the transcription. Since the vowel in stressed word-final open syllables is generally short (§2.2.1.2.), it is the norm for /ɛ/ to be lowered to /a/ also in this context. This is found, for example, in the feminine singular imperative of final /y/ verbs, e.g. *štá!* 'Drink! (fs.)' < *štέ. If a pronominal suffix is added, the syllable is non-final and the vowel is pronounced long (§2.2.1.1.), so the /ɛ/ is not lowered, e.g. *štéla* 'Drink it! (fs.)'.

   The lowering of /ɛ/ also takes place in closed syllables, when the vowel is shortened, e.g. *lat* 'you are not' < *lɛt, bɛθ-qòra* [bæθ-ˈqoːɾæ] 'cemetery' (A25:89). Where this is very common, as in negative copula forms such as *lat*, it is marked in the transcription. When /ɛ/ is lowered in a final unstressed closed syllable, the resulting vowel /a/ sometimes undergoes subsequent centralization to /ə/, which is a common phonetic process that affects this vowel (§2.3.5.), e.g. *ʾə́θyət* 'you have come' < *ʾə́θyɛt*.

   This distribution of lowered /ɛ/ is, however, a tendency rather than an absolute rule. Exceptions are occasionally found to the principles just described. In some isolated cases, for example, /ɛ/ deriving from *ay* retains its low-mid quality when short in a closed syllable, e.g. *ʾénta* [ˈʔɛntæ] 'airhole in an oven', where the vowel quality may have be retained by analogy with the corresponding form *ʾɛna* [ˈʔɛːnæ] 'eye'. Conversely a semi-long /ɛ/ in a pretonic open syllable and even a stressed long /ɛ/ in an open syllable deriving form *ay* are sporadically realized with a lowered quality,

e.g. *ṣleθèy* [ṣlæˑθeˑy] 'their coming down' (A4:53), *ʾu-ta-t-maxzéle* [mæxˈzæːle] 'in order to show it' (A24:38).

In *lɛle* 'night' and the homophonous negative copula form *lɛle* 'he is not' the */ɛ/* is sometimes raised to the region of [e], i.e. [ˈlẹːle ~ ˈlẹːle], by a process of assimilation to the phonetic form of the following syllable. This quality is occasionally extended by analogy to other forms in the negative copula paradigm, e.g. *lɛla* [ˈlẹːlæ ~ ˈlẹːlæ] 'they are not'. In all these cases the transcription has been normalized with */ɛ/*.

2.3.5. /a/

This is often realized in the region of [a] or [æ], e.g. *tmanì* [tmaːˈni] 'eighty' (A24:9), *màgla* [ˈmæglæ] 'sickle' (B5:141), *láxxa* [ˈlæxːæ] 'here' (A24:4), *bnáθaʾ* [ˈbnæːθæ] 'girls' (A24:13).

In the environment of */y/* the realization is sometimes raised, e.g. *lá băyàtte?ˀ* [bɛˈjɛtte] 'Don't you want it?' (A30:33), *ṭḷaθà yomáθaʾ* [ṭḷɑˈθɛ joːˈmæːθæ] 'three days' (A29:2).

In the environment of the uvular */q/* and emphatic consonants it generally has the back quality [ɑ], e.g. *mbáqrena* [ˈmbɑqrenæ] 'I shall ask' (A24:6), *qá-mo là?ˀ* [ˈqɑˑmoˑ ˈlæː] 'Why not?' (A24:4), *ʾo-góṛa* [ʾoː-ˈgoːrɑ] 'the elder one' (A24:5), *qəṛṭála* [qərˈṭɑːlɑ] 'saddle basket' (B5:135).

When the velarization of emphatics is weakened, the vowel still retains its back quality. This can result in pairs in which the back realization contrasts with the front realization [æ], e.g.

    para [pʰæːɾæ] 'dust'   *paṛa* [pɑːrɑ] 'lamb'

In the transcription, the difference between such words is represented as the presence or absence of emphasis.

The back quality [ɑ] is also found in the environment of the labio-velar glide */w/*, e.g. *xonăwáθi* [xoˑnɑˈwæːθi] 'my brothers' (A24:24). When preceding this glide, it sometimes acquires also a lip-rounding and is realized in the region of [ɑ] or even [ɔ], e.g. *zawn-*[zɑwn] 'time' (A1:26), *ʾáwwa* [ˈʾɔwːɑ] *nàšaʾ* 'this man' (A8:4).

Short */a/* vowels in unstressed syllables exhibit a tendency to be centralized. We may refer to this as a process of attenuation, which is associated with more laxness of muscular tension than is the case in the articulation of the quality */a/*. This is the norm in posttonic closed syllables, such as the 1fs. and 2fs. endings of present base verbs, e.g. *qáṭlən* 'I (f.) kill' < *qáṭlan,*

qáṭlət 'you (fs.) kill' < *qáṭlat*, and in loanwords ending in a consonant such as *čángəl* 'fork' < *čángal, mánzəl* 'room' < *manzal*. In such cases the vowel is regularly transcribed as /ə/. When the stress shifts onto the vowel, the /a/ quality is preserved, e.g. *qaṭlánne* 'I (f.) kill him', *čangále* 'forks'. The centralization also regularly occurs when the genitive/relative particle *D* is clitized to the end of a noun ending in -*a*, e.g. *béθət málka* 'the house of the king' < *béθa-d málka*. Here too the vowel is transcribed as /ə/.

On some occasions centralization takes place in pretonic or propretonic syllables. Since, however, in most words it does not occur regularly in this position, it is generally not represented in the transcription, e.g. *bt̂-áwət maṭróye* [məṭˈroːje] 'you will ride' (A8:46), *ʾána qaryánne* [qəɾˈjænn-] *ʾo-qálət ṭḷàθa*ˈ 'I shall cry the third cry' (A8:75). In a few words, on the other hand, centralization is the norm and it is represented by the vowel /ə/ in the transcription. The regular occurrence of centralization in some words rather than others has arisen from the fact that it is not a blind phonetic process but correlates with grammatical function or has become lexicalized. The past converter prefix *qəm-*, for example, is regularly pronounced with the vowel /ə/, which has arisen by centralization of an original **a* (< **qam-* < **q̱dam*). The preposition *qam* 'before', on the other hand, generally preserves the /a/ quality. This results in minimal pairs such as:

qəm-maxéle	'he hit him'
qam-maxéle	'before he hits him'

It sporadically occurs with short /a/ vowels also in other environments, such as in unstressed final open syllables, e.g. *mðìta*ˈ [ˈmðiːtə] 'town' (A24:4), *wáða* [ˈwæːðə] *kăbàbe*ˈ 'making kebabs' (A24:4), and even in stressed syllables, e.g. *t̪-átwən* [ˈtətwən] 'that I sit' (A6:8), *yắðət* [ˈjəðət] *mèlaʔ* 'Do you know what it is?' (A16:10). In most cases such as these, where the centralization is not regular, the transcription has been normalized and the vowel is transcribed as /a/ or /ă/.

2.3.6. /o/

This is realized in the region of [o] when long and in an open syllable, e.g., *bnóne* [ˈbnoːneː] 'sons' (A24:1), *xzóli* [ˈɣzoːli] 'find for me' (A24:2), *t̪-oðáxxe* [toːˈðəxːe] 'that we do it' (A4:48). It sometimes maintains this quality also when pronounced short in an unstressed open syllable, e.g. *mέθo*

['mɛːθo] 'bring! (pl.)' (A24:3), or in a stressed closed syllable, e.g. *mandòrta* [mænˈdoɾtæ] 'roller' (B5:145). When the duration of /o/ is shortened, however, there is a general tendency for it to be raised and centralized to the region of [ʊ], e.g. *payóxa* [pʰæˑˈjoːxæ] 'cool' (ms.) vs. *payóxta* [pʰæˑˈjʊxtæ] 'cool' (fs.). In pretonic open syllables, the duration of which tends to fluctuate according to the position of the word in an intonation group, the qualities [o] and [ʊ] often interchange in the same word, e.g. *moθéli* [moˑ(90)ˈθeːli] 'I have brought' (A24:21) vs. *muθêlexu* [mʊˑ(80)ˈθeːlɛxu] *ṭèraʔ* 'Have you brought the bird' (A24:26). These quality fluctuations are represented in the transcription.

2.3.7. /u/

When pronounced long this is realized in the region of [u], e.g. *šùla* ['ʃuːlæː] 'job' (A24:4), *zùze* ['zuːzeː] 'money' (A24:3), *la-hàru* [læ-ˈhæːɾuː] 'it will not speak' (A24:18). When its duration is shortened, it tends to be centralized somewhat to the region of [ʊ], e.g. *plúx* ['plʊ(55)x] 'work!' (A24:5), *qu-dùqle* [qʊ(60)-ˈdʊ(75)qle] 'get up and seize him' (A24:25), *šuréla* [ʃʊˑ(115)ˈreːlæ] 'they began' (A24:26). In a few cases short /u/ is fronted to the region of [ʏ], e.g. *jùlla* ['ʤʏlːæ] 'cloth' (B5:80); *dùnye* ['dʏnyeː] 'world' (A10:11).

2.4. DIPHTHONGS

2.4.1. *ay

The original diphthong *ay* has in most cases contracted to the low-mid vowel /ɛ/, e.g.

bέθa	'house'	< *baytā*
qέṭa	'summer'	< *qayṭā*
xazέli	'they see me'	< *ḥāzaylī*
štέla	'drink (fs.) it!'	< *štāylah*

As remarked above (§2.3.4.), this vowel tends to be lowered to /a/ in positions where it is shortened, e.g.

štéla	'they drank'	< *štelɛ* < *štelay
šáta	'they drink'	< *šátɛ* < *šātay
štá	'drink! (fs.)'	< *štɛ < *štāy
lát	'you are not'	< *lɛt* < *lā-it

In a few cases an original *ay diphthong is not fully contracted. This applies, for example, to the 3pl. pronominal suffix and several quadriliteral verbs with second radical /y/. In these the diphthong normally has the form /ey/, in which the vowel is raised to /e/:

maθéy	'their village'
mšéyðən	'he goes mad'
mhéymən	'he believes'

On some occasions, however, the vowel in these forms retains the low quality /a/ or is raised only to /ɛ/, e.g.

| *maθáy, maθέy* | 'their village' |
| *mháymən* | 'they believe' |

The /ay/ diphthong is found in the feminine singular personal and demonstrative pronoun *'ay*, which has developed historically from *hā-hī, e.g. *'ay-ṣrìxla* 'She cried out' (A4:4), *'ay-bàxta* 'that woman' (A4:9). When functioning as an attributive demonstrative, however, it is often contracted to *'ɛ* and this may be lowered to *'a* when its duration is shortened, e.g. *'ɛ-bráta* 'that girl' (A4:11), *'ɛ-kusíθa* 'that hat' (A7:19), *'a-bráta* 'that girl' (A14:1), *'a-yalə́xθa* 'that scarf' (A4:17). The contraction, therefore, is dependent on its syntactic function.

2.4.2. *aw

The diphthong *aw remains uncontracted in numerous words, e.g.

màwθa	'death' (A21:35)
ṣàwma	'fast' (B7:5)
ṣáwθa	'voice' (A21:18)
záwna	'time' (B2:1)
qáwra	'grave' (B2:6)
xáwla	'rope' (B7:16)
gáwṛa	'man' (A21:31)

háwya	'(that) she be' (B12:2)
ʾáwði	'they make' (A26:43)
ʾàwra	'she enters' (B12:2)
záwnən	'I buy' (A22:16)

Contraction of the /aw/ to /o/ also takes place. In many words this contraction is optional and both forms with /aw/ and forms with /o/ are used, e.g.

> *hóya* (A21:44)
> *háwya* (B12:2) '(that) she be'
>
> *y-oðíwa* (B7:1)
> *y-awðíwa* (B2:5) 'they used to do'
>
> *lá gawrèn* (A16:5)
> *là-gorən* (A16:5) 'I shall not marry'
>
> *qəm-doqále* (A17:26)
> *qəm-dawqàle* (A22:19) 'she seized him'
>
> *biz-zóda* (A8:44)
> *biz-zàwda* (B5:3) 'more'

This contraction is not a purely phonetic phenomenon that is blind to the grammatical category and function of the word. Although it is attested in all categories of word, it does not take place evenly across all categories. The optional contraction of /aw/ occurs far more frequently in verbs than in nouns.

In most nouns the diphthong is stable and regularly occurs, e.g.

gawṛa	'man'
tawra	'ox'
gawza	'wallnut'
qawra	'grave'
kawda	'liver'
sawta	'old woman'
kaθawta	'writer (f.)'

Only sporadic contraction is attested in nouns in the text corpus, e.g. *gòze* 'walnuts' (B16:10) < *gawze*, *xoránux* 'your companions' (A8:47) < *xawranux*.

On account of the stability of the diphthong /*aw*/ in nouns, some minimal pairs exist in which the diphthong /*aw*/ in a noun stands in contrastive opposition to /*o*/, e.g.

gawṛa	'man'
goṛa	'big'
dawla	'drum'
dola	'mountain pass'
kawsa	'hair'
kosa	'beardless, effeminate'
qawla	'promise'
qola	'animal trap'

In a small set of nouns an original *aw is regularly contracted to /*o*/. These include the following:

yoma	'day'	< *yawma
roma	'hill, height'	< *rawma
gota	'side'	< *gawta < *gaḇta

The explanation for the regular contraction in these words may be linked to the syntactic context in which they typically occur. The words *yoma* 'day' and *gota* 'side' are frequently attested in the text corpus and in virtually all cases they occur in phrases that have adverbial function, temporal or spatial respectively, e.g.

(1) *šə́ryela gu-d-ɛ́ ʾotél ʾo-yòma.* 'They stayed in that hotel that day.' (A2:2)
(2) *yóma mən-duzúθa qìdle béθa.*ˈ 'One day the house really burnt.' (A17:5)
(3) *ʾárya hóle l-xà-gota*ˈ *ʾu-nə́mra xà-gota.*ˈ 'The lion was on one side and the tiger on the other side.' (A27:21)
(4) *xa-pə̀čča píša l-ày-gota,*ˈ *xa-l-ày-gota.*ˈ 'A piece remained on that side and one on the other side.' (A51:18)

The word *roma* 'hill, height' is far less commonly used in the dialect, but, historically at least, it is likely to be associated with spatial adverbial expressions (cf. Syriac expressions such as *ba-mrawme* 'on high').

The relevance of syntactic function for contraction is also demonstrated by the word *šawpa* 'place, trace', since the diphthong /aw/ in this word is generally contracted when it is used with an adverbial function, e.g.

(5) *de-puš-šôpux!*¹ 'Stay in your place (where you are).' (A14:20)
(6) *ʾáwwa píšle málka šópət bábe diye.*¹ 'He became king in place of his father.' (A12:70).

We could perhaps also include here the temporal adverbials *bázzune* 'last/next year', *bzúne* 'two years ago' and *tábzune* 'three years ago', all of which contain an element derived from *zawna* 'time' with the diphthong regularly contracted to /u/.

Contraction of /aw/ regularly occurs in adjectives, e.g.

goṛa	'big'	< *gaḇrā*
kopa	'low'	< *kawpā*
koma	'black'	< *kawmā*

These words are of the same historical pattern as nouns such as *gawza* 'nut' and *gawṛa* 'man' and historically they no doubt functioned as nouns; cf. Syr. *kawpā* 'bending' (Brockelmann 1928: 323). Indeed the word *goṛa* 'big' appears to be a doublet of *gawṛa* 'man', both being derived from *gaḇrā*. Their different formal developments reflect their different functions, the contracted form being used when the word was used as an adjective to express an attribute and the uncontracted form remaining when it was used as an entity term.

It is relevant to note that some compound nominal phrases also exhibit regular contraction of a diphthong in their second element, which has a functional status similar to that of attributive adjectives, e.g.

bεθ-qoṛa	'cemetery'	cf. *qawṛa* 'grave'
zaqra-qode	'spider' ('weaver of fetters')	cf. *qawda* 'fetter'

Differences in the pattern of contraction of the 3ms. demonstrative pronoun *ʾaw* can likewise be correlated with syntactic function. In principle its contraction to *ʾo* is restricted to cases where it functions as an attributive pronoun. When it functions as an independent pronoun it regularly remains uncontracted. This is illustrated in the following examples, in which the pronoun is in all cases unstressed:

ʾaw-mə̀re	'he said' (A23:19)	
ʾaw-tíwɛle xaràya	'he sat down last' (A17:31)	
ʾaw-gàrele	'that is the roof' (A23:14)	
ʾo-tắra	'that door' (A17:20)	
ʾo-tèla	'that fox' (A20:1)	
ʾo-ʾixàla	'that food' (A21:19)	

In a few cases the attributive demonstrative remains uncontracted, but these are very much exceptional to the normal rule, e.g.

> *ʾaw-téla*   'that fox' (A20:5)

Other monosyllabic words ending in an original *-*aw* regularly exhibit contraction of the diphthong, e.g.

xzó	'see!'	< *xzaw
mó?	'what?'	< **maw?*

2.5. The Historical Background of the Vowels

2.5.1. /i/

(i) In most cases this vowel derives from long *ī, e.g.

sawi	'grandfather'	< *sāḇī
xazyali	'she sees me'	< *ḥāzyālī
šaqli	'they take'	< *šāqlīn
ṭlaθi	'thirty'	< *tlāṯīn
basima	'pleasant (ms.)'	< *bassīmā
basimta	'pleasant (f.)'	< *bassīmtā
pθixa	'open'	< *pṯīxā
pθixle	'he opened'	< *pṯīxleh

As has been shown above (§2.2.2.1.), /*i*/ in closed syllables, as in *basimta* and *pθixle*, is generally pronounced short.

(ii) Before /*y*/ in an open syllable, it sometimes derives from a short high vowel in syllables that were originally closed by a pharyngal or laryngal but became open after the elision of these consonants. For the sake of convenience, this vowel can be represented here as *ə, e.g.

| ṣiya | 'thirsty' | < *ṣəhyā |
| ṭiya | 'searched' | < *ṭə'yā < *ṭə‘yā |

Some cases of /i/ before /y/ in an open syllable originated as epenthetic vowels, e.g.

tawriyáθa	'cows'	< *tawryaθa
zawriyáθa	'water pots'	< *zawryaθa
manšíya	'she forgets'	< *manšya

Compare the singular noun forms *tawərta* 'cow', *zawərta* 'water pot' and the alternative 3fs. verbal form *manəšya* 'she forgets', in which the epenthetic is placed before the preceding consonant.

(iii) In a few words /i/ has developed by raising from an original *a before the palatal glide /y/, e.g.

miya	'water'	< *maya
riyana	'rain'	< *rayana
diya	'now'	< *daya < *daha
ṛiya	'shepherd'	< *ṛaya < *rā‘yā

The word *ṛiya* may have undergone an intermediate stage *ṛeya* in accordance with the shift *a'C > *eC described below (§2.5.2.).

The raising of *a to /i/ before a glide /y/ applies also to a few cases where the glide is inserted between a final /a/ vowel of loanwords and the Aramaic inflectional ending, e.g.

panjǎriya	'window'	< Kurd. pencere
wastiyaθa	'dresses'	< sing. wasta
titiye	'silver ornaments'	< sing. tita

2.5.2. /e/

(i) In some cases this derives from original long *ē, e.g.

reša	'head'	< *rēšā
kepa	'stone'	< *kēpā
kθawe	'books'	< *ktāḇē
xaze	'he sees'	< *ḥāzē
xzelən	'we saw'	< *ḥzēlan

(ii) In several words it derives from short *a that was originally in a syl-
lable closed by following a laryngal *ʾ or *h, e.g.

tela	'fox'	< *taʾla* < *taʿlā*
ṭena	'load'	< *ṭaʾna* < *ṭaʿnā*
pərṭena	'flea'	< *purtaʾnā* < *purtaʿnā*
zreta	'cultivation'	< *zraʾta* < *zraʿtā*
ʾarbe	'four (f.)'	< *ʾarbaʾ* < *ʾarbaʿ*
nera	'river'	< *nahrā*
sera	'moon'	< *sahrā*
beṛa	'light'	< *bahrā*
ṣewa	'thirst'	< *ṣahwā*
ṭera	'noon'	< *ṭahrā*

As can be seen from the examples above, the laryngal *ʾ is generally derived
ultimately from the pharyngal *ʿ. The vowel shift, however, appears to have
been conditioned by the laryngal rather than the original pharyngal. This
is shown by the occurrence of the shift in words originally containing the
laryngal *h. Furthermore it is found also in words containing an original
*ʾ that cannot be reconstructed as deriving from the pharyngal *ʿ, e.g.

sebuθa	'old age'	< *saʾbuθa* (cf. Syr. *sʾb* 'to become old')

In some words the raising of *a to /e/ in this context is not completely
fixed, in that forms with /e/ are used alongside with forms with /a/, e.g.

tela ~ tala	'fox'	< *taʾlā*
ṭena ~ ṭana	'load'	< *ṭaʾnā*
nera ~ nara	'river'	< *nahrā*
seṛa ~ saṛa	'goat's hair'	< *saʾrā*
zreta ~ zrata	'cultivation'	< *zraʾtā*
pərṭena ~ pərṭana	'flea'	< *purtaʾnā*

In some words, furthermore, the shift does not take place at all. There is
no clear phonetic conditioning that blocks the shift in these cases, which
suggests that its occurrence has become lexicalized, e.g.

nala	'horse-shoe'	< *naʾla* < *naʿlā*
pala	'labourer'	< *paʾla* < *paʿlā*
saða	'martyr'	< *sahðā*
dawa	'gold'	< *dahwā*

Conversely the shift is occasionally found in words that contain no ety-mological laryngal, e.g.

| *šeta* | 'year' | < *šattā* |
| *xušeba* | 'Sunday' | < *xa-b-šabbā* |

The explanation seems to be that in such cases the sequence *CaCC* evolved initially into the sequence *Ca'C* and then this conditioned the vowel raising. So the development would be *šeta* < *ša'ta* < *šattā*, *xušeba* < *xuša'ba* < *xa-b-šabbā*. This reconstruction is supported by the existence in the Qaraqosh dialect of the form *ša'ta* as an alternative to *šata* 'year' (Khan 2002: 43).

(iii) In some words the /e/ is more easily reconstructed as deriving from a short high vowel *ə before a laryngal. This applies to cases where the vowel before the original laryngal is an epenthetic, e.g.

'ăreta	'layer of algae'	< *'arə'ta* < *'ar'- + ta*
tăreθa	'small door'	< *tarə'ta* < *tar'- + ta*
qăreθa	'gourd'	< *qarə'θa* < *qar'- + ta*
năreθa	'small axe'	< *narə'θa* < *nar'- + ta*

It also applies to other words that have /ə/ in their original morphologi-cal pattern, e.g.

deθa	'sweat'	< *də'θa*
magreta	'shaving knife'	< *magrə'ta*
mpŭqele	'he exploded (tr.)'	< *mpuqə'le*

(iv) The vowel /e/ in a pretonic open syllable has sometimes developed by lengthening of an original short *ə in other contexts. This applies, for example, to some cases where the *ə developed by centralization of an original short *a in an unstressed syllable that was closed by a geminated consonant. After the gemination was weakened the syllable became open and the *ə vowel was lengthened to /e/, e.g.

genawa	'thief'	< *gənnawa* < *gannāḇā*
gewaya	'beggar'	< *gəwwaya* < *gawwāyā*
meqora	'hole'	< *məqqora* < *maqqōrā*
nepoxta	'date syrup'	< *nəppoxta* < *nappoxta*

For all of these examples variant forms exist with /a/ in the first syllable. These have developed directly from forms without centralized *ə:

ganawa	'thief'	< *gannāb̲ā*
gawaya	'beggar'	< *gawwāyā*
maqora	'hole'	< *maqqōrā*
napoxta	'date syrup'	< *nappoxta*

The vowel /e/ in an open syllable at the end of adverbials such as *qamaye* 'at first', *gawaye* 'inside' and *baraye* 'outside', also developed by lengthening of a short *ə that had resulted by attenuation of *a. In this case the short *a was in an unstressed syllable that was originally closed by final *t, as in Syr. *qaḏmāyat̲* 'at first'. We may reconstruct as follows *qamaye* < *qamayət* < *qaḏmāyat̲*.

In some cases a short *ə was original in the pattern of the word in an unstressed closed syllable before a geminated consonant. The vowel was lengthened to /e/ when the gemination was weakened. Most words of this type have variants that retain the gemination, e.g.

ʾeliθa ~ *ʾəlliθa*	'fat of a tail'
mesukta ~ *məssukta*	'gizzard (of a bird)'
gepona ~ *gəppona*	'small cave'

Short /ə/ is lengthened to /e/ is some other contexts, e.g. *mére* 'he said' < *mə́re* (A49:6).

(v) Final *–e* in singular nouns is generally derived from an original *-yā, e.g.

lɛle	'night'	< *laylyā* (Syr. *lelyā*)
ʾore	'manger'	< *ʾoryā* (Syr. *ʾuryā*)
ʾərxe	'water-mill'	< *raḥyā* (Syr. *raḥyā*)
xuwwe	'snake'	< *xəwyā* (Syr. *ḥewyā*)

2.5.3. /ɛ/

Most cases of /ɛ/ have developed by contraction of an original diphthong *ay, as has been described above (§2.4.1.). It normally occurs in open syllables, e.g. *bɛθa* 'house' < *baytā*, *xazɛli* 'they see me' < *ḥāzaylī*, but on a few occasions is found in closed syllables, e.g. *ʾɛnta* 'air-hole' < *ʾayntā*.

The vowel /a/ is often raised to /ɛ/ before /r/ in non-emphatic environments. This applies both to short /a/ in closed syllables and long /a/ in open syllables. The process does not occur completely regularly in the speech of all informants. Since, however, this is a distinctive feature of the pronunciation of the C. Barwar dialect, it has been decided to represent it in the transcription where it is heard rather than conceal it by a completely normalized orthography, e.g.

dɛrta ~ darta	'courtyard'
sɛrga ~ sarga	'saddle'
yɛrxa ~ yarxa	'month'
gʸɛrma ~ gʸarma	'bone'
pɛršəx ~ paršəx	'we divide'
dɛre ~ dare	'he puts'
šɛre ~ šare	'he begins'
dawɛ́ra	'mule'

The raising is blocked in emphatic environments, cf.

pɛrma ~ parma	'she cuts'
paṛma	'she understands'

2.5.4. /a/

(i) This derives in most cases from an original short *a or long *ā, though the length of the vowel in the dialect is determined by syllable structure and stress and not by its historical derivation from an original short or long vowel, e.g.

páθxa [ˈpæθxæ]	'she opens'	< *pāṭhā
kʸása [ˈcʸæːsæ]	'stomach'	< *karsā

(ii) As we have seen (§2.3.4.), in some cases a short /a/ in the transcription derives by lowering from /ɛ/, which in turn is a reflex of the diphthong *ay.

2.5.5. /ə/

(i) This may derive from an original short high vowel, which, for the sake of convenience we may represent here with the same symbol *ə, e.g.

gárəš	'he pulls'	< **gārəš*
lə́bba	'heart'	< **lə́bba*

(ii) In some cases it is the result of attenuation of an original /a/, /e/ or /ɛ/ in a closed syllable, e.g.

gáršət	'you (fs.) pull'	< **gāršā-t*
gáršət	'you (ms.) pull'	< **gāršē-t*
gríšət	'you have pulled'	< *grišɛt*

(iii) The reflex of an original long **ī* is in principle /i/. An exception to this is the past form of the verb to say, which has /ə/, e.g. *mə́re* 'he said' < **mīrrēh* < **mīr + lēh.*

(iv) The vowel /ə/ is found in both open and closed syllables as an epenthetic vowel, e.g.

mapə́lxi	'they use'
matə̆mə́mi	'they finish'

2.5.6. /o/

(i) In many cases this derives from an original long **ō*, e.g.

naṭora	'guard'	< **nāṭōrā*
dəbbora	'hornet'	< **dəbbōrā*
l-xoδe	'by himself'	< **ḥōḏēh*
mšadore	'to send'	< **mšaddōrē*

(ii) Occasionally it has arisen by lengthening of an original short **u*. This has occurred when a closed syllable containing a short **u* has become open by the elision of a consonant or the weakening of gemination, e.g.

mpoləṭle	'he brought out'	< **mpulləṭlēh*
ṣabota	'finger'	< **ṣabbuʿtā*

(iii) In several cases it has arisen by contraction of the diphthong **aw* (see §2.4.2.).

2.5.7. /u/

(i) This is may be derived from an original short or long **u*, e.g.

ʾurxa	'road'	< **ʾurḥā*
dukθa	'place'	< **dukkˀṭā*

xabuša	'apple'	< *ḥabbūšā*
duwana	'oil, fat'	< *dūhānā*

(ii) On some occasions it has arisen in closed syllables by the shortening of an original long *ō̄, e.g.

dəbburta	'horsefly'	< *dəbbōrtā*

(iii) Before labial consonants it has sometimes developed from other vowels, e.g.

gumla	'camel'	< *gamlā*
šumaša	'deacon'	< *šammāšā*
ṭuwalta	'game'	< *mṭawwaltā*
tuna	'straw'	< *tuwna* < *təḇnā*
xuwwe	'snake'	< *xəwyā*

CHAPTER THREE

CONSONANT GEMINATION

3.1. Phonetic Realization and Transcription

The physical duration of a consonant that is marked as geminate in the transcription varies considerably. As a general rule the duration of a geminate consonant that is preceded by a stress is longer than one that lacks a preceding stress. This can be seen by comparing the range of durations of /ll/ in the following examples, in which the approximate duration of the geminate consonant is measured in milliseconds:

(1) *máxəlla* [ˈmæːxəl·(70)æ] *ġðàðe*ˈ 'He knocks them together' (A24:13)
(2) *zə́dyəlla* [ˈzɪdyəl·(80)æ] *tàma*ˈ 'They threw down it there' (A24:25)
(3) *mùrrɛ-lli*ˈ [ˈmʊrːɛːlː(115)i] 'Tell them to me' (A24:11)
(4) *zílle* [ˈzil·(75)e] 'He went' (A24:4)
(5) *kúlle* [ˈkʊlː(130)e] 'all of it' (A24:11)
(6) *šqúlle* [ˈʃqʊlː(155)e] 'Take it!' (A24:15)
(7) *gə́lla*ˈ [ˈgɪlː(190)æː] 'grass' (A24:15)

In words with the same stress position a geminate consonant is still realized with a wide range of durations, as can be seen in (8)–(12), which illustrate various attested durations for the geminate consonant /xx/ in the word *laxxa* 'here':

(8) *láxxa* [ˈlæx(50)æ] (A24:51)
(9) *láxxa* [ˈlæx·(80)æ] (A24:4)
(10) *làxxa*ˈ [ˈlæxː(95)æ] (A24:6)
(11) *làxxa*ˈ [ˈlæxː(125)æ] (A24:6)
(12) *làxxa*ˈ [ˈlæxː(185)ɐ] (A24:49)

As can be seen, there is a considerable difference in the duration with which the sequence /xx/ is realized in this word. It tends to be longer at the end of an intonation group, though even here there is a large variety of realizations. The duration is reduced in forms that occur inside an intonation group. Indeed this lower range of durations, as attested in (8)

and (9), overlaps with the durations attested for instances of the same consonant that are represented in the transcription as non-geminate, as can be seen in (13)–(17) below. In some cases, in fact, a non-geminate /x/ in these examples has a longer phonetic duration than geminate /xx/ in examples (8)–(12):

(13) *xa-daṛmána* [x(60)æ-dạṛˈmæːnæ] 'a remedy' (A24:2)
(14) *ʾan-tre-xéne* [ˈx(70)eːneˇ] 'the other two' (A24:5)
(15) *xa-šùlaˈ* [x(75)æ-ʃuːlæː] 'a job' (A24:4)
(16) *xa-màlkaˈ* [x(80)æ-ˈmælkæː] 'a king' (A24:1)
(17) *ʾixàlaˈ* [ʾiːˈx(90)æːlæː] 'food' (A24:16)

The transcription of gemination that is adopted in this grammar does not attempt to reflect the phonetic diversity of individual occurrences of words that has just been described. The general principle that has been followed is that a geminate consonant is consistently marked in a particular lexical item or inflectional form, even where, on the phonetic level, the duration of the consonant is reduced in some utterances of it. The choice as to which words gemination should be marked in is based on relative rather than absolute phonetic duration. In general, all other factors being equal, certain lexical items or inflectional forms exhibit a more consistent tendency for a consonant to be pronounced long than others and it is in such cases that the consonants are marked as geminate. Consonants that are marked as geminate would be expected to be pronounced long consistently when the word occurs in pausal position at the end of an intonation group, though the precise duration of this length may vary. Of course, the term 'gemination' or 'doubling' strictly refers only to the double marking of the letter in the orthography. As seen above in the instrumental measurements, there is no question of exact doubling in phonetic duration.

The marking of consonant gemination in certain words in the transcription is further justified by the existence of a number of minimal pairs in which two words are distinguished only by the length of a consonant. The absolute duration of the consonants in each member of the pair may be increased or reduced according to the contextual position of the word, but, all other factors being equal, there is clearly a relative difference in length that has significance for meaning and for the morphological pattern to which the words are assigned:

băle 'he swallows'	*balle* 'sheep with erect ears'
păle 'he divides'	*palle* 'burning embers'
găre 'he shaves'	*garre* 'pools'
šăre 'wet cow dung'	*šarre* 'battle'

3.2. The Distribution of Gemination in the Consonant Inventory

Examples can be identified for the gemination of the majority of consonants:

/b/	*ləbba* 'heart'
/č/	*xačča* 'a few'
/č̣/	*ʾəč̣č̣a* 'nine'
/d/	*gədda* 'thread'
/g/	*xəgga* 'dance'
/j/	*məjja* 'paste of dried yoghurt'
/k/	*gərsəkka* 'wild pear'
/l/	*ṭəlla* 'shade'
/m/	*šəmma* 'name'
/n/	*qənna* 'nest'
/p/	*quppe* 'brooding hen'
/q/	*zəqqa* 'water-skin'
/r/	*garra* 'pool'
/s/	*massa* 'ox-goad'
/ṣ/	*qəṣṣət* 'story'
/š/	*məššara* 'paddy-field'
/t/	*gutta* 'ball'
/ṭ/	*qəṭṭa* 'piece'
/θ/	*qəθθurta* 'knapsack'
/w/	*xuwwe* 'snake'
/x/	*laxxa* 'here'
/y/	*ʾayya* 'this (f.)'
/z/	*ʾəzza* 'nanny-goat'
/ž/	*gəžže* 'raised hand'

Examples for some consonants in the phoneme inventory have not been identified. It should be noted, however, that the list above includes

consonants from all articulatory areas with the exception of laryngal and
pharyngal consonants.

3.3. The Origin of Consonant Gemination

3.3.1. *Gemination Inherited from Earlier Aramaic*

Gemination inherited from morphological patterns of earlier Aramaic is
preserved in various words. This is the case when the geminate consonant
is preceded by the short vowel /ə/ in a stressed syllable, e.g.

lə́bba	'heart'
qə́nna	'nest'
ʾə́zza	'nanny-goat'

In some words it is preserved after /ə/ also in unstressed syllables, e.g.

dəbbóra	'hornet'	cf. Syr. *debbōrtā*
səmmála	'bundle'	cf. Syr. *semmālā*

In other words, however, it is normally weakened in this context, e.g.

gezara	'carrot'	cf. Syr. *gezzārā*
lišana	'tongue'	cf. Syr. *leššānā*

The distribution of gemination in these patterns, therefore, has become
largely lexicalized.

The original gemination has usually been weakened after an original
/a/ or /u/ in both stressed and unstressed syllables, e.g.

káka	'tooth'	< *kakkā*
xabúša	'apple'	< *ḥabbūšā*
basíma	'pleasant'	< *bassīmā*
mšadóre	'to send'	< *mšaddōrē*
gúda	'wall'	< *guddā*
buqára	'question'	< *buqqārā*
mšulə́xle	'he stripped'	< *mšulláx-lēh*

There are some exceptions to this principle. The consonant /r/, for example, tends to preserve vestiges of gemination in contexts where it is lost in other consonants. This is the case, for example, in some nominal patterns with an originally geminated medial radical, such as *CaCCūCā, *CaCCūCtā and *CaCCāCtā, in which /r/ is often heard geminate, though in free variation with non-geminate forms. The gemination is regularly lost, by contrast, in other consonants, e.g.

garruwa ~ garuwa	'pile of twigs'
garruta ~ garuta	'small pile of twigs'
parrušta ~ parušta	'smooth pebble'
qarraṣta ~ qaraṣta	'crowbar'
ṭarraša ~ ṭaraša	'bush'

Contrast:

xabuša	'apple'	< *ḥabbūšā
tanura	'oven'	< *tannūrā
šabuqta	'wooden rod'	< *šabbūqtā
nasarta	'saw'	< *nassārtā

It should also be noted that words with an original geminate *r in the historical pattern *CaCCā have emphatic /ṛ/, which is pronounced with a longer trill than non-emphatic /r/, e.g.

maṛa	'spade'	< *marra
paṛa	'lamb'	< *parrā

Gemination of other consonants is occasionally heard after /a/ in words deriving from the historical patterns *CaCCāCā and CaCCīCā, e.g.

gabbara	'hero'
ṭannaxa	'miller'
bannaya	'builder'
qaddiša	'saint'

In some cases these may have been influenced by literary Syriac or by loans from Arabic with the same pattern that preserve the gemination, e.g. ḥaddada 'blacksmith', fassada 'corrupt person'. In the words of Aramaic

stock, however, the forms with gemination are generally used in free varia-
tion with forms that lack it, e.g. *bannaya ~ banaya* 'builder'.

Gemination occurs after /u/ in the word *pumma* 'mouth'. Here the
explanation seems to be that the /u/ has developed from an original *ə
under the influence of the following labial.

Gemination is preserved after /a/ in the word *xašša* 'sadness' < *ḥaššā
and its derivative *xaššana* 'sad' and also in the word *šmayya* 'heaven'. This
may be due to the association of these words with the language of the
liturgy and so could be explained as due to the influence of literary
Syriac.

Note also the preservation of the geminated /m/ in the numeral *xamməš*
'five' (f.) < *ḥamməš.

3.3.2. *Gemination after Stressed Short Vowels*

Gemination has developed in a number of cases after a stressed syllable
containing a short vowel that has become open due to the elision of a
consonant at the beginning of the next syllable. In some words where the
vowel in question is /ə/ or /u/ the gemination regularly occurs, e.g.

də́mme	'tears'	< *də́me < *dəmʕē
pə́qqa	'split'	< *pə́qa < *pəqʕā
qə́ṭṭa	'piece'	< *qə́ṭa < *qəṭʕā
xúwwe	'snake'	< *xŭwe < *xuwyā

In words containing the low vowel /a/, such secondary gemination does
not occur regularly and in most words is in free variation with forms
without it, e.g.

tăra ~ tárra	'doors'	< *tarʕā
măra ~ márra	'illness'	< *marʕā

The gemination is stable, however, after an /a/ vowel in the numeral
'seven':

šáwwa	'seven'	< *šăwa < *šaḇʕā

We may include here perhaps the demonstrative pronouns *ʾáwwa* 'this' (m.)
and *ʾáyya* 'this' (f.) and the adverbial *támma* 'here', in which gemination is

a stable feature. It may have developed secondarily by a similar process due to the elision of a laryngal:

ʾáwwa	'this' (m.)	< *ʾăwa < *ʾawhā
ʾáyya	'this' (f.)	< *ʾăya < *ʾayhā
támma	'here'	< *tăma < *támhā

Another exceptional form is the word ʾaxxa 'here' < *ʾāxā and its variant láxxa 'here' < *l-āxā, in which the gemination appears to have developed on account of the incidence of stress in the preceding syllable, despite the fact that the vowel was originally long.

3.3.3. *Gemination in the Environment of Epenthetic Vowels*

A similar type of secondary gemination has developed after a stressed short epenthetic /ə/ in nouns and particles, where it is a fixed feature of the word, e.g.

də́mma	'blood'	< *də́ma	< *dmā
šə́mma	'name'	< *šə́ma	< *šmā
ṭə́lləθ	'three' (f.)	< *ṭə́ləθ	< *ṭlāθ

Such gemination is also heard after stressed epenthetics in some verbal forms, though it is not stable and occurs in free variation with forms without the gemination, e.g.

mălə́pa ~ mălə́ppa	'she teaches'
mzăwə́gi ~ mzăwə́ggi	'they pair together'
muryə́za ~ muryə́zza	'standing in a row'

A geminated consonant after an unstressed /ə/ syllable in some nominal patterns may have developed secondarily after the insertion of an epenthetic either before it or after it, e.g.

dəqqə́nθa	'chin'	< *dəqənθa < *dəqnθa < m. dəqna
šəddə́lta	'lullaby'	< *šədəlta < *šədlta < pl. šədle
xəmmə́rta	'bead'	< *xəmərta < *xəmrta < pl. xəmre
ləxxáwa	'bridle'	< * lə́ḡāwā < *lḡāmā

The gemination in the word *ʾə́mma* 'hundred' may have developed due to stress falling on a prosthetic vowel: *ʾə́mma* < **má* (cf. Syr. *mā*). It is more likely, however, that it developed originally in compound forms such as *xamšá-mma* 'five hundred' due to the incidence of stress on the last syllable of the first numeral. After the development of gemination in such compounds, the word for 'hundred' was reanalysed as *ʾə́mma*.

3.3.4. *Gemination Resulting from Elision*

Gemination has developed in some words due to the elision of a vowel between two syllables with the same consonant at their onset, e.g.

qúppe	'brooding hen'	cf. Syr. *quppāp̄ā*
mássa	'ox goad'	cf. Syr. *massāsā*, C. Qaraqosh *masasa*

3.3.5. *Gemination in Kurdish Loanwords*

Kurdish loanwords that end in a consonant after a short vowel often have their final consonant geminated after the addition of an Aramaic inflectional vowel, e.g.

šákka	'male sheep (2–3 years old)'	< Kurd. şek
pálle	'embers of wood'	< Kurd. pel
gərsə́kka	'wild pear'	< Kurd. girsik
ḳawə́lla	'ruin'	< Kurd. kavil

In Kurdish loanwords /r/ is regularly geminated by this process when it is a reflex of the Kurdish trilled *r̄*, e.g.

ḳarra	'deaf'	< Kurd. ker̄
šarre	'war'	< Kurd. šer̄
garra	'pool'	< Kurd. ger̄
parra	'feather'	< Kurd. per̄
ḳavərra	'young male sheep'	< Kurd. kavir̄

It does not always take place, however, when it is a reflex of the non-trilled Kurdish *r*, e.g.

gəra	'hill'	< Kurd. gir

3.3.6. *Gemination Resulting from Assimilation*

Gemination has sometimes resulted from the assimilation of consonants in affixes. This occurs, for example, when the /l/ of pronominal suffixes is assimilated in certain contexts. This gemination takes place irrespective of the quality of the preceding vowel, e.g.

qaṭlə́nne	'I (m.) kill him'	< **qaṭlən + le*
qaṭlánne	'I (f.) kill him'	< **qaṭlan + le*
ṱwínne	'He went numb'	< **ṱwin + le*
mšadórre	'He sends it'	< **mšadər + le*
xírre	'He looked'	< **xir +le*

Gemination that resulted as a result of assimilations within the interior of words at an earlier historical period has now mostly been weakened, e.g.

mðita	'town'	< **mðīttā*	< **mðīntā*
šeta	'year'	< **šattā*	< **šantā*

CHAPTER FOUR

SYLLABLE STRUCTURE

4.1. Syllabic Patterns

The following types of syllable pattern are found:

CV	**bɛ**.θa	'house'
CCV	**smo**.qa	'red'
CVC	ṗa.**θəx**	'he opens'
CCVC	**praq**.ta	'the end'

In principle, the laryngal /ʾ/ may stand at the onset of the syllables CV and CVC but not in other syllabic contexts, e.g.

/ʾ/	**ʾa**.mər	'he says'
	ʾaθ.ɣa	'land'

The only exceptions to this principle are the demonstrative pronouns *ʾăwaʾha* (ms.) and *ʾăyaʾha* (fs.) 'that far over there', the adverb *tămaʾha* 'far over there' and the negative exclamation *laʾ!* 'no!', which contain a syllable with /ʾ/ in its coda. These are intensive variants of forms with /a/ in an open syllable: *ʾăwáha* (ms.), *ʾăyáha* (fs.) 'that over there', *tămáha* 'over there', *la!* 'no!'. As has been remarked in §2.5.2., the secondary development of a laryngal must be reconstructed as occurring in other words of the language at some earlier historical period, e.g. *šeta* < **šaʾta* < **šattā* 'year'.

Similarly the occurrence of the laryngal /h/ is largely restricted to the onset of the syllables CV and CVC. It does, however, occasionally occur as the second consonant of the syllable onset cluster CC-, e.g.

/h/	**ha**.diya	'now'
	har.nuwa	'rabbit'
	mha.yər	'he helps'

In a few forms metathesis has taken place that removes the /h/ from the coda of a syllable and thus preserves it from elision, e.g.

harwa	'she speaks'	< **raḥwa*
dawha	'gold'	< **dahwa*

A syllable does not have a vowel as its onset but always begins with at least the laryngal /ʾ/, e.g. *ʾá.na* 'I', *ʾá.ti* 'you', *ʾi.lána* 'tree'. This is demonstrated by the fact that two vowel syllable nuclei cannot follow one another within a word without an intervening consonant, e.g. *šmaʾa* 'to hear' (not *šmaa*) < **šmāˤā*, *mašmoye* 'to listen' (not *mašmoe*) < *mašmōˤē*. This justifies the transcription of word initial syllables with /ʾ/ before the vowel. In some NENA dialects, such as the Jewish dialects of Iran, two vowel nuclei can follow one another within a word without an intervening laryngal or glide, e.g. J. Urmi *hudaa* 'Jew', *mašmoe* 'to make hear'. In such a dialect, the transcription of word initial syllables with a vowel onset is justifiable, e.g. *ana* 'I', *ilana* 'tree'.

In some circumstances a vowel is augmented by splitting it into two syllable nuclei by a laryngal /ʾ/ rather than simply increasing its duration. This is found especially in the numerals *xa* 'one' > *xáʾa* and *tre* 'two' > *tréʾe*. It is sporadically heard also elsewhere, e.g. *kmέleʾ* 'How much is it?' > *kmέʾɛleʾ*

4.2. WORD INITIAL CLUSTERS OF CONSONANTS

Clusters of two consonants often occur at the beginning of a word.

The cluster is sometimes pronounced without being broken by an epenthetic vowel. This is generally the case if the first consonant is a sibilant and/or the second is a sonorant continuant such as /l/ or /y/, e.g. *štèla* 'they drank' (A32:25), *ṣlígən* 'Go down!' (A26:46), *xlùla* 'wedding' (A32:25), *plìṭele* 'He went out' (A26:53), *pyášela* 'It is remaining' (A26:91).

Initial clusters are often broken by pronouncing an ultra-short epenthetic vowel between them, which is not represented in the transcription, e.g. *mšuréla* [mᵊʃuˑˈreːlæ] 'She began' (A4:6), *kpìnne* [ˈkᵊpinːe] 'He became hungry' (A14:24), *qṭilálən* [qᵊṭiːˈlɑlən] *gànən* 'We killed ourselves' (A26:16), *pqíle* [pᵊˈqiːle] 'It split' (A12:45). This splitting of an initial cluster by an epenthetic vowel is a permanent feature of several words that are historically monosyllabic. The epenthesis is exploited to augment the word to two syllables. Secondary gemination develops after the inserted vowel (§3.3.3.), e.g.

dámma	'blood'	< **dáma* < **dmā*

This type of augmentation of syllables is mainly restricted to nouns. Monosyllabic words with initial clusters are widely tolerated in other categories of word such as particles, e.g. *ṭla* 'to', and imperative verbal forms, e.g. *šqul!* 'Take!', *xzi!* 'See!'.

Another way in which the cluster is broken is by prefixing a prosthetic vowel, which generally has the central quality of /ə/. This also is not marked in the transcription, e.g. *mjárbu* [ʾəmˈʤɐɾbu] 'Try!' (A8:32), *smèle¹* [ʾəsˈmeːle] 'He became blind' (A24:1), *bnòni¹* [ʾəbˈnoːni] 'my sons'(A24:2), *rwèle* [ʾərˈweˑle] 'He became drunk' (A17:26), *b-lèle* [ʾəbˈlɛːle] 'at night' (A26:3). The prefixing of a prosthetic vowel is a permanent feature of several words that are historically monosyllabic. The prosthesis is exploited to augment the word to two syllables. These prosthetic vowels, which bear the stress, are represented in the transcription, e.g.

ʾə́rxe	'water-mill'	< **rxe* < **raḥyā*
ʾə́šta	'six' (m.)	< **štā*
ʾə́ltəx	'below'	< **l-tēx*

Occasionally the stress is moved onto a prosthetic syllable also in other words. In such cases the stressed prosthetic syllable is indicated in the transcription, e.g. *ʾə́ġðaðe* (A26:1).

An initial /w/ in clusters generally shifts to *ʾu-*, which arises by the contraction of the /w/ with a prosthetic vowel: *ʾu* < **ʾuw*. This is the normal realization of the conjunctive particle *w-* before a consonant, e.g. *ʾu-rìqle* 'and he ran' (A31:8), *ʾu-mbašĺəxla* 'and we shall cook them' (A32:2), *ʾu-ṣlèla* 'and she went down' (A32:32).

In some cases a word initial cluster may be broken by eliding the first consonant completely. This is not a blind phonetic process that operates on all clusters, but tends to be restricted to word initial inflectional prefixes. The initial /m/ of stem II and quadriliteral verbal forms is frequently omitted by this process, e.g.

šúrela	'She began' (A1:3)	< *mšurela*
barbə̀rwa	'He was bleating' (A34:23)	< *mbarbərwa*
pu̞rmèlux?	'Have you understood?' (A24:18)	< *mpu̞rmelux*

Also elided on some occasions are vowelless particles, especially *b-* and the subordinating particle *D* on words bearing the nuclear stress, e.g.

(1)   *čù-ʾurxa* (< *b-čù-ʾurxa*) 'in no way' (A11:16)
(2)   *ʾína ʾən-háwe ṭḷà ʾaqláθa¹* (< *b-ṭḷa*) 'If it is with three legs' (A22:3)
(3)   *pθíxla tắra qðìla¹* (< *b-qðila*) 'She opened the door with a key' (A18:3)
(4)   *mádam bráti wéla pəlxàna¹* (<*b-pəlxana*) 'If my daughter has been at work' (A21:32)
(5)   *ða-kértə qésa* (< *kertə t-qesa*) 'a bundle of wood' (A10:6)
(6)   *ʾotáxə gàwṛəx* (< *ʾotáxə t-gàwṛəx*) 'the room of your husband' (A10:13)
(7)   *ʾénə mīya* (< *ʾénə t-mīya*) 'the spring of water' (A11:17)

In some cases the initial syllable of a cluster at the beginning of particle is elided, e.g.

(8)   *ma-t-wéwa gòṛa¹* (< *kma-t-wewa*) 'so big was he' (A29:3)

When a word beginning with a cluster is closely connected to a preceding word that ends in a vowel, the first consonant of the cluster is sometimes syllabified with the preceding vowel. There is a particular tendency for this to occur when the initial consonant is a prefixed particle, e.g.

(9)   *képa qítle b-gàwza¹* [ˈqit.le b.ˈgɑw.zæ] 'The stone has hit the walnut tree' (A1:5)
(10) *hóla jnána b-dargùšta¹* [ˈʤnæː.næ b.dærˈgʊʃ.tæ] 'She was singing a dirge over the cradle' (A38:6)
(11) *mṭéla l-dăraǰyàθa¹* [ˈmṭeː.læ l.dæ.ræʤ.ˈjæː.θæ] 'They reached the steps' (A40:12)
(12) *zílla l-bɛθèy¹* [ˈzil.læ l.bɛː.ˈθej] 'They went to their home' (A18:31)

This frequently occurs with the subordinating particle *D* and it is written with the preceding word in the transcription. The particle is generally realized as a voiceless *t* in this context before a voiceless consonant and sometimes also before one that is voiced. This can be regarded as its default realization and the transcription has been normalized with /t/, e.g.

(13) *tắrət béθa* (< *tắra d-bɛθa*) 'the door of the house' (A26:10)
(14) *ṣoṣiyáθət Z̃íne¹* (< *ṣoṣiyaθa d-Z̃ine*) 'the tresses of Zine' (A26:50)
(15) *gu-réšət ṭùra¹* (< *gu-reša d-ṭura*) 'the top of the mountain' (A26:22)
(16) *ʾánna waríðət qðàle* (< *wariðe d-qðale*) 'these veins of his neck' (A26:81)

(17) *ku-nášət ʾàwər* (< *naša d-ʾawər*) 'Every person who enters' (A14:50)

(18) *kú-dukθət xazìtuˈ qaṭlìtulaˈ* (< *dukθa d-xazitu*) 'Everywhere that you find (them), kill them' (A14:57)

(19) *ʾa-dánət méθeti qàwaˈ* (< *ʾa-dana d-mɛθeti*) 'at the time that you bring coffee' (A29:46)

The conjunctive particle *w* is frequently syllabified with the preceding word, e.g.

(20) *zmára-w rqáða* 'singing and dancing' (A13:11)

(21) *sépa-w qóšta-w gèraˈ* 'a sword and a bow and an arrow' (A13:44)

(22) *xíšla-w xìšla-w xìšlaˈ* 'he went and went and went' (A14:38)

When a word begins with an open syllable containing a short vowel, the short vowel is occasionally elided and the initial consonant is syllabified with the final vowel of the preceding word. In such cases the transcription is normalized and does not reflect this restructuring, e.g.

(23) *ʾan-heywáne hóla tămàha.ˈ* [ˈhoːlæ t.ˈmæːhæ] 'The animals are over there' (A27:4)

4.3. WORD INTERNAL CLUSTERS OF CONSONANTS

The sequence *VCCCV* in word internal position is found in certain inflections of stem III and quadriliteral verbs. It may be syllabified *VCC.CV* or *VC.CCV*. An epenthetic vowel is usually inserted between the *CC* cluster in the coda of *VCC* or the onset of *CCV*. This epenthetic bears the stress if it is in penultimate position, e.g.

mapə́l.xa ~ *map.lə́xa*	'She uses'	< *maplxa*
mkanə́k.ša ~ *mkan.ká̀ša*	'She drags'	< *mkankša*
mašə́m.ya ~ *maš.míya*	'She listens'	< *mašmya*

Occasionally a *VC.CCV* syllabification has no epenthetic in the onset of the *CCV* syllable. This is found where the first consonant of this syllable is a sibilant and/or the second is a sonorant continuant, e.g.

mqáž.drət	'You interfere'
mún.šya	'forgotten'

If the last two consonants in the sequence *VCCCV* are identical, these are obligatorily split by an epenthetic. A stressed epenthetic may also be inserted between the first two consonants, by analogy with the syllabification pattern *mapə́l.xa* of other verbs. This results in the two alternate syllabifications *VCə́.Cə.CV ~ VC.Cə́CV*, e.g.

> *mapə́.rəra ~ map.rə́ra*   'She widens' < *maprra*

In some stem III verbs in which a weak radical has been elided the word internal sequence *VCCV* is optionally split by an epenthetic vowel. There seems no phonotactic reason for this, since the *CC* sequence is not clustering at the coda or onset of a syllable. Such a pattern of syllabification has apparently developed by analogy with the syllabification of *VCCCV* in strong verbs, e.g.

> *mámði ~ mămə́ði*   'They baptize'
> *máčya ~ mắčíya*   'She smoothes'

In a similar manner, a word internal sequence *VCCV* is optionally split by an epenthetic vowel also in some stem II verbs. Again this is likely to have arisen by analogy with the syllabification of strong stem III and quadriliteral verbs. It is found mainly in verbs with weak radicals, e.g.

> *mnawli ~ mnăwə́li*   'She shoes'
> *mqawla ~ mqăwə́la*   'She promises'
> *mšɛna ~ mšằyə́na*   'She becomes tame'
> *mšarya ~ mšằríya*   'She begins'

In stem II verbs where the cluster *VCCV* contains two identical consonants the insertion of the epenthetic vowel between them is obligatory, as is the case with stem III forms with identical second and third radicals such as *mapə́rəra ~ maprə́ra* 'she widens', e.g.

> *mtămə́ma*   'She completes'

In stem I verbs, by contrast, the sequence of identical second and third radicals without an intervening vowel is permissible. The explanation may be that the stem I verbs are in the process of being reanalysed as middle weak verbs involving the collapsing together of the final two consonants.

In the stem II and stem III, on the other hand, there is a greater effort to keep the two radicals distinct. Indeed, some stem I verbs with identical second and third radicals have alternative middle /y/ inflections where the two radicals are in contact, e.g. *jnn* 'to sing a dirge':

    janna (*jnn*) ~ *jɛna* (*jyn*)   'She sings a dirge'

4.4. The Elision of Laryngals

As has been shown in §1.4.2.2, §1.4.2.4., a historical laryngal *ʾ is elided when in contact with another consonant, e.g.

    pala   'worker'   < **paʾla* < **pāʿlā*
    tăra   'door'   < **tarʾa* < **tarʿā*

The form *tăra* must have undergone resyllabification on account of the aforementioned principle of not having a vowel as a syllable onset, i.e. **tar.ʾa > tă.ra*. The shortness of the vowel in the first syllable must be regarded as a fossilized vestige of the period when the syllable was closed, indicating that vowel lengthening is not always in step with changes in syllable structure.

A laryngal /ʿ/ between vowels is sometimes elided. This is attested between two /a/ vowels, which coalesce into one vowel nucleus. If it is stressed, this vowel is pronounced long, even if in word final position, where according to the normal rules of vowel length it would generally be expected to be short, at least when in the middle of an intonation group (§2.2.1.2.). As far as vowel lengthening is concerned, it is treated as if it were still in an open non-final syllable. Since this type of contraction does not regularly occur it is treated as an allegro form and not represented in the transcription, e.g. *hóle zdáʾa* [ˈzdæːʀ] 'he is afraid'.

The laryngal /ʾ/ at the beginning of a word is often elided when a vowelless particle is prefixed to it, e.g.

(1) *b-áyya dúkθa* (< *b-ʾayya*) 'in this place' (A13:6)
(2) *b-áwwa dúša* (< *b-ʾawwa*) 'with this honey' (A14:15)
(3) *w-ána šaqlə̀nna* (< *w-ʾana*) 'and I shall take it' (A14:52)
(4) *w-ánna* (< *w-ʾanna*) 'and they' (A29:50)
(5) *m-áxxa l-tămàha* (< *m-ʾaxxa*) 'from here to there' (A13:11)

The subordinating particle *D* is devoiced in some cases. This devoicing is not a blind phonetic process but is conditioned by the grammatical category of the word to which the particle is prefixed. In principle the devoicing takes place only when the word is a verb or a copula. The devoicing results in an unaspirated /t̯/, e.g.

(6) *ʾáwwa dúxa t̯-íle* (< *d-ʾile*) *prìma*˥ 'the sacrifice that has been slaughtered' (B5:71)

(7) *ʾáyya bráta šapìrtə t̯-íla* (< *d-ʾila*) *dmíxta kə̀sli*˥ 'this beautiful girl who slept with me' (A26:6)

(8) *qáša ʾu-šamáše t̯-íwa* (< *d-ʾiwa*) *tàma*˥ 'the priest and the deacons who were there' (B5:45)

(9) *ʾáw ʾakàra*˥ *t̯-íθwale pθánət tàwre*˥ 'the farmer who had the pair of oxen' (B5:74)

(10) *bằyən t̯-àzən*˥ (< *d-ʾazən*) 'I want to go' (A8:65)

(11) *la-ṣábrəx t̯-òrəx*˥ (< *d-ʾorəx*) 'We do not dare enter' (A14:40)

The lack of aspiration of the unvoiced particle in these words is marked in the transcription since it may contrast phonemically with the usual aspirated /t/ before a vowel, as shown by minimal pairs such as:

t̯-aza	'that she goes'	:	*taza*	'beautiful'
t̯-awra	'that she enters'	:	*tawra*	'bull'
t̯-arya	'that it rains'	:	*tarya*	'it becomes wet'
t̯-iwa	'who was'	:	*tiwa*	'sitting'

When the word is a demonstrative or the interrogative pronoun *ʾεni*, it remains in its voiced form *d-*:

(12) *rəš-kúlla d-áni* (< *d-ʾani*) 'above all of them' (A25:22)

(13) *léwət d-áwwa* (< *d-ʾawwa*) *ʾàθṛa*˥ 'you are not from this country' (A25:82)

(14) *xóna d-o-málka* (< *d-ʾo*) 'the brother of the king' (A25:1)

(15) *bábə d-á-brata* (< *d-ʾa-*) 'the father of the girl' (A29:35)

(16) *yíwtəlle ta-d-án* (< *d-ʾan*) *xulàme*˥ 'She gave it to the servants' (A28:26)

(17) *gu-d-έni* (< *d-ʾεni*) *mðíta xằye*?˥ 'In which town does he live in?' (A28:23)

(18) *ʾu-yaláxta d-ὲnila*?˥ (< *d-ʾεnila*) 'and whose handkerchief is it?' (A26:12)

On account of this variation in the phonetic realization of the particle it will be convenient to refer to it as *D*, which should be understood as an abstract representation including both the voiced and unvoiced realizations.

Occasionally a *b-* particle is devoiced to *p-* when the following laryngal is elided. This is restricted to a few fixed expressions where the consonant after the vowel is unvoiced, e.g.

(19) *p-àqla* (< *b-ʾaqla*) 'on foot' (B5:37)

(20) *hóla p-ápe šawwà yamáθa¹* (< *b-ʾape*) 'They are beyond seven seas' (A12:21)

The elision of the laryngal /ʾ/ sometimes occurs also when a word with its own vowel nucleus is combined in a stress group with a word beginning with /ʾ/, e.g.

(21) *mən-an-məndiyàne¹* (< *mən-ʾan*) 'some of those things' (A32:2)

(22) *qəm-axə́lle* 'he ate it' (A31:5)

In such cases the final consonant of the preceding word is syllabified with the beginning of the word that has lost the /ʾ/, since a syllable cannot begin with a vowel. This resyllabification does not result in any change in vowel length, just as the vowel in words such as *tăra* (< **tarʾa* < **tarʿā*) remains short. It has, however, sometimes motivated the lengthening of the final consonant, allowing it to act as onset of the following syllable while remaining also the coda of the preceding one. This lengthening is not marked in the transcription:

(23) *qəm-axlíla* [qəm.mæx.ˈliː.læ] (< *qəm-ʾaxlila*) 'They ate them' (A23:35)

(24) *qam-énux* [qæm.mˈɛɪ.nʊx] (< *qam-ʾɛnux*) 'before your eyes' (A15:15)

(25) *ta-ṭ-axlíwale* [tæt.tæx.ˈliː.wæˑ.le] 'in order to eat it' (A14:68)

An initial /ʾ/ is sometimes elided also when a preceding stressed word ends in a consonant and the vowel forms a syllable with this consonant across the word boundary. In such cases the elision of the /ʾ/ is not represented in the transcription, e.g.

(26) *fə̃llən ʾàti¹* [ˈfəllən ˈæɪtiː] 'you so-and-so' (B5:9)

(27) *qémən ʾàzən¹* [ˈqɛmən ˈæɪzən] (A1:4)

(28) *də-šqúl ʾanna-zùze.¹* [də-ˈʃqʊl ænɪæ-ˈzuɪze] (A1:27)

The elision of the /ʾ/ is not obligatory in any of these contexts and in many cases it is retained, e.g.

(29) *mən-ʾəsrí dináre* [mən-ʾəsˈri] 'from twenty dinars' (B5:8)
(30) *bas-ʾíθwa* [bæs-ˈᵖiθwɑ] 'but there was' (A8:2)
(31) *ʾə́n ʾamrə̀nnux* [ˈᵖən ʾæmˈrɪnnʊx] 'If I tell you' (A1:12)
(32) *muθélux ʾánna zúze* [muˑˈθɛːlʊx ᵖænnæ] 'You have brought these coins' (A1:27)

The laryngal also occurs sometimes after vowelless particles, but in such cases the particle does not cluster with the laryngal in the onset of the syllable, since the sequence /Cʾ/ is not permissible as a syllable onset. Rather it is syllabified with the preceding word or the cluster is broken by a prosthetic or epenthetic vowel, e.g.

(33) *báxte díye láwa píšta b-ʾùrxa* [ˈpiʃ.tæb. ᵖʊrxæ] 'His wife was not on the way (to having a child)' (A8:4)
(34) *qímela mšoxə́lpe b-ʾisəqyàθa* [mʃoː.ˈxəl.pəb.ʾiː.səq.ˈjæː.θæ] 'They exchanged rings' (A26:7)
(35) *ta-ṭ-áxlən b-ʾùrxa* [ʾəb.-ᵖʊrxæ] 'so that I could eat (it) on the way' (A23:8)

Resyllabification does not take place across intonation group boundaries, so at the beginning of an intonation group such a cluster is always broken by a prosthetic or epenthetic vowel, e.g.

(36) *mə́ra dũ̀s bábi. b-ʾùrxa* [ʾəb.ᵖʊɾ.xæ] *lát-xila xa-lə́xma-w xa-bèta?* 'She said "(He's) right, father. On the way did you not eat a loaf of bread and an egg?"' (A17:15)

A laryngal /h/ within the interior of a word is sometimes elided. This is attested between two /a/ vowels, which coalesce into one vowel nucleus. If it is stressed, this vowel is pronounced long, even if in word final position, where according to the normal rules of vowel length it would generally be expected to be short, at least when in the middle of an intonation group (§2.2.1.2.). As far as vowel lengthening is concerned it is treated as if it were still in an open non-final syllable.

(37) *tə̆màha* [tæˈmæː] 'over there' (A2:5)
(38) *ʾə̆wáha* [ʾaˈwɑː] 'that one over there' (A27:5)
(39) *b-álaha* [ˈbæːlæ] 'by God' (A1:5)

It also takes place in fast speech when in contact with a preceding consonant, e.g.

(40) *múrra tóti ṯ-áθya mhɛràli*ˈ [mɛˈɾæːli] 'Tell my grandmother to come and help me' (A7:25)

Since these two aforementioned types of elision of /h/ do not take place regularly they are not marked in the transcription.

A laryngal /h/ is elided at the beginning of a word after a vowelless prefixed particle in some cases. This is regularly the case with the verb *hwy* 'to be', e.g. *y-áwe* 'he is' (< *ʾi-hawe*), *ṯ-awe* 'he will be' (< *bəd-hawe*). Note the contraction and devoicing of the future particle.

It is occasionally elided when the previous word ends in a consonant. As with the elision of /ʾ/ in such a context, this is not marked in the transcription, e.g.

(41) *xáčča xéna biš-hódəx* [bi.ˈʃoː.dəx] 'a little further on' (A7:22)
(42) *hắl qə́ṣṣət hàtxɛla*ˈ [ˈqəṣ.ṣə.ˈtæt.xɛlæ] 'The situation is like this' (A24:32)

The sequence *CV + ʾV* sometimes contracts to *CV* at the juncture between words. For the sake of orthographic consistency, this contraction is not represented in the transcription. It occurs both where the two vowels are the same and also where they are different qualities.

(i) Contraction of two vowels of the same quality.

This is attested particularly frequently in the text corpus when the vowels have the quality of /a/, e.g.

(43) *qímɛle mkúpšəlla kúlla ʾànna*ˈ [ˈkʊl.ˈlæn.næ] 'He gathered them all up' (A7:5)
(44) *kúlla-ʾani* [ˈkʊl.læː.ni] *qəm-qaṭlìla*ˈ 'They killed all of them' (A13:9)
(45) *mɛyə́nna ʾay-bàxta*ˈ [mɛˑˈjɪn.n æj.-ˈbæx.tæ] 'I shall bring that woman' (A4:9)
(46) *dìrtɛla ʾáy*ˈ [ˈdịr.tɛ.læj] 'She returned' (A24:50)
(47) *xa-bəṛ-náša xéna lá-ʾaməṣ* [ˈlæː.-m̩əṣ] *xáya tàma*ˈ 'Another person cannot live there' (A8:48)
(48) *ʾɛ́-ga ʾana-mɛ̀θən.*ˈ [ˈᵊɛː.-gæː.næ] 'when I die' (A12:41)
(49) *ʾána mò-ʾoðən?*ˈ [ˈmoː.ðən] 'What should I do?' (A23:23)

(ii) Vowels of different quality

In general the final vowel of the first word tends to be elided if it is an unstressed /e/ or /a/, e.g.

(50) *mpìlle-ʾăra* [ʾəm.ˈpil.læ.ɾæ] *gáwza*ˈ 'The walnut has fallen on the ground' (A1:5)

(51) *čríkəlle ʾaw-bèθa*ˈ [ˈtʃriː.kəl.l æw.ˈbɛːθæ] 'They surrounded that house' (A4:53)

(52) *hadíya mǎṛəšánne ʾáwwa* [mæ.ṛə.ˈʃæn.ˈnɑw.wɑ] *ʿafrít qaṭəlɛxu*ˈ 'Now I shall wake this demon and he will kill you' (A13:12)

(53) *ʾítle ʾárbi* [ʾⁱit.ˈl æɾ.bi] *bnàθa*ˈ 'He has forty daughters' (A12:2)

(54) *ʾarbí-ʾotaxe ʾìθwaləx*ˈ [ʾoˑ.tɑˑˈx.iθ.wɑˑ.ləx] 'You had forty rooms' (A24:34)

(55) *ʾána wáðən*ˈ *be-baxtùθa ʾəllux*ˈ [beˑ.-bæxˈtuː.θ əl.lʊx] 'I am performing treachery against you' (A13:8)

(56) *muxzélux ʾáwwa xǎzìna-ʾəlli*ˈ [xæ.ˈziː.n əl.li] 'You showed this treasure to me' (A14:23)

(57) *b-àyya ʾúrxa*ˈ [ˈbæj.ˈj ʊɾ.xæ] 'in this way' (A9:4)

(58) *támməl ʾana-ʾə̀θyən*ˈ [ʾæˑ.ˈnɪθ.jɪn] 'I came yesterday' (A12:66)

Unstressed /i/, /u/ and /o/ at the end of the first word, on the other hand, tend to be preserved, e.g.

(59) *ʾáti ʾən-yawə́llux* [ʾⁱæː.ti n-] *ðà-tawərta*ˈ 'If he gives you a cow' (A3:4)

(60) *ʾáp-ʾati ʾə̀θyət*ˈ [ʾⁱæp-ʾæː.ˈti θ.yət] 'You also came' (A2:9)

(61) *šárṭən gu-ʾiθáθə* [gu.-ˈθæː.θə] *d-áwwa nàša*ˈ 'I shall escape from the hands of this man' (A31:30)

If the final vowel of the first word is stressed, it is generally the one that is retained after the contraction irrespective of its quality, e.g.

(62) *kút-yum xá ʾərbe-díye* [ˈxæ ɾ.be] *talə̀qwa*ˈ 'Every day a sheep of his was lost' (A10:1)

(63) *mò-ʾawəð* [ˈmoː.-wəð] *b-gʸáne.*ʾˈ 'What should he do with himself?' (A30:28)

In a few cases the /ʾ/ in the sequence *CV + ʾV* is replaced by a glide consonant when the two vowels are of a different quality, e.g.

(64) *mo-ʾìba.*ʾˈ [moː.ˈjiː.bæ] 'What is in it?' (A13:1)

The sequence *CV + hV*, with the laryngal */h/*, is sometimes contracted to *CV* across a word boundary. This contraction is not marked in the transcription, e.g.

(65) *ʾána háwən* [ˈʾæː.ˈnæː.wən] *Gozàli*ˈ 'I should be Gozali' (A8:55)
(66) *ʾána mo-hoyàli.ʾ*ˈ [moː.ˈjæː.li] 'What could she be to me?' (A32:12)
(67) *lá-hawət* [ˈlæː.wət] *šeðàna*ˈ 'Don't be mad' (A10:8)

4.5. OTHER CONTRACTIONS AND ELISIONS

Various other contractions of syllables take place in natural fast speech. These can be categorized as follows:

4.5.1. *Syllables Beginning with Identical Consonants*

In a sequence of two syllables beginning with the same consonant, the first is sometimes elided. This generally takes place where the first consonant is preceded by a vowel and the second occurrence of the consonant is geminate thus:

VCVCCV   >   VCCV

Such contractions occur mainly in the endings of verbal forms with pronominal suffixes. It regularly takes placed when a pronominal object L-suffix is bonded to a compound verbal form ending in a 3rd person copula:

qtíləlle	'He has killed him'	< *qtílɛle + lle*
grášəlle	'He is pulling him'	< *grášɛle + lle*

Since the contraction in this context is the norm, it is represented in the transcription. The endings of 3rd person compound verbal forms with pronominal suffixes are sometimes contracted further in verbs whose third radical is */l/*, e.g.

(1) *xìləlle*ˈ [ˈxiːlːle] 'They ate him' (A14:22)
(2) *šqíləlla* [ˈʃqiːlːæ] *ʾálpa dàwe*ˈ 'He took the thousand gold pieces' (A1:15)
(3) *ʾáp-xa lá-θele šqàləlle* [ˈʃqæːlːe] 'Nobody came to buy it' (A22:9)

(4) *ʾa-sústət yamàθa*ˈ *nabòləlla*ˈ [næːboːlːæ] *Čə̆lkǎ̀ze*ˈ 'The mare of the seas is taking away Čə̆lkǎze' (A12:34)

The stressed vowel in these contracted forms remains long, as if it were still in an open syllable. The contracted compound past forms with suffixes are, therefore, distinguished from the non-compound past forms only by the length of the vowel:

šqílle [ˈʃqilːe]	'He took'
šqíləlle [ˈʃqiːlːe]	'He has taken it'

Since, however, this type of contraction does not regularly take place, it is treated as an allomorph of the normal uncontracted form and is not represented in the transcription.

A syllabic contraction of the type *VCVCCV > VCCV* occasionally occurs when the 1st person singular verbal inflection *-ən* follows an /n/ that belongs to the verbal root, e.g.

(5) *hálli banə̀nni* [bæːnːi] *xa-bέθa*ˈ 'Let me build myself a house' (A11:10)

(6) *hadíya mtánənnux* [ˈmtæːnːʊx] *ða-qəṣṣə̀tta*ˈ 'Now I shall tell you a story' (A45:1)

4.5.2. *Elision of* /l/

The articulation of the consonant /l/ occurring after a vowel in the copula or L-suffixes attached to a verb is occasionally weakened in the speech of a number of informants and is elided outside the contexts described in §4.4.1. If the vowels on either side of the /l/ are homorganic or closely related they coalesce into a single vowel, e.g.

(1) *ʾən-twírwala* [ˈtwiːɾwɑ] *tə́rna* 'If both have broken' (B5:59)

(2) *ʾíθwalan* [ˈiˑθwɑn] 'we had' (B5:206)

(3) *θéle* [ˈθeː] 'He came' (A34:5)

(4) *qəm-daryála* [qəm-dəɾˈjæː] 'She has put it' (A34:6)

(5) *léðəx ʾèkəla* [ˈɛːkɛ] 'We do not know where she is' (A34:7)

(6) *ʾu-zeðáye šwíqile* [ˈʃwiːqi] 'He left the flat breads' (A30:12)

If the two adjacent vowels are not homorganic the elided /l/ is replaced by a glide, e.g.

(7) *mòdila* [ˈmoːdijæ] 'What is it?' (A4:14)

(8) *ṭ-íla* [ˈt-iːjæ] *tàma* 'which are there' (A14:70)

(9) *hóle* [ˈhoːje] 'behold him' (A10:3)

More rarely a radical consonant /l/ is weakened, e.g.

(10) *kʸelónna* [kʸɛˈjɪnnæ] *zùzì* 'I shall measure my money' (A32:8)

It may even be elided after a consonant, resulting in the opening of a closed syllable. The vowel of the syllable remains short as if it were still in a closed syllable, e.g.

(11) *mpatlìle* [mpæˈtiˑle] 'They span it' (B10:79)

This weakening and elision of /l/, which is a sporadic phenomenon and is not general to the speech of all informants, is not represented in the transcription.

4.5.3. *Intervocalic* /y/

The glide /y/ between vowels is sometimes elided and the two adjacent syllable nuclei coalesce. This occurs in some cases in the infinitive of final /y/ verbs when used in compound verbal forms. As with the contractions described in §4.4.1. above, the vowel remains long even when this results in being in a closed syllable, e.g.

(1) *bábi hòle xzàyǝlla* [ˈxzæːlːæ] 'My father could see them' (B9:6)

(2) *ʾáw hox-šqáləlle zdáyǝlle* [ˈzdæːlːe] 'We take it and throw it away' (B9:21)

(3) *xzáyǝt* [ˈxzæːt] *ʾǎnáha naše-ṭ-íla ráqa bàθri?* 'Do you see those people who are running after me?' (A7:17)

(4) *lán-ðaya* [ðæː] 'I do not know' (B5:10)

(5) *hé b-álaha hole-ràya* [hoˑ-ˈræː] 'Yes, by God, it is raining' (A34:5)

(6) *hóle šmíyǝlla* [ˈʃmiːlːæ] *Rustǎmo* 'Rustam has heard it' (A29:11)

This contraction does not regularly take place in the constructions described above and is not represented in the transcription. Where it is the norm, however, it is represented in the transcription. This applies, for example, to negative expressions containing the verb 'to know', e.g.

léðən	'I do not know'	< *la yăðən*
míðən	'I do not know'	< *mo yăðən*

In the sequence /aye/, /ayi/ and /ayə/ an unstressed /e/, /i/ or /ə/ occasionally loses its status as a syllable nucleus and coalesces with the syllable marginal /y/. This is not represented in the transcription, e.g.

> (7) *kpíšela maymúne b-ʾalpàye* [b-ʾælˈpæːj] 'The monkeys gathered in thousands' (A14:53)
>
> (8) *tərté-kθaye* [kθæj] 'two chickens' (A2:3)
>
> (9) *rába băyewale* [ˈbæjwɑle] *ʾaw-bróna dìye* 'He loved that son of his a lot' (A8:2)
>
> (10) *léle gnàyi* [gɔˈnæːj] 'It is not my fault' (A23:23)
>
> (11) *bróne díye páyəš* [ˈpæːjʃ] *šàwpe díye* 'His son will become (king) in his place' (A8:2)

4.5.4. *Elision of Word Final /ə/*

As has been described above (§4.2.), the particle *D* of annexation constructions is sometimes elided. The annexed noun is then left with a final /ə/ vowel, e.g. *ʾénə mìya* 'the spring of water' (A11:17). In some cases also the /ə/ is elided. As a result the preceding syllable, which was originally open, becomes closed. The vowel, however, retains its length as if it were still in an open syllable. The elision of the /ə/ in this context is represented in the transcription, e.g.

> (1) *brōn-málka* 'the son of the king' (A14:43)
>
> (2) *xāṣ-sùsux* 'the back of your donkey' (A14:67)
>
> (3) *ʾḖn-Nune* 'the Spring of Fishes (name of village)'

Sporadically a final /ə/ is elided in other contexts at the juncture of two words. Note, for example, the following:

> (4) *ʾu-mbáqrən xàzən* [ˈmbæqər ˈxæːzən] 'I shall ask in order to find' (A24:4)

Here the final /n/ of *mbaqrən* has been elided, presumably due to its clustering with the initial consonant of the following word, by the process described in §4.2. The final /ə/ is then elided, resulting in a syllable

ending in a cluster, which is resolved by the insertion of an epenthetic:
[mbæqrən] > [mbæqrə] > [mbæqər]. These types of sporadic contraction
across word junctions are not represented in the transcription.

4.5.5. *Allegro Forms of the Past Copula*

Various contractions take place in the past enclitic copula in fast speech
that are not represented in the transcription. These include the elision of
the final *-wa* element in the 3rd person forms *-wewa* 'he was', *-wawa* 'she
was' *-wɛwa* 'they were', e.g.

(1) *xzéle ʾɛ́kə t-wèwa*ˈ [ˈtweːɾ] 'He saw where he was' (A14:92)
(2) *kúlla tunīθa*ˈ *d-ɛ-bráta qəm-mtanèla*ˈ...*ʾu-ʾɛ̀ni-wewa* [ᵇɛːniwe] *twírəlle réše
    díye*ˈ 'He narrated all the story of the girl...and who had broken
    his head' (A29:12)
(3) *ʾu-xa-mašmóye-wewa* [mæʃˈmoːjwe] *ʾəllɛ̀ni lázəm*ˈ 'Somebody must have
    been listening to us' (A35:19)
(4) *reša-réša d-a-dudə̀kθa,*ˈ *t-wawa* [t-waːɾ] *rəš-d-à-masta*ˈ 'across the pipe
    that was over the yoghurt' (A11:5)
(5) *ʾánna xákma náše gabbàre-wɛwa*ˈ [gæbˈbæɾewɛ] *xɛlàne*ˈ 'These were
    mighty heroic warriors' (A29:1)
(6) *ʾáni xá-yoma ṣə́lye xyàpa-wɛwa*ˈ [ˈxjæːpawɛ] 'One day they went down
    to bathe' (A34:27)

On some occasions the initial /*w*/ of these clitic forms is elided after a
consonant, e.g.

(7) *gu-d-ay šwíθa t-wewa-dmíxa* [ˈteːɾwɑ] *xònəx*ˈ 'In the bed in which your
    brother had slept' (A8:68)
(8) *ma-t-wéwa* [ˈteːɾwɑ] *mùsyəlle*ˈ 'so much had he fortified it' (A11:16)
(9) *ʾímə t-wewa-mára* [t-eːɾ-maːɾa] *ṭla-ʾÙmmo*ˈ 'when he was saying to
    'Ummo...' (A23:25)

4.5.6. *Miscellaneous Other Allegro Forms*

In fast speech one occcasionally hears various other contractions that
are not included in the categories described above. None of these are
represented in the transcription, e.g.

(1) *čɛdə́tla* [ˈʧætːæ] *kúlla náš̌ət màθa*ˈ 'You should invite all the people of
   the village' (A7:2)

(2) *bábi šqìlə̀tle*ˈ [ˈʃqiːltle] 'You have taken my father' (A14:23)

(3) *yằðət b-gànux*ˈ [ˈjəðt ˈgæːnʊx] 'You know, by your soul' (A1:11)

WORD STRESS

5.1. Preliminary Remarks

The position of word stress is largely predictable. Since, however, there is some variation, the place of stress is marked in the transcription on all words that bear it. The transcription of the recorded texts also marks the boundaries of intonation groups by a short vertical sign ˈ. Intonation contours are not represented, but a distinction is made between the nuclear stress of the intonation group and non-nuclear stress. The nuclear stress, which is the most prominent stress of the intonation group, is marked by a grave accent (*v̀*) and the non-nuclear stress is marked by an acute accent (*v́*), e.g.

> (1) *ʾáwwa qímɛle qedàmta,*ˈ *šqíləlle xa-mən-súsət xàle,*ˈ *tíwa l-xáṣe dìye,*ˈ *ʾu-ṣ̀lya.*ˈ
> 'He got up in the morning, took one of his father's horses, sat on its back and went down.' (A25:40)

In principle, there is only one nuclear stress in an intonation group. Occasionally, however, two intonation groups are linked together without any perceptible boundary by a process of sandhi and two nuclear stresses occur in what appears to be a single intonation group (cf. Cruttenden 1986: 43), e.g.

> (2) *ʾàtit θíθa kə̀sli.*ˈ *lán ʾàna-ʾə́θya kə̀sləx.*ˈ '*You* came *to me*. *I* did not come *to you*.' (A4:4)
> (3) *ʾaw-lɛ̀wa qázde díye ta-ṭ-ázət ʾawðə́tle xaprə́tle ṭùra*ˈ 'It was not his intention that you should go and dig the mountain.' (A17:19)

In words that consist of more than one syllable, the general position for the placement of stress is on the penultimate syllable. Deviations from this canonical position occur for a number of reasons. The various grammatical categories of words exhibit some differences in stress patterns, so they will be dealt separately in what follows.

5.2. INDEPENDENT PRONOUNS

Independent personal and demonstrative pronouns regularly take the stress on the penultimate syllable, e.g.

ʾána	'I'
ʾáwwa	'this'
ʾăwáha	'that over there'

As remarked in §4.4., the laryngal /h/ in the sequence /aha/ in forms such as ʾăwáha is sometimes elided and the two syllable nuclei coalesce. In such cases the stress does not shift back a place and so it falls on what is now the final syllable of the word: [ʾaˈwaː]. This contraction is not marked in the transcription.

5.3. NOUNS AND ADJECTIVES

In principle the stress falls on the penultimate syllable in both singular and plural forms, e.g.

béθa	'house'
xwára	'white'
basíma	'pleasant'
ʾilána	'tree'
ʾilanáne	'trees'

This applies also to forms with pronominal suffixes, with the exception of the 3pl. suffix, which often takes the stress, resulting in the placement of the stress on the final syllable of the word, e.g.

béθi	'my house'
beθéxu	'your (pl.) house'
beθéy ~ beθé	'their house'

The word final stress in the forms with the 3pl. suffix can be explained by the fact that this suffix has developed historically from a form *-áyhən, with stress on the penultimate (§7.2.). The final syllable has been elided but the stress has remained in its historical position, which is now the final syllable. The stress is not, however, completely fixed in this position and it

is sometimes moved back to the penultimate syllable, in conformity with
the synchronic syllable structure, e.g.

(1) *ʾap-xmárey šqìləlla¹ dawérey ṭrìðəlla¹* 'They also took their asses and
    drove away their mules' (A7:15)
(2) *kúlla dáryəlla xáṣət dawèrey¹* 'They put everything on the back of their
    mules' (B4:15)

This retraction to the penultimate is, in fact, the norm when the suffix
has the form of the monophthong -ε, though cases of word final stress
are occasionally attested, e.g.

(3) *daríwala l-ganɛ̀¹* 'They used to put it on themselves' (B15:28)

Loanwords that are stressed on the final syllable in the source language and
have not been adapted to Aramaic morphology by attaching an inflectional
ending are nevertheless usually adapted to the canonical Aramaic stress
pattern by retracting the stress to the penultimate syllable. This applies
also to nouns that in the source language have a long vowel in the final
syllable. After the stress shift, this vowel is pronounced short, e.g.

wăzir	'minister'	< Arab. *wazír*
ḥăkim	'doctor'	< Arab. *ḥakím*
ʾájib	'amazing'	< Arab. *ʿajíb*
ḥŭdud	'borders'	< Arab. *ḥudúd*
hŭjum	'attack'	< Arab. *hujúm*
pážgir	'towel'	< Kurd. *pêjgîr*
múxtər	'village head'	< Arab. *muxtár*
ʾÍrən	'Iran'	< Pers./Arab. *ʾÍrán*
ʾótəx	'room'	< Kurd. *otáx*
čángəl	'fork'	< Kurd. *çengál*
díwən	'social gathering'	< Kurd. *dîwán*
tálən	'plunder'	< Kurd. *talán*

In some cases nouns and adjectives that normally take the stress on the
penultimate syllable are stressed on another syllable. The purpose of this
stress shift to a non-canonical position has a functional explanation.

In trisyllabic nouns the stress is shifted to the antepenultimate syllable
when it is functioning as a vocative. This is the case with the word *ʾalaha*
'God', e.g.

(4)   *ya-ʔálaha šqùlli*ˈ 'Oh God, take me!' (A15:19)

(5)   *ya-ʔàlaha*ˈ *hal-róxa qa-d-ánna náše ṭ-ila píše kèpa*ˈ 'Oh God, give spirit to these people who have become stone' (A8:82)

(6)   *máre yá-marya ʔàlaha*ˈ *máre ga-mù*ˈ *qwála ṭla-ʔalàha,*ˈ *ya-ʔàlaha*ˈ *máre ʔána bàryən?*ˈ 'He said "Oh Lord God", he said complaining to God "Oh God, why was I born?"' (A14:23)

In (6) it can be seen that a distinction is made between the vocative forms of *ʔalaha* with antepenultimate stress and the non-vocative form that has the canonical penultimate stress. In many cases, however, the antepenultimate stress is retained also when the word does not have a vocative function, e.g.

(7)   *ʔálaha mšúdrəlle malàxa*ˈ 'God sent an angel to him' (A15:5)

(8)   *máre šaqlóxle bronéy ta-t-taxríle ʔálaha xá-ga xèta*ˈ 'He told us to take their son so that they remember God again' (A15:17)

(9)   *har-ʔúrxət ʔálaha dóqən b-ìðì*ˈ 'I shall always keep firmly to God's way (literally: keep in my hand)' (A15:21)

The explanation appears to be that due to the frequent use of the vocative form *ʔálaha* there is a tendency to treat the vocative stress placement as the norm and extend it to non-vocative occurrences of the word. It should be noted that the stress is regularly retracted when it has an exclamatory function, as in the oath *b-álaha* 'by God'.

Retraction of the stress in trisyllabic words used in vocative function may result in contraction of weak consonants. This is the case, for example, in the word *xwarzáya* 'nephew', which is attested as a vocative with the form *xwàrza* (A29:17).

In disyllabic words, where the stress cannot be moved back further, it is occasionally shifted from the canonical penultimate position to word final position in vocative expressions that involve particularly emotive engagement on the part of the speaker, e.g.

(10) *mára babì,*ˈ *yắðət ʔ́dyo módi wídle Fárxo bìyən?*ˈ 'She said "Father. Do you know what Farxo did to us?"' (A25:19)

Elsewhere, shift of stress in nouns and adjectives from the canonical position is attested in phrases to which the speaker wishes to attract particular attention and give prominence. In (11), for example, the prominence given to the expression 'the first time' is due to the fact that it is placed

in contrastive opposition to the second and third times that the character had come:

(11) ʾo-gáya qằmɛθa θélux l-kásli,' mári ṭlàlux' málka xə́zyɛle b-xə́lme dúnye ráya tèle.' 'The first time you came to me, I said to you that the king saw in his dream that it was raining foxes.' (A1:22)

One could, in fact, regard also the vocative and exclamatory functions as manifestations of a general function of the stress shift from the canonical position to attract particular attention to the word.

There is, however, one context where stress is shifted from the canonical position for rhythmic rather than discourse functional reasons. This is found in bisyllabic nouns placed after words that are stressed on the final syllable. In such cases the stress of the noun is sometimes moved to the end of the word, presumably to avoid the occurrence of stress in two consecutive syllables, e.g.

(12) ʾə̀štà yarxê' xamšà yarxê' 'six months, five months' (B5:3)
(13) wírre mən-əsri-w-xamšà šə̀nné' 'He passed twenty-five years' (A8:33)
(14) xá malkà' 'a king' (A8:2)
(15) xá bronà' 'a son' (A8:3)
(16) ʾáw malkà' 'that king' (A8:2)

5.4. VERBS

Different patterns of stress are exhibited by (i) verbal forms derived from present and past bases, (ii) imperative forms and (iii) compound verbal forms containing a copula enclitic.

5.4.1. *Verbal Forms Derived from Present and Past Bases*

In principle the stress is placed in the canonical position on the penultimate syllable in such forms, e.g.

qáṭəl	'he kills'
qáṭlən	'I kill'
qaṭlítu	'you (pl.) killed'
mšádra	'she sends'
mtămə́ma	'she completes'

| *qṭílle* | 'he killed' |
| *mšudə́rre* | 'he sent' |

As can be seen in forms such as *mtămə́ma*, the stress is placed on an epenthetic vowel if this is in a penultimate syllable. On some occasions, however, the epenthetic is ignored and the stress is place on the preceding syllable, e.g. *mtágəbrən* 'I look after' (A1:8).

When additional suffixes are added to such forms, the stress shifts accordingly and remains on the penultimate syllable, e.g.

| *qaṭə́lwa* | 'he used to kill' |
| *qaṭə́lle* | 'he kills him' |

There is a constraint, however, that prevents the stress shifting onto one of these additional suffixes, which causes it to remain in antepenultimate position in some forms. This applies to the attachment of the element *wa* followed by a pronominal suffix, e.g.

qṭílwale	'he had killed him'
qṭiláwale	'he had killed her'
qaṭə́lwale	'he used to kill him'

The 2pl. forms also deviate from the canonical stress position in that the stress is constrained to remain on the penultimate syllable of the subject inflection suffix *-ítu* even when additional suffixes are added, e.g.

qaṭlítuwa	'you (pl.) used to kill'
qaṭlítule	'you (pl.) kill him'
qaṭlítuwale	'you (pl.) used to kill him'

These two constraints can be collapsed into one, namely that the stress has to remain on a syllable that contains a radical of the verbal base.

Deviations from these principles of stress placement are found in some verbal forms where the speaker wishes to draw particular attention to the expression, e.g.

(1) *lá gawrèn!* 'I shall not marry!' (A16:5)
(2) *rəmyàθa hawetúwa!*ǀ 'Oh that you would be cursed!' (A26:27)

Stress is shifted from its normal position also in some constructions where a verbal form is repeated, the second occurrence exhibiting a variation in stress position from the first occurrence, e.g.

(3) *marəqðə́xwale.¹ marəqðiwalè,¹ ta-t-náše yawíwale yabìše,¹ gòze.¹* 'Then we made him dance. They made him dance so that people would give him raisins, walnuts.' (B16:10)

(4) *kúlla-hatxa dorìwala.¹ doriwalà,¹ péšiwa pràge.¹* 'They would thresh all of it. They would thresh it and it would become millet.' (B16:28)

5.4.2. *Imperative Forms*

In imperative forms of verbs the stress is generally placed on the initial syllable of the form irrespective of how many syllables back it is from the end of the word, e.g.

qṭúl	'kill!' (sing.)
qə́ṭlu	'kill!' (pl.)
qə́ṭlule	'kill (pl.) him!'
mšádər	'send! (sing.)'
mšádərre	'send (sing.) it!'
mápəlxu	'use! (pl.)'
mápəlxule	'use (pl.) it!'

This principle of stress placement on imperative forms in some cases distinguishes them from an otherwise homophonous form derived from the present base, e.g.

mšádərre	'send it!' (imperative)
mšadə́rre	'he sends it' (present base)

5.4.3. *Compound Verbal Forms*

In compound verbal forms, which are a combination of a resultative participle or infinitive base with an auxiliary copula element, the stress placement only takes account of the base and falls on the penultimate syllable of the base irrespective of any additional elements, e.g.

qṭílεle	'he has killed'	< *qṭíla + ile*
qṭíltεla	'she has killed'	< *qṭílta + ila*

qṭílawewa	'he had killed'	< *qṭíla + wewa*
mšúdrɛle	'he has sent'	< *mšúdra + ile*
mšudártɛla	'she has sent'	< *mšudárta + ila*
qṭílǝlle	'he has killed him'	< *qṭíla + ile + le*
mšudártǝlle	'she has sent it'	< *mšudárta + ila + le*
hóle qṭílǝlle	'he has killed him'	< *hóle qṭíla + ǝlle*
hóla mšudártǝlle	'she has sent it'	< *hóla mšudárta + ǝlle*

This stress placement may distinguish a compound form from an otherwise homophonous form derived from a present base, e.g.

yáwǝlle	'he is giving him' (compound)
yawǝ́lle	'he gives him' (present base)

5.5. Numerals

When numerals occur independently they regular have penultimate stress, e.g.

ṭḷáθa	'three'
xadǝ́ssǝr	'eleven'
ʾárbi	'forty'
ʾúmma	'a hundred'

When they qualify a following noun, however, the stress is sometimes placed on the final syllable, e.g.

(1) *xamšî yománeˈ* 'fifty days' (B16:12)
(2) *šawwà xonǎwáθa* 'seven brothers' (B4:7)
(3) *ʾummà dináreˈ* 'a hundred dinars' (A24:3)
(4) *qúrbǝt ṭḷaθî šǝnnéleˈ* 'He is nearly thirty years old' (A8:33)
(5) *ʾarbá-mma-w xamšî ʾisǝqyáθa* 'four hundred and fifty rings' (A13:13)

The motivation for this shift from the canonical stress position appears to be to give prominence to the numeral. This is shown by the fact that there is a particular tendency to shift the stress position when the nuclear stress of the intonation group falls on the numeral. As has been remarked in §5.3., when a bisyllabic noun follows numerals that are stressed on the

final syllable, the stress of the noun is sometimes shifted to the end to avoid the occurrence of stress in two consecutive syllables.

5.6. Adverbial Particles

Several adverbial particles that stand as independent words follow the canonical rules of stress placement and take the stress on the penultimate syllable, e.g.

baráye	'outside'
gawáye	'inside'
qamáye	'at first'
hadíya	'now'

Some adverbs, however, retract the stress to the antepenultimate syllable on certain occasions. This is found mainly in some temporal adverbs, e.g.

qédamta	'early in the morning, the next day'
bázzune	'last/next year'
ʾə́dlɛle	'tonight'
ʾə́ššeta	'this year'

This retraction does not regularly take place in all occurrences of the words. They are also used with penultimate stress. The retraction to the antepenultimate syllable is motivated to some extent by discourse function. There is a clear tendency for the forms with antepenultimate stress to be used when the word functions as a sentence adverbial in a prominent position at the front of the sentence whereas the form with canonical penultimate stress is generally used later in the clause after the verb. This is illustrated below for the adverb *qedamta* 'the early morning, the next day', e.g.

(1) *qédamta híwɛle xàbra¹ sìqela¹* 'The next day he gave word and they went up' (A26:45)

(2) *qédamta qímɛle xále dìye,¹ ʾína xə́zyəlla ʾán ʾaskaràye,¹ kúlla xðìrta¹ ʾAmedìa¹* 'The next morning his maternal uncle got up and saw those soldiers and (saw that) Amedia was completely surrounded' (A25:79)

(3) *qédamta mə̀re¹* 'The next day he said…' (A1:2)

(4) ʾu-qímli qedàmta,ˈ la-xəzyàliˈ 'I got up in the early morning and did
    not find her' (A26:11)

(5) bína qémi qedámta nàšeˈ ʾu-jằmiˈ 'The people get up the next morning
    and gather together' (B5:46)

The non-canoncial antepenultimate stress has the function of giving par-
ticular prominence to the sentence adverbial, which typically marks the
onset of a new section of discourse. On some occasions *qedamta* occurs
with antepenultimate stress after the verb. In also these cases the moti-
vation for the stress retraction generally appears to be motivated by an
intention by the speaker to give prominence to the particle. This is shown
by the fact that the particle is often presented in its own intonation group
in such cases, e.g.

(6) síqla qəm-mṭamrìla,ˈ qèdamtaˈ 'They went up and buried her in the
    morning' (A25:86)

(7) qìmtɛla,ˈ qèdamtaˈ lɛ́la mírta ṭla-xmáθa-w xəmyána-w ʾáxxa-w tàmmaˈ 'She
    got up in the morning, but did not tell her mother-in-law and father-
    in-law, and so forth' (A19:7)

The motivation for giving it prominence is sometimes to set it up in a
contrastive opposition with another item in the adjacent context, e.g.

(8) Mắmo mítle qèdamta-wˈ ʾána mɛ́θən ʾaṣə̀rtaˈ 'Mắmo died in the morning
    and I shall die in the evening' (A26:83)

CHAPTER SIX

STRESS GROUPS

6.1. PRELIMINARY REMARKS

Occasionally a short word is combined with another word in a single stress group and only one of the words bears stress. The stress may fall on either the first or second word, depending on the nature of the component words and on their relative informational importance. Such stress groups occasionally consist of more than two words. In most cases each of the component words can bear its own stress and examples of this can be found in other contexts. If the stress falls on the final word of the group, its position in this word is normally the same as it would have been if the word stood independently. If, on the other hand, the stress falls on the first word of the group and this word consists of more than one syllable, the stress is often placed on the final syllable of the word, rather than on the penultimate one, where it would be placed if the word stood independently.

When the words that are combined in such stress groups retain their full form without contraction, they are joined in the transcription by a hyphen. When, however, one word is contracted and coalesces in some way phonetically with another word no hyphen is used, e.g. *dūs-ile* (*dūs* + *ile*) 'He is right', but *xəðyɛle* (*xəðya* + *ile*) 'He is happy'.

Some of the most common types of words that are combined with other words in stress groups are as follows.

6.2. NUMERAL + COUNTED NOMINAL

The stress falls either on the nominal following the numeral or on the numeral. When the numeral is 'two' and above it is more frequently placed on the numeral than on the noun. The distribution of the stress in groups containing the numeral 'one' (*xa* m., *ða* f.) depends on various factors such as whether the numeral is functioning as a cardinal or as an indefinite article and what information value is conveyed by the noun. These will be discussed in greater detail in §14.1. Suffice it to say here

that if the numeral functions as a cardinal it tends to take the stress, as is the case with the other cardinals. When numerals contain more than one syllable, the stress is regularly put on the final syllable:

6.2.1. *Stress on the Nominal*

Examples: *xa-màlka* 'a king' (A1:2), *ða-ʾótəx* 'a room' (A4:43), *tre-ʾumràne* 'two churches' (B1:6), *ṭḷaθa-yóme* (A3:6).

6.2.2. *Stress on the Numeral*

Examples: *xá-yoma* 'one day' (B5:25), *ðá-kθɛθa* 'one chicken' (A2:3), *trè-yome* 'two days' (A50:8), *tərté-kθaye* 'two chickens' (A1:3); *ʾarbà-yarxe* 'four months' (A30:37), *xamšà-juwale*' 'five sacks' (B5:86), *šawwà-qəfle* 'seven locks' (A13:11), *xamšî̀-guṛe* 'fifty men' (A52:20), *šawwí-zəvre* 'seventy spins' (A52:2).

6.2.3. *Stress on Both Components*

Examples: *xá maláxa* 'an angel' (A8:23), *tré malàxe*' 'two angels' (A4:2), *ṭḷà bnóne* 'three sons' (A24:1), *xamšà ʾotáxe*' 'five rooms' (B5:187).

6.3. PREDICATE + COPULA

The stress regularly falls on the predicate. The presence of the copula is ignored with regard to the rules of stress placement and the stress is put on the penultimate syllable of the first word, e.g.

> *xàwrən-ile*' 'He is our friend' (A46:61)
> *dìyux-ile* 'It is yours' (A26:38)
> *ʾána bàxtux-iwən* 'I am your wife'
> *dũ̀s-iwa.*' 'He was right' (A14:71)
> *bábət Mắmo gòṛa-wewa*' 'The father of Mămo was a great man' (A26:13)
> *gwírta-wawa* 'She was married' (A26:22)

On a few sporadic occasions the copula following the predicate has its own stress, e.g.

*lá͡ʿat ʾàw ʾíle*ˈ 'Surely it is him' (A25:47)

*xá gáwṛa xɛlána-w zàxma wéwa*ˈ 'He was a powerful, tough man' (A27:1)

*dmìxa wéwa*ˈ 'He was asleep' (A8:3)

6.4. Negator + Verb/Nominal/Adverbial

The default position of the stress is on the negated item. In certain circumstances, however, it is retracted onto the negator. The distribution of stress in negative constructions is examined in more detail in §17.7.14.1.

6.4.1. *Stress on the Negated Item*

*la-ṣábrɔx ṭ-òrɔx*ˈ 'We do not dare enter' (A14:40)

*la-sáqði bìya*ˈ 'They are not unhappy with it' (B5:197)

*lɛ́mo la-qìmlux?*ˈ 'Why did you not stand?' (A26:48)

*la-bàba ʾítle,*ˈ *la-yɔ̀mme ʾítle*ˈ 'He has neither a father nor a mother' (A14:16)

6.4.2. *Stress on the Negator*

*xošéba lá-palxi nàše*ˈ 'On Sunday people do not work' (B5:130)

*là-jwìjle súsa*ˈ 'The horse did not move' (A26:28)

*lá-mṣɔn mtanɛ́nnɔx kùlla*ˈ 'I cannot tell you everything' (A14:33)

*là-daqrɔt bíye*ˈ 'Do not touch him!' (A26:73)

*lá-mur hàtxa!*ˈ 'Do not say that!' (A26:52)

*là-kulley yapáwa*ˈ 'Not all of them used to bake' (B5:17)

6.4.3. *Stress on Both Components*

lá taxmɛ́nnɔn 'I do not think' (A26:44)

ʾáwwa là hummɛ́nne 'He did not believe' (A26:79)

*ʾu-réšɔx là parmɛ́nne*ˈ 'and I shall not cut off your head' (A14:35)

*là maṣíθɔt*ˈ 'Do not listen' (A26:11)

là kúlla náše 'not everybody' (B10:88)

6.5. Attributive Demonstrative + Nominal

These demonstratives are often combined with the nominal, especially when the demonstrative is in its 'default' form (§7.4.), which is morphologically least complex. The stress is put either on the nominal or on the demonstrative pronoun. This is determined by syntactic and discourse factors that will be discussed in §14.3.3.

6.5.1. *Stress on the Nominal*

Examples: *ʾaw-màlka* 'that king' (A14:3), *ʾo-tắra* 'that door' (A17:20), *ʾay-dùkθa* 'that place' (A17:27), *ʾa-bràta* 'that girl' (A16:6), *ʾan-ʾŏrwe* 'those sheep' (A10:1), *ʾawwa-náša* 'this person' (A8:3), *ʾanna-náše* 'these people' (A11:18).

6.5.2. *Stress on the Demonstrative*

Examples: *ʾó-malka* 'that king' (A24:1), *ʾò-yoma* 'that day' (B15:93), *ʾέ-ga* 'at that time' (A30:27), *ʾán-julla díya* 'those clothes of hers' (A14:99).

6.5.3. *Stress on Both Components*

This is found only sporadically when the attributive demonstrative is in its short default form, but is the norm when it is one of the longer morphologically heavier sets: *ʾáw malkàˈ* 'that king' (A8:2), *ʾáw kawsèy* 'that hair of theirs' (A8:14), *ʾán naθyáθə d-àn hambišáye* 'those ears of those giants' (A12:16), *ʾáwwa náša* 'this man' (A8:3), *ʾáyya bàxta* 'this woman' (A14:4), *ʾánna məndiyàne* 'these things' (B5:73).

6.6. Quantifier + Nominal

Stress groups of this type are mainly found with the monosyllabic quantifier *ku(t)* 'each, every'. The stress is put either on the nominal or on the quantifier pronoun.

6.6.1. *Stress on the Nominal*

Examples: *kut-béθa* 'each house' (B5:64), *kut-ṭéna* 'each load' (B5:181), *kut-mósta* 'each hair' (A27:10), *kut-béna* 'each time' (B10:63), *kut-báze* 'each jump of his' (A52:6), *kulla-náše* 'everybody' (B10:22).

6.6.2. *Stress on the Quantifier*

Examples: *kùt-yoma* 'every day' (B5:158), *kút-yum* 'every day' (B10:85), *kú-ššət* 'every year' (A12:1), *kú-məndit bắyət* 'anything you want' (A25:14), *kùl-tăhər* 'every kind' (A27:4), *kùl-naše* 'everybody' (B10:51).

6.6.3. *Stress on Both Components*

This is found mainly with the bisyllabic quanitifer *kulla* 'all, the whole': *kùlla máθa* 'all the village' (B6:14), *kúlla mðíta* 'all the town' (B6:17), *kúlla tunīθa* 'the whole story' (A29:12), *kúlla dukàne* 'all places' (B3:17), *kút yaṣílət qàṣra* 'every corner of the palace' (A12:24).

6.6.4. *Prepositions and Prepositional Phrases*

Monosyllabic prepositions are regularly combined with the item that follows them in a single stress group and the stress is placed on the second item, e.g.

Examples: *mən-ṣèda* 'from the hunt' (A26:54), *max-šeðàna* 'like a madman' (A26:9), *qam-ʾènəx* 'before your eyes' (A4:36), *bar-ṣùpa* 'behind the stove' (A32:32), *gu-šə̀mša* 'in the sun' (A2:4).

Prepositional phrases consisting of *ʾəll-* + pronominal suffix are often attached to a preceding verb or noun in a stress group. In such cases the stress falls on the first item, in most cases on the penultimate syllable, e.g.

> *mə̀ri-llux*⎮ 'I said to you' (A26:78)
> *mhuymə́nni-llux* 'I have trusted you' (A1:18)
> *šlàma-llux*⎮ 'greetings to you' (A1:11)
> *masímən bằl-ʾəlla*⎮ 'I shall look after them' (A8:18)
> *zodànta-llɛxu*⎮ 'an extra one for you' (A5:6)

Occasionally the stress is shifted to the end of the first word of the group, e.g.

> *hóya brixtà-llux*⎮ 'Congratulations to you' (A25:69)
> *ʾáxni ṯ-amráxlux qəṣṣəttə̀n-əllux*⎮ 'We shall tell you our story' (A24:51)

Examples of the occurrence of stress on both components contain usually the preposition with 2pl. or 3pl. pronominal suffixes, e.g.

*dɛ́re šlàma ʾəlléxu*ˈ 'He offers you a greeting' (A25:47)

*qímle mŭrísle hátxa míya ʾəllèy*ˈ 'He sprinkled water on them like this' (B6:11)

*sab-y-áwe qaləpθa ʾəlléy*ˈ 'since there is a peel on them' (B5:216)

6.7. Stress Groups Consisting of More Than Two Words

*gu-ʾayya-maθɛ̀ni*ˈ 'in this village of ours' (B11:16)

*qam-ðà-ʾərxe*ˈ 'before a mill' (A32:1)

*gu-xa-quṣxáne gòrta*ˈ 'in a big pan' (B6:13)

xa-l-d-o-xréna 'one on the other' (B6:10)

ta-ʾap-o-yóma 'to also that day' (B5:68)

MORPHOLOGY

CHAPTER SEVEN

PRONOUNS

7.1. Independent Personal Pronouns

3rd pers.	ms.	ʾaw	(ʾawən)
	fs.	ʾay	(ʾayən)
	pl.	ʾáni	

2nd pers.	ms.	ʾáti	(ʾat)
	fs.	ʾáti	(ʾat)
	pl.	ʾáxtu	

1st pers.	sing.	ʾána
	pl.	ʾáxni

Some of these pronominal forms have undergone historical development, largely by the force of analogy.

The 3rd person singular pronouns ʾaw (ms.) and ʾay (fs.) are conservative in form, being derived from *haw < *hā-hū and *hay < *hā-hū respectively. The forms ʾawən 'he' and ʾayən 'she' with an augmented -ən suffix are sporadically used by speakers. This augment regularly occurs on the pronouns in some other NENA dialects, e.g. ʾawən, ʾayən (C. Baṭnaya, C. Darbant, C. Karimlesh, C. Tisqopa); ʾawun, ʾayun (C. Ankawa), ʾawwən, ʾayyən (C. Shosh-u-Sharmən).

The 3pl. form ʾani is abundantly attested across the NENA area. The final -i no doubt developed by analogy with the 3pl. -i inflection of present base verbs, e.g. qaṭli 'they kill'. In some other NENA dialects the ending is formed by analogy with the 3pl. inflectional endings that occur on past base verbs and nouns, e.g. C. Ankawa ʾanu (cf. qṭəllu 'they killed', beθu 'their house'), C. Qaraqosh ʾanhən (cf. qṭəlhən 'they killed', beθhən 'their house').

The 2nd person singular form ʾati has developed by attaching an augment suffix -i to the base ʾat. The base form ʾat itself is sporadically used by speakers. The motivation for the augment was probably to increase the form to two syllables in conformity with the other pronouns in the paradigm. It may be related to the augment -ən, which is attested on the

2nd personal suffix in some NENA dialects, e.g. *ʾatən* (C. Urmi, C. Jilu, C. Darbant). The final /n/ of the *-ən* augment would have been elided. In some dialects the final vowel is *-ə* or *-e* after the elision of the /n/, e.g. *ʾatə* (C. Mar-Yaqo), *ʾate* (C. Bēṣpən, C. Mēr, C. Peshabur, C. Umra d-Shish). Alternatively the *-i* may be the original form of the augment. One may compare the interrogative pronouns *mǎni* 'who?' (< *man*), and *dáxi ~ dəx* 'how?', also the final *-i* augment in secondary long forms of various pronominal suffixes, e.g. on present base verbs: *-ət ~ -eti* (2ms.), *-ət ~ -ati* (2fs.), *-əx ~ -exi* (1pl.); on nouns and prepositions: *-ən ~ -ɛni* (1pl.). This *-i* augment is used in C. Urmi and related dialects in middle /y/ verbs, e.g. *qayəm ~ qemi* 'he rises'.

The initial *ʾax-* element in the 2nd person plural form *ʾaxtu* has apparently developed by analogy with the 1st person plural form *ʾaxni*.

7.2. Pronominal Suffixes on Nouns and Prepositions

The pronominal suffixes are as follows:

3rd pers.	ms.	*-e*
	fs.	*-a*
	pl.	*-ay*, *-ɛy*, *-ey*, *-ɛ*, *-a*
2nd pers.	ms.	*-ux*
	fs.	*-əx*, *-ax*
	pl.	*-ɛxu*, *-axu*
1st pers.	sing.	*-i*
	pl.	*-ən*, *-an*, *-ɛni*

These suffixes replace the final inflectional vowel of nouns, as illustrated by the following, which presents the suffixed forms of the noun *bɛθa* 'house':

3rd pers.	ms.	*bɛ́θe*
	fs.	*bɛ́θa*
	pl.	*bɛθáy*, *bɛθɛ́y*, *bɛθéy*, *bɛθɛ́*, *bɛ́θa*
2nd pers.	ms.	*bɛ́θux*
	fs.	*bɛ́θəx*, *bɛ́θax*
	pl.	*bɛθɛ́xu*, *bɛθáxu*

1st pers.	sing.	*bέθi*
	pl.	*bέθən, bɛθέni*

These suffixes are added to both singular and plural nouns. If, therefore, singular and plural forms are distinguished only by the final nominal inflectional vowel, the suffixed forms of both are identical, e.g. *képa* 'stone', *képe* 'stones', but *képux* 'your (ms.) stone/stones'.

The 3rd person singular suffixes derive historically from *-eh* and *-ah* with final /h/. The original form of the suffixes with final /h/ has been preserved in the suffixes in several NENA dialects, e.g. C. Ankawa, C. Barəṭle, C. Baṭnaya. The endings *-e* and *-a* are homophonous with the nominal plural and singular endings respectively. A form such as *képe*, therefore, could mean 'stones', 'his stone' or 'his stones'. Likewise, *képa* could mean 'stone', 'her stone' or 'her stones'. The meaning is often clarified by combining a noun ending in a 3rd singular pronominal suffix with the corresponding independent genitive particle (§7.3.), e.g. *képe díye* 'his stone(s)', *képa díya* 'her stone(s)'. In some cases, however, where the interpretation is not ambiguous the suffix is used alone, e.g.

(1) *kút-yăðe mòdile xə́zya b-xə́lme* 'whoever knows what he has seen in his dream...' (A1:5)

(2) *mə́re ṭla-bàxte*ˈ 'He said to his wife' (A1:10)

(3) *mšuréla srə́ṭa júlla mšeðòne*ˈ 'She began to tear her clothes out of madness' (A4:6)

(4) *max-d-an-gúmle t-wéwa núbla mónne díye max-d-áni xéne híwle bába ṭlála dìya*ˈ 'Like the camels that he had brought with him, her father gave her others like these' (A4:27)

The 3pl. suffix exhibits a considerable diversity in its form. It derives historically from *-áyhən*. This earlier form has been preserved in various degrees in other NENA dialects, e.g. *-éyhən* (C. Billin, C. Mar-Yaqo), *-éhən* (C. Aradhin, C. Tən), *-éhən* (C. Baṭnaya, C. Derabun, C. Dɛre, C. Hertevin, C. Umra d-Shish). Since *ay* in principle contracts to /ɛ/ in C. Barwar, the /y/ element in the forms *-ey*, *-ɛy* and *-ay* is likely to be the vestige of the vowel of the elided *-hən* element. The form *-ayhən* was originally the form of the pronominal suffixes that was attached to plural nouns. In the C. Barwar dialect, as in most NENA dialects, no distinction is made in the form of suffixes according to whether the noun is singular or plural and one form has been generalized. The distinction is still preserved in C. Qaraqosh and C. Barəṭle with the 3pl. suffix, e.g. C. Qaraqosh *tórhən* 'their ox': *toréhən* 'their oxen'. In the C. Barwar dialect the *-hən* element

has been elided, but the stress generally remains on the final syllable, contrary to the canonical rules of stress placement, by a historical drag effect (§5.3.). It is occasionally retracted to the penultimate syllable, the canonical position for stress, e.g.

(5) *ʾap-xmárey šqìləlla¹ dawérey ṭrìðəlla¹* 'They also took their asses and drove away their mules' (A7:15)

The vowel in the final diphthong is pronounced with a variety of different qualities ranging from the open vowel /a/ to the close mid vowel /e/. The diphthong may even be contracted to the monophthong -*ɛ*. When the stress is retracted this is generally lowered to /a/ according to the usual process (§2.3.4.). This results in an ending that is homophonous with the singular nominal ending -*a* and tends to be used only where the suffix is unambiguous, e.g.

(6) *daríwala l-ganɛ̀¹* 'They used to put it on themselves' (B15:28)
(7) *príməlla ṣoṣiyàθa,¹ dɔ́ryəlla réše dìye¹* 'They had cut their locks and laid them on him' (A31:10)
(8) *xákma ṭɛnɛ́wa xàsa¹ masqíwale bɔ̀dra¹* 'Some carried it on their back and brought it up to the threshing floor' (B5:81)

A rare variant of the 3pl. suffix with the form -*éyən* is attested in the text corpus, e.g.

(9) *ʾay-píšla xáθa ṭlalèyən¹* 'She became a sister for them' (A34:8)

This is likely to have been formed by a secondary development whereby an augment suffix -*ən* has been attached to the suffix -*éy*. The informant for this text exhibits a tendency to add this augment suffix also to other pronominal forms.

The 2ms. singular suffix -*ux* developed from the original form *-*ox*, which still exists in many NENA dialects. The 2fs. suffix -*əx* has developed from the original form -*ax* by the common process of centralization of /a/ vowels in unstressed closed syllables (§2.3.5.). The original /a/ vowel is occasionally preserved when the duration of the final syllable is extended at the end of an intonation group.

The 2pl. form -*ɛxu* derives historically from the form *-*ayxon*, which was attached originally only to plural nouns but has now been generalized for both singular and plural nouns. In some conservative NENA dialects such

as C. Qaraqosh the reflex of this form is still restricted to plural nouns, e.g. *torxun* 'your ox' : *torexun* 'your oxen'. The /ɛ/ vowel of the suffix *-ɛxu* is occasionally pronounced lower in the region of /a/ by some speakers, e.g. *babáxu* 'your father' (A14:84), *xaθáxu* 'your sister' (A14:85).

The 1pl. suffix has two alternative forms. The form *-ən* has developed from *-an* by the normal process of centralization of an /a/ vowel in an unstressed closed syllable. The original /a/ vowel is preserved on some rare occasions when the duration of the final syllable is extended at the end of an intonation group. The longer variant *-ɛni* may be derived historically from the form of the suffix that was attached to plural nouns, while the shorter form *-ən* (< *-an) would be derived from the suffix that was originally attached to singular nouns. In conservative NENA dialects such as C. Qaraqosh the distinction is still maintained between the suffixes, e.g. *toran* 'our ox': *torenan* 'our oxen'. In C. Barwar, as in most dialects, this distinction has broken down. The original two distinct forms of the suffix are preserved, but are used interchangeably on singular and plural nouns. For further remarks on the distribution of the two forms see §14.5.1. The final /i/ vowel of the form *-ɛni* probably developed by analogy with the ending of the 1pl. independent pronoun *ʾaxni*. The original form of the suffix may have been *-ayn*, as in Syriac. Long variant forms of the 1pl. suffix, which are attached to singular and plural nouns, are attested in several other NENA dialects. Most of these can be reconstructed as *-ayn + i*, e.g. *-ayni* (C. Challək), *-eni* (C. Urmi, C. Dɛre, C. Mar-Yaqo, C. Umra d-Shish, J. Amedia). The J. Sanandaj dialect, by contrast, has the two variant forms *-an* and *-ani*, the latter being derived from the form *-an* with the addition of an augment.

The pronominal suffixes replace the final inflectional vowels *-a* and *-e*, whether these be on singular or plural nouns:

kθáwa (sing.)	'book'	*kθáwi*	'my book'
kθáwe (pl.)	'books'	*kθáwi*	'my books'
káwe (sing.)	'window'	*káwi*	'my window'
kawáθa (pl.)	'windows'	*kawáθi*	'my windows'

Final *-i*, which occurs only in loanwords, is retained before the pronominal suffixes and connected to them by a /y/ glide, e.g.

ṭúrši	'pickled vegetable'	*ṭuršíyi*	'my pickled vegetable'

Nouns ending in *-o* cannot take suffixes. The independent genitive particle must be used, e.g.

kʸálo	'bride'	*kʸálo díyi*	'my bride'
xə́ppo	'wedding veil'	*xə́ppo díyi*	'my wedding veil'

The explanation for this is that these endings derive historically from the diminutive ending *-*ōn* in the absolute state and pronominal suffixes cannot be added to the absolute state of nouns (§10.6.). The word *qáṭu* 'female cat' is an exceptional case. This form, which is used when the noun is indefinite, is also a vestige of the absolute state. Unlike nouns ending in *-o*, however, it has also a form deriving from the determined state of earlier Aramaic, which is used when the noun is definite, viz. *qaṭúθa*, and pronominal suffixes can be added to this latter form in the regular way:

qáṭu	'a cat'	*qaṭúθa*	'the cat'	*qaṭúθi*	'my cat'

Loanwords ending in a consonant can in principle take pronominal suffixes, e.g.

párzun	'bag'	*parzúni*	'my bag'
ṣábun	'soap'	*ṣabúni*	'my soap'
tŭ́tun	'tobacco'	*tŭtúni*	'my tobacco'
ṭáxin	'tahini'	*ṭaxíni*	'my tahini'

If an /*a*/ or /*e*/ vowel has been centralized to /*ə*/ in the final unstressed closed syllable, the vowel is restored when the stress shifts onto this syllable after the addition of the suffix, e.g.

mánzəl	'room'	*manzáli*	'my room'
čángəl	'fork'	*čangáli*	'my fork'
čéypəs	'teapot'	*čeypási*	'my teapot'
kúlpət	'family'	*kulpáti*	'my family'
ʾatnábəl	'car'	*ʾatnabéli*	'my car'

There is, however, a tendency to avoid using suffixes on some loanwords ending in a consonant. This applies mainly to nouns containing an original short high vowel in the final syllable. The suffix is attached to a juxtaposed independent genitive particle, e.g.

habrésəm	'silk' (Kurd. hevrîşim, Arab. *ʾibrīsim*)
habrésəm díyi	'my silk'

mášməš	'apricot' (Kurd. mişmiş, Arab. *mišmiš*)
mášməš díyi	'my apricot'

fálfəl	'pepper' (Arab. *filfil*)
fálfəl díyi	'my pepper'

7.3. THE INDEPENDENT GENITIVE PARTICLE

3rd pers.	ms.	*díye*
	fs.	*díya*
	pl.	*díyay*, *díyɛy*, *díyey*, *díyɛ*, *díya*

2nd pers.	ms.	*díyux*
	fs.	*díyəx*, *díyax*
	pl.	*diyɛ́xu*

1st pers.	sing.	*díyi*
	pl.	*díyən*, *díyɛni*

This particle consists of the base *diy-* which is inflected with the pronominal suffixes. Other forms of the base of this particle that are attested in the NENA dialects include *did-*, *diδ-* and *d-*. The */y/* glide element has arisen by weakening of an original */d/* or */δ/*, i.e. *díyi* < **dídi/díδi*. An alternative explanation is that the original base was *d-*, which was extended to *diy-*. Several NENA dialects have the base *d-* in at least some of the paradigm of the genitive particle, e.g. *dohun* 3pl., *doxun* 2pl., *deni* 1pl. (J. Amedia), *d-o* 3s., *d-oni* 3pl. (J. Sanandaj, J. Sulemaniyya). It is also relevant to note by way of comparison that in the C. Barwar dialect the preposition *b-* has the extended base *biy-* when pronominal suffixes are attached, e.g. *bíye* 'in him', *bíya* 'in her', etc. (§13.3.2.).

A rare variant of the 2pl. form with a final *-n* is attested in text A34:

(1) *qəm-daryála b-ay-káwe diyɛ̀xun*ˈ 'It put it in your window' (A34:6)

This is best analysed as having arisen by the attachment of an augment suffix *-n* rather than as a conservative form preserving the original *-n*. The

informant for this text has a tendency to add this augment to pronominal forms.

7.4. DEMONSTRATIVE PRONOUNS

There are three series of demonstrative pronouns, which can be designated 'speaker deixis', 'far deixis' and 'default'. These labels refer to the use of the pronouns to refer to entities in the extra-linguistic situation. The system is 'hearer orientated', in that the deictic centre for all pronouns is the hearer. The speaker deixis forms are used to direct the hearer's attention to items that are near to the speaker. The far deixis forms are used to direct the hearer's attention to items that are in sight but far from both the speaker and the hearer. The default forms are used when the item is with the hearer in the deictic centre. They do not point the hearer's attention to anything remote from him in the surrounding environment. The demonstrative pronouns are also used anaphorically to refer back to items that have been mentioned in the preceding discourse rather than to refer to items that exist in the extra-linguist environment. The default pronoun is the one that is most commonly used in this function (for further details see §14.3.2.).

All three series of demonstratives can be used independently or attributively in combination with a noun. The independent and the attributive forms are identical throughout most the paradigm, the only exception being in the default forms, where the singular forms are liable to contract and the plural form is shortened.

Independent forms

	Speaker deixis	Far deixis	Default
ms.	ʾáwwa	ʾăwáha ~ wáha	ʾaw
fs.	ʾáyya	ʾăyáha ~ yáha	ʾay
pl.	ʾánna	ʾănáha ~ náha	ʾáni

Attributive forms

	Speaker deixis	Far deixis	Default
ms.	ʾáwwa	ʾăwáha ~ wáha	ʾaw ~ ʾo
fs.	ʾáyya	ʾăyáha ~ yáha	ʾay ~ ʾey ~ ʾɛ ~ ʾa
pl.	ʾánna	ʾănáha ~ náha	ʾan

Examples: *ʾáwwa kθawa* 'this book (near the speaker)', *ʾăwáha kθawa* 'that book (over there)', *ʾáw kθawa ~ ʾo-kθawa* 'that book (that is with you)'.

The default forms are structurally the least complex. The independent forms are identical to the independent personal pronouns. A rare variant of the singular attributive forms with an augmented *-ən* suffix is attested in text A34: *ʾáwən, ʾáyən*, e.g.

(1) *bṭ-ázən xázyən ʾáwən-nura ʾèkɛle*ˈ 'I shall go and see where that fire is' (A34:9)

(2) *xázyəlla ʾáyən bráta l-gàre*ˈ 'They saw that girl on the roof' (A34:6)

The speaker deixis pronouns appear to have been formed historically by suffixing a *-*ha* element to the default form. The development would have been as follows:

ms.	ʾáwwa	< *ắwa	< *áwha
fs.	ʾáyya	< *ắya	< *áyha
pl.	ʾánna	< *ắna	< *ánha

After the elision of the larygnal /h/ the vowel in the preceding syllable remained short (§2.2.2.2.) and the gemination of the medial consonant developed secondarily after this stressed short vowel (§3.3.2.). In some NENA dialects the diphthongs /aw/ and /ay/ in the singular forms have contracted and the following /h/ is preserved, e.g. *ʾoha* and *ʾeha* (C. Derabun, J. Dohok).

The far deixis pronouns have been formed by suffixing a further *-ha* element to the speaker deixis forms without the secondary gemination. The unstressed initial short *ʾă-* is sometimes elided. Furthermore the /áha/ sequence sometimes contracts to /a/ in accordance with the tendency of the laryngal /h/ to be elided between vowels (§4.4.). This contraction is not marked in the transcription, e.g.

(3) *ʾu-ʾáp-yaha* [yæː] *bráta xéta* 'also that other girl' (A28:37)

(4) *réšux mattánne gu-d-yàha* [yæː] *káwe*ˈ *ṭ-íla pyàša*ˈ 'I shall put your head in that hole that is remaining' (A25:62)

Intensive variants of the far deixis forms exist with the long stressed vowel /á/ being replaced by the sequence /aʾ/:

ms.	ʾăwáʾha ~ wáʾha
fs.	ʾăyáʾha ~ yáʾha
pl.	ʾănáʾha ~ náʾha

These intensive forms are used to refer to an item that lies a considerable distance from the interlocutors.

Another demonstrative element with the form ʾəd- has been preserved in the adverbial expressions ʾə́dyo 'today', ʾə́dlɛle 'tonight' and ʾə́ššeta (< *ʾədšeta) 'this year'. This is not used productively in other contexts. It is probably derived historically from *da- or *ha-d-. In some NENA dialects similar forms, with an alveolar or interdental consonant, are used productively as speaker deixis attributive demonstratives, e.g. ʾad (C. Ankawa, C. Baṭnaya, C. Hertevin, C. Tisqopa), ʾaθ ~ ʾað (C. Alqosh), ʾaθ (C. Telkepe).

Some speakers sporadically use the form ʾa- as a singular attributive demonstrative with speaker deixis, e.g. ʾá-naša 'this man' (A8:4), ʾa-ṣ̀ùpra[1] 'this beauty' (A8:41). This should be interpreted as interference from the koine dialect of Urmi origin.

7.5. INTERROGATIVE PRONOUNS

ʾέni	'who?'
mắni	
ʾέni	'which?'
mo, mu, maw	'what'
mut	
módi, máwdi	
ma	

Out of the two forms used for 'who?', ʾέni is the more frequent. It is identical with the form for 'which'. This is cognate with Syriac ʾaynā. Unlike in Syriac, however, it is invariable and does not inflect for gender or number, e.g. ʾέnile? 'Who is he?', ʾέnila? 'Who is she/Who are they?', ʾέni mə́n d-an-baxtáθa? 'which of those women?', ʾέni gʸáwṛa? 'which man?', ʾέni báxta 'which woman?', ʾέni náše? 'which people?' The final -i appears to have developed by analogy with the presence of final -i in the other interrogative pronouns mắni and módi.

The form *mǎni* is derived from *man (cf. Syriac *man*) with the addition of a final augment *-i*. In many dialects this is the normal form for 'who?' but in C. Barwar it is used only sporadically, e.g.

(1) *ʾan-náše mǎnila?¹* 'Who are those people?' (A14:78)
(2) *mǎniwət?¹* 'Who are you?' (A23:26)
(3) *ʾánna tre-yále mǎnile mə́sya dəryə́lla gu-šaqìθa?¹* 'Who could have put these two children in the stream?' (A8:15)

The most primitive form of the inanimate interrogative pronoun 'what?' is *ma*, but this is only used sporadically in the dialect, e.g.

(4) *xúwwe mà ṭ-áwəð b-an-álpa dáwe¹* 'What will the snake do with those thousand gold coins?' (A1:8)
(5) *xáθi mà-ləx?¹* 'Sister, what is the matter with you?' (A34:12)

The form *mo* has developed historically from a combination of the interrogative *ma* with the 3ms. demonstrative pronoun *ʾaw*, thus: *mo* < *maw* < *ma + *ʾaw*. The uncontracted form *maw*, in fact, is occasionally used in the dialect. By a similar process in some NENA dialects (e.g. J. Arbel, J. Sulemaniyya, C. Qaraqosh) this interrogative pronoun has the form *may*, which developed from a combination of *ma* with the demonstrative pronoun *ʾay* (cf. Khan 1999: 86; 2002: 83; 2004: 77). One may compare also the Syriac forms *mānā* and *mān*, which arose by the coalescence of *mā* with the demonstrative element *dnā* (Nöldeke 1904: 47) and Jewish Babylonian Aramaic *may*, which developed by combining *mā* with the demonstrave *hāy* (Epstein 1060: 23, 28). In fast speech the /o/ vowel of *mo* is sometimes raised to /u/, e.g.

(6) *mò-bǎyət?¹* 'What do you want?' (A13:13)
(7) *mò ʾóðən ʾána?¹* 'What should I do?' (A25:37)
(8) *ṭla-mò θéləx drangèθa?¹* 'Why (literally: for what) have you come late?' (A25:57)
(9) *mú bṭ-àwe?¹* 'What will it be?' (= what does it matter?) (A18:33)
(10) *mù-y-amri?¹* 'What do they say?' (A25:64)

It is combined with 1st and 2nd person copula elements in compound verbal constructions, but is not combined with 3rd person copula forms, e.g.

(11) *ʾáti mòt wáḏa táma.ʔ*ꜞ 'What are you doing here?' (A25:60)

(12) *qa-mòt hátxa wáḏa bíyi*ꜞ 'Why (literally: for what) are you doing this to me?' (A25:42)

(13) *ʾána mùn wíḏa.ʔ*ꜞ 'What have I done?' (A14:23)

The most frequently used form of the inanimate demonstrative is *módi*, e.g.

(14) *mòdi wídle.ʔ*ꜞ 'What did he do?' (A25:19)

(15) *šə́mmə d-ɛ-bráta mòdile.ʔ*ꜞ 'What is the name of the girl?' (A25:4)

(16) *qurṭána m-mòdi mtúrṣa.ʔ*ꜞ 'What is the cloth made out of?' (B5:127)

(17) *mòdit mára.ʔ*ꜞ 'What do you say?' (A25:60)

One possible explanation for the presence of the /d/ element in this form would be to identify it with the relative particle *D*, which would have arisen in copula constructions such as *mo-d-ile* 'What (is it) that it is?' There is a problem, however, in this reconstruction in that the relative particle is elsewhere regularly devoiced to *ṭ* before the copula (§4.4.), e.g.

(18) *ʾáwwa dúxa ṭ-íle prìma*ꜞ 'this sacrifice that has been slaughtered' (B5:71)

(19) *ʾáyya bráta šapìrtə ṭ-íla dmíxta kə̀sli*ꜞ 'this beautiful girl who has slept with me' (A26:6)

(20) *ʾo-ṭ-ile-bə̀nya*ꜞ 'whoever has built' (B10:52)

A more likely explanation, therefore, is that the form *módi* is a contraction of *mo-məndi* 'what thing'. This is supported by the fact that some NENA dialects (e.g. C. Bebede, C. ɛnəške, C. Kharjawa) have the interrogative form *mándi*, which can be reconstructed as *ma-məndi. The neighbouring dialect C. Shōsh-u-Sharmən has *mádi* with contraction of the /n/ as in the form *modi*. A similar development may lie behind the Upper Ṭiyari form *ʾə́di* 'which?', 'who?' < *ʾay-məndi*. Speakers of the C. Barwar dialect occasionally use the uncontracted form *mawdi* instead of the normal form *modi*, e.g. *màwdile.ʔ*ꜞ 'What is it?' (A31:9).

Occasionally the final vowel of *módi* is elided and the form is shortened to *mut* with devoicing of the final /d/, e.g.

(21) *mút qála dìyi.ʔ*ꜞ 'What is my voice?' (A25:44)

(22) *mùt ṭ-óðət b-masárqa.ʔ*ꜞ 'What will you do with the comb?' (A32:3)

(23) *ʾaṣə́rta mùt ṭ-áwəð.ʔ*ꜞ 'In the evening what does he do?' (A30:22)

Finally, we should mention in this context the contracted interrogative pronoun of the construction *mídən* 'I do not know'. This derives historically from *mo yắðən* 'What do I know?' It has now, however, lost its interrogative sense and functions as a negator, as shown by phrases such as *mídən mòdi*[1] 'I don't know what'.

7.6. REFLEXIVE AND RECIPROCAL PRONOUNS

Reflexive pronouns are formed by attaching pronominal suffixes to the Kurdish loan-word *gana* (often pronounced with palatalization of the /g/: *gʸana*), which literally means 'soul' or 'person':

3rd pers.	ms.	*gáne*
	fs.	*gána*
	pl.	*ganáy, ganέy, ganéy, gánɛ, gána*
2nd pers.	ms.	*gánux*
	fs.	*gánəx, gánax*
	pl.	*ganéxu*
1st pers.	sing.	*gáni*
	pl.	*gánən, gánan, ganέni*

The reciprocal pronoun is the invariable form *ġðaðe*. The historical development of this is < *xðaðe* < *ḥðaðe*. The initial consonant is regularly pronounced voiced by partial assimilation to the adjacent voiced fricative /ð/.

7.7. PRONOUN OF ISOLATION

The base *xoð-* with pronominal suffixes is used for expressions such as 'by himself' denoting isolation:

3rd pers.	ms.	*xóðe*
	fs.	*xóða*
	pl.	*xoðáy, xóðέy, xoðéy, xóðɛ, xóða*

2nd pers.	ms.	*xóðux*
	fs.	*xóðəx, xóðax*
	pl.	*xoðéxu*
1st pers.	sing.	*xóði*
	pl.	*xóðən, xóðan, xoðéni*

VERBS

8.1. Verbal Stems

Verbs with triliteral roots are used in one of three stems with distinctive patterns of inflection. In addition to these there are a number of quadriliteral verbs. The various parts that are used in the formation of verbal forms in each of these four categories are given below:

Stem I

pθx I 'to open'

Present base:	*paθəx-*
Past base:	*pθix-*
Resultative participle:	*pθixa*
Imperative:	*pθux*
Infinitive:	*pθaxa*
Verbal noun:	*pθaxta*

Stem II

m-šlx II 'to strip'

Present base:	*mšaləx-*
Past base:	*mšolǝx- ~ mšuləx-*
Resultative participle:	*mšulxa*
Imperative:	*mšaləx*
Infinitive:	*mšaloxe*
Verbal noun:	*mšalaxta*

Stem III

m-plx III 'to use'

Present base:	*mapləx-*
Past base:	*mupləx-*
Resultative participle:	*mupəlxa*
Imperative:	*mapləx*
Infinitive:	*maploxe*
Verbal noun:	*maplaxta*

Quadriliteral

m-knkš 'to drag'

Present:	*mkankəš-*
Past:	*mkunkəš-*
Resultative participle:	*mkunəkša*
Imperative:	*mkankəš*
Infinitive:	*mkankoše*
Verbal noun:	*mkankašta*

The three triliteral stems are the descendants of the *pᵊˁal*, *paˁˁel* and *ʾap̄ˁel* stems respectively in earlier Aramaic. As in most NENA dialects, the forms of the imperative and infinitive in stems II and III have been adapted to conform to the structure of the present and past bases, which are the descendants of the active and passive participles of earlier Aramaic. This has resulted in the analogical extension of the *m-* prefix of the erstwhile *paˁˁel* and *ʾap̄ˁel* participles to the imperative and the infinitive. The original forms of the *paˁˁel* and *ʾap̄ˁel* imperative and infinitive without the *m-* prefix are preserved only in a few dialects on the Moṣul plain, such as C. Qaraqosh:

	C. Barwar	C. Qaraqosh
Stem II		
Imperative	*mqaṭəl*	*qaṭəl*
Infinitive	*mqaṭole*	*qaṭolə*
Stem III		
Imperative	*maqṭəl*	*ʾaqṭəl*
Infinitive	*maqṭole*	*ʾaqṭolə*

In fast speech in the Barwar dialect the */m/* in the initial sequence */mC/* of stem II and quadriliteral verb forms is sometimes elided (§4.2.). This is a secondary phonetic process and affects all bases. The */m/* of quadriliteral verbs is particularly prone to be elided in this way:

Stem II

m-šlx II 'to strip'

Present base:	*šaləx-*
Past base:	*šoləx-* ~ *šuləx*
Resultative participle:	*šulxa*

Imperative:	*šaləx*
Infinitive:	*šaloxe*
Verbal noun:	*šalaxta*

Quadriliteral

m-knkš 'to drag'

Present:	*kankəš-*
Past:	*kunkəš-*
Resultative participle:	*kunəška*
Imperative:	*kankəš*
Infinitive:	*kankoše*
Verbal noun:	*kankašta*

8.2. Inflection of the Present Base

8.2.1. *Inflectional S-Suffixes*

The present base is derived historically from the active participle of earlier Aramaic. As is usual in the NENA dialects, it is inflected for person and number by a series of suffixes. The suffixes of the 1st and 2nd persons are in origin enclitic pronouns. Most of the suffixes of the 1st and 2nd persons have two variants, which will be designated 'default' and 'long' forms respectively. The suffixes on verbs with a strong final radical are as follows:

		Default	Long
3rd pers.	ms.	——	
	fs.	*-a*	
	pl.	*-i*	
2nd pers.	ms.	*-ət*	*-eti*
	fs.	*-ət*	*-ati*
	pl.	*-itu*	
1st pers.	ms.	*-ən*	*-ena*
	fs.	*-ən*	*-ana*
	pl.	*-əx*	*-exi*

For convenience this set of suffixes, which express the subject of the verb, will be referred to as S-suffixes.

8.2.2. *Stem I Verbs*

When these suffixes are added to the present base of stem I verbs, the /a/ vowel of the base form *paθəx-* is in a stressed open syllable only in the 3ms. form, which has zero inflection. In accordance with the rules of vowel lengthening, the /a/ in the 3ms. is long. When inflection suffixes for the other forms are attached, the vowel after the second radical of the base is elided and the preceding syllable becomes closed. As result of this, the long vowel is shortened. The full paradigm of the inflection of present base *paθəx-* is as follows:

		Default	Long
3rd pers.	ms.	*páθəx*	
	fs.	*páθxa*	
	pl.	*páθxi*	
2nd pers.	ms.	*páθxət*	*paθxeti*
	fs.	*páθxət*	*paθxati*
	pl.	*paθxítu*	
1st pers.	ms.	*páθxən*	*paθxena*
	fs.	*páθxən*	*paθxana*
	pl.	*páθxəx*	*paθxexi*

The long forms of the 1st and 2nd persons differ from the corresponding default forms in the augment of a final vowel. In the long forms the position of stress is variable. It may fall on the /a/ vowel of the base as in the default forms: *páθxeti, páθxati, páθxena, páθxana, páθxexi*. Alternatively it may be shifted to the penultimate vowel of the suffix: *paθxéti, paθxáti, paθxéna, paθxána, paθxéxi*. In the 1st and 2nd person singular there is a distinction in gender only in the long forms. The gender distinction has been levelled in the default forms. This has taken place by a process of vowel attentuation in which the original /e/ and /a/ in the unstressed closed syllables of the suffixes have been centralized to /ə/ (§2.3.5., §2.5.5.):

| 2ms. | **páθxet* | > | *páθxət* |
| 2fs. | **páθxat* | > | *páθxət* |

1ms.	*páθxen	>	páθxən
1fs.	*páθxan	>	páθxən

An original *a* is preserved when the stress shifts onto the closed syllable after the addition of further inflectional suffixes. An original *e*, however, is not preserved in this environment but also here is centralized to /ə/:

2ms.	*paθxétwa	>	paθxə́twa
2fs.	*paθxátwa	>	paθxátwa
1ms.	*paθxénwa	>	paθxə́nwa
1fs.	*paθxánwa	>	paθxánwa

In accordance with this process, we can reconstruct an original *e* in the inflectional ending of the 1pl., since the centralized vowel /ə/ occurs even when it is stressed:

1pl.	*páθxex	>	páθxəx
	*paθxéxwa	>	paθxə́xwa

In some sporadic cases when the vowel duration is extended at the end of an intonation group an original *e* is preserved in inflectional suffixes, e.g. *là-gawrēn!* 'I (m.) shall not marry!' (A16:5), *'ána màṣlēn*[1] 'I shall deduct' (B5:9).

The long forms of the 1st person singular suffixes *-ena* (1ms.) and *-ana* (1fs.) are archaic forms, which preserve the original final vowel of the 1st personal pronoun. Since it is an open syllable the vowel is long and it does not undergo attenuation.

The final *-i* of the long 2s. and 1pl. suffixes *-eti* (2ms.), *-ati* (2fs.) and *-exi* (1pl.) is an innovative augment. It can be compared to the *−i* augment that has been attached to the independent 2s. pronoun *'áti* (< *'at*) and the interrogative pronouns *mắni* 'who?' (< *man*) and *dáxi ~ dax* 'how?'

As is the case in the other NENA dialects, some of the inflectional endings of the present base of verbs with strong radicals appear to have been transferred by analogy from the inflection of final weak verbs.[1] This applies to the 1s., 2s. forms. These analogical relationships are shown in the following table, which shows the corresponding forms in Classical Syriac:

---

[1] Cf. Hoberman (1988: 567–568, 571–572) and Khan (1999: 91).

	Syriac Strong verb	Syriac Final weak	C. Barwar Strong verb	C. Barwar Final weak
2ms.	qāṭlat	ḥāzēt	qáṭlət ~ -eti	xázət ~ -eti
2fs.	qāṭlat	ḥāzyat	qáṭlət ~ -ati	xázyət ~ -ati
2pl.	qāṭlittōn	ḥāzēttōn	qaṭlítu	xazétu
1ms.	qāṭəlnā	ḥāzēnā	qáṭlən ~ -ena	xázən ~ -ena
1fs.	qāṭlānā	ḥāzyānā	qáṭlən ~ -ana	xázyən ~ -ana
1pl.	qāṭlinnan	ḥāzēnnan	qáṭləx ~ -exi	xázəx ~ -exi

The relationship of the 1st and 2nd person suffixes of the C. Barwar verbs to the suffixes of the Syriac final weak verb is clearest in the alternative long forms, which preserve the original vowel. In the default forms the vowel has been attenuated to /ə/. The distinction between the forms of the 2pl. suffixes of the Syriac strong and final weak verbs has been preserved in the C. Barwar suffixes. The fact that Syriac has an *e* quality vowel in this suffix in the final weak verb whereas C. Barwar has the /ɛ/ vowel (-ɛtu) reflects a different phonetic development of an original diphthong *ay* in the plural active participle: Syriac *ḥāzayn > ḥāzē(n)*; C. Barwar *ḥāzayn > xazɛ* (see §2.4.1.). The long form of the 1pl. suffix on strong and final weak verbs –*exi*, however, has an /e/ vowel and, as remarked above, an original *e* must be reconstructed for the default form of the suffix -*əx*. This vowel could not have developed by contraction of *ay*. It may have arisen by analogy with the /e/ in the 1ms. long form –*ena* and the original *e* in short form *en > *ən*. The /x/ in the 1pl. suffix corresponds to the /x/ of the independent pronoun ʾaxni. Note that the original phonetic shape of the suffix has been preserved in the J. Amedia form *qaṭlaxni*. This reflects a different historical development from that of the enclitic pronoun in Syriac, in which the equivalent consonant has been elided.

8.2.3. *Stem II Verbs*

The same inflectional endings are attached to the present base of stem II verbs that have a strong final radical. As in stem I, when inflectional vowels are added, the short /ə/ of the second syllable of the base is elided. The stress remains on the first syllable of the present base, with the exception of the 2pl. form, e.g.

m-šlx II 'to strip'

		Default	Long
3rd pers.	ms.	*mšáləx*	
	fs.	*mšálxa*	
	pl.	*mšálxi*	
2nd pers.	ms.	*mšálxət*	*mšalxeti*
	fs.	*mšálxət*	*mšalxati*
	pl.	*mšalxítu*	
1st pers.	ms.	*mšálxən*	*mšalxena*
	fs.	*mšálxən*	*mšalxana*
	pl.	*mšálxəx*	*mšalxexi*

This stem is the descendant of the *paᶜel* of earlier Aramaic, but there is no vestige of the original gemination of the second radical. Even in the 3ms. form *mšáləx*, where the middle radical is followed by a vowel, the gemination has been lost and the preceding vowel lengthened as a result of a general phonetic process in the language (see §3.3.1.).

As remarked above, the initial /m/ in the opening cluster *mC-* of this stem is frequently elided: *šaləx, šalxa, šalxi*, etc.

The forms with long suffixes may take the stress either on the /a/ vowel of the base or on the penultimate vowel of the suffix, e.g. *mšálxeti ~ mšalxéti, mšálxati ~ mšalxáti*, etc.

In a few verbs a paradigm with a slightly different syllabic structure is used. It has a short /a/ vowel throughout and has a stressed epenthetic vowel between the final two radicals in forms with inflectional endings. This variant type of inflection will be referred to as stem IIa, e.g.

m-tmz IIa 'to clean'

		Default	Long
3rd pers.	ms.	*mtăˊməz*	
	fs.	*mtăméza*	
	pl.	*mtămézi*	
2nd pers.	ms.	*mtămézət*	*mtăməzeti*
	fs.	*mtămézət*	*mtăməzati*
	pl.	*mtăməzítu*	

1st pers.	ms.	*mtămə́zən*	*mtăməzena*
	fs.	*mtămə́zən*	*mtăməzana*
	pl.	*mtămə́zəx*	*mtăməzexi*

On some occasions the consonant following the short vowels in this conjugation, especially when preceded by a stress, is geminated by a secondary process, e.g. *mtámməz* 'he cleans', *mtămə́zza* 'she cleans'.

The verbs that have the stem IIa type of conjugation fall into two categories. The first includes verbs that are derived from adjectives and nouns containing a short /a/ in the first syllable. Verbs in this category include *m-tmz* 'to clean' (< *tăməz* 'clean'), *m-zrn* 'to become yellow' (< *zărin* 'yellow, golden'), *m-qrn* 'to become big' (< *qărana* 'big'), *m-qlm* 'to crop protruding branches' (< *qălama* 'protruding branch'). The adjectives *tăməz* and *zărin* are loanwords from Kurdish. The second category are loaned Arabic form II verbs (*faꜥꜥala*) or form V verbs (*tafaꜥꜥala*), both of which are conjugated as stem II in the Aramaic dialect. The short /a/ of this type of stem II conjugation preserves the short vowel of the verbal form in the source language, e.g. *mꜥăqəmə̀xwale* 'We used to sterilized it' < Arab. *ꜥaqqama* (B10:77), *ta-t-ṭăbəqàwa* 'so that it was pressed' < Arab. *taṭabbaqa* (B10:23).

8.2.4. *Stem III Verbs*

In the conjugation of the present base of stem III, *maCCəC*, the short /ə/ in the second syllable is elided when inflectional endings are added. The resulting cluster *CCC* is broken by the insertion of a short epenthetic /ə/ either between the first and second consonants or between the second and third consonants. The epenthetic takes the stress when it is in penultimate position:

m-plx III 'to use'

		Default	Long
3rd pers.	ms.	*mápləx*	
	fs.	*mapə́lxa*	
		maplə́xa	
	pl.	*mapə́lxi*	
		maplə́xi	
2nd pers.	ms.	*mapə́lxət*	*mapəlxeti*
		maplə́xət	*mapləxeti*

	fs.	*mapə́lxət*	*mapəlxati*
		maplə́xət	*mapləxati*
	pl.	*mapəlxítu*	
		mapləxítu	
1st pers.	ms.	*mapə́lxən*	*mapəlxena*
		maplə́xən	*mapləxena*
	fs.	*mapə́lxən*	*mapəlxana*
		maplə́xən	*mapləxana*
	pl.	*mapə́lxəx*	*mapəlxexi*
		maplə́xəx	*mapləxexi*

The consonant following a stressed epenthetic in an open syllable is occasionally geminated by a secondary process, e.g. *maplə́xxa* 'she uses' < *maplə́xa*. The forms with long suffixes take the stress either on the vowel before the second radical, as in the default forms (e.g. *mapə́lxeti*, *mapə́lxati*, etc.), or on the penultimate vowel of the suffix (e.g. *mapəlxéti*, *mapəlxáti*, etc.).

8.2.5. *Quadriliteral Verbs*

The present base of quadriliteral verbs has a syllabic structure that is similar to that of stem III present bases, viz. *mCaCCəC-*. When the inflectional endings are added, the /ə/ of the final syllable of the base is elided, which results in the cluster *CCC*. The resulting cluster *CCC* is broken by the insertion of a short epenthetic /ə/ either between the first and second consonants or between the second and third consonants. The epenthetic takes the stress when it is in penultimate position:

m-knkš 'to drag'

		Default	Long
3rd pers.	ms.	*mkánkəš*	
	fs.	*mkanə́kša*	
		mkankə́ša	
	pl.	*mkanə́kši*	
		mkankə́ši	
2nd pers.	ms.	*mkanə́kšət*	*mkanəkšeti*
		mkankə́šət	*mkankəšeti*
	fs.	*mkanə́kšət*	*mkanəkšati*
		mkankə́šət	*mkankəšati*

	pl.	*mkanəkšítu*	
		mkankəšítu	
1st pers.	ms.	*mkanə́kšən*	*mkanəkšena*
		mkankə́šən	*mkankəšena*
	fs.	*mkanə́kšən*	*mkanəkšana*
		mkankə́šən	*mkankəšana*
	pl.	*mkanə́kšəx*	*mkanəkšexi*
		mkankə́šəx	*mkankəšexi*

When the stressed epenthetic occurs in an open syllable between the third and fourth radicals, the fourth radical is sometimes geminated, e.g. *mkankə́šší* 'they drag'. The forms with long suffixes take the stress either on the vowel before the third radical, as in the default forms (e.g. *mkanə́kšeti, mkanə́kšati,* etc.), or on the penultimate vowel of the suffix (e.g. *mkanəkšéti, mkanəkšáti,* etc.). Occasionally epenthetic vowels do not occur in the inflections. This is found where a cluster of the third and fourth radicals in syllable initial position is tolerated, e.g. *mqáždrət* 'You interfere' (*m-qždr*).

8.3. INFLECTION OF THE PAST BASE

8.3.1. *Inflectional L-Suffixes*

As indicated above, the past base derives historically from the ertswhile passive participle in the absolute state. The subject of the past base is expressed by the following inflectional endings:

		Default	Long
3rd pers.	ms.	*-le*	
	fs.	*-la*	
	pl.	*-lɛ, -la*	*-ley, -lay*
2nd pers.	ms.	*-lux*	
	fs.	*-ləx*	
	pl.	*-lέxu*	
1st pers.	s.	*-li*	
	pl.	*-lən*	*-lέni*

For convenience this series of suffixes will be referred as the L-suffixes.

The 3pl. suffix has the same features and historical background as the 3pl. suffix that is attached to nouns and prepositions (§7.2.). The default form *-lɛ* is heard in slow, deliberate speech. In natural, fast speech the final /ɛ/ vowel is usually lowered to /a/, resulting in a form that is homophonous with the 3fs. form *-la*. It is derived from a form such as **-léhən < *-láyhən*, with the elision of the /hən/ element. The long form *–ley ~ -lay* sometimes takes the stress: *qtilléy* 'they killed'. This preserves the original stress position of **-láyhən*. On other occasions, however, the stress is retracted: *qtílley*.

The /ə/ vowel in the 2fs. and 1pl. forms is the result of attenuation of an original /a/: *-ləx < -lax, -lən < -lan*. The /ɛ/ vowel of the long 1pl. form *-léni* appears to have developed by analogy with the /ɛ/ of the 2pl. suffix *-éxu*.

The L-suffixes are in origin pronominal suffixes combined with the preposition *l-*, which were originally agentive phrases in a passive construction ('by him', 'by her', etc.). This construction is characteristic of the NENA dialects. It is significant that in the C. Barwar dialect the preposition *l-* can be used with an agentive sense also when it is prefixed to nouns (§16.2.1.5.). In many NENA dialects, by contrast, the agentive sense of the preposition *l-* is restricted to the L-suffixes, which are attached to the past base of verbs.

Originally the inflection of the past base by L-suffixes was used only with transitive verbs, the agent being expressed by the agentive prepositional phrase and the patient being construed as the grammatical subject of the passive participle. In the C. Barwar dialect, as is generally the case with the Christian NENA dialects, the use of the construction has been extended to intransitive verbs. In several Jewish dialects in the eastern NENA area, it is still restricted to transitive verbs.[2]

8.3.2. *Stem I Verbs*

The full inflection of the past base of the stem I verb *pθx* 'to open', *pθix-*, is as follows:

---

[2] See Hopkins (1989), Khan (2004).

		Default	Long
3rd pers.	ms.	*pθíxle*	
	fs.	*pθíxla*	
	pl.	*pθíxlɛ*	*pθíxley*
		pθíxla	
2nd pers.	ms.	*pθíxlux*	
	fs.	*pθíxləx*	
	pl.	*pθíxlɛxu*	
1st pers.	s.	*pθíxli*	
	pl.	*pθíxlən*	*pθíxlɛni*

The /i/ vowel of the base is derived historically from a long vowel *ī, the original pattern being *qṭīl-, but is pronounced short in the closed syllable in accordance with the general principles of vowel lengthening (§2.2.2.1.).

When the final consonant of the verbal base is /n/ or /r/, the /l/ of the inflectional suffix regularly assimilates to this, e.g.

kpn 'to hunger'	*kpínne* 'He hungered'
špn 'to level (ground)'	*špínne* 'He levelled'
šxn 'to become warm'	*šxínne* 'He became warm'
ṭpn 'to become moudy'	*ṭpínne* 'It became mouldy'
ṭxn 'to grind'	*ṭxínne* 'He ground'
bðr 'to scatter'	*bðírre* 'He scattered'
bṣr 'to reduce'	*bṣírre* 'It reduced, became less'
gmr 'to tan (skin)'	*gmírre* 'He tanned'
nðr 'to dedicate'	*nðírre* 'He dedicated'
nqr 'to inscribe'	*nqírre* 'He inscribed'
nsr 'to saw'	*nsírre* 'He sawed'
nθr 'to fall (leaves)'	*nθírre* 'It fell'
nṭr 'guard'	*nṭírre* 'He guarded'
pšr 'to melt'	*pšírre* 'It melted'
spr 'to wait'	*spírre* 'He waited'
ṣbr 'to dare'	*ṣbírre* 'He dared'
txr 'to remember'	*txírre* 'He remembered'
zmr 'to sing'	*zmírre* 'He sang'
zqr 'to weave, knit'	*zqírre* 'He wove'

An interdental fricative /θ/ or /ð/ that is the final radical of the root shifts to the corresponding stops /t/ or /d/ when in contact with the /l/ or the L-suffix, e.g.

tpθ 'to sneeze'	*tpítle* 'He sneezed'
grð 'to scrub'	*grídle* 'He scrubbed'
ṭrð 'to chase away'	*ṭrídle* 'He chased away'
sqð 'to be bored'	*sqídle* 'He was bored'

In addition to the default form of the past base, transitive verbs also have a feminine and a plural form that express 3fs. and 3pl. patients respectively. In verbs with a strong final radical these have the endings *-a* (fs.) and *-i* (pl.), which are vestiges of the fs. and pl. endings in the absolute state of earlier Aramaic and correspond to the 3fs. and 3pl. S-suffixes of the present base. The past bases of *qṭl* 'to kill', for example, are:

Default	*qṭil-*
fs.	*qṭila-*
pl.	*qṭili-*

The fs. and pl. forms are used to express 3fs. and 3pl. patients as follows: *qṭilále* 'He killed her' (originally: 'She was killed by him'), *qṭilíle* 'He killed them' (originally: 'They were killed by him'). The default form of the base can be used to express a 3ms. patient, e.g. *qṭílla* 'She killed him', *qṭílli* 'I killed him'. 1st and 2nd person pronominal patients, however, cannot be expressed in this way by S-suffixes on the verbal base.

The /l/ of the suffix is retained on the fs. and pl. form of bases ending in the consonants /n/ and /r/ and not assimilated, since there is an intervening vowel, e.g. *ṭxiníle* 'He ground them', *bðiríle* 'He scattered them', *txirále* 'He remembered her'. Similarly, an interdental occurring at the end of the root is retained on the fs. and pl. past bases since the consonant is not in direct contact with the /l/ of the suffix, e.g. *ṭriðále* 'He chased here away', *ṭriðíle* 'He chased them away'.

8.3.3. *Stem II Verbs*

The past base of stem II verbs has the pattern *mqoṭəl-* or *mquṭəl-*, the latter being the more usual in fast speech. The inflection of the past base of the stem II verb *m-šlx* 'to strip' is as follows:

		Default	Long
3rd pers.	ms.	*mšoláxle*	
		mšuláxle	
	fs.	*mšoláxla*	
		mšuláxla	
	pl.	*mšoláxlɛ, mšoláxla*	*mšoláxley*
		mšuláxlɛ, mšuláxla	*mšuláxley*
2nd pers.	ms.	*mšoláxlux*	
		mšuláxlux	
	fs.	*mšoláxləx*	
		mšuláxləx	
	pl.	*mšoláxlɛxu*	
		mšuláxlɛxu	
1st pers.	s.	*mšoláxli*	
		mšuláxli	
	pl.	*mšoláxlən*	*mšoláxlɛni*
		mšuláxlən	*mšuláxlɛni*

The original *pa⁽⁾el* passive participle, from which the stem II past base
is descended, had the form **mquṭṭal* or **mqaṭṭal*. The gemination of the
middle radical has been reduced and the /a/ vowel in the final syllable
has been replaced by /ə/. This loss of the /a/ vowel may have come
about by analogy with the pattern of the present base *mqatəl*. The /ə/ is
elided in the fs. and pl. forms of the base: *mšulxa-* (fs.), *mšulxi-* (pl.), e.g.
mšulxále 'He stripped her', *mšulxíle* 'He stripped them'.

   If the /l/ of the suffix is in contact with a final /n/ or /r/ of the verbal
base, it assimilates to it, e.g.

m-zbn 'to sell'	*mzubánne* 'He sold'
m-bðr 'to scatter'	*mbuðárre* 'He scattered'
m-bqr 'to ask'	*mbuqárre* 'He asked'
m-šdr 'to send'	*mšudárre* 'He sent'

Verbs belonging to the variant stem IIa (§8.2.2.) have a short /u/ vowel
after the first radical, e.g.

m-tmz II 'to clean'

		Default	Long
3rd pers.	ms.	*mtŭmázle*	
	fs.	*mtŭmázla*	
	pl.	*mtŭmázlɛ*	*mtŭmázley*
		mtŭmázla	
2nd pers.	ms.	*mtŭmázlux*	
	fs.	*mtŭmázləx*	
	pl.	*mtŭmázlɛxu*	
1st pers.	s.	*mtŭmázli*	
	pl.	*mtŭmázlən*	*mtŭmázlɛni*

In this variant conjugation the /ə/ is retained in the fs. and the pl. form of the base: *mtŭməza-* (fs.), *mtŭməzi-* (pl.), e.g. *mtŭməzále* 'He cleaned it (f.)', *mtŭməzíle* 'He cleaned them'.

8.3.4. *Stem III Verbs*

The inflection of the past base of the stem III verb *m-plx* 'to use', *mupləx-*, is as follows:

		Default	Long
3rd pers.	ms.	*mupláxle*	
	fs.	*mupláxla*	
	pl.	*mupláxlɛ*	*mupláxley*
		mupláxla	
2nd pers.	ms.	*mupláxlux*	
	fs.	*mupláxləx*	
	pl.	*mupláxlɛxu*	
1st pers.	s.	*mupláxli*	
	pl.	*mupláxlən*	*mupláxlɛni*

The original *ʾap̄ʿel* passive participle, from which the stem III past base is descended, had the form *muqtal* with an /a/ vowel in the final syllable. The /ə/ of the past base, therefore, is an innovation that probably developed by analogy with the /ə/ in the pattern of the present base *maqṭəl*. As we have

seen, this process of analogy affected also the past base of stem II verbs. There is resyllabification in the fs. and pl. forms of the base: *mupəlxa-* (fs.), *mupəlxi-* (pl.), e.g. *mupəlxále* 'He used it (f.)', *mupəlxíle* 'He used them'.

If the /l/ of the suffix is in contact with a final /n/ or /r/ of the verbal base, it assimilates to it, e.g.

m-bṣr 'to reduce'	*mubṣárre* 'He reduced'
m-pšr 'to melt'	*mupšárre* 'He melted'
m-ṭmr 'to bury'	*muṭmárre* 'He buried'
m-xbr 'to telephone'	*muxbárre* 'He telephoned'

8.3.5. *Quadriliteral Verbs*

The inflection of the past base of the quadriliteral verb *m-knkš* 'to drag', *mkunkəš-*, is as follows:

		Default	Long
3rd pers.	ms.	*mkunkášle*	
	fs.	*mkunkášla*	
	pl.	*mkunkášlɛ*	*mkunkášley*
		mkunkášla	
2nd pers.	ms.	*mkunkášlux*	
	fs.	*mkunkášləx*	
	pl.	*mkunkášlɛxu*	
1st pers.	s.	*mkunkášli*	
	pl.	*mkunkášlən*	*mkunkášlɛni*

There is resyllabification in the fs. and pl. forms of the base: *mkunəška-* (fs.), *mkunəški-* (pl.), e.g. *mkunəškále* 'He dragged her', *mkunəškíle* 'He dragged them'.

8.3.6. *Past Base without L-Suffixes*

The past base is used without L-suffixes in passive constructions with 3rd person subjects. The ms., fs. and pl. forms of the base may be used in this way:

Stem I

qṭl 'to kill'

3rd pers.	ms.	*qṭil*	'He was killed'
	fs.	*qṭíla*	'She was killed'
	pl.	*qṭíli*	'They were killed'

The /i/ vowel in the 3ms. form *qṭil* is pronounced short, as it is in the past base before L-suffixes (*qṭille*), in accordance with the general principles of vowel lengthening, although historically it was long (**qṭīl*).

Stem II

m-ṭmr 'to bury'

3rd pers.	ms.	*mṭómər*	'He was buried'
	fs.	*mṭúmra*	'She was buried'
	pl.	*mṭúmri*	'They were buried'

Stem III

m-dbš 'to stick'

3rd pers.	ms.	*múdbəš*	'He was stuck'
	fs.	*mudə́bša*	'She was stuck'
	pl.	*mudə́bši*	'They were stuck'

Quadriliteral

m-šxlp 'to exchange'

3rd pers.	ms.	*mšúxləp*	'He was exchanged'
	fs.	*mšuxə́lpa*	'She was exchanged'
	pl.	*mšuxə́lpi*	'They were exchanged'

A passive construction with this form is only available for the 3rd person. It cannot be inflected to express 1st or 2nd person subjects. This corresponds to the restriction of the inflection of the past base with L-suffixes to the 3rd person (*qṭil-le, qṭila-le, qṭili-le*).

8.4. INFLECTION OF THE RESULTATIVE PARTICIPLE

In addition to the past base, all verbs also have a resultative participle, which is used in some compound verbal forms. This is the descendant of

the passive participle of earlier Aramaic with nominal inflectional endings corresponding to the original determined state. It designates a state that has resulted from an action in the past. This form is available for both transitive and intransitive verbs. Moreover in the modern dialect it can be used with active diathesis when derived from transitive verbs. The term 'resultative' participle, therefore, is preferable to 'passive' participle.

The nominal inflection distinguishes the three categories of masculine singular, feminine singular and plural. The various forms are as follows:

Stem I

ms.	*pθíxa*
fs.	*pθíxta*
pl.	*pθíxe*

Stem II

ms.	*mšúlxa*
fs.	*mšuláxta*
pl.	*mšúlxe*

Stem IIa

ms.	*mtŭmə́za ~ mtŭmə́zza*
fs.	*mtŭmázta*
pl.	*mtŭmə́ze ~ mtŭmə́zze*

Stem III

ms.	*mupə́lxa ~ muplə́xa ~ muplə́xxa*
fs.	*mupláxta*
pl.	*mupə́lxe ~ muplə́xe ~ muplə́xxe*

Quadriliteral

ms.	*mkunə́kša ~ mkunkə́ša ~ mkunkə́šša*
fs.	*mkunkášta*
pl.	*mkunə́kše ~ mkunkə́še ~ mkunkə́šše*

The resultative participle of stems II and III retains the original /a/ after the second radical in the fs. form. The same applies to quadriliteral verbs, which have /a/ after the third radical in the fs. form. This contrasts with the past bases of these stems, in which the original /a/ has been replaced by /ə/ by analogy with the present base. The corresponding vowel in the ms. and pl. forms has been elided and the stress shifted to the preceding syllable.

8.5. INFLECTION OF THE IMPERATIVE

The inflection of the various forms of the imperative is as follows.

Stem I
    sing.   *pθux*
    plural   *pθúxu, pə́θxu*

Stem II
    sing.   *mšáləx*
    plural   *mšálxu*

Stem IIa
    sing.   *mtắməz*
    plural   *mtắməzu*

Stem III
    sing.   *mápləx*
    plural   *mắpəlxu ~ mápəlxu ~ mápləxu*

Quadriliteral
    sing.   *mkánkəš*
    plural   *mkắnəkšu ~ mkánəkšu ~ mkánkəšu*

The stress is generally placed on the first syllable of imperative forms, even where this is the antepenultimate, as is the case with the plural imperatives of stem III and quadriliteral verbs. Note that in one of the variant plural forms of the stem III and quadriliteral imperatives where the /a/ vowel is in an open syllable due to the insertion of a following epenthetic, the /a/ vowel remains short. Another variant form exists with the same syllabic structure in which this /a/ vowel is pronounced long.

    Although in the majority of verbs no gender distinction is made in either the imperative singular or the imperative plural, this distinction is expressed in the imperative singular of weak verbs with a final /y/ radical, e.g. *šty* 'to drink': *šti* 'Drink (ms.)!', *šta* 'Drink (fs.)!', *što* 'Drink (pl.)!' (see §8.12.8.).

8.6. PARTICLES ATTACHED TO VERBAL FORMS

Various particles may be attached to the inflections of the present and past bases. We give the most common of these here. More details concerning their function can be found in chapter 15.

8.6.1. ʾi-

Verb forms derived from the present base sometimes have the particle *ʾi-* prefixed to them, e.g. *ʾi-qaṭəl* 'He kills'. This is associated with the mood expressed by the verb. Forms on which the particle occurs are always indicative in mood. Those that express an irrealis mood regularly lack the particle. The particle is not found, however, in a large proportion of indicative forms in the text corpus. The form *qaṭəl* without the particle should, therefore, be regarded as the default, unmarked form with regard to mood, since it is not restricted to a specific mood. The form *ʾi-qaṭəl*, on the other hand, is the marked form, in that its use is restricted to forms expressing the indicative mood.

A rare variant form of the *ʾi-* prefix is *yi-*, e.g. *yi-măyīle* 'They churn it' (B6:38).

When the verb begins with the laryngal /ʾ/, this is generally elided and the particle has the form of the glide *y-* forming the onset of the first syllable of the verb, e.g. *y-axəl* 'He eats' (< *ʾi + ʾaxəl*). On a few rare occasions the /ʾ/ is retained, e.g. *ʾi-ʾóði* 'They do' (B15:92).

An initial /h/ is not elided after the particle, with the exception of the irregular verb *hwy* 'to be' (§8.16.1.), e.g. *ʾi-hayər b-gane* 'He is confused', *ʾi-harwət mənni* 'You speak with me'. In the very *hwy* the /h/ is generally elided, e.g. *y-awe* 'He is' (< *ʾi-hawe*). Sporadically, however, the /h/ is retained, e.g. *ʾi-háwe* 'It is' (B15:50).

The limited use of verbal forms with the *ʾi-* prefix suggests that the particle is in the process of falling into disuse. It is relevant to note that in closely related Christian NENA dialects in the Lower Ṭiyari region present base verbs have no corresponding prefixed particle. The distribution of the *ʾi-* particle on indicative verbs in C. Barwar is not, however, entirely random and certain principles can be identified. These will be examined in §15.1.3.

In origin the particle is likely to be a reduced form of the verb 'to be' and so related morphologically to the copula. The vowel /i/ is a morphological component of the copula in many of its inflections. Indeed the

3ms form of the copula is sometimes reduced to this component alone without any inflection (§8.7.1.).

8.6.2. bəd-

The particle *bəd-* is prefixed to an inflected form of the present base when it expresses a future action or an apodosis of a condition and in some other syntactic contexts (see §15.1.5.),[3] e.g. *bəd-yawə̀nne* 'I shall give him' (A1:2), *bəd-šáqəl* 'He will take' (A1:5), *qaṭúθi bəd-mnagràlux* 'My cat will gnaw you' (A37:16).

The foregoing cases are examples of the particle used in its full form, which are not very frequently found in the text corpus. In most cases where the particle occurs it is phonetically reduced.

Before verbs beginning with a consonant other than /ʾ/, /h/, /y/, /l/ and /x/, the /d/ segment is generally elided and the particle is reduced to *b-*, e.g. *b-tàrəṣ* 'He will be cured' (A8:33), *b-tàlqət* 'You will be lost' (A8:92), *šàwpi b-šaqlíle* 'He will take my place' (A8:7), *b-qáryən* 'I (f.) shall call' (A8:72). When the initial consonant is unvoiced, the particle is sometimes devoiced by partial assimilation, e.g. *b-šatêxi* [p-ʃæːˈteːxi] 'We shall drink' (A22:28). This devoicing is not represented in the transcription.

When the particle is placed before verbs from roots beginning with /ʾ/, the initial /ʾ/ is usually elided and the particle has the form *bṭ-* with devoicing of the /d/ or simply *ṭ-* with devoicing of the /d/ and elision of the /b/. e.g. *bṭ-ázən ~ ṭ-ázən* 'I shall go' (< *bəd-ʾazən*). The transcription distinguishes here the devoiced consonant as unaspirated /ṭ/ since before a vowel it can contrast phonemically with aspirated /t/, e.g. *ṭ-aza* 'She will go': *taza* 'new'. The /ṭ/ forms the onset of the first syllable of the verb and so is protected from elision. The form *bṭ-* tends to occur where the verb is closely connected with the preceding word ending in a vowel and the /b/ is syllabified with the final syllable of this word, e.g. *ʾána bṭ-àzən*ˈ 'I shall go' (A8:51), *ʾáti bṭ-àzet* 'You shall go' (A8:46), *ʾáyya bṭ-amràlux*ˈ 'She will tell you' (A8:92), *ʾu-bṭ-amrə̀nnux*ˈ 'and I shall say to you' (A8:44), *kúlla bṭ-oðə̀nna-llux*ˈ 'I shall do everything for you' (A8:38). The form *ṭ-* occurs in all contexts, e.g. at the beginning of an intonation group: *ṭ-azítu* 'You shall go' (A8:27), *ṭ-àzət* 'You shall go' (A8:46), *ṭ-ámrət* 'You shall say' (A8:48); in

---

[3] This particle, which is widespread in the NENA dialects, has usually be regarded as a phonetically attentuated form of the verbal construction **baʿe d-* 'he wants to', or **bʿe d-* 'it is desired that' (Nöldeke 1868: 294–296; Pennacchietti 1994a: 281, 1994b: 137; Cohen 1984: 520).

the middle of an intonation group after a preceding vowel: ʾu-xárθa ṭ-àzən¹ 'and then you shall go' (A8:43), políse mù ṭ-óði.ˀ¹ 'What will the policemen do?' (A8:9), hátxa ṭ-óðən b-xàbrux¹ 'You shall act on my instructions thus' (A8:50); in the middle of an intonation group after a preceding consonant: yán ṭ-áθya Bə́lbəl Hazàr¹ 'or Bəlbəl Hazar will come' (A8:74), ʾu-baˁdèn ṭ-áwrən gu-màθa¹ 'and then you will enter the village' (A25:34), lắat kúllən ṭ-àxləx¹ 'So we shall all eat' (A21:21).

A similar development of the particle is found when it is prefixed to the verb hwy 'to be', the initial /h/ of which is elided, e.g. bṭ-awe ~ ṭ-awe 'He will be' (< bəd-hawe). As with initial /ʾ/ verbs, the form bṭ- tends to occur when the verb is closely connected to a preceding word and the /b/ is syllabified with this word in speech, e.g. ʾána bṭ-áwən mə̀nnax¹ 'I shall be with you' (A8:68), mú bṭ-àwe.ˀ¹ 'What will it be?' (= what does it matter?) (A18:33), tre-ṭḷá yománe xéne bṭ-áwət maṭróye xāṣ-sùsa¹ 'You shall ride for two or three more days on horseback' (A8:46).

In other verbs that begin with /h/, the particle bəd- contracts to b-, e.g. hrw 'to speak (harshly)': ʾána b-hér̀wən 'I shall speak'. The /h/ may be elided and the /b/ devoiced to /p/, e.g. p-aqə̀nna (< b-haqənna) 'I shall tell it' (B3:12).

Before /y/ bəd- generally contracts to t-, no doubt because the cluster /ty/ easily forms a syllable onset, e.g. t-yawə̀llux 'He will give you' (A3:4), t-yawínnux 'I shall give you' (A1:10), t-yánnux 'I shall give you' (A22:37). The /t/ is written without a diacritic, since before a consonant /t/ is always pronounced unaspirated. On some occasions the bəd- particle contracts to b-, e.g. b-yawə́lle 'He will give him' (A1:2), b-yawínnəx 'I shall give you' (A40:3). The contraction of bəd- to t- is also found before /l/ and /x/, e.g. t-lawšánna 'I shall wear them' (A14:89), míθe t-xằyi¹ 'The dead will live' (A50:4), which, as is the case with /y/, has come about since /tl/ and /tx/ easily form a syllable onset.

8.6.3. qəm-

This is attached to the present base when it has a pronominal object suffix and gives it a past time reference, e.g. qəm-paθə́xle 'He opened it'. The particle derives historically from *qðam, a fossilized form of a past tense qṭal form verb in earlier Aramaic. The vowel is regularly pronounced /ə/, which has developed by attenuation from /a/: qəm < *qam < *qðam. This contrasts with the particle qam 'before' (< *qðām), which generally retains the /a/ unattenuated (§2.3.5.). As a result one finds minimal pairs such as:

qəm- paθə́xle	'he opened it
qam-paθə́xle	'before he opens it'

The more advanced degree of phonetic attentuation of the particle *qəm-* reflects a greater degree of morphological and semantic bonding to the following verbal form. It cannot be used independently in other contexts, but is indissolubly bound to its position before present base verbal forms. The particle *qam* 'before', by contrast, exhibits greater independence of distribution, in that it can be used also before nouns, in a temporal or spatial sense, e.g. *qam-xa-šábθa* 'a week before', *qam-málka* 'before the king'.

The pronominal suffix may express either a direct or an indirect object, e.g.

(1) *qəm-xazyále gu-dàsta*ˈ 'She saw him on the plain' (A18:24)
(2) *záwna qəm-ʾawə́dlux lebàna*ˈ 'The time made you a trickster' (A1:22)
(3) *ʾaláha qəm-yawə́lla xa-bròna*ˈ 'God gave them a son' (A4:57)
(4) *qəm-hawéla xáθa yak̭ànta*ˈ 'An only sister was born to them' (A18:1)

8.6.4. wa

The particle *wa* may be affixed to verbal forms derived from the present and past bases. This is an invariable fossilized form that is derived historically from the past tense verb **hwā* of earlier Aramaic. It gives present tense verbs a past time reference and past tense verbs a time reference that is remoter in the past. The combination of *-wa* with the future form expressed by the prefix *bəd-* is used in the apodosis of a counterfactual condition and in other syntactic contexts. For details of the various functions of these verbal forms see chapter 15. Examples:

pálət	'He leaves'
palə́twa	'He used to leave'
qəm-paθə́xle	'He has opened it/he opened it'
qəm-paθə́xwale	'He opened it/he had opened it'
bəd-pálət	'He will leave'
bəd-palə́twa	'He would have left'
plíṭle	'He has left/he left'
plíṭwale	'He left/he had left'

The *wa* is infixed before the L-suffixes in forms derived from the past base and in present base forms with the prefixed particle *qəm-*. Stress placement is governed by the general constraint that it must fall on a syllable that contains a radical of the verbal base (§5.4.1.), so it is not moved onto the *wa* particle even when this constitutes the penultimate syllable.

Full paradigms of the *paləṭwa* and *plíṭwale* forms are as follows:

3rd pers.	ms.	*paθə́xwa*
	fs.	*paθxáwa*
	pl.	*paθxíwa*
2nd pers.	ms.	*paθxə́twa*
	fs.	*paθxátwa*
	pl.	*paθxítuwa*
1st pers.	ms.	*paθxə́nwa*
	fs.	*paθxánwa*
	pl.	*paθxə́xwa*

The original /a/ vowel of the 1fs and 2fs suffixes are retained in the stressed syllable and so they are distinguished from the 1ms and 2ms forms in the paradigm. The long forms of the 1st and 2nd person inflectional suffixes of the present base, i.e. *-ena* (1ms), *-ana* (1fs), *-exi* (1pl), *-eti* (2ms) *-ati* (2fs), are not used before the *wa* particle.

3rd pers.	ms.	*pθíxwale*	
	fs.	*pθíxwala*	
	pl.	*pθíxwalɛ*	*pθíxwaley*
		pθíxwala	
2nd pers.	ms.	*pθíxwalux*	
	fs.	*pθíxwaləx*	
	pl.	*pθíxwalɛxu*	
1st pers.	s.	*pθíxwali*	
	pl.	*pθíxwalən*	*pθíxwalɛni*

Verbs ending in the interdental /θ/ or /ð/, which shift to the stops /t/ and /d/ in contact with L-suffixes, generally retain these interdentals when they are separated from the L-suffixes by the *wa* particle, e.g.

tpθ 'to sneeze'	*tpitle*	*tpiθwale*
ṭrð 'to chase'	*ṭridle*	*ṭriðwale*

On some occasions, however, the interdental shifts to a stop by analogy with the *plíṭle* form, e.g.

ṭrð 'to chase'	*ṭrídle*	*ṭrídwale*

8.6.5. *Particles Attached to the Imperative*

Various particles may be attached to imperative forms to give the command that they express added force. These include:

(i) The prefixed particle *də-*, e.g. *də-pluṭ!* 'Go out (sing.)!', *də-plúṭu* 'Go out (pl.)!' The /ə/ vowel of this is sometimes lengthened to /e/, e.g. *de-pluṭ!*

(ii) An assortment of suffixes, which can be classifed as follows:

With the singular imperative:

Default form	Long form
-ga	
-ən	*-ena*
-gən	*-gena*

With the plural imperative

-gu

The stress remains on the first syllable of the imperative form when these suffixes are added, e.g.

Singular imperative:

Default form	Long form
plúṭga	
plúṭən	*plúṭena*
plúṭgən	*plúṭgena*

Plural imperative:

> *plúṭugu*
> *pə́lṭugu*

The prefixed particle *də-* can be combined with an imperative with a supplementary suffix, e.g. *də-pluṭga, də-pluṭən*.

8.7. THE COPULA

The dialect has two categories of copula, the basic copula and the deictic copula. The basic copula has both a present and a past form, whereas the deictic copula has only a present form. In what follows the basic copula will be referred to simply as 'the copula'.

8.7.1. *Present Copula*

The full form of the various inflections of the present copula are as follows:

3rd pers.	ms.	ʾile
	fs.	ʾila
	pl.	ʾilɛ, ʾila, ʾiley
2nd pers.	ms.	ʾiwət
	fs.	ʾiwət, ʾiwat
	pl.	ʾiwɛtu
		ʾiwitu
1st pers.	ms.	ʾiwən
	fs.	ʾiwən, ʾiwan
	pl.	ʾiwəx

The 3rd person forms are inflected with L-suffixes, whereas the 1st and 2nd person forms are inflected with S-suffixes like the present base of verbs. Only the default form of these suffixes are normally used with the copula and not the long forms that can be used with verbs. Long forms are, however, occasionally used in poetic texts, e.g. *ʾo sɛpa, sɛpɛwena* 'I am the same sword' (A52:22).

Some speakers sporadically use the 3pl. form *-ina* with /n/ rather than
-ila, e.g. *ṭuránə ṭ-ína bēl-ʾIráq ʾu-Tùrkiya*ˈ 'the mountains that are between Iraq
and Turkey' (B3:3). This is due to the influence of the C. Urmi dialect.

The copula is most commonly placed after the predicate in a clause,
though in certain circumstances it is put before the predicate. The condi-
tions that determine its position in the clause are examined in §15.3.1.
and §17.1.1.

When it is placed after the predicate, it does not bear its own stress
but is attached to the predicate as an enclitic. This enclitic is ignored by
the stress placement rules and the stress remains on the predicate. If the
predicate ends in a consonant, the copula may retain its full form, e.g.

3rd pers.	ms.	*dū́s-ile*	'He is right'
	fs.	*dū́s-ila*	'She is right'
	pl.	*dū́s-ila*	'They are right', etc.

2nd pers.	ms.	*dū́s-iwət*	
	fs.	*dū́s-iwət*	
	pl.	*dū́s-iwitu*	

1st pers.	ms.	*dū́s-iwən*	
	fs.	*dū́s-iwən*	
	pl.	*dū́s-iwəx*	

If the predicate ends in a vowel, various contractions of the copula take
place. If the final vowel is /a/, the /a/ and the initial /i/ of the copula
contract to the vowel /ɛ/. This is seen in the following paradigm, in which
the copula is cliticized to the predicate *gu-maθa* 'in the village':

3rd pers.	ms.	*gu-máθɛle*	'He is in the village'
	fs.	*gu-máθɛla*	'She is in the village'
	pl.	*gu-máθɛla*	'They are in the village', etc.

2nd pers.	ms.	*gu-máθɛwət*	
	fs.	*gu-máθɛwət*	
	pl.	*gu-máθɛwitu*	

1st pers.	ms.	*gu-máθɛwən*	
	fs.	*gu-máθɛwən*	
	pl.	*gu-máθɛwəx*	

When the interrogative particle *ma* is combined with the copula, the sequence /a-i/ in some cases contracts to /ɛ/ and in others remains uncontracted e.g.

(1) *sállət míya yằðət mèla?ˡ* (< *mà-ila*) 'Do you know what a basket of water is?' (A16:10)
(2) *ràbbənˡ yằðət-mà-yle?ˡ* 'Do you know what a monk is?' (A15:4)

If the predicate ends in any vowel other than /a/, the initial /i/ of the copula is elided and the vowel of the predicate retained, e.g.

babi + *ile*	→	*bábile*	'He is my father'
xoni + *iwət*	→	*xóniwət*	'You are my brother'
rəpye + *ila*	→	*rə́pyela*	'They are lazy'
xəðye + *iwəx*	→	*xəðyewəx*	'We are happy'
kʸalo + *ila*	→	*kʸálola*	'She is the bride'
Mixo + *iwət*	→	*Míxowət*	'You are Mixo'
diyɛxu + *ile*	→	*diyɛ́xule*	'It is yours (pl.)'
babɛxu + *iwən*	→	*babɛ́xuwən*	'I am your (pl.) father'

The copula may be contracted still further in some circumstances, whereby the /w/ of the 1st and 2nd person forms is elided. When this occurs, the sequence /iwə/ and /iwi/ both contract to the close vowel /i/, e.g.

2nd pers.	ms.	*dṹs-it*	'You (ms) are right'
	fs.	*dṹs-it*	'You (fs) are right'
	pl.	*dṹs-itu*	'You (pl) are right', etc.
1st pers.	ms.	*dṹs-in*	
	fs.	*dṹs-in*	
	pl.	*dṹs-ix*	

When the predicate ends in an /a/ vowel, this contracts with the /i/ of the copula inflection to the vowel /ɛ/, e.g.

2nd pers.	ms.	*gu-máθɛt*	'You (ms.) are in the village'
	fs.	*gu-máθɛt*	'You (fs.) are in the village'
	pl.	*gu-máθɛtu*	'You (pl.) are in the village', etc.

1st pers.   ms.   *gu-máθɛn*
               fs.   *gu-máθɛn*
               pl.   *gu-máθɛx*

In fast speech, the /ɛ/ in a closed syllable (i.e. all forms except the 2pl.) is often attenuated to /ə/, e.g. *gu-máθət, gu-máθən, gu-máθəx*. The contracted form of the copula occurs also when the predicate ends in other vowels. In such cases the /i/ of the copula is elided, e.g.

kʸalo + it	→	*kʸálot*	'You are the bride'
babɛxu + in	→	*babɛ́xun*	'I am your (pl.) father'
babɛ́ni + it	→	*babɛ́nit*	'You are our father'
xəðye + ix	→	*xə́ðyex*	'We are happy'

An /e/ vowel in a final closed syllable of such constructions is sometimes attenuated to /ə/, e.g. *xə́ðyəx < xə́ðyex*.

   The 3rd person copula occasionally has the short form *-i* without the L-suffix. When the predicate ends in an /a/ vowel, the combination *a + i* contracts to the vowel /ɛ/. This short form is most easily explained as resulting from the weakening of the articulation of the /l/ and the subsequent coalescence of the remaining vowels. The weakening of the /l/ of L-suffixes both in this and in other contexts is a sporadic phonemenon that is found in the speech of some informants. For the sake of clarity it has been decided to retain the uncontracted form in the transcription when this occurs (§4.5.2.), e.g.

(3) *ʾən-ila zawdàneˈ* ['ən-i] 'If they are left over' (B5:219)
(4) *ʾáwwa xa-nišànqɛleˈ* [niˑ'ʃanqɛ] 'This is a symbolic act' (B5:153)
(5) *lɛ́ðəx ʾèkɛla* ['ɛːkɛ] 'We do not know where she is' (A34:7)

8.7.2. *Past Copula*

The past copula has the *wa* particle as a suffix. It has a number of variant forms. These can be categorized into those that have a /w/ element in the base and those that lack this /w/ element. The forms with a /w/ base are as follows:

3rd pers.	ms.	*ʾiwɛ́wa*	*wɛ́wa*
	fs.	*ʾiwáwa*	*wáwa*
	pl.	*ʾiwɛ́wa*	*wɛ́wa*

2nd pers.	ms.	ʾiwə́ṱwa	wə́ṱwa
	fs.	ʾiwáṱwa	wáṱwa
	pl.	ʾiwɛ́tuwa	wɛ́tuwa
		ʾiwítuwa	wítuwa
1st pers.	ms.	ʾiwə́nwa	wə́nwa
	fs.	ʾiwánwa	wánwa
	pl.	ʾiwə́xwa	wə́xwa

In fast speech these forms are sometimes reduced by the elision of the final *-wa* element or of the initial /w/ when in contact with a preceding consonant. These are treated as allegro forms and are not represented in the transcription (§4.5.5.), e.g.

(1) *xzéle ʾə́kə t-wèwa*¹ [ˈtweː] 'He saw where he was' (A14:92)
(2) *ʾánna xákma náše gabbàre-wɛwa*¹ [gæbˈbærɛwɛ] *xɛlàne*¹ 'These were mighty heroic warriors' (A29:1)
(3) *gu-d-ay-šwíθa t-wewa-dmíxa* [ˈteːwɑ] *xònax*¹ 'In the bed in which your brother had slept' (A8:68)

The forms lacking the /w/ base have two alternant sets for the 3rd person. One set is inflected for gender and number and the other set is not inflected for these and has the same form for the 3ms, 3fs and 3pl.

3rd pers.	ms.	ʾiwa	ʾiyéwa
	fs.	ʾiwa	ʾiyáwa
	pl.	ʾiwa	ʾiyéwa
2nd pers.	ms.	ʾiṱwa	
	fs.	ʾiṱwa	
	pl.	ʾituwa	
1st pers.	ms.	ʾinwa	
	fs.	ʾinwa	
	pl.	ʾixwa	

As is the case with the present copula, the past copula is frequently attached to the end of the predicate as an enclitic. This applies to the forms *wéwa*, *ʾiwa* and *ʾiyéwa* in their various inflections. The form *ʾiwéwa* and its inflections, however, is generally restricted to a non-clitic position before the predicate. When not stressed, the /ɛ/ of the 3pl. forms *-wɛwa*

and *-iyɛwa* and the 2pl. forms *-wɛtuwa* and *-iyɛtuwa* is often lowered to /a/, in accordance with a common phonetic process (§2.3.4.).

When cliticization takes place and the predicate ends in a vowel, the following phonotatic rules regarding the initial /i/ of the copula apply. A distinction should be made between (i) the copula forms that have an open initial syllable, on the one hand, and (ii) those that have a closed initial syllable. If the predicate ends in /a/, the combination of this with the initial /i/ of group (i) coalesces to the vowel /ɛ/, e.g.

ʾáw gu-máθɛyewa	(< *gu-maθa + iyewa*)	'He was in the village'
ʾáw gu-máθɛwa	(< *gu-maθa + iwa*)	
ʾáy gu-máθɛyawa	(< *gu-maθa + iyawa*)	'She was in the village'
ʾáy gu-máθɛwa	(< *gu-maθa + iwa*)	
ʾáni gu-máθɛyɛwa	(< *gu-maθa + iyɛwa*)	'They were in the village'
ʾáni gu-máθɛwa	(< *gu-maθa + iwa*)	
ʾáxtu gu-máθɛtuwa	(< *gu-maθa + ituwa*)	'You (pl.) were in the village'

The combination of the final /a/ with the /i/ of the copula forms in group (ii) coalesces to /ə/, e.g.

2nd pers.	ms.	*gu-máθətwa*	'You (ms.) were in the village'
	fs.	*gu-máθətwa*	'You (fs.) were in the village', etc.
1st pers.	ms.	*gu-máθənwa*	
	fs.	*gu-máθənwa*	
	pl.	*gu-máθəxwa*	

When the predicate ends in /e/, the combination of this with the /i/ of the copula forms in group (i) coalesces to the vowel /e/, whereas its combination with the /i/ of copula forms in group (ii) coalesces to the vowel /ə/, e.g.

ʾáni zórewɛwa	(< *zore + iwɛwa*)	'They were small'
ʾáni zóreyɛwa	(< *zore + iyɛwa*)	'They were small'
ʾáni zórewa	(< *zore + iwa*)	'They were small'
ʾáxtu zóretuwa	(< *zore + ituwa*)	'You (pl.) were small'
ʾáxni zórəxwa	(< *zore + ixwa*)	'We were small'

If the predicate ends in any other vowel, the initial /i/ of the copula forms in both groups is elided, e.g.

ʾáy kʸáloyawa	*(< kʸalo + iyawa)*	'She was the bride'
ʾáy kʸálowa	*(< kʸalo + iwa)*	'She was the bride'
ʾati kʸálotwa	*(< kʸalo + itwa)*	'You (fs.) were the bride'
ʾáw bɛθéxuyewa	*(< bɛθɛxu + iyewa)*	'That was your (pl.) house'
ʾáw bɛθéxuwa	*(< bɛθɛxu + iwa)*	'That was your (pl.) house'
ʾana xoréxunwa	*(< xorɛxu + inwa)*	'I was your (pl.) friend'
ʾáw ʾaθṛéniyewa	*(< ʾaθṛeni + iyewa)*	'That was our land'
ʾáw ʾaθṛéniwa	*(< ʾaθṛeni + iwa)*	'That was our land'
ʾati gu-ʾaθṛénitwa	*(< gu-ʾaθṛeni + itwa)*	'You were in our land'

When the past copula is placed after the predicate, it sporadically carries its own stress, e.g.

(4) *xá gáwṛa xɛlána-w zàxma wéwaˈ* 'He was a powerful, tough man' (A27:1)

(5) *dmìxa wéwaˈ* 'He was asleep' (A8:3)

8.7.3. *Deictic Copula*

The deictic copula is formed by combining the presentative element *ho-* with the enclitic present copula. The most commonly used forms are the following:

3rd pers.	ms.	*hóle*	*(< ho + ile)*
	fs.	*hóla*	*(< ho + ila)*
	pl.	*hólɛ*	*(< ho + ilɛ)*
		hóla	
2nd pers.	ms.	*hot*	*(< ho + iṱ)*
	fs.	*hot*	*(< ho + iṱ)*
	pl.	*hótu*	*(< ho + itu)*
1st pers.	ms.	*hon*	*(< ho + in)*
	fs.	*hon*	*(< ho + in)*
	pl.	*hox*	*(< ho + əx)*

Two further alternative sets of forms exist. In one of these the enclitic copula element has a less contracted form, with a glide /w/ being inserted between the *ho-* and the enclitic:

3rd pers.	ms.	*hówile*	(< *ho* + *ile*)
	fs.	*hówila*	(< *ho* + *ila*)
	pl.	*hówilɛ*	(< *ho* + *ilɛ*)
		hówila	

2nd pers.	ms.	*hówət*	(< *ho* + *wət*)
	fs.	*hówət*	(< *ho* + *wət*)
	pl.	*hówitu*	(< *ho* + *witu*)

1st pers.	ms.	*hówən*	(< *ho* + *wən*)
	fs.	*hówən*	(< *ho* + *wən*)
	pl.	*hówəx*	(< *ho* + *wəx*)

In the second alternative set, the 1st and 2nd person forms are inflected with L-suffixes like the 3rd person forms:

2nd pers.	ms.	*hólux*
	fs.	*hóləx*
	pl.	*hólɛxu*

1st pers.	s.	*hóli*
	pl.	*hólən*
		holɛni

There is a yet another variant set of forms in which the /o/ vowel is replaced by /o'/. These forms are used to point to a very distant item. One may compare the distinction between the two variant far deixis demonstrative forms *'ăwáha* 'that one over there' and *'awá'ha* 'that one far over there':

3rd pers.	ms.	*hó'le*
	fs.	*hó'la*
	pl.	*hó'lɛ, hó'la* etc.

The presentative particle *ho-* is occasionally used alone without being combined with a copula element, e.g. *hó 'an-ṭḷá gerə-qə̀šta¹* 'Here are the three arrows of a bow' (A12:46).

8.8. Compound Verbal Forms

Various compound verbal forms are constructed by combining the verb 'to be' with the resultative participle or with the infinitive. The verb 'to be' takes the form of a copula or of the verb *hwy*. The copula is the normal form in indicative clauses and the verb *hwy* is restricted mainly to subordinate irrealis clauses. When the copula is used, this is either the basic copula or the deictic copula. The basic copula has the status of an enclitic. This is generally attached to the resultative participle or the infinitive, but on some occasions it is attached to some other element in the clause. The deictic copula is placed before the participle or infinitive. Broadly speaking, the function of the compound form containing a resultative participle is to express a state resulting from a past action whereas the function of the construction containing an infinitive is to express an imperfective progressive action. A detailed description of their functions is given in §15.4.

8.8.1. *Deictic Copula + Resultative Participle*

The most commonly used paradigm of compound forms constructed with the deictic copula and the resultative participle is the following. Note that the participle is inflected for number and gender with the inflectional endings of nouns:

prq I 'to finish'

3rd pers.	ms.	*hóle príqa*	'He has finished'
	fs.	*hóla príqta*	'She has finished'
	pl.	*hóla príqe*	'They have finished', etc.
2nd pers.	ms.	*hót príqa*	
	fs.	*hót príqta*	
	pl.	*hótu príqe*	
1st pers.	ms.	*hón príqa*	
	fs.	*hón príqta*	
	pl.	*hóx príqe*	

The deictic copula series with L-suffixes in the 1st and 2nd person forms is also used in this construction:

2nd pers.	ms.	*hólux príqa*
	fs.	*hóləx príqta*
	pl.	*hólɛxu príqe*

1st pers.	s.	*hóli príqa*
	pl.	*hólən príqe*

8.8.2. *Resultative Participle + Present Enclitic Copula*

The forms of the present copula that are cliticized to the resultative participle correspond to the various series that are described in §8.7.1. These are shown in the following paradigm. Note that the stress remains on the participle throughout:

3rd pers.	ms.	*príqɛle*	'He has finished'
	fs.	*príqtɛla*	'She has finished'
	pl.	*príqelɛ*	'They have finished', etc.
		príqela	

2nd pers.	ms.	*príqɛwət*	*príqɛt*
	fs.	*príqtɛwət*	*príqtɛt*
	pl.	*príqewitu*	*príqetu*

1st pers.	ms.	*príqɛwən*	*príqɛn*
	fs.	*príqtɛwən*	*príqtɛn*
	pl.	*príqewəx*	*príqex*

The /ɛ/ and /e/ vowels in the closed final syllable of the forms in the second column are often attenuated to /ə/ in fast speech, which results in the endings merging in form with the inflectional endings of the present base:

2nd pers.	ms.	*príqɛt*	~	*príqət*
	fs.	*príqtɛt*	~	*príqtət*

1st pers.	ms.	*príqɛn*	~	*príqən*
	fs.	*príqtɛn*	~	*príqtən*
	pl.	*príqex*	~	*príqəx*

8.8.3. *Resultative Participle + Past Enclitic Copula*

The past copula series with the /w/ base may be cliticized to resultative participles from all verbs:

pθx I 'to open'

3rd pers.	ms.	*pθíxa-wewa*	'He had opened'
	fs.	*pθíxta-wawa*	'She had opened'
	pl.	*pθíxe-wɛwa*	'They had opened', etc.
2nd pers.	ms.	*pθíxa-wətwa*	
	fs.	*pθíxta-wətwa*	
	pl.	*pθíxe-wetuwa*	
1st pers.	ms.	*pθíxa-wənwa*	
	fs.	*pθíxta-wənwa*	
	pl.	*pθíxe-wəxwa*	

The constructions containing forms of the past copula without the /w/ base (cf. §8.7.2.) exhibit a difference in one detail between transitive and intransitive verbs. Intransitive verbs have the expected forms, e.g.

prx I 'to fly'

3rd pers.	ms.	*príxɛyewa*	'He had flown'
		príxɛwa	
	fs.	*príxtɛyawa*	'She had flown'
		príxtɛwa	
	pl.	*príxeyɛwa*	'They had flown', etc.
		príxewa	
2nd pers.	ms.	*príxətwa*	
	fs.	*príxtətwa*	
	pl.	*príxetuwa*	
1st pers.	ms.	*príxənwa*	
	fs.	*príxtənwa*	
	pl.	*príxəxwa*	

Transitive verbs insert an /l/ in the past copula ending by analogy with the /l/ of the present copula, e.g. *qṭíləlwale* 'He had killed him'. This has

evolved in forms of transitive verbs with pronominal object suffixes, so will
be dealt with together with the pronominal suffixes below (§8.19.4.2.).

8.8.4. *Verb* hwy + *Resultative Participle*

The verb *hwy* is regularly placed before the resultative participle:

3rd pers.	ms.	*háwe príqa*	'He has finished'
	fs.	*háwya príqta*	'She has finished'
	pl.	*háwɛ príqe*	'They have finished', etc.
2nd pers.	ms.	*háwət príqa*	
	fs.	*háwyət príqta*	
	pl.	*hawétu príqe*	
1st pers.	ms.	*háwən príqa*	
	fs.	*háwyən príqta*	
	pl.	*háwəx príqe*	

8.8.5. *Deictic Copula + Infinitive*

The most commonly used paradigm of compound forms constructed
with the deictic copula and the infinitive is the following. The infinitive
remains invariable without inflection:

xpr I 'to dig'

3rd pers.	ms.	*hóle xpára*	'He is digging'
	fs.	*hóla xpara*	'She is digging'
	pl.	*hólɛ xpara*	'They are digging', etc.
		hóla xpara	
2nd pers.	ms.	*hót xpára*	
	fs.	*hót xpára*	
	pl.	*hótu xpára*	
1st pers.	ms.	*hón xpára*	
	fs.	*hón xpára*	
	pl.	*hóx xpára*	

The alternative series of the deictic copula with L-suffixes in the 1st and 2nd persons is also used:

2nd pers.	ms.	*hólux xpára*
	fs.	*hóləx xpára*
	pl.	*hólɛxu xpára*

| 1st pers. | s. | *hóli xpára* |
| | pl. | *hólən xpára* |

On some occasions the preposition *b-* is placed before the infinitive:

3rd pers.	ms.	*hóle b-xpára*	'He is digging'
	fs.	*hóla b-xpara*	'She is digging'
	pl.	*hóla b-xpara*	'They are digging', etc.

8.8.6. *Infinitive + Present Enclitic Copula*

The forms of the present copula that are cliticized to the infinitive correspond to the various series that are described in §8.7.1. These are shown in the following paradigm:

3rd pers.	ms.	*xpárɛle*	'He is digging'
	fs.	*xpárɛla*	'She is digging'
	pl.	*xpárɛlɛ*	'They are digging', etc.
		xpárɛla	

2nd pers.	ms.	*xpárɛwət*	*xpárɛt*
	fs.	*xpárɛwət*	*xpárɛt*
	pl.	*xpárɛwitu*	*xpárɛtu*

1st pers.	ms.	*xpárɛwən*	*xpárɛn*
	fs.	*xpárɛwən*	*xpárɛn*
	pl.	*xpárɛwəx*	*xpárɛx*

The /ɛ/ vowel in the closed final syllable of the forms in the second column is often attenuated to /ə/ in fast speech:

| 2nd pers. | s. | *xpárɛt* | ~ | *xpárət* |

1st pers.	s.	*xpárɛn*	~	*xpárən*
	pl.	*xpárɛx*	~	*xpárəx*

The preposition *b-* is occasionally placed before the infinitive in the various forms given above:

3rd pers.	ms.	*b-xpárɛle*	'He is digging'
	fs.	*b-xparɛla*	'She is digging'
	pl.	*b-xparɛla*	'They are digging', etc.

8.8.7. *Infinitive + Past Enclitic Copula*

All series of the past copula described in §8.7.2. may be cliticized to infinitives:

3rd pers.	ms.	*xpára-wewa*	'He was digging'
		xpárɛyewa	
		xpárɛwa	
	fs.	*xpára-wawa*	'She was digging'
		xpárɛyawa	
		xpárɛwa	
	pl.	*xpára-wɛwa*	'They were digging', etc.
		xpárɛyɛwa	
		xpárɛwa	
2nd pers.	ms.	*xpára-wətwa*	
		xpárətwa	
	fs.	*xpára-wətwa*	
		xpárətwa	
	pl.	*xpára-wɛtuwa*	
		xpárɛtuwa	
1st pers.	ms.	*xpára-wənwa*	
		xpárənwa	
	fs.	*xpára-wənwa*	
		xpárənwa	
	pl.	*xpára-wəxwa*	
		xpárəxwa	

The preposition *b-* is occasionally prefixed to these forms, e.g.

3rd pers.	ms.	*b-xpára-wewa*	'He was digging'
	fs.	*b-xpára-wawa*	'She was digging'
	pl.	*b-xpára-wɛwa*	'They were digging', etc.

8.9. NEGATION OF VERBAL FORMS

Verbal forms are negated by the particle *la*. This is placed before verbs derived from the present and past bases and also before the imperative. It is frequently linked to the verb in the same stress group, the stress falling either on the negator or on the verb, e.g.

la-páləṭ ~ lá-paləṭ	'He does not go out'
la-plíṭle ~ lá-pliṭle	'He did not go out'
la-plúṭ ~ lá-pluṭ	'Do not go out!'

The negated imperative may be combined with the various supplementary suffixes that are used to strengthen its force (§8.6.5.), e.g.

la-plúṭga!	'Do not go out!'
la-plúṭən!	
la-plúṭgena!	

The particle *la* may be combined with the pre-verbal particles *ʾi-* (§8.6.1.) and *qəm-* (§8.6.3.). When the particle *ʾi-* occurs before a verb beginning with a consonant, the /i/ vowel is syllabified with the /a/ of the preceding negator. In most cases the sequence /lay/ shifts to /ley/ or contracts to *lɛ*, in accordance with the usual phonetic process that is undergone by the diphthong /ay/, e.g.

le-y-paləṭ
lɛ-paləṭ

Examples from the text corpus:

(1) *ʾan-náše le-y-mbáqri mən-ʾárxa ʾáti m-ɛ̀kɛwəṭˈ* 'Those people do not ask from a guest "Where are you from?"' (A29:45)
(2) *bás le-y-mabyə̀nwaˈ* 'but it did not show' (B10:57)
(3) *le-y-máxi prə́zla l-ʾáqləṭ dawɛ̀reˀˈ* 'Don't people put metal on the feet of mules?' (B4:12)

(4) *lɛ-xàru*¹ 'It does not go off' (B5:119)

(5) *míya lɛ́-ṣale bíye dìye*¹ 'Water does not flow down into it' (B5:192)

(6) *lɛ́-qɛmi ràba*¹ 'They do not grow much' (B5:215)

Note (7) in which the negator bears its own stress and the /y/ is separated from the verb:

(7) *lè-y ʾamrátli qá-mo θélǝx.*ʔ¹ 'Won't you tell me why you have come?' (A8:77)

Since the vowel /ɛ/ has a tendency to be lowered to /a/, especially in unstressed syllables (§2.3.4.), the form *lɛ-pálǝṭ* is sometimes pronounced *la-pálǝṭ*, in which all trace of the indicative particle has been lost.

When the particle *ʾi-* has the form of *y-* at the onset of the first syllable of verbs of initial /ʾ/ roots, the /y/ generally remains when the negator is prefixed. The /a/ sometimes remains unchanged, but usually is raised to the region of /ɛ/ or /e/, e.g.

    la-y-áxǝl   'He does not eat'

    lɛ-y-áxǝl

    le-y-áxǝl

The initial /ʾ/ of the verb is sometimes retained, e.g.

    la-y-ʾáxǝl

    lɛ-y-ʾáxǝl

    le-y-ʾáxǝl

Examples from the text corpus:

(8) *là-y-awra*¹ 'She will not enter' (B8:35)

(9) *là-y-asqǝn*¹ 'I shall not go up' (A32:29)

(10) *ʾɔ́rwe lɛ́-y-asqi ṭúra xàla*¹ 'The sheep do not go up into the mountains to eat' (B5:108)

(11) *lɛ́-y-axǝl xɛ̀tna*¹ 'The groom will not eat' (B5:32)

(12) *le-y-áxlǝx b-čàngǝl*¹ 'We do not eat with a fork' (B10:96)

(13) *le-y-ʾamrə́nne ṭlàlux*¹ 'I shall not tell you' (A24:45)

Examples of the negator used before the particle *qǝm-*:

(14) *là qəm-qaṭə́lla ʾaqə́rwa*�per 'He did not kill the scorpion' (A9:5)
(15) *lá qəm-xazìle*ᐟ 'They did not see him' (B9:6)
(16) *lá qəm-basmále ʾayyà* 'This did not please him' (A8:5)

The particle *bəd-* together with its various phonetic variants (§8.6.2.), one of several functions of which is to express a future action, is not combined with the negator *la*. In the negation of constructions with *bəd-*, the latter is omitted and the negator is placed before the verb:

    bəd-páləṭ   'He will leave'   →   *la-páləṭ*   'He will not leave'

On some occasions a negated future form has the particle *ʾi-*, e.g.

    ṭ-áxléna   'I shall eat'   →   *lɛ-y-axléna*   'I shall not eat'

8.10. Negative Copula

8.10.1. *Negative Present Copula*

The present copula is negated by prefixing to it the particle *la*. The combination of the /a/ of the negator with the /i/ of the copula coalesces to /ɛ/. The 1st and 2nd person forms exist in two alternants, a longer one formed by the combination of the negator and the copula with a *iw-* base (*ʾiwən, ʾiwət* etc.) and a shorter one formed from the abbreviated copula without /w/ (*ʾin, ʾit* etc.):

3rd pers.	ms.	*léle*	
	fs.	*léla*	
	pl.	*lélɛ*	
		léla	
2nd pers.	ms.	*léwət*	*lɛt*
	fs.	*léwət*	*lɛt*
	pl.	*léwɛtu*	*létu*
		léwitu	
1st pers.	ms.	*léwən*	*lɛn*
	fs.	*léwən*	*lɛn*
	pl.	*léwəx*	*lɛx*

In natural, fast speech the /ɛ/ of the forms in the second column is often lowered to the region of /a/: *lat* (2s), *lan* (1s.), *lax* (1pl.). In the speech of some informants the /l/ between the two vowels of the 3rd person negative copula is occasionally weakened and the vowels coalesce. This is not represented in the transcription: *léle* [lɛː], *léla* [lɛː], *lélɛ* [lɛː]. In fast speech the quality of the vowel may be lowered to [a], resulting in a form that is homophonous with the simple negative particle *la*.

Unlike the positive copula, the negative copula is regularly placed before the predicate, e.g. *léle gu-máθa* 'He is not in the village', *léwən xə́ðya* 'I am not happy', *lat-xáwri* 'You are not my friend'.

8.10.2. *Negative Past Copula*

The negative past copula is formed by combining *la* with the past copula series *ʾiwa*, *ʾiwéwa* and *wéwa*. When combined with the first two series with initial *ʾi-*, this vowel contracts with the /a/ vowel of *la* to /ɛ/: *léwa* < *la* + *ʾiwa*, *léwewa* < *la* + *ʾiwewa*. The stress normally falls on the initial syllable. Full paradigms of these two negated series are as follows:

3rd pers.	ms.	*léwa*
	fs.	*léwa*
	pl.	*léwa*
2nd pers.	ms.	*létwa*
	fs.	*létwa*
	pl.	*létuwa*
1st pers.	ms.	*lénwa*
	fs.	*lénwa*
	pl.	*léxwa*
3rd pers.	ms.	*léwewa*
	fs.	*léwawa*
	pl.	*léwɛwa*
2nd pers.	ms.	*léwətwa*
	fs.	*léwətwa*
	pl.	*léwituwa*

1st pers.	ms.	*lɛ́wənwa*
	fs.	*lɛ́wənwa*
	pl.	*lɛ́wəxwa*

The /ɛ/ in the closed syllables of the forms *lɛ́twa, lɛ́nwa* and *lɛ́xwa* is often lowered to /a/: *látwa, lánwa, láxwa.*

8.11. Negation of Compound Verbal Forms

Compound verb forms consisting of a combination of the copula with a resultative participle or an infinitive are negated by replacing the positive copula with the negative copula. The negative copula is regularly placed before the participle or infinitive:

8.11.1. *Negative Present Copula + Resultative Participle*

prq I 'to finish'

3rd pers.	ms.	*lɛ́le príqa*	'He has not finished'
	fs.	*lɛ́la príqta*	'She has not finished'
	pl.	*lɛ́lɛ príqe*	'They has not finished', etc.
		lɛ́la príqe

8.12. Weak Verbs in Stem I

8.12.1. *Verba Primae* /ʾ/

Verbs in this category include:

ʾč̌m 'to close', ʾmð 'to be baptized', ʾmr 'to say', ʾqð 'to burn (intr.)', ʾqr 'to dig up, to plough; to cost, be expensive', ʾrq 'to run', ʾsq 'to ascend', ʾšq 'to be in love', ʾsṛ 'to tie', ʾxl 'to eat', ʾzl 'to weave'.

The present base is inflected regularly like a verb with strong consonants, e.g. ʾxl 'to eat': ʾáxəl 'He eats', ʾáxla 'She eats', ʾáxli 'They eat', etc. The initial /ʾ/ is elided after prefixed particles. The ʾi- prefix takes the form of the glide /y/, e.g. y-áxəl 'He eats'. The particle bəd- generally takes the form bt̠- or simply t̠- (§8.6.2.), e.g. bt̠-áxəl, t̠-áxəl 'He will eat'.

The initial /ʾ/ is elided in all other bases. The past base has the pattern *CiC* (ms.), *CiCa* (fs.), *CiCi* (pl.), e.g. xil- (ʾxl 'to eat'): xille 'He ate', xílli 'I ate', xíllux 'You (ms.) ate', etc. The /l/ for the L-suffixes is assimilated to a final /r/, e.g. síṛṛe 'He tied' (< *siṛ-le).

The verb ʾmr 'to say' exhibits some irregularities in the past base in that the gemination of the /r/ is usually weakened and the vowel has the central quality /ə/ rather than /i/, e.g. mə́re 'he said'. The regular form mirre is sporadically found, as well as some other rare variants such as míre and mére, the latter with the /ə/ vowel lengthened to /e/ (§2.1., §2.3.2.). The usual past base form of this verb mə́re has been normalized in the transcription.

The final /ð/ of the verb ʾqð 'to burn (intr.)' shifts to the stop /d/ when in contact with an L-suffix, e.g. qidle 'He burnt'.

The fs. and pl. forms of the past base are formed in the regular manner by adding -a and -i respectively to the default ms. base, e.g. ʾxl: xilále 'He ate her', xilíle 'He ate them'.

The resultative participle has the pattern *CiCa* (ms.), *CiCta* (fs.), *CiCe* (pl.), e.g. ʾxl 'to eat': xila (ms.), xilta (fs.), xile (pl.). Compound forms: xílɛle 'He has eaten', xíltɛn 'I (f.) have eaten', xílɛx 'We have eaten'.

The imperative has the pattern *CuC* (sing.), *CuCu* (pl.), e.g. xul! 'Eat!' (sing.), xúlu 'Eat!' (pl.).

The infinitive has the pattern *CaCa*, e.g. xála 'to eat'. Compound form: hóle xála 'He is eating', xálɛx 'We are eating'. Verbal noun: *CaCta*, e.g. xalta 'eating'.

The elision of the /ʾ/ in all bases other than the present applies to all initial /ʾ/ verbs, irrespective of whether the /ʾ/ is derived historically from a laryngal *ʾ or a pharyngal *ʿ, e.g. *ʾmr* < *ʾmr* 'to say': *ʾamər, mər-, mira, mur, mara*; *ʾsṛ* < *ʾsr* 'to tie': *ʾasəṛ, siṛ-, siṛa, suṛ, saṛa*; *ʾrq* < *ʿrq* 'to run': *ʾarəq, riq-, riqa, ruq, raqa*; *ʾzl* < *ʿzl* 'to weave': *ʾazəl, zil-, zila, zul, zala*. This applies also to loan words from Arabic in which the Arabic source has a pharyngal, e.g. *ʾšq* < Arab. *ʿšq* 'to be in love': *ʾašəq, šiq-, šiqa, šuq, šaqa*. The verbs *ʾqð* 'to burn (intr.)', *ʾqr* 'to be expensive' and *ʾsq* 'to ascend' are not historically initial /ʾ/ but rather have developed from initial /y/ roots (*yqð, yqr, ysq*). The verb 'to ascend' had the root *ʾslq* at an earlier period in Aramaic, but the initial /y/ form of the root is found in several other NENA dialects. Their treatment as initial /ʾ/ verbs may have come about by a false analysis of *qaṭəl* forms such *yaqəð* 'it burns', *yaqər* 'it costs' as *y-aqəð, y-aqər*, in which the initial /y/ was interpreted as the particle *ʾi-* rather than the root letter.

The verb *ʾčm* has a doublet middle /y/ form *čym*. Many of the inflected forms of the two are identical, due to the elision of the /ʾ/ in the inflections of initial /ʾ/ verbs.

The initial /ʾ/ is preserved in a few nominal forms that are infinitives or verbal nouns in origin, e.g. *ʾixala* 'food', *ʾitawa* 'sitting' (*dúkθət ʾitàwaˈ* 'a sitting place, a seat' B6:7), *ʾisaqta* 'ascension' (*ʾisáqtət Mšíxa l-šmàyyaˈ* the ascension of Christ to Heaven' B6:7).

8.12.2. *Verba Tertiae /ʾ/*

Verbs in this category include:

blʾ 'to swallow', *bzʾ* 'to cleave, make a hole', *grʾ* 'to shave', *jmʾ* 'to collect, *mrʾ* 'to be ill; to hurt', *mzʾ* 'to mix liquids', *plʾ* 'to divide', *pqʾ* 'to split, explode', *prʾ* 'to pay; to burst', *qṭʾ* 'to cut, decide', *swʾ* 'to be sated', *šmʾ* 'to hear', *ṭbʾ* 'to sink', *ṭlʾ* 'to sleep', *xð* 'to roll up, wrap, bind', *xmʾ* 'to ferment', *zdʾ* 'to fear', *zlʾ* 'to crack', *zrʾ* 'to cultivate'.

The /ʾ/ in these verbs is derived historically from a pharyngal *ʿ, which existed at some stage in their diachronic development. In some cases the original final consonant was *g, which shifted to a voiced pharyngal *ʿ in post-vocalic position (§1.4.1.6.), e.g. *plʾ* 'to divide' < *plʿ* < *plg*.

The inflection of these verbs is in the process of being assimilated to the paradigms of final /y/ verbs. Various features that are characteristic of final /y/ verbs exist as alternative forms of inflection or have totally

replaced the original inflection of this category of verb. Several features of inflection, nevertheless, remain distinct from that of final /y/ verbs, and so these verbs should be classified as a separate group.

The labelling of this group as final /ʾ/ is somewhat of an anachronism, since the /ʾ/ has been elided in all forms with the exception of one variant of the infinitive. In those forms that have not assimilated to the inflection of final /y/ verbs, the morphophonology remains largely unaffected by the elision of the /ʾ/ and has the same pattern that it would have had if the /ʾ/ were still present.

The inflection of the present base is as follows:

šm' 'to hear'

		Default	Long
3rd pers.	ms.	šắme	
	fs.	šắma	
	pl.	šắmi	
2nd pers.	ms.	šắmət	šắmeti
	fs.	šắmət	šắmati
	pl.	šămítu	
1st pers.	ms.	šắmən	šắmena
	fs.	šắmən	šắmana
	pl.	šắməx	šắmexi

With the exception of the 3ms. form šắme, all the forms in this paradigm have the vocalic pattern of verbs with strong consonants. Even the /a/ vowel of the base is short, as if it were still in a closed syllable. The /ʾ/ has been elided but the vocalic pattern remains unaltered:

*šam'a	>	šắma
*šam'i	>	šắmi, etc.

The ending -e in the 3ms. form šắme has developed from *-ə', the short *ə being lengthened to /e/ after the elision of the laryngal (§2.1., §2.3.2.). The shortness of the /a/ in the 3ms. form could not have been conditioned by historical syllable structure, since in the 3ms. form the /a/ would have been in an open syllable at all stages of its historical development. The explanation seems to be that the vowel came to be pronounced short by analogy with the shortness of the /a/ in the rest of the paradigm.

The 3pl. form occasionally has the ending -*ε* by analogy with the paradigm of final -*y* verbs, e.g. *šằmε* 'They hear': *xázε* 'They see'.

The consonant after the short /*ă*/ in the present base paradigm is sometimes geminated when it is preceded by the stress, e.g. *šámme* 'He hears', *šámma* 'She hears'.

The past base exists in two variant forms, viz. *CCi-* (ms.), *CCiya-* (fs.), *CCiyi-* (pl.), on the one hand, and *CCe-* (ms.), *CəCya-* (fs.), *CCε-*, on the other. The form *CCi-* and its inflections has the pattern of the past base of strong verbs *qṭil-*, except that the /*i*/ vowel has been lengthened after the elision of the final /ʾ/, e.g. *šmíle* 'He heard (him)' (< **šmiʾle*), *šmiyále* 'He heard her', *šmiyíle* 'He heard them', *ṭbíli* 'I sank' (< **ṭbiʾle*). The alternative form *CCe-* and its inflections is the pattern of past bases from final /*y*/ verbs, e.g. *šméle* 'He heard (him)', *šəmyále* 'He heard her', *šmɛ́le* 'He heard them'. The sequence /*iyi*/ tends to be contracted to /*i*/ in the plural form of the base *CCiyi-*, making it homophonous with the singular form. For this reason, the alternative final /*y*/ type inflection *CCε-* is generally used to distinguish a plural pronominal object.

One set of forms for the resultative participle corresponds in pattern to strong verbs except for the elision of the third radical: *šmiya* (ms.), *šmita* (fs.), *šmiye* (pl.). The glide /*y*/ has been inserted between the two adjacent vowels in the ms. and pl. forms. The /*t*/ of the feminine ending in the fs. form remains a stop since at an earlier stage of development it was separated from the preceding vowel by the /ʾ/ consonant (**šmiʾta* > *šmita*). A variant set of forms has the pattern of the resultative participle of final /*y*/ verbs: *šəmya* (ms.), *šmiθa* (fs.), *šəmye* (pl.).

The imperative has forms with a pattern corresponding to that of strong verbs. The imperative singular has the form *šmu* (< **šmuʾ*). The final /*u*/ vowel is generally pronounced long, although historically it occurred in a closed syllable. The plural imperative either has the form *šə́mu* (< **šə́mʾu*) or *šmu* (< **šmúʾu*) like the singular. An alternative set of forms correspond to the pattern of imperatives from final /*y*/ verbs: *šmi* (ms.), *šma* (fs.) and *šmo* (pl.). Note that there is a distinction in gender in the singular of final /*y*/ imperatives. When a supplementary suffix or pronominal object suffix is attached to the fs. form, it has an /*ε*/ vowel rather than an /*a*/, e.g. *šmɛ́ga* 'Hear (fs.)!', *zdɛ́le* 'Fear (fs.) him!' (*zdʾ*).

The infinitive, likewise, exists in two alternative forms. One form retains the original final /ʾ/ of the root: *šmaʾa, zdaʾa, zraʾa*. The other corresponds to that of final /*y*/ verbs: *šmaya, zdaya, zraya*. Compound forms: *zdáʾεle/ zdáyεle* 'He is afraid', *zráʾεx/zráyεx* 'We are cultivating', *zdáʾa-wawa/zdáya-wawa* 'She was afraid'.

The verbal noun has various patterns. These include *CCeta* and *CCata*, which have developed from **CCaʾta* (§2.5.2.), e.g. *jmeta* 'gathering', *zrata* 'agriculture', and *CCɛθa*, which is the pattern of final */y/* verbal nouns, e.g. *šmɛθa* 'hearing'.

The verbal root *zdʾ* 'to fear' has an alternative form *zdl* with final */l/*. This is likely to have arisen by reanalysis of a form such as *zdaʾəlle* 'He fears him'. In fast speech this sometimes contracts to [zdalle] by the elision of the laryngal */ʾ/* (§4.4.) The form [zdalle] could also be interpreted as the result of the contraction of a form such as *zdaləlle*, by the process whereby the first of a sequence of two syllables beginning with the same consonant is elided (§4.5.1.).

8.12.3. *Verba Primae* /y/

This category includes the verb *yðl* 'to give birth, to lay (eggs)'.

The */y/* of the root is retained in the inflections of the present base: *yádla* 'She gives birth', *yádli* 'They give birth'. Note that the fricative */ð/* of the root shifts to the stop */d/* when in contact with the */l/*.

The */y/* is elided in other bases. Past base: *ðilla* 'She gave birth'. Resultative participle: *ðílta* (fs.), *ðíle* (pl.). Compound form: *hóla ðílta* 'She has given birth'. Imperative: *ðúl* (sing.), *ðúlu* (pl.). Infinitive: *ðála*. Compound form: *hóla ðála* 'She is giving birth'. Verbal noun: *ðalta*.

Most initial */y/* roots have shifted to the category of initial */ʾ/* verbs, e.g. **yqð > ʾqð* 'to burn', **yqr > ʾqr* 'to be expensive', **ysq > ʾsq* 'to ascend' (§8.12.1.).

8.12.4. *Verba Primae* /y/, *Tertiae* /ʾ/

This category includes the verb *yðʾ* 'to know'.

The initial */y/* is preserved in the present base, which is inflected like other final */ʾ/* verbs with a short */a/* throughout the paradigm (§8.12.2.): *yắðe* 'He knows, *yắða* 'She knows', *yắði* 'They know'. The short */a/* of the first syllable is sometimes attenuated to short */ə/*, though this is not represented in the transcription. The attenuation is particularly common in the 1st and 2nd person forms, e.g. *yắðən* [ˈjəðən] 'I (m. and f.) know', *yắðət* [ˈjəðət] 'You (ms. and fs.) know'. When combined with the negative particle *la*, the vowel of this particle and the initial syllable of the verb contract to */ɛ/*. This is especially common in the 1st sing. form *lέðən* 'I do not know' < *la-yắðən*. An alternative negative form is *míðən* 'I do not

know', which has resulted from contraction of an interrogative particle: *míðən < mo yăðən* (§7.5.).

The initial /y/ is elided in other bases, which are otherwise inflected like final /ˁ/ verbs. Past base: *ðì-* (ms.), *ðìya-* (fs.), *ðìyi-*, e.g. *ðíle* 'He knew him', *ðiyále* 'He knew her', *ðiyíle* 'He knew them'. Resultative participle: *ðíya* (ms.), *ðíta* (fs.), *ðíye* (pl.). Compound forms: *ðíyɛle* 'He has known', *ðítɛla* 'She has known'. The imperative has the form *ðu*, which is used for singular and plural, or alternatively forms with endings that are characteristic of final /y/ verbs: *ðì* (ms.), *ða* (fs.), *ðo* (pl.). The infinitive has the form *ðaˀa* or *ðaya*. This sometimes contracts in negative compound forms, e.g. *lán-ðaˀa* [læn-ðæ] 'I do not know'. Verbal noun: *ðeta* 'knowing'.

8.12.5. *Verba Mediae* /y/

Verbs in this category include:

byx 'to overflow', *byz* 'to pour, spill', *čyd* 'to invite', *čyk* 'to jam, pierce', *čyl* 'to sprout', *čyr* 'to turn away from, to become alienated', *čym* 'to close', *dyl* 'to see', *dyn* 'to judge', *dyp* 'to fold', *dyq* 'to crush', *dyṛ* 'to return', *dys* 'to thrust', *dyš* 'to tread', *dyθ* 'to sweat', *dyx* 'to die down (fire)', *fyd* 'to be of use', *gyð* 'to finish off an edge', *hyr* 'to be confused', *jyl* 'to go around, go for a walk', *jyq* 'to tear', *jyr* 'to urinate', *kyl* 'to measure', *kym* 'to become black', *kyp* 'to bow', *kyš* 'to deflate', *lyp* 'to learn', *lyq* 'to get stuck, get caught', *lym* 'to blame', *lys* 'to chew', *lyṣ* 'to be spoilt, ruined', *lyš* 'to knead (dough)', *lyṭ* 'to curse', *myj, myč* 'to knead and crush (dried yoghurt in hands)', *myn* 'to become watery', *mys* 'to suck', *myθ* 'to die', *myx* 'to smell', *nyd* 'to move, shake', *nym* 'to doze', *nys* 'to bite, sting', *pyč̣* 'to squash', *pyð* 'to pass', *pyš* 'to become, remain', *pyx* 'to cool', *qym* 'to rise', *qyp* 'to brood (hen)', *qyr* 'to cool', *qyṣ* 'to cut; bruise', *qyθ* 'to hit', *qyx* 'to fade, become yellow (grass)', *ryθ* 'to inherit', *ryð* 'to darn', *rym* 'to rise up', *ryp* 'to attack', *ryq* 'to spit', *rys* 'to sprink', *ryš* 'to wake, feel', *ryx* 'to become long', *syl* 'to copulate', *sym* 'to ordain', *ṣyd* 'to hunt', *ṣym* 'to fast', *ṣyn* 'to burn, spoil (food)', *ṣyr* 'to prepare ground for cultivation', *šyl* 'to cough', *šyp* 'to rub, erase', *šyr* 'to stoke (fire)', *šyš* 'to rock, shake', *tyk* 'to have a bad name; to give a bad name', *tym* 'to finish', *ṭym* 'to taste', *ṭyn* 'to carry', *ṭyp* 'to float', *ṭyš* 'to besmear', *xyk* 'to scratch', *xym* 'to become hot', *xyp* 'to wash', *xyr* 'to watch', *xyṭ* 'to sew', *zyd* 'to increase (intr.)', *zyn* 'to stand', *zyp* 'to push', *zyr* 'to visit' (on pilgrimage).

In the present base the medial /y/ is regularly retained only in the 3ms. form, e.g. *dyq* 'to crush': *dáyəq* 'He crushes'. In the rest of the paradigm the sequence /ay/ is contracted to /ɛ/: *déqa* 'She crushes', *déqi* 'They crush', etc.

The /y/ is contracted in the past base, resultative participle and imperative.

Past base: *diq-* (ms.), *diqa-* (fs.), *diqi-* (pl.), e.g. *diqle* 'He crushed (him)', *diqále* 'He crushed her', *diqíle* 'He crushed them'. If the verbal root ends in an interdental /θ/ or /ð/, these shift to the stops /t/ and /d/ respectively when in contact with the /l/ of the L-suffixes (cf. §8.3.2.), e.g. *ditle* 'He sweated' (*dyθ*), *ridle* 'He darned' (*ryð*).

Resultative participle: *diqa* (ms.), *diqta* (fs.), *diqe* (pl.), e.g. *hóle diqa* 'He has crushed', *hóla diqta* 'She has crushed', *hóla díqe* 'They have crushed', etc. *qímɛle* 'He has risen', *qímtɛla* 'She has risen', *qímela* 'They have risen', etc.

Imperative: *duq* (sing.), *dúqu* (pl.) 'Crush!' The verb *qym* 'to rise' has the singular imperative form *qu*, in which the final radical has been elided. Various alternatives are available for the expression of the plural imperative. It may have the regular form *qúmu*. Other forms, however, are constructed from the singular base *qu*. These include the emphatic form *qúgu*, with the suffix *-gu* (§8.6.5.), and the phrase *qu-qíme*, in which the plural is expressed morphologically in the inflected form of the resultative participle *qime*. Similar phrases are used for the singular, in which a gender distinction is marked by the participle: *qu-qíma* (ms.), *qu-qímta* (fs.).

The /y/ is preserved in the infinitive: *dyaqa, qyama*. Compound forms: *hóle dyaqa* 'He is crushing', *qyámɛle* 'He is rising'. Verbal noun: *dyaqta, qyamta*.

This category of weak verb has been expanded by the absorption of verbs that originally belonged to other categories. The category of medial /y/ verbs includes both verbs that were medial /y/ and also those that had a weak medial /w/ in earlier Aramaic. Some verbs in this category were originally final geminate, e.g. *gyð* 'to finish off an edge' (< **gdd*), *kyp* 'to bow' (< **kpp*), *myṣ* 'to suck' (< **mṣṣ*), *nyd* 'to move' (< **ndd*), *qyp* 'to brood (hen)' (< **qpp*), *qyr* 'to cool' (< **qrr*), *qyṣ* 'to cut; bruise' (< **qṣṣ*), *qyθ* 'to hit' (< **qtt*), *ryq* 'to spit' (< **rqq*), *xym* 'to become hot' (< **xmm*). These include loans from Arabic, e.g. *tym* 'to finish' (< Arab. *tmm*). Others had a medial pharyngal *ʕ at some point in their historical development. This would have been weakened to a laryngal *ʔ, which was subsequently elided, e.g. *dyθ* 'to sweat' (< **dʔθ < *dʕθ*), *dyx* 'to die down (fire)' (< **dʔx < *dʕx*), *lys* 'to chew' (< **lʔs < *lʕs*), *myj, myč* 'to crush' (< **mʔṣ < *mʕṣ*), *šyl* 'to cough' (< **šʔl < *šʕl*), *tym* 'to taste' (< **tʔm < *tʕm*), *tyn* 'to carry' (< **tʔn < *tʕn*), *zyp* 'to push' (< **zʔp < *zʕp*), *ryš* 'to wake up; to feel' (< **rʔš < *rʕš < *rġš*),

šyš 'to rock (a child)' (< **š'š* < **šʕš* < **šǧš*). A few middle /y/ verbs are derived historically from roots with an initial weak radical. The verbs *lyp* 'to learn', *ryθ* 'to inherit' and *ryx* 'to become long', for example, developed from initial /y/ roots (**ylp, *yrθ, *yrx*), some of which were ultimately initial /'/ (**'lp, *'rx*). Note also the verb *lyq* 'to get stuck, caught', which is a loan from the Arabic root *ʕlq*, the development being no doubt *ʕlq* > **'lq* > *lyq*.

8.12.6. *Verba Primae /'/, Mediae* /y/

Verbs in this category include:

'yd 'to weed', *'yq* 'to be narrow, tight (clothes); to be in distress'

The present base has the regular inflection of middle /y/ verbs: *'áyəd* 'He weeds', *'έda* 'She weeds', *'έdi* 'They weed', etc.

The initial /'/ is elided in the other bases. Past base: *yid-* (ms.), *yida-* (fs.), *yidi-* (pl.), e.g. *yídle* 'He weeded (it)', *yidále* 'He weeded it (f.)', *yidíle* 'He weeded them'. Resultative participle: *yida* (ms.), *yitta* (fs. < *yidta*), *yide* (pl.), e.g. *hóle yída* 'He has weeded', *yíttɛla* 'She has weeded', *yídela* 'They have weeded'. Imperative: *yud* (sing.), *yúdu* (pl.) 'Weed!'. Infinitive: *yada*. Compound forms: *hót yáda* 'You are weeding', *yádɛle* 'He is weeding'. Verbal noun: *yatta*.

8.12.7. *Verba Mediae* /y/, *Tertiae /'/*

Verbs in this category include:

my' 'to churn', *sy'* 'to build a fence', *ṣy'* 'to get stuck', and *šy'* 'to plaster; smooth'

In the inflection of the present base, the medial /y/ radical is retained throughout the paradigm. The vocalic pattern of the inflections is that of final /'/ verbs, with a short /a/ vowel in the base:

my' 'to churn'

		Default	Long
3rd pers.	ms.	*mǎye*	
	fs.	*mǎya*	
	pl.	*mǎyi*	

2nd pers.	ms.	mǎ́yət	mǎyeti
	fs.	mǎ́yət	mǎyati
	pl.	mǎyítu	

1st pers.	ms.	mǎ́yən	mǎyena
	fs.	mǎ́yən	mǎyana
	pl.	mǎ́yəx	mǎyexi

The past base has the forms *mi-* (ms.), *miya-* (fs.), *miyi-* (pl.), which correspond to the forms *šmi-*, *šmiya-* and *šmiyi-* of final /ʾ/ verbs, e.g. *míle* 'He churned (it)', *miyálux* 'You churned it (f.)', *miyíwali* 'I had churned them'. The base may also have the endings of final /y/ verbs: *me-* (ms.), *miya-* (fs.), *mɛ-* (pl.).

The resultative participle has the forms *míʾa* (ms.), *míta* (fs.), *míʾe* (pl.). The /ʾ/ in the ms. and pl. forms is often replaced by the glide /y/. Examples: *hóle míʾa ~ míya* 'He churned', *míʾɛt ~ míyɛt* 'You (ms.) have churned', *mítɛla* 'She churned', *míʾe-wɛwa ~ míye-wɛwa* 'They had churned'.

The imperative singular has the form *myu* (sing. < *myuʾ*). The plural imperative either has the form *míyu* (< *míyʾu*) or *myu* (< *myuʾu*) like the singular. All of these forms are sometimes contracted to *mu* in fast speech. The plural is distinguished from the singular when a supplementary suffix (§8.6.5.) is added to strengthen the command: *múga* (sing.), *múgu* (pl.). Alternative forms of the imperative exist that have the ending of imperatives from final /y/ verbs: *mi* (ms.), *ma* (fs.), *mo* (pl.). Note the gender distinction in the singular. The /a/ of the fs. form shifts to /ɛ/ when a supplementary suffix or a pronominal object suffix is attached to it, e.g. *mɛ́ga!* 'Churn (fs.)!', *mɛ́le!* 'Churn (fs.) it!

The infinitive has the form *myaʾa*. Compound forms: *hóle myáʾa* 'He is churning', *myáʾɛn* 'I am churning'. Verbal noun: *myeta*.

8.12.8. *Verba Tertiae* /y/

Verbs in this category include:

bly 'to wear out', *bny* 'to build', *bry* 'to happen, be born, grow', *bxy* 'to weep', *č̌my* 'to be extinguished', *dmy* 'to resemble, to seem', *dry* 'to put', *gby* 'to froth, foam', *gly* 'to reveal', *gny* 'to set (sun)', *gsy* 'to vomit', *hny* 'to please', *jry* 'to flow', *kč̌y* 'to pick (fruit)', *kly* 'to stop, stand', *kry* 'to strike, attack; to become short', *lṭy* 'to lap', *ṃly* 'to fill', *msy* 'to wash (clothes)', *mny* 'to count', *mšy* 'to wipe', *mṭy* 'to arrive', *mxy* 'to beat', *nðy* 'to leap',

nšy 'to forget', *p̱ly* 'to remove lice', *pry* 'to get light; to channel (water)',
qly 'to fry', *qmy* 'to scorch, burn', *qny* 'to gain, earn', *qp̱y* 'to catch', *qry*
'to call', *qṣy* 'to cut (bread)', *rmy* 'to grieve; put ash on (oneself)', *rp̱y* 'to
throw', *smy* 'to become blind', *sny* 'to hate', *sp̱y* 'to grasp', *sxy* 'to swim,
bathe', *ṣly* 'to descend', *ṣp̱y* 'to be pure', *ṣry* 'to rend, cut open', *ṣty* 'to dart,
swoop', *šðy* 'to card (wool)', *šky* 'to complain', *šly* 'to calm down', *šny* 'to
anaesthetize', *šry* 'to untie, solve; to lodge', *šty* 'to drink', *tly* 'to hang', *tny*
'to repeat, follow suit', *tp̱y* 'to catch up; infect', *try* 'to become wet', *tsy* 'to
copulate (birds)', *ṭry* 'to drive', *xðy* 'to rejoice, be happy', *xmy* 'to dwell',
xny 'to honour; be honoured, be lucky', *xp̱y* 'to crouch, huddle', *xry* 'to
defecate', *xṣy* 'to castrate', *xty* 'to sin', *xzy* 'to see, find', *zdy* 'to throw', *zny*
'to commit adultery'.

   The final /y/ is retained in feminine singular inflections of the present
base, e.g. *xzy* 'to see, find': *xazya* 'She sees', *xazyət* 'You (fs.) see', *xazyən*
'I (f.) see'. In other inflections of the present, the /y/ has been contracted.
The full paradigm of the present base inflections is as follows. In addi-
tion to the usual long forms, alternant inflections exist for the 3pl. and
the 2pl.:

xzy 'to see'

		Default	Long
3rd pers.	ms.	*xáze*	
	fs.	*xázya*	
	pl.	*xázɛ*	
		xáza	
		xázi	
2nd pers.	ms.	*xázət*	*xazetí*
	fs.	*xázyət*	*xazyatí*
	pl.	*xazɛ́tu*	
		xazítu	
1st pers.	ms.	*xázən*	*xazena*
	fs.	*xázyən*	*xazyana*
	pl.	*xázəx*	*xazexi*

The 3pl. form *xáza* is an allegro variant of *xázɛ*, whereby the original
final *-ɛ* is lowered to /a/ in fast speech (§2.3.4). The alternative forms *xázi*
(3pl.) and *xazítu* (2pl.) have developed by analogy with the corresponding

inflections of the strong verb (*qaṭli* and *qaṭlitu*). The forms *xázɛ* (3pl.) and *xazɛ́tu* (2pl.) are the original final /y/ inflections. The /ɛ/ vowel has resulted from the contraction of the diphthong **ay* in the plural ending of the final /y/ active participle at an earlier stage of the language: *xázɛ* < **xazayn*, *xazɛ́tu* < **xazay-tūn*. The remainder of the paradigm, including the long inflections of the 1st and 2nd person singular, is derived from the singular final /y/ active participle. The /e/ vowel of the long form of the 1pl. inflection *-exi* appears to have developed by analogy with the /e/ of the long 1ms. suffix (*-ena*) (§8.2.2.). The same applies to the short 1pl. form *-əx*, the proto-form of which is **-ex* with /e/ by analogy with the 1ms. short proto-form **-en*. The full reconstructed paradigm would be as follows:

		Proto-form	Actual form
3rd pers.	ms.	**xaze*	*xáze*
	fs.	**xazya*	*xázya*
	pl.	**xazayn*	*xázɛ*
2nd pers.	ms.	**xaze-t*	*xázət*
		*xaze-t-i	*xazeti*
	fs.	**xazya-t*	*xázyət*
		*xazya-t-i	*xazyati*
	pl.	**xazay-tun*	*xazɛ́tu*
1st pers.	ms.	**xaze-n*	*xázən*
		*xaze-na	*xazena*
	fs.	**xazy-an*	*xázyən*
		*xazy-ana	*xazyana*
	pl.	**xaze-x*	*xázəx*
		*xaze-x-i	*xazexi*

As shown in §8.2.2., the endings of the 1st and 2nd person singular were extended by analogy to the strong verb. In the speech of one informant an infixed /n/ appears in the 3ms. form with the *-wa* suffix, e.g. *baxènwa* 'He used to weep' (= *baxewa* A34:29). An augment of this type is regularly used in some NENA dialects, e.g. the Baz and Jilu dialects.

   The past base has the form *CCe-* (ms.), *CəCCa-* (fs.), *CCɛ-* (pl.), e.g. *xzéle* 'He saw (him)', *xəzyále* 'He saw her', *xzéle* 'He saw them'.

Resultative participle: *CəCya* (ms.), *CCiθa* (fs.), *CəCye* (pl.), e.g. *hóle xə́zya* 'He has seen', *hóla xzíθa* 'She has seen', *hóla xə́zye* 'They have seen', *nə́ðyɛle* 'He has jumped', *bxíθɛla* 'She has wept', *šə́ṭyela* 'They have drunk'.

The imperative distinguishes between gender in the singular: *xzi* (ms.), *xza* (fs.), *xzo* (pl.) 'See!' When a supplementary suffix or pronominal object suffix is attached to the fs. form, it has an /ɛ/ vowel rather than an /a/, e.g. *xzɛ́ga* 'See!', *šṭɛ́le* 'Drink it!'. This indicates that the proto-form of the fs. imperative *xza* is *ḥzay with a final diphthong (§2.4.1.).

The /y/ is preserved in the infinitive: *CCaya*, e.g. *xzaya*. Compound forms: *hóle šṭáya* 'He is drinking', *hóx bnáya* 'We are building', *ṭráyɛle* 'He is driving', *xzáyɛt* 'You see'. In fast speech the /y/ is sometimes contracted in compound forms (§4.4.), e.g. *xzàyəlla* ['xzæːlːæ] 'he sees them' (B9:6), *xzáyət* ['xzæːt] 'Do you see?' (A7:17); *lán-mṣaya* [lam-mṣa] 'I cannot (A7:25).

8.12.9. *Verba Primae /ʾ/, Tertiae /y/*

Verbs in this category include:

ʾry 'to curdle; to rain', and *ʾṣy* 'to resist, get stuck'

The initial /ʾ/ is retained in the present base without prefixes, e.g. *ʾáṣe* 'It (ms.) gets stuck', *ʾáṣya* 'It (fs.) gets stuck', *ʾáṣɛ* 'They get stuck'. The /ʾ/ is elided before prefixed particles, e.g. *y-áṣe* 'It (ms.) gets stuck', *bṭ-árya* 'It will rain'.

The /ʾ/ is elided in the other bases where the pattern has an initial cluster *CC*, elsewhere it is retained. Past base: *ṣéle* 'It (ms.) got stuck', *réla másta* 'The yoghurt curdled'. Resultative participle: *ʾə́ṣya* (ms.), *ṣíθa* (fs.), *ʾə́ṣye* (pl.). Imperative: *ṣi* (ms.), *ṣa* (fs.), *ṣo* (pl.). Infinitive: *ṣáya*. Verbal noun: *ṣɛ́θa*.

8.12.10. *Verbs with a Zero Medial Radical and Final /y/*

Verbs in this category include:

by 'to want, to like', *čy* 'to be tired', *ny* 'to breath last breath; to dawn', *qy* 'to be blunt', *ry* 'to graze; to crush', *ṣy* 'to be thirsty', *ṭy* 'to search'.

At some stage of development these roots had a medial laryngal *ʾ or *h, the *ʾ being derived ultimately from the pharyngal *ʿ: *by* 'to want' < *bʿy, *ny* 'to breath last breath' < *nʾy, *ny* 'to dawn' (< *nʿy < *ngh), *ry* 'to graze'

< *ŕ'y, ry 'to crush' < *ŕ'y < *ŕ', ṭy < *ṭ'y, čy < *čhy, qy < *qhy, sy < *shy. The laryngal, however, does not appear in any of the bases of these verbs.

The endings of the present base are those of final /y/ verbs. One would have expected there to be long /a/ vowels in the open syllable after the first radical given the original historical form of the inflected paradigm. In the ms. and pl. forms the vowel is historically in an open syllable (e.g. *ba'e 'He wants', *ba'et 'You (ms.) want', *ba'ayn 'They want'). Also in the fs. forms (e.g. *ba'ya 'She wants'), the elision of the laryngal led to the opening of a syllable and according to the usual rule when a laryngal in the coda of a syllable is elided, the preceding vowel is long (§2.2.4.1.), e.g. pála 'worker' < *pa'la. The /a/ vowel, however, is pronounced short throughout the paradigm. This has arisen by the assimilation of this paradigm to that of verbs with medial /y/ and final /'/ (§8.12.7.), where the short vowel is explicable historically. The glide /y/ occurs in all forms in place of the elided laryngal before the inflectional ending:

ṭy 'to search'

		Default	Long
3rd pers.	ms.	ṭắye	
	fs.	ṭắya	
	pl.	ṭắyɛ	
		ṭắya	
		ṭắyi	
2nd pers.	ms.	ṭắyət	ṭăyeti
	fs.	ṭắyət	ṭăyati
	pl.	ṭăyɛ́tu	
		ṭăyítu	
1st pers.	ms.	ṭắyən	ṭăyena
	fs.	ṭắyən	ṭăyana
	pl.	ṭắyəx	ṭăyexi

The past base has the form Ce- (< *C'e), e.g. ṭéle 'He searched', séle 'He became thirsty'.

Resultative participle: Cíya (ms. < *Ci'ya), Cíθa (fs. < *C'iθa), Cíye (pl. < *Ci'ye), e.g. hóle ṭíya 'He has searched', síya-wewa 'He was thirsty', hóla ṭíθa 'She has searched', síθa-wawa 'She was thirsty', hóla ṭíye 'They have searched', síye-wɛwa 'They were thirsty'.

The imperative can have the form *ṭi* (ms.), *ṭa* (fs.), *ṭo* (pl.), which has the regular inflectional endings of final */y/* verbs, or the form *ṭu* (sing. and pl.). The latter form has arisen by analogy with roots with medial */y/* and final */ʾ/* (§8.12.7.).

The infinitive is *ṭăya*, with a short */a/* after the first radical, apparently by analogy with the present base paradigm. Verbal noun: *ṭɛθa*.

The verb *lhy* 'to kindle (intr.)' is exceptional. Throughout most of its inflections the medial */h/* is elided in conformity with the behaviour of the verbs in this category, e.g. *lăye* 'It kindles (tr.)', *léle* 'It kindled', *líyɛle* 'It has kindled'. In the infinitive, however, the */h/* is sometimes retained: *lhăya* ~ *lăya*.

8.12.11. *Verba Primae* /y/, *Tertiae* /y/

Verbs in this category include:

ymy 'to swear', *ypy* 'to bake'.

The initial */y/* is retained in the inflections of the present base, e.g. *yápe* 'He bakes', *yápya* 'She bakes', *yápɛ* 'They bake'.

The initial */y/* is elided in the other bases where the pattern has an initial cluster *CC*, elsewhere it is retained. Past base: *péle* 'He baked (it)', *yəpyále* 'He baked it (fs.)', *pɛ́le* 'He baked them'. Resultative participle: *yə́pya* (ms.), *píθa* (fs.), *yə́pye* (pl.), e.g. *hóle yə́pya* 'He has baked', *píθɛla* 'She has baked', *yə́pyela* 'They have baked'. Imperative: *pi* (ms.), *pa* (fs.), *po* (pl.). Infinitive: *paya*. Verbal noun: *pɛθa*.

8.12.12. *Verba Mediae* /w/

Verbs in this category include:

čwr 'to spin; to roll (eyes)', *dwq* 'to hold, catch', *dwr* 'to close; to turn on the threshing floor', *dwx* 'to sacrifice, dedicate', *gwr* 'to marry', *jwj* 'to move, walk', *kwš* 'to pack tightly', *lwš* 'to wear (clothes)', *lwx* 'to catch fire, to blaze', *nwr* 'to shy away', *nwx* 'to bark', *qwl* 'to complain', *qwr* 'to bury', *šwq* 'to leave', *šwr* 'to jump, leap', *twn* 'to become numb', *twr* 'to break', *ṭwx* 'to shatter', *xwq* 'to hug', *xwr* 'to become white', *xwš* 'to shut in, confine', *xwṭ* 'to mix', *xwx* 'to mix', *zwn* 'to buy'.

The medial /w/ in this category of verbs often derives historically from postvocalic *b, e.g. *dwq* < **dbq*, *kwš* < **kbš*, *lwx* < **lbk*, *xwš* < *ḥbš*, *xwṭ* < *ḥbt*, *xwx* < *ḥbk*, *zwn* < **zbn*. On some occasions, however, the /w/ is etymologically *w, e.g. *nwr* < **nwr*. *šwr* < **šwr*. In the present base the diphthong /aw/ in a closed syllable is often contracted to /o/: *záwən* 'He buys', *záwna* ~ *zóna* 'She buys', *záwni* ~ *zóni* 'They buy', etc. The /ə/ in the 3ms. form often shifts to the rounded vowel /u/ under the influence of the preceding /w/: *záwun*.

The remaining bases have inflectional patterns like those of strong verbs. Past base: *xwiṭle* 'He mixed (it)', *xwiṭále* 'He mixed it (f.)', *xwiṭíle* 'He mixed them'. The /i/ after the /w/ in this base is sometimes realized with lip-rounding in the region of [y]. Final /r/ and /n/ of verbal roots assimilate to the /l/ of the L-suffix when it is in contact with it, e.g. *dwírre* 'He closed', *zwínne* 'He bought'. Resultative participle: *zwína* (ms.), *zwínta* (fs.), *zwíne* (pl.). In the imperative the sequence /wu/ is contracted to /u/: *zun* (sing.), *zúnu* (sing.) 'Buy!' Infinitive: *zwana*. Verbal noun: *zwanta*.

8.12.13. *Verba Primae /ʾ/, Mediae* /w/

Verbs in this category include:

ʾwð 'to do, make', *ʾwr* 'to pass, enter'.

The /ʾ/ is retained in the present base when it has no prefixed particles. The diphthong /aw/ in a closed syllable is sometimes contracted to /o/: *ʾáwəð* 'He does', *ʾáwða* ~ *ʾóða* 'She does', *ʾáwði* ~ *ʾóði* 'They do', etc. The /ə/ of the 3ms. form often shifts to the rounded vowel /u/: *ʾáwuð*. The /ʾ/ is elided before prefixed particles such as *ʾi-* and *bəd-*: *y-áwəð* 'He does', *bṭ-áwəð* 'He will do'.

The initial /ʾ/ is elided in all other bases. Past base: *wið-* (ms.), *wiða-* (fs.), *wiði-* (pl.). The /ð/ of the verb *ʾwð* shifts to the stop /d/ when in contact with the /l/ of an L-suffix: *widle* 'He made (it)', *wídale* 'He made it (f.)', *widíle* 'He made them'. The /r/ of the verb *ʾwr* assimilates the /l/ of an adjacent L-suffix: *wírre* 'He entered'.

Resultative participle: *wíða* (ms.), *wíðta* (fs.), *wíðe* (pl.), e.g. *hóle wíða* 'He has done', *wíðɛt* 'You (ms.) have done', *mòdi-t wíða?* 'What have you done?' Imperative: *wúð* (sing.), *wúðu* (pl.) 'Do!'. Infinitive: *wáða*. Compound forms: *hóle wáða* 'He is doing', *wáðɛt* 'You are doing', *mòdi-t wáða?* 'What are you doing?' Verbal noun: *waðta*.

8.12.14. *Verba Mediae* /w/, *Tertiae* /ʾ/

Verbs in this category include:

nwʾ 'to emerge, well up', *ṣwʾ* 'be sated', *ṣwʾ* 'to colour, paint'.

These verbs combine the features of middle /w/ and final /ʾ/ roots. Present base: *ṣä́we* 'He paints', *ṣä́wa* 'She paints', *ṣä́wi* 'They paint', etc. Past base: *ṣwíle* 'He painted (it)', *ṣwiyále* 'He painted it (f.)', *ṣwiyíle* 'He painted them'. Resultative participle: *ṣwiya* (ms.), *ṣwita* (fs.), *ṣwiye* (pl.). Infinitive: *ṣwaʾa* or *ṣwaya*. Verbal noun: *ṣweta*.

The past base and resultative participle of these verbs are sometimes given the inflectional patterns of final /y/ verbs, e.g. *swéli* 'I have become sated', *səwyɛn* 'I (m.) am sated', *swiθɛn* 'I (f.) am sated'.

8.12.15. *Verba Mediae* /w/, *Tertiae* /y/

Verbs in this category include:

gwy 'to beg', *kwy* 'to scorch, sear', *qwy* 'to scoop', *rwy* 'to become drunk', *šwy* 'to spread out (bed)', *ṭwy* 'to roast' (intr.); to be worth', *xwy* 'to become faint; to become dark, bring (animal) into shelter'.

The medial /w/ in these roots is derived historically either from *w (e.g. *kwy* < *kwy, *rwy* < *rwy, *šwy* < *šwy, *ṭwy* < *ṭwy) or from *b (e.g. *gwy* < *gby, *qwy* < *qby, *xwy* < *ḥby).

The verbs of this group combine the features of middle /w/ and final /y/ roots. In the present base the diphthong /aw/ in the closed syllable of the fs. forms is occasionally contracted to /o/: *káwe* 'He scorches', *kawya* ~ *kóya* 'She scorches', *káwɛ* 'They scorch', *qáwət* 'You (ms.) scoop', *qáwyət* ~ *qóyət* 'You (fs.) scoop'.

Past base: *kwele* 'He scorched (him)', *kəwyále* 'He scorched (her)', *kwɛ́le* 'He scorched (them)'. Resultative participle: *kəwya* (ms.), *kwiθa* (fs.), *kəwye* (pl.). Imperative: *gwi* (ms.), *gwa* (fs.), *gwo* (pl.) 'Beg!' Infinitive: *kwaya*. Verbal noun: *kwɛθa*.

8.12.16. *Verba Tertiae* /w/

Verbs in this category include:

gnw 'to rob', *grw* 'to become ravenous', *jlw* 'to kidnap', *kθw* 'to write', *nṣw* 'to plant (in ground)', *qrw* 'to approach', *rkw* 'to ride, copulate with', *srw* 'to deny, reject', *xlw* 'to milk', *xrw* 'to be destroyed, spoilt', *xšw* 'to think'.

The final radical in verbs of this category derives historically from post-vocalic *b*, e.g. *kθw* < **ktb, *nṣw* < **nṣb, *qrw* < **qrb, *rkw* < **rkb, *xrw* < **ḫrb.

In the present base the sequence /əw/ in the 3ms. form contracts to the vowel /u/, e.g. *káθu* 'He writes'. Elsewhere in the paradigm the /w/ is generally retained when the inflection ends in a vowel, e.g. *káθwa* 'She writes', *káθwi* 'They write', *kaθwítu* 'You (pl.) write'. The sequence /wə/ sometimes contracts to /u/ when the inflection ends in a consonant. The preceding /a/ remains short as if it were still in a closed syllable, e.g. *káθwət* ~ *kǎθut* 'You (ms.) write', *káθwəx* ~ *kǎθux* 'We write'.

The sequence /iw/ is often contracted to /u/ in the ms. past base, e.g. *kθúle* 'He wrote (it)'. On some occasions it remans uncontracted, in which case the /i/ is generally realized with lip-rounding in the region of [y] and the /w/ as a labio-palatal glide [ɥ], e.g. *kθíwle* [kθyɥle]. In the fs. and pl. forms of the past base the /w/ remains uncontracted, e.g. *jliwále* 'He kidnapped her', *jliwíle* 'He kidnapped them'.

Resultative participle: *kθíwa* (ms.), *kθiwta / kθúta* (fs.), *kθíwe* (pl.). The feminine ending in the fs. form has the stop /t/ after the /u/, since at an earlier historical period it was preceded by the consonant *b* rather than a vowel (§1.4.1.3.).

The singular imperative has the form *kθu* 'Write!', in which the /w/ has been contracted (< **kθuw*). Of the two plural imperative patterns available for strong verbs, *qṭúlu* and *qə́ṭlu*, the pattern *qə́ṭlu* is preferred in verbs of this category: * kə́θwu* 'Write!' The form *kθu* (< **kθúwu*), which is identical with the singular form is, however, also available. This plural form can be distinguished from the singular by attaching the supplementary imperative plural suffix -*gu* (§8.6.5.): *kθúgu*.

The infinitive: *kθawa*. Verbal noun *kθawta*.

8.12.17. *Verba Primae* /ʾ/, *Tertiae* /w/

The verb *ʾtw* 'to sit' belongs to this category, though it is derived historically from an initial /y/ root (**ytw*). The initial /ʾ/ is retained in the inflections

of the present base, e.g. *’átu* 'He sits', *’átwa* 'She sits', *’átwi* 'They sit'. It is elided when a preverbal particle is attached to these forms, e.g. *y-átu* 'He sits', *t̠-átu* 'He will sit'. Some speakers retain the original initial /y/ radical in the root, e.g. *t-yátu* 'He will sit'. In fast speech the /w/ sometimes assimilates to /t/ in the sequence /tw/, e.g. *y-átti* (< *y-átwi*) 'They sit'.

The /’/ is regularly elided in all other bases. Past base: *tiw-* or, with contraction of the /w/, *tu-*, e.g. *tíwle / túle* 'He sat down'. Resultative participle: *tíwa* (ms.), *tíwta / túta* (fs.), *tíwe* (pl.). The singular imperative is *tu* 'Sit!' (< *tuw*). The form *tu* may also be used for the plural imperative (< *túwu*). The singular and plural forms of the imperative may be distinguished by the addition of the plural imperative supplementary suffixes *-ga -gən* on the singular and *-gu* on the plural: *túga, túgən* 'Sit!' (sing.): *túgu!* 'Sit' (pl.). An alternative method of disinguishing them is to combine the imperative form with the resultative participle inflected for number and gender, e.g. *tu-tíwa!* 'Sit!' (ms.), *tu-tíwta!* 'Sit!' (fs.), *tu-tíwe!* 'Sit!' (pl.). Infinitive: *tawa*. Verbal noun: *tawta*.

8.12.18. *Verba Tertiae* /w/, *Mediae* /y/

The verb *syw* 'to become old' belongs to this category.

In the present base the contractions characteristic of the final /w/ and middle /y/ verbs take place: *sayu* 'He becomes old', *sɛwa* 'She becomes old', *sɛwi* 'They become old', etc.

The past base is *syiw-*, in which both the /y/ and the /w/ are retained. The /i/ is generally realized with lip-rounding in the region of [y] and the /w/ as a labio-palatal glide [ɥ], e.g. *syiwle* ['sjyɥle] 'He grew old'.

Resultative participle: *síwa* (ms.), *syíwta* (fs.), *síwe* (pl.). The sequence /yi/ in the open syllable of the ms. and pl. forms has been contracted to the long vowel /i/, whereas the /y/ remains uncontracted in the closed syllable of the fs. form, in which the /i/ is a short vowel, pronounced with lip-rounding ['sjyɥta].

Imperative: *syu* (sing. and pl.). Infinitive: *syawa*. Verbal noun: *syawta*.

8.12.19. *Verbs with Identical Second and Third Radicals*

Verbs in this category include:

jnn 'to sing a dirge', *ṣnn* 'to burn (food)'.

The present base of these verbs has two alternative paradigms. They may be conjugated like a strong verb, e.g. *ṣánən* (3ms.), *ṣánna* (3fs.), *ṣánni* (3pl.), etc. Alternatively they may be conjugated as if they were medial */y/* verbs, e.g. *ṣáyən* (3ms.), *ṣéna* (3fs.), *ṣéni* (3pl.), etc. In the remaining inflections they are regularly conjugated as strong verbs.

8.13. Weak Verbs in Stem II

8.13.1. *Verba Mediae /ʾ/*

Verbs in this category include:

m-gʾr 'to belch', *m-lʾm* 'to weld', *m-nʾl* 'to shoe (a horse) / 'to curse'; *m-pʾr* 'to yawn', *m-rʾd* 'to quake (earth)', *m-ṣʾr* 'to curse, insult', *m-ṭʾl* 'to play'.

It is necessary to distinguish this category due to the morphology of various of its inflections that can be explained as reflections of the presence of a medial laryngal *ʾ at some stage in their historical development. The laryngal would, in turn, have been a development of an earlier pharyngal *ʿ. In the present state of the dialect, however, no pharyngal /ʿ/ or laryngal /ʾ/ is attested in any of the inflections forms.

These verbs are in the process of assimilating to the category of medial */w/* verbs (§8.13.5.) and most of the inflections are identical. As has been noted in §8.12.7., there are no grounds for distinguishing a category of medial /ʾ/ verbs in stem I, since these have entirely merged with medial */y/* verbs, e.g. *dyθ* 'to sweat' (< *dʾθ < *dʿθ), *lys* 'to chew' (< *lʾs < *lʿs), etc. The stem II medial /ʾ/ verbs have the appearance of medial */w/* verbs in many of their inflections, but they have not entirely merged with this class.

The 3ms. of the present base regularly has medial */w/*, e.g. *mnawəl* 'He shoes'. The /ə/ often shifts to the rounded vowel /u/: *mnawul*. In the rest of the paradigm three alternative forms exist. In one set of forms the middle radical is zero, reflecting the elision of a laryngal *ʾ: *mnála* 'She shoes' (< *mnaʾla), *mnáli* 'They shoe' (< *mnaʾli), etc. The alternative two sets of forms have /w/ as the medial radical and are identical to those of medial */w/* verbs. One set has the diphthong /aw/ in a closed syllable, e.g. *mnáwla* 'She shoes'. In the other set a short epenthetic vowel is placed between the /w/ and the third radical in the sequence /awC/. The stress is generally placed on this epenthetic when it is in penultimate

position. The /a/ vowel of the base remains short, as if it were still in a closed syllable, e.g. *mnăwə́la* 'She shoes'. The /a/ vowel of the 3ms. form is also sometimes pronounced short, by analogy with the shortness of the /a/ in open syllables in the rest of this alternative paradigm. This type of paradigm has apparently arisen by analogy with the vocalic pattern of stem III verbs (*máqṭəl, maqṭə́la, maqṭə́li*, etc.). The various paradigms are as follows:

m-nʾl 'to shoe'

		1	2	3
3rd pers.	ms.	*mnáwəl*	*mnáwəl*	*mnǎ̆wəl*
	fs.	*mnála*	*mnáwla*	*mnăwə́la*
	pl.	*mnáli*	*mnáwli*	*mnăwə́li*
2nd pers.	ms.	*mnálət*	*mnáwlət*	*mnăwə́lət*
	fs.	*mnálət*	*mnáwlət*	*mnăwə́lət*
	pl.	*mnalítu*	*mnawlítu*	*mnăwəlítu*
1st pers.	ms.	*mnálən*	*mnáwlən*	*mnăwə́lən*
	fs.	*mnálən*	*mnáwlən*	*mnăwə́lən*
	pl.	*mnáləx*	*mnáwləx*	*mnăwə́ləx*

There appears to be a certain amount of lexical variation in the use of these alternative paradigms. The paradigms with medial /w/ throughout are used more frequently with some verbs of this category than with others, indicating that the assimilation to the category of medial /w/ verbs is more advanced in some verbs than in others.

The past base has the form *mnuwəl-*. The glide /w/ has arisen after the rounded vowel /u/ following the elision of a laryngal: *mnuwəl- < *mnuʾəl- < *mnuʿəl*. The /ə/ vowel in this form often shifts to /u/ under the influence of the phonetic context, e.g. *mnuwə́lle / mnuwúlle* 'He shoed'. The fs. and pl. forms of the past base are *mnula-* and *mnuli-* respectively, which have developed from **mnuʾla* and **mnuʾli*.

There are two alternative forms of the ms. and pl. resultative participle. In one of these the /w/ is contracted: *mCúCa* (ms. < *mCuʾCa*), *mCúCe* (pl. < *mCuʾCe*). In the other the stress is shifted onto a short epethetic /ə/, with the /w/ being retained and the /u/ remaining short as if it were in a closed syllable: *mCŭwə́Ca* (ms.), *Cŭwə́Ce* (pl.). The fs. form has the vocalic pattern of the strong verb and regularly has medial /w/. The two sets of forms are illustrated below:

	1	2
ms.	*mnŭwɔ́la*	*mnŭwɔ́la*
fs.	*mnuwálta*	*mnuwálta*
pl.	*mnúle*	*mnŭwɔ́le*

The singular imperative has the form *mnáwəl*, with medial /w/. The plural imperative has two alternative forms. One with a zero medial radical, resulting from the elision of the medial radical *ʾ: *mnálu* (< **mnaʾlu*). The other has medial /w/: *mnáwlu*.

The infinitive form *mnawole* has developed from **mnaʾole*. Verbal noun: *mnawalta*.

The development of the medial /w/ glide replacing an original pharyngal *ʿ* would most likely have taken place originally in the forms where it is adjacent to /u/, e.g. *mnuwəlle* < **mnuʿəlle* (cf. §1.4.2.2.). The /w/ would then have spread to other areas of the paradigm by analogy.

8.13.2. *Verb Tertiae /ʾ/*

Verbs in this category include:

m-grʾ 'to strip off (twigs and branches)', *m-jmʾ* 'to gather', *m-plʾ* 'to share, distribute', *m-plʾ* 'to imitate', *m-pqʾ* 'to inflate; to explode, blow up (tr.)', *m-qṭʾ* 'to remove stones from grain', *m-šmʾ* 'to apply wax', *m-ṭmʾ* 'to covet'.

The inflection of the present base exhibits the distinctive features of final /ʾ/ verbs in stem I. The paradigm is as follows:

		Default	Long
3rd pers.	ms.	*mpằqe*	
	fs.	*mpằqa*	
	pl.	*mpằqi*	
2nd pers.	ms.	*mpằqət*	*mpăqeti*
	fs.	*mpằqət*	*mpăqati*
	pl.	*mpăqítu*	
1st pers.	ms.	*mpằqən*	*mpăqena*
	fs.	*mpằqən*	*mpăqana*
	pl.	*mpằqəx*	*mpăqexi*

The /ʾ/ has been elided in the sequence *Cʾ but the preceding /a/ vowel remains short, as if it were still in a closed syllable, e.g. *mpắqa* < **mpaqʾa* < **mpaqˤa*. In the 3ms. form *mpắqe* the /a/ vowel is short by analogy with the rest of the paradigm. The final *-e* of this form has arisen from an original final **-əʾ* < **əˤ*. After the elision of the final laryngal, the **ə* was lengthened to /e/.

The fs. and pl. past bases correspond to the pattern of strong verbs with the elision of the /ʾ/: *mpŭqa-* < **mpuqʾa-* (fs.), *mpŭqi-* < **mpuqʾi-* (pl.). The /u/ remains short as if it were still in a closed syllable. The ms. past base has the ending *-e: mpŭqe-*. As in the present base, this has developed historically from **-əʾ*. The /u/ is short in the ms. form by analogy with the fs. and pl. forms, e.g. *mpŭqéle* 'He exploded (it)'.

The resultative participle has the form: *mpŭqa* (ms.), *mpŭqέθa* (fs.), *mpŭqe* (pl.). The ms. and pl. forms correspond to the pattern of strong verbs with the elision of the /ʾ/: *mpŭqa* < **mpuqʾa, mpŭqe* < **mpuqʾe*. The /u/ remains short as if it were still in a closed syllable. The fs. form has the ending *-εθa*, by analogy with the paradigm of final /y/ verbs but its /u/ vowel remains short by analogy with the ms. and pl. forms of the participle.

The imperative forms have the endings of final /y/ verbs, with a distinction of gender in the singular: *mpắqi* (ms.), *mpắqa* (fs.), *mpắqo* (pl.). The short /a/ vowel in the singular form has arisen by analogy with other inflections of the verb where it was originally in a closed syllable.

The infinitive has the form *mpắqoye*. The /y/ replaces the original laryngal between the /o/ and /e/ vowels, The /a/ vowel is short by analogy with other inflections of the verb. Indeed, the short /a/ has been generalized in all inflections of all paradigms. The verbal noun has the ending that is characteristic of final /y/ verbs: *mpắqεθa*.

8.13.3. *Verba Mediae* /y/

Verbs in this category include:

m-byn 'to appear', *m-hyr* 'to help', *m-šyn* 'to become tame', *m-syd* 'to hunt', *m-zyx* 'to celebrate (a festival)'.

Two alternative paradigms exist for the inflection of the present base. One of these corresponds to that middle /y/ verbs in stem I, with contraction of the /y/ in all forms except the 3ms. In the other paradigm the /y/ is preserved in all forms, with an epenthetic vowel being inserted after the /y/ throughout the paradigm except in the 3ms. This epenthetic is

stressed when in penultimate position. After the insertion of the epenthetic, the /a/ vowel remains short, as if it were still in a closed syllable.
The /a/ vowel is short also in the 3ms. form, by analogy with the rest of
the paradigm. This alternative paradigm is based on the vocalic pattern
of stem III verbs:

m-hyr 'to help'

		1	2
3rd pers.	ms.	*mháyər*	*mhä́yər*
	fs.	*mhɛ́ra*	*mhăyə́ra*
	pl.	*mhɛ́ri*	*mhăyə́ri*
2nd pers.	ms.	*mhɛ́rət*	*mhăyə́rət*
	fs.	*mhɛ́rət*	*mhăyə́rət*
	pl.	*mhɛrítu*	*mhăyərítu*
1st pers.	ms.	*mhɛ́rən*	*mhăyə́rən*
	fs.	*mhɛ́rən*	*mhăyə́rən*
	pl.	*mhɛ́rəx*	*mhăyə́rəx*

In the past base the /y/ is treated like a strong radical. An epenthetic /ə/
vowel is inserted between the /y/ and the third radical in the fs. and pl.
forms and the /u/ in the open syllable remains short, as if it were in a
closed syllable, and this feature is extended by analogy to the ms. form:
mCŭCəC- (ms.), *mCŭCəCa-* (fs.), *mCŭCəCi-* (pl.), e.g. *mhŭyə́rre* 'He helped
(him)', *mhŭyərále* 'He helped her', *mhŭyəríle* 'He helped them'.

An epenthetic /ə/ vowel is inserted before the third radical in the ms.
and pl. forms of the resultative participle. This epenthetic is stressed when
in penultimate position. The /u/ remains short, as if it were in a closed
syllable, and this feature is extended by analogy also to the fs. form: *mhŭyə́ra*
(ms.), *mhŭyárta* (fs.), *mhŭyáre* (pl.).

An epenthetic /ə/ is inserted before the third radical in the pl. imperative. After the insertion of the epenthetic the /a/ vowel remains. By
analogy this latter feature is extended also to the sing. imperative: *mhä́yər*
(sing.), *mhä́yəru* (pl.).

The infinitive has the pattern of a strong verb: *mhayore*. Verbal noun:
mhayarta.

The /h/ in the verb *m-hyr* 'to help' is often elided in fast speech, e.g.
mhayər [maːyər], *mhayore* [maːyoːre]. This elision, however, is not represented in the transcription.

8.13.4. *Verba Tertiae* /y/

Verbs in this category include:

m-bny 'to prepare food', *m-dry* 'to winnow', *m-dxy* 'to brand', *m-gby* 'to chose, elect', *m-gly* 'to uncover', *m-jly* 'to prize up (roots)', *m-jzy* 'to tax', *m-kpy* 'to cover', *m-ksy* 'to cover', *m-pθy* 'to spread out', *m-pšy* 'to break wind silently', *m-qby* 'to swell', *m-rpy* 'to release', *m-spy* 'to hand over, deliver', *m-ṣly* 'to pray', *m-ṣpy* 'to purify, strain', *m-šny* 'to move, change place', *m-šqy* 'to joke; to take trouble', *m-šry* 'to begin', *m-šṭy* 'to convey, to give', *m-tny* 'to recount', *m-ṭšy* 'to hide (tr. and intr.)', *m-vdy* 'to move aside', *m-xmy* 'to keep'.

The predominant paradigm for the present base of this category has inflectional endings that are the same as those of final /y/ verbs in stem I (§8.12.8.):

m-ṣly 'to pray'

		Default	Long
3rd pers.	ms.	*mṣále*	
	fs.	*mṣálya*	
	pl.	*mṣálɛ*	
		mṣála	
		mṣáli	
2nd pers.	ms.	*mṣálət*	*mṣaleti*
	fs.	*mṣályət*	*mṣalyati*
	pl.	*mṣalɛ́tu*	
		mṣalítu	
1st pers.	ms.	*mṣálən*	*mṣalena*
	fs.	*mṣályən*	*mṣalyana*
	pl.	*mṣáləx*	*mṣalexi*

An alternative paradigm for the inflection of the present base exists with an epenthetic vowel /i/ inserted before the /y/ of the fs. forms. This epenthetic generally receives the stress when in penultimate position. The /a/ preceding the epenthetic remains short, as if it were still in a closed syllable. By analogy with such forms, the /a/ is pronounced short also in the open syllables of the ms. and pl. forms. This alternative paradigm is

based on the vocalic pattern of stem III verbs, e.g. *mákle* 'he stops', *maklíya* 'she stops', etc. (§8.14.4.). It appears to be lexically restricted. It is not available for all verbs of the category. It is most commonly used with the verb *m-šry* 'to begin', which may be inflected with both paradigms:

		1	2
3rd pers.	ms.	*mšáre*	*mšắre*
	fs.	*mšárya*	*mšăríya*
	pl.	*mšárɛ*	*mšắrɛ*
		mšára	*mšắra*
		mšári	*mšắri*
2nd pers.	ms.	*mšárət*	*mšắrət*
	fs.	*mšáryət*	*mšăríyət*
	pl.	*mšarétu*	*mšărétu*
		mšarítu	*mšărítu*
1st pers.	ms.	*mšárən*	*mšắrən*
	fs.	*mšáryən*	*mšăríyən*
	pl.	*mšárəx*	*mšắrəx*

The verb *m-vdy* 'to move aside' is regularly conjugated with paradigm no. 2 with a short /a/ vowel after the first radical. The verb appears to be a loan from Kurdish ve dan (pronounced [va-daːn]). By conjugating it with paradigm no. 2 the short /a/ of the Kurdish source form is preserved, e.g. *mvắde, mvădíya, mvắdɛ*. Feminine singular forms from paradigm no. 1 are also used, since the /a/ is short in the closed syllable: *mvádya, mvádyət, mvádyən*.

The past base has the pattern *mCoCe / mCuCe-* (ms.), *mCuCya-* (fs.) and *mCoCɛ ~ mCuCɛ-* (pl.), e.g. *mkuséli* 'I covered (him)', *mkusyáli* 'I covered her', *mkuséli* 'I covered them'. There is an alternative fs. base with the form *mCŭCiya-*, with a short epenthetic /i/ inserted before the /y/ radical. The preceding /u/ remains short, as if it were in a closed syllable. This is used most commonly for the verb *m-šry* 'to begin': *mšuryáli ~ mšŭriyáli* 'I began it (f.)'.

The resultative participle in most verbs has the pattern: *mCúCya* (ms.), *mCoCɛ́θa ~ mCuCɛ́θa* (fs.), *mCúCye* (pl.), e.g. *hóle mṣúlya* 'He has prayed', *hóla mṣuléθa* 'She has prayed', *hóla mṣúlye* 'They have prayed'. The verb *m-šry* has alternative ms. and pl. forms with a short epenthetic /i/ vowel between the sequence *Cy*, which generally takes the stress. The preced-

ing /u/ remains short as if it were still in a closed syllable: *hóle mšúrya ~ mšŭríya* 'He has begun', *hóla mšúrye ~ mšŭríye* 'They have begun', *mšúryət ~ mšŭríyət* 'You have begun'.

As is the case with final /y/ in stem I, gender is distinguished in the singular of the imperative: *mṣáli* (ms.), *mṣála* (fs.), *mṣálo* (pl.) 'Pray!' When a supplementary suffix or a pronominal object suffix is attached to the fs. form, the final /a/ shifts to /ɛ/, e.g. *mṣaléga* 'Pray!', *mkaséle* 'Cover it!'. An alternative inflection of the imperative exists in which the /a/ vowel is short, as in the alternative paradigm of the present base. This is regularly used for the verb *m-vdy: mvắdi* (ms.), *mvắda* (fs.), *mvắdo* (pl.) 'Move aside!'. It is available for *m-šry* 'to begin', e.g. *mšắri* 'Begin!', and also occasionally for other verbs, e.g. *mrắpi* (ms.) 'Throw! (ms.).

In the infinitive the /y/ of the root remains uncontracted: *mkasóye* 'to cover'. An alternative form of the infinitive exists with a short /a/, e.g. *mvắdóye* 'to move aside'. Verbal nouns: *mkasɛθa, mvădɛθa*.

8.13.5. *Verba Mediae* /w/

Verbs in this category include:

m-dwr 'to thresh', *m-jwb* 'to reply', *m-jwd* 'to argue', *m-kwr* 'to distil', *m-qwd* 'to put on handcuffs', *m-qwl* 'to promise', *m-qwm* 'to happen, befall', *m-qwr* 'to bury' *m-swq* 'to go shopping', *m-ṣwθ* 'to speak', *m-šwr* 'to cause to jump', *m-twb* 'to repent', *m-zwg* 'to pair together'.

The medial /w/ in these verbs in most cases derives historically from **w*. Original medial **b* in stem II remains the stop /b/ due to its gemination at an earlier period, e.g. *mzábən* 'He sells' < **mzabbən*.

The present base may be inflected like a strong verb, with the /w/ uncontracted, e.g. *mṣáwəθ* 'He speaks', *mṣáwθa* 'She speaks', *mṣáwθi* 'They speak', etc. The unstressed /ə/ of the 3ms. form sometimes shifts to the

rounded vowel /u/: *mṣáwuθ*. An alternative pattern of inflection, based on the vocalic pattern of stem III verbs, is to place a short epenthetic between the /w/ and the third radical in the sequence /awC/. The stress is generally placed on this epenthetic when it is in penultimate position. The /a/ vowel of the base remains short, as if it were still in a closed syllable, e.g. *mqăwə́la* 'She promises', *mpăwə́ri* 'They yawn'. The /a/ vowel of the 3ms. form is also sometimes pronounced short, by analogy with the shortness of the /a/ in open syllables in the rest of this alternative paradigm. The two paradigms are as follows:

m-qwl 'to promise'

		1	2
3rd pers.	ms.	*mqáwəl*	*mqă̌wəl*
	fs.	*mqáwla*	*mqăwə́la*
	pl.	*mqáwli*	*mqăwə́li*
2nd pers.	ms.	*mqáwlət*	*mqăwə́lət*
	fs.	*mqáwlət*	*mqăwə́lət*
	pl.	*mqawlítu*	*mqăwəlítu*
1st pers.	ms.	*mqáwlən*	*mqăwə́lən*
	fs.	*mqáwlən*	*mqăwə́lən*
	pl.	*mqáwləx*	*mqăwə́ləx*

The third radical after the stressed epenthetic in paradigm no. 2 is sometimes pronounced geminated, e.g. *mzawə́ggi* 'They pair together'.

The past base has the pattern *mCuCəC-*, e.g. *mquwə́lle* 'He promised', *mṣuwə́tlux* 'You spoke'. Note the shift of the interdental /θ/ to the stop /t/ before the L-suffix in the verb *m-ṣwθ*.

There are two alternative forms of the ms. and pl. resultative participle. In one of these the /w/ is contracted: *mCúCa* (ms. < *mCuwCa*), *mCúCe* (pl. < *mCuwCe*). In the other the stress is shifted onto a short epethetic /ə/, with the /w/ being retained and the /u/ remaining short as if it were in a close syllable: *mCŭwə́ra* (ms.), *Cŭwə́re* (pl.). The fs. form sometimes has a short /u/ by analogy with these two forms. The two sets of forms are illustrated below:

m-qwl 'to promise'

	1	2
ms.	mqúla	mqŭwə́la
fs.	mquwálta	mqŭwálta
pl.	mqúle	mqŭwə́le

The imperative is formed according to the regular pattern: *mṣáwəθ* (sing.), *mṣáwθu* (pl.) 'Speak!'

Infinitive: *mṣawóθe*. Verbal noun: *mṣawaθta*.

8.13.6. *Verba Mediae /w/, Tertiae /y/*

Verbs in this category include:

m-šwy 'to furnish, lay out bed', *m-ṭwy* 'to roast'.

The medial /w/ in these verbs is derived historically from **w*. It remains stable throughout the inflection of all bases. Present base: *mšáwe, mšáwya, mšáwɛ*. Past base: *mšuwe-* (ms.), *mšuwya-* (fs.), *mšuwe-* (pl.). Resultative participle: *mšúwya* (ms.), *mšuwéθa* (fs.), *mšúwye* (pl.). Imperative: *mšáwi* (sing.), *mšáwo* (pl.). Infinitive: *mšawóye*. Verbal noun: *mšawɛθa*.

8.13.7. *Verba Tertiae /w/*

This category includes the verb *m-qrw* 'to approach', in which the final /w/ is derived historically from the fricative allophone of **b*. The /w/ is contracted in the same contexts as in stem I verbs. Present base: *mqáru* 'He approaches', *mqárwa* 'She approaches', *mqárwi* 'They approach', etc. Past base: *mqúrule* 'He approached'. Resultative participle: *mqurwa* (ms.), *mqurawta* (fs.), *mqurwe* (pl.). Imperative: *mqáru* (sing. and pl.). Infinitive: *mqarowe*.

8.13.8. *Verbs with Identical Second and Third Radicals*

Verbs in this category include:

m-bdd 'to poke (a fire)', *m-btt* 'to investigate', *m-dll* 'to plant crops with spaces in between; to spoil, pamper', *m-jss* 'to spy', *m-kll* 'to ululate', *m-qdd* 'to cut up (meat)', *m-ṣll* 'to become sober; to neigh', *m-šll* 'to sew a row of stitches', *m-tmm* 'to complete', *m-xll* 'to wash (vessels)'.

Two types of inflection are attested in verbs of this category. The first type is the regular inflection of the strong verb, e.g. *m-xll* 'to wash'. Present base: *mxaləl, mxalla, mxalli.* Past base: *mxuləlle, mxullále, mxullíle.* Resultative participle: *mxulla, mxulalta, mxulle.* Imperative: *mxaləl, mxallu.* Infinitive: *mxalole.*

The second type of inflection is based on the vocalic pattern of stem III verbs. It differs from the usual inflection of strong verbs in that the clustering of the second and third radicals is avoided by inserting a short epenthetic /ə/ vowel, which generally takes the stress when it occurs in penultimate position. The consonant after a stressed short epenthetic /ə/ is occasionally pronounced geminated: *CəCV* > *CəCCV.* The vowel in the syllable preceding the epenthetic remains short, as if it were in a closed syllable. The shortness of the vowel after the first radical is extended by analogy to all inflections, including those where no phonetic process has taken place to shorten the vowel.

In the present base the /a/ vowel after the first radical is short in all forms, including the 3ms. form where the shortness has arisen by analogy with the rest of the paradigm:

m-tmm 'to complete'

3rd pers.	ms.	*mtắməm*
	fs.	*mtămə́ma*
	pl.	*mtămə́mi*
2nd pers.	ms.	*mtămə́mət*
	fs.	*mtămə́mət*
	pl.	*mtăməmítu*
1st pers.	ms.	*mtămə́mən*
	fs.	*mtămə́mən*
	pl.	*mtămə́məx*

As remarked, the consonant after the stressed short epenthetic /ə/ is sometimes geminated, e.g. *mtamə́mma* (3fs.), *mtamə́mmi* (3pl.), etc. Gemination sometimes develops also after the stress short /a/ in the 3ms form: *mtámməm.*

The past base has the form *mtŭməm-* (ms.), *mtŭməma-* (fs. < **mtumma-*), *mtŭməmi-* (pl. < **mtummi-*). The /u/ of the ms. base is pronounced short by analogy with the fs. and pl. bases and also with the general shortness of the vowel after the first radical in all paradigms of the verb, e.g. *mtŭmə́mle* 'He completed (it m.)', *mtŭməmále* 'He completed it (f.)', *mtŭməmíle* 'He completed them'.

Resultative participle: *mtŭmə́ma* (ms. < **mtumma*), *mtŭmámta* (fs.), *mtŭmə́me* (pl. < **mtumme*). The */u/* of the fs. form is shortened by analogy rather than by phonetic process.

Imperative: *mtǎ́məm* (sing.), *mtǎ́məmu* (pl.) 'Complete!' The unstressed epenthetic vowel in the plural form is sometimes elided in fast speech: *mtámmu*.

The infinitive has a short */a/* vowel by analogy with the general shortness of the vowel in this position in the inflections of the verb: *mtămóme*. Verbal noun: *mtămámta*.

8.14. Weak Verbs in Stem III

8.14.1. *Verbs with a Zero First or Second Radical*

A number of verbs that derive historically from roots with a weak first or second radical are conjugated with the morphological pattern of stem III verbs but do not preserve the weak radical in any of their inflections. These include verbs with corresponding stem I forms from initial */ʕ/* roots and from medial */y/* roots, though at some earlier historical period the roots sometimes had a different configuration, e.g. initial or medial pharyngal, initial */y/* or final geminate (§8.12.1., §8.12.5.). There are also some verbs with no extant stem I form, but these can all be assumed to have been at some stage of development initial */ʕ/* or medial */y/* roots. Stem III verbs with these backgrounds exhibit the same patterns of inflection when the weak radical has a zero reflex. These patterns can be classified into two alternative paradigms, one in which the two radicals cluster and one in which the cluster is broken by a short epenthetic */ə/* vowel. The second paradigm is based on the vocalic pattern of strong verbs in stem III. The epenthetic in this paradigm is generally stressed when it occurs in penultimate position. The consonant after a stressed short epenthetic */ə/* is occasionally pronounced geminated: *Cə́CV > Cə́CCV*. The vowel in the syllable preceding the epenthetic is short, as if it were in a closed syllable. The shortness of the vowel in this syllable is extended by analogy through all paradigms of this group by analogy.

	1	2
Present base:		
3ms.	*máCəC*	*mǎ́CəC*
3fs.	*máCCa*	*mǎCə́Ca*
3pl.	*máCCi*	*mǎCə́Ci*

Past base
   ms.   *muCəC-*   *mŭCəC-*
   fs.   *muCCa-*   *mŭCəCa-*
   pl.   *muCCi-*   *mŭCəCi-*

Resultative participle
   ms.   *múCCa*   *mŭCə́Ca*
   fs.   *muCáCta*   *mŭCáCta*
   pl.   *múCCe*   *mŭCə́Ce*

Imperative
   sing.   *máCəC*   *mə́CəC*
   plural   *máCCu*   *mə́CəCu*

Infinitive
                             maCóCe   *mŭCóCe*

Verbal noun
                             maCáCta   *mŭCáCta*

These two sets of inflections are to some extent interchangeable, in that some verbs are conjugated with both. The interchangeability may be restricted to the inflection of one base. If this is the case, it is usually the present base that exhibits variant inflections. Some verbs, on the other hand, use mainly or, in some cases, exclusively one set of inflections rather than another. Some linkage can be identified between the tendency to use one type of inflection and the morphological background of the verb. The choice between the two types is, however, also lexically determined, since verbs from the same morphological background sometimes exhibit different trends in inflection.

Verbs in this category with a corresponding initial /ʾ/ verb in stem I include: *m-mð* 'to baptize' (*ʾmð* I < **ʿmð*), *m-sq* 'to cause to ascend' (*ʾsq* I), *m-qð* 'to burn (tr.)' (*ʾqð* I), *m-rq* 'to cause to run, smuggle away' (*ʾrq* I), *m-xl* 'to feed' (*ʾxl* I). Verbs derived historically from initial /ʾ/ roots but with no corresonding stem I forms include: *m-jb* 'to be astonished' (**ʾjb* < **ʿjb*), *m-čz* 'to be in pain, to be vexed; to vex, annoy' (< **ʾjz* < **ʿjz* ?), *m-rṭ* 'to break wind loudly' (**ʾrṭ* < **ʿrṭ*).

Verbs in this category with a corresponding medial /y/ verb in stem I include: *m-dṛ* 'to return (tr.); vomit' (*dyṛ* I), *m-kp* 'to knock down, shoot (a gun)' (*kyp* I 'to bend down, bow'), *m-lp* 'to teach' (*lyp* I), *m-rm* 'to raise' (*rym*

I), *m-rš* 'to wake (tr.)' (*ryš* I), *m-ṭm* 'to cause to taste' (*ṭym* I), *m-ṭn* 'to load' (*ṭyn* I), *m-zn* 'to cause to stand' (*zyn* I). The medial /*y*/ in several of these stem I forms was a secondary development: *dyṛ* < *ďṛ, *lyp* < *ylp < *ˀlp, *ryš* < *ṛˀš, *ṭym* < *ṭˀm, *ṭyn* < *ṭˀn. Most medial /*y*/ verbs have a stem III form that retains the /*y*/ in its inflections. The verb *m-kp* has a doublet root with middle /*y*/: *m-kyp*. The meaning of the verb *m-kyp* 'to lower' corresponds more directly to that of the stem I form *kyp* 'to become low, bend down'. Perhaps at some stage of their development the originally middle /*y*/ roots were construed as initial *ˀ (*m-ˀrm, m-ˀzn, m-ˀkp*). One may compare a root such as *ˀčm* 'to close', which has a middle /*y*/ doublet *čym*.

In a few cases verbs in this category were historically final geminate. This applies, for example, to the verb *m-xb* 'to love', which is derived historically from the root *ḥbb. Note also *m-xn* 'to yearn for' (< *ḥnn), which is optionally conjugated as a verb of this category in some of its inflections, though is more frequently construed as final /*y*/ (*m-xny*). The verb *m-ks* 'to close' appears to be derived historically from the final /*y*/ root *ksy 'to cover'. It is possible that at some stage of their development these three verbs were treated as having an initial *ˀ radical (**m-ˀxb, m-ˀxn, m-ˀks*). One may compare again the stem I form *ˀčm* 'to close', which derives historically from the final geminate root *ṭmm (§1.4.6.).

An exceptional case, as regards its historical derivation, is the verb *m-čx* 'to find', which has developed from the *ˀap̄ˁel* form of the root *škḥ in earlier Aramaic. The sequence *šk has become the affricate /*č*/.[4]

Type 1 inflection is exhibited by the verbs: *m-kp, m-ks, m-sq, m-qð, m-xl*:

8.14.1.1. m-kp *'to knock down'*
Present base: *mákəp, mákpa, mákpi*. Past base: *mukə́ple, mukpále, mukpíle*. Resultative participle: *múkpa, mukápta, múkpe*. Imperative: *mákəp, mákpu*. Infinitive: *makópe*. Verbal noun: *makápta*.

8.14.1.2. m-ks *'to close'*
Present base: *mákəs, máksa, máksi*. Past base: *mukə́sle, muksále, muksíle*. Resultative participle: *múksa, mukásta, múkse*. Imperative: *mákəs, máksu*. Infinitive: *makóse*. Verbal noun: *makásta*.

---

[4] This development appears to have been brought about by an initial shift of *šk to *št, as is found in the form of this verb in some other NENA dialects such as Jewish Urmia *m-štx*. The affricate /*č*/ would then have developed by metathesis from *št.

8.14.1.3. m-sq *'to cause to ascend'*
Present base: *másəq, másqa, másqi*. Past base: *musə́qle, musqále, musqíle*. Resultative participle: *músqa, musáqta, músqe*. Imperative: *másəq, másqu*. Infinitive: *masóqe*. Verbal noun: *masáqta*.

8.14.1.4. m-qð *'to burn'*
Present base: *maqəð, máqða, máqði*. Past base: *muqə́dle, muqðále, muqðíle*. Resultative participle: *múqða, muqáðta, múqðe*. Imperative: *máqəð, máqðu*. Infinitive: *maqóðe*. Verbal noun: *maqáðta*.

8.14.1.5. m-xl *'to feed'*
Present base: *máxəl, máxla, máxli*. Past base: *muxə́lle, muxlále, muxlíle*. Resultative participle: *múxla, muxálta, múxle*. Imperative: *máxəl, máxlu*. Infinitive: *maxóle*. Verbal noun: *maxálta*.

Type 2 inflection is exhibited by other verbs, in many cases as an optional alternative to type 1 inflection.

8.14.1.6. m-čx *'to find'*
Present base: *máčəx ~ măč̀əx, máčxa ~ măč̀əxa, máčxi ~ măč̀əxi*. Past base: *mŭč̀əxle, mŭčəxále, mŭčəxíle*. Resultative participle: *mŭč̀əxa, mŭčáxta, mŭč̀əxe*. Imperative: *măč̀əx, măč̀əxu*. Infinitive: *măčóxe*. Verbal noun: *măčáxta*.

8.14.1.7. m-čz *'to vex, be vexed'*
Present base: *măč̀əz, măč̀əza, mačəzi*. Past base: *mŭč̀əzle*. Resultative participle: *mŭč̀əza, mŭčázta, mŭč̀əze*. Imperative: *măč̀əz, măč̀əzu*. Infinitive: *măčóze*. Verbal noun: *măčázta*.

8.14.1.8. m-dr̝ *'to return (tr.)'*
Present base: *măd̀ər, mădə́ra, mădə́ri*. Past base: *mŭdə́r̝r̝e, mŭdərále, mŭdəríle*. Resultative participle: *mŭdə́ra, mŭdárta, mŭdə́re*. Imperative: *măd̀ər, măd̀əru*. Infinitive: *mădór̝e*. Verbal noun: *mădárta*.

8.14.1.9. m-jb *'to be astonished'*
Present base: *májəb ~ măj̀əb, májba ~ măj̀əba, májbi ~ majə́bi*. Past base: *mŭjə́ble*. Resultative participle: *mŭjə́ba ~ mujba, mŭjábta ~ mujabta, mŭjə́be ~ mujbe*. Imperative: *măj̀əb, măj̀əbu*. Infinitive: *măjóbe*. Verbal noun: *măjábta*.

8.14.1.10. m-lp *'to teach'*
Present base: *máləp ~ măl̀əp, málpa ~ mălə́pa, málpi ~ mălə́pi*. Past base: *mŭlə́ple, mŭləpále, mŭləpíle*. Resultative participle: *mŭlə́pa, mŭlápta, mŭlə́pe*. Imperative: *măl̀əp, măl̀əpu*. Infinitive: *mălópe*. Verbal noun: *mălápta*.

8.14.1.11. m-mð *'to baptize'*
Present base: *mámǝð ~ mǎmǝð, mámða ~ mǎmáða, mámði ~ mǎmáði*. Past base: *mŭmǝ́dle, mŭmǝðále, mŭmǝðíle*. Resultative participle: *mŭmáða, mŭmáðta, mŭmǝ́ðe*. Imperative: *mǎ́mǝð, mǎ́mǝðu*. Infinitive: *mǎmóðe*. Verbal noun: *mǎmáðta*.

8.14.1.12. m-rm *'to raise'*
Present base: *márǝm ~ mǎ́rǝm, márma ~ mǎráma, mármi ~ mǎrǝ́mi*. Past base: *mŭrǝ́mle, mŭrǝmále, mŭrǝmíle*. Resultative participle: *mŭráma, mŭrámta, mŭrǝ́me*. Imperative: *mǎ́rǝm, mǎ́rǝmu*. Infinitive: *mǎróme*. Verbal noun: *mǎrámta*.

8.14.1.13. m-rq *'to cause to run'*
Present base: *mǎ́rǝq, mǎrǝ́qa, mǎrǝ́qi*. Past base: *mŭrǝ́qle, mŭrǝqále, mŭrǝqíle*. Resultative participle: *mŭrǝ́qa, mŭrǝ́qta, mŭrǝ́qe*. Imperative: *mǎ́rǝq, mǎ́rǝqu*. Infinitive: *mǎróqe*. Verbal noun: *mǎráqta*.

8.14.1.14. m-r̭š *'to wake'*
Present base: *mǎ́r̭ǝš, mǎr̭ǝ́ša, mǎr̭ǝ́ši*. Past base: *mŭr̭ǝ́šle, mŭr̭ǝšále, mŭr̭ǝšíle*. Resultative participle: *mŭr̭ǝ́ša, mŭr̭ǝ́šta, mŭr̭ǝ́še*. Imperative: *mǎ́r̭ǝš, mǎ́r̭ǝšu*. Infinitive: *mǎr̭óše*. Verbal noun: *mǎr̭ášta*.

8.14.1.15. m-rṭ *'to break wind loudly'*
Present base: *mǎ́rǝṭ, mǎrǝ́ṭa, mǎrǝ́ṭi*. Past base: *mŭrǝ́ṭle*. Resultative participle: *mŭrǝ́ṭa, mŭrǝ́ṭṭa, mŭrǝ́ṭe*. Imperative: *mǎ́rǝṭ, mǎ́rǝṭu*. Infinitive: *mǎróṭe*. Verbal noun: *mǎráṭṭa*.

8.14.1.16. m-ṭm *'to cause to taste'*
Present base: *mǎ́ṭǝm, mǎṭǝ́ma, mǎṭǝ́mi*. Past base: *mŭṭǝ́mle, mŭṭǝmále, mŭṭǝmíle*. Resultative participle: *mŭṭǝ́ma, mŭṭámta, mŭṭǝ́me*. Imperative: *mǎ́ṭǝm, mǎ́ṭǝmu*. Infinitive: *mǎṭóme*. Verbal noun: *mǎṭámta*.

8.14.1.17. m-ṭn *'to load'*
Present base: *mǎ́ṭǝn, mǎṭǝ́na, mǎṭǝ́ni*. Past base: *mŭṭǝ́nle, mŭṭǝnále, mŭṭǝníle*. Resultative participle: *mŭṭǝ́na, mŭṭánta, mŭṭǝ́ne*. Imperative: *mǎ́ṭǝn, mǎ́ṭǝnu*. Infinitive: *mǎṭóne*. Verbal noun: *mǎṭánta*.

8.14.1.18. m-xb *'to love'*
Present base: *máxǝb ~ mǎ́xǝb, máxba ~ mǎxába, máxbi ~ mǎxǝ́bi*. Past base: *mŭxǝ́ble, mŭxǝbále, mŭxǝbíle*. Resultative participle: *mŭxǝ́ba, mŭxábta, mŭxǝ́be*. Imperative: *mǎ́xǝb, mǎ́xǝbu*. Infinitive: *mǎxóbe*. Verbal noun: *mǎxábta*.

8.14.1.19. m-xn *'to yearn for'*

Present base: *mắxən, mǎxə́na, mǎxə́ni*. Resultative participle (ms.): *mŭxə́na*. In other inflections the verb is construed as final */y/*.

8.14.1.20. m-zn *'to cause to stand'*

Present base: *mǎ́zən, mǎzə́na, mǎzə́ni*. Past base: *mŭzə́nne, mŭzənále, mŭzəníle*. Resultative participle: *mŭzə́na, mŭzánta, mŭzə́ne*. Imperative: *mǎ́zən, mǎ́zənu*. Infinitive: *mǎzóne*. Verbal noun: *mǎzánta*.

8.14.2. *Verba Tertiae /ʔ/*

Verbs in this category include: *m-šmʔ* 'to listen', *m-zdʔ* 'to frighten', *m-ṭlʔ* 'to put to sleep'.

    There is a considerable diversity of forms in the inflection of the present base of this group of verbs:

m-šmʔ 'to listen'

			Default	Long
3rd pers.	ms.		*mášme*	
	fs.		*mášma*	
			mašmíya	
			mǎšə́mya	
	pl.		*mášmi*	
			mášmɛ	
			mášma	
2nd pers.	ms.		*mášmət*	*mašmeti*
			mašmíyət	*mašmiyeti*
	fs.		*mášmət*	*mašmati*
			mašmíyət	*mašmiyati*
			mǎšə́myət	*mǎšə́myati*
	pl.		*mašmítu*	
			mašmɛ́tu	
			mašmiyítu	
1st pers.	ms.		*mášmən*	*mašmena*
			mašmíyən	*mašmiyena*
	fs.		*mášmən*	*mašmana*
			mašmíyən	*mašmiyana*
			mǎšə́myən	*mǎšə́myana*

pl.	*mášməx*	*mašmexi*
	mašmíyəx	*mašmiyexi*

Some of these inflections reflect a direct development from a form with final /ˀ/ whereas others are based on the analogy of final /y/ verbs. The feminine singular forms have three variant inflections. One reflects a development from a final /ˀ/, ultimately final *ˤ, form:

3fs.	*mášma*	< *mášmˀa*	< *mášmˤa*
2fs.	*mášmət*	< *mášmˀa-t*	< *mášmˤa-t*
1fs.	*mášmən*	< *mášmˀa-n*	< *mášmˤa-t*

The second may reflect a development from a final /ˀ/ form or a final /y/ form with a stressed epenthetic after the second radical. If it is a development from a final /ˀ/ form, the /y/ in the form would have arisen as a glide after the elision of the /ˀ/:

3fs.	*mašmíya*	< *mašmə́ˀa*	< *mašmə́ˤa*
		< *mašmya*	
2fs.	*mašmíyət*	< *mašmə́ˀa-t*	< *mašmə́ˤa-t*
		< *mašmya-t*	
1fs.	*mašmíyan*	< *mašmə́ˀa-n*	< *mašmə́ˤa-n*
		< *mašmya-n*	

The third reflects a development from a final /y/ form with an epenthetic placed before the second radical. Note that the /a/ vowel in the preceding syllable is short, as if it were still in a closed syllable:

3fs.	*măšə́mya*	< *mašmya*
2fs.	*măšə́myət*	< *mašmya-t*
1fs.	*măšə́mya*	< *mašmya-n*

The 2ms., 1ms., and 1pl. inflections have two variants, one with a glide /y/ reflecting a derivation from a final /ˀ/ form and the other without the glide reflecting a derivation from a final /y/ form:

2ms.	*mašmíyət*	< *mašmə́ˀət*	< *mašmə́ˤət*
	mášmət		
1ms.	*mašmíyən*	< *mašmə́ˀən*	< *mašmə́ˤən*
	mášmən		

1pl.   *mašmíyəx*   < **mašmə́ʾəx*   < **mašmə́ʿəx*
          mášməx

The 2pl. form has three variants, one with a glide /y/ reflecting a deriva-
tion from a final /ʾ/ form and the other two without the glide reflecting
a derivation from a final /y/ form:

2pl.   *mašmiyítu*   < **mašmə́ʾítu*   < **mašmə́ʿítu*
          mašmítu
          mašmɛ́tu

The 3ms. and 3pl. forms have the endings of final /y/ forms.

   The other bases have the pattern of final /y/ verbs. Past base: *muCCe-*
(ms.), *muCəCya-* (fs.), *muCCɛ-* (pl.), e.g. *muzdéle* 'He frightened (him)', *muzədyále*
'He frightened her', *muzdéle* 'He frightened them'. Resultative participle:
muCəCya (ms.), *muCCɛ́θa* (fs.), *muCóCye* (pl.). Compound forms: *hóle mušə́mya*
'He has listened', *mušmɛ́θela* 'She has listened', *mušə́myəx* 'We have listened'.
Imperative: *mášmi* (ms.), *mášma* (fs.), *mášmo* (pl.) 'Listen!'. Infinitive: *mašmóye*.
Compound forms: *hóle mašmóye* 'He is listening', *mašmóyən* 'I am listening'.
Verbal noun: *mašmɛθa*.

8.14.3. *Verba Mediae* /y/

Verbs in this category include:

m-byn 'to appear; to come to visit', *m-byč̣* 'to give birth to a bastard', *m-č̣yl*
'to sprout', *m-dyn* 'to owe', *m-dyx* 'to dampen down (fire)', *m-j̣yr* 'to cause
to urinate', *m-kym* 'to make black', *m-kyp* 'to lower, bow (tr.)', *m-kyš* 'to
deflate, defray', *m-lyṣ* 'to spoil, ruin', *m-lyz* 'to hurry', *m-myl* 'to become
green/blue', *m-myṣ* 'to give suck, nurture', *m-myθ* 'to cause to die', *m-myx*
'to let (somebody) smell (something)', *m-nyx* 'to rest', *m-pyð* 'to cause to
cross', *m-qym* 'to raise; to evacuate', *m-qyṣ* 'to cut (with scissors)', *m-rys* 'to
sprinkle', *m-ryx* 'to make long', *m-ryz* 'to stand in a row; put in a row',
m-sym bala 'to pay attention', *m-ṣyx* 'to examine, test (sth.); to visit (the
sick)', *m-ṣyθ* 'to listen', *m-zyd* 'to add'.

Two alternative types of inflection are used for this category of verb. In
the type 1 inflection the medial /y/ is retained in all bases whereas in
type 2 the /y/ coalesces with the vowel that follows it.

In the type 1 inflection of the present base, the /y/ clusters with the preceding consonant. In forms other than the 3ms., a short epenthetic /ə/ is inserted after the /y/, which is stressed when in penultimate position in the word.

m-zyd 'to add'

		Default	Long
3rd pers.	ms.	*mázyəd*	
	fs.	*mazyə́da*	
	pl.	*mazyə́di*	
2nd pers.	ms.	*mazyə́dət*	*mazyədeti*
	fs.	*mazyə́dət*	*mazyədati*
	pl.	*mazyədítu*	
1st pers.	ms.	*mazyə́dən*	*mazyədena*
	fs.	*mazyə́dən*	*mazyədana*
	pl.	*mazyə́dəx*	*mazyədexi*

The consonant after the stressed short epenthetic /ə/ is occasionally pronounced geminated, e.g. *mazyə́dda, mazyə́ddi*, etc.

In the type 2 inflection, in which the /y/ coalesces with the following /i/ vowel, the /a/ vowel is sometimes pronounced long and sometimes remains short as if it were in a closed syllable: *mázid ~ mắzid, mazída ~ mă̆zída, mazídi ~ mă̆zídi*, etc.

The type 1 inflection of the past base has the form: *muzyəd-* (ms.), *muzyəda-* (fs.), *muzyədi-* (pl.), e.g. *muzyə́dle* 'He added (it)', *muzyədále* 'He added it (f.)', *muzyədíle* 'He added them'. In the type 2 inflection the /y/ coalesces with the following /i/ in the way described regarding the present base: *muzídle ~ mŭzídle, muzidále ~ mŭzidále, muzidíle ~ mŭzidíle*.

The type 1 form of the resultative participle is: *muzyə́da* (ms.), *muzyə́dta* (fs.), *muzyə́de* (pl.). The consonant after the stressed short epenthetic /ə/ in the ms. and pl. forms is occasionally pronounced geminated: *muzyə́dda, muzyə́dde*. In the type 2 form of inflection the sequence /yə/ contracts to /i/, but /ya/ of the fs. form remains unchanged: *muzída ~ mŭzída* (ms.), *muzíde ~ mŭzíde* (pl.).

The forms of the imperative are in the type 1 inflection *mázyəd* (sing.), *mázyədu* (pl.) and the type 2 inflection *mázid ~ mắzid* (sing.), *mázidu ~ mắzidu* (pl.).

Type 1 infinitive: *mazyóde.* Type 2 infinitive: *mazóde* ~ *măzóde.* Type 1 verbal noun: *mazyátta.* Type 2 verbal noun: *maqámta* ~ *măqámta* (*m-qym*).

8.14.4. *Verba Tertiae* /y/

Verbs in this category include:

m-bry 'to give birth to', *m-čmy* 'to extinguish', *m-jry* 'to leak', *m-kly* 'to stop (tr.)', *m-kry* 'to make short', *m-ldy* 'to cheat', *m-lhy* 'to kindle', *m-nšy* 'to forget', *m-nty* 'to succeed', *m-rdy/m-rḏy* 'to reconcile', *m-ṣly* 'to bring down', *m-šty* 'to give to drink, irrigate; arrange the warp (weaving)', *m-ṭpy* 'to cause to catch, to kindle', *m-ṭry* 'to drive', *m-xly* 'to give a gift', *m-xny* 'to yearn for', *m-xzy* 'to show'.

The inflectional endings of the present base are the same as those of final /y/ verbs in stem I (§8.12.8.) and stem II (§8.13.4.). A short epenthetic is generally inserted in the feminine singular forms. This is placed either before the second radical or before the /y/ radical. In both cases it is stressed when in penultimate position, e.g. *maklíya* ~ *makə́lya* 'She stops'. The feminine singular inflections also have alternative forms without a /y/ radical, e.g. *mákla* 'She stops'. These forms may have arisen by analogy with the inflection of stem III final /ʾ/ verbs such as *m-šmʾ* 'to listen', e.g. *mašma* 'She listens' (§8.14.2.), or by the phonetic process of the elision of the /y/ after the consonant:

m-kly 'to stop'

		Default	Long
3rd pers.	ms.	*mákle*	
	fs.	*maklíya*	
		makə́lya	
		mákla	
	pl.	*máklɛ*	
		mákla	
		mákli	
2nd pers.	ms.	*máklət*	*makleti*
	fs.	*maklíyət*	*makliyati*
		makə́lyət	*makə́lyati*
		máklət	*maklati*
	pl.	*maklɛ́tu*	
		maklítu	

1st pers.	ms.	*máklən*	*maklena*
	fs.	*maklíyən*	*makliyana*
		makə́lyən	
		máklən	
	pl.	*mákləx*	*maklexi*

In the past base the */y/* of the fs. form is optionally elided: *mukle-* (ms.), *mukliya-* ~ *mukəlya-* ~ *mukla-* (fs.), *muklɛ* (pl.), e.g. *muklḗli* 'I have stopped (him)', *mukəlyáli* ~ *mukliyáli* ~ *mukl. áli* 'I have stopped her', *muklḗli* 'I have stopped them'.

In the resultative participle the */y/* is optionally elided in the ms. and pl. forms: *muklíya* ~ *mukə́lya* ~ *múkla* (ms.), *muklɛ́θa* (fs.), *muklíye* ~ *mukə́lye* ~ *múkle* (pl.).

As in other final */y/* verbs, gender is distinguished in the singular of the imperative: *mákli* (ms.), *mákla* (fs.), *máklo* (pl.). When a supplementary suffix or pronominal object suffix is attached to the fs. form, it has an */ɛ/* vowel rather than an */a/*, e.g. *maklɛ́ga* 'Stop!', *muklḗle* 'Stop him!'.

Infinitive: *maklóye*. Verbal noun: *maklɛθa*.

The verb *m-xny* 'to yearn for' has alternative forms for some of its inflections which belong to the category of verbs with a zero first or second radical (§8.14.1.). These include the present base (*mắxən, mă̆xə́na, mă̆xə́ni*) and the ms. resultative participle: *mŭxə́na*. In all other forms only final */y/* type of inflections are available.

8.14.5. *Verbs with a Zero First or Second Radical and a Final* /y/

These verbs resemble the category of verbs described in §8.14.1. with the additional weakness of a final */y/* radical. Most are derived historically from verbs with initial or medial *ʾ in their roots at some stage of their historical development. The *ʾ is generally derived from an original pharyngal *ʿ. Verbs with historically initial /ʾ/ roots are: *m-by* 'to swell' (*ʾby* < *ʿby*), *m-ry* 'to patch, repair clothes; to put rennet in cheese' (*ʾry* < *ʿry*), *m-ṣy* 'to fortify' (*ʾṣy* < *ʿṣy*). We should also include *m-my* 'to swear', which, although originally from an initial */y/* root, appears to be treated as an initial /ʾ/ root. Verbs with historically medial /ʾ/ roots are: *m-čy* 'to smooth' (*šʾy* < *šʿy*), *m-ny* 'to dawn' (*nʾy* < *ngh*), *m-ry* 'to graze (tr.)' (*rʾy* < *rʿy*). This inflectional category also includes the verb *m-ðy* 'to inform', which is historically initial */y/* and final /ʾ/ (< *ʿ), as in the corresponding stem I form *yðʾ* 'to know'.

As in verbs with a strong final radical described in §8.14.1., the inflections of verbs in this category fall into two alternative groups, one in which the strong radical clusters with the consonantal /y/ and another in which this cluster is broken by an epenthetic vowel /i/ before the /y/. The epenthetic is generally stressed when it occurs in penultimate position. The vowel in the syllable preceding the epenthetic is short, as if it were in a closed syllable. The shortness of the vowel in this syllable is extended by analogy through all paradigms of this group by analogy.

	1	2
Present base:		
3ms.	máCe	mắCe
3fs.	máCya	măCíya
3pl.	máCɛ	mắCɛ
	máCa	mắCa
	máCi	mắCi
Past base		
ms.	muCe-	mŭCe-
fs.	muCya-	mŭCiya-
pl.	muCɛ-	mŭCɛ-
Resultative participle		
ms.	múCya	mŭCíya
fs.	muCέθa	mŭCέθa
pl.	múCye	mŭCíye
Imperative		
ms.	máCi	mắCi
fs.	máCa	mắCa
plural	máCo	mắCo
Infinitive		
	maCóye	măCóye

According to the rules of historical phonology in the dialect, pattern 1 would be expected with roots with an original initial *ʾ and pattern 2 with roots with an original medial *ʾ, e.g. *mare* 'He patches' (< *maʾre*), *mặṛe* 'He grazes (tr.)' (< *marʾe*). This distinction is, indeed, generally maintained in the inflection of these roots. Note that they also have different *r* phonemes:

	m-ry 'to patch	*m-ry* 'to graze'
Present base:		
3ms.	*máre*	*mắṛe*
3fs.	*márya*	*mắṛíya*
3pl.	*márɛ*	*mắṛɛ*
	mára	*mắṛa*
	mári	*mắṛi*
Past base		
ms.	*muṛe-*	*mŭṛe-*
fs.	*murya-*	*mŭṛiya-*
pl.	*murɛ-*	*mŭṛɛ-*
Resultative participle		
ms.	*múrya*	*mŭṛíya*
fs.	*muṛέθa*	*mŭṛέθa*
pl.	*múrye*	*mŭṛíye*
Imperative		
ms.	*mári*	*mắṛi*
fs.	*mára*	*mắṛa*
plural	*máro*	*mắṛo*
Infinitive		
	maróye	*mắṛóye*
Verbal noun		
	maréθa	*mắṛéθa*

The division between the two patterns is not, however, completely consistent with the historical root of the verb and indeed the patterns generally alternate in the same root, e.g. *mábya ~ mặbíya* 'She swells', *mámya ~ mặmíya* 'She swears', *máčya ~ mặčíya* 'She smoothes'.

Verbs with a medial radical */h/* and a final radical */y/* are sometimes conjugated with the pattern of the verbs in this category, in that the medial */h/* is elided, e.g. *m-lhy* 'to ignite': *mắle* 'He ignites', *mặlíya* 'She ignites', *mắli* 'They ignite'. In careful speech, however, the */h/* is sometimes retained: *málhe, malhíya, málhi*.

8.14.6. *Verba Mediae* /w/

Verbs in this category include:

m-dwq 'to cause to hold', *m-gwr* 'to cause to marry', *m-gwṛ* 'to make big'; *m-jwj* 'to cause to walk, move', *m-lwš* 'to dress', *m-qwx* 'to make a noise', *m-xwr* 'to make white'.

The sequence /əw/ in the various inflected forms of this verb sometimes contacts to /u/ and the sequence /wo/ in the infinitve sometimes contracts to /o/. Otherwise the /w/ remains uncontracted.

    Present: *májwəj* (3ms.), *majə́wja ~ majúja ~ majwə́ja* (3fs.), *majə́wji ~ majúji ~ majwə́ji* (3pl.), etc.

    Past base: *mujwəj- (ms.), *majəwja- ~ mujuja- (fs.), *majəwji- ~ mujuji- (pl.), e.g. *mujwə́jle* 'He made (him) move', *mujujále* 'He made her move', *mujujíle* 'He made them move'.

    Resultative participle: *majəwja ~ mujúja* (ms.), *mujwájta* (fs.), *majəwje- ~ mujúje* (pl.).

    In the imperative the /a/ vowel in the initial syllable sometimes remains short even where it is open in the pl.: *májwəj* (sing.), *májəwju ~ mắjəwju- ~mắjuju* (pl.).

    Infinitive: *majwóje ~ majoje* . Verbal noun: *majwajta*.

8.14.7. *Verbs with a Zero First Radical and Medial* /w/

The verb *m-wr* 'to bring in' falls into this category. It is derived historically from the root *ʿbr* with an initial pharyngal.

    The /w/ is generally retained throughout the inflection of the present base: *máwər, máwra, máwri*. The sequence /aw/ in a closed syllable is occasionally contracted to /o/: *móra, móri*.

    Past base: *muwər- (ms.), *mura- (fs.), *muri- (pl.), e.g. *muwə́rre* 'He brought (him) in', *murále* 'He brought her in', *muríle* 'He brought them in'. Resultative participle: *múra* (ms.), *muwárta* (fs.), *múre* (pl.). Imperative: *máwər* (sing.), *máwru* (pl.). Infinitive: *mawóre*. Verbal noun: *mawárta*.

8.14.8. *Verba Tertiae* /w/

Verbs in this category include:

m-jlw 'to elope (woman)', *m-kθw* 'to register', *m-xrw* 'to damage, destroy'

In general the /ə/ in the sequence /əw/ is rounded by assimilation to the labial /w/, resulting either in a rounded front realization [y] or in the back vowel /u/. When the vowel shifts to /u/, the /w/ of the sequence is elided before a consonant or at the end of a word.

Present: *mákθu* (3ms.), *makə́θwa ~ makθŭ̆wa* (3fs.), *makə́θwi ~ makθŭ̆wi* (3pl.), etc.

Past base: *mukθu-* (ms.), *mukəθwa-* (fs.), *mukəθwi-* (pl.), e.g. *mukθúle* 'He registered (him)', *mukəθwále* 'He registered her, *mukəθwíle* 'He registered them'.

Resultative participle: *mukə́θwa* (ms.), *mukθáwta* (fs.), *mukə́θwe* (pl.).

The imperative exhibits a contraction of the sequence /əw/ > /u/ in the singular and of the sequence /wu/ > /u/ in the plural. The /a/ vowel in the initial syllable sometimes remains short even where it is open in the pl.: *mákθu* (sing. < *makθəw*), *mákəθu ~ mă̆kəθu* (pl. < *mă̆kəθwu*).

Infinitive: *makθówe*. Verbal noun: *makθáwta*.

8.14.9. *Verbs with a Zero First or Second Radical and a Final* /w/

The verb *m-dw* 'to be able, to manage to' belongs in this category.

The sequence /əw/ in the patterns of the various inflections contracts to /u/, otherwise the /w/ remains uncontracted. Present: *mádu* (3ms.), *mádwa* (3fs.), *mádwi* (3pl.), etc. Past base: *mudu-*, e.g. *mudúle* 'He managed to'. Resultative participle: *múdwa* (ms.), *mudáwta* (fs.), *múdwe* (pl.). The singular and plural forms of the imperative are the same: *mádu* (sing. < *madəw*, pl. < *madwu*). Infinitive: *madówe*. Verbal noun *madáwta*.

8.14.10. *Verbs with Identical Second and Third Radicals*

The verb *maprore* 'to widen' belongs to this category. The inflection of the bases of this verb corresponds to the patterns that are applied to strong verbs, except that an additional epenthetic is inserted between the second and third radicals if the pattern brings them together in a cluster.

Present base:

3rd pers.	ms.	*máprər*	cf. *máplax*
	fs.	*mapə́rəra*	cf. *mapə́lxa*
		maprə́ra	cf. *maplə́xa*
	pl.	*mapə́rəri*	cf. *mapə́lxi*
		maprə́ri	cf. *maplə́xi*

Past base: *muprǝr-* (ms.), *mupǝrǝra-* (fs.), *mupǝrǝri-* (pl.), e.g. *muprárre* 'He widened (it ms.)', *mupǝrǝrále* 'He widened it (fs.)' (cf. *mupǝlxále*), *mupǝrǝríle* 'He widened them' (cf. *mupǝlxíle*). Resultative participle: *mupárǝra* (ms.), *muprárta* (fs.), *mupárǝre* (pl.); cf. *mupálxa*, *mupláxta*, *mupálxe*. Imperative: *máprǝr* (sing.), *mápǝrǝru* ~ *mắpǝrǝru* (pl.). Infinitive: *mapróre*. Verbal noun: *maprárta*.

8.15. Weak Quadriliteral Verbs

8.15.1. *Verba Primae* /ʾ/

Verbs in this category include *m-rml* 'to become a widow/widower', *m-rql* 'to be late', *m-ršn* 'to become mirky, make mirky (water); to become numb'.

These verbs are conjugated with the pattern of stem III of strong verbs with triliteral roots. Since their roots, however, can be reconstructed as having an initial *ʾ at some stage in their historical development, they are classifed here as quadriliteral verbs: *m-rml* < *ʾrml* (cf. *ʾarǝmla* 'widower'), *m-rql* < *ʾrql* < *ʿrql* (cf. Syr. *ʿarqel* 'to bind, to hinder'), *m-ršn* < *ʾršn* (cf. *ʾǝršana* 'mirky', *ʾǝrša* 'mirkiness').

Present base: *márqǝl* 'He is late', *maráqla* 'She is late', *maráqli* 'They are late', etc. Past base: *murqálle* 'He was late'. Resultative participle: *muráqla* (ms.), *murqálta* (fs.), *muráqle* (pl.). Imperative: *márqǝl* (sing.), *márǝqlu* (pl.). Infinitive: *marqóle*. Verbal noun: *marqalta*.

8.15.2. *Verba Secundae* /y/

Verbs in this category include:

m-gyžn 'to become dizzy', *m-nyšn* 'to hit a target', *m-šyðn* 'to become mad', *m-hymn* 'to believe'.

The differing inflections of these verbs require these verbs to be divided into two distinct groups:

Group 1: *m-gyžn, m-nyšn, m-šyðn*
Group 2: *m-hymn*

(i) *Verbs in Group 1*

The present base of verbs in this group has the diphthong /ey/, which may be interpreted as a development of the sequence /ay/. This development of an original /ay/ is found elsewhere in the dialect (§2.4.1.), albeit rather marginally. The occurrence of the diphthong /ey/, with the /e/ vowel nucleus, in the verbs *m-gyžn* and *m-šyðn* is likely to be influenced by the fact that they are derived respectively from the adjectives *gežana* 'dizzy' (< Kurd. gêj) and *šeðana* 'mad', which have an /e/ after their first radical.

In the inflection of the present base a short epenthetic /ə/ breaks the cluster of the second and third radicals in all forms except the 3ms. This is placed either before or after the third radical. It is often stressed when in penultimate position:

3rd pers.	ms.	*mgéyžən*
	fs.	*mgeyə́žna*
		mgeyžə́na
	pl.	*mgeyə́žni*
		mgeyžə́ni

In the past base and resultative participle the /y/ remains uncontracted before the /u/ of the pattern, e.g. *mguyžə́nne* 'He became dizzy', *mšuyðə́nne* 'He went mad'. The /u/ of this base is usually fronted to the region of [y] by assimilation to the following /y/. Resultative participle: *mguyə́žna* ~ *mguyžə́na* (ms.), *mguyžánta* (fs.), *mguyə́žne* ~ *mguyžə́ne* (pl.). The /u/ of this base is usually fronted to the region of [y] by assimilation to the following /y/.

The imperative and infinitive forms exhibit the same development of the sequence /ay/ to /ey/ as the inflection of the present. Imperative: *mšéyðən* 'Become mad!' (sing.), *mšéyəðnu* 'Become mad' (pl.). Infinitive: *mšeyðóne*. Verbal noun: *mšeyðanta*.

(ii) *The Verb* m-hymn *'to believe'*

The inflection of this verb differs from that of the verbs in group 1 with regard to developments of the second radical /y/. Furthermore, two types of inflection should be distinguished for this verb.

In the type 1 inflection the /y/ radical is retained in all bases. The vocalic patterns of these are the same as in the verbs *m-gyžn, m-nyšn* and *m-šyðn*, except that the sequence /ay/ in the present base, imperative and

infintive exhibits a variety of different developments. It may be preserved as /ay/, shift to /ey/ or contract to /ɛ/:

Present base:
<div>

3rd pers.   ms.   *mháymən*
                            mhéymən
                            mhɛ́mən
                fs.   *mhaymə́na*
                            mhayə́mna
                            mheymə́na
                            mheyə́mna
                            mhɛmə́na
                pl.   *mhaymə́ni*
                            mhayə́mni
                            mheymə́ni
                            mheyə́mni
                            mhɛmə́ni
</div>

Past base: *mhuymə́nne* 'He believed'. Resultative participle: *mhuyə́mna* ~ *mhuymə́na* (ms.), *mhuymánta* (fs.), *mhuyə́mna* ~ *mhuymə́ne* (pl.). Imperative: *mháymən* ~ *mhéymən* ~ *mhɛ́mən* 'Believe!' (sing.), *mháyəmnu* ~ *mhéyəmnu* 'Believe!' (pl.). Infinitive: *mhaymóne* ~ *mheymóne* ~ *mhɛmóne*. Verbal noun: *mhaymánta* ~ *mheymánta* ~ *mhɛmánta*.

   The second type of inflection of the verb *m-hymn* has a vocalic pattern corresponding to that of stem III verbs with a zero first or second radical (§8.14.1.). The /y/ radical is absent and the vowel of the first syllable is short:

Present base:
<div>

3rd pers.   ms.   *mhă̆mən*
                fs.   *mhă̆mə́na*
                pl.   *mhă̆mə́ni*
</div>

Past base: *mhŭmə́nne* 'He believed (him)', *mhŭmənále* 'He believed her', *mhŭməníle* 'He believed them'. Resultative participle: *mhŭmə́na* ~ *mhúmna* (ms.), *mhŭmánta* (fs.), *mhŭmə́ne* ~ *mhúmne* (pl.). Imperative: *mhă̆mən* (sing.), *mhă̆mənu* (pl.). Infinitive: *mhă̆móne*. Verbal noun: *mhă̆mánta*.

   The /m/ radical after the short vowel in these patterns is sometimes secondarily geminated, especially when preceded by the stress, e.g. *mhámmən* 'he believes', *mhummə́nne* 'he believed'.

8.15.3. *Verba Quartae* /y/

Verbs in this category include:

m-blby 'to search (inside a container)', *m-bsty* 'to become an ally', *m-črqy* 'to fire (gun), spring (a trap)', *m-čřčy* 'to dirty, to soil', *m-p̣ṛmy* 'to understand', *m-prpy* 'to rinse', *m-sxsy* 'to examine, test', *m-ṣrby* 'to drench', *m-šršy* 'to tilt, slope; to languish', *m-tlty* 'to hang', *m-trsy* 'to sustain, provide sustenance for', *m-xldy* 'to dig, excavate', *m-xrdy* 'to surround', *m-zrzy* 'to suffer, be in a predicament'.

The present base has the regular endings of final /y/ verbs. In the feminine singular forms a short epenthetic is placed either before the third radical or before the final /y/ radical. This epenthetic generally takes the stress when in penultimate position. The feminine singular inflections also have alternative forms without a /y/ radical:

m-prpy 'to rinse'

		Default	Long
3rd pers.	ms.	*mpárpe*	
	fs.	*mparpíya*	
		mparə́pya	
		mpárpa	
	pl.	*mpárpɛ*	
		mpárpa	
		mpárpi	
2nd pers.	ms.	*mpárpət*	*mparpeti*
	fs.	*mparpíyət*	*mparpiyati*
		mparə́pyət	
		mpárpət	
	pl.	*mparpítu*	
1st pers.	ms.	*mpárpən*	*mparpena*
	fs.	*mparpíyən*	*mparpiyana*
		mparə́pyən	
		mpárpən	
	pl.	*mpárpəx*	*mparpexi*

Past base: *mpurpe-* (ms.), *mpurpiya- ~ mpurəpya- ~ mpurpa-* (fs.), *mpurpɛ-* (pl.), e.g. *mpurpéle* 'He rinsed (it m.)', *mpurpiyále ~ mpurəpyále* 'He rinsed it (f.)', *mpurpéle* 'He rinsed them'.

Resultative participle: *mpurpíya ~ mpurə́pya* (ms.), *mpurpɛ́θa* (fs.), *mpurpíye ~ mpurə́pye* (pl.).

As with other final */y/* forms, gender is distinguished in the singular: *mpárpi* (ms.), *mpárpa* (fs.), *mpárpo* (pl.). When a supplementary suffix or pronominal object suffix is attached to the fs. form, it has an */ɛ/* vowel rather than an */a/*, e.g. *mparpéga!* 'Rinse (fs.)!', *mparpéle* 'Rinse (fs.) it!'

Infinitive: *mparpoye.* Verbal noun: *mparpɛθa.*

8.15.4. *Verbal Secundae* /w/, *Quartae* /y/

Verbs in this category include:

m-bʷby 'to howl (wolf)', *m-čʷčy̆* 'to chirp', *m-nʷny* 'to meow (cat)', *m-ṣʷsy* 'to twitter, chirp', *m-qʷqy* 'to bark (fox)'.

The present base is inflected with the same pattern as the final */y/* quadriliteral verbs described in §8.15.3:

m-čʷčy̆ 'to chirp'
3rd pers.	ms.	*mčáwče*	
	fs.	*mčawčĩya*	
		mčawə́čy̆a	
		mčáwča	
	pl.	*mčáwčɛ*	
		mčáwča	
		mčáwčĩ	etc.

In the past base and the resultative participle the */w/* radical is contracted. Past base: *mčuče-*, e.g. *mčučéle* 'It chirped'. Resultative participle: *mčučĩya ~ mčúčya* (ms.), *mčučɛ́θa* (fs.), *mčučĩye ~ mčúčye* (pl.).

The */w/* is usually preserved after */a/* in the other inflections. Imperative: *mčáwčĩ* (ms.), *mčáwča* (fs.), *mčáwčo* (pl.). Infinitive: *mčawčóye.* Verbal noun: *mčawčɛθa.* On some occasions, however, the diphthong */aw/* is contracted to */o/*.

8.16. Irregular and Defective Verbs

8.16.1. hwy 'to be'

This verb is suppletive to the copula. It has the full range of verbal inflections and supplies various functions that are not expressed by the copula (§15.3.9.).

Its inflections have the pattern of other stem I verbs from roots containing medial /w/ and final /y/ (§8.12.15.), except that the initial /h/ is elided in many forms.

In the present base the initial /h/ is preserved when there are no prefixed particles. The diphthong /aw/ in a closed syllable is sometimes contracted to /o/: háwe (3ms.), háwya ~ hóya (3fs.), háwɛ ~ háwi (3pl.), háwət (2ms.), háwyət ~ hóyət (2fs.), etc. The /h/ is elided after a prefixed particle, e.g. y-awe (3ms. < 'i-hawe), y-áwya ~ y-óya (3fs.), y-áwɛ ~ y-áwi (3pl.), etc. The future particle bəd- has the form bṭ- or, more frequently, is reduced to ṭ- (§8.6.2.), e.g. bṭ-áwe, ṭ-áwe, ṭ-óya, ṭ-áwɛ.

The initial /h/ is regularly elided in other bases. Past base we-, e.g. wéle, wéwale. Resultative participle: wíya (ms.), wíta (fs.), wíye (pl.). Note that the fs. form has the stop /t/ rather than the fricative /θ/, which would be expected in final /y/ verbs. This has arisen by analogy with the resultative participle of final /'/ verbs (§8.12.2), which the ms. and pl. forms resemble due to the elision of the /h/; cf. šmiya, šmita, šmiye. On some rare occasions the form wiθa with the interdental /θ/ is used. Imperative: wi (ms.), wa (fs.), wo (pl.). Infinitive: wáya. Verbal noun: wɛθa.

8.16.2. 'zl 'to go'

This verb follows the inflectional patterns of initial /'/ verbs (§8.12.1.) in most of its bases, but exhibits a few irregular features. In the present base the final /l/ is elided in all forms except the 3ms.: 'ázəl 'He goes', 'áza 'She goes' (< *'azla), 'ázi 'They go' (< *'azli), etc. The /a/ vowel of the base in the forms from which the /l/ has been elided is pronounced long due to its occurrence in an open syllable. This should be contrasted with final /'/ verbs, in which the /a/ remains short after the elision of the /'/: šắma 'She hears' < *šam'a (§8.12.2.).

Past base: zil-, e.g. zílle 'He has gone', zíllux 'You (ms.) went'. Resultative participle: zíla (ms.), zílta (fs.), zíle (pl.). Compound forms: zílele 'He has gone', zílɛt 'You have gone', zíla wéwa 'They had gone'. Infinitive: zála.

Compound forms: *hóle zála* 'He is going', *zálɛt* 'You are going'. Verbal noun: *zalta*.

The imperative has the irregular forms *si* (ms.), *sa* (fs.), *so* (pl.). These have inflectional endings that are characteristic of final */y/* forms.

8.16.3. ʾθy 'to come'

In all of its inflections except the imperative, this verb follows the pattern of other verbs with initial */ʾ/* and final */y/* (§8.12.9.). Present base: *ʾáθe, ʾáθya, ʾáθɛ ~ ʾáθi*, with prefixes: *y-áθe* 'He comes', *ṭ-áθe* 'He will come'. Past base: *θéle* 'He has come'. Resultative participle: *ʾə́θya* (ms.), *θíθa* (fs.), *ʾíθye* (pl.). Infinitive: *θaya*. Verbal noun: *θɛθa*.

The imperative has the irregular form *háyyo*, which is used for both the singular and plural. In some cases where the imperative is connected to a following word it is shortened to *hay*, e.g. *hay-làxxaⁿ* 'Come here!' (A8:35), *hay-wùrⁿ* 'Come in!' (A27:23). The plural form can take the supplementary suffix *-gu* (§8.6.5.): *hayyógu*.

8.16.4. m-θy 'to bring'

The causative of *ʾθy* 'to come' is a stem III form verb. Unlike other stem III verbs from initial */ʾ/* roots, this verb has *mɛ-* rather than *ma-* in the present base, imperative and infinitive, e.g. *mɛ́θe* 'He brings' (cf. *máxəl* 'He feeds'). This reflects a development from an original diphthong **ay*, indicating that, in this stem, the verb was construed as initial */y/* (< **mayθe*), as was indeed the case with the *ʾap̄ʿel* of this verb in several dialects of earlier Aramaic (cf. Syriac *ʾaytū*). In the feminine singular forms of the present base inflection, in which the initial syllable is closed, the */ɛ/* is lowered to */a/*:

		Default	Long
3rd pers.	ms.	*mɛ́θe*	
	fs.	*máθya*	
	pl.	*mɛ́θɛ*	
		mɛ́θa	
		mɛ́θi	
2nd pers.	ms.	*mɛ́θət*	*mɛθeti*
	fs.	*máθyət*	*maθyati*
	pl.	*mɛθétu*	
		mɛθítu	

1st pers.	ms.	*mɛ́θən*	*mɛθena*
	fs.	*máθyən*	*maθyana*
	pl.	*mɛ́θəx*	*mɛθexi*

Past base: *moθe-* ~ *muθe-* (ms.), *muθya-*(fs.), *moθɛ-* ~ *muθɛ-* (pl.), e.g. *muθéli* 'I brought (him)', *muθyáli* 'I brought her', *muθéli* 'I brought them'.

Resultative participle: *múθya* (ms.), *muθéθa* (fs.), *múθye* (pl.). Compound forms: *hóle múθya* 'He has brought', *muθéθɛla* 'She has brought', *muθyétu* 'You (pl.) have brought'.

Imperative: *mɛ́θi* (ms.), *mɛ́θa* (fs.), *mɛ́θo* (pl.) 'Bring!' When a supplementary suffix or pronominal suffix is added to the fs. form, the inflectional ending is /ɛ/ rather than /a/: *mɛ́θɛga* 'Bring!', *mɛ́θɛle* 'Bring it!'

Infinitive: *mɛθóye*. Compound forms: *hóle mɛθóye* 'He is bringing', *mɛθóyela* 'She is bringing', *mɛθóyɛt* 'You are bringing'. Verbal noun: *mɛθɛθa*.

In fast speech the medial /θ/ radical is occasionally elided and replaced by the glide /y/, e.g. *mayɛ́wa* 'They used to bring' (< *mɛθɛ́wa*, B5:157), *mɛyónna* 'I shall bring her' (< *mɛθónna* A4:9).

8.16.5. mṣy 'to be able'

This verb has the regular inflections of stem I final /y/ verb (§8.12.8.) in all its paradigms: Present base: *máṣe, máṣya, máṣɛ* ~ *máṣi*. Past base: *mṣéle*. Resultative participle: *máṣya, mṣíθa, máṣye*. Imperative: *mṣi, mṣa, mṣo*. Infinitive: *mṣáya*. The /a/ vowel in the present base is sometimes elided in fast speech when the verb is combined in a stress group with a stressed negative particle, e.g. *lá-mṣe* 'He cannot' (< *la maṣe*), *lá-mṣən* 'I cannot' (< *la maṣən*).

In addition to the regular present base forms, the verb has an alternative paradigm, in which the root is construed as *ʾmṣ* rather than *mṣy*. This probably arose through reinterpretion of forms such as *lá-mṣən* 'I cannot' as being contractions of *la ʾamṣən* rather than *la maṣən*. This alternative root is attested mainly with the indicative preverbal particle *ʾi-*, e.g. *y-áməṣ* 'He is able', *y-ámṣa* 'She is able', *y-ámṣi* 'They are able', etc.

8.16.6. xyʾ/xy 'to live'

The inflections of this verb exhibit parallels both with stem I medial /y/, final /ʾ/ verbs (§8.12.7.) like *myʾ* 'to churn' and also stem I medial zero (< *ʾ), final /y/ verbs (§8.12.10.) like *ṭy* (< *ṭʾy) 'to search'.

The present base has a short /a/ throughout the paradigm and is inflected like *myʾ* and *ṭy*: *xằ̌ye* 'He lives', *xằ̌ya* 'She lives', *xằ̌yi* 'They live', etc. The /y/ is sometimes geminated when preceded by the stress: *xáyye, xáyya, xáyyi,* etc.

The past base is *xe-*, which is a pattern used for both *myʾ* and *ṭy*, or *xye-*, e.g. *xéle, xyéle* 'He lived'.

The resultative participle has the forms *xíya* (ms.), *xíθa* (fs.), *xíθe* (pl.), which have the pattern of those of *ṭy*.

The imperative forms are *xyu* (sing.) and *xə́yu* (pl.), the patterns of which are characteristic of final /ʾ/ roots.

The infinitive is *xyáʾa*, which has the pattern of final /ʾ/ verbs such as *myʾ* (*myaʾa*), or *xyaya*. Compound forms: *hóle b-xyáʾa* 'He is living', *xyáʾɛt* 'You are living'. The word *xayuθa* 'life' is used in place of a regularly derived verbal noun.

8.16.7. yhw *'to give'*

The medial /h/ of this verb is elided throughout the inflection of the present base: *yáwa* 'She gives' (< **yahwa*), *yáwi* 'They give' (< **yahwi*), *yáwət* 'You (sing.) give' (< **yahwət*), etc. The 3ms. has the form *yawəl* 'He gives', with a an additional /l/ element, which is treated as part of the root. This is likely to have arisen by a false morphological division of a combination of the verb with a pronominal L-suffix. Variant contracted forms exist for the inflections that end in a consonant, in which the /w/ is elided, e.g. *yal* 'He gives', *yat* 'You (ms. and fs.) give', *yan* 'I (ms. and fs.) give', *yax* 'We give'.

The /y/ is elided and the /h/ preserved in the past base and resultative participle. Past base: *hiw-* (ms.), *hiwa-* (fs.), *hiwi-* (pl.). The /i/ in the /iw/ sequence in the closed syllable of the ms. form is generally realized with lip-rounding in the region of [y] and the /w/ as a labio-palatal glide [ɥ], e.g. *híwle* [hyɥle] 'He gave (it)'. Resultative participle: *híwa* (ms.), *híwta* [hyɥta] (fs.), *híwe* (pl.). Compound forms: *hówət híwa* 'You have given', *híwɛle* 'He has given', *híwtɛt* 'You (fs.) have given'. Variant past bases and resultative participle exist with initial /y/ in place of the /h/, e.g. *yiwle* 'He gave (it)', *yíwɛle* 'He has given'.

The imperative drops the /y/ radical and is formed with an additional /l/ element, which is treated like a third radical: *hál* (sing.), *hǎ̌lu, hállu* (pl.). The pl. form has a short /a/ by analogy with the singular and the /l/ is usually geminated when this vowel takes the stress. As with the 3ms. form

of the present base, the origin of the /l/ is likely to be a false morphological division of the verb combined with pronominal L-suffixes.

The /h/ is elided in the infinitive: *yáwa*. Compound forms: *hóle yáwa* 'He is giving', *yáwɛt* 'You are giving'. Verbal noun: *yawta*.

8.16.8. rhw *'to speak, to speak agitatedly'*

This verb is inflected like other final /w/ verbs. Its irregular feature is that the initial two radicals are in some cases metathesized. This is regularly the case in the present base, e.g. *háru* 'He speaks', *hárwa* 'She speaks', *hárwi* 'They speak'. In other bases the metathesis generally does not occur and the root has the original order of radicals (cf. Syriac **rhb*): Past base: *rhiw-*, e.g. *rhíwle* 'He spoke'. Resultative participle: *rhíwa* (ms.), *rhíwta* (fs.), *rhíwe* (pl.). Imperative: *rhu* (sing. and pl.). Infinitive: *rháwa*. Metathesis is sporadically attested in some of these bases, e.g. *lɛ́le hràwa* 'He does not speak' (A4:36). The motivation for the metathesis in the present base appears to be to avoid the elision of the laryngal /h/ at the end of syllables in forms such as **rahwa* 'she speaks'. Metathesis in other bases such as the infinitive has developed by analogy with the present base.

8.16.9. m-xy *'to cause to live, give birth'*

The inflections of the causative of the verb 'to live' exhibits features of stem III verbs that are historically medial **ʾ* (§8.14.1.) and also of stem III verbs that are historically final **ʾ* (§8.14.2.).

Present base:

		Default	Long
3rd pers.	ms.	*măxe*	
	fs.	*măxíya*	
		mắxa	
	pl.	*măxíyi*	
		mắxi	
2nd pers.	ms.	*măxíyət*	*măxiyeti*
		mắxət	
	fs.	*măxíyət*	*măxiyati*
		mắxət	
	pl.	*măxiyítu*	
		mắxítu	

1st pers.	ms.	*măxíyən*	*măxiyena*
		mắxən	
	fs.	*măxíyən*	*măxiyana*
		mắxən	
	pl.	*măxíyəx*	*măxiyexi*
		mắxəx	

Past base: *mŭxe-* (ms.), *mŭxiya-* (fs.), *mŭxiyi-* (pl.). Resultative participle: *mŭxíya* (ms.), *muxέθa* (fs.), *mŭxíye* (pl.). Imperative: *mắxi* (ms.), *mắxa* (fs.), *mắxo* (pl.). Infinitive: *măxóye*.

8.16.10. m-ty *'to put'*

This verb is in origin the stem III causative form of *ytw / 'tw* 'to sit'. In the inflections of the present base, the /w/ is assimilated by the preceding /t/ when in contact with it, resulting in a geminate /tt/, e.g. *mátta* 'She puts' (< *matwa*), *mátti* 'They put' (< *matwi*). In the 3ms. there is historically no assimilation of the /w/ radical, since this is not in contact with the /t/ (*matuw), but the initial sequence *matt-* has been extended to this form by analogy with the rest of the paradigm: *máttu* 'He puts'.

Past base: *muttu-* (ms.), *mutta-* (fs.), *mutti-* (pl.), e.g. *muttúle* 'He put (him)', *muttále* 'He put her', *muttíle* 'He put them'. Note that the /t/ is geminated in all forms, including in the ms. form, which is historically derived from *mutuw.

Resultative participle: *mútta* (ms.), *muttέθa* (fs.), *mútti* (pl.). The most frequently used fs. form has the ending of stem II and stem III final /y/ verbs (§8.13.4, §8.14.4). Occasionally the form *muttawta/muttota* is used.

The imperative has the form *máttu* both in the singular and the plural.

The infinitive generally has the form *mattóye*, with /y/ rather than /w/. Occasionally the form *mattówe* is used. Verbal noun: *mattεθa*.

8.16.11. nbl *'to take (away)'*

This verb is historically a causative stem of a verb with an initial weak radical (cf. the Syriac *'af̄el* form *'awbel*). The /n/ has developed from an original /m/, by a process of dissimilation from the labial feature of the medial /b/ (§1.4.7.), and the verb is inflected with the patterns of a stem III verb such as *m-xl* 'to feed'

The present base has the appearance of a stem I verb throughout the paradigm: *nábəl* 'He takes', *nábla* 'She takes', *nábli* 'They take', etc. In other bases, however, it is inflected with the pattern of a stem III verb. Past base: *nobəl / nubəl-* (ms.), *nubla-* (fs.), *nubli-* (pl.), e.g. *nubə́lle* 'He took (him)', *nublále* 'He took her', *nublíle* 'He took them'. Resultative participle: *núbla* (ms.), *nubálta* (fs.), *núble* (pl.). Compound forms: *hóle núbla* 'He has taken', *nubáltɛla* 'She has taken', *núbləx* 'We have taken'. Imperative: *nábəl* (sing.), *náblu* (pl.) 'Take!' Infinitive: *nabóle*. Compound forms: *hóle nabóle* 'He is taking', *nabóləx* 'We are taking'.

8.16.12. kyz *'to try'*

This verb has an inflection of the present base that is irregular for middle */y/* verbs (§8.12.5.): *káze* (3ms.), *káza* (3fs.), *kázi* (3pl), *kázət* (2ms. and 2fs.), etc., which exhibits features of both final */ʾ/* and final */y/* verbs (§8.12.2, §8.12.8.).

The remaining forms in use have the regular inflection for middle */y/* verbs. Past base: *kiz-*, e.g. *kízle* 'He attempted', *kízla* 'She attempted'. Resultative participle: *kiza* (ms.), *kizta* (fs.), *kize* (pl.), e.g. *kizɛle* 'He has attempted', *kiztɛla* 'She has attempted', *kizela* 'They have attempted'. Infinitive: *kyaza*.

8.16.13. kyr *'to try'*

This synonym of *kyz* is used only in inflections of the past base forms in the phrase *kizle ʾu-kirre* (3ms.), *kizla ʾu-kirra* (3fs.), etc.

8.17. General Remarks Concerning Stems II and III

8.17.1. *Stem II*

When stem I and stem II forms exist for the same verbal root, as a general rule the two forms differ in transitivity. There is sometimes a difference in valence between the two forms, in that stem I takes only a subject participant whereas the stem II form has both a subject and object participant. In some such cases the stem II form is a causative of the action expressed by the stem I form. This applies to the following:

braza 'to dry (intr.)'	*mbaroze* 'to dry (tr.)'
bṭala 'to stop (intr.)'	*mbaṭole* 'to cause to stop'
bsama 'to be pleasant, healthy'	*mbasome* 'to cure'
bšala 'to cook (intr.)'	*mbašole* 'to cook (tr.)'
dbaša 'to stick' (intr.)	*mdaboše* 'to stick (tr.), join'
jmaʾa 'to gather (intr.)'	*mjămoye* 'to gather (intr. and tr.)'
plaṭa 'to come out'	*mpaloṭe* 'to cause to come out'
praða 'to flee (sleep)'	*mparoðe* 'to cause (sleep) to flee'
plama 'to become bent'	*mpalome* 'to bend'
pšama 'to be sad'	*mpašome* 'to be sad; to make sad'
pšara 'to melt (intr.)'	*mpašore* 'to melt (tr.)'
pqaʾa 'to crack, explode (intr.)'	*mpăqoye* 'to blow up'
rzaga 'to be ready'	*mrazoge* 'to make ready, prepare'
spaqa 'to become empty'	*msapoqe* 'to empty' (*spiqa*)
ṣpaya 'to be pure'	*mṣapoye* 'to purify'
ṣqala 'to be decorated'	*mṣaqole* 'to decorate'
šwara 'to jump'	*mšawore* 'to cause to jump, smuggle'
šxana 'to become hot'	*mšaxone* 'to heat'
traṣa 'to recover'	*mtaroṣe* 'to repair, cure; prepare'
ṭmara 'to fill a hole'	*mṭamore* 'to bury = to cause to fill a hole'
xmaya 'to dwell'	*mxamoye* 'to keep, cause to dwell'
zwana 'to buy'	*mzabone* 'to sell'

In some verbs the stem II form differs in valence from the stem I form
but it does not function as a causative. This applies, for example to the
root *tlq*:

tlaqa 'to be lost'	*mtaloqe* 'to lose (tr.)'

The semantic role of the grammatical subject of the stem I of the verb
is the undergoer of the action, e.g. *tliqli* 'I have become lost', 'I am lost'.
The semantic role of the grammatical subject of the stem II verb is
not that of an agent causing an action but rather an experiencer of the
action, e.g. *mtulqali kisti* 'I have lost my purse'. The motivation for the use
of the stem II form, therefore, can be said to be syntactic rather than
semantic. It is motivated by the syntactic valence of the verb, in that it
takes a grammatical direct object, rather than the semantic role of the
grammatical subject.

Difference in valence corresponds to the traditional concept of the distinction between intransitive and transitive verbs. In several cases, however, stem I and stem II forms from the same verbal root have the same valence, i.e. they both lack objects or they both take objects. These pairs of verbal forms often seem to be semantically equivalent and to be used interchangeably. Closer examination reveals, however, that a difference in transitivity can in some cases be discerned between the two forms. This is possible if we adopt the view of transitivity as a multifactorial continuum that was proposed by Hopper and Thompson (1980). According to this view there is no absolute dichotomy between intransitive and transitive, but rather transitivity is a scalar phenomenon. The degree of transitivity is determined not only by the valence of the verb but also by numerous other parameters relating to the nature of the participants and of the activity. Let us now examine some of the differences between stem I and stem II verbs that have the same valence and take into account other parameters that would be expected, according to Hopper and Thompson's model, to bring about differences in degrees of transitivity.

In some cases where both the stem I and the stem II forms take objects, the stem II form expresses an activity that is more extensive, generally requiring greater energy, and what is affected by the activity is of a greater extent. This applies to the following:

glaya 'to reveal (sth. abstract)'	*mgaloye* 'to uncover (sth. physical)'
graʾa 'to shave (one's face)'	*mgăroye* 'to strip and chop sticks'
lmaṣa 'to suck'	*mlamoṣe* 'to absorb'
plaʾa 'to divide, share'	*mpăloye* 'to distribute'
pθaxa 'to open'	*mpaθoxe* 'to open out, to spread out'
qṭaʾa 'to cut'	*mqăṭoye* 'to separate stones from grains'
šlaxa 'to pull out (hair, plant)'	*mšaloxe* 'to strip'
šwaya 'to spread out a bed'	*mšawoye* 'to furnish (a house)'
tnaya 'to repeat'	*mtanoye* 'to recount (a tale)'
ṭraxa 'to flatten' (in one act)'	*mṭaroxe* 'to flatten wool (by repeated combing)'

The extent of the affectedness of the object is one of the parameters that, according to the model of Hopper and Thompson, contribute to the transitivity and so the stem II forms in this list can be regarded as being more transitive than the stem I forms.

Where both the stem I and the stem II form are used without direct objects, the semantic difference between the two can in some cases be identified as relating to the degree of control of the action by the grammatical subject. This applies, for example, to

> *xmala* 'to enjoy oneself'   *mxamole* 'to put on festive clothes'

It can be said that in the activity of putting on smart clothes in order to become festive (*mxamole*) the subject is the agent of the action and has control over the action. In the event of 'enjoying oneself' (*xmala*), on the other hand, the grammatical subject is less of a controlling agent and often may be simply an experiencer of the event. Agency of the grammatical subject and control of the action by the agent are parameters that increase the transitivity of the verb according to the Hopper and Thompson model.

There are, nevertheless, several pairs of stem I and stem II forms that do not express any identifiable difference in meaning or transitivity, e.g.

bðara 'to scatter'	*mbaðore* 'to scatter'
dwara 'to thresh'	*mdawore* 'to thresh'
grača 'to scratch'	*mgaroče* 'to scratch'
jraga 'to snatch'	*mjaroge* 'to snatch'
ngara 'to tear bite from bone'	*mnagore* 'to bite meat from bone'
npaša 'to tease (wool, cotton)'	*mnapoše* 'to tease (wool, cotton)'
pšama 'to be sad'	*mpašome* 'to be sad, regret'
qrawa 'to approach'	*mqarowe* 'to approach'
qwara 'to bury'	*mqawore* 'to bury'
sxaya 'to swim'	*msaxoye* 'to swim'
šðaya 'to card (wool, flax)'	*mšaðoye* 'to card (wool, flax)'
šraṭa 'to escape'	*mšaroṭe* 'to escape'
ṣlaxa 'to split (wood)'	*mṣaloxe* 'to split (wood)'
tlaxa 'to destroy'	*mtaloxe* 'to destroy'

It is possible that the stem II form of these pairs originally expressed enhanced transitivity due to such features as the iterativity of the action, e.g. *npaša* 'to tease' vs. *mnapoše* 'to tease repeatedly', *šðaya* 'to card' vs. *mšaðoye* 'to card repeatedly', *ṣlaxa* 'to split' vs. *mṣaloxe* 'to split repeatedly', the energy input of the subject, e.g. *sxaya* 'to bathe' vs. *msaxoye* 'to swim', or the degree of affectedness of the subject, e.g. *pšama* 'to be sad' vs.

mpašome 'to be very sad'. These semantic distinctions, however, seem now to have become blurred.

One difference in transitivity that some of the stem I forms of this list do exhibit from the corresponding stem II forms is that they can function as both as transitives and unaccusative intransitives. When used as a transitive verb they take the agent as subject, whereas in their unaccusative intransitive use the undergoer is made the subject. This semantic alternation does not exist in the stem II form, which is only transitive, e.g.

ʾaw ṣlixle qɛsa	'He split the wood'	*qɛsa ṣlixle* 'The wood split'
ʾaw mṣuləxle qɛsa	'He split the wood'	—
ʾaw tlixle bɛθa	'He destroyed the house'	*bɛθa tlixle* 'The house collapsed'
ʾaw mtuləxle bɛθa	'He destroyed the house'	—

In the case of some stem II verbs, there is a stem I form from a homophonous root that has no direct semantic connection, although in several cases there is an etymological connection, e.g.

bnaya 'to built'	*mbanoye* 'to prepare food'
draya 'to put, pour'	*mdaroye* 'to winnow'
gbaya 'to froth'	*mgaboye* 'to elect'
nqara 'to inscribe'	*mnaqore* 'to scrap, fight'
praqa 'to finish'	*mparoqe* 'to save'
qwala 'to complain'	*mqawole* 'to promise'
sraqa 'to comb'	*msaroqe* 'to pour out'
ṣlaya 'to descend'	*mṣaloye* 'to pray'
šdala 'to plant'	*mšadole* 'to sing a lullaby'
šnaya 'to faint'	*mšanoye* 'to move'
šraya 'to untie/lodge'	*mšaroye* 'to begin'
šyana 'to smart'	*mšayone* 'to become tame'
traṣa 'to recover (from illness)'	*mtaroṣe* 'to make, to construct'
ṭwaya 'to be worth'	*mṭawoye* 'to roast'
xzada 'to harvest'	*mxazode* 'to blame'

The majority of stem II verbs have no corresponding stem I form. These include both verbs that typically take an object complement and those that typically are used without such a complement. The classification of

the verbs into one of these two groups is in some cases not completely clear-cut, since some verbs can be used with a semantic range including both activities that require an object complement and those that do not require one (e.g. *mṭašoye* 'to hide (oneself)' ~ 'to hide (something)', *mdagole* 'to lie' ~ 'to make lie'). Furthermore some verbs take a complement in the form of a prepositional phrase rather than a direct object. The following two lists offer a broad division into the two categories:

Verbs taking an object complement

mbădode	'to poke (a fire)'
mbaloqe	'to fix (eyes), stare'
mbaqore (mən)	'to ask'
mbaroxe	'to bless'
mbaxole (b-)	'to envy (s.o.)'
mbaxoše	'to stir'
mčaroke	'to surround'
mčaxose	'to insult (so.)'
mdabore	'to repair; complete'
mdalole	'to spoil, pamper; to plant thinly'
mdaxoye	'to brand'
mfaṣole	'to cut out'
mgaroče	'to scratch'
mḥaṣole	'to give birth to'
mjarobe	'to try (to do sth.)'
mjazoye	'to tax'
mkaloče	'to peel'
mkapoše	'to gather'
mkapoye	'to cover, shade'
mkaroxe	'to shroud'
mmatole	'to tell a maxim, tale'
mnagore	'to bite (meat from a bone)'
mnaqoše	'to embroider'
mpadome	'to stop up'
mpăḷoye	'to imitate'
mpaqoðe	'to command'
mpaqože	'to clean'
mparoje (b-)	'to look (at)'
mparoze	'to crumble (bread)'
mpašoqe	'to stretch out', 'to explain'
mpaxole	'to forgive'

mqadore	'to reckon'
mqadoše	'to sanctify'
mqalope	'to peel'
mqapose	'to compress, to push down (pile)'
mqazode	'to approach, to pick a fight with, challenge'
msajole	'to record'
msapoye	'to deliver, hand over'
msaroge	'to saddle'
mṣapoye	'to purify, strain'
mṣaqole	'to decorate'
mṣarofe	'to spend'
mṣawore	'to insult'
mšaboðe	'to enslave'
mšaboxe	'to glorify'
mšadore	'to send'
mšahoye	'to have an appetite'
mšaloše	'to try (to do sth.)'
mšamoše	'to perform burial rites for a dead person'
mšămoye	'to apply wax to'
mšapore	'to praise sycophantically'
mšatore	'to spoil, pamper'
mšaṭoye	'to convey, give (something to somebody)'
mtalope	'to ruin, destroy'
mtalome	'to discipline'
mtămome	'to finish'
mtămoze	'to clean'
mtarose	'to prepare, construct; repair'
mṭašoye	'to hide'
mṭaloze	'to indulge'
mxaboðe	'to bury'
mxalole	'to wash (vessels)'
mxaroxe	'to burn, scorch'
mxašoke	'to darken, to blind'
myaqore	'to respect'
mzabole	'to lay manure'

Verbs that typically do not take an object complement

mbaroṭe	'to roll over (in sleep)'
mbătote	'to investigate'
mbayone	'to appear'

mdagole	'to lie'
mdalope	'to leak'
mjagore	'to contend'
mjasose	'to spy'
mjawode	'to argue'
mkălole	'to ululate'
mnaqore	'to scrap, fight'
mpašore	'to chew the cud'
mpašoye	'to fart silently'
mpawore	'to yawn'
mqaboye	'to swell; blister'
mqahore	'to grieve'
mqarowe	'to approach'
mqawole	'to promise'
mqawome	'to befall, happen'
mqazode	'to approach, move towards'
mrazole	'to be paralyzed'
msarobe	'to argue'
mṣălole	'to neigh (horse, mule); to become sober'
mṣawoθe	'to speak'
mṣaxoye	'to become clear (sky)'
mšadole	'to sing a lullaby'
mšahore	'to make night vigil, pray in the night'
mšanoye	'to move'
mšaroke	'to be partners'
mšaθone	'to have a fever'
mšayone	'to become tame'
mtanoxe	'to sigh'
mṭašoye	'to hide'
mtawobe	'to repent'
mzawoge	'to pair together'

These lists contain a number of verbs that are continuations of *pa⁽ᶜ⁾el* forms in earlier Aramaic. Three other sub-groups can be identified:

(i) Intransitive verbs that correspond in meaning to verbs in the *ʾetpᵉ⁽ᶜ⁾el*, *ʾetpa⁽ᶜ⁾al* or *ʾettafᶜal* stems in Syriac rather than to verbs in the *pa⁽ᶜ⁾el*, e.g.

mqaboye	'to swell', cf. Syr. Ethpe. *ʾetqᵊḇī* 'to be collected (liquids)'
mqarowe	'to approach', cf. Syr. Ethpa. *ʾetqarrrab* 'to approach'
mṣălole	'to become sober', cf. Syr. Ethpa. *ʾeṣṭallal* 'to be purified'

mšayone	'to become tame', cf. Syr. Ethpa. *ʾeštayyan* 'to become tame'
mtanoxe	'to sigh', cf. Syr. Ettaph. *ʾettanaḥ* 'to sigh' (root *ʾnḥ*)
mṭašoye	'to hide oneself', cf. Syr. Ethpa. *ʾeṭṭašī* 'to hide oneself'

The *pᵊʿal* stem of some of these has the same intransitive meaning, e.g. *qḇā* 'to be collected together (liquids)', *qreb* 'to approach', *ṭšā* 'to hide oneself'. It is structurally more straightforward, however, to reconstruct the development of these stem II verbs from original *ʾetpᵊʿel*, *ʾetpaʿʿal* or *ʾettaṗʿal* stems. This is demonstrably the case with *mtanoxe*, in which the /t/ has been preserved and has been reinterpreted as a root letter. In other forms the /t/ element has been lost.

(ii) Verbs that are derived from nouns, adjectives or particles, e.g.

mčaroke	'to surround'	< *čǝnnǝḵɛr* < *čɛrnǝḵɛr* 'around'
mqawode	'to handcuff'	< *qawde* 'handcuffs'
mtămoze	'to clean'	< *tămǝz* 'clean'
mkawore	'to distill'	< *kura* 'kiln, furnace'
mzabole	'to lay manure'	< *zǝbla* 'manure'
msaroge	'to saddle'	< *sarga* 'saddle'
mṣawoθe	'to talk'	< *ṣawθa* 'voice, sound'
mṣaxoye	'to become clear (sky)'	< *ṣǝxwa* 'clear sky'
mšaθone	'to have a fever'	< *šaθa* 'fever'
mšămoye	'to apply wax to'	< *šăma* 'wax'
mšaqoye	'to joke, have fun'	< *šăqa* 'fun, joke'

(iii) Verbs loaned from verbal roots in another language, mainly Arabic, e.g.

mbayone	'to appear, be seen'	< Arab. *tabayyana*
mfaṣole	'to cut out'	< Arab. *faṣala, faṣṣala*
mḥaṣole	'to give birth'	< Arab. *ḥaṣṣala*
mjarobe	'to try (to do sth.)'	< Arab. *jarraba*
mlawome	'to weld, solder'	< Arab. *laḥḥama*
mnaqoše	'to embroider'	< Arab. *naqaša, naqqaša*
mdabore	'to manage'	< Arab. *dabbara*
mdalole	'to pamper'	< Arab. *dallala*
mparoje b-	'to look at'	< Arab. *tafarraj*
mqadore	'to reckon'	< Arab. *qaddara*
mqazode	'to pick a fight with'	< Arab. *qaṣada*
msajole	'to record'	< Arab. *sajjala*

msawoqe	'to go shopping'	< Arab. *tasawwaqa*
mṣarofe	'to spend'	< Arab. *ṣarafa, ṣarrafa*
mtalope	'to ruin, destroy'	< Arab. *tallafa, ʾatlafa*
mtafoqe	'to agree'	< Arab. *ʾittafaqa*
mjasose	'to spy'	< Arab. *tajassasa*
mjawode	'to argue'	< Arab. *tajādala*
mšaroke	'to be partners'	< Arab. *šāraka, ʾištaraka*
mxaloṣe	'to save'	< Arab. *xallaṣa*
mšaqoye	'to take trouble'	< Arab. *šaqqa*
mharoke	'to move'	< Arab. *taḥarraka*
mnaṣoḥe	'to advise'	< Arab. *naṣaḥa*

Loans from Arabic may preserve the original short vowel after the first radical, sometimes together with the original gemination, e.g.

mʿăqome ~ mʿaqqome 'to sterilize'	< Arab. *ʿaqqama*
mhădoye ~ mhaddoye 'to calm down'	< Arab. *haddaʾa*
mqărore ~ mqarrore 'to decide'	< Arab. *qarrara*

8.17.2. *Stem III*

The number of stem III verbs that function as the causative of a corresponding stem I verb is far higher than the number of stem II verbs that have this function. This reflects a higher degree of productivity of stem III for this purpose. Examples of causative stem III forms include:

bnaya 'to build'	*mabnoye* 'to have built'
braqa 'to shine'	*mabroqe* 'to cause to shine'
braya 'to be born'	*mabroye* 'to give birth'
braza 'to dry (intr.)'	*mabroze* 'to dry (tr.)'
bṣara 'to diminish'	*mabṣore* 'to cause to diminish, to reduce'
čmaya 'to be extinguished'	*mačmoye* 'to extinguish'
dmaxa 'to lie down, sleep'	*madmoxe* 'to cause to lie down, sleep'
dqara 'to be worth'	*madqore* 'to cause to be worth, to evaluate'
gwara 'to marry'	*magwore* 'to cause to marry'
jlawa 'to abduct (a woman)'	*majlowe* 'to cause (a man) to abduct' = 'to elope (with a man)'

ɟyara 'to urinate'   *maɟyore* 'to cause to urinate'

klaya 'to stop (intr.)'   *makloye* 'to cause to stop'

kraya 'to become short'   *makroye* 'to make short'

kyama 'to become black'   *makyome* 'to make black'

kyapa 'to bow (intr.)'   *makyope* 'to lower, bow (tr.)'

kčaxa 'to tire (intr.)'   *makčoxe* 'to tire (tr.)'

lhaya 'to glow, be kindled' *malhoye* 'to cause to glow, kindle'

lkaxa 'to lick'   *malkoxe* 'to cause (sheep) to lick (salt)'

lwaša 'to wear'   *malwoše* 'to cause to wear, to dress'

lxama 'to fit'   *malxome* 'to cause to fit, compose'

lyaṣa 'to be spoilt, ruined' *malyoṣe* 'to spoil, ruin'

mṭaya 'to arrive'   *mamṭoye* 'to cause to arrive'

mxaya 'to strike'   *mamxoye* 'to cause to strike'

myaṣa 'to suck'   *mamyoṣe* 'to give suck, nurture'

myaxa 'to smell'   *mamyoxe* 'to cause to smell; to smell'

myaθa 'to die'   *mamyoθe* 'to cause to be (or to seem) dead'

nšapa 'to drip'   *manšope* 'to cause to drip'

nšaqa 'to kiss'   *manšoqe* 'to allow (so.) to kiss'

npala 'to fall'   *manpole* 'to cause to fall, drop'

nqaja 'to pinch; peck at seeds' *manqoje* 'to give (a hen) seeds to peck'

nxapa 'to be ashamed'   *manxope* 'to shame (tr.)'

pčala 'to become bent'   *mapčole* 'to bend'

praxa 'to fly'   *maproxe* 'to cause to fly'

pšama 'to be sad'   *mapšome* 'to cause to be sad'

plaša 'to fight'   *maploše* 'to make fight'

plaxa 'to work'   *maploxe* 'to cause to work, use'

ƥyaða 'to pass'   *mapyoðe* 'to cause to cross'

ƥyaša 'to remain'   *mapyoše* 'to cause to remain'

qraxa 'to become white'   *maqroxe* 'to whiten'

qraya 'to read'   *maqroye* 'to cause to read, to teach'

qṭala 'to kill'   *maqṭole* 'to cause to kill'

qaða 'to burn (intr.)'   *maqoðe* 'to burn (tr.)'

qrama 'to win'   *maqrome* 'to cause to win, to lose'

qwaya 'to become strong'   *maqwoye* 'to cause to become strong'

qyama 'to rise'   *maqyome* 'to raise'

rθaxa 'to boil (intr.)'   *marθoxe* 'to boil (tr.)'

rkaxa 'to become soft'	*markoxe* 'to cause to become soft'
rqaða 'to dance'	*marqoðe* 'to cause to dance'
ryaxa 'to become long'	*maryoxe* 'to cause to be long'
spara 'to wait'	*maspore* 'to cause to wait'
sqaða 'to become annoyed'	*masqoðe* 'to annoy'
šnaya 'to faint; be anaesthetized'	*mašnoye* 'to anaesthetize'
šraṭa 'to escape'	*mašroṭe* 'to cause to escape, to rescue'
šraya 'to lodge'	*mašroye* 'to offer lodging to'
štaya 'to drink'	*maštoye* 'to cause to drink, irrigate'
ṭpaqa 'to meet'	*maṭpoqe* 'to cause to meet'
txara 'to remember'	*matxore* 'to cause to remember, mention'
ṭpaya 'to reach, catch'	*maṭpoye* 'to cause to catch, kindle'
ṭrasa 'to become fat'	*maṭrose* 'to make fat'
xðara 'to go around'	*maxðore* 'to cause to go around'
xjala 'to be terrified'	*maxjole* 'to terrify'
xlaya 'to become sweet'	*maxloye* 'to make sweet'
xmara 'to ferment'	*maxmore* 'to cause to ferment'
xrapa 'to become sharp'	*maxrope* 'to sharpen'
xraṭa 'to bore, chisel; trim'	*maxroṭe* 'to cause to bore, chisel, trim'
xrama 'to be banned'	*maxrome* 'to ban, forbid'
xrawa 'to be damaged'	*maxrowe* 'to damage'
zvara 'to turn'	*mazvore* 'to cause to turn'
zyada 'to increase'	*mazyode* 'to cause to increase'
zyana 'to stand'	*mazyone* 'to cause to stand'

When the stem I form of these pairs is transitive and takes a direct object, the stem III causative can have an active or passive diathesis, e.g. *qṭala* 'to kill (s.o.)': *maqṭole* 'to cause (s.o.) to kill ~ to cause (s.o.) to be killed (§15.9.7.).

Several stem III verbs are used intransitively without an object complement. These include the following:

măboye	'to swell'
mabsome	'to enjoy o.s.'
mabyone	'to appear, seem'

măčoze	'to be vexed'
mačyole	'to sprout'
magðole	'to freeze'
majroṭe	'to slip'
majroye	'to leak'
malhoðe	'to pant'
malqoṭe	'to peck (at food)'
malyoze	'to hurry'
mamyole	'to become green/blue'
mamžole	'to delay, postpone'
mangole	'to hop, limp'
mantoye	'to succeed'
manṭope	'to drip'
manyoxe	'to rest'
manzole	'to fester'
maqwoxe	'to make a noise'
măroṭe	'fart loudly'
maryoze	'to stand in a row'
mašmoye	'to listen'
mašxoðe	'to give good news (*šəxða*)'
maṣyoxe	'to visit (the sick)'
maṣyoθe l-	'to listen'
maxbore	'to telephone'
maxšoxe	'to decide'
mazloqe	'to shine'

For a few of the intransitive stem III verbs there is a corresponding stem I form of related but not identical meaning:

bsama 'to be pleasing, healthy'	*mabsome* 'to revel, to make merry'
myaxa 'to smell' (experiencer)	*mamyoxe* 'to sniff; to smell (agent)'
nyaxa 'to have relief, to die'	*manyoxe* 'to take a rest'
šma'a 'to hear'	*mašmoye* 'to listen'

In the examples above the stem III form does not express a causative of stem I. The semantic distinction between the two stems is rather that in stem III the subject is in control of the activity whereas this is not the case in stem I. According to traditional terminology both the stem

I and stem III forms are intransitive. If, however, we adopt the concept of transitivity in the broader sense that was proposed by Hopper and Thompson (1980), the stem III forms can be shown to be higher in transitivity. Among the parameters identified by Hopper and Thompson that condition high transitivity are the potency of the agent and the control of the action by the agent. Lack of control by the agent, conversely, is a feature of low transitivity.

Many of the stem III forms without object complements listed above can also be used as causatives that take an object complement, e.g.

măboye	'to swell'	'to cause to swell'
mabsome	'to make merry'	'to entertain'
mabyone	'to appear'	'to cause to appear'
magðole	'to freeze'	'to cause to freeze'
majroṭe	'to slip'	'to cause to slip'
majroye	'to leak'	'to shed (e.g. tears)'
maryoze	'to stand in a row'	'to make stand in a row'
măčoze	'to be vexed'	'to vex'
mačyole	'to sprout'	'to cause to sprout'
mamyole	'to become green'	'to make green'
mamžole	'to delay (intr.)'	'to delay (tr.)'
manzole	'to fester'	'to cause (pus) to flow'
manṭope	'to drip'	'to cause to drip'
mazloqe	'to shine'	'to cause to shine, to polish'

In some cases stem I and III forms have what appear to be the same or overlapping meaning, e.g.

čyala 'to sprout'	*mačyole* 'to sprout'
jraṭa 'to slip'	*majroṭe* 'to slip'
jraya 'to flow, leak'	*majroye* 'to leak'
lhaða 'to pant (animal)'	*malhoðe* 'to pant (animal)'
maya 'to swear'	*mamoye* 'to swear'
nsara 'to saw'	*mansore* 'to saw'
nšaya 'to forget'	*manšoye* 'to forget'
qraṭa 'to bite, gnaw'	*maqroṭe* 'to cut (with scissors), clip'
qyaṣa 'to cut (tr. and intr.)'	*maqyoṣe* 'to cut with scissors'
rgada 'to tremble, shiver'	*margode* 'to tremble, shiver'
rpaya 'to throw'	*marpoye* 'to throw'
ryasa 'to sprinkle'	*maryose* 'to sprinkle'

šṭaxa 'to spread out'   *mašṭoxe* 'to spread out'
ṭraya 'to ride (*b-* on an animal)'   *maṭroye* 'to ride (an animal)'

As we have seen, where the stem III form has an intransitive meaning, it usually can also have a causative meaning. This alternative causative meaning is, however, not available for the corresponding intransitive stem I form. In some cases the non-causative use of the stem III form can be shown to be higher in transitivity than the stem I form with regard to the parameters of Hopper and Thompson, such as the extent of the action, the degree of energy input, degree of control by the agent and degree of affectedness of the object. The pair *nsara* I and *mansore* III 'to saw', for example, are typically not used in identical contexts. The stem I form *nsara* is used when one man is using a small saw whereas the stem III form *mansore* is prefered when referring to the use of a large two handled saw by two men. It can be said that the agent of *mansore* is more potent than that of *nsara* and more energy is put into the action. In the pair *ṭraya* and *maṭroye*, both of which can be rendered into English as 'to ride', the stem III form, which takes a direct object, involves greater control by the agent of the animal. A distinction in transitivity according to such parameters is likely to have originally existed between the other pairs of verbs, but now these have become blurred.

Some of the stem III forms may be denominal derivations from nouns with an initial *m-* affix, e.g.

maqyoṣe 'to cut with scissors'   < *maqaṣta* 'scissors'
mašṭoxe 'to spread out (to dry)'   < *məšṭaxa* 'area for spreading out fruit and vegetables to dry'

In the case of several stem III forms, a stem I form with a homophonous root exists that is unrelated in meaning, though in some cases there may be an etymological connection, e.g.

gðala 'to plait; wrestle'   *magðole* 'to freeze'
dyana 'to judge'   *madyone* 'to owe (money)'
syama 'to ordain'   *masyome bala* 'pay attention'
šṭaya 'to drink'   *mašṭoye* 'to arrange threads on warp beam'

There is a small residue of transitive stem III verbs that have no corresponding stem I forms:

malxome	'to compose'
mašxode	'to congratulate'
mazloqe	'to polish'
madrose	'to straighten'
mabyoče	'to give birth to a bastard'
makyoše	'to deflate, defray (tr.)'
magyoše	'to fumble'
manxose	'to rebuke'
masloye	'to despise'

Verbal roots that are used in all three stems are rare. Examples include the following:

I   *bsama* 'to be pleasant, healthy'
II   *mbasome* 'to cure'
III   *mabsome* 'to make merry'

I   *pšama* 'to be sad'
II   *mpašome* 'to be sad, regret'
III   *mapšome* 'to make sad'

I   *sxaya* 'to swim, to bathe'
II   *msaxoye* 'to swim'
III   *masxoye* 'to cause to bathe'

I   *šnaya* 'to faint, be anaesthetized'
II   *mšanoye* 'to move (to a different place)'
III   *mašnoye* 'to anaesthetize'

I   *šraya* 'to loosen, untie', 'to lodge'
II   *mšaroye* 'to begin'
III   *mašroye* 'to cause to lodge, give hospitality to'

I   *braza* 'to be dry'
II   *mbaroze* 'to dry (tr.)'
III   *mabroze* 'to dry (tr.)'

I   *rpaya* 'to become weak; to throw'
II   *mrapoye* 'to throw'
III   *marpoye* 'to throw'

It can be seen that forms II and III have different meanings in the roots
bsm, *pšm*, *sxy*, *šny* and *šry*, but in the roots *brz* and *rpy* forms II and III are
of the same meaning.

8.18. General Remarks Concerning Quadriliteral Verbs

The quadriliteral roots in the dialect exhibit various patterns of radical
sequence, which may be classified as follows:

(i) $C_aC_bC_aC_b$ *(1st radical identical with 3rd and 2nd radical identical with 4th)*

mbajboje	'to move'
mbalbole	'to ruffle, dishevel'
mbaqboqe	'to gurgle (water)'
mbarbore	'to bleat (sheep); to low (cattle)'
mčakčoke	'to chatter together; to clatter; to prick'
mčakčoke	'to talk garrulously'
mčančone	'to whine; buzz'
mčarčore	'to talk garrulously; screech'
mčazčoze	'to crackle (frying food)'
mdabdobe	'to beat (heart)'
mdamdome	'to beat up; cause to cry out'
mdandone	'to hum'
mdaqdoqe	'to chop into small pieces'
mdardore	'to natter, gossip; to protract, procrastinate'
mdaxdoxe	'to tickle, prod'
mfalfole	'to become very hot'
mfasfose	'to snivel, sniffle'
mgajgoje	'to shuffle along, move slowly'
mgalgole	'to clean grain by moving around by hand'
mgamgome	'to strike hard'
mgapgope	'to boast'
mgargore	'to hull (rice); to make a noise'
mgažgaže	'to pelt down (rain)'
mgazgoze	'to shiver'
mhalhole	'to ululate, to celebrate'
mkafkofe	'to hiss'
mkalkole	'to ululate'
mkarkore	'to bleat (goats); cluck (hen)'
mkaškoše	'to make threatening noises'; 'to shoo away'

mlajloje	'to smart (tongue)'
mlaplope	'to twinkle'
mlaqloqe	'to be loose; waver'
mmačmoče	'to suck, kiss'
mmašmoše	'to sniff about'
mnaqnoqe	'to knock back (drink)
mnarnore	'to make threatening noises (before a fight)'
mnaznoze	'to make sucking noises; to breath last breath'
mpačpoče	'to chop into pieces; mince (meat)'
mpakpoke	'to chatter; to boast'
mparpore	'to plead; to wave, brandish; to fall, dive down'
mpašpoše	'to whisper'
mpatpote	'to become rags, fall apart (clothes); to tear apart'
mpaxpoxe	'to snooze (with light snoring)'
mqadqode	'to cut up finely'
mqamqome	'to have flatulence; to buzz'
mqarqore	'to squeak'
mqaṣqoṣe	'to creak'
mqašqoše	'to rustle (leaves)'
mqaṭqoṭe	'to cut into small pieces; to cluck (hen)'
mqazqoze	'to prepare'
mragroge	'to quiver, shake (out of old age)'
mraprope	'to hover; palpitate'
mṣapṣope	'to feel severe pain (in joints)'
mṣarṣore	'to whimper, twitter; to howl, screech (animals)'
mšamšome	'to fall (water in a waterfall)'
mšapšope	'to feel weakened, intimidated'
mšaqšoqe	'to clatter'
mšaršore	'to splash, plash (sound made by flowing water)'
mtamtome	'to stutter'
mtantone	'to smoke'
mtaqtoqe	'to cackle'
mtaštoše	'to whisper (secrets)'
mtaxtoxe	'to prod, tickle'
mṭapṭope	'to tap, bang; knock bread dough against hands alternately'
mṭaqṭoqe	'to knock (at the door)'
mvalvole	'to sprout'
mvarvore	'to croak' (frog)
mwanwone	'to twitter, chatter (birds, insects)'

mwaqwoqe	'to croak (frogs)'
mwarwore	'to roar'
mwaswose	'to twitter (birds)'
mwaṣwoṣe	'to squeak (mouse)'
mxač̌xoč̌e	'to poke, prod (the ground)'
mxamxome	'to become hot, feverish'
mxapxope	'to be faint'
mxarxore	'to snore'
mxasxose	'to grind (teeth)'
mxaθxoθe	'to renew'
mxaṭxoṭe	'to plan'
mzamzome	'to hum, plash (water); to ring, sound; whistle (wind)'
mzanzone	'to buzz; throb (wound)'
mzanzore	'to bray (donkey); to lose flavour'
mzaqzoqe	'to twitter (birds)'

(ii) $C_a C_b C_a C_c$ *(1st radical identical with 3rd)*

mbalboye	'to search (inside a container)'
mbarboqe	'to shake'
mbarboṭe	'to shudder'
mbarboze	'to scatter; be distributed'
mč̌ančole	'to egg on (a straggler)'
mč̌arč̌oye	'to dirty, to soil'
mdandole	'to dangle'
mgangoze	'to shiver (in fright), to squirm (in disgust)'
mgargome	'to thunder; to buzz'
mjanjore	'to be exhausted; to torture'
mkankoše	'to drag'
mparpole	'to supplicate, entreat'
mparpose	'to scatter; pull apart'
mparpoṭe	'to pluck (a chicken)'
mparpoye	'to rinse'
mqarqoze	'to prepare, to put in order'
msaxsoye	'to examine, test'
mṣanṣole	'to trickle; to nod (head when dozing)'
mšaršoṭe	'to become baggy (clothes)'
mšaršoye	'to slope, tilt; relax; to be exhausted, languish'
mtaltoye	'to hang'
mtantore	'to shake; crave'
mtantose	'to drizzle'

mtartoxe	'to be angry, irritated'
mṭarṭome	'to grumble'
mxarxoče	'to scribble'
mzanzore	'to lose taste'
mzarzoče	'to scribble'
mzarzope	'to push'
mzarzoye	'to suffer, be in a predicament'

(iii) *C_aC_bC_cC_b (2nd radical identical with 4th)*

mbaṣloṣe	'to shine, to glitter'
mčalwole	'to wail'
mjangone	'to jangle'
mpartore	to stagger, totter
mṣaplope	'to feel severe pain (in joints)'
mṣaxloxe	'to feel pains of an incipient fever'
mšakloke	'to sew by hand with large loose stitches'
mšaplope	'to shiver, shudder'
mšaqloqe	'to boil; to scald (in hot water)'
mxaprope	'to dig about, poke about'
mzaqloqe	'to reflect, to shine'

(iv) *CwCy (second radical /w/ and fourth radical /y/)*

mbawboye	'to howl (wolf)'
mčawčoye	'to chirp'
mnawnoye	'to meow (cat)'
mqawqoye	'to bark (fox)'
mṣawṣoye	'to twitter, chirp'

(v) *Other roots*

mbahrone	'to shine'
mbardome	'to mumble, mutter'
mbartole	'to bribe'
mbarxoše	'to mix'
mbazmore	'to nail'
mčak̂bone	'to arm (with weapons)'
mčalmose	'to be sore, to sting (eyes)'
mčalboxe	'to beat with a stick'
mčambole	'to hook (sth. onto sth.)'
mčangole	'to roll'
mčarqoye	'to fire (gun), to spring (a trap)'

mčawrone	'to be sleeply'
mdarbone	'to injure'
mdarmone	'to treat with medicine'
mdaštone	'to level, flatten'
mgambole	'to roll'
mgampore	'to be arrogant'
mgarmoze	'to shrink'
mhandose	'to practice engineering'
mhargome	'to bang, to make a loud sound; to roar (lion)'
mjangore	'to rust'
mkalboče	'to put on handcuffs'
mkamboxe	'to collapse, to be utterly destroyed'
mkarboðe	'to grapple with'
mgandore	'to roll'
mkarmoše	'to shrink, shrivel'
mmandore	'to flatten (the roof)'
mmardone	'to be cultured'
mmaškone	'to be covered with mud brought by rains'
mneyšone	'to hit a target'
mpačkone	'to be useless; to lose (in gambling)'
mparčome	'to rivet'
mparṣome	'to grin'
mparṣone	'to grin'
mparšone	'to pave'
mpartole	'to stagger, twist, to throw'
mpartone	'to winnow (corn)'
mpartore	'to stagger, to totter'
mpartoxe	'to break up (a clod of earth), to crumble (bread)'
mpaṭrome	'to graft'
mqalboze	'to turn over'
mqalṣone	'to smart' (due to sting or prick of a thorn)
mqantole	'to mate (animals)'
mqarbone	'to approach'
mqarčope	'to cut down, harvest (fruit)'
mqardoše	'to make a clattering noise'
mqardoxe	'to shatter (with a loud noise)'
mqarmoče	'to crumple'
mqarmoṭe	'to tie in a bundle'
mqarmoxe	'to crush, crumble (in hands)'
mqarnoze	'to shiver (from cold or fever)'

mqarpoče	'to hit, to beat'
mqarpoxe	'to slap, to hit hard'
mqarṣone	'to sting'
mqarṭone	'to put cloth on back of animal'
mqarṭope	'to break off'
mqašmore	'to make fun of'
mqaždore	'to interfere; to take control of'
msarbose	'to gather wool together (on a *msarbəs*)'
msaxbore	'to visit'
msazgore	'to reconcile o.s., to agree'
mṣandole	'to be disorientated; detached'
mṣarboye	'to drench'
mṣaxwone	'to become clear (sky)'
mšahwote	'to desire'
mšalqone	'to boil'
mšalṭone	'to take control'
mšaprone	'to praise sycophantically'
mšarboqe	'to whip'
mšarboṭe	'to whip, to strike (animal) with a pliant stick (*šarbəṭana*)'
mšarmoṭe	'to be entangled'
mšarqoṭe	'to break off heads of millet (*prage*)'
mšarṭoxe	'to die in masses (due to epidemic)'
mšaxlope	'to exchange'
mšaxrone	'to make black (with smoke)'
mšaxtone	'to become dirty'
mštawhore	'to be proud'
mtagbore	'to look after, to adminster'
mtalpoše	'to whisper'
mtandole	'to sling, to hang'
mtargole	'to trip'
mtarkose	'to build up embers of a fire to keep it burning'
mtarmoze	'to bruise (skin); wilt'
mtarpoθe	'to blink' (< *tarapθa*)
mtarqoðe	'to frolic, gambol'
mtarqole	'to stumble, trip; to fail (to do sth.)'
mtarsoye	'to sustain, provide sustenance for'
mtašboxe	'to praise'
mtaslome	'to hand over'
mtaxmone	'to think, consider'

mxaldoye	'to dig, excavated'
mxanzore	'to become fuming with anger, make a scene'
mxarboqe	'to knot together'
mxardoye	'to surround'
mxarmoše	'to give food (to animals), let them feed on grass'
mxarpoše	'to search (for something, especially food)'
mxaršone	'to be without fruit (tree)'
mxarzope	'to push'
mxažbone	'to make account, calculate'
mzampore	'to swell, to swagger'
mzanfore	'to act pompously'
mzangore	'to ring (bell); to sound (musical instrument); to echo'
mzanjore	'to rust'
mzaprone	'to add animal fat to food'
mzaqnobe	'to eat (said of an unwelcome guest in your house)'
mzarbone	'to become strong, to grow'
mzarmoṭe	'to be aggressive towards s.o.; to swell (skin)'
mzaxmone	'to become strong, grow'

It can be seen that a large proportion of the verbs in group (i) denote some kind of sound. All verbs of group (iv) denote animal noises. There is, therefore, some correlation between root pattern and class of meaning.

Some quadriliteral roots are related to triliteral roots of similar meaning. Roots of pattern $C_aC_bC_aC_b$ sometimes share the first two strong radicals of a related triliteral root. e.g.

mragroge	'to quiver'	cf. *rgada*	'to tremble, shiver'
mraprope	'palpitate (eye)'	cf. *rpaθa*	'to blink'
mkalkole	'to ululate'	cf. *mkălole*	'to ululate'
mdaqdoqe	'to chop up'	cf. *dyaqa*	'to crush'

Roots of the patterns $C_aC_bC_aC_c$ and $C_aC_bC_cC_b$ may share all three radicals of a related triliteral root and repeat one of them, e.g.

mparpose	'to pull apart'	cf. *prasa*	'to pull apart'
mparpoṭe	'to pluck off'	cf. *praṭa*	'to tear'
mtaltoye	'to hang'	cf. *tlaya*	'to hang'
mxaprope	'to dig about'	cf. *xpara*	'to dig'

Some quadriliteral roots have arisen by augmenting a triliteral root by an /r/ before the second radical. The related triliteral root either exists in the dialect or can be found in earlier forms of Aramaic, e.g.

mbarxoše	'to mix'	cf. Syr. *bḥaš* 'to agitate'
mkarmoše	'to shrivel'	cf. *čmača* 'to shrivel' (< Syr. *kmš*)
mpartole	'to stagger, twist'	cf. *pθala* 'to twist'
mqarčope	'to cut down'	cf. *qčapa* 'to cut down'
mqarmoṭe	'to crumple'	cf. *qmaṭa* 'to bundle up'
mqarmoxe	'to crush, crumble'	cf. Jewish Bab. Aram. *'aqmeḥ* 'to pulverize'
mqarpoxe	'to slap, hit hard'	cf. Syr. *qpaḥ* 'to strike'
mqarṭope	'to cut down'	cf. *qṭapa* 'to cut down'
msarbose	'to wind wool'	cf. Syr. *sḇas* 'to be compacted', *sabbes* 'to increase, compact'
mšarboṭe	'to strike a stick'	cf. Syr. *šaḇṭā* 'rod'
mtarqole	'to trip'	cf. Syr. *tqal* 'to trip'
mxarboqe	'to knot together'	cf. Syr. *ḥabbeq* 'to embrace'
mzarzope	'to push':	cf. *zyapa* 'to push'

Some quadriliteral roots extend a triliteral root by the addition of an initial /t/, e.g.

mtarpoθe	'to blink'	cf. *rpaθa* 'to blink'
mtarqoðe	'to frolic, gambol'	cf. *rqaða* 'to dance'
mtašboxe	'to praise'	cf. Syr. *šabbaḥ* 'to praise'
mtagbore	'to nurture, look after'	cf. *magwoṛe* 'to make big'; Syr. Jewish Bab. Aram. *gbr* 'to be strong'
mtargole	'to trip'	cf. Syr. *rgl* Ethpa. 'to come on foot', Eshtap̄. 'to trip'
mtaslome	'to hand over'	cf. Arab. *sallama* 'to hand over'
mtaxmone	'to think'	cf. Arab. *xammana* 'to assess'

Verbs with this structure appear to be based on verbal nouns with a *t*-prefix. One may compare *mtašboxe* with Syr. *tešbūḥtā* 'praise' and *mtaslome* and *mtaxmone* with Arab. *taslīm* and *taxmīn*. Verbal nouns from the other roots in the list are not attested.

Occasionally triliteral roots have been extended by other consonants, e.g.

mqalboze	'to turn over'	cf. *maqlobe* 'to turn over'
mšalqone	'to boil'	cf. *šlaqa* 'to boil'
mč̣awrone	'to be sleepy'	cf. *č̣wara* 'to roll (eyes)'
mč̣alboxe	'to beat (with stick)< *ṭlbx*	cf. Syr. *ṭbaḥ* 'to strike'

Several quadriliteral roots are derived from nouns or adjectives, e.g.

mbartole	'to bribe'	< Kurd. *bertîl* 'bribe'
mbazmore	'to nail'	< *bəzmara* 'nail'
mč̣aḵbone	'to arm (with weapons)'	< Kurd. *çekband* 'armour'
mdarmone	'to treat with medicine'	< *darmana* 'medicine'
mkalboče	'to put on handcuffs'	< *kalabča* 'handcuff'
mneyšone	'to hit a target'	< Kurd. *nîşan* 'mark, target'
mqarṣone	'to sting'	< *quraṣina* 'nettle'
mqarṭone	'to lay a cloth on animal'	< *qurṭana* cloth for animal's back'
mqašmore	'to make fun of'	< Kurd. *qeşmer* 'clown'
mšahwote	'to desire'	< Arab. *šahwa* 'desire'
mšamšome	'to fall (water)'	< *šamšuma* 'waterfall'
mxažbone	'to calculate'	< Syr. *ḥušbānā* 'account'
mšaxtone	'to become dirty'	< *šəxtana* 'dirty'
mxaršone	'to be without fruit'	< *xəršana* 'not bearing fruit (tree)'

When the noun or adjective does not have four consonants, the root is extended to four consonants. The reduplicated pattern $C_aC_bC_aC_b$ is used to extend roots containing only two distinct consonants, e.g.

mtantone	'to smoke'	< *tənna* 'smoke'
mxamxome	'to be hot (with fever)'	< *xəmma* 'heat'
mxaθxoθe	'to renew'	< *xaθa* 'new'

When the root of the noun or adjective consists of three consonants, the root is extended by a final /n/ radical, e.g.

mdarbone	'to injure'	< *darba* 'blow, injury'
mdaštone	'to level, flatten'	< *dašta* 'plain'

mpartone	'to winnow (corn)'	< *parta* 'chaff'
mparšone	'to pave, lay flat stones'	< *parše* 'flat stones'
mqarbone	'to approach'	< *qurba* 'near'
mṣaxwone	'to become clear (sky)'	< *ṣǝxwa* 'clear sky'
mšaprone	'to be sycophantic'	< *šapira* 'beautiful'
mšaxrone	'to make sooty'	< *šǝxra* 'soot'
mzaprone	'to add animal fat'	< *zǝpra* 'animal fat'
mzaxmone	'to become strong'	< *zaxma* 'large'

8.19. PRONOMINAL OBJECTS

8.19.1. *Pronominal Direct Objects on Present Base Verbs*

Pronominal direct objects are generally expressed on verb forms derived from the present base by L-series pronominal suffixes. The forms attached to a 3ms. verb are as follows:

		Default	Long	
3rd pers.	ms.	*qaṭǝ́lle*		'He kills him'
	fs.	*qaṭǝ́lla*		'He kills her'
	pl.	*qaṭǝ́llɛ*	*qaṭǝ́lley*	'He kills them'
		qaṭǝ́lla		
2nd pers.	ms.	*qaṭǝ́llux*		'He kills you (ms.)'
	fs.	*qaṭǝ́lláx*		'He kills you (fs.)'
	pl.	*qaṭǝ́llɛxu*		'He kills you (pl.)'
1st pers.	sing.	*qaṭǝ́lli*		'He kills me'
	pl.	*qaṭǝ́llǝn*	*qaṭǝ́llɛni*	'He kills us'

The 2pl. form and the 3pl. and 1pl. long forms may take the stress either on the last syllable of the base (*qaṭǝ́llɛxu, qaṭǝ́lley, qaṭǝ́llɛni*) or on the penultimate syllable of the suffix (*qaṭǝlléxu, qaṭǝlléy, qaṭǝllɛ́ni*).

When the final consonant of the verbal base is /n/ or /r/, the /l/ of the object suffix generally assimilates to this when the verb is in the 3ms. form, e.g.

špn	'to level (ground)'	*šapǝ́nne*	'He levels it'
ṭxn	'to grind'	*ṭaxǝ́nne*	'He grinds it'
zwn	'to buy'	*zawǝ́nne*	'He buys it'

bðr	'to scatter'	*baðə́rre*	'He scatters it'
txr	'to remember'	*taxə́rre*	'He remembers it'
zqr	'to weave, knit'	*zaqə́rre*	'He weaves it'

The /l/ of the suffix remains in all verbs in the 3fs., 3pl. and 2pl. forms, in which it is preceded by a vowel, e.g.

ṭaxnále	'She grinds it'	*baðrále*	'She scatters it'
ṭaxníle	'They grind it'	*baðríle*	'They scatter it'
ṭaxnítule	'You (pl.) grind it'	*baðrítule*	'You (pl.) scatter it'

When the verb base ends in the interdentals /θ/ or /ð/, these shift to the corresponding stops /t/ and /d/ when in contact with the /l/ of the object suffix in the 3ms. form of the verb, e.g.

ṭárəð	'He chases'	*ṭarádle*	'He chases him'
mxáθxəθ	'He renews'	*mxaθxátle*	'He renews it'

When in contact with the /t/ of the 2nd person singular inflections, the /l/ of the object suffix generally remains unassimilated. The vocalic distinction between the 2ms. (*-ət*) and the 2fs. (*-at*) inflections is retained due to the incidence of the stress on the inflection, whereas in forms without suffixes the 2fs. form is regularly attenuated to *-ət* (§2.3.5.):

2ms.	*qáṭlət*	*qaṭlə́tle*	'You (ms.) kill him'
2fs.	*qáṭlət*	*qaṭlátle*	'You (fs.) kill him'

Sporadically the /l/ of the object suffix is assimilated to the /t/, e.g. *qaṭlə́tte* 'You (ms.) kill him'.

The /l/ of the object suffix is regularly assimilated to the /n/ of the 1st person singular suffixes. As with the second person singular suffixes, the stress generally preserves the vocalic distinction between 1ms. and 1fs. inflections:

1ms.	*qáṭlən*	*qaṭlə́nne*	'I (ms.) kill him'
1fs.	*qáṭlən*	*qaṭlánne*	'I (fs.) kill him'

The /l/ is optionally assimilated to the /x/ of the 1pl. suffix:

1pl.	*qaṭlə́xle* ~ *qaṭlə́xxe*	'We (ms.) kill him'

The object suffixes are added after the *wa* particle in the *qaṭəlwa* form of the verb. The position of the stress is not changed when the object suffix is attached:

qaṭə́lwa	*qaṭə́lwale*
qaṭláwa	*qaṭláwale*
qaṭlíwa	*qaṭlíwale*
qaṭlə́twa	*qaṭlə́twale*
qaṭlə́nwa	*qaṭlə́nwale*, etc.

8.19.2. *Pronominal Direct Objects on Past Base Verbs*

Various options are available when one wishes to express a pronominal direct object on verb forms derived from the past base (*qṭille, qṭilwale*). When the pronominal object is 3rd person, it may be expressed by the inflection of the past base: *qṭil-* (ms.), *qṭila-* (fs.), *qṭili-* (pl.), e.g.

qṭílle	'He killed him'	*qṭílwale*	'He had killed him'
qṭilále	'He killed her'	*qṭiláwale*	'He had killed her'
qṭilíle	'He killed them'	*qṭilíwale*	'He had killed them'

This option is not available, however, when the pronominal object is 1st or 2nd person. An alternative construction is to express the pronominal object by attaching pronominal suffixes to the preposition *ʾəll-*. This may be joined with the verb in the same stress group, in which case the initial vowel is generally elided. Pronominal objects of all persons can be expressed in this way:

qṭílle ʾə́lle	*qṭílle-lle*	'He killed him'
qṭílle ʾə́lla	*qṭílle-lla*	'He killed her'
qṭílle ʾə́llɛ	*qṭílle-llɛ*	'He killed them'
qṭílle ʾə́llux	*qṭílle-llux*	'He killed you (ms.)'
qṭílle ʾə́lli	*qṭílle-lli*	'He killed me'

Far more commonly, the past base verb is replaced by a present base verb form with the past converter prefix *qəm-*, whereby *qəm-qaṭəl* corresponds to *qṭille* and *qəm-qaṭəlwa* to *qṭilwale*, e.g.

qəm-qaṭə́lle	'He killed him'	*qəm-qaṭə́lwale*	'He had killed him'
qəm-qaṭə́lla	'He killed her'	*qəm-qaṭə́lwala*	'He had killed her'

qəm-qaṭə́llɛ	'He killed them'	*qəm-qaṭə́lwalɛ*	'He had killed them'
qəm-qaṭə́llux	'He killed you'	*qəm-qaṭə́lwalux*	'He had killed you'
qəm-qaṭə́lli	'He killed me'	*qəm-qaṭə́lwali*	'He had killed me'

8.19.3. *Pronominal Direct Objects on Imperatives*

The L-suffixes are added to imperative forms to express the pronominal object. A distinctive feature of imperative forms with pronominal suffixes is that they generally retain the stress on the initial syllable, e.g.

qṭul	'Kill (sing.)!'	*qṭúlle*	'Kill (sing.) him!'
qə́ṭlu	'Kill (pl.)!'	*qə́ṭlule*	'Kill (pl.) him!'
mšáləx	'Strip (sing.)!'	*mšáləxle*	'Strip (sing.) him!'
mšálxu	'Strip (pl.)!'	*mšálxule*	'Strip (pl.) him!'
mápləx	'Use (sing.)!'	*mápləxle*	'Use (sing.) it!'
mápəlxu	'Use (pl.)!'	*mápəlxule*	'Use (pl.) it!'
mkánkəš	'Drag (sing.)!'	*mkánkəšle*	'Drag (sing.) it!'
mkánəkšu	'Drag (pl.)!'	*mkánəkšule*	'Drag (pl.) it!'

On some occasions the stress is shifted to penultimate position, in conformity with the general rules of stress placement, e.g. *mpălòla* 'Distribute it!' (B17:11). The supplementary suffixes that are attached to imperative forms to strengthen the command (*-ga, -ən, -gən, -gena, -gu* §8.6.5.) are not used before pronominal object suffixes.

8.19.4. *Pronominal Direct Objects on Compound Verbal Forms*

In compound verbal constructions consisting of a form of the verb 'to be' and the resultative participle or infinitive, the direct pronominal object is expressed by L-suffixes consisting of the preposition *l-*, as in other verbal forms, or by a pronominal suffix attached to the longer preposition *ʾəll-*. The use of L-suffixes reflects the treatment of these compound forms as fully verbal in nature.

8.19.4.1. *Resultative Participle + Present Enclitic Copula* (qṭilεle)
The normal position of the L-suffix is after the enclitic copula. The forms
of the construction with the 3ms. L-suffix are as follows:

3rd pers.	ms.	*qṭíləlle*	'He has killed him'
		(*qṭílεlele*)	
	fs.	*qṭíltəlle*	'She has killed him'
		(*qṭíltεlale*)	
	pl.	*qṭíləlle*	'They have killed him'
		(*qṭílelεle*)	
2nd pers.	ms.	*qṭílətle*	'You (ms.) have killed him'
	fs.	*qṭíltətle*	'You (fs.) have killed him'
	pl.	*qṭíletule*	'You (pl.) have killed him'
1st pers.	ms.	*qṭílənne*	'I (ms.) have killed him'
	fs.	*qṭíltənne*	'I (fs.) have killed him'
	pl.	*qṭíləxle*	'We have killed him'
		qṭíləxxe	

The enclitic copula before the object suffix regularly has a contracted form
(*qṭilət* < *qṭilεwət*, *qṭilən* < *qṭilεwən*, etc.). Contraction of the 3rd person copula
also takes place, which results in the elision of the final vowel before the
L-suffix. Forms such as *qṭilεlele* in which the 3rd person copula retains its
shape are used, but so rarely that they have been put in brackets in the
paradigm. The stress generally remains on the participle in the same posi-
tion as it would occur without the object suffixes. Occasionally, however,
it is moved onto the inflectional suffix, e.g. *qṭilátle*, *qṭilə́nne*. This movement
of stress is more frequently found with 1st and 2nd person subjects than
with 3rd person subjects.

The L-suffix is occasionally replaced by the long preposition *ʾəll-*, e.g.

3rd pers.	ms.	*qṭílεləlle*	'He has killed him'
2nd pers.	ms.	*qṭílətəlle*	'You (ms.) have killed him'
1st pers.	ms.	*qṭílənəlle*	'I (ms.) have killed him'

Examples: *rə́pyεləlla*⸜ 'He threw it down' (A25:33), *rípeləlle* 'They attacked
him' (A35:21); *múttətəlle* 'You put him' (A22:39), *qṭìlənəlle*⸜ 'I killed him'
(A12:18), *prìmənəlla*⸜ 'I cut it' (A22:9).

When the grammatical subject expressed by the copula is 3rd person, the *ʾəll-* phrase expressing the object is often placed before the copula element. This ordering is not used when the copula is 1st or 2nd person, e.g.

3rd pers.	ms.	*qṭíləllɛle* (< *qṭila-əlla-ile*)	'He has killed her'
3rd pers.	fs.	*qṭíltəllela* (< *qṭilta-əlle-ila*)	'She has killed him'
3rd pers.	pl.	*qṭíləlluxila* (< *qṭila-əllux-ila*)	'They have killed you'

8.19.4.2. *Resultative Participle + Past Enclitic Copula*

When object suffixes are attached to the construction consisting of a resultative participle and past enclitic copula, the inflectional endings that are generally used are based on the first paradigm in the previous section (§8.19.4.1.), in which object suffixes are combined with the present enclitic copula, rather than directly on forms with the past enclitic copula. The particle *wa* is simply added before the L-suffix throughout the paradigm. The most conspicuous result of this is in the 3rd person, in which the /l/ element of the present copula is retained, although this element does not occur in any form of the past copula.

3rd pers.	ms.	*qṭíləlwale*	'He had killed him'
	fs.	*qṭíltəlwale*	'She had killed him'
	pl.	*qṭíləlwale*	'They had killed him', etc.
2nd pers.	ms.	*qṭílətwale*	
	fs.	*qṭíltətwale*	
	pl.	*qṭíletuwale*	
1st pers.	ms.	*qṭílənwale*	
	fs.	*qṭíltənwale*	
	pl.	*qṭíləxwale*	

The 3rd person forms with the /l/ element are sometimes used also with a transitive verb without a pronominal object suffix, e.g. *ʾáy šwíqtəlwa májma tàma¹* 'She had left a tray there' (A4:53).

Occasionally the expected form of the 3rd past copula is used, without the /l/ element, e.g. *šítɛwəlle* 'She had plastered it' (A23:36), which can be analysed as *šita + iwa + əlle*. In the attested cases of this construction the pronominal object element is attached to the long preposition *ʾəll-* rather than the short preposition *l-* (i.e. in an L-suffix):

3rd pers.	ms.	*qṭílɛwəlle* (< *qṭila-iwa-əlle*)	'He had killed him'
	fs.	*qṭíltɛwəlle* (< *qṭilta-iwa-əlle*)	'She had killed him'
	pl.	*qṭílewəlle* (< *qṭile-iwa-əlle*)	'They had killed him'

8.19.4.3. *Non-Enclitic Copula or hwy + Resultative Participle*

When a non-enclitic type of copula, such as the deictic or negative copula, or the verb *hwy* precedes the resultative participle, the pronominal object suffixes are attached to the preposition *ʾəll-*, which in turn is suffixed to the end of the participle:

Deictic copula

3rd pers.	ms.	*hóle qṭíləlle*	'He has killed him'
	fs.	*hóla qṭíltəlle*	'She has killed him'
	pl.	*hóla qṭíləlle*	'They have killed him', etc.

2nd pers.	ms.	*hót qṭíləlle*	
	fs.	*hót qṭíltəlle*	
	pl.	*hótu qṭíləlle*	

1st pers.	ms.	*hón qṭíləlle*	
	fs.	*hón qṭíltəlle*	
	pl.	*hóx qṭíləlle*	

Negative copula

3rd pers.	ms.	*léle qṭíləlle*	'He has not killed him'
	fs.	*léla qṭíltəlle*	'She has not killed him'
	pl.	*léla qṭíləlle*	'They have not killed him', etc.

Verb hwy

3rd pers.	ms.	*háwe qṭíləlle*	'He has killed him'
	fs.	*háwya qṭíltəlle*	'She has killed him'
	pl.	*háwɛ qṭíləlle*	'They have killed him', etc.

8.19.4.4. *Infinitive + Present Enclitic Copula*

When the pronominal object suffixes are added to this construction, the endings are the same as in the corresponding construction with a resultative participle:

3rd pers.	ms.	*qṭáləlle*	'He is killing him'
	fs.	*qṭáləlle*	'She is killing him'
	pl.	*qṭáləlle*	'They are killing him', etc.

2nd pers.	ms.	*qṭáləṭle*
	fs.	*qṭáləṭle*
	pl.	*qṭáletule*

1st pers.	ms.	*qṭálənne*
	fs.	*qṭálənne*
	pl.	*qṭáləxle*
		qṭáləxxe

The L-suffix is occasionally replaced by the long preposition *ʾəll-*, e.g.

3rd pers.	ms.	*qṭáləlalle*	'He is killing him'
2nd pers.	ms.	*qṭáləṭalle*	'You (ms.) are killing him'
1st pers.	ms.	*qṭálənalle*	'I (ms.) am killing him'

When the grammatical subject expressed by the copula is 3rd person, the *ʾəll-* phrase expressing the object is often placed before the copula element, e.g.

3rd pers.	ms.	*qṭáləllɛle* (< *qṭala-əlla-ile*)	'He is killing her'
3rd pers.	fs.	*qṭáləllela* (< *qṭala-əlle-ila*)	'She is killing him'
3rd pers.	pl.	*qṭáləlluxila* (< *qṭala-əllux-ila*)	'They are killing you'

8.19.4.5. *Infinitive + Past Enclitic Copula*

As is the case with the resultative participle + past enclitic copula construction (§8.19.4.2.), when object suffixes are attached to the construction consisting of an infinitive and past enclitic copula, the inflectional endings are based on the paradigm in which object suffixes are combined with the present enclitic copula (§8.19.4.4.), rather than directly on forms with the past enclitic copula. The particle *wa* is simply added before the L-suffix throughout the paradigm. As a result of this, the /l/ element of the present copula is retained in the 3rd person forms, although this element does not occur in any form of the past copula:

3rd pers.	ms.	*qṭáləlwale*	'He was killing him'
	fs.	*qṭáləlwale*	'She was killing him'
	pl.	*qṭáləlwale*	'They were killing him', etc.

2nd pers.	ms.	*qṭáləṭwale*
	fs.	*qṭáləṭwale*
	pl.	*qṭáletuwale*

	1st pers.	ms.	*qṭálənwale*
		fs.	*qṭálənwale*
		pl.	*qṭáləxwale*

Occasionally the pronominal object is expressed by a phrase consisting of the long preposition *ʾəll-* rather than the short preposition *l-*. In such cases the expected form of the 3rd past copula is used, without the */l/* element, e.g.

3rd pers.	ms.	*qṭálɛwəlle* (< *qṭala-iwa-əlle*)	'He was killing him'
3rd pers.	fs.	*qṭálɛwəlle* (< *qṭala-iwa-əlle*)	'She was killing him'
3rd pers.	pl.	*qṭálɛwəlle* (< *qṭala-iwa-əlle*)	'They were killing him'

8.19.4.6. *Non-Enclitic Copula or hwy + Infinitive*
When a non-enclitic type of copula, such as the deictic or negative copula, or the verb *hwy* precedes the infinitive, the pronominal object suffixes are attached to the preposition *ʾəll-*, which in turn is suffixed to the end of the infinitive:

Deictic copula
3rd pers.	ms.	*hóle qṭáləlle*	'He is killing him'
	fs.	*hóla qṭáləlle*	'She is killing him'
	pl.	*hóla qṭáləlle*	'They are killing him', etc.

2nd pers.	ms.	*hót qṭáləlle*	
	fs.	*hót qṭáləlle*	
	pl.	*hótu qṭáləlle*	

1st pers.	ms.	*hón qṭáləlle*	
	fs.	*hón qṭáləlle*	
	pl.	*hóx qṭáləlle*	

Negative copula
3rd pers.	ms.	*lɛ́le qṭáləlle*	'He is not killing him'
	fs.	*lɛ́la qṭáləlle*	'She is not killing him'
	pl.	*lɛ́la qṭáləlle*	'They are not killing him'

Verb hwy
3rd pers.	ms.	*háwe qṭáləlle*	'He is killing him'
	fs.	*háwya qṭáləlle*	'She is killing him'
	pl.	*háwɛ qṭáləlle*	'They are killing him', etc.

8.19.5. *Pronominal Indirect Object*

A pronominal indirect object may be expressed on a present base verb form by the same series of pronominal suffixes as those that express the direct object, i.e. the L-series, so long as a direct pronominal object suffix is not attached to the same verb:

		Default	Long	
3rd pers.	ms.	*yawə́lle*		'He gives to him'
	fs.	*yawə́lla*		'He gives to her'
	pl.	*yawə́llɛ*	*yawəlley*	'He gives to them', etc.
		yawə́lla		
2nd pers.	ms.	*yawə́llux*		
	fs.	*yawə́lləx*		
	pl.	*yawə́llɛxu*		
1st pers.	sing.	*yawə́lli*		
	pl.	*yawə́llən*	*yawəllɛni*	

As is the case with pronominal direct objects, L-suffixes expressing the indirect object are generally avoided on verbs derived from past bases. The most common practice is to substitute a present base form with the past converted prefix *qəm-*, e.g.

3rd pers.	ms.	*qəm-yawə́lle*		'He gave to him'
	fs.	*qəm-yawə́lla*		'He gave to her'
	pl.	*qəm-yawə́llɛ*	*qəm-yawəlley*	'He gave to them'
				etc.
		qəm-yawə́lla		
2nd pers.	ms.	*qəm-yawə́llux*		
	fs.	*qəm-yawə́lləx*		
	pl.	*qəm-yawə́llɛxu*		
1st pers.	sing.	*qəm-yawə́lli*		
	pl.	*qəm-yawə́llən*	*qəm-yawəllɛni*	

On some occasions a 3rd person indirect pronominal object is expressed by the inflection of the past base. This usage tends to be restricted to verbs

that do not generally take a direct object together with an indirect object, such as *ʾmr* 'to say', e.g. *mirále* 'He said to her', *miríle* 'He said to them'.

Indirect pronominal objects on imperative and compound verbal forms with an enclitic copula are expressed by L-suffixes in the same way as pronominal direct objects:

Imperative:

hálli	'Give (sing.) to me!'
hálluli	'Give (pl.) to me!
mɛ́θili	'Bring (sing.) to me!'
mɛ́θoli	'Bring (pl.) to me!'
múrri	'Say (sing.) to me!'
múruli	'Say (pl.) to me!'

Compound forms:

híwəlli	'He has given to me'
yáwəlli	'He is giving to me'

The indirect pronominal object may also be expressed by an independent prepositional phrase. This may consist of the preposition *ṭla-* 'to', which, when pronominal suffixes are attached, has the base *ṭlal-* (§13.3.22.):

		Default	Long
3rd pers.	ms.	*ṭlále*	
	fs.	*ṭlála*	
	pl.	*ṭlálɛ*	*ṭlaléy*
		ṭlála	
2nd pers.	ms.	*ṭlálux*	
	fs.	*ṭláləx*	
	pl.	*ṭlaléxu*	
1st pers.	sing.	*ṭláli*	
	pl.	*ṭlálən*	*ṭlalɛni*

Alternatively an independent phrase consisting of the preposition *ʾəll-* may be used:

3rd pers.	ms.	ʾə́lle	
	fs.	ʾə́lla	
	pl.	ʾə́llɛ	ʾəlley
		ʾə́lla	

2nd pers.	ms.	ʾə́llux	
	fs.	ʾə́lləx	
	pl.	ʾəllέxu	

1st pers.	sing.	ʾə́lli	
	pl.	ʾə́llən	ʾəllɛni

More rarely a pronominal phrase consisting of the preposition *qa-* is used,
e.g. *qa-diye* 'to him', *qa-diya* 'to her', etc.

These prepositional phrases often have their own stress and need not
be placed immediately adjacent to the verb. They may be used to express
the indirect object with all forms of the verb:

mšádər ṭláli / ʾə́lli	'He sends to me'
mšudə́rre ṭláli / ʾə́lli	'He sent to me'
mšádər ṭláli / ʾə́lli!	'Send (sing.) to me!'
mšúdrɛle ṭláli / ʾə́lli	'He sent to me'
mšadórele ṭláli / ʾə́lli	'He is sending to me'
lέle híwəlli	'He has not given to me'
lέle yáwəlli	'He is not giving to me'

8.19.6. *Combination of Pronominal Suffixes*

When a verb has both a pronominal direct object and a pronominal indi-
rect object, the direct object is generally expressed by an L-suffix attached
to the verb and the indirect object by one of the prepositional phrases
desribed in §8.19.5. When the suffix of the direct pronominal object ends
in a vowel, the initial syllable of the *ʾəll-* phrase is often elided and the
phrase is linked to the verb in the same stress group:

yawə́lle ṭláli	'He gives it to me'
yawə́lle ʾə́lli	
yawə́lle-lli	

qəm-hawə́lle ṭláli   'He gave it to me'
qəm-hawə́lle ʾə́lli
qəm-hawə́lle-lli

hálle ṭláli   'Give it to me!'
hálle ʾə́lli
hálle-lle

híwəlle ṭláli   'He has given it to me'
híwəlle ʾə́lli
híwəlle-lli

8.20. Pseudo-Verbs

8.20.1. *The Existential Particles* ʾiθ *and* liθ

As elsewhere in NENA, the C. Barwar dialect expresses predications of existence ('there is', 'there are') by an existential particle. The basic form of this is *ʾiθ*. On some occasions the form is extended by attaching various supplementary suffixes as follows:

Default	Long
ʾíθən	*ʾíθena*
ʾíθga	
ʾíθgən	*ʾíθgena*

These supplementary suffixes are the same as those that are attached to imperative forms.

The negative form of the existential particle is *liθ*, which has developed historically by the merger of the elements *la + iθ*. The coalescence of the vowels /a/ + /i/ to /i/ rather than to the expected /ɛ/ is likely to have arisen by analogy with the /i/ vowel in the positive form *ʾiθ*. The negative particle may also be extended by supplementary suffixes:

Default	Long
líθən	*líθena*
líθga	
líθgən	*líθgena*

The existential particles can be given past time reference in the manner of verbs by attaching the particle *-wa* to their basic forms: *ʾiθwa, líθwa*.

The L-series suffixes are added to the basic forms of the particles to express possession. The final fricative /θ/ generally shifts to a stop /t/ when in direct contact with the /l/ of the suffix (cf. §1.4.1.3.), e.g. *ʾitli* (< *ʾiθ + li*) 'I have (literally: there is to me)', *lítli* (< *liθ + li*) 'I have not'. A few isolated cases are attested in which this shift does not take place, e.g. *ʾiθli* 'I have' (A7:9). The fricative regularly remains when the /l/ is separated from the /θ/ by the past tense marker *-wa*, e.g. *ʾiθwali* 'I had', *líθwali* 'I had not'. The full paradigms of these forms are as follows:

Present:

3rd pers.	ms.	*ʾítle*	*lítle*
	fs.	*ʾítla*	*lítla*
	pl.	*ʾítlɛ*	*lítlɛ*
		ʾítla	*lítla*
		ʾitley	*litley*
2nd pers.	ms.	*ʾítlux*	*lítlux*
	fs.	*ʾítləx*	*lítləx*
	pl.	*ʾitlɛxu*	*lítlɛxu*
1st pers.	sing.	*ʾítli*	*lítli*
	pl.	*ʾítlən*	*lítlən*
		ʾitlɛni	*litlɛni*

Past:

3rd pers.	ms.	*ʾíθwale*	*líθwale*
	fs.	*ʾíθwala*	*líθwala*
	pl.	*ʾíθwalɛ*	*líθwalɛ*
		ʾíθwala	*líθwala*
		ʾíθwaley	*liθwaley*
2nd pers.	ms.	*ʾíθwalux*	*líθwalux*
	fs.	*ʾíθwaləx*	*líθwaləx*
	pl.	*ʾíθwalɛx*	*líθwalɛx*
1st pers.	sing.	*ʾíθwali*	*líθwali*
	pl.	*ʾíθwalən*	*líθwalən*
		ʾíθwalɛni	*liθwalɛni*

The existential particle may also be combined with pronominal suffixes that are attached to the preposition *b-*. The inflection of such suffixes introduced by *b-* corresponds to that of L-suffixes and differs from the inflection of this preposition when it occurs in an independent prepositional phrase (§13.3.2.):

		Suffix	Independent phrase
3rd pers.	ms.	-*be*	*ʾə́bbe, bíye*
	fs.	-*ba*	*ʾə́bba, bíya*
	pl.	-*bɛ*	*ʾə́bbɛ, bíyɛ*
		-*ba*	*ʾə́bba, bíya*
		-*bey*	*ʾə́bbey, biyey*
2nd pers.	ms.	-*bux*	*ʾə́bbux, bíyux*
	fs.	-*bəx*	*ʾə́bbəx, bíyəx*
	pl.	-*bɛxu*	*ʾəbbɛ́xu, bíyɛxu*
1st pers.	sing.	-*bi*	*ʾə́bbi, bíyi*
	pl.	-*bən*	*ʾə́bbən, bíyən*
		-*bɛni*	*ʾə́bbɛni, biyɛni*

Present:

3rd pers.	ms.	*ʾíθbe*	*líθbe*
	fs.	*ʾíθba*	*líθba*
	pl.	*ʾíθbɛ*	*líθbɛ*

Past:

3rd pers.	ms.	*ʾíθwabe*	*líθwabe*
	fs.	*ʾíθwaba*	*líθwaba*
	pl.	*ʾíθwabɛ*	*líθwabɛ*

The /θ/ of the present form of the existential particle is often elided, e.g.

Present:

3rd pers.	ms.	*ʾíbe*	*líbe*
	fs.	*ʾíba*	*líba*
	pl.	*ʾíbɛ*	*líbɛ*

Past:

3rd pers.	ms.	*ʾíwabe*	*líwabe*
	fs.	*ʾíwaba*	*líwaba*
	pl.	*ʾíwabɛ*	*líwabɛ*

8.20.2. bas-

Expressions such as 'He has had enough', 'She has had enough', etc. are formed by conjugating the particle *bas* 'enough' with L-suffixes. The /l/ regularly assimilates to the /s/, e.g. *básse* (< **basle*). The full paradigm is as follows:

3rd pers.	ms.	*básse*	'He has had enough'
	fs.	*bássa*	'She has had enough'
	pl.	*bássɛ*	'They have had enough', etc.
		bássa	
		basséy	
2nd pers.	ms.	*bássux*	
	fs.	*bássəx*	
	pl.	*basséxu*	
1st pers.	sing.	*bássi*	
	pl.	*bássən*	
		bassɛni	

This construction may be used in combination with the past affix *wa*, which is inserted before the L-suffixes. The /l/ of the L-suffixes is retained, e.g.

3rd pers.	ms.	*báswale*	'He had had enough'
	fs.	*báswala*	'She had had enough'
	pl.	*báswalɛ*	'They had had enough', etc.

8.20.3. ḵɛw-, ḵaw-

The base *ḵɛw-* or *ḵaw-* is inflected with the series of pronominal suffixes that are attached to nouns and prepositions to form optative expressions 'May he be', 'May she be', etc.:

3rd pers.	ms.	ḳéwe	'May he be'
	fs.	ḳéwa	'May she be'
	pl.	ḳéwɛ	'May they be', etc.
		ḳéwa	
		ḳɛwéy	
2nd pers.	ms.	ḳéwux	
	fs.	ḳéwəx	
	pl.	ḳɛwéxu	
1st pers.	sing.	ḳéwi	
	pl.	ḳéwən	
		ḳɛwɛni	

In origin this construction appears to be a combination of the Kurdish particle qey 'perhaps' with the present base of the verb *hwy*: *qay-hawe. The uvular /q/ of the Kurdish particle has shifted to an unaspirated velar /ḳ/, as is attested in some other loans, e.g. ḳašḳa 'wheat husk' < Kurd. qaşik (§1.2.2.). The combined sequence ḳɛw- has become reinterpreted as a particle rather than verb and is now inflected like a preposition. The trigger for this process was no doubt the 3ms. form ḳɛwe, which is the most frequently used and has an ending that could be interpreted either as a verbal inflection or a 3ms. suffix.

8.20.4. kɛ- *'Where?'*

Interrogative expressions 'Where is he?', 'Where is she?', etc. are formed by conjugating the particle *kɛ-* with L-suffixes:

3rd pers.	ms.	kéle	'Where is he?'
	fs.	kéla	'Where is she?'
	pl.	kélɛ	'Where are they?', etc.
		kéla	
		kɛléy	
2nd pers.	ms.	kélux	
	fs.	kéləx	
	pl.	kɛléxu	

1st pers.	sing.	*kéli*
	pl.	*kélən*
		kelɛni

The inflection of this expression with L-suffixes appears to have developed by analogy with the L-suffix conjugation of the deictic copula and presentative expression *hole* 'There he is' (§8.7.3.). The construction is used only to refer to the present. If the time reference is past or future, the particle *ʾéka* 'where' must be used with the appropriate form of the enclitic copula or verb *hwy*, e.g. *ʾékɛwaʾ* 'Where was he?', *ʾéka t̠-áweʾ* 'Where will he be?'

8.20.5. ṣad-

In addition to the verb *zdʾ* 'to fear', which is fully inflected, there is an invariable base *ṣad-* which is conjugated with L-suffixes to express the actual present 'He is afraid', etc.:

3rd pers.	ms.	*ṣádle*	'He is afraid'
	fs.	*ṣádla*	'She is afraid'
	pl.	*ṣádlɛ*	'They are afraid', etc.
		ṣádla	
		ṣadléy	
2nd pers.	ms.	*ṣádlux*	
	fs.	*ṣádləx*	
	pl.	*ṣadléxu*	
1st pers.	sing.	*ṣádli*	
	pl.	*ṣádlən*	
		ṣádlɛni	

These forms can take the habitual verbal prefix *ʾi-*, e.g. *ʾi-ṣádle* 'He is (habitually) afraid'. They may also function as deontic forms, e.g. *la-ṣàdlux*ˈ 'Do not be afraid' (B9:26). The base *ṣad-* is also used in combination with the past converter affix *wa* before the L-suffixes to express the imperfective past:

3rd pers.   ms.   *ṣádwale*   'He was afraid'
             fs.   *ṣádwala*   'She was afraid'
             pl.   *ṣádwalɛ*   'They were afraid', etc.

The ʾ*i*- prefix may also be prefixed to this form: ʾ*i-ṣádwale* 'He was afraid'.

VERB PARADIGMS

The purpose of these paradigms is to present a summary of the inflectional forms of verbs in their present and past bases. A representative selection of the various categories of verbs is made. For the sake of economy the alternative 'long' forms of inflectional endings are not given nor the full range of alternative base forms that exist in some categories.

9.1. QATḶ Form

pθx I 'to open' (1), *šmˀ* I 'to hear' (2), *qym* I 'to rise' (3), *myˀ* I 'to churn' (4)

		(1)	(2)	(3)	(4)
3rd pers.	ms.	páθǝx	šắme	qáyǝm	mǎ̆ye
	fs.	páθxa	šắma	qɛ́ma	mǎ̆ya
	pl.	páθxi	šắmi	qɛ́mi	mǎ̆yi
2nd pers.	ms.	páθxǝt	šắmǝt	qɛ́mǝt	mǎ̆yǝt
	fs.	páθxǝt	šắmǝt	qɛ́mǝt	mǎ̆yǝt
	pl.	paθxítu	šǎmítu	qɛmítu	mǎyítu
1st pers.	ms.	páθxǝn	šắmǝn	qɛ́mǝn	mǎ̆yǝn
	fs.	páθxǝn	šắmǝn	qɛ́mǝn	mǎ̆yǝn
	pl.	páθxǝx	šắmǝx	qɛ́mǝx	mǎ̆yǝx

xzy I 'to see' (5), *by* I (*bˤy*) 'to want' (6), *dwq* I 'to hold' (7), *kθw* I 'to write' (8)

		(5)	(6)	(7)	(8)
3rd pers.	ms.	xáze	bǎ̆ye	dáwǝq	káθu
	fs.	xázya	bǎ̆ya	dáwqa	káθwa
	pl.	xázɛ	bǎ̆yɛ	dáwqi	káθwi
		xáza	bǎ̆ya		
		xázi	bǎ̆yi		

2nd pers.	ms.	xázət	bắyət	dáwqət	káθwət
	fs.	xázyət	bắyət	dáwqət	káθwət
	pl.	xazétu	bắyétu	dawqítu	kaθwítu
		xazítu	bắyítu		
1st pers.	ms.	xázən	bắyən	dáwqən	káθwən
	fs.	xázyən	bắyən	dáwqən	káθwən
	pl.	xázəx	bắyəx	dáwqəx	káθwəx

m-šlx II 'to strip' (9), *m-ṭʾl* II 'to play' (10), *m-plʾ* II 'to share' (11), *m-dry* II 'to winnow' (12)

		(9)	(10)	(11)	(12)
3rd pers.	ms.	mšắləx	mṭáwəl	mpắle	mdáre
	fs.	mšắlxa	mṭála	mpắla	mdárya
	pl.	mšắlxi	mṭáli	mpắli	mdárɛ
					mdára
					mdári
2nd pers.	ms.	mšắlxət	mṭálət	mpắlət	mdárət
	fs.	mšắlxət	mṭálət	mpắlət	mdáryət
	pl.	mšalxítu	mṭalítu	mpắlítu	mdarítu
1st pers.	ms.	mšắlxən	mṭálən	mpắlən	mdárən
	fs.	mšắlxən	mṭálən	mpắlən	mdáryən
	pl.	mšắlxəx	mṭáləx	mpắləx	mdárəx

m-plx III 'to use' (13), *m-xl* III 'to feed' (14), *m-ṛš* III 'to wake' (15), *m-šmʾ* III 'to listen' (16)

		(13)	(14)	(15)	(16)
3rd pers.	ms.	mápləx	máxəl	mắṛəš	mášme

NOUNS

10.1. Preliminary Remarks

Nouns of Aramaic stock and loanwords that have been adapted to Aramaic morphology have in the singular one of the following basic inflectional endings:

(i)   *-a*, which is the reflex of the masculine singular determined state inflection of earlier Aramaic.

(ii) *-ta* or *-θa*, which are the reflexes of the feminine singular determined state inflection of earlier Aramaic.

(iii) *-o*, which is a feminine or diminutive ending.

(iv) *-e*.

A classification is given below of the various morphological patterns of nouns in the dialect that have one of these inflectional endings in the singular.

10.2. Nouns with *-a* Inflection

10.2.1. *Bisyllabic Patterns*

(1) *CaCCa*

ʾaθra	'land, country'
ʾaqla	'leg'
čamča	'spoon'
danwa	'tail'
kalba	'dog'
magla	'sickle'
malka	'king'
massa	'ox-goad'
palga	'half'

qalma	'louse'
qazba	'date'
sahða	'martyr'
talga	'snow'
talma	'water-jar'
xašša	'sadness'
yalma	'face'

In the category of *CaCCa* we should also include words with /r/ as the second radical in which the /a/ is raised to /ɛ/ (§2.5.3.):

ʾɛrya	'lion'
gɛrma	'bone'
kɛrma	'orchard'
tɛrba	'fat'
yɛrxa	'month'

Nouns of the pattern *CaCCa* that are derived from the determined form of the active participle of early Aramaic (*CāCCā) mostly refer to inanimate objects, e.g.

ʾarxa	'guest'
daqra	'long pole' (< *dqr* 'to touch')
parma	'blade'
qamṣa	'grasshopper'
sahða	'martyr'
samxa	'post supporting a vine'
sanda	'support, prop'
šapna	'instrument for levelling the ground'
šaqla	'carrying pole'
xalqa	'button, press-stud' (< *xlq* 'to close')
xasla	'bit; mouth cover used in weaning animal'
xatma	'muzzle'

(2) *CawCa*

bawsa	'wooden piece connecting yoke to the plough'
dawra	'wooden bolt'
gawna	'colour'
gawṛa	'man, husband'

gawza	'walnut'
kawda	'liver'
kawsa	'hair'
kawša	'handle of a plough'
pawxa	'air, wind'
ṣawma	'fast'
šawba	'head cold, influenza'
šawpa	'footprint, place'
tawra	'ox'
xawla	'rope'
xawra	'friend'
xawxa	'peach'
yawna	'dove; pigeon'
zawga	'pair'
zawna	'time'

The medial diphthong */aw/* in this pattern is stable and is only rarely contracted to */o/* by speakers. Two exceptions to this are the words *yoma* 'day' (< **yawmā*) and *roma* 'hill' (< **rawmā*), which are regularly pronounced with the diphthong contracted to */o/* and so assigned to the pattern *CoCCa* (§2.4.2.).

(3) *CəCCa*

ʾəðma	'brother of husband'
ʾənwa	'grape'
bərka	'knee'
bəṣla	'onion'
bəsra	'meat'
dəqna	'beard'
gərwa	'sock'
gəšra	'bridge'
kəxwa	'star'
ləxma	'bread'
məšxa	'butter, oil'
məṭra	'rain'
pərma	'thurible'
pəšla	'kind, type'
qəpla	'lock'
qəṭma	'ash'
qəṭwa	'wooden needle'

sətwa	'winter'
šəlxa	'swarm (of bees)'
šəmša	'sun'
šərma	'buttock'
šəxta	'dirt'
xəlma	'dream'
xəḷya	'milk'
xətna	'bridegroom; son-in-law'

Several words with this pattern have a geminate middle radical, e.g.

ʾəzza	'nanny-goat'
dəmma	'blood'
gədda	'string, strand'
gəppa	'cave'
ləbba	'heart'
qəṭṭa	'piece'
qənna	'nest'
šəmma	'name'
ṭəlla	'shade, shadow'
xəmma	'heat'
yəmma	'mother'

The pattern is used for various deverbal nouns. These are mainly derived from stem I verbs. They can be divided into (i) those that refer to actions and states and (ii) those that refer to concrete entities:

(i) Actions and states

bəxya	'weeping'	< *bxaya* 'to weep'
gədša	'slaughter'	< *gdaša* 'to slaughter'
jənna	'dirge'	< *jnana* 'to sing a dirge'
kəčxa	'tiredness'	< *kčaxa* 'to tire'
qəbla	'donation'	< *qbala* 'to donate'
qəṭla	'murder'	< *qṭala* 'to kill'
rəqða	'dance, dancing'	< *rqaða* 'to dance'
zəmra	'song'	< *zmara* 'to sing'

(ii) Concrete entities

bəθqa (< *bəðqa*)	'scattered (sweets)'	< *bðaqa* 'to scatter'
nəqša	'embroidery'	< *nqaša* 'to embroider'

nəxla	'sieved grain'	< *nxala* 'to sieve'
pəqxa	'blossom'	< *pqaxa* 'to blossom'
qəθra	'knot'	< *qθara* 'to knot'
šədla	'seedling'	< *šdala* 'to plant'
təpna	'mould'	< *tpana* 'to go mouldy'
zəqra	'woven product'	< *zqara* 'to weave'

A few such nouns have no corresponding stem I verb form, but are related to verbs from stems II or III, e.g.

nəxsa	'rebuke'	< *manxose* 'to rebuke'
ṣəqla	'decoration'	< *mṣaqole* 'to decorate'
šədla	'lullaby'	< *mšadole* 'to sing lullabies'
šəxda	'joy'	< *mašxode* 'to congratulate'
xəzda	'reproach'	< *mxazode* 'to reproach'

(4) *CuCCa*

ʾumqa	'depth'
ʾupra	'earth, soil'
ʾurxa	'road'
ʾurza	'man, male'
bubra	'thorny pod'
burra	'pot for preserving yoghurt'
dugla	'lie'
gujma	'bunch (of grapes)'
gulpa	'wing'
gumla	'camel'
pumma	'mouth'
purya	'light'
ṣudra	'shirt'
šupra	'beauty'
tuxma	'way'
xubba	'love'
yuqra	'weight'

(5) *CaCa*

baba	'father'
dana	'time'
dara	'generation, century'
dawa	'gold'

kaka	'tooth'
kasa	'stomach'
mama	'paternal uncle'
mara	'master'
maṛa	'shovel'
nala	'horse-shoe'
pala	'workman'
paṛa	'lamb'
qaša	'priest'
qala	'voice'
qana	'horn'
sama	'portion'
sawa	'old man, grandfather'
šana	'honeycomb'
šaqa	'thigh'
taqa	'branch'
ṭana	'load'
ṭaxa	'pile'
xaṣa	'back'
xapa	'wooden peg'
yala	'child'
yama	'sea, lake'
zaga	'bell'

Some of the nouns of Aramaic stock had this as their pattern in an earlier stage of Aramaic, e.g.

dara	< **dārā*	'generation'
qala	< **qālā*	'voice'
sawa	< **sāḇā*	'old man'
šaqa	< **šāqā*	'thigh'

Many nouns, however, have acquired this pattern by the loss of a consonant. These can be classified as follows:

(i) Weakening of gemination of the second consonant

kaka	< **kakkā*		'tooth'
maṛa	< **marra* (cf. Syr. *marrā*)	'spade'
paṛa	< **parrā*		'lamb'

qaša	< **qaššā* < **qašī̆šā*	'priest'
yama	< **yammā*	'sea'
zaga	< **zaggā*	'bell'

(ii) Loss of a medial laryngal or pharyngal

nala	< **naʾla* < **naʾlā*	'horse-shoe'
þala	< **þaʾla* < **þaʾlā*	'labourer'
ṭana	< **ṭaʾna* < **ṭaʿnā*	'load'
saða	< **sahðā*	'martyr'
dawa	< **dahwā*	'gold'

(iii) Loss of a medial **r*

kasa	< **karsā*	'stomach'
qana	< **qarnā*	'horn'
xaṣa	< **ḥarṣā*	'back'

(iv) Ellipsis of an initial syllable

dana	< **ʿiddānā*	'time'

(6) *CăCa*

ʾăra	'ground'
măra	'illness'
năra	'axe'
qăra	'pumpkin'
šăma	'wax'
tăra	'door'

All nouns of this pattern had at an earlier period the pattern **CaCCa*
with a pharyngal **ʿ* as the third radical. In some cases the pharyngal was
a development of a fricative **ḡ*. The pharyngal has been elided but the
preceding vowel remains short, as if it were still in a closed syllable: e.g.
ʾăra < **ʾarʿā*, *măra* < **marʿā*, *năra* < **narḡā*. This process also operated on
Arabic loanwords such as *šăma* < Arab. **šamʿ*. The consonant after the
short /a/ is sometimes geminated secondarily in these words when the first
syllable bears the stress, e.g. *márra* 'illness', *qárra* 'pumpkin', *tárra* 'door'.

(7) *CiCa*

ʾiða	'hand'
diga	'cock'
kima	'the Pleiades'

lina	'pot'
nira	'yoke'
rixa	'smell'
šima	'catastrophe'
ziqa	'neck of a shirt'

(8) *CoCa*

boya	'hole'
dona	'animal fat'
moja	'calf'
moxa	'brain'
roma	'hill'
roxa	'spirit'
yoma	'day'
zoma	'summer hut'

The /o/ in *roma* 'hill' and *yoma* 'day' has developed by contraction of an original diphthong **aw* (< **rawmā*, **yawmā*; cf. §2.4.2.). Other words in this category did not have a diphthong at an earlier stage of the language, e.g. *moxa* < **muxxā*, *dona* < **duhnā*, *boya* < **bo'a* < **boga* < **burgā* (cf. C. Qaraqosh *burga* 'hole'), or are loanwords, e.g. *moja* (Kurd. moz), *zoma* (Kurd. zom).

(9) *CɛCa*

ʾɛna	'eye'
ʾɛwa	'cloud'
bɛθa	'house'
dɛna	'debt'
lɛša	'dough'
mɛša	'scarlet oak'
qɛma	'stand, stake'
qɛsa	'wood'
qɛṭa	'summer'
sɛpa	'sword'
šɛna	'peace'
xɛla	'strength'
zɛθa	'olive oil'

The medial /ɛ/ in this pattern derives historically from the diphthong **ay*, e.g. *bɛθa* < **bayθā* (§2.4.1).

(10) *CeCa*

ʾeða	'festival'
beṛa	'light'
bera	'well'
feka	'fruit'
geba	'side'
gera	'arrow'
jeba	'pocket'
keṗa	'stone'
nera	'river'
reša	'head'
sela	'griddle for making bread'
sera	'moon'
ṣewa	'thirst'
šeða	'almond'
šera	'festival (of a saint)'
tela	'fox'
ṭema	'taste; value'
tena	'fig'
ṭena	'load'
ṭera	'noon'

Nouns of Aramaic stock with this pattern have different backgrounds. These include:

(i) Nouns that had medial **ē* in earlier Aramaic, e.g.

ʾeða	< **ʿēðā*
keṗa	< **kēp̄ā*
reša	< **rēšā*

(ii) Nouns that in earlier Aramaic had the pattern *CaCCa* with a laryngal **h* or pharyngal **ʿ* as the second consonant, which has now been elided. The pharyngal **ʿ* would have shifted first to the laryngal **ʾ* before being lost. The medial **a* is likely to have been raised to /e/ while still in a syllable closed by the laryngal:

nera	< **nehra*	< **nahrā*
sera	< **sehra*	< **sahrā*
tela	< **teʾla*	< **taʾla* < **taʿlā*
ṭema	< **ṭeʾma*	< *ṭaʾma* < *ṭaʿmā*

This reconstruction is supported by the retention of the laryngal after the raised vowel in some NENA dialects with a more archaic structure, e.g. J. Amedia *teʾla* 'fox' < **taʿlā*.

It should be noted that also several words in category (i) had a medial laryngal **ʾ* at some pre-historical period and in some cases the original pattern was *CaCCa*. The forms in category (ii), therefore, are a continuation of this process:

reša	< **rešā*	< **raʾšā*

(11) *CuCa*

buma	'owl'
duna	'sheep pen'
duša	'honey'
duxa	'sacrifice'
guða	'churn'
guda	'wall'
kura	'furnace'
nura	'fire'
ruša	'shoulder'
susa	'horse'
ṣula	'manure'
šuqa	'market'
šura	'wall (fortification)'
šuša	'glass; bottle'
šuxa	'praise'
tuma	'garlic'
tuna	'straw'
tura	'stick'
ṭura	'mountain'
xuya	'darkness'

Nouns of Aramaic stock with this pattern have different backgrounds. These include:

(i) Nouns that had this pattern in earlier Aramaic, e.g.

nura	< **nūrā*
šura	< **šūrā*
tuma	< **tūmā*
ṭura	< **ṭūrā*

(ii)   Nouns with an original geminated second consonant, e.g.
     guda   < *guddā

(iii) Nouns with an original *b as second consonant, which has been
contracted, e.g.

duša	< *dubša	< **dəb̠šā* (Syr. *deb̠šā*)
duxa	< *dubḥa	< **dəb̠ḥā* (Syr. *deb̠ḥā*)
šuxa	< **šub̠ḥā* (Syr. *šub̠ḥā*)	
tuna	< **tub̠na*	< **təb̠nā* (Syr. *teb̠nā*)
xuya	< **ḥub̠ya* (Syr. *ḥub̠yā*)	

(12) *CCaCa*

byaṭa	'pickaxe'
gnaya	'fault'
klama	'wooden collar of ox'
kθawa	'book'
prasa	'cloth spread on floor'
praza	'cultivated field'
psasa	'permission'
pθana	'pair (of oxen)'
qðala	'neck'
šlama	'peace'
šwawa	'neighbour'
xmara	'ass'
xmaṭa	'needle'

The pattern *CCaCa* is also that of stem I infinitives, e.g. *pθaxa* 'to open',
zqara 'to weave', *šmaʾa* 'to hear'.

(13) *CCiCa*

gðila	'ice'
gwina	'boundary'
jwina	'side (in a game, conflict)'
pxiša	'paste of flour and oil'
ṣliwa	'cross'
xmira	'yeast'

(14) *CCuCa*

gnuna	'wedding band'
stuna	'wooden post'
txuma	'boundary'
ṭxuna	'grist'
xlula	'wedding'
xzura	'pig'

(15) *CCoCa*

glola	'circle'
troṣa	'truth'

(16) *CCeCa*

rkewa	'stirrup'

10.2.2. *Trisyllabic Patterns*

(1) *CaCaCa ~ CaCCaCa ~ CeCaCa*
The reflex of the pattern **CaCCāCa* in earlier Aramaic with a geminate medial consonant is usually *CaCaCa*. The vowel of the first syllable is in principle pronounced long, in accordance with the normal rules of vowel lengthening in pretonic open syllables (§2.2.1.4.), although the duration is reduced in fast speech.

The most common use of this pattern is to form nouns denoting the human performer of an activity. It usually refers to an activity that is performed habitually or one that is a permanent property or profession of the referent. Nouns with this pattern are formed productively from existing verbal roots. There appears, however, to be a certain lexical restriction on its derivation:

ʾamara	'sayer, teller'
ʾaraqa	'fugitive'
ʾawaða	'doer'
baxaya	'weeper'
dagala	'liar'
kanaša	'sweeper'
kaθawa	'writer'
palaxa	'worker'
rakawa	'rider'
raqaða	'dancer'

rawaya	'drunkard'
raxaša	'walker'
sahaḏa	'witness'
ṣawaya	'dyer'
ṭaxana	'miller'
ṭayana	'porter'
xaṭaya	'sinner'
xazada	'harvester'
zamara	'singer'
zaqara	'weaver'
zaraya	'cultivator'

Occasionally the form is derived from a noun rather than a verbal root, e.g.

baqara	'minder of cattle' < *bəqra* 'cattle'

In the case of a few nouns denoting professions or characteristic activities, no corresponding verbal root is in use in the dialect, but rather they are a heritage from earlier Aramaic or are loanwords:

ʾakara	'farmer'
karaxa	'irrigation manager' (cf. C. Shiyuz *karxa* 'irrigation basin')
najara	'carpenter'

In some isolated instances the pattern is used as the name of an animal or an insect to designate their characteristic activity, e.g.

dabaša	'bee (honey-maker)'

This must be derived from the noun *duša* (< *dəbš*) 'honey', since the verbal root *dbš* denotes 'to stick' in the dialect. More frequently, however, names of animals or insects that denote their characteristic activity have the pattern *CaCCa* deriving from the fs. active participle in earlier Aramaic (*CāCCaṯ), e.g. *zaqra-qode* 'spider (weaver of traps)', *ʾazla-kuše* 'dragonfly (spinner of spindles)' (§10.17.1.).

Some words preserve the gemination of the middle radical and have the form *CaCCaCa*, which in most cases is used in free variation with *CaCaCa*.

gabbara	'hero'
šammaša ~ šamaša	'deacon'
bannaya ~ banaya	'builder'
karraxa ~ karaxa	'irrigation manager'

The phonetic properties of the medial radical in these words may have facilitated the preservation. This certainly applies to /r/, which exhibits a tendency to preserve gemination also in other patterns. In the word *gabbara* 'hero' the gemination is a fixed lexicalized feature of the word, but cf. *gebare* 'Orion'.

Gemination of the medial radical regularly occurs in this pattern in a number of loans from Arabic:

xaddama	'servant'
fassada	'corrupt person'
ḥaddada	'metalworker'

A few words of Aramaic origin derived from the pattern **CaCCaCa* have the pattern *CeCaCa* with /e/ in the first syllable. This has developed by the attenuation of the /a/ vowel in the originally closed syllable to /ə/ and its subsequent lengthening to /e/ after the gemination was weakened and the syllable was opened (*CeCaCa* < *CəCCaCa* < *CaCCaCa*). The pattern is lexically restricted and is only found in a small set of words:

genawa	'thief'
gewaya	'beggar'
geyasa	'penitent thief (at crucifixion)'
gebare	'Orion'

In some words derived from the pattern **CaCCaCa* that have a medial labial consonant the vowel in the first syllable is sometimes pronounced /u/ (*CuCaCa* < *CəCCaCa* < *CaCCaCa*):

guwaya	'beggar'
šumaša	'deacon'

The pattern *CaCaCa* is found also in a number of other nouns, which do not clearly fit the category of nouns of activity described above:

balaya	'problem, disaster'
kawaza	'water pot'
mašana	'beam of a plough'
qadaša	'goat with a dewlap'
sarada	'sieve (with large holes)'
saxara	'brass dish'
ṭaraša	'bush, shrub'
xanana	'goat with a brown face'

In some cases a variant form is heard with gemination of the middle radical. This is commonly the case with the /r/ in ṭaraša ~ ṭarraša.

(2) *CaCiCa*

Most words of this pattern are derived from an original pattern **CaC-CiCa* with a geminated medial radical. The /a/ vowel in the first syllable of *CaCiCa* is either pronounced long or is treated as if it were still in a closed syllable and is pronounced short.

nahira	'lamp oil'
naxira	'nose'
qadida	'dried salted meat'
qadiša	'saint'
qariwa	'best man (at a wedding)'
qaṭira	'wooden beam joining a pair of oxen'
wariða	'vein, artery; root'
xaṣira	'mat'

The original gemination of the middle radical is often retained in the word *qadiša ~ qaddiša* under the influence of the language of the church liturgy, which is based on literary Syriac. In some words the /a/ in the initial closed syllable of the original **CaCCiCa* pattern has been attenuated to /ə/ and the gemination of the following consonant preserved, as is the normal rule after the vowel /ə/ (see §3.3.1.):

| gəddiša | 'pile' (< **gaddiša*) |

(3) *CaCuCa*
| ʾamuṛa | 'tool' |
| baluṭa | 'acorn' |

kanuna	'small fireplace'
nabuwa	'spring (of water)'
tanura	'oven'
yatuma	'orphan'
xabuša	'apple'

Many words of this pattern are derived from the pattern **CaCCuCa* with gemination of the medial consonant. As in *CaCaCa* and *CaCiCa*, the vowel in the initial syllable of *CaCuCa* varies between long and short. If the word contains a medial */r/*, the original gemination is sometimes preserved:

> *garuwa ~ garruwa*   'pile of twigs'

(4) *CaCoCa*

This pattern is used predominantly in nouns denoting animate agents and inanimate instruments. It overlaps semantically with the *CaCaCa* pattern, in that it designates the characteristic activity of the referent. In many cases there is a corresponding verbal root, from which the noun has been derived. In some cases, however, no corresponding verb is in existence in the present state of the dialect, e.g.

ʾaxola	'(big) eater'	< *ʾxl* 'to eat'
badoda	'poker (for fire)'	< *m-bdd* II 'to poke'
baxoya	'weeper'	< *bxy* 'to weep'
čadoda	'inviter'	cf. *čyd* 'to invite'
kapora	'infidel'	
kaθowa	'writer'	< *kθw* 'to write'
layosa	'jaw'	< *lys* 'to chew'
mayoya	'handle of churn'	< *myʾ* 'to churn'
naqoša	'bell'	
naṭora	'guard'	< *nṭr* 'to guard'
paṭoša	'patch'	
qaroya	'reader'	< *qry* 'to read'
qaṭola	'murder'	< *qṭl* 'to kill'
raxoša	'crutch'	< *rxš* 'to walk'
ṣawoya	'painter'	< *ṣwʾ* 'to paint'
ṭapoya	'kindling (for fire)'	< *ṭpy* 'to catch (fire)'
xayoṭa	'sewing machine'	< *xyṭ* 'to sew'
zaloma	'tyrant'	< *zlm* 'to act unjustly'

This pattern is also found in a number of nouns that do not express agents or instruments, e.g.

ʾamoma	'scarecrow'
ʾalola	'alley'
baroqa	'shooting pain'
barora	'roll (of fabric)'
dalopa	'drip (leaking from roof)'
nagoza	'bite'
paṭoxa	'flat piece of animal excrement used as fuel'
rawola	'valley'
saxora	'sty in the eye'
šaqola	'shin'

(5) *CaCeCa*

gameša	'buffalo'

(6) *CəCCoCa*

dəbbora	'hornet'
pəddoma	'cloth stopper of a vessel'
qəllora	'bread made of maize flour'
šəppola	'edge of clothing'
xərroza	'string of dried fruit'
zəqqora	'woven cloth'

The gemination of the medial radical is sometimes weakened: *dəbora*, *xəroza*, etc. Since this is not regular, the transcription with gemination has been normalized.

If the middle radical is /y/, this pattern has the form *CiyoCa*:

kiyola	'measure, quantity'
diyopa	'pleat'
xiyoṭa	'sewing, sewn product'

(7) *CəCCiCa*

gəddiša	'pile'

This word is derived from an original pattern **gaddiša* (see §10.2.2. pattern 2 above). The gemination is sometimes weakened: *gədiša*.

(8) *CiCaCa*

ʾilana	'tree'
ʾiqara	'honour'
ʾisara	'large rock'
ʾixala	'food'
kiwara	'thorny herb'
lišana	'tongue'

The majority of words with this pattern have initial /ʾ/. The noun *lišana* is derived historically from the pattern *CəCCaCa* with a geminated medial radical (cf. Syr. *leššānā*). The long /i/ vowel developed after the gemination was weakened. The fact that it developed into /i/ rather than /e/ (cf. *gezara* < *gəzzārā, Syr. *gezzārā*) is likely to be due to the raising of the vowel in the environment of the sibilant /š/ (cf. §2.3.2.)

(6) *CəCCaCa*

The original gemination in the middle radical of this pattern is generally preserved and so is represented in the transcription:

ləxxawa	'bit/bridle of horse'
məššara	'section of a paddy field'
qaṭṭana	'lace (for tying clothes)'
šəbbaqa	'belt'
səmmala	'small bundle of grass'

The gemination is, however, often weakened in fast speech: *ləxawa*, *məšara*, etc.

(9) *CeCaCa*

This is derived from the pattern *CəCCaCa*. The gemination has been weakened and the /ə/ lengthened to /e/:

gezara	'carrot'

Note also nouns such as *genawa* 'thief', *gewaya* 'beggar', which are reflexes of an original **CaCCaCa* pattern (see §10.2.2. pattern 1).

(10) *CəCCeCa*

xəllepa	'beehive'
šəllela	'waterfall'
xəzzema	'nose-ring'

(11) *CuCaCa*
Some words with this pattern are deverbal nouns expressing an activity, e.g.

buqara	'question'
buraxa	'blessing, wedding ceremony'
bušala	'stew'
busama	'enjoyment'
judala	'argument'
nuhara	'explanation, clarification'
šubaða	'slavery'
xulaṣa	'end; summary'
xumala	'festivity'

This pattern is found also in various nouns referring to concrete entities, some of which are loanwords:

dulaba	'wheel of water-mill'
duwana	'paste put in cakes'
huðala	'store of grass'
juwala	'sack'
kuraxa	'shroud'
kutana	'shirt'
nuwala	'water channel'
qulaya	'clod (of earth)'
xulama	'servant'

Note also *xusɛra* 'dew' in which /a/ is raised to /ɛ/ in the environment of /r/ (§2.5.3.)

(12) *CuCiCa*
dudiya	'cradle'
gugiya	'tassel'
sulina	'section of a pipe'

10.2.3. *Patterns Containing Four Consonants*

(1) *CVCCVCa*

(i) Forms with reduplication of two consonants
čakčaka	'grain dispenser in water mill'

zəmzŭma	'waterfall'
bazbuza	'small bird'
šamšuma	'large waterfall'

The word *didwa*, with an originally long /i/ in the first syllable (cf. BJA *dīḏḇā*), could be included here, since it appears to derive historically from a reduplicated form **dəbdəb*.

(ii) Other patterns

bambula	'spout'
narduma	'muzzle of a sheep'
naqruza	'beak (of bird)'
parṣupa	'physiognomy, personality'
bəzmara	'nail'
qərṭala	'pannier basket on pack-animal'
šərwala	'trousers'
pərṭana	'flea'
pərṭena	'flea'
šəryoxa	'shoe-lace'
bəṣliṣa	'ray of light'

(2) *CVCVCCa*

ʾaqubra	'mouse'
ʾaqərwa	'scorpion'
ʾurədxa	'large needle'
kawədna	'mule'
səxurra	'water-rat'

In the following words the second vowel has the status of an epenthetic and is generally not stressed. The stress, therefore, falls on the first syllable:

gárəbya	'North'
táyəmna	'South'

(3) CCVCCa

prəzla	'iron'
ṭlawxa	'lentil'

(4) CCVCVCa

qraqipa	'turtle'

10.2.4. *Forms Containing Five or More Consonants*

quraṣina	'nettle'
gəngəryasa	'lime tree'
šalgəmma	'turnip, swede'

10.3. NOUNS WITH -*TA* INFLECTION

10.3.1. *Bisyllabic Patterns*

(1) *CaCta*

ʾamta	'paternal aunt'
darta	'courtyard'
marta	'mistress, lady'
naqta	'young female goat'
parta	'residue in sieve'
sawta	'old woman'
ṭamta	'breakfast'
xalta	'maternal aunt'
yalta	'girl'

(2) *CiCta*

ʾipta	'leather strap connecting yoke to the plough'
kista	'bag'
linta	'small pot'
pista	'bag for jajik'
riqta	'spit'

(3) *CuCta*

gupta	'cheese'
gusta	'ball of dough'
gutta	'ball'
qumta	'stature, height (of a man)'
rušta	'small spade'
susta	'mare'
ṭunta	'fruit of a tree'

(4) *CoCta*
    qoqta   'small pot'
    romta   'hill'

(5) *Cita*
    č̣ita   'butter made from curds'
    nita   'all night wedding party'

(6) *Ceta*
    ʾeta   'church'
    beta   'egg'
    šeta   'year'

The /e/ vowel in the word *šeta* has developed from an attenuated form of an original **a* vowel (< **šətta* or **šəˀta* < **šatta*); cf. §2.5.2.

(7) *Cota*
    gota   'side'
    lota   'cheek'

(8) *CCata*
    brata   'daughter'

(9) *CCita*
    mδita   'town'

(10) *CCota*
    šwota   'neighbour (f.)'

(11) *CCuta*
    zruta   'cultivation'

(12) *CCaCta*
    šwalta   'edible herb'
    xmarta   'she ass'

The most common use of this pattern is for stem I verbal nouns, e.g. *dyapta* 'a fold' < *dyapa* 'to fold' (§10.5.2.2.).

(11) *CCiCta*

kništa	'synagogue'
qðilta	'key'
skinta	'knife'
šxinta	'sanctuary, altar'

10.3.2. *Trisyllabic Patterns*

(1) *CaCaCta*

This pattern is used productively to refer to women by denoting their characteristic or professional activity. It corresponds to the masculine patterns *CaCaCa* and *CaCoCa*. The feminine pattern *CaCoCta* is rarely used for nouns with human referents but is largely restricted to nouns denoting instruments, e.g.

ʾaraqta	'fugitive (f.)'
ʾaxalta	'big eater (f.)'
kaθawta	'writer (f.)'
palaxta	'worker (f.)'
xadamta	'servant girl'
zaqarta	'weaver (f.)'

It is occasionally used elsewhere in words with inanimate referents:

mararta	'gall bladder'
napaxta	'measure for corn put in a water-mill'
nasarta	'saw'
qaraṣta	'crowbar'
šaharta	'vigil'
xalaqta	'earring'

The original gemination of the second radical is occasionally retained, especially when this is /r/, e.g. *qarraṣta* ~ *qaraṣta* 'crowbar'.

(2) *CeCaCta*

genawta	'thief (f.)'
semalta	'ladder'

The historical pattern of both of these words had an originally geminated medial radical and the /e/ developed by the lengthening of an /ə/ vowel: *genawta < gənnawta < gannawta, semalta < səmmalta* (cf. Syr. *sebbel̠tā*).

(3) *CuCaCta*
quṣarta	'cooking pot'
gumarta	'piece of glowing charcoal'
ṣuwarta	'wide mountain pass'

(4) *CaCəCta*
ʾarəxta	'female guest'
ʾaṣərta	'late afternoon, evening'
basəsta	'crushed wheat'
jawətta	'chopping tool'
jaxəšta	'young f. mule'
načəpta	'drop'
šadəsta	'family party before wedding'
tarəqta	'button'
tawərta	'cow'
yaləxta	'scarf'

(5) *CaCiCta*
gaðilta	'plaited strap'
yabišta	'raisin'

(6) *CaCuCta*
parušta	'smooth pebble'
šabuqta	'wooden strip, shuttle'
tanurta	'oven'

Words of this pattern are derived historically from the pattern **CaCCuCta* with a geminated medial consonant (cf. Syr. **šabbuqtā, *tannurtā*). The gemination is sometimes retained in the medial /r/ of *parušta* and the word is pronounced *parrušta*.

(7) *CaCoCta*
Most nouns with this pattern are instruments. Feminine equivalents of masculine nouns of the pattern *CaCoCa* referring to humans are generally expressed by the suppletive pattern *CaCaCta*, e.g. *ʾaxola* 'big eater (m.)' : *ʾaxalta* 'big eater (f.)'.

ʾaqolta	'rope tightener'
baxošta	'large spoon, ladle'
garomta	'stone rolling pin'
garosta	'handmill'
kanošta	'brush'
naðorta	'pipe'
paṭorta	'mushroom'
xaṭorta	'washing board'

The /o/ vowel is often raised to /u/ or even centralized to /ə/, e.g. *kanošta ~ kanušta ~ kanəšta*. The /o/ has been normalized in the transcription.

(8) *CəCCəCta*

gərrəsta	'dandruff'
nəṭṭəpta	'drop'
xəppərta	'mud pit'
xəzzəmta	'nose-ring'

(9) *CəCCoCta*

bəllorta	'pipe (on cradle)'
čəlloxta	'scrap of bread'
sənnorta	'shoot (of corn)'
šəlloxta	'shed skin of snake'

(10) *CeCoCta*

nepoxta	'date syrup'

This is likely to have developed historically from **nəppoxta*, with lengthening of the /ə/ after the weakening of the gemination of the medial radical.

(11) *CəCCuCta*

məssukta	'craw, gizzard (of a bird)'
dəbburta	'horsefly'
šəxxurta	'piece of (cold) charcoal'
qərrušta	'crust (of yoghurt)'
qəθθurta	'knapsack'

The gemination of the medial radical is sometimes weakened and the initial syllable reduced, e.g. *qərrušta ~ qrušta* 'crust'.

(12) *CəCCəCta ~ CCəCta*
    šəbbəlta   'head of corn'
    šəddəlta   'lullaby'
    xəmmərta   'bead'

The gemination of the medial radical is sometimes weakened and the initial syllable reduced, e.g. *xəmmərta ~ xmərta* 'bead'.

(13) *CəCCiCta*
    xəzzinta   'storage pot, treasure chest'
    gəddišta   'stook (of corn or rice)'

The gemination of the medial radical is sometimes weakened and the initial syllable reduced, e.g. *gəddišta ~ gdišta* 'stook'. In the word *xəzzinta* (< Arabic *xăzina*) the gemination has been geminated secondarily after the central vowel /ə/ (*xəzzinta < xəzinta < xăzina*).

(14) *CaCeta*
    ʾareta   'water weed'
    gareta   'shaving knife'
    jareta   'food bag'
    zareta   'cultivator (f.)'

Most words of this pattern originally had a geminated medial radical. This is often retained in the /r/ of *jareta* and the word is pronounced *jarreta*.

(15) *CaCuta*
    garuta   'stack of twigs (against a tree)'
    pasuta   'pace'
    qaruta   'bridesmaid'

These are derived historically from a pattern *CaCCuta* with a geminated medial radical and a short /a/ vowel in the first syllable. The gemination is often retained in the /r/ of *garuta* and the word is pronounced *garruta*.

(16) *CəCCeta*
    xəlleta   'gift'

(17) *CəCCota*
    qəmmota   'husks of wheat remaining in a sieve'

(18) *CaCota*
    baloṭa   'throat, hole in millstone'
    p̱aqoṭa   'dish of wheat dumplings'
    qaṭoṭa   'dam in a channel'

(19) *CoCiCta*
    ṣoṣinta   'azerole tree'
    qodišta   'small bunch of grapes'

10.3.3. *Patterns Containing Four Consonants*

(i) Forms with reduplication of two consonants
    gərgərta   'wheel'
    qulqulta   'component of door lock'

The word *šišəlta* 'chain, boundary wall' could be included here, since it derives historically from a reduplicated form **šəlšəltā*.

(ii) Other forms
    mandorta   'instrument for flattening roof'
    xarbuqta   'knot'
    kurtəxta   'lower back'
    qurṣəlta   'elbow'
    šənduxta   'smooth stone used for polishing'
    bərmalta   'outer jacket'
    p̱aṛmɛθa   'knowledge, wisdom'

10.4. NOUNS WITH -θA INFLECTION

10.4.1. *Bisyllabic Forms*

(1) *CaCθa*
    ʾarθa   'rival wife'
    danθa   'water jar'
    dap̱θa   'strip of wood'
    kalθa   'daughter-in-law'
    p̱aṛθa   'lamb'

      qarθa   'cold'
      šabθa   'week'
      šarθa   'navel'
      xamθa   'young woman'

(2) *CəCθa*
      gənθa   'garden'
      məlθa   'twine made of gut'
      qənθa   'walnut kernal'
      səkθa   'peg'
      səpθa   'lip'
      šənθa   'sleep'
      təkθa   'trouser-cord'

(3) *CuCθa*
      dukθa   'place'
      xumθa   'anger'

(4) *Caθa*
      naθa   'ear'
      ṗaθa   'face'
      šaθa   'fever'

(5) *Ceθa*
      deθa   'sweat; chewing-gum'

(6) *CCaCθa*
      xwarθa   'friend' (f.)

(7) *CCəCθa*
      nxəpθa   'shame'
      ṣləmθa   'form'

(8) *CCuCθa*
      squpθa   'lintel'

(9) *CCaθa*
      xmaθa   'mother-in-law'

(10) *CCεθa*
    gnεθa   'setting (of the sun)'
    kθεθa   'chicken'
    rmεθa   'udder'
    štεθa   'drink'

(11) *CCiθa*
    kliθa   'kidney'
    þqiθa   'blister'
    šliθa   'membrane of newborn calf'
    šwiθa   'bed'
    xṭiθa   'sin'

10.4.2. *Trisyllabic Patterns*

(1) *CaCəCθa*
    kaləbθa   'bitch'
    maləkθa   'queen'
    qaləpθa   'peel'
    qayəmθa   'monument'
    taləmθa   'small water-jar'
    ṭarəpθa   'leaf'
    xadəmθa   'servant girl'

(2) *CuCəCθa*
    xurəgθa   'step-daughter'

(3) *CiCaCθa*
    'iðamθa   'wife of husband's brother'

(4) *CiCəCθa*
    'isəqθa   'ring'

(5) *CəCCəCθa*
    šəbbərθa   'bracelet'
    ṣəppərθa   'sparrow'
    dəqqənθa   'chin'
    məttəlθa   'tale, maxim'

The gemination of the medial consonant is sometimes weakened in pronunciation, e.g. *šəbbərθa ~ šəbərθa*. In some words of this pattern the gemination has developed secondarily after an /ə/ in an open syllable, e.g. *dəqqənθa < *dəqnəθā* 'chin'.

(6) *CaCɛθa*
      ʾapɛθa   'cloth cover for bread'
      baxɛθa   'weeper (f.)'
      kasɛθa   'lid, cover'
      qalɛθa   'cell'
      qarɛθa   'reader (f.)'
      šatɛθa   'big drinker (f.)'
      xaṭɛθa   'sinner (f.)'
      yapɛθa   'baker-woman'

This pattern is equivalent to the pattern *CaCaCta* (§10.3.2. pattern 1) in nouns with a strong final radical.

(7) *CəCCɛθa*
      kəssɛθa   'lid, cover'

This is a variant of the pattern *CaCɛθa* (< *CaCCɛθa) in which the original gemination has been retained.

(8) *CaCeθa*
      qareθa   'gourd'

(9) *CaCiθa*
      ʾariθa   'lionness'
      ʾašiθa   'avalanche'
      daliθa   'vine'
      qariθa   'beam'
      šaqiθa   'irrigation channel'
      rapiθa   'instrument for flattening ground'
      taniθa   'line (for hanging things)'
      zawiθa   'corner'

(10) *CaCoθa*
      maṣoθa   'rennet'

(11) *CaCuθa*
    ʾaθuθa   'letter'
    mayuθa   'crown (of the head)'
    šaruθa   'breakfast'
    xanuθa   'loom for weaving'

(12) *CuCiθa*
    tuniθa   'story'

The medial radical of this word is sometimes pronounced geminated: *tunniθa*.

(13) *CoCiθa*
    kosiθa   'hat'
    ṣoṣiθa   'plait'
    ṣopiθa   'outhouse'

(14) *CeCiθa*
    ʾeliθa   'fat tail of sheep'

(15) *CCVCiθa*
    snoniθa   'swallow'

10.4.3. *Patterns Containing Four Consonants in the Root*

The only noun in this category that has been identified is the following:

    qarqupθa   'skull'

10.5. Remarks on the Feminine Endings *-ta* and *-θa*

10.5.1. *The Distribution of* -ta *and* -θa

In principle the feminine ending *-ta* with the stop /t/ is attached to bases ending in a consonant and the ending *-θa* with the fricative /θ/ to bases ending in a vowel. This is a reflex of the stop and fricative allophones of *t* in earlier Aramaic. Subsequent developments in the phonology of the language, however, have sometimes resulted in a number of deviations from this principle, whereby *-ta* occurs after vowels and *-θa* after consonants.

In most of these cases, nevertheless, the *-ta* ending occurs in words that ended in a consonant at some earlier historical period and, likewise, *-θa* occurs where at some earlier historical period it was preceded by a vowel. Since the consonants /t/ and /θ/ became phonemicized in the dialect and ceased to be allophones conditioned by context, they became fossilized in the feminine endings of words irrespective of subsequent phonological development. Indeed minimal pairs can be identified that are disinguished only by the form of the feminine ending, e.g.

marθa	'mistress'	*marta*	'saying'

10.5.1.1. *The Ending* -ta *after a Vowel*
Cases of *-ta* occurring after vowels fall into the following categories:

(a) Where the /t/ of the ending was originally geminated, usually on account of having assimilated a preceding consonant (see §1.4.1.3.), e.g.

šeta	'year'	< **šattā*
brata	'daughter'	< **brattā*
mðita	'town'	< **mðīttā*

(b) Where the root of the noun originally ended in the pharyngal consonant **ʿ*, which was weakened to the laryngal **ʾ* and has now been completely elided (see §1.4.1.3.), e.g.

balota	'throat'	< **bālōʿtā*
beta	'egg'	< **bəʿtā*
čita	'yoghurt cream'	< **šʿītā* (**šʿʿ* 'to smooth')
garuta	'stack of twigs'	< **garrūʿtā*
pasuta	'pace'	< **passūʿtā*
qaṭota	'dam in channel'	< **qāṭōʿtā*
zruta	'cultivation'	< **zrūʿtā*

(c) Where the stop /t/ was originally preceded by the consonant **ḇ*, which has subsequently become contracted (see §1.4.1.3.), e.g.

gota	'side'	< **gaḇtā*
šwota	'neighbour (f.)'	< **šḇāḇtā*
ruta	'Friday'	< **ʿaruḇtā*

The form *kxuθa* 'a star' (cf. Syr. *kawkaḇtā*) is an apparent exception. It can be explained as being the result of a secondary morphological development based on the plural form *kəxwe* 'stars', which took place after the shift of **ḇ > w* had occurred.

10.5.1.2. *The Ending* -θa *after a Consonant*

Most cases of *-θa* that occur after a consonant can be explained as having originally followed an epenthetic vowel that has now been lost. The occurrences may be classified as follows:

(a) The preceding consonant was originally geminated but subsequently the gemination was weakened and the epenthetic vowel following it was elided, e.g.

dukθa	'place'	< **dukkəθā*
paṛθa	'lamb'	< **parrəθā*
kalθa	'daughter-in-law'	< **kalləθā*
qənθa	'walnut kernel'	< **qənnəθā*
səkθa	'peg'	< **səkkəθā*
šabθa	'week'	< **šabbəθā*

In slow deliberate speech the consonant is indeed sometimes still pronounced geminate, e.g. *səkkθa* 'peg'.

(b) An epenthetic originally preceded the feminine ending but was subsequently moved before the preceding consonant by a process of resyllabification, e.g.

kaləbθa	'bitch'	< **kalbəθā*
maləkθa	'queen'	< **malkəθa*
dəqqənθa	'chin'	< **dəqnəθā*
nxəpθa	'shame'	< **naxpəθā*
ṣləmθa	'form'	< **ṣalməθā*
squpθa	'lintel'	< **suqpəθā*
xwarθa	'friend (f.)'	< **ḥaḇrəθā*

This process did not regularly take place. Contrast the forms listed above with forms such as *tawərta* 'cow' (< **tawr + tā*), which exhibits similar resyllabification.

10.5.2. *Function of the Feminine Marker Suffixes* -ta *and* -θa

When a corresponding masculine form of a word exists, the addition of the feminine endings *-ta* or *-θa* serves various functions.

10.5.2.1. *Marking Female Gender*
In the case of animate referents, it may designate the female counterpart of the masculine form, e.g.

ʾaraqa 'fugitive (m.)'	*ʾaraqta* 'fugitive (f.)'
ʾəðma 'brother of husband'	*ʾiðamθa* 'sister of husband'
barəxmaya 'brother of wife'	*barəxmɛθa* 'sister of wife'
čuka 'chick (m.)'	*čukta* 'chick (f.)'
gameša 'buffalo (m.)'	*gaməšta* 'buffalo (f.)'
kaθawa 'writer (m.)'	*kaθawta* 'writer (f.)'
mara 'master'	*marθa* 'mistress'
nawaga 'grandson'	*nawagta* 'granddaughter'
tawra 'ox'	*tawərta* 'cow'
xaṭaya 'sinner (m.)'	*xaṭɛθa* 'sinner (f.)'
zaqara 'weaver (m.)'	*zaqarta* 'weaver (f.)'

This distinction based on biological gender has been extended by analogy to the inanimate objects *xašola* 'pestle' and *xašolta* 'mortar'.

10.5.2.2. *Expressing Singularity and Specificity*
In some cases, the feminine ending expresses singularity and specificity. The addition of the feminine ending to the infinitive form of a verb, for example, forms the verbal noun, which expresses a single event or specific performance of the activity referred to by the verb, or some entity or quality that results from the performance of the action. The infinitive without the feminine ending, on the other hand, expresses the abstraction of the activity. It should be noted that even when the infinitive does not have the feminine morphological ending, it is still often construed as feminine in gender, e.g.

dyapa 'to fold'	*dyapta* 'a fold'
fṭara 'to breakfast'	*fṭarta* 'breakfast'
gnaya 'to set (sun)'	*gnɛθa (t-yoma)* 'sunset'
jmaʾa 'to gather'	*jmeta* 'a gathering (of people)'
mara 'to say'	*marta* 'a saying'

mṣaya 'to be able'	*mṣɛθa* 'ability'
praqa 'to finish'	*praqta* 'the end'
saqa 'to ascend'	*saqta* 'ascent'
syama 'to ordain'	*syamta* 'ordination'
šya'a 'to plaster'	*šyɛθa* 'plastering'
tawa 'to sit'	*tawta* 'a sitting, social gathering'
xala 'to eat'	*xalta* 'food'
xlawa 'to milk'	*xlawta* 'milking'
xšawa 'to think'	*xšawta* 'a thought'
zraqa 'to rise (sun)'	*zraqta (t-yoma)* 'sunrise'
zraya 'to cultivate'	*zrata* 'cultivating'

When the feminine ending is added to infinitives from stem II, stem III and quadriliteral verbs, the /o/ in the vocalic pattern is replaced by /a/, e.g.

mkapoše 'to gather'	*mkapašta* 'gathering'
majwoje 'to move'	*majwajta* 'a movement'
mčakčoke 'to clatter'	*mčakčakta* 'clattering'

The shape of stem II and quadriliteral feminine infinitives is often changed by the elision of the initial /m/, e.g.

paxalta 'forgiveness'	< *mpaxalta*
paṛmɛθa 'wisdom'	< *mpaṛmɛθa*
hayarta 'help'	< *mhayarta*

Another function of the feminine ending that falls in this category is its use to express a single item of an entity that is usually referred to as a collectivity in the plural, e.g.

bəṭme 'terebinth nuts'	*bəṭəmθa* 'a terebinth nut'
čaroxe 'leather shoes'	*čaroxta* 'a shoe'
čəkkalle 'slippers'	*čəkkalta* 'a slipper'
čəlloxe 'scraps of bread'	*čəlloxta* 'a scrap of bread'
čučəkke 'sparrows'	*čučəkθa* 'a sparrow'
dəndəkke 'grains'	*dəndəkθa* 'a grain'
gazgoze 'goose pimples'	*gazgozta* 'a goose pimple'
gəndore 'melons'	*gəndorta* 'a melon'
harmone 'pomegranates'	*harmonta* 'pomegranate'

kəxwe 'stars'	*kxuθa* 'a star'
kursəlle 'animal dung'	*kursəlta* 'a piece of dung'
lastike 'rubber shoes'	*lastikta* 'a rubber shoe'
marquze 'type of flowers'	*marqusta* 'one such flower'
məzze 'hair'	*məsta* 'a hair'
nune 'fish'	*nunta* 'a fish'
pampule 'large shoes'	*pampulta* 'a large shoe'
pəškəlle 'sheep droppings'	*pəškəlta* 'a single dropping'
pilawe 'shoes'	*pilawta* 'shoe'
qənne 'walnut kernels'	*qənθa* 'a walnut kernel'
qundăre 'leather shoes'	*qundarta* 'a leather shoe'
šalgəmme 'turnips'	*šalgəmta* 'a turnip'
šarniye 'sweets'	*šarnita* 'a sweet'
ṣawle 'shoes'	*ṣawəlta* 'a shoe'
šəkwane 'ants'	*šəkwanta* 'an ant'
ṣəmmame 'hooves'	*ṣəmθa* 'hoof'
šəxxore 'charcoals'	*šəxxorta* 'a piece of charcoal'
ṭarpe 'leaves'	*ṭarəpθa* 'leaf'
ṭəlme 'large flat breads'	*ṭləmθa* 'one bread'
tene 'figs'	*tenta* 'a fig'
ṭəppe 'drops'	*ṭəpθa* 'a drop'
tuθe 'mulberries'	*tuθta* 'a mulberry'
xartmane 'chickpeas'	*xartmanta* 'a chickpea'
xəlxale 'bangles'	*xəlxalta* 'a bangle'
xəmre 'beads'	*xəmmərta* 'a bead'
yabiše 'raisins'	*yăbišta* 'a raisin'
yaṣile 'corners'	*yaṣilta* 'corner'
zargule 'sheep skin boots'	*zargulta* 'a boot'
zəvre 'spins'	*zvərta* 'a spin'

In some cases a second plural exists that is derived from the feminine singular, e.g.

ṭarpe 'leaves'	*ṭarəpθa* 'a leaf'	*ṭarəpyaθa/ṭarpaθa* 'leaves'
tuθe 'mulberries'	*tuθta* 'a mulberry'	*tuθyaθa* 'mulberries'
dəndəkke 'seeds'	*dəndəkθa* 'a seed'	*dəndəkyaθa* 'seeds'
jənne 'dirges'	*jnənta* 'a dirge'	*jnənyaθa* 'dirges'

If a masculine singular exists of words of this type, this generally has a slightly different meaning. In the case of fruits, for example, the mas-

culine singular form sometimes denotes the tree that bears the fruit in question:

bəṭma 'terebinth tree'   *bṭəmθa* 'terebinth nut'
tuθa 'mulberry tree'   *tuθta* 'mulberry'

Tree names, however, are sometimes feminine, e.g. *harmonta* 'pomegranate tree/fruit', *xabušta* 'apple tree' (*xabuša* 'apple').

Sometimes the meaning of the masculine singular and feminine singular form of the noun is the same, e.g.

banjane 'tomatoes'   *banjanta* 'a tomato'   *banjana* 'a tomato'
kəxwe 'stars'   *kxuθa* 'a star'   *kəxwa* 'a star'
šəkwane 'ants'   *šəkwanta* 'an ant'   *šəkwana* 'an ant'
ṭəppe 'drops'   *ṭəpθa* 'a drop'   *ṭəppa* 'a drop'

In the case of *ṭarpe* 'leaves', the masculine singular expresses a collectivity, like the plural:

ṭarpa 'leaves'   *ṭarpe* 'leaves'   *ṭarəpθa* 'a leaf'

10.5.2.3. *Expressing a Diminutive*
The addition of the feminine ending sometimes denotes the diminutive of the corresponding masculine form, e.g.

ʾilana 'tree'   *ʾilanta* 'small tree'
ʾisara 'rock'   *ʾisarta* 'gravel'
bola 'head of millet'   *bulta* 'small head of millet'
čakala 'pruning hook'   *čakalta* 'small pruning hook'
čakuč 'hammer'   *čukučta* 'small hammer'
dalopa 'drip'   *dalupta* 'small drip'
dapa 'plank'   *dapθa* 'small board'
dəbbora 'hornet'   *dəbburta* 'horsefly'
dəprana 'juniper tree'   *dəpranta* 'small juniper tree'
dəqna 'beard'   *dəqqənθa* 'chin'
došăka 'mattress'   *došəkθa* 'cushion'
garoma 'stone rolling pin' *garomta* 'small stone rolling pin'
garuwa 'pile of twigs'   *garuta* 'small pile against a tree'
gəddiša 'pile of wood'   *gəddišta* 'stook (of corn or rice)'
gəzra 'pile (of stones)'   *gzərta* 'small pile'

juwala 'sack'	*juwəlta* 'small sack'
kaka 'tooth'	*kakta* 'small tooth of a comb'
kanoša 'broom'	*kanošta* 'small broom, brush'
kisa 'large bag'	*kista* 'small bag'
lawora 'valley'	*lawurta* 'small valley'
lina 'pot'	*linta* 'small pot'
marəgla 'pan'	*margəlta* 'small pan'
masərqa 'large carding comb'	*masrəqθa* 'comb for hair'
nuwa 'edible herb'	*nuta* 'small form of *nuwa*'
parša 'large flat stone'	*parəšta* 'small flat stone'
qaṣxane 'pan'	*qaṣxanta* 'small pan'
qərṭala 'pannier'	*qərṭalta* 'small pannier'
qoqa 'water pot'	*qoqta* 'small water pot'
qraqipa 'turtle'	*qraqəpta* 'small turtle'
roma 'hill'	*romta* 'small hill'
saṭana 'devil'	*saṭanta* 'demon, evil spirit'
šəndoxa 'smooth stone'	*šənduxta* 'small smooth stone'
stuna 'post'	*stunta* 'small post'
talma 'water-jar'	*taləmθa* 'small water-jar'
tanura 'oven'	*tanurta* 'small oven'
ṭapaya 'slope (of a mountain)'	*ṭapɛθa* 'small slope (of a hill)'
taqa 'branch'	*taqta* 'twig'
tăra 'door'	*tăreθa* 'small door'
xawla 'rope'	*xawəlta* 'small piece of rope'
yama 'sea'	*yamθa* 'lake'

In some cases where a masculine and feminine form of a noun exist, the referent of the feminine form is a figurative or virtual form of the entity denoted by the masculine noun. The feminine form is not necessarily physically smaller than that of the corresponding masculine form, but is nevertheless a derivative, secondary form. This applies to the following pairs of forms:

năra 'axe'	*năreθa* 'piece in shape of an axe at the end of the rotating shaft that fits into the upper millstone'
masərqa 'comb'	*masrəqθa* 'comb for filtering the water passing through a pipe leading to a water-mill'
ruša 'shoulder'	*rušta* 'spade with a head resembling a shoulder blade'
ʾɛna 'eye'	*ʾɛnta* 'hole at the bottom of an oven for the intake of air'

ʾăra 'ground'   ʾăreta 'layer of stagnant algae on the surface of
                       water'
salla 'basket'   salθa 'large basket used to catch fish in a river'
qăra 'gourd'   qăreθa 'vessel made from a gourd'

In a few cases there appears to be no difference in meaning between pairs
of masculine and feminine nouns, e.g.

ʾalola 'alley'   ʾalulta 'alley'
rawola 'small valley'   rawulta 'small valley'

10.5.2.4. *Expressing a Whole Inclusive of Parts*
There is a small set of items in which the feminine form expresses a whole
of which the corresponding masculine form is a part, e.g.

daliθa 'vine'   dalya 'tendril of vine'
sulta 'dunghill'   sula 'dung'

Perhaps in this category belongs the pair:

dabašta 'beehive'   dabaša 'bee'

10.6. Nouns with -*o* Inflection

A number of nouns of feminine gender have the ending -*o*. This is some-
times pronounced higher in the region of /u/. For the sake of orthographic
consistency, however, it is here regularly transcribed -*o*. Nouns with this
ending generally refer to inanimate entities or small animals. They are
attested in the following patterns:

(1) *CaCCo*
   ʾatko f.   'stomach lining of ruminant'
   garšo f.   'tool used to stir up mud in paddy fields'
   naqro f.   'woodpecker'
   patlo f.   '(hot) whirlwind (of sand)'
   qapyo f.   'blockage in water channel'
   šalqo f.   'measles'
   xapro f.   'trowel'

Several nouns of this pattern are derived historically from active participles
with the base *CāCC-, e.g. *naqro* 'woodpecker' ('borer' < *nqr* 'to bore'), *patlo*
'whirlwind' ('twister' < *pθl* 'to twist'), *qaƥyo* 'blockage' ('catcher' < *qƥy* 'to
catch'), *šalqo* 'measles' ('boiler' < *šlq* 'to boil'), *xapro* 'trowel' ('digger' < *xpr* 'to
dig'). It should be noted that the base pattern is not *CaCaC-* (< *CaCCāC-*),
which is the productive pattern for forming nouns denoting human per-
formers of habitual activities, e.g. *zaqara* 'weaver', *kaθawa* 'writer'.

(2) *CəCCo*
    gəbbo f.   'foam, froth'
    gərðo f.   'dish consisting of yoghurt and cracked wheat'
    qəppo f.   'foam, froth'
    sərmo f.   'herb put in *jajik* and cheese'
    xəppo f.   'bridal veil'

(3) *CaCo*
    garo f.   'rat'
    kʾalo f.   'bride'
    majo f.   'trough for kneading dried yoghurt'

(4) *CăCo*
    bălo f.   'whirlpool'

Nouns with this pattern are derived historically from the active participle
base *CāCC- of verbs from roots with a final pharyngal *ʿ: *bălo* < *balʿo*
'to swallow'. The pharygnal has been dropped but the first vowel remains
short, as if it were still in a closed syllable.

(5) *CoCCo*
This occurs only in the word *solho* f. 'peace, reconciliation', which is a
loan from Arabic.

The historical origin of the ending *-o* is likely to be the diminutive ending
-ōn in the absolute state. The final *n* has been elided, as is regularly the
case in absolute state endings that survive elsewhere in the dialect, e.g.
in the 3pl. present base of the verb (*qaṭli* < *qāṭlīn*) and in numerals (*ʾəsri*
'twenty' < *ʿəsrīn*).
    The diminutive sense of the ending is still evident in most of the nouns
listed above. Historically, however, the ending *-ōn* (absolute state of *-ōnā*)
is a masculine rather than a feminine form. It has apparently acquired

feminine gender by a semantic association between feminine gender and diminutives, which is reflected elsewhere in the dialect (§10.5.2.3.). It should be noted, however, that in some NENA dialects this ending is developing into a general feminine inflection. This is the case, for example, in C. Alqosh, where the feminine active participle regularly ends in *-u* (< *ō), e.g. *xɛṭu* 'dressmaker' (f.), *yapyu* 'baker-woman', *gaðlu* 'knitter-woman' (Coghill 2003: §7.8.5.). These are feminine equivalents of the masculine active participle *CaCaCa* but are derived historically from the participle base *CāCC-*, as is the case with nouns such as *paṭlo, naqro, xapro* etc. in C. Barwar.

The diminutive sense of *-o* may relate to novelty, as in *kʲalo* 'bride', who is a 'new daughter-in-law' (*kalθa*).

It can also be used to express endearment rather than physical smallness. It is used productively in this way to create hypocoristic forms of personal names. These are shortened forms that generally have the bisyllabic pattern *CVCo* or *CVCCo*. Hypocoristic names of this type are those of both men and women (for a full list see §21.22.), e.g.

(i) Men's names
       Bənno   < Bənyamən
       Čăbo, Šăbo   < Xošăba
       Ḳanno   < Yuxanna
       M̂ixo   < Mixayil

(ii) Women's names
       Bebo   < Xošebo
       Mayyo   < Maryam
       Xəzzo   < Xənzada
       ʾƐššo   < ʾEləšwa

The kinship term *ṭoṭa* is frequently used with the hypocoristic ending: *ṭoṭo* 'granny'. Note also the form *šətro* 'beautiful woman', a hypocoristic form of *šətranta*.

The ending *-o* is also used in names given to individual domesticated animals (for a full list see §21.23.). In this usage, however, it is restricted to male animals, e.g.

(i) Oxen
       Xămo
       Niso

(ii) Asses
     ʾƗnšăro

10.7. NOUNS WITH *-E* INFLECTION

This ending is found in a number of nouns of Aramaic stock. These are of both genders. In some cases it appears to be derived historically from the absolute state of a noun with a final **y* radical, e.g.

ʾarxe, ʾərxe f.	'water-mill' (Syr. *raḥyā*)
ʾore f.	'manger' (Syr. *ʾuryā*)
xuwwe m.	'snake' (Syr. *ḥewyā*)
lɛle m.	'night' (Syr. *līlyā*, pl. *laylē*)

In other cases the historical origin is likely to be a plural form, e.g.

| gare m. | 'roof' (Syr. *ʾeggārā*, pl. *ʾeggārē*) |
| kawe f. | 'small window' (Syr. *kawṯā*, pl. *kawwē*) |

The use of an original plural form to denote a singular is found elsewhere, e.g. *naθa* 'ear' (< **ʾeðnāθā*). The explanation may be that the referent in question most commonly occurs as a collectivity. The roofs of houses in the villages were generally contiguous and interconnecting. A building generally had several of the small windows in question. All of these originally plural nouns have acquired a new plural form (*garăwaθa* 'roofs', *kăwaθa* 'windows', *naθyaθa* 'ears').

The final *-e* in the form *yamne* 'right (hand/side)' probably developed by analogy with the Kurdish loanword *čappe* 'left'. The form *yamne* is presumably derived ultimately from a form such as **yammīnā* as in Syriac. The analogy with *čappe*, therefore, affected not only the inflectional ending but also the morphological pattern.

The final *-e* in stem II and stem III infinitives (*mqaṭole, maqṭole*) is derived historically from final **-ē*.

The ending *-e* also occurs on numerous Kurdish loanwords that are feminine in gender, e.g.

beriye f.	'milkmaid'	< Kurd. bêrî f.
čale f.	'pit'	< Kurd. çal f.
čappe f.	'left (hand/side)'	< Kurd. çep f.

dunye f.	'world, weather'	< Kurd. dinya f.
hawše f.	'sheep-fold'	< Kurd. hewş f.
hézuke f.	'swing'	< Kurd. hêzok f.
juwarre f.	'nosebag'	< Kurd. cuher m.
maqle f.	'cooking pot'	< Kurd. meqle f., Arab. *maqlā*
qarəkke f.	'crow'	< Kurd. qiřik f.
quṣxane f.	'saucepan'	< Kurd. qûşxane f.
saršoye f.	'washing place'	< Kurd. serşo f.
senike f.	'metal plate'	< Kurd. sênîk f.
sərrəkke f.	'plughole, drain'	< Kurd. serik f./m.
ṭăpəkke f.	'bird trap'	< Kurd. ṭepik f.
ṭašte f.	'brass bowl'	< Kurd. teşt f.
taxe f.	'neighbourhood'	< Kurd. tax f.
tope f.	'gun'	< Kurd. top f.

It is possible that the origin of this is the Kurdish feminine singular oblique nominal inflection *-ê*. The ending, however, is added as a feminine singular inflectional ending to some words of Aramaic origin, e.g. *quppe* 'brooding hen' (cf. Syr. *quppāpā*). Some other NENA dialects inflect this word with the *-o ⁄ -u* ending (cf. C. Qaraqosh: *qipu*).

The ending *-e* is also found in feminine loanwords of Arabic origin, in which it can be identified as the Arabic feminine ending corresponding historically to the *tāʾ marbūṭa*, e.g.

bərke	'pool'	< Arab. *birka*

In some cases a noun is used alternatively with either final *-e* or final *-a*, e.g.

xuwwe ~ xuwwa	'snake'
ṭašte ~ ṭašta	'brass bowl'

The *-e* ending is also used to form hypocoristic personal names of men and women, as is the case with *-o*. This is attached to shortened forms of names with the bisyllabic structure *CVCe* or *CVCCe*:

(i) Men's names
Čaqqe	< *ʾIsḥaq*
Čope	< *Yawsəp*
Xaye	< *Mixayəl*

(ii) Women's names

Čebe	< *Xošebo*
Məlle	< *Məryam*
Nane	< *Helen*

It is found also in other women's names that are not abbreviations of a longer form, e.g.

Bibe
Guhare
Guzze
Naze
Xamme
Xoxe

The ending *-e* is used in the names of female domesticated animals (for a full list see §21.23.), e.g.

(i)   Names of female goats and sheep
Xənne
Poše

(ii) Names of cows
Ġazale
Nisane

(iii) Names of female mules
Surme
Gurje

10.8. FURTHER ENDINGS

10.8.1. -ana

The suffix *-ana* is found in a number of nouns. It is added to the present base of verbs of all stems to denote the performer of an activity. The construction often refers to habitual action or action performed as a profession. It is a productive inflection and may be regarded as a form of active participle. The patterns are as follows:

Stem I	*CaCCana*
Stem II	*mCaCCana*
Stem III	*maCCǝCana ~ maCǝCCana*
Quadriliteral	*mCaCCǝCana ~ mCaCǝCCana*

Nouns with the function of active participles are not formed productively from the present base by the addition of the basic inflectional ending *-a*. A small set of such nouns derived from stem I verbs with the pattern *CaCCa* are listed above (§10.2.1. pattern 1). The stem I pattern *CaCCana* overlaps semantically with the *CaCaCa* pattern, which is also used productively to form active participles. The corresponding feminine ending is *-anta*. Examples:

Stem I

ʾaxlana	(f. *ʾaxlanta*)	'big eater'
baxyana	(f. *baxyanta*)	'weeper'
dawqana	(f. *dawqanta*)	'setter of bones'
qaṭlana	(f. *qaṭlanta*)	'murderer'
qarmana	(f. *qarmanta*)	'winner'
qaryana	(f. *qaryanta*)	'reader'
raxšana	(f. *raxšanta*)	'walker'
saxðana	(f. *saxðanta*)	'worshipper'
ṣawyana	(f. *ṣawyanta*)	'painter'
šằyana	(f. *šằyanta*)	'plasterer'
šatyana	(f. *šatyanta*)	'big drinker'
xašlana	(f. *xašlanta*)	'crusher' (using a *xašola*)
yapyana	(f. *yapyanta*)	'baker'
zaqrana	(f. *zaqranta*)	'weaver'
zonana	(f. *zonanta*)	'buyer'

Stem II

mbašlana	(f. *mbašlanta*)	'cook'
mšadrana	(f. *mšadranta*)	'sender'
mxamyana	(f. *mxamyanta*)	'guard'
mzabnana	(f. *mzabnanta*)	'seller'

Stem III

maxlana	(f. *maxlanta*)	'feeder'
mapšǝmana	(f. *mapšǝmanta*)	'trouble-maker'
maryana	(f. *maryanta*)	'repairer of clothes'
mǎṛiyana		'pasturer'

Quadriliteral

mčakčəkana	(f. *mčakčəkanta*)	'garrulous person'
mčarčərana	(f. *mčarčəranta*)	'garrulous person'
mgamprana	(f. *mgampranta*)	'arrogant person'
mparəmyana	(f. *mparəmyanta*)	'wise person'
mṭarṭəmana	(f. *mṭarṭəmanta*)	'grumbler'

In some cases active participles with one of these patterns has a more specific meaning than the verb from which it is derived, e.g. *dawqana* 'setter of bones' (< *dwq* 'to grasp, stick together').

Some nouns with inanimate referents with the ending *-ana* or *-anta* are likewise formed from present bases, e.g.

kɛlana	'measure'	< *kyl* I 'to measure'
parmanta	'cutting tool'	< *prm* I 'to cut'
rawðana	'earthquake'	< *rwð* I 'to quake'
šɛpanta	'rubber, eraser'	< *šyp* I 'to erase'
mdabqana	'glue'	< *dbq* II 'to stick'
mxallana	'cleaning cloth'	< *xll* II 'to wash'
mṣapyana	'strainer'	< *m-ṣpy* II 'to purify'
maqərxana	'whitewash'	< *m-qrx* III 'to whitewash'
marmana	'lever'	< *m-rm* III 'to raise'
mšarbəṭana	'whip'	< *m-šrbṭ* 'to whip'
mtarkəsana	'wooden poker'	< *m-trks* 'to build up fire'

The *-ana* ending is added to a past base in the following:

mubyana	'swelling (on skin)'	< *m-by* 'to swell'

Occasionally nouns in *-ana* derive from a identifiable noun base, e.g.

ʾamədyana	'Amedia stitching'	< *ʾAmediya* 'Amedia'
drana	'arm'	< *draʾa, draya* 'span'
duglana	'liar'	< *dugla* 'lie'
gawzana	'walnut-tree'	< *gawza* 'walnut'
kasana	'glutton'	< *kasa* 'stomach'
kepana	'gravel'	< *kepa* 'stone'
məšxana	'paste'	< *məšxa* 'clarified butter'
parranta	'comb of bird'	< *parre* 'feathers'
šišmanta	'sesame grass'	< *šišme* 'sesame'
ṣliwana	'knot'	< *ṣliwa* 'cross'

Some nouns with this ending have the function of verbal nouns, e.g.

ʾəryana	'rainfall'	< ʾry 'to rain'
ʾawqana	'distress'	< ʾyq 'to be tight, to be distressed'
duxrana	'memorial'	< *dxr (= txr) 'to remember'
pəlxana	'work, cultivation'	< plx 'to work, cultivate'
pəšmanta	'sorrow'	< pšm 'to be sorry'
puqdana	'command'	< pqð 'to command'
xumlana	'merriment'	< xml 'to be merry'
yulpana	'learning'	< *ylp 'to learn' (cf. lyp)

The ending *-ana* or its feminine form *-anta* is sometimes used to produce a diminutive of a noun ending in *-a*, e.g.

kepa	'stone'	kepana	'gravel'
guða	'churn'	guðanta	'small churn'

There is a sizeable group of other nouns ending in *-ana* or *-anta* that are not derived from a clearly identifiable verbal or nominal base that exists in the dialect. They may be classified as follows:

(i)   Human referents

rabbana	'monk'
rabbanta	'nun'
turgamana	'interpreter'
xəmyana	'father-in-law'
yaK̲ana	'only son'

(ii)   Animals

čučana	'magpie'
qənyane	'cattle, sheep'
qəqwana	'partridge' (f. qəqwanta)
sarəṭlana	'crab'
šəkwana	'ant'
ṭabuwana	'tick'

(iii) Inanimate entities

daprana	'juniper'
dərvana	'frying pan'
kuprana	'wooden hut, trellis'

nəsyana	'experience'
qurbana	'holy communion'
səndana	'large pot'
ṭawpana	'flood'
xumlana	'merriment'
zirana	'slap'

Some of these nouns can be identified as loanwords with the Aramaic ending -*ana* added to them, e.g. *yak̭ana* 'only son' (< Kurd. yek 'one'), *kup̂rana* 'wooden hut' (< Kurd. kepir).

10.8.2. -aya

The suffix -*aya* is found in gentilic nouns expressing geographical origin or affiliation to a religious or ethnic community, e.g.

suraya	'Assyrian Christian'
mšíxaya	'Christian'
huðaya	'Jew'
ʾarabaya	'Arab'
turkaya	'Turk'
ʾaramnaya	'Armenian'
ʾiranaya	'Iranian'
handawaya	'Indian'
komaya	'negro'
q̭ărăčaya	'Gypsy'
daštaya	'dweller on the plain'

We should include here also *naxraya* 'stranger'.

   A more common and productive gentilic ending is -*naya*, with an added /n/. This is used with gentilics relating to villages and towns and also with some that relate to nationalities, e.g.

ʾalqošnaya	'man from Alqosh'
ʾiyyətnaya	'man from Iyyət'
dohuknaya	'man from Dohuk'
moṣulnaya	'man from Moṣul'
zaxonaya	'man from Zakho'
ʾəngləznaya	'Englishman'

If the place name ends in *-e*, this vowel is elided before the addition of the *-naya* affix, e.g.

baġdednaya	'man from Qaraqosh (Baġdede)'
durnaya	'man from Dure'
telkepnaya	'man from Telkepe'

When the place name ends in *-n* or *-ne*, the gentilic ending *-aya* rather than *-naya* is added, e.g.

ʾēn-nunaya	'man from ʾƐn-Nune'

Note also the form *slemanaya* 'man from Sulemaniyya (Slemani)'.

The feminine forms of the suffixes *-aya* and *-naya* are *-ɛθa* and *-nɛθa* respectively, e.g.

surɛθa	'Assyrian Christian woman'
huðɛθa	'Jewess'
ʾalqošnɛθa	'woman from Alqosh'
durnɛθa	'woman from Dure'
ʾēn-nunɛθa	'woman from ʾƐn-Nune'

The ending *-aya* (f. *-ɛθa*) is used in a few nouns that do not denote geographical origin or religious affiliation, e.g.

ʾaqraya	'turtle, tortoise'
ʾəṣraya	'udder'
barəxmaya	'brother of wife'
barəxmɛθa	'sister of wife'
paloxaya	'labourer'
ṭalobaya	'a man who arranges a betrothal (*ṭalobe*)'
xwarzaya	'nephew (son of sister)'
xwarzɛθa	'niece (daughter of sister)'

In some isolated cases the feminine ending *-ɛθa* is used to derive a feminine form from a masculine noun that does not have the ending *-aya*, e.g.

ṭaxana 'miller'	*ṭaxanɛθa* 'miller woman'

10.8.3. -uθa

(i) Abstractions

This ending is used productively to form nouns referring to abstractions.
The majority of such nouns are derived from an existing adjectival form,
e.g.

ʾazəduθa	'permission'	< ʾazəd 'permitted'
ʾəršanuθa	'mirkiness'	< ʾəršana 'mirky'
ʾiquθa	'distress'	< ʾiqa 'distressed, narrow'
basimuθa	'pleasantness'	< basima 'pleasant'
baxiluθa	'envy'	< baxila 'envious'
dəžmənayuθa	'enmity, hostility'	< dəžmənaya 'hostile'
duzuθa	'truth'	< dūs 'true'
heymanuθa	'faith'	< heymana 'faithful, trusted'
kom-paθuθa	'disgrace'	< kōm-paθa 'disgraced'
kumuθa	'blackness'	< koma 'black'
majburuθa	'necessity'	< majbur 'necessary, forced'
milanuθa	'blueness'	< milana 'blue'
ramuθa	'height'	< rama 'high'
sănayuθa	'easiness'	< sănayi 'easy'
ṣarupuθa	'spiciness'	< ṣarupa 'spicy, smarting'
šaxinuθa	'heat'	< šaxina 'hot'
smoquθa	'redness'	< smoqa 'red'
sniquθa	'need'	< sniqa 'needy'
spayuθa	'goodness'	< spay 'good'
šumuθa	'naughtiness'	< šumana 'naughty'
taliluθa	'wetness'	< talila 'wet'
tăməzuθa	'cleanliness'	< tăməz 'clean'
xarayuθa	'finality, end'	< xaraya 'last, final'
xəðyuθa	'joy'	< xəðya 'joyful'
xwar-paθuθa	'innocence'	< xwār-paθa 'innocent'
xwaruθa	'whiteness'	< xwara 'white'
zamətuθa	'difficulty'	< zamət 'difficult'
zăruθa	'yellowness'	< zăra 'yellow'
zoruθa	'smallness, youth'	< zora 'small, young'

In some cases the base of the derived form is a noun, e.g.

bəṛ-našuθa	'mankind'	< bəṛ-naša 'man'
dostuθa	'friendship'	< dost 'friend'

farquθa	'difference'	< Arab. *farq* 'difference'
genawuθa	'theft, stealth'	< *genawa* 'thief'
guruθa	'bravery'	< *gure* '(brave) men'
ḥaqquθa	'right'	< Arab. *ḥaqq* 'right'
jwanquθa	'youth'	< *jwanqa* 'young man'
kʸaluθa	'bridehood'	< *kʸalo* 'bride'
msapyanuθa	'tradition'	< *msapyana* 'tradent'
mušəlmanuθa	'Islam'	< *mušəlmana* 'Muslim'
našuθa	'humanity'	< *naša* 'person'
saðuθa	'martyrdom'	< *saða* 'martyr'
surayuθa	'Christianity'	< *suraya* 'Christian'
waduθa	'promise'	< Arab. *waʿd*
wajəbuθa	'duty'	< Arab. *wājib*
xətnuθa	'state of a groom'	< *xətna* 'groom'
xonuθa	'brotherhood'	< *xona* 'brother'

In a few cases an /ay/ infix is added between the base and the *-uθa* suffix, e.g.

| *xərbayuθa* | 'evil' | < *xərba* 'bad' |
| *xəzmayuθa* | 'kinship relationship' | < *xəzme* 'relatives' |

In the case of a few nouns with the ending *-uθa* that express abstractions the base cannot be identified as an existing adjective or noun, e.g.

marduθa	'education'
sarastuθa	'honesty, frankness'
sebuθa	'old age'
təxruθa	'memory'
xaðuθa	'joy'

The suffix is also used to express professions by attaching it to nouns referring to practitioners of the profession in question, e.g.

najaruθa	'carpentry'
zaqaruθa	'weaving'
karaxuθa	'the profession of the *karaxa* (irrigation administrator)'

In a few cases the suffix *-uθa* forms a noun that denotes a diffuse or collective entity rather than an intangible abstraction, e.g.

bεθuθa	'household, family'
xεpuθa	'fog'
bər-našuθa	'mankind'

Occasionally it occurs in words referring to a tangible entity, e.g.

xəlyuθa	'sweet foods'
xwaruθa	'dairy products'
milanuθa	'greens, vegetables'

(ii) Feminine marker

Some feminine nouns referring to concrete entities that do not have a final /w/ element in their root have the ending *-uθa*, e.g.

maṛuθa	'wooden spade for moving snow'
qaṭuθa	'(female) cat'

The suffix here should be distinguished from the suffix that expresses abstraction and should be analysed as a feminine marker. The nouns *maṛuθa* and *qaṭuθa* have masculine counterparts, viz. *maṛa* '(metal) spade' and *qaṭa* 'tomcat'. The distinction between *qaṭa* and *qaṭuθa* is one of biological gender. In the pair *maṛa* : *maṛuθa*, on the other hand, the *-uθa* can be regarded as having a diminutive function. A *maṛuθa* is less robust than a *maṛa*, although it is not necessarily smaller.

The noun *qaṭuθa* is exceptional in that the *-θa* is sometimes omitted when it is indefinite in status: *qaṭu* 'a cat', *qaṭuθa* 'the cat'. This is a vestige of the absolute state of earlier Aramaic (§10.9.).

10.8.4. -iθa

In some cases, when a masculine form of a word exists, the corresponding feminine form is constructed by adding the ending *-iθa*, with a supplementary /i/. This forestalls any consequential resyllabification. It is commonly attached to masculine nouns with the pattern *CVCV* or those whose base ends in a geminate consonant. As with the *-ta/-θa* ending, the *-iθa* ending is used to express singulars of collectives and diminutives:

(i) Singulars of collectives

    dəmme 'tears'   *dəmmiθa* 'a tear'
    gerwe 'socks'   *gərwiθa* 'a sock'
    ṭəppe 'drops'   *ṭəppiθa* 'a drop'
    xəṭṭe 'wheat'   *xəṭṭiθa* 'a grain of wheat'

(ii) Diminutives

    gare 'roof'   *gariθa* 'small roof'
    gəppa 'cave'   *gəppiθa* 'small cave'
    goja 'stock of tree'   *gojiθa* 'small stock of tree'
    goma 'stable'   *gomiθa* 'small stable'
    qəčča 'piece of rope'   *qəččiθa* 'small piece of rope'
    qupa 'basket'   *qupiθa* 'small basket'
    rapa 'gate of pen'   *rapiθa* 'small gate of pen'
    ṣlawa 'tether'   *ṣlawiθa* 'small tether'
    xuwwe 'snake'   *xuwwiθa* 'small snake'

It is found in a few words that have no corresponding masculine form, e.g.

    ʾurṭiθa   'fart'
    qunjiθa   'corner'
    qurniθa   'corner'
    ṣopiθa   'porch'
    zarzariθa   'small ant'

In a few words the suffix is used to express an abstraction or intangible entity, like the ending *-uθa*, e.g.

    mamodiθa   'baptism'
    ḥaqqiθa   'due'
    xănăqiθa   'whooping cough'

10.8.5. -əlta

This ending, which is found in a few nouns that have a corresponding masculine form, has a diminutive function, e.g.

    gawza   'walnut tree'   *gawzəlta*   'small walnut-tree'
    biba   'pupil (of eye)'   *bibəlta*   '(small) pupil'

It occasionally interchanges with the ending *-iθa*, e.g.

    qunjəlta ~ qunjiθa   'corner'   < Kurd. qunc

A similar ending is probably to be identified in the word *beðulta* 'sleeve', which is in origin a compound form consisting of *be* + *ʾiða* 'place of the arm'.

10.8.6. -usta, -əsta

This feminine ending can be identified in a few nouns with a diminutive function:

    danwa   'tail'   *dambusta*   'small tail'
    gərra   'leprosy, psoriasis'   *gərrəsta*   'dandruff'

10.8.7. -əšta

This ending also has a diminutive function:

    margəšta   'small meadow'   cf. *marga*   'meadow'
    pəqqəšta   'blister'   cf. Kurd. peq, peqik   'blister'

10.8.8. -ənta

This ending is found sporadically in feminine nouns that have a masculine counterpart. In all known cases the masculine form is a loanword. The feminine form, however, is an internal development within the Aramaic dialect:

    čulla   'mountain peak'   *čullənta*   'small mountain peak'
    moja   'calf'   *mojənta*   'heiffer'
    parra   'feather'   *parrənta*   'comb of a bird'

These feminine forms exhibit different types of semantic relationship to the masculine form, including diminutive (*čullənta*, *parrənta*) and biological gender difference (*mojənta*).

10.8.9. -ona

The diminutive ending *-ona* is found as a fixed component of the kinship terms *brona* 'son' (< *br + *ona*) and *xona* 'brother' < (*ʾaḥ + *ona*). It is sporadically found elsewhere, mainly in poetic contexts, e.g.

gǝppona 'small cave' (A51:16)		< *gǝppa* 'cave'
čarxona 'small walk' (A51:12)		< *čarxa* 'turn, walk'
bǝxyona 'crying (of a baby)' (A38:7)		< *bǝxya* 'crying'
laqṭona 'a small morsel'		< *laqṭa* 'a morsel'

The feminine form of the suffix is either *-oniθa* or *-onta*. The former is a fixed element in the insect name *parxoniθa* 'butterfly' (cf. *parxa* 'bird'), the flower name *wardoniθa* 'type of small flower' (cf. *warda* 'flower') and possibly also in the bird name *snoniθa* 'swallow' (cf. *sona* 'type of duck'). The latter is used to form diminutives from an existing base form, mainly in poetic contexts, e.g.

k̭ǝčče	'girl'	*k̭ǝččonta*	'little girl'
qarǝkke	'crow'	*qarǝkθonta*	'little crow' (A34:3)
masrǝqθa	'comb'	*masrǝqθonta*	'little comb' (A34:3)

The diminutive plural ending can perhaps be identified as a fixed element in *xǝšxǝšone* 'skating, skiing'.

10.8.10. -una

This is identifiable as a derivative suffix in the following:

paṛuna	'sheepskin bag'	< *paṛa*		'lamb'

10.8.11. -unya

The suffix *–unya* is found in a few abstract nouns, e.g.

pǝršunya	'difference'
tǝxrunya	'memory, memorial'

10.8.12. -ola

This is identifiable as a derivative suffix in the following:

šaqola 'shin'   cf. *šaqa* 'legging (worn on shin)'

10.8.13. -us, -əs

An ending with the form *-us* with no final vowel can be indentified as a derivational ending in *murč̣anus* f. 'mashed potato', which is derived from the Aramaic verbal root *mrč̣* 'to crush', and perhaps also in *dambus* f. 'a plant resembling a horse's tail'; *limandus* f. 'lemon juice'. A related ending appears to be the *-əs* of the form *kundarəs* f. 'chain stitch'. All these words are feminine in gender. The ending may be related to the diminutive ending *-usta/-əsta* (§10.8.6.). Note the pair *dambus* f. 'plant like a horse's tail': *dambusta* f. 'small tail'.

10.8.14. *Pronominal Suffix Treated as a Nominal Ending*

In the noun *rabi* 'teacher' the original pronominal suffix has lost its original attributive function and is treated as the basic ending of the word. It meant originally 'my master', but now is used in the sense of 'teacher' in general. The ending *-i* is a fixed component of the word and is retained in all circumstances, including in the plural, e.g. *rábi díyux* 'your teacher', *rabíye* 'teachers'.

10.9. NOUNS WITH NO INFLECTIONAL ENDING AND THE ABSOLUTE STATE

It has been remarked in §10.6. and §10.7. that nouns ending in *-o* and some nouns ending in *-e* derive historically from nouns in the absolute state. There are a few other cases of this phenomenon. These include the common word *məndi* 'thing' (< **mənda‘* < **mədda‘*). Another case is the form *duka* f. 'place', which is used, apparently in free variation, as an alternative to *dukθa* 'place' with the ending *-θa*. Due to the feminine gender of *duka* it is most easily interpreted as the absolute form of *dukθa*. We should also mention the two names of instruments *manquš* 'metal instrument for striking fire on flint' and *msarbəs* 'wooden instrument on which balls of wool are wound'. These seem to have Aramaic etymologies (< **nqš* 'to strike', < **sbs* 'to be compact').

In addition to the aforementiond nouns, which are fossilized relics of the absolute state, there are some that lack the inflectional vowels only in certain syntactic contexts. In such cases the erstwhile functional distinction between absolute and determined state has been preserved. The absolute

form *qaṭu* 'cat', for example, is used when indefinite and definite, but the form *qaṭuθa*, which is historically the determined form, is only used when definite. The nouns *yoma* 'day' and *šeta* 'year' are used without the final vowel in certain adverbial expressions, such as *kut-yom* 'every day', *ʾədyo* 'today' (< *ʾəd-yom*), *kúššət* 'every year' (< *kut-šat*). The noun *geb* 'side' is attested in the absolute state form *gēb* in distributive constructions, e.g. *kút-xa xíša l-xà-gēb¹* 'Everybody went in one (= a different) direction' (B1:8).

10.10. Nouns with Prefixed *M-*

In addition to infinitives, verbal nouns and participle forms (e.g. *mbašlana* 'cook', *maryana* 'repairer'), there are a number of other nouns of other patterns that have been derived historically by the prefixing of a *m-* element. In a large proportion of cases the root is not used in the current dialect as a verbal form. These can be divided into the following categories:

(i)   Spatial locations
maʾarwa	'West'
madənxa	'East'
meqora	'hole'
məṣṭaqa	'place in a chicken-coop where chickens sit'
məšṭaxa	'place where fruit and vegetables are spread out to dry'

(ii) Instruments
masərqa	'comb'
maqara	'gouge'
masəxθa	'poker; griddle, frying pan'
mazreta	'yoyo'
məlxawa	'fork used in threshing'
mziða	'bag (for storing grain)'

(iii) Others
maxmore	'jewels'
mbadla	'morning'
mɛxolta	'food, meal'

10.11. THE MORPHOLOGICAL ADAPTION OF LOANWORDS

The vast majority of loanwords in the dialect originate in Kurmanji Kurdish. There are also loans from other languages used in the region, such as Arabic and Turkish, though many of these may have entered the dialect through Kurdish. Loanwords that end in a consonant in the source language are generally adapted to Aramaic morphology by adding a final -*a* inflectional vowel. This applies to nouns of both genders, e.g.

barana	'adult male sheep'	Kurd. beran m.
čura	'angora goat'	Kurd. çûr m.
čuxa	'broadcloth'	Kurd. çox m.
galaveža	'Sirius, Dog Star'	Kurd. gelavêj f.
garra	'turn'	Kurd. ger̄ f.
gəra	'hill'	Kurd. gir m.
gisqa	'male goat (1–2 years)'	Kurd. gîsk m.
ḥakima	'doctor'	Kurd. ḥekîm m. < Arab. ḥakīm m.
həlma	'breath'	Kurd. hilm f.
jeba	'pocket'	Kurd. cêb f. < Arab. *jēb* m.
juwala	'sack'	Kurd. çewal m.
kaža	'pine tree'	Kurd. kaj f.
kulənga	'pickaxe'	Kurd. kuling m.
kura	'male goat (2–3 years)'	Kurd. kûr m.
pəškoža	'bud; tastle'	Kurd. pişkoj f.
qayiša	'belt'	Kurd. qayîş f.
razwana	'guard of orchard'	Kurd. r̄ezvan m.
šằmala	'candle'	Kurd. şemal f.
šəxxaṭa	'match'	Arab. *šixxāṭ* m.
ṭanga	'saddle girth, strap'	Kurd. ṭeng m./f.
tasa	'bowl, basin'	Kurd. tas f.
xiza	'sand'	Kurd. xîz m./f.

When the source form ends in a closed syllable with a short vowel followed by a single consonant, the vowel remains short but the final consonant is generally geminated due to the incidence of stress:

balle	'sheep with erect ears'	Kurd. bel 'erect (ears)'
ferəssa	'hero'	Kurd. fêris m. < Arab. *fāris*
gərsəkka	'wild pear'	Kurd. girsik m.

hogəčča	'male sheep (3 years)'	Kurd. hogiç m.
k̭avərra	'male sheep (1–2 years)'	Kurd. kaviṛ m.
k̭awəlla	'ruin'	Kurd. kavil m.
ҏalle	'embers of wood'	Kurd. pel m./f.
šakka	'male sheep (2–3 years)'	Kurd. şek m.
sayəssa	'male goat (3 years)'	Kurd. k̭ayis m.

In a few cases the gemination does not take place, e.g.

došăka	'mattress'	Kurd. doşek f.
wardăka	'duck'	Kurd. werdek f.

When the Kurdish source form ends in a vowel, a glide is inserted before the added *-a* inflectional vowel. After unrounded vowels this is */y/* and after rounded vowels it is */w/*, e.g.

găliya	'valley'	Kurd. gelî m.
neriya	'male goat'	Kurd. nêrî m.
parsuwa	'rib'	Kurd. parsû m./f.
pošĭya	'head kerchief'	Kurd. poşî m.
qamčiya	'whip'	Kurd. qamçî m.
qoṭiya	'mirror'	Kurd. qotî f.
šəfṭiya	'watermelon'	Kurd. şiftî m.
xădaya	'lunch'	Arab. ġadāʾ m.
xaliya	'carpet'	Kurd. xalî f.

In a few sporadic cases a loanword of feminine gender is adapted by attaching the Aramaic feminine ending *-ta/-θa*, e.g.

qapaxta	'lid'	Kurd. qapaẍ f.
ṣəmθa	'hoof'	Kurd. sim f.
ṭušṭirta	'young female goat'	Kurd. ṭuşṭîr f.

The Aramaic feminine ending is sometimes used to derive a feminine form from a masculine loanword that has no corresponding feminine form in the source language, e.g.

gisəqθa	'1–2 year old female goat'	Kurd. gîsk 'male goat'
k̭avərta	'1–2 year old female sheep'	Kurd. k̭avirra 'male sheep'

Occasionally a final *-a* vowel in the source form of a loanword is inter-
preted as the Aramaic inflectional ending. Likewise the sequence */ta/* at
the end of a loan-word is sometimes interpreted as the Aramaic feminine
ending. This is shown by the plural forms of such words, in which these
endings are removed when the Aramaic plural inflections are added:

darga (pl. *darge*)	'door'	Kurd. dergeh
parča (pl. *parče*)	'cloth, fabric'	Kurd. perçe
parda (pl. *parde*)	'cloth blind'	Kurd. perde
ṭašta (pl. *ṭašyaθa*)	'bowl'	Kurd. teşt
čanta (pl. *čanaθa*)	'bag'	Kurd. cente

Note also the word *masta* which is construed as feminine in gender although
the Kurdish source word *mast* is masculine.

10.12. Unadapted Loanwords

Numerous loanwords in the dialect do not have Aramaic inflectional
endings added to them in the singular. Most of these, nevertheless, take
Aramaic plural endings (§10.15.8.). These unadapted loans tend to end in a
consonant. Most words with a source form ending in a vowel are adapted.
If the word in the source language ends in a closed syllable with a short
or long *a* vowel, this is generally raised, when unstressed, to the region of
/ə/ by a process of attenuation that is normal in the dialect, e.g.

bahər	'Spring'	Kurd. bihar
manzəl	'room'	Kurd. mezel f.
ṭabəq	'floor, storey'	Arab. *ṭabaq* m.
čangəl	'fork'	Kurd. çengal f.
ʾotəx	'room'	Kurd. otax f.
tăhər	'type'	Kurd. teher
heywən	'animal'	Kurd. ḥeywan m./f. < Arab.
diwən	'social gathering'	Kurd. dîwan f.
čakuč	'hammer'	Kurd. çakûç m.
danbus	'pin'	Arab. *dabbūs*
fəstəq	'pistachio'	Kurd. fistiq f.
pažgir	'towel'	Kurd. pêjgîr f.
brin	'wound'	Kurd. birîn f.

A consonant after a stressed short vowel in an open syllable is generally geminated in the target form, e.g.

kalləš	'corpse, carrion'	Kurd. keleş m.
marrəs	'hair of angora goat'	Kurd. merez f.

An *a* vowel that is attenuated in an unstressed syllable is restored when stress shifts onto the syllable after the addition of a suffix and it becomes open, e.g. *mánzəl* 'room', *manzáli* 'my room'.

A few loanwords with a source form that ends in an *a* vowel can be classified as unadapted, in that the final vowel is not interpreted as the Aramaic inflectional vowel but rather is treated as belonging to the base of the word. This applies to the word *panjăra* 'window' (Kurd. pencere), the plural form of which is *panjăriyaθa* (< *panjărayaθa*) with a vestige of the original final vowel. A singular form *panjăriya* has developed by back-formation from this plural.

Morphological adaptation is inconsistent across the lexicon and also in individual lexical items, since some words are used both in an adapted and also in an unadapted form, e.g.

ʾotəx ~ ʾotaxa	'room'
barbi ~ barbiya, barbiye	'bride's female companion'
čangəl ~ čəngala	'fork'
čeydən ~ čeydana	'teapot'
panjăra ~ panjăriya	'window'
parzūn ~ parzuna	'back-pack' (Kurd. parzûn)
qayiš ~ qayiša	'belt'
qazəd ~ qazədda	'messenger'
sənjəq ~ sənjaqa	'crotchet hook'
xəllət ~ xəlleta	'gift'

10.13. Nouns with Kurdish Derivational Suffixes

10.13.1. *Diminutive Suffixes*

Various suffixes containing the Kurdish diminutive element /k/ are attested. The vast majority of these are attached to nouns of Kurdish origin. It appears, however, that these suffixes are used productively in the Aramaic dialect. This is shown by the fact that several of the nouns bearing these

suffixes are not recorded as having diminutive suffixes in the Kurdish dictionaries. In a few cases, furthermore, they have been attached to nouns of Aramaic or Arabic origin.

10.13.1.1. -əkka
This is composed of the Kurdish diminutive ending -ək and the Aramaic inflectional ending -a, with the /k/ geminated after the short vowel due to the incidence of stress. The /ə/ is elided if the base of the noun ends in a vowel, e.g.

badəkka	'small house, hut'	
bazəkka	'little jump'	cf. *baza* 'jump'
čezəkka	'spark'	
dəndəkka	'grain'	
halukka	'plum'	
jaməkka	'twin'	
kavəkka	'funnel'	
maməkka	'breast of a young woman'	
tannəkka	'tin'	
ziləkka	'small reed'	cf. *zala* 'reed'

The ending -əkka is attached also to words of Aramaic and Arabic origin, e.g.

ṣawməkka	'little fast' (custom in fast of Lent)	cf. *ṣawma* 'fast'
miθəkka	'little dead man' (custom at Christmas)	cf. *miθa* 'dead'
xorəkka	'little friend'	cf. *xawra* 'friend'
lifəkka	'flannel'	
zarpəkka	'insect bite'	cf. *zarba* 'blow'

In a few isolated cases the suffix has /gg/ instead of /kk/, e.g.

nawəgga	'great-grandson'

10.13.1.2. -əkke
This is a variant of the -əkka ending with final -e in the singular rather than final -a. These nouns are feminine in gender, e.g.

sorəkke f.	'open water pipe'
pozəkke f.	'nozzle' (Kurd. poz 'nose')
rawəkke f.	'little rawe'
saləkke f.	'small basket of beehive'

10.13.1.3. -əkθa

This suffix is composed of the Kurdish diminutive ending *-ək* and the Aramaic feminine ending *-θa*.

In a few cases, the *-əkθa* suffix is used to express the female counterpart of a masculine form, e.g.

čurra m. 'angora goat'   *čurrəkθa* f. 'angora goat'

Several nouns ending in *-əkθa* form a diminutive of a corresponding noun ending in *-a*, e.g.

băra 'sheet'	*bărəkθa* 'small sheet'
gəra 'hill'	*gərəkθa* 'hillock'
kəppa 'ankle'	*kəppəkθa* 'bottom of the ankle'
lappa 'palm of the hand'	*lappəkθa* 'small hand, paw'
pačča 'large handful'	*paččəkθa* 'small handful'
palla 'burning coal'	*palləkθa* 'small burning coal, ember'
sulina 'pipe'	*suləkθa* 'small pipe'
tulla 'hound'	*tulləkθa* 'a small hound'

The ending is attached to some words of Aramaic origin with a diminutive sense, e.g.

ʾɛna 'eye'	*ʾɛnəkθa* 'small hole in a shoe'
ʾəzza 'female goat'	*ʾəzzəkθa* 'small female goat'

The suffix is used to express the singular of some plural nouns ending in *-e*. These refer to entities that naturally occur as a collectivity, e.g.

palle 'burning embers'	*palləkθa* 'an ember'
k̭ərme 'worms'	*k̭ərməkθa* 'a worm'

Such nouns may also have a secondary plural that is derived from the singular form. This is the case, for example, with *k̭ərməkθa*:

k̭ərme 'worms' > *k̭ərməkθa* 'worm' > *k̭ərməkyaθa* 'worms'

In some cases a singular noun ending in *-əkθa* is derived from a plural ending in *-əkke*, e.g. *dəndəkke* 'grains': *dəndəkθa* 'grain'; *čučəkke* 'sparrows': *čučəkθa* 'sparrow'. Such nouns can be classified with nouns that form singulars of collectives by the suffix *-ta ⁄ -θa* (§10.5.2.2.). The ending *-əkke* is the plural of the diminutive inflection *-əkka*. The form *dəndəkka* is, indeed, also used as the singular for *dəndəkke*. Note also *čučəkke* 'sparrows': *čučəkka* ∼ *čučəkθa* 'sparrow'.

The majority of nouns ending in *-əkθa* are not derivative of another noun that exists in the dialect, e.g.

čelləkθa	'milking pot; vessel for yoghurt'
ḵunnəkθa	'woman's headscarf'
ḥabbəkθa	'tablet'
julləkθa	'milk pail'
koləkθa	'chicken coop'
laməkθa	'jaw (of an animal)'
mučəkθa	'small dry measure'
rapəkθa	'cup measure for grain'
zarrəkθa	'detergent made of wood ash'
ṭăpəkθa	'lid; trap for sparrows'
dâbbəkθa	'lid; trap for sparrows' (variant form of *ṭăpəkθa*)
jalləkθa	'rabbit trap'
yarəkθa	'female concubine'

10.13.1.4. -unka

This ending can be analysed as the Aramaic diminutive element *-un*, which is related to *-ona* (§10.8.9.), combined with a Kurdish diminutive element /k/, e.g.

yalunka	'young child'
sawunka	'old man'

10.13.1.5. -ka

This suffix is composed of the Kurdish diminutive element /k/ and the Aramaic inflectional suffix *-a*, e.g.

baqurka	'piglet'
haluka	'black plum' (Kurd. ḧilû)
nawčərka	'great-great-grandson' (Kurd. nevîçîrk)
qălunka	'pipe' (Kurd. qelûn)
salaməška	'beehive'

A few isolated nouns have /g/, /q/ or /č/ instead of /k/ in the suffix, e.g.

jwanqa	'young man'
nawaga	'grandson' (Kurd. nevî)
baqča	'vegetable garden'

10.13.1.6. -ăka, -akka

A variant of the *-ka* ending is *-ăka* or *-akka* with the /k/ geminated after the stress, e.g.

gozăka	'ankle'
halučakka	'black plum' (< *haluka* < Kurd. ḧilû)

10.13.1.7. -ika

Another rare variant is *-ika*, with a long /i/ bfore the *-ka* ending, e.g.

pərtika	'splinter' (cf. Syr. *prt* 'to split')

10.13.1.8. -ke

This consists of the Kurdish /k/ element and the ending *-e*, which is probably the Kurdish feminine oblique ending in origin, e.g.

pəqqəške f.	'bubble, blister' (cf. *pəqqəšta* 'bubble')
xamiṣoke f.	'a bitter herb'

10.13.2. -či

This expresses professions or habitual activities. Nouns with the *-či* suffix are never adapted:

dəkkanči	'shopkeeper'	< *dəkkana* 'shop'
čayxanči	'teashop owner'	< *čayxana* 'teashop'
qumārči	'gambler'	< *qumār* 'gambling'

10.13.3. -dan

This occurs in loanwords denoting containers. These are sometimes adapted to Aramaic morphology by the addition of the ending *-a*:

qawadən	'coffee pot'
čeydən, čeydana	'kettle'

10.13.4. -i

This Kurdish suffix is used to form nouns expressing abstractions. Loan-words with this ending are never adapted by the addition of Aramaic inflectional endings:

rəqqi	'stubbornness'

10.14. GENDER

10.14.1. *Feminine Nouns Ending in* -a

Nouns of Aramaic stock ending in the nominal inflections *-ta*, *-θa* and *-o* are feminine in gender. The small number of nouns of Aramaic origin ending in *-e* are of either gender without one clearly predominating. Nouns ending in the inflection *-a* are generally masculine in gender. A few nouns ending in *-a*, however, are feminine. Feminine nouns of Aramaic stock ending in *-a* can be classified as follows:

(i) Parts of the body

ʾaqla	'leg'
ʾaṭma	'side, thigh'
ʾɛna	'eye'
ʾəqba	'heel'
ʾiða	'hand'
bərka	'knee'
kʸasa	'stomach'
kawda	'liver'
naθa	'ear'
nəšma	'soul'
qana	'horn'
raθa	'lung'
roxa	'spirit'
səmmala	'left handful, small bundle held in left hand'
šərma	'buttock'

| *ṭəpra* | 'fingernail, toenail' |
| *šlada* | 'corpse' |

Numerous nouns referring to other parts of the body are masculine in gender, e.g. *biba* 'pupil', *čə̌čča* shoulder-blade, *kaka* 'tooth', *kawsa* 'hair', *lappa* 'palm', *lišana* 'tongue', *naxira* 'nose', *šaqa* 'thigh', *šaqola* 'lower leg', *reša* 'head', *ruša* 'shoulder', *wariða* 'vein', *xəðya* 'breast', *yalma* 'face'.

(ii) Small animals

ʾaqərwa	'scorpion'
buma	'owl'
čena	'mosquito'
dəbba	'bear'
dɛda	'hawk'
harnuwa	'rabbit'
nama	'ostrich'
pəqqa	'frog'
qalma	'louse'
ṣəmawla	'squirrel'
ṣəpra	'sparrow'
ṣəṣra	'cockroach'
sona	'type of duck'
ṭabuwana	'tick'
yawna	'dove'

(iii) Female animals

| *ʾəzza* | 'nanny-goat' |
| *wana* | 'ewe' |

(iv) Various inanimate nouns
Many of the residue of feminine nouns refer to natural phenomena, locations, containers or weapons:

ʾərbala	'medium sized sieve'
ʾəryana	'rainfall'
ʾərzala	'portable bed'
ʾəsra	'large storage basket'
ʾilana	'tree'
ʾurədxa	'large needle'
ʾurxa	'road'

barða	'hail'
bədra	'threshing floor'
bera	'well'
bəṭma	'terebinth tree'
bzara	'plough'
dana	'time'
gərwa	'sock'
gorna	'baptismal font'
gurza	'club'
halwasna	'raspberry'
kawuθra	'lunch'
masina	'earthenware pot'
məlxa	'salt'
məšna	'whetstone for sharpening blades'
məššara	'paddy-field basin'
məṭra	'rain'
murza	'ball and chain weapon'
pawxa	'wind'
þraza	'harvested field'
þunda	'wick'
qawra	'grave'
qənna	'nest'
qərṭala	'pannier bag'
qutana	'shirt'
rumxa	'spear'
swana	'eaves of roof'
ṣamərma	'a thorny tree'
šana	'honeycomb'
šapna	'instrument for smoothing ground after ploughing'
šəmša	'sun'
šmayya	'sky'
šraʾa, šraya	'oil-lamp'
ṭəlla	'shade'
xaqla	'field'
xmaṭa	'needle'
yama	'sea'
zeðaya	'flat bread'
zəqqa	'water-skin'

Some issues regarding the morphophonology of feminine nouns in *-a* should be noted here.

In a few feminine words with the *-a* ending an original feminine inflection has been reanalysed as part of the root. Such a development is reflected by the fact that the plural is formed by replacing only the *-a* and not the whole ending. This applies to the words *šədda* f. 'demon', *ʾarda* f. 'floor, bottom', and *rəzda* f. 'line of stones', the ending *-da* of which, although originally the feminine affix (cf. *šeða* m. 'demon', *ʾăra* f. 'ground', *reza* m. 'line'), is now no longer interpreted as such and the plurals are formed by replacing the final *-a* by *-aθa* or *-e*: *šəddaθa*, *ʾardaθa*, *rəzde*. Likewise *raθa* f. 'lung' and *naθa* n.f., although derived historically from plural forms with the feminine plural ending *-āθā*, the /θ/ is now interpreted as part of the root of the words, their plurals being *raθe* and *naθyaθa* respectively. Conversely, the word *ṣawθa* 'word, speech' from the root *ṣwθ* is feminine since the ending *-θa* has been interpreted as the feminine inflectional suffix, although /θ/ is originally a radical. This is reflected in the plural form *ṣăwaθa*, in which the *-θa* ending is replaced by *-aθa*.

When two nouns in *-a* are distinguished only by emphasis and one is feminine in gender, there is a tendency for the emphasis to be present in the masculine word of the pair, e.g.

bera f. 'well'	*beṛa* m. 'light'
pəqqa f. 'frog'	*p̣əqqa* m. 'crack'
čəčča f. 'breast'	*čə̣čča* m. 'shoulder-blade'

In at least the first two pairs the emphasis distinction appears to have developed secondarily to distinguish meaning (§1.4.4., §1.4.5.) so gender is likely to have been a factor determining phonological form.

10.14.2. *Infinitives*

The infinitive form of verbs, which does not have a feminine ending, is sometimes construed as feminine in gender, e.g.

zraʾa f.	'to cultivate'
mzabone f.	'to sell'
maštoye f.	'to irrigate'

10.14.3. *Loanwords*

Loanwords that are feminine in the source language are generally feminine in the Aramaic dialect. There are a few discrepancies between the gender of the loanword and the gender indicated in Kurdish dictionaries. This

may be due to a certain degree of instability of gender assignment in
Kurdish. Arabic loanwords that are masculine in Arabic are frequently
assigned feminine gender in Kurdish and these generally appear in the
Aramaic dialect as feminine. Examples of nouns loaned from Kurdish
that have feminine gender are:

ʾăraq	'arak'
ʾaskar	'army' (Arab. *ʿaskar* m.)
ʾotəx	'room'
bena	'breath, time (instance)'
brīn	'wound'
čay	'tea'
diwən	'social gathering'
dəkkana	'shop' (Arab. *dukkān* m.)
ga	'time'
juwala	'sack' (Kurd. çewal m.)
kalləš	'corpse' (Kurd. keleş m.)
qarwən	'caravan' (Kurd. karwan m.)
k̂olana	'street'
k̂uprana	'wooden hut'
manzəl	'room' (Arab. *manzil* m.)
panjăriya	'window'
šarṭ	'condition' (Arab. *šarṭ* m.)
ṭasa	'bowl'
xădaya	'lunch' (Arab. *ġadāʾ* m.)
xaliya	'carpet'
xanjər	'dagger'

10.15. Plural Forms

The plural of nouns is generally expressed by attaching a plural inflec-
tional ending. The plural endings that are used in the dialect are the
following: *-e, -ane, -aθa,-ăwaθa, -waθa, -yaθa*. These replace the singular
nominal inflections *-a, -ta, -θa,* and *-e*. In the case of nouns ending in *-o*,
the plural ending is added to the singular form without replacing the *-o*
inflection. The correspondence between the various plural endings and
the singular endings is not one-to-one. For this reason the plural inflection
is not predictable for a singular form. If a singular form with one of the
feminine endings *-ta* or *-θa* takes a plural ending beginning with a vowel,

there is generally some consequential resyllabification, e.g. *ṭarəpθa* 'leaf' > *ṭarpe* 'leaves'. This tends to be avoided, however, by the predominant use of the plural inflection *-yaθa*. Since this begins with a consonant, no resyllabification takes place, e.g. *gdišta* 'stook of corn' > *gdišyaθa* 'stooks of corn'.

In what follows the various plural endings are classified according to the form of the singular inflection that they replace. It will be seen that some nouns have more than one plural form. In some cases, there is a semantic distinction between the different plurals, e.g.

ʾɛna	'eye'	pl. *ʾɛne*
ʾɛna	'hole in shoe-strap'	pl. *ʾɛnaθa*
ʾɛna	'spring'	pl. *ʾɛnaθa, ʾɛnăwaθa*
reša	'head (of a man)'	pl. *rešăwaθa*
reša	'head (of a tool)'	pl. *rešaθa*
reša	'top (of a village)'	pl. *rešane*
lappa	'palm, sole'	pl. *lappape*
lappa	'wave'	pl. *lappe*
parra	'feather'	pl. *parre*
parra	'fin (on propeller)'	pl. *parrane*

Some alternations of plural forms do not, however, entail a semantic distinction, e.g.

ʾilana	'tree'	pl. *ʾilane, ʾilanane*
ʾiđa	'hand'	pl. *ʾiθaθa, ʾiđăwaθa*
pəqqa	'frog'	pl. *pəqqe, pəqqaθa*

When one of these alternative plurals ends in *–e*, this tends to be used with low numerals (see §14.12.), e.g. *tre pəqqe* 'two frogs', *raba pəqqaθa* 'many frogs'.

10.15.1. *The Plural Ending* -e

10.15.1.1. *Plurals in* -e *from Singulars in* -a
This category includes singular nouns in *-a* of both genders:

(i) Masculine

Singular	Plural	
ʾənwa	*ʾənwe*	'grape'
boya	*boye*	'hole'
čamča	*čamče*	'spoon'
dabaša	*dabaše*	'bee'
dugla	*dugle*	'lie'
garma	*garme*	'bone'
genawa	*genawe*	'thief'
gəšra	*gəšre*	'bridge'
gədda	*gədde*	'string, strand'
gərwa	*gərwe*	'sock'
gumla	*gumle*	'camel'
jeba	*jebe*	'pocket'
kaka	*kake*	'tooth'
kepa	*kepe*	'stone'
kəxwa	*kəxwe*	'star'
ləbba	*ləbbe*	'heart'
naxira	*naxire*	'nose'
pərṭana	*pərṭane*	'flea'
punda	*punde*	'wick'
qaša	*qaše*	'priest'
qazba	*qazbe*	'date'
qəṭwa	*qəṭwe*	'wooden needle'
susa	*suse*	'horse'
šămala	*šămale*	'candle'
šawpa	*šawpe*	'footprint'
šəfṭiya	*šəfṭiye*	'watermelon'
taqa	*taqe*	'branch'
tawra	*tawre*	'ox'
tena	*tene*	'fig'
ṭlawxa	*ṭlawxe*	'lentil'
xabuša	*xabuše*	'apple'

(ii) Feminine

ʾɛna f.	*ʾɛne*	'eye'
ʾilana f.	*ʾilane*	'tree'
č̣ena f.	*č̣ene*	'mosquito'
čeydən f.	*čeydane*	'teapot'
čeypəs f.	*čeypase*	'small teapot'

darjăma f.	*darjăme*	'screen used by hunters'
harnuwa f.	*harnuwe*	'rabbit'
kawaza f.	*kawaze*	'earthenware pot'
lagna f.	*lagne*	'thorny plant'
mašana f.	*mašane*	'beam of plough'
qalma f.	*qalme*	'louse'
qawadən f.	*qawadane*	'coffeepot'
qərṭala f.	*qərṭale*	'pannier bag'
šarba f.	*šarbe*	'earthenware jug'
sarməjanka f.	*sarməjanke*	'hook of plough beam'
səmmala f.	*səmmale*	'small bundle of grass'
səsra f.	*səsre*	'cockroach'
ṭabuwana f.	*ṭabuwane*	'tick'
yasmina f.	*yasmine*	'jasmin'
zeðaya f.	*zeðaye*	'flat bread'

10.15.1.2. *Plurals in* -e *from Singulars in* -ta *or* -θa

This includes the nouns listed in §10.5.2.2., where a referent is usually referred to as a collectivity by the plural form and the singular with a feminine ending is used to denote a single item of the collectivity:

Singular	Plural	
beta	*beʾe*	'egg'
nunta	*nune*	'fish'
bṭəmθa	*bəṭme*	'terebinth nut'
ṭarəpθa	*ṭarpe*	'leaves'

The word *raθa*, which is historically a plural form with the plural ending *-āθā*, has been reinterpreted as a singular form 'lung' and the /θ/ is treated as part of the root. The plural is formed by replacing the final -*a* with -*e*:

raθa	*raθe*	'lung'

10.15.2. *The Plural Ending* -ane

Nouns that take this plural ending almost all have inanimate referents.

10.15.2.1. *Plurals in* -ane *from Singulars in* -a
This include nouns of both genders:

(i) Masculine

Singular	Plural	
ʾumra	ʾumrane	'church'
ʾupra	ʾuprane	'land, soil'
bura	burane	'unirrigated field'
darmana	darmanane	'drug, medicine'
drana	dranane	'arm'
gawza	gawzane	'walnut tree'
geba	gebane	'side'
gewana	gewanane	'border of field'
gulpa	gulpane	'wing'
gwina	gwinane	'boundary'
jeba	jebane	'pocket'
karma	karmane	'orchard'
kuprana	kupranane	'trellis, bower'
mă̆ra	mă̆rane	'illness'
marga	margane	'meadow'
pəlxana	pəlxanane	'work'
rasa	rasane	'grass used for animal fodder'
reša	rešane	'top (of a village)'
ruša	rušane	'shoulder'
stuna	stunane	'post'
syaʾa	syaʾane	'fence'
šəmma	šəmmane	'name'
šula	šulane	'job'
šuqa	šuqane	'market'
talma	talmane	'water pot'
taqa	taqane	'branch'
tă̆ra	tă̆rane	'door'
ṭura	ṭurane	'mountain'
tuθa	tuθane	'mulberry tree'
yoma	yomane	'day'

(ii) Feminine

ʾilana f.	ʾilanane	'tree'
dəkkana f.	dəkkanane	'shop'
qana f.	qanane	'horn'

qənna f.	*qənnane*	'nest'
šana f.	*šanane*	'honeycomb'
ṣwana f.	*ṣwanane*	'overhanging eaves of roof'

Most nouns ending in the singular nominal inflectional ending *-a* that have a plural in *-ane* can also form a plural with the shorter ending *-e*, e.g. *ʾilana* 'tree' (pl. *ʾilanane, ʾilane*), *ʾumra* (pl. *ʾumrane, ʾumre*), etc. For the usage of these variant plurals see §14.12.

10.15.2.2. *Plurals in* -ane *from Singulars in* -θa

dukθa	*dukane*	'place'
gənθa	*gənnane*	'garden'
kənθa	*kənnane*	'kidney'

10.15.3. *The Plural Ending* -aθa

10.15.3.1. *Plurals in* -aθa *from Singulars in* -a
Nearly all nouns in this category are feminine in gender, e.g.

Singular	Plural	
ʾaqla f.	*ʾaqlaθa*	'leg'
ʾaṭma f.	*ʾaṭmaθa*	'thigh, side'
ʾəqba f.	*ʾəqbaθa*	'heel'
ʾəsra f.	*ʾəsraθa*	'storage basket'
ʾiða f.	*ʾiθaθa*	'hand'
barbiya f.	*barbiyaθa*	'bride's female companion'
baxta f.	*baxtaθa*	'woman'
bədra f.	*bədraθa*	'threshing floor'
bera f.	*beraθa*	'well'
beriya f.	*beriyaθa*	'milkmaid'
buma f.	*bumaθa*	'owl'
bzara f.	*bzaraθa*	'plough'
dəbba f.	*dəbbaθa*	'bear'
dudiya f.	*dudiyaθa*	'cradle'
gana f.	*ganaθa*	'person'
guniya f.	*guniyaθa*	'sack'
gutta f	*guttaθa*	'ball'
kasa f.	*kasaθa*	'stomach'
kawda f.	*kawdaθa*	'liver'

mbadla f.	*mbadlaθa*	'morning'
məṭra f.	*məṭraθa*	'rain'
pəqqa f.	*pəqqaθa*	'frog'
pošiya f.	*pošiyaθa*	'festive headscarf'
qawra f.	*qawraθa*	'grave'
qənna f.	*qənnaθa*	'nest'
qatta f.	*qattaθa*	'handle of a knife'
salla f.	*sallaθa*	'basket'
šapna f.	*šapnaθa*	'instrument for smoothing ground'
šarba f.	*šarbaθa*	'jug'
šərma f.	*šərmaθa*	'buttock'
ṣəṣra f.	*ṣəṣraθa*	'cockroach'
šlada f.	*šladaθa*	'corpse'
sona f.	*sonaθa*	'type of duck'
ṣudra f.	*ṣudraθa*	'shirt'
suta f.	*sutaθa*	'partridge trap'
ṭəpra f.	*ṭəpraθa*	'fingernail, toenail'
xaliya f.	*xaliyaθa*	'carpet'
xaqla f.	*xaqlaθa*	'field'
xmaṭa f.	*xmaṭaθa*	'needle'
yama f.	*yamaθa*	'sea'
yawna f.	*yawnaθa*	'dove, pigeon'
yəmma f.	*yəmmaθa*	'mother'
yubqa f.	*yubqaθa*	'skirt'
zəqqa f.	*zəqqaθa*	'waterskin'
zorna f.	*zornaθa*	'pipe'

An exception is the masculine noun *reša*, which has the plural *rešaθa* when it is used in the secondary sense of 'head of a tool'.

Most nouns ending in the singular nominal inflectional ending *-a* that have a plural in *-aθa* can also form a plural with the shorter ending *-e*, e.g. *ʾaqla* 'leg' (pl. *ʾaqlaθa, ʾaqle*), *ʾaṭma* 'thigh' (pl. *ʾaṭmaθa, ʾaṭme*), etc. For the usage of these variant plurals see §14.12. Exceptions to this are the nouns *baxta* 'woman' and *yəmma* 'mother', which have plurals only in *-aθa*.

In a few feminine nouns with the singular feminine ending *-ta* the plural *-aθa* is added after the ending without replacing it, as if the /t/ were part of the root, e.g.

xəlleta f.	*xəlletaθa*	'gift'
yamta f.	*yamtaθa*	'lake'

Note also the word *šədda* f. 'demon', the ending *-da* of which, although originally the feminine affix (cf. *šeða* m. 'demon'), is now no longer interpreted as such and forms a plural by replacing the final *-a* by *-aθa*:

šədda	*šəddaθa*	'demon'

10.15.3.2. *Plurals in* **-aθa** *from Singulars in* **-e**
All nouns in this category are feminine in gender:

Singular	Plural	
ʾarxe f.	*ʾarxaθa*	'water-mill'
beriye f.	*beriyaθa*	'milkmaid'
hawše f.	*hawšaθa*	'sheep-fold'
kawe f.	*kawaθa*	'small window'
kore f.	*koraθa*	'hole in the ground'
pəqqəške f.	*pəqqəškaθa*	'bubble, blister'
qəlle f.	*qəllaθa*	'hawk'
ṭašte f.	*ṭaštaθa*	'brass bowl'
ṭoke f.	*ṭokaθa*	'type of bird'
ṭope f.	*ṭopaθa*	'gun'

10.15.3.3. *Plurals in* **-aθa** *from Singulars in* **-ta**

Singular	Plural	
čanta	*čanaθa*	'bag'
karta	*karaθa*	'load of wood'
mðita	*mðinaθa*	'town'
quṣarta	*quṣraθa*	'cooking pot'
ṣabota	*ṣabaθa*	'finger'
šəbbəlta	*šəblaθa*	'head of corn'
šišəlta	*šišlaθa*	'chain
tawərta	*tawraθa*	'cow'
taxərta	*taxraθa*	'small pitta bread'

Some nouns also have plurals in *-yaθa*, which is the more common plural inflection for nouns with singulars in *-ta*, e.g. *tawərta* pl. *tawriyaθa, quṣarta* pl. *quṣariyaθa*.

Note the appearance of the */n/* in the plural form *mðinaθa*, which has been lost in the singular form through a process of assimilation: *mðita*

< *məδīntā. The plural ṣabaθa 'fingers' has developed from an original *ṣabʿāθā. The historical background of the singular ṣabota is < *ṣabuʾta.

Some feminine nouns retain the /t/ of the feminine singular ending after the attachment of the plural inflection:

ʾamta	ʾamtaθa	'paternal aunt'
gota	gotaθa	'side'
lota	lotaθa	'cheek'
nita	nitaθa	'all night wedding celebration'
qulta	qultaθa	'animal trap'
ruta	rutaθa	'Friday'
šətta	səttaθa	'bottom'
tata	tataθa	'crest of a bird'
xalta	xaltaθa	'maternal aunt'

The nouns *gota, lota* and *qulta* also have the plural forms *goyaθa, loyaθa* and *qulyaθa* respectively.

10.15.3.4. *Plurals in* -aθa *from Singulars in* -θa

Singular	Plural	
ʾapɛθa	ʾapayaθa	'cloth put over bread'
daliθa	dalyaθa	'vine'
kalθa	kalaθa	'daughter-in-law'
kliθa	kəlyaθa	'kidney'
kutəlθa	kutlaθa	'cutlet'
kθɛθa	kθayaθa	'chicken'
mawmiθa	mawmaθa	'oath'
paṛθa	paṛaθa	'female lamb'
qalθa	qalaθa	'basket'
qăreθa	qăraθa	'gourd'
səpθa	səppaθa	'lip'
šabθa	šabbaθa	'week'
šəkθa	šəkkaθa	'testicle'
šmɛθa	šămaθa	'report'
šwiθa	šəwyaθa	'bed'
xamθa	xamaθa	'young woman'

The plural forms *səppaθa, šabbaθa* and *šəkkaθa* exhibit gemination of the second consonant, which has prevented the elision of the preceding vowel.

Note the syllabic restructuring in some of the plural forms, viz. *kəlyaθa,*
šằmaθa (< *šamʿaθa), šᵊwyaθa.

10.15.3.5. *Plurals in* -aθa *from Singulars in* -o

Singular	Plural	
ṭoṭo f.	*ṭoṭaθa*	'old woman'

Most words of feminine gender ending in *-o* form a plural in *-owaθa*
(§10.15.5.2.).

10.15.4. *The Plural Ending* -ằwaθa

10.15.4.1. *Plurals in* -ằwaθa *from Singulars in* -a
This plural ending is commonly found with masculine nouns, many of
which have human referents, e.g.

Singular   Plural

(i) Masculine nouns with human referents

ʾəðma m.	ʾəðmằwaθa	'brother of husband'
baba m.	babằwaθa	'father'
mama m.	mamằwaθa	'paternal uncle'
mara m.	marằwaθa	'master, owner (pl. family)'
sawa m.	sawằwaθa	'grandfather, ancestor'
xala m.	xalằwaθa	'maternal uncle'
xawra m.	xawrằwaθa	'friend'
xaθa f.	xaθằwaθa	'sister'
xətna m.	xətnằwaθa	'son-in-law'
xona m.	xonằwaθa	'brother'

(ii) Other masculine nouns

ʾaθṛa m.	ʾaθṛằwaθa	'country, place'
ʾeða m.	ʾeðằwaθa	'festival'
bɛθa m.	bɛθằwaθa	'house'
koza m.	kozằwaθa	'cave for sheltering sheep'
nera m.	nerằwaθa	'river'
pumma m.	pummằwaθa	'mouth'
reša m.	rešằwaθa	'head, summit'

susa m.	*susă̆waθa*	'horse'
kursa m.	*kursă̆waθa*	'chair'
mez m.	*meză̆waθa*	'table'
xɛla m.	*xɛlă̆waθa*	'force'
zoma m.	*zomă̆waθa*	'summer camp'
čə̆čča m.	*čə̆ččă̆waθa*	'teat, breast'
xəðya m.	*xəðyă̆waθa*	'breast'

It is used with a few feminine nouns with -*a* in the singular, e.g.

ʾiða f.	*ʾiðă̆waθa*	'hand'
ʾɛna f.	*ʾɛnă̆waθa*	'spring (of water)'
gurza f.	*gurză̆waθa*	'club'
murza f.	*murză̆waθa*	'ball and chain weapon'

The /θ/ of the noun *xaθa* 'sister', although historically a feminine marker suffix, is treated as part of the root and retained in the plural *xaθă̆waθa*.

10.15.4.2. *Plurals in* -ă̆waθa *from Singulars in* -e
Nouns in this category are of both genders:

Singular	Plural	
gare m.	*gară̆waθa*	'roof'
lɛle m.	*lɛlă̆waθa*	'night'
maqle m.	*maqlă̆waθa*	'cooking pot'
xuwwe m.	*xuwwă̆waθa*	'snake'
ʾore f.	*ʾ oră̆waθa*	'manger'
baste f.	*bastă̆waθa*	'expanse of stones in river'
čale f.	*čală̆waθa*	'pit'
kore f.	*koră̆waθa*	'hole'
šarre f.	*šarră̆waθa*	'battle'
ṭaražoke f.	*ṭaražokă̆waθa*	'small blue bird

10.15.5. *The Plural Ending* -waθa

10.15.5.1. *Plurals in* -waθa *from Singulars in* -a
Nouns in this category are of both genders:

Singular	Plural	
bɛθa m.	*bɛθwaθa*	'house'
xona m.	*xonwaθa*	'brother'
xulama m.	*xulamwaθa*	'servant'
maθa f.	*maθwaθa*	'village'
paθa f.	*paθwaθa*	'face'
xaθa f.	*xaθwaθa*	'sister'
zəbbara f.	*zəbbərwaθa*	'group of workers'

The plural ending *-waθa* is an abbreviated form of the ending *-ăwaθa* and, indeed, some nouns in this group also have an alternative plural in *-ăwaθa*, e.g. *bɛθăwaθa, xonăwaθa, xaθăwaθa*.

10.15.5.2. *Plurals in* -waθa *from Singulars in* -o
All nouns in this category are feminine. The *-o* is retained after the attachment of the plural ending:

ʾ*atko*	ʾ*atkowaθa*	'stomach lining of ruminant'
bălo	*bălowaθa*	'whirlpool'
garo	*garowaθa*	'rat'
garšo	*garšowaθa*	'tool used in paddy fields'
kʸalo	*kʸalowaθa*	'bride'
majo	*majowaθa*	'crushing bowl'
naqro	*naqrowaθa*	'woodpecker'

10.15.5.3. *Plurals in* -waθa *from Singulars in* -uθa
Feminine nouns with the singular ending *-uθa* form the plural by replacing the *-θa* with *-waθa*:

ʾ*aθuθa*	ʾ*aθuwaθa*	'letter (of the alphabet)'
malkuθa	*malkuwaθa*	'kingdom'
maṛuθa	*maṛuwaθa*	'snow spade'
qaṭuθa	*qaṭuwaθa*	'(female) cat'

10.15.6. *The Plural Ending* -yaθa

This is the usual plural ending of singulars in *-ta* and *-θa*.

10.15.6.1. *Plurals in* -yaθa *from Singulars in* -ta

Singular	Plural	
ʾaqulta	ʾaqulyaθa	'piece used to tighten rope'
ʾiðamta	ʾiðamyaθa	'sister of husband'
ʾipta	ʾipyaθa	'leather strap'
barəšta	barəšyaθa	'pillow'
baxošta	baxošyaθa	'large spoon, ladle'
gdišta	gdišyaθa	'stook of corn'
genawta	genawyaθa	'thief (f.)'
gawzəlta	gawzəlyaθa	'small walnut tree'
gusta	gusyaθa	'ball of dough'
gərgərta	gərgəryaθa	'wheel'
koðənta	koðənyaθa	'mule'
kurtəxta	kurtəxyaθa	'lower back'
margəlta	margəlyaθa	'small pan'
məssukta	məssukyaθa	'craw, gizzard (of a bird)'
mojənta	mojenyaθa	'heifer'
parošta	parošyaθa	'smooth pebble'
paṭorta	paṭoryaθa	'mushroom'
pəqqəšta	pəqqəšyaθa	'bubble'
pista	pisyaθa	'bag for jajik'
qalta	qalyaθa	'basket'
qedamta	qedamyaθa	'morning'
qursəlta	qursəlyaθa	'elbow'
quṣarta	quṣaryaθa	'pot'
romta	romyaθa	'small hill'
skinta	skinyaθa	'knife'
susta	susyaθa	'mare'
šənduxta	šənduxyaθa	'smooth stone'
tarəqta	tarəqyaθa	'button'
tuθta	tuθyaθa	'berry'
xalaqta	xalaqyaθa	'earring'
xazəmta	xazəmyaθa	'nose-ring'
yaləxta	yaləxyaθa	'scarf'
jareta	jareyaθa	'lunch box'
gota	goyaθa	'side'
garuta	garuyaθa	'stack of branches'
lota	loyaθa	'cheek'
pasuta	pasuyaθa	'pace'
zruta	zruyaθa	'cultivation'

In a few cases the vowel /i/ is inserted before the ending. This sometimes involves resyllabification of the noun base:

tawərta	tawriyaθa	'cow'
zawərta	zawriyaθa	'clay water pot'
xorta	xoriyaθa	'willow tree'

10.15.6.2. *Plurals in* -yaθa *from Singulars in* -θa

Singular	Plural	
ʾašiθa	ʾašiyaθa	'avalanche'
ʾeliθa	ʾəlyaθa	'fat tail (of sheep)'
ʾisəqθa	ʾisəqyaθa	'ring'
dapθa	dapyaθa	'strip of wood'
gərəkθa	gərəkyaθa	'small hill'
ḥabbəkθa	ḥabbəkyaθa	'tablet'
kusiθa	kusiyaθa	'hat'
laməkθa	laməkyaθa	'jaw (of an animal)'
naθa	naθyaθa	'ear'
qariθa	qariyaθa	'beam'
qarqupθa	qarqupyaθa	'skull'
qurniθa	qurniyaθa	'corner'
šaqiθa	šaqiyaθa	'irrigation channel'
šəbbərθa	šəbbəryaθa	'bracelet'
snoniθa	snoniyaθa	'swallow'
ṣoṣiθa	ṣoṣiyaθa	'plait'
squpθa	squpyaθa	'lintel'
xṭiθa	xṭiyaθa	'sin'

The plural of *naθa* 'ear' is formed irregularly in that the /θ/ is retained when the *-yaθa* ending is attached, resulting in the form *naθyaθa*. Historically the singular form *naθa* is, in fact, a plural form (< *ʾəðnaθa).

10.15.6.3. *Plurals in* -yaθa *from Singulars in* -e

pozəkke	pozəkyaθa	'nozzle'
qarəkke	qarəkyaθa	'crow'
quṣxane	quṣxanyaθa	'pan'

A few bisyllabic nouns retain the final /e/ vowel in the plural:

qare	qareyaθa	'chicken coop'
quppe	quppeyaθa	'brooding hen'

10.15.7. *Plurals with Reduplication of the Final Syllable*

Most nouns that have this type of plural have in the singular the bisyllabic pattern *CVCCa*. The reduplication consists of the repetition of the final radical. In the case of nouns with a geminated final radical, it is repeated ungeminated. Reduplicative plurals are found both in nouns of Aramaic stock and also in loanwords. None have human referents.

Singular	Plural	
ʾaqra	ʾaqrare	'stock, stem'
boya	boyaye	'hole'
čəmma	čəmmame	'split hoof'
garra	garrɛre	'pool'
gəlla	gəllale	'herb'
gəppa	gəppape	'cave'
gəra	gərare	'hill'
lappa	lappape	'palm, sole'
məxra	məxrare	'small water channel'
pəqqa	pəqqaqe	'frog'
qəṭṭa	qəṭṭaṭe	'piece'
təlpa	təlpape	'eyelash'
tiya	tiyaye	'mountain peak'
ṭuwa	ṭuwawe	'coloured gem'
xərṭa	xərṭaṭe	'line (of palm)'
xuwwe	xuwwawe	'snake'

Occasionally reduplicative plurals are formed from feminine singular nouns ending in *-ta* or *-θa*:

ʾaṣərta	ʾaṣrare	'evening'
səkθa	səkkake	'peg'
ṣəmθa, ṣəmma	ṣəmmame	'hoof'
təkθa	təkkake	'trouser cord'

Some of these nouns also have plurals without reduplication, e.g. *boya* 'hole', pl. *boye* 'holes'. In the case of *lappa*, the plural form *lappe* means 'waves' rather than 'palms'.

10.15.8. *Plural Endings on Loanwords with Unadapted Singulars*

Most loanwords that are unadapted in the singular form a plural by attaching an Aramaic plural inflection. This is normally the inflection *-e* irrespective of the gender of the noun.

Where the original vowel of the final syllable is attenuated in the singular due to its occurrence in an unstressed closed syllable, this is retained unattenuated in the plural, in which it occurs in a stressed open syllable, e.g.

Singular	Plural	
ʾatnábəl	ʾatnabéle	'car'
ʾótəx	ʾotáxe	'room'
čángəl	čangále	'fork'
čéypəs	čeypáse	'small teapot'
derúbər	derubáre	'wood, forest'
dărəj	dăráje	'step'
héywən	heywáne	'animal'
kəlbə́ttən	kəlbəttáne	'pincers'
márkən	markáne	'pot'
qárwən	qarwáne	'caravan'
táhər	tahére	'type'
ṭábəq	ṭabáqe	'floor, storey'

If the original vowel in the final closed syllable is a short /ə/, this remains short in the plural, even though it is in an opened stressed syllable, e.g.

Singular	Plural	
fə́lfəl	fəlfə́le	'pepper'
mə́šməš	məšmə́še	'apricot'

In some cases the consonant after the short vowel is geminated when a plural ending is added, e.g.

Singular	Plural	
šab	šábbe	'alum'
xam	xámme	'worry'

xə́llət	*xəllátte*	'gift'
qaráwət	*qarawə́tte*	'bed'

When the loanword ends in a vowel, a glide /y/, /w/ or /ˀ/ is inserted before the *-e* plural ending, e.g.

Singular	Plural	
ga	*gaye*	'time'
ṭurši	*ṭuršiye*	'pickled vegetable'
kilo	*kiloye ~ kiloˀe*	'kilo'

A final *-a* vowel in a loanword is, however, sometimes interpreted as the Aramaic singular inflection *-a* and the plural is formed by replacing the *-a* with *-e*, e.g.

Singular	Plural	
parča	*parče*	'cloth, fabric' (Kurd. perçe)

Occasionally other plural endings are used on loanwords with unadapted singulars, e.g.

Singular	Plural	
brīn f.	*brinane*	'wound'
ˀadət f.	*ˀadətaθa*	'custom'
jamm f.	*jammaθa*	'glass; green-house'
ˀaskar f.	*ˀaskaryaθa*	'army'
barbi f.	*barbiyaθa*	'bridesmaid'
čəlluri f.	*čəlluriyaθa*	'small lizard'
barju f.	*barjuwaθa*	'channel in a paddy field'

When the singular ends in *-a*, a glide /y/ is inserted before the plural ending and the preceding /a/ has a tendency to shift to /i/ through assimilation to this, e.g.

Singular	Plural	
panjăra	*panjăriyaθa*	'window'
wasta	*wastiyaθa*	'woman's dress'

The sequence /ta/ at the end of an unadapted singular form is sometimes interpreted as the Aramaic feminine inflection and it is replaced by the plural endings -aθa or -yaθa, e.g.

Singular	Plural	
čanta	*čanaθa*	'bag' (Kurd. cente f.)
ṭašta	*ṭašyaθa*	'brass bowl' (Kurd. teşt f.)

A few unadapted loanwords are invariable and have no inflectional endings in the plural, e.g.

Singular	Plural	
qaṭ	*qaṭ*	'floor, storey'

10.15.9. *Irregular Plurals*

Singular	Plural	
šeta	*šənne*	'year'
bεθa	*bate*	'house'
brata	*bnaθa*	'daughter'
brona	*bnone*	'son'
gʸawṛa	*guṛe, guṛane*	'man, gentleman'
kalba	*kalwe*	'dog'
ʾərba	*ʾərwe ~ ʾərbe*	'sheep'
ɣala	*ʾayale*	'child'

The irregular plural forms *bate, bnaθa, bnone* and *guṛe* have their roots in earlier Aramaic, except that the word *bnone* has a diminutive suffix. The plural *guṛe* derives from *gubrē whereas the singular *gawṛa* derives from *gaḇrā. The plural *kalwe* with /w/ has developed from *kalḇē with the fricative *ḇ, whereas the singular *kalba* is derived historically from *kalbā with the stop *b. This differs from other words in the dialect that are derived historically from the pattern *CVCC with a *BGDKPT* letter as third radical, since all of these extend the stop pronunciation of the *BGDKPT* letter in the singular to the plural, e.g. *malka*, pl. *malke* 'king' (< *malkā, pl. *malkē). The word *bεθa* also has the regular plural form *bεθăwaθa*.

10.15.10. *Pluralia Tantum*

This category includes plural nouns for which no singular form appears
to be available. They are mainly nouns of mass:

ʾawahaθa	'parents' (rare)
ʾawahe	'parents' (rare)
ʾəxre	'excrement'
dawwe	'yoghurt mixed with water'
čakke	'weapons; jewels'
həšše	'senses'
mị̄ya	'water'
parpịṭe	'brushwood'
prage	'millet'
pode	'pus from nose'
rịṛe	'slobber, drivel'
šăre	'wet cattle dung'
šəmme	'sky'
xaye	'life'
xrorịye	'sorghum'
xəšxəšone	'skating, skiing'

The form *mị̄ya* 'water' has developed from the plural form **mayyā*.

10.16. THE ANNEXATION OF NOUNS

A noun may be syntactically annexed to a following noun or clause by
means of the particle *D* (§4.4.), which has the phonetic realization of *t* or
d. Although historically this particle is derived from **d* of earlier Aramaic,
with a voiced consonant, there are grounds for considering the unvoiced
realization *t* to be the basic form in annexation constructions in the C.
Barwar NENA dialect, with *d* now being a secondary form that is con-
ditioned by the environment. The abstract representation *D* is used to
refer to both phonetic realizations. We shall be concerned here with the
annexation of a noun to a another noun. The annexation of a noun to
a clause will be dealt with in §19.1.

When a noun is annexed to a following noun, the first noun functions
as the head of the phrase and the second has the function of a modifier
which stands broadly in a genitive relation to the head. The *D* particle is

normally cliticized to the head noun rather than to the following dependent modifier noun. The final inflectional vowels *-a* or *-e* of the head noun are reduced to /ə/ in the resulting closed syllable. Other vowels retain their quality:

-a + *t*	>	*-ət*
-e + *t*	>	*-ət*
-i + *t*	>	*-it*
-u + *t*	>	*-ut*
-o + *t*	>	*-ot*

If the singular and plural forms of the noun are distinguished only by the inflectional vowels *-a* and *-e*, this distinction is lost. Examples: *xá-gəldət tàwra* 'a skin of an ox' (A11:10), *tré-gəldət tàwre* 'two skins of oxen' (A11:11), *kértət qèse* 'a load of wood' (A15:13), *dánət kawùθra* 'time of lunch' (A22:22), *ṭəppəryáθət heywàne*¹ 'the claws of animals' (A19:2).

When the first consonant of the dependent noun is voiced, the *D* particle sometimes becomes voiced by assimilation. This voice assimilation is not marked in the transcription, e.g. *béθət* [bɛːθəd] *duglàna* 'the house of the liar' (A48:7), *bábət* [bɑːbəd] *bráta* 'the father of the girl' (A17:20), *nášət* [naːʃəd] *màθa* 'the people of the village' (A48:3). On numerous occasions, however, this assimilation does not take place before a voiced consonant and the particle retains its default unvoiced form, e.g. *brónət* [broːnət] *màlka* 'the son of the king' (A32:21), *ða-qə́nnət* [qənnət] *dəbbòre* 'a nest of hornets' (A20:6), *ʾánna nášət* [naːʃət] *màθa* 'these people of the village' (A48:2).

An unadapted loanword that has a final vowel that it has retained from the source language sometimes has the annexation suffix *-ət* connected to it by the glide /y/, e.g. *ḥabbayət xəṭṭəθa* 'a seed (*ḥabba*) of grain'.

When the dependent noun begins with a laryngal /ʾ/ followed by a vowel, the laryngal is generally retained and not elided, e.g. *mástət ʾàrye* 'the yoghurt of lions' (A33:2), *xa-káwtət ʾə̀rwe* 'a flock of sheep' (A32:14), *b-úrxət ʾalàha* 'on the path of God' (A15:19).

When the item dependent on the head noun is a demonstrative pronoun, however, the phonotactics are different, in that the particle is regularly syllabified with the demonstrative pronoun and replaces the initial laryngal. The head noun may end in the centralized vowel /ə/ or the original /a/ or /e/ vowel may be retained. A further difference is that the particle in such contexts is regularly pronounced voiced as *d*, e.g. *málka d-áyya bàžər*¹ 'the king of this town' (A32:5), *gu-ṣádrə d-áwwa sùsa*¹ 'in the chest of this horse' (A14:67), *čádra d-ò-malka* 'the tent of that king' (A4:2), *ríxə d-o-xámra*

'the smell of that wine' (A12:47), *manáyə d-áyya ṭàsa* 'the meaning of this goblet' (A15:17), *xadámta d-ɛ-bráta* 'the servant of that girl' (A4:50), *šə́mmə d-ɛ-bráta* 'the name of that girl' (A25:4), *qam-ʾénə d-ánna botanàye* 'before the eyes of these Botan people' (A26:72). The same applies to nouns annexed to independent demonstrative pronouns, e.g. *čánta d-àwwa* 'the bag of this one' (A14:5), *féka d-ăwàha* 'the fruit of that one' (A14:7), *béθa d-àw* 'his house' (A8:24), and also to those annexed to interrogative pronouns, e.g. *ʾan-ʾə́rwe d-ɛ̀nila?* 'Whose sheep are those?' (A32:16), *ʾáyya bə́rke d-ɛ̀nila?* 'Whose pool is this?' (A25:61).

The regular voicing of the particle before demonstratives and the syllabification of the particle with the demonstrative rather than with the head noun has the appearance of an archaism. It is likely, however, to have arisen by analogical association with constructions containing the independent genitive particle, which begins with /d/:

bɛθa diya : bɛθa d-ay 'her house'

When the demonstrative pronoun is 3ms the head noun sometimes has a 3ms suffix, as does the construction with the independent genitive particle:

bɛθe diye : bɛθe d-aw 'his house'

The base of the analogy was presumably in constructions with independent demonstratives, as above, and this was then extended to nominal phrases beginning with attributive demonstratives.

On some occasions the annexation particle is separated from the head noun and attached to the dependent noun even when it is not combined with a demonstrative. In such cases the particle has its usual unvoiced form *t*. It is often preceded by a prosthetic vowel, though this is not marked in the transcription, e.g. *t-ə́rxe* [ʾət-ʾərxe] 'of the mill' (A19:4). Examples of this type of annexation are found where the head noun is an unadapted loanword with an inflectional vowel, e.g. *múxtər t-Bàrwər* 'the chief of Barwar' (B15:20), *mánquš t-prə̀zla* 'a sparking tool made of metal' (B7:19) *púwuš t-ʾilàna* 'hay kindling of a tree' (B7:19), *qə́ṣṣət t-Fárxo diyɛ̀xu* 'the story of your Farxo' (A25:21). It is also found after words of Aramaic stock with an inflectional vowel, which retains its original quality in the annexation, e.g. *də́mma t-tèla* 'the blood of a fox' (A32:21), *xa-málka t-Yǎ̀man* 'a king of Yemen' (A14:36), *brátət málka t-Màġrəb* 'the daughter of the king of Morocco' (A28:17). When the dependent noun begins with a laryngal,

this is occasionally elided, in which case the *D* particle is syllabified with the following word and realized as an unvoiced unaspirated /ṭ/ before the vowel, e.g. *tre-pắnxe ṭ-ə́rxe* 'two stones of a water-mill' (A24:13).

A dependent noun that has the particle prefixed to it is sometimes put in a separate intonation group. In some cases this is the result of hesitation or correction by the speaker, e.g. *ṭə̀ḷḷəθ bnáθa xène¹ t-Băkùrku¹* 'three other girls, of Băkurku' (A26:24), *rìxa¹ t-xa-kàlləš¹* 'the scent of carrion' (C8:5), *šíšət prə̀zla¹ t-ə̀rxe¹* 'The bars of iron, of the mill' (A19:4), *ða-gótət màθa,¹ t-mðìta¹* 'one side of the village, of the town' (A29:54), *qúwwət…t-ʾurusnàye¹* 'the force…of the Russians' (B7:8), *pə̀nxa,¹ t-ə̀rxe,¹ pắnxət ə̀rxe¹* 'the stone, of the mill, the mill stone' (B5:90), *dắn-t pàlgət yóma,¹ kawùθra,¹ t-xădàya¹* 'the time of midday, lunch, of lunch' (B11:34).

In some sporadic cases the annexation particle occurs twice in the construction, being affixed both to the head noun and to the dependent nominal, e.g. *qurṭánət t-xmàre¹* 'the blankets of the mules' (A23:13), *bába-w yə́mmət…t-yàla¹* 'the father and the mother of the boy' (A25:10), *qam-tằrət¹ d-ó-boyət tèle¹* 'before the door of the hole of the foxes' (A20:6), *ʾahwáltət d-ò naša¹* 'the condition of that person' (B5:8).

In some loanwords a final /ət/ syllable in their base is interpreted as the annexation particle. This applies to annexation constructions of the nouns *qəṣṣət* 'story' and *saʾəta* 'hour' such as *qə́ṣṣət xóni* 'the story of my brother' (A8:65), *sáʾət ʾárpa* 'the hour of four (= four o'clock)' (A17:27).

Occasionally the /ə/ vowel of the *-ət* ending on the head noun is elided and the /t/ clusters with the final consonant of the noun. This is found where the final consonant is a sonorant or sibilant. A long vowel in an originally open syllable generally remains long despite the fact that it has been closed by this syllabic contraction, e.g. *díwən-t málka* 'the audience chamber of the king' (A17:31), *guðắn-t ʾàrye¹* 'a churn of lions' (A33:13), *dắn-t pàlgət yóma¹* 'the time of midday' (B11:34), *xắṣ-t dawèra* 'the back of a mule' (B5:125), *rḗš-t-kʸàlo* 'the head of the bride' (B5:49).

More frequently the /t/ in the ending *-ət* of the head noun is elided, with the result that the head noun ends in the vowel *-ə*, e.g. *ʾéʾnə mìya* 'the spring of water' (A11:17), *ʾɛnáθə mìya* 'springs of water' (A12:9), *núrə šmàyya* 'the fire of heaven' (A12:31), *yománə šàbθa* (A17:15), *nášə ʾàskar* 'the people of the army' (A11:14).

In some cases the contraction of the head noun is further advanced, in that the entire ending *-ət* is elided. If the preceding syllable originally contained a long vowel, this is usually retained in the resultant closed syllable, e.g. *brōn < bronət* 'son of'. If the elision brings about a final cluster, the cluster is often broken by an epenthetic vowel, e.g. *băxət < baxtət*

'the wife of'. A distinction should be made between this contracted form of annexation and compound nominal constructions (§10.17.). Unlike compound nominals, which are fixed phrases with an invariable form, contracted annexation is an optional process and interchanges with less contracted annexation of the same word in the same or similar contexts, e.g. *brōn mami* ~ *bronət mami* 'the son of my uncle (my cousin)', *băxət babi* ~ *baxtət babi* 'the wife of my father (my step-mother)'. When the word *baxta* is used outside of expressions relating to kinship relationships to the speaker, it is generally not contracted, e.g. *báxtət ʾáġa Čǎl* 'the wife of the Agha of Čāl' (A19:29), *báxtət ʿAbda-Raḥmā̀n-bēk* 'the wife of ʿAbda-Raḥmān-bēk' (A23:26). Further examples from the text corpus: *rš-ắqəl bàxta* 'onto the leg (ʾaqla) of the woman' (A16:11, but *ʾáqlət màlla* 'the leg of the mullah' A22:38), *ắθəṛ dèwele¹* 'It is the land of the wolves' (A14:55, but *ʾáθṛət bàbux* 'the land of your father' A14:89), *ʾáw šḕr-Màyele¹* 'That is the festival (šera) of Maye' (B5:229, but *šḕrət Dúre* 'the festival of Dure' B5:228), *zawn-šlàmɛle¹* 'It is the time (zawna) of peace' (A1:26, but *záwnət qə̀ṭla* 'the time of killing' A1:25), *xāṣ-sùsux* 'the back of your horse' (A14:67, but *xáṣə súse dìye* 'the back of his horse' A25:54). The contraction is commonly found in some place names, e.g. *ʾḖn-Nune* 'Spring of Fishes' (name of village, but *ʾḖnə-Nùne* B3:3) and *Rōm-Dibo* 'Hill of Dibo' (locality in ʾɛn-Nune).

The annexation particle is always retained on a demonstrative that occurs in the dependent nominal phrase, e.g. *brōn-d-o-náša* 'the son of that man' (A9:2).

The gender of the phrase with contracted annexation is that of the head noun, as is the general rule in annexation. The plural is formed by putting the head noun in the plural, like other forms of annexation, e.g. *bnōn mami* ~ *bnonət mami* 'the sons of my uncle (my cousins)'.

10.17. COMPOUND NOMINAL PHRASES

10.17.1. *General Remarks*

Compound nominal phrases consist of two nouns linked together, but differ from annexation constructions in a number of respects.

The first noun does not have the morphophonological shape of a noun in annexation. In most cases it exhibits a more advanced degree of phonetic contraction than the head noun in contracted annexation constructions described above. This is reflected by the shortening of an originally long vowel in a closed syllable, e.g. *bɛθ-qora* ~ *bəθ-qora* 'cemetery'

<*bēθ-qora*, and the elision of consonants, e.g. *xa-ramša* 'dinner' < **xal-ramša*
('eating of evening').

In some cases the second noun of the construction also undergoes
contraction. In the second element of *bɛθ-qora*, for example, the original
diphthong /aw/ is regularly contracted to /o/, whereas the diphthong is
preserved when the word *qawra* 'grave' is used independently (§2.4.2.). In
a few cases consonants are elided, e.g. *barša* 'namesake' (< **bar-šma* 'son
of the name'), *šəmmaxta* 'palate' (< **šəmme-ḥakta* 'sky of the palate').

The first noun sometimes has the form of the construct of earlier
Aramaic, e.g. *bəṛ-zăra* 'seed' (< **bar-zarʿā* 'son of a seed'), *mare bena* 'toler-
ant person' ('owner of breath'; cf. Syriac construct *mārē*). This applies to
various originally feminine singular construct forms in which the ending
*-aθ has been contracted to *–a*, which include compounds with the element
bra- (< **braθ* 'daughter of'), e.g. *bra-ṣəppa* 'thimble' < **braθ-ṣəppa* ('daughter
of the finger'), and compounds with an original feminine singular parti-
ciple, mainly names of insects and small animals, e.g. *ʾazla-kuše* 'dragonfly'
(literally: 'spinner of spindles' < **ʿāzlaθ kuše*), *zaqra-qode* 'spider' (literally:
'weaver of traps' < **zāqraθ qode*), *taqla-šəkke* 'spider' (literally: 'weigher of
testicles' < **tāqlaθ šəkke*), *marč̣a-xuwwe* 'chameleon' (literally: 'squasher of
snakes' < **mārč̣aθ xuwwe*), *mɛṣa-ʾozze* 'lizard' (literally: 'sucker of goats' <
*māyṣaθ ʾozze), *parxa-lɛle* 'bat' (literally: 'flyer of the night' < **pārxaθ lɛle*), also
pašxa rase 'late snow' (literally: 'breaker of *rasa* grass' < **pāšxaθ rasa*). The
construct state of masculine participles can be identified in forms such as
mayəṣ-ʾozze 'lizard' (literally: 'sucker of goats'), *makrəb č̣uč̣ane* 'late snow' (liter-
ally: 'the one that angers the magpies'), *gambəl-ʾəxre* 'dung-beetle' (literally:
'roller of dung'), *ʾaxəl-qarṣa* 'the devil' (literally: 'the eater of a morsel').

The original meaning of the first element of compound phrases is
generally not maintained in the meaning of the phrase as a whole. This
is particularly the case with compounds containing the initial elements *bəṛ*
(< **bar* 'son of'), *bra* (< **braθ* 'daughter of') and *be-* (< *beθ* 'house of'), e.g.
bəṛ-gare 'plateau' (< *bəṛ* 'son' + *gare* 'roof'), *bra-qala* 'echo' (< *bra* 'daugh-
ter' + *qala* 'voice'), *be-təkke* 'waist' (< **beθ* 'house' + *təkke* 'trouser cords'),
be-yalda 'Christmas' (< **beθ* 'house' + *yalda* 'birth'). The meaning of the
first element is occasionally completely lost, e.g. *be-dyuθa* (< **beθ* 'house'
+ *dyuθa* 'ink'), which is generally used with the meaning 'ink' rather than
'inkpot', and *be-gwine* 'eyebrows', sing. *be-gwina* (< **beθ-gbīnē* 'space between
the eyebrows').

The plural of a compound nominal is formed by attaching a plural
ending to the end of the phrase rather than to the first noun, viz. *bɛθ-
qorăwaθa* 'cemeteries' and *xa-ramšaθa* 'dinners'. If the basic singular form of

the compound has a plural noun as its second element, the plural form of the phrase has the same form as the singular. This applies to the names of insects and small animals mentioned above, e.g. *ʾazla-kuše* sing. and pl. 'dragon-fly' (*kuša* 'spindle'), and other compounds with this features, e.g. *be-tune* sing. and pl. 'store-room for straw' (*tuna* 'straw').

The gender of a compound nominal phrase is sometimes taken from that of the second noun, e.g. *bra-qala* m. 'echo' (< **braθ* f. 'daughter' + *qala* m. 'voice'), *xa-ramša* f. 'dinner' (< *xal* m. 'eating' + *ramša* f. 'evening'). In some cases, on the other hand, the gender is that of the first noun, e.g. *bɛθa-qora* 'cemetery' m. (*bɛθa* m. + *qawra* f.), *be-ʾɛna* 'forehead' m. (< **beθ* m. + *ʾɛna* f. 'eye'). We could include here the names of insects and small animals such as *ʾazla-kuše* f. 'dragon-fly', *zaqra-qode* f. 'spider', *taqla-šəkke* f. 'spider', the feminine gender of which was presumably taken from the original feminine singular initial element. The insect name *gambəl-ʾəxre* m. 'dung-beetle' (literally: 'roller of dung') is masculine since the first element is derived from a masculine singular participle. Note, however, *jalla nune* m. 'fish-eating bird, stork', (< **šālyaθ nune* 'extractor of fish'?), which is masculine. When the basic singular form of other compounds has a plural noun as its second element and the phrase refers to an inanimate entity, the gender of the phrase is feminine, e.g. *be-tune* f. 'store for straw', *be-qanke* f. 'chancel', *be-təkke* f. 'waist', *be-ḷaye* f. 'upper room', *be-xənxe* f. 'oesophagus', *makrəb čučane* f. 'late snow falling at the beginning of Aðar' (literally: 'the one that angers the magpies'), *mkase qərṭale* f. 'late snow falling at the end of Aðar (literally: the coverer of panniers)'. We may include here also the compound *bəṛ-gare* f. 'plateau', the word *gare* 'roof' being historically a plural, although it is now interpreted as singular (§10.7.).

On account of these features, the two elements in such compound nominal phrases should not be analysed as head noun + dependent noun, as in annexation constructions, but rather as a single head. The first element cannot be considered to be a head since, in principle, it cannot stand independently of the second element and it does not control the number and gender of the phrase.

Certain initial elements are attested recurrently in a series of compound phrases, these include *be-* (< **beθ* 'house of'), *bəṛ* (< **bar* 'son of'), *bra* (< **braθ* 'daughter of'), *mare* (< *mare* 'owner of'), *məl* (< **māl* < **maʿlā* 'eve of' a day or festival, literally 'entrance of'),[1] *sar* (Kurd. 'head'). Full inventories of the compounds containing these elements are given below.

---

[1] The word has the form *māl* in the J. Betanure dialect (Mutzafi, p.c.).

10.17.2. be-

This is used productively to denote the family or household of somebody, e.g. *be-Hɛ̀do* 'the family of Hɛdo' (B3:12), *be-xòni* 'the family of my brother' (B8:9), *be-mámi Čùna* 'the household of my uncle Čuna' (B8:19), *be-šwàwən* 'household of our neighbour' (A5:3), *be-kʸàlo* 'the family of the bride' (B5:4). It does not, in principle, mean 'house' in the sense of a physical building, which is expressed by the noun *bɛθa*. The two may be combined, e.g. *nášət xə́tna y-azìwaˈ l-bēθ-be-kʸàloˈ* 'The relatives of the groom would go to the house of the family of the bride' (B5:1).

The form *be-* is also used in the following fixed phrases, where its meaning has been generalized to being a marker of location, which may be spatial or temporal:

(i) Spatial

be-gwina m.	'eyebrow' (< *beθ-gḇīnē 'space between the eyebrows')
be-ḷaye f.	'upper room'
be-palga m.	'(the place) in the middle' (< *beθ-palgā)
be-qanke f.	'chancel' (*be* + *qanke* 'sanctuary of the church')
be-təkke f.	'waist' (*be* + < *təkke* 'trouser cords')
be-tune f.	'store for straw' (*be* + *tuna* 'straw')
be-xənxe f.	'oesophagus'
be-xtaye f.	'lower room'
be-ʾɛna m.	'forehead' (*be* + *ʾɛna* 'eye')
be-dyuθa f.	'ink' (< * *beθ-dyūṯā* 'inkpot')

In some compounds, the initial element *be-* has contracted or changed its phonetic shape, e.g.

beðulta f.	'sleeve' (*be* + *ʾiða* 'hand' + diminutive suffix §10.8.5.)
beθaθa	'sleeves' (*be* + *ʾiθaθa* 'hands')
barəšta f.	'pillow' (< *beθ* + *reša* 'head'+-*ta*)
bədra f.	'threshing floor' (*be* + *ʾəddəra 'threshing floor')

(ii) Temporal

be-yalda m.	'Christmas' (*be* + *yalda* 'birth')
be-qyamta m.	'Easter' (*be* + *qyamta* 'resurrection')
be-dənxa m.	'Epiphany' (*be* + *dənxa* 'rising, appearance')
be-nisane m.	'Spring' (*be* + *nisən*)

Note the use of plural forms in the second element of several of these compounds, viz. *be-ḷaye, be-xtaye, be-tune, be-təkke, be-nisane.*

10.17.3. baṛ-, bəṛ-

This element originally meant 'son of'. The vowel is regularly attenuated to /ə/ in most forms, but in some words the original /a/ is retained. It is used with various senses. It has a sense that is close to its original meaning of offspring in the phrases:

bəṛ-naša m.	'person, human' (*bəṛ* + *naša* 'person')
bəṛ-gawṛa m.	'young sheep/goat' (*bəṛ* + *gawṛa* 'man')
bəṛ-zăra f.	'seed' (*bəṛ* + *zăra* 'seed')

The following kinship terms are ms. and fs. back-formations of **bar + *xmāhē* 'son of parents-in-law':

barəxmaya	'brother of wife'
barəxmɛθa	'sister of wife'

The sense of offspring is sometimes generalized to denote something similar to the item designated by the second noun, e.g.

bəṛ-gare f.	'plateau' (*bəṛ* + *gare* 'roof')
bəṛ-qatta f.	'type of worm' (*bəṛ* + *qatta* 'stick, handle')
baṛ-xoxa m.	'thorny pod' (*baṛ* + **xoxa* 'thorn')
bəṛ-zoma m.	'cool storeroom' (*bəṛ* + *zoma* 'cool summer-camp')

It may also express possession of some property, e.g.

bəṛ-ʿăqəl	'wise man' (*bəṛ* + *ʿăqəl* 'mind')
baṛ-xəlya	'fennel' (*baṛ* + *xəlya* 'milk, sap')

10.17.4. bra-

In most cases compounds with this element express something that is closely associated with the item designated by the second noun:

bra-ʾiḏa f.	'glove' (*bra* + *ʾiḏa* 'hand')
bra-qala m.	'echo' (*bra* + *qala* 'voice')

bra-qaple m./f.	'babe in arms' (*bra* + *qaple* 'arms')	
bra-qðala m.	'collar' (*bra* + *qðala* 'neck')	
bra-qənna f.	'egg placed in chicken's nest' (*bra* + *qənna* 'nest')	
bra-ṣəppa f.	'thimble' (*bra* +*ṣəppa* 'finger')	
bla-mandora m.	'shaft of a roller' (< *bra* + *mandora*)	
bla-jorta f.	'bladder'	

Note the shift *r* > *l* in the last two words.

10.17.5. mare

mare-ʾarxe	'hospitable man' (*mare* + *ʾarxe* 'guests')
mare-bena	'tolerant person' (*mare* + *bena* 'breath')
mare-janga	'contentious person' (*mare* + *janga* 'fight, contention')

10.17.6. məl-

məl-xošeba	'eve of Sunday = Saturday'
məl-trušeba	'eve of Monday = Sunday'
məl-ṭḷaθušeba	'eve of Tuesday = Monday'
məl-ʾarbušeba	'eve of Wednesday = Tuesday'
məl-xamšušeba	'eve of Thursday = Wednesday'
məl-ruta	'eve of Friday = Thursday'
məl-šabθa	'eve of Saturday = Friday'

10.17.7. sar-

The Kurdish word *sar* 'head' is not used as an independent word in the
C. Barwar dialect, but it occurs in the following compounds. In the first
four the second noun is Aramaic, while in the remainder both elements
are Kurdish:

sar-amoða	'the first child to be baptized'
sar-bari	'my first born child'
sar-dɛra	'the head of a monastery'
sar-qənna	'firstborn (literally: head of the nest)'
sar-bar	'front row'
sar-dər	'lintel'
sar-gera	'(animal) taking the lead'

ADJECTIVES

11.1. Preliminary Remarks

Adjectives of Aramaic stock and loanwords that have been adapted to Aramaic morphology are inflected for gender and number. In addition to the basic masculine singular form they are inflected for the feminine singular and the plural. They are closely related morphologically to nouns. There is, however, a case on syntactic grounds for distinguishing the categories of noun and adjective (see §14.7.). The attributive function of adjectives is reflected not only by their syntactic function of a modifier of a head noun but also by their inflection, in that attributive adjectives, unlike referential nouns, do not exhibit a large diversity of plural endings but generally have only the ending *-e* irrespective of whether the plural noun is masculine or feminine (for some isolated exceptions see §14.7.), e.g.

ʾurza sniqa	'a needy man'
baxta sniqta	'a needy woman'
ʾurze sniqe	'needy men'
baxtaθa sniqe	'needy women'

11.2. Bisyllabic Patterns

(1) *CaCa* (ms.), *CaCta, CaCθa* (fs.), *CaCe* (pl.)

paxa (ms.)	*paxta* (fs.)	*paxe* (pl.)	'insipid'
raba (ms.)	*rabθa* (fs.)	*rabe* (pl.)	'large, numerous'
rama (ms.)	*ramta* (fs.)	*rame* (pl.)	'high'
xaθa (ms.)	*xaθta* (fs.)	*xaθe* (pl.)	'new'

(2) *CoCa* (ms.), *CoCta* (fs.), *CoCe*

goṛa (ms.)	*goṛta* (fs.)	*goṛe* (pl.)	'big'
koma (ms.)	*komta* (fs.)	*kome* (pl.)	'black'
kopa (ms.)	*kopta* (fs.)	*kope* (pl.)	'low'
zora (ms.)	*zorta* (fs.)	*zore* (pl.)	'small'

The /o/ vowel in the fs. forms of this pattern is often centralized to the region of [ʊ], e.g. *zorta* [zʊɾtæ]. This tends not to occur, however, in the form *goṛta*, in which the /o/ generally remains in a back position due to the adjacent pharyngalized /ṛ/.

(3) *CCaCa* (ms.), *CCaCta* (fs.), *CCaCe* (pl.)
    xwara (ms.)   *xwarta* (fs.)   *xware* (pl.)   'white'

(4) *CCiCa* (ms.), *CCiCta* (fs.), *CCiCe* (pl.)
Most adjectives with this pattern are in origin resultative participles of stem I verbal roots:

bliga (ms.)	*bligta* (fs.)	*blige* (pl.)	'busy'
brika (ms.)	*brikta* (fs.)	*brike* (pl.)	'kneeling'
briza (ms.)	*brizta* (fs.)	*brize* (pl.)	'dry'
dwira (ms.)	*dwirta* (fs.)	*dwire* (pl.)	'closed'
gðila (ms.)	*gðilta* (fs.)	*gðile* (pl.)	'frozen'
kčixa (ms.)	*kčixta* (fs.)	*kčixe* (pl.)	'tired'
kriba (ms.)	*kribta* (fs.)	*kribe* (pl.)	'angry'
pčila (ms.)	*pčilta* (fs.)	*pčile* (pl.)	'bendy'
prisa (ms.)	*prista* (fs.)	*prise* (pl.)	'spread, famous'
pšima (ms.)	*pšimta* (fs.)	*pšime* (pl.)	'sad'
pṣixa (ms.)	*pṣixta* (fs.)	*pṣixe* (pl.)	'happy'
sniqa (ms.)	*sniqta* (fs.)	*sniqe* (pl.)	'needy'
špina (ms.)	*špinta* (fs.)	*špine* (pl.)	'level (ground)'
spisa (ms.)	*spista* (fs.)	*spise* (pl.)	'worn out, rotten'
šṭixa (ms.)	*šṭixta* (fs.)	*šṭixe* (pl.)	'flat'
tpina (ms.)	*tpinta* (fs.)	*tpine* (pl.)	'mouldy'
ṭrisa (ms.)	*ṭrista* (fs.)	*ṭrise* (pl.)	'fat'
xlima (ms.)	*xlimta* (fs.)	*xlime* (pl.)	'thick'
xliṣa (ms.)	*xliṣta* (fs.)	*xliṣe* (pl.)	'tight'
xmiqa (ms.)	*xmiqta* (fs.)	*xmiqe* (pl.)	'rotten'
xšiwa (ms.)	*xšiwta* (fs.)	*xšiwe* (pl.)	'respected'

(5) *CiCa* (ms.), *CiCta* (fs.), *CiCe* (pl.)
This is the equivalent to pattern (4) from middle /y/ roots or initial /ʾ/ roots:

ʾiqa (ms.)	*ʾiqta* (fs.)	*ʾiqe* (pl.)	'narrow'
dipa (ms.)	*dipta* (fs.)	*dipe* (pl.)	'bent'

miθa (ms.)	*miθta* (fs.)	*miθe* (pl.)	'dead'
nixa (ms.)	*nixta* (fs.)	*nixe* (pl.)	'slow'
p̌ixa (ms.)	*p̌ixta* (fs.)	*p̌ixe* (pl.)	'cool'
qixa (ms.)	*qixta* (fs.)	*qixe* (pl.)	'faded'
rixa (ms.)	*rixta* (fs.)	*rixe* (pl.)	'long'
šima (ms.)	*šimta* (fs.)	*šime* (pl.)	'huge'
šipa (ms.)	*šipta* (fs.)	*šipe* (pl.)	'worn down, erased'

We should include here the form *qirθa* 'barren, infertile' which occurs only in the fs. and pl., e.g. *tawərta qirθa* 'a barren cow', *tawriyaθa qire* 'barren cows'.

(6) *CəCya* (ms.), *CCiθa* (fs.), *CəCye* (pl.)
This is equivalent to pattern (4) from final /y/ roots or final /ʾ/ roots that have adopted the pattern of final /y/ roots:

dəxya (ms.)	*dxiθa* (fs.)	*dəxye* (pl.)	'pure'
kəlya (ms.)	*kliθa* (fs.)	*kəlye* (pl.)	'standing'
kərya (ms.)	*kriθa* (fs.)	*kərye* (pl.)	'short'
ṃəlya (ms.)	*ṃliθa* (fs.)	*ṃəlye* (pl.)	'full'
mərya (ms.)	*mriθa* (fs.)	*mərye* (pl.)	'ill'
məṭya (ms.)	*mṭiθa* (fs.)	*məṭye* (pl.)	'ripe'
pərya (ms.)	*priθa* (fs.)	*pərye* (pl.)	'much, abundant'
pəθya (ms.)	*pθiθa* (fs.)	*pəθye* (pl.)	'wide'
rəmya (ms.)	*rmiθa* (fs.)	*rəmye* (pl.)	'woeful'
rəpya (ms.)	*rpiθa* (fs.)	*rəpye* (pl.)	'lazy'
səmya (ms.)	*smiθa* (fs.)	*səmye* (pl.)	'blind'
ṣəpya (ms.)	*ṣpiθa* (fs.)	*ṣəpye* (pl.)	'pure'
tərya (ms.)	*triθa* (fs.)	*tərye* (pl.)	'wet'
xəðya (ms.)	*xðiθa* (fs.)	*xəðye* (pl.)	'joyful, happy'
xəlya (ms.)	*xliθa* (fs.)	*xəlye* (pl.)	'sweet'

When the medial radical is /w/, the vowel in the first syllable of the ms. and pl. forms is generally rounded with the quality of /u/ by assimilation, e.g.

| *quwya* (ms.) | *qwiθa* (fs.) | *quwye* (pl.) | 'strong, tough' |
| *ṣuwya* (ms.) | *ṣwiθa* (fs.) | *ṣuwye* (pl.) | 'hard' |

When the initial radical is /ʾ/, this is elided in the fs. form, e.g.

ʾəṣya (ms.)   ṣiθa (fs.)   ʾəṣye (pl.)   'stuck, trapped'

(7) *Ciya* (ms.), *Ciθa* (fs.), *Ciye* (pl.)
This is equivalent to pattern (4) from final /y/ roots that had a laryngal
as their medial radical at some stage of development (§8.12.10.) or medial
/y/ and final /ʾ/ roots (§8.12.7.), e.g.

čiya (ms.)   čiθa (fs.)   čiye (pl.)   'tired'
ṣiya (ms.)   ṣiθa (fs.)   ṣiye (pl.)   'stuck, trapped'
qiya (ms.)   qiθa (fs.)   qiye (pl.)   'blunt'

(8) *CCiya* (ms.), *CCita* (fs.), *CCiye* (pl.)
This is equivalent to pattern (4) from final /ʾ/ roots (§8.12.2.), e.g.

mriya (ms.)   mrita (fs.)   mriye (pl.)   'ill'
ṭliya (ms.)   ṭlita (fs.)   ṭliye (pl.)   'asleep'
zliya (ms.)   zlita (fs.)   zliye (pl.)   'cracked'

(9) *CCoCa* (ms.), *CCoCta* (fs.), *CCoCe* (pl.)
glola (ms.)   glolta (fs.)   glole (pl.)   'round'
prora (ms.)   prorta (fs.)   prore (pl.)   'open (space)'
pṭoxa (ms.)   pṭoxta (fs.)   pṭoxe (pl.)   'wide'
rpoxa (ms.)   rpoxta (fs.)   rpoxe (pl.)   'loose'
smoqa (ms.)   smoqta (fs.)   smoqe (pl.)   'red'
xloṣa (ms.)   xloṣta (fs.)   xloṣe (pl.)   'tight'

The /o/ vowel in the fs. forms of this pattern is often centralized to the
region of [ʊ], e.g. *smoqta* [smʊqtɑ]. Some roots may form adjectives with
both this pattern and also the resultative participle pattern *CCiCa*, e.g.
xliṣa 'tight', *xloṣa* 'tight'. There is a slight difference in sense, in that *xliṣa*
denotes the final resultant state of the action of tightening whereas *xloṣa*
denotes an inherent, charateristic property of an entity.

(10) *Cuwa* (ms.), *Cuta* (fs.), *Cuwe* (pl.)
čuwa (ms.)   čuta (fs.)   čuwe (pl.)   'smooth'

This appears to be equivalent to pattern (9). The historical root of *čuwa*
is likely to be *ṣ̌ʿoʿa (ms.), *ṣ̌ʿoʿta (fs.), *ṣ̌ʿoʿe (pl.). The original pharyngals

have been elided. The two vowels in the ms. and pl. forms are separated by the glide /w/, which probably brought about the raising of the vowel to /u/. In the fs. form the original presence of the pharyngal before the feminine ending prevented the /t/ of this ending from being pronounced as a fricative.

(11) *Caya* (ms.), *Cεθa* (fs.), *Caye* (pl.)
   xaya (ms.)   *xεθa* (fs.)   *xaye* (pl.)   'living, alive'

The fs. form *xεθa* is used as an attribute of a woman who is giving birth, or has recently given birth, e.g. *baxta xεθa*.

11.3. TRISYLLABIC PATTERNS

(1) *CaCiCa* (ms.), *CaCiCta* (fs.), *CaCiCe* (pl.)
This pattern is derived historically from **CaCCiCa* with gemination of the middle radical. The vowel in the first syllable is in principle pronounced long, in accordance with the normal rules of vowel lengthening in pretonic open syllables (§2.2.1.4.), although the duration is reduced in fast speech.

ʾ*atiqa* (ms.)	ʾ*atiqta* (fs.)	ʾ*atiqe* (pl.)	'ancient'
basima (ms.)	*basimta* (fs.)	*basime* (pl.)	'pleasant'
baṭila (ms.)	*baṭilta* (fs.)	*baṭile* (pl.)	'idle'
dalila (ms.)	*dalilta* (fs.)	*dalile* (pl.)	'thin, fine'
marira (ms.)	*marirta* (fs.)	*marire* (pl.)	'bitter'
naqiða (ms.)	*naqiðta* (fs.)	*naqiðe* (pl.)	'thin'
qarira (ms.)	*qarirta* (fs.)	*qarire* (pl.)	'cold, cool'
rakixa (ms.)	*rakixta* (fs.)	*rakixe* (pl.)	'soft'
raqiqa (ms.)	*raqiqta* (fs.)	*raqiqe* (pl.)	'thin'
talila (ms.)	*talilta* (fs.)	*talile* (pl.)	'wet'
sapiqa (ms.)	*sapiqta* (fs.)	*sapiqe* (pl.)	'empty'
ṣalila (ms.)	*ṣalilta* (fs.)	*ṣalile* (pl.)	'sober'
šapira (ms.)	*šapirta* (fs.)	*šapire* (pl.)	'beautiful'
šarira (ms.)	*šarirta* (fs.)	*šarire* (pl.)	'true, truthful'
šaxina (ms.)	*šaxinta* (fs.)	*šaxine* (pl.)	'hot'
xamima (ms.)	*xamimta* (fs.)	*xamime* (pl.)	'hot'

In the form *qaddiša* 'holy' the original gemination is usually preserved due to the influence of the language of the church liturgy, which is based on literary Syriac.

(2) *CaCuCa* (ms.), *CaCuCta* (fs.), *CaCuCe* (pl.)
This also is derived historically from a pattern with an originally geminated middle radical (**CaCCuCa*). Adjectives of this pattern typically denote permanent, characteristic properties:

ʾamuqa (ms.)	ʾamuqta (fs.)	ʾamuqe (pl.)	'deep'
ʾamura (ms.)	ʾamurta (fs.)	ʾamure (pl.)	'dense'
bahura (ms.)	bahurta (fs.)	bahure (pl.)	'shining'
baruza (ms.)	baruzta (fs.)	baruze (pl.)	'dry'
gamura (ms.)	gamurta (fs.)	gamure (pl.)	'sour'
jaruṭa (ms.)	jaruṭṭa (fs.)	jaruṭe (pl.)	'slippery'
paruða (ms.)	paruðta (fs.)	paruðe (pl.)	'coarse (grain)'
paruxa (ms.)	paruxta (fs.)	paruxe (pl.)	'able to fly'
qalula (ms.)	qalulta (fs.)	qalule (pl.)	'light, quick'
qaruṭa (ms.)	qaruṭṭa (fs.)	qaruṭe (pl.)	'tough (food)'
rapuxa (ms.)	rapuxta (fs.)	rapuxe (pl.)	'loose'
ṣarupa (ms.)	ṣarupta (fs.)	ṣarupe (pl.)	'smarting'
tawuna (ms.)	tawunta (fs.)	tawune (pl.)	'lukewarm'
xamuṣa (ms.)	xamuṣta (fs.)	xamuṣe (pl.)	'sour'
xarupa (ms.)	xarupta (fs.)	xarupe (pl.)	'sharp'
yaðuwa (ms.)	yaðuwta (fs.)	yaðuwe (pl.)	'knowledgeable'
yaqura (ms.)	yaqurta (fs.)	yaqure (pl.)	'heavy'

Some roots may form adjectives with both this pattern and also the resultative participle pattern *CCiCa*, e.g. *briza* 'dry', *baruza* 'dry'. The form *briza* denotes the final resultant state of the action of drying whereas *baruza* denotes an inherent, charateristic property of an entity. This can be interpreted as a difference of degrees of intensity, in that *briza* denotes 'completely dried out' whereas *baruza* is used as an attribute of something that is 'habitually dry' but not necessarily completely dried out at any specific point in time.

(3) *CaCoCa* (ms.), *CaCoCta* (fs.), *CaCoCe* (pl.)
Adjectives of this pattern typically denote permanent, characteristic properties:

karoba (ms.)	*karobta* (fs.)	*karobe* (pl.)	'angry'
laxoma (ms.)	*laxomta* (fs.)	*laxome* (pl.)	'handsome'
mayoθa (ms.)	*mayoθta* (fs.)	*mayoθe* (pl.)	'mortal'
payoxa (ms.)	*payoxta* (fs.)	*payoxe* (pl.)	'cool'
naxopa	*naxopta* (fs.)	*naxope* (pl.)	'shy'
paroxa	*paroxta* (fs.)	*paroxe* (pl.)	'flying'

The */o/* vowel in the fs. forms of this pattern is often centralized to the region of [ʊ], e.g. *karobta* [kæːrʊbtæ].

11.4. Adjectives with Derivative Affixes

11.4.1. -ana *(ms.)*, -anta *(fs.)*, -ane *(pl.)*

This ending is used productively to form attributive adjectives from nouns, e.g.

ʾəršana	'mirky'	< *ʾərša* 'mirkiness'
ʾɛwana	'cloudy'	< *ʾɛwa* 'cloud'
beṛana	'light'	< *beṛa* 'light'
dəmmana	'bloody'	< *dəmma* 'blood'
denana	'owing'	< *dena* 'debt'
didwana	'full of flies'	< *didwa* 'fly'
dunana	'fatty'	< *duna* 'fat'
gazəndana	'moaning'	< *gazənda* 'complaint'
hawnana	'clever'	< *hawna* 'intelligence'
lebana	'tricky'	< *leba* 'trick'
ləbbana	'brave'	< *ləbba* 'heart'
mărana	'ill'	< *măra* 'illness'
məlxana	'salty'	< *məlxa* 'salt'
milana	'blue/green'	< *mila* 'blue/green colour'
miyana	'watery, wet'	< *miya* 'water'
puryana	'light'	< *purya* 'light (noun)'
raxmana	'merciful'	< *raxme* 'mercy'
rəqqiyana	'stubborn'	< *rəqqi* 'stubbornness'
šawbana	'ill with a cold'	< *šawba* 'head-cold'
šaθana	'feverish'	< *šaθa* 'fever'
šeðana	'mad'	< *šeðe* 'demons'
šəklana	'beautiful'	< *šəkla* 'form'
šəxtana	'dirty'	< *šəxta* 'dirt'

šumana	'badly behaved'	< *šumuθa* 'bad behaviour'
ṭemana	'valuable'	< *ṭema* 'value'
xaššana	'sad'	< *xašša* 'sadness'
xɛlana	'strong'	< *xɛla* 'strength'
xəlyana	'producing milk'	< *xəlya* 'milk'
xəmmana	'hot'	< *xəmma* 'heat'
xumθana	'angry'	< *xumθa* 'anger'
xuyana	'dark'	< *xuya* 'darkness'
zduwana	'fearful'	< *zduθa* 'fear'

The suffix is attached productively to the present base of verbs to form active participles (§10.8.1.). Sometimes these forms are used primarily as attributes rather than nouns, e.g.

ṃalyana	'enough'	< *ṃly* I 'to fill'
malyəzana	'hasty'	< *m-lyz* III 'to hasten'
maqhərana	'sad'	< *m-qhr* III 'to sadden'
masyana	'capable'	< *msy* I 'to be able'
maxjəlana	'terrifying'	< *m-xjl* III 'to terrify'

In some cases the ending is attached to an existing adjective. The forms with *-ana* in principle express permanent, characteristic properties, whereas the forms without the suffix can be regarded as unmarked with regard to permanence, in that they may denote a property of an entity on one particular occasion or a permanent property, e.g.

čuwana	'smooth'	< *čuwa* 'smooth'
kopana	'low'	< *kopa* 'low'
quwyana	'tough'	< *quwya* 'strong, tough'
ramana	'high'	< *rama* 'high'
zawdana	'excessive'	< *zawda* 'major, largest'
zalmana	'unjust'	< *zaləm* 'unjust'

The base of the word may be a Kurdish loanword, e.g.

gežana	'dizzy'	< Kurd. gêj

There is a residue of adjectives with this affix that do not have a base that is a functional word in the dialect, e.g.

nimana	'damp'
šeðana	'mad'
šəṭrana	'beautiful'
xaršana	'non-fruit-bearing (tree)'
xarsupana	'rough'

Verbs are derived from some adjectives with the *-ana* ending. In such cases the verbs are quadriliteral with /n/ as the fourth radical, e.g. *m-xršn* 'to become barren, non-fruit-bearing', *m-ʾršn* 'to become mirky', *m-šyðn* 'to go mad', *m-gyžn* 'to become dizzy'.

11.4.2. -aya *(ms.)*, -ɛθa *(fs.)*, -aye *(pl.)*

In some cases the base form of these adjectives is used in the dialect as an independent word. These base forms are either nouns or adverbs, e.g.

čappaya	'left-handed'	< *čappe* 'left'
drangaya	'late'	< *drang* 'late (adverb)'
rangaya	'colourful'	< *rang* 'colour'
rešaya	'first class, excellent'	< *reša* 'head'
šəmšaya	'sunny'	< *šəmša* 'sun'
šɛnaya	'tame'	< *šɛna* 'tameness'
yamnaya	'right-handed'	< *yamne* 'right'

The *-aya* affix is combined with the *-ana* affix in some such forms, e.g.

ʾetanaya	'ecclesiastical'	< *ʾeta* 'church'
tašʿiθanaya	'historical'	< *tašʿiθa* 'history'

In the majority of cases the *-aya* ending can be identified as an affix on etymological grounds, but the base form cannot stand alone as a separate word, e.g.

ʾəḷḷaya, ḷaya	'upper'
naxraya	'foreign, strange'
qamaya	'first'
suraya	'Assyrian Christian'
šluxaya	'naked'
xaraya	'last'
xəpyaya	'barefoot'
xtaya	'lower'

Gentilic forms with the *-aya* ending, such as *suraya* 'Christian', are classi-
fied as nouns (§10.8.2.). When qualifying another noun in constructions
such as *gawṛa suraya* 'a Christian man', they are best interpreted as nouns
in apposition rather than adjectives (§14.7.).

11.4.3. -naya *(ms.)*, -nɛθa *(fs.)*, -naye *(pl.)*

The ending *-naya* also is commonly used in gentilic nouns (§10.8.2.),
e.g. *durnaya* 'a man from Dure'. Within the category of adjectives, it is
added to those denoting colours in order to give them the connotation
of approximation, e.g.

gawrnaya	'greyish'	< *gawra*
kasknaya	'greenish'	< *kaska*
komnaya	'blackish'	< *koma*
milannaya	'bluish'	< *milana*
smoqnaya	'reddish'	< *smoqa*
xwarnaya	'whitish'	< *xwara*
zarnaya	'yellowish'	< *zăra*

11.4.4. *Adjectival Participles with the* m- *Prefix*

Active and resultative participles of stems II and III from some verbal
roots and also those derived from some quadriliteral verbs are used pre-
dominantly as adjectives rather than referentially as nouns. These have
an *m-* prefix in their pattern. In the stem II and quadriliteral participles,
in which the *m-* is in contact with the initial radical, the prefix is often
elided, unless the root begins with the laryngal /ʾ/, e.g.

Stem II
mǝʾajbana	'amazing'
mbaxlana ~ baxlana	'envious'
mšuṭra	'spoilt (child)'

Stem III
makǝčxana	'tiring'
mapšǝmana	'sad'
mugǝdla	'frozen'

Quadriliteral
>   *mparmyana ~ parmyana*   'knowledgeable, wise'
>   *mhumna ~ humna*   'faithful, trustworthy'

11.5. XENA 'OTHER'

The adjective *xena* 'other' exhibits a certain irregularity, in that the */n/* of the base is elided with the attachment of the *-ta* ending in the feminine singular form. Note also the free alternation between forms with */r/* after the initial consonant and those lacking it. The forms with */r/* preserve a more archaic form:

>   *xena ~ xrena* (ms.)
>   *xeta ~ xreta* (fs.)
>   *xene ~ xrene* (pl.)

11.6. INVARIABLE ARAMAIC ADJECTIVES

A few adjectives of Aramaic stock are invariable in inflection. These are in origin nouns, which have come to be used as adjectives (§14.7.). They include the following:

>   *rəḥqa*   'distant'
>   *qurba*   'near, nearby'
>   *xərba*   'bad'
>   *šɛna*   'tame'

Examples:
>   *bɛθa rəḥqa*   'a distant house'
>   *maθa rəḥqa*   'a distant village'
>   *maθwaθa rəḥqa*   'distant villages'
>
>   *bɛθa qurba*   'a nearby house'
>   *maθa qurba*   'a nearby village'
>   *maθwaθa qurba*   'nearby villages'
>
>   *ʾurza xərba*   'a bad man'
>   *baxta xərba*   'a bad woman'
>   *naše xərba*   'bad people'

susa šena	'a tame horse'
susta šena	'a tame mare'
susawaθa šena	'tame horses'

The adjective *ṭawa* 'good' is invariable in the singular, in that it does not take a feminine inflection, but it takes the usual plural inflection *-e*, as is seen in the following examples:

(1) *ʾáwwa náša sáwa rába ṭàwa-wewa¹* 'This old man was very good' (A15:19)
(2) *ramšéxu ṭàwa¹* 'Good evening (*ramša* f.)'
(3) *nə́mu ʾánna là-biš ṭáwe m-áwwa Gozáli xóni!¹* Surely they are not better than Gozali, my brother! (A8:72)

11.7. Compound Forms

Several attributive phrases are formed by combining a preposition with a noun. These include phrases introduced by *b-* 'with' and those introdcued by *be-* 'without':

(i) *b-*

b-xamme	'sad'
b-xaye	'alive'
b-ṭali	'ill (with a disease)'
b-šrara	'truthful'
b-pəlxana	'busy, hard-working'

The adjectival form *šarira* is synonymous with *b-šrara*. There is not, however, always complete semantic overlap between the compound adjectival form and a corresponding simple form. The compound form *b-xaye* 'alive', for example, is used for both male and female referents, whereas the simple fs. form *xɛθa* does not mean 'alive' but rather 'giving birth' or 'having recently given birth'.

(ii) *be-*

be-băxət	'lacking in honour, dishonest'
be-nxəpθa	'shameless'

11.8. ADAPTED LOANS

Some adjectives that are loanwords have been fully adapted to Aramaic
inflectional morphology, e.g.

zangina (ms.)	*zanginta* (fs.)	*zangine* (pl.)	'rich'	< Turk. zengin
fãqira (ms.)	*fãqirta* (fs.)	*fãqire* (pl.)	'poor'	< Arab. *faqīr*
băxila (ms.)	*băxilta* (fs.)	*băxile* (pl.)	'miserly'	< Arab. *baxīl*

11.9. PARTIALLY ADAPTED LOANS

Some adjectives that are loaned from Kurdish are inflected with the
Aramaic ms. ending *-a* and pl. ending *-e*, but in the fs. have the end-
ing *-e*, which is in origin the Kurdish feminine singular oblique nominal
inflection *-ê*, e.g.

gawra (ms.)	*gawre* (fs.)	*gawre* (pl.)	'grey'	< Kurd. gewr
kăčăla (ms.)	*kăčăle* (fs.)	*kăčăle* (pl.)	'bald'	< Kurd. keçel
karra (ms.)	*karre* (fs.)	*karre* (pl.)	'deaf'	< Kurd. ker̂
kaska (ms.)	*kaske* (fs.)	*kaske* (pl.)	'green'	< Kurd. kesk
ḳora (ms.)	*ḳore* (fs.)	*ḳore* (pl.)	'blind'	< Kurd. kor
lala (ms.)	*lale* (fs.)	*lale* (pl.)	'dumb'	< Kurd. lal
laṭṭa (ms.)	*laṭṭe* (fs.)	*laṭṭe* (pl.)	'shallow'	< Kurd. lat ('flat')
lənga (ms.)	*lənge* (fs.)	*lənge* (pl.)	'crippled'	< Kurd. ling ('leg')
marda (ms.)	*marde* (fs.)	*marde* (pl.)	'generous'	< Kurd. merd
qopa (ms.)	*qope* (fs.)	*qope* (pl.)	'hunchbacked'	< Kurd. qop
qutta (ms.)	*qutte* (fs.)	*qutte* (pl.)	'tailless'	< Kurd. qut
sarḳola (ms.)	*sarḳole* (fs.)	*sarḳole* (pl.)	'bare-headed'	< Kurd. ser-kol
zăra (ms.)	*zăre* (fs.)	*zăre* (pl.)	'yellow'	< Kurd. zer
zaxma (ms.)	*zaxme* (fs.)	*zaxme* (pl.)	'huge, mighty'	< Kurd. zexm

A few loaned adjectives retain the source form without inflection in the
ms. and fs. but take the Aramaic plural inflection *-e*, e.g.

krēt (ms.)	*krēt* (fs.)	*krete* (pl.)	'bad'	< Kurd. kirêt
krehət (ms.)	*krehət* (fs.)	*krehətte* (pl.)	'bad'	variant of *krēt*
saqqaṭ (ms.)	*saqqaṭ* (fs.)	*saqqaṭe* (pl.)	'crippled'	< Kurd. seqqet

sāx (ms.)	*sāx* (fs.)	*saxe* (pl.)	'healthy, alive'	< Kurd. sax
taza (ms.)	*taza* (fs.)	*taze* (pl.)	'beautiful'	< Kurd. taze

11.10. UNADAPTED LOANS

Several loaned adjectives are left unadapted without Aramaic morpho-logical endings and remain invariable for number or gender. Examples of such adjectives include:

ʾarzən	'cheap'
ʾaṣi	'difficult (terrain)'
ʾašəq	'in love'
ʾəškǎra	'clear'
bista	'familiar (with)'
brindar	'injured'
dūs	'right, just'
gǎrən	'expensive'
həšyər	'careful'
maqul	'acceptable, respectable'
qǎləs	'miserly'
sǎnayi	'easy'
šarəz	'familiar, knowledgeable'
tambəl	'lazy'
zǎbun	'weak'

NUMERALS

12.1. Cardinals

12.1.1. *Numerals 1–10*

	With masculine noun	With feminine noun
1	*xa*	*ða*
2	*tre*	*tə́rte ~ tə́tte*
3	*ṭláθa ~ ṭla*	*ṭə́lləθ*
4	*ʾárba ~ ʾárpa*	*ʾárbe*
5	*xámša*	*xámməš*
6	*ʾə́šta*	*ʾə́ššət*
7	*šáwwa*	*ʾə́šwa*
8	*tmánya*	*tmáne*
9	*ʾə́čča*	*ʾə́čča*
10	*ʾə́ṣra*	*ʾə́ssər*

Examples: *xa ʾurza* 'one man', *ða baxta* 'one woman'; *tre ʾurze* 'two men', *tərte baxtaθa* 'two women'; *ṭlaθa ʾurze ~ ṭla ʾurze* 'three men', *ṭə́lləθ baxtaθa* 'three women', etc.

The feminine form *ða* has developed from an original **ḥðā* by elision of the initial consonant. The feminine forms *ṭə́lləθ* and *ʾəssər* have developed from original monosyllabic forms **tlāθ* and **ʕar* by the insertion of a stressed epenthetic vowel between the first two consonants, as is the case with forms such as *də́mma < *dmā* 'blood', *šə́nne < *šnē* 'years' (§3.3.3). The development of the masculine forms *ʾárba* and *ʾárpa* is **ʾarbʾa < *ʾarbʿā*. The /p/ in *ʾarpa* has arisen by the devoicing of /b/ due to contact with the laryngal (**ʾarbʾa > ʾarpa*), as in *p-aqle* 'by foot (< **b-ʿaqlē*). The feminine form *ʾárbe* derives from **ʾárbaʿ*. An intermediary stage would have been **ʾárbəʾ*, in which the /a/ of the final syllable was attenuated. The /e/ in the final syllable of the form *ʾárbe* has developed by the lengthening of the attenuated vowel after the elision of the final laryngal. The feminine form *ʾə́ššət* has resulted from the stressing of a prosthetic vowel, which was attached

to the form by analogy with the masculine *ʾə̀šta*. The development of the masculine form *šáwwa* is < **šā́wa* < **šaw'a* < **šaḇ'ā*, with the secondary gemination of the /w/ after the stressed short /a/ vowel. The feminine form *ʾə̀šwa* has developed from an original **šḇa'* by the acquisition of a stressed prosthetic vowel. Unlike *ʾarbe* the final vowel remains /a/, probably since it was stressed in the original monosyllabic form *šḇa'*.

The masculine form *ʾə̀čča* is distinguished from the feminine form *ʾə̀čča* only by the emphatic articulation of the medial consonants. As is commonly the case with such minimal pairs (§1.2.3.), the pharyngalization of the emphatic /č̣č̣/ is sometimes weakened and the two words are distinguished by a difference in the general setting of the body of the tongue rather than the position of the root of the tongue. The vowel segments are more susceptible to such a difference in setting, with the result that the most perceptible distinction between *ʾə̀čča* and *ʾə̀čča* is in the relative position of the vowels, which is more retracted in the former than in the latter, i.e. [ˈətʃtʃɑ] vs. [ˈɪtʃtʃa].

Although distinct masculine and feminine forms exist for the cardinal numerals, there is an incipient tendency to use the masculine forms with all nouns. As a result, there is an inconsistent use of the feminine forms, even within the speech of an individual informant, e.g.

> *ða-màθa* 'a village' (A48:1)—*xa-máθa* (A15:10)
> *tə́rte bnàθa* 'two girls' (A25:1)—*tre-bnàθa* (A24:20)
> *ṭə́ḷḷəθ gàye* 'three times' (A28:36)—*ṭḷà-gaye* (A24:47)

The usage of the feminine forms is rarer for the cardinals 4–10 than for the cardinals 1–3.

When the cardinals are used without a following counted nominal, the monosyllabic numerals *xa* / *ða* and *tre* often have the extended forms *xáʾa* / *ðáʾa* and *treʾe*. In these circumstances the long form *ṭḷáθa* is preferred to the short form *ṭḷa*. If the cardinals are used for counting in a series without reference to a specific referent, only the masculine forms are used, e.g. *xáʾa, tre, ṭḷáθa, ʾárba*, etc.

When the cardinal *xa* occurs in predicative position with an enclitic copula, it sometimes has the form *xat*. The final /t/, which may be a reflex of the original final consonant of the numeral (*ḥaḏ), acts as a buffer between its vowel and that of the copula. It is pronounced unaspirated before the following vowel, e.g.

(1) *ʾána-w ʾáw xàṭ-ix*| 'What I and he are [is] one (= We are the same) (A30:55)

The fact that it has the stop /t/ rather than the expected fricative /ð/ (< *haḏ) may be due to a false morphological division whereby the sequence *haḏ-ile was analysed as *ḥa-d-ile, the original *ḏ being interpreted as the subordinating particle. If this *xat* form is not used, the numeral has the long form *xaʾa* in predicative position, e.g. *xàʾɛla*| 'They are one'.[1] The use of the form *xat* has been extended to predications with the past copula and the verb *hwy*, e.g. *xàt-wɛwa*| 'They were one', *xàt bṭ-áwa* 'They will be one'.

12.1.2. *Numerals 11–19*

Cardinals from 11 onwards have one invariable form, which is used with nouns of both genders. The numerals 11–19 are as follows:

11	*xadássər ~ xadéssər*
12	*trássər ~ tréssər*
13	*təltássər*
14	*ʾarbássər*
15	*xamšássər*
16	*ʾəštássər*
17	*šwássər*
18	*tmanássər ~ tmanéssər*
19	*ʾəččássər*

The /s/ in the 'ten' component of these forms is geminated. The historical forms *treʾsar*, *tlaθaʾsar* etc. would be expected to develop into *trésər*, *təltásər*. The gemination may have arisen by analogy with the feminine form *ʾəssər*. Another possible explanation is that these forms were treated as stress groups consisting of two words, i.e. *təltá-ssər*, *ʾarbá-ssər* etc. When numerals 1–10 ending in *-a* are combined with the counted nominal in a stress group and the stress is placed on the final syllable of the numeral, the stressed vowel is generally not lengthened, e.g. *xá-naša* (A1:4), *ðá-kista* (A4:15), *ʾəštá-maθwaθa* (B1:3), *šawwá-šənne* (A25:23). This may be the reason why the stressed /a/ in forms such as *təltá-ssər*, *ʾarbá-ssər* remained short. The gemination of the /s/ would have developed secondarily after the stressed short vowel. This gemination could have been extended to the

---

[1] Some NENA dialects block contraction of a diphthong in this context without the buffer consonant, e.g. J. Urmi *xaylu* 'They are one', in which the /ay/ diphthong does not undergo the usual contraction to /e/; cf. Garbell (1965: 64).

forms *xadə́ssər, trə́ssər* and *tmanə́ssər* by analogy. In slow speech the latter numerals have /e/ in the stressed syllable, viz. *xadéssər, tréssər, tmanéssər*.

The stop /d/ after the vowel in *xadə́ssər* probably developed from an originally geminated *dd. This seems to have been secondarily geminated in order to allow an /a/ vowel to follow the initial letter, presumably by analogy with the form for *xa* 'one', i.e. *xadə́ssər* < *xadə́ʾsər* < *xaddə́ʾsər < *ḥʾðaʿsar*.

12.1.3. *Tens*

20	*ʾə́sri*
30	*ṭḷáθi*
40	*ʾárbi*
50	*xámši*
60	*ʾə́šti*
70	*šáwwi*
80	*tmáni*
90	*ʾə́ččî*

12.1.4. *Hundreds*

100	*ʾə́mma*
200	*tré ʾə́mma ~ tré-mma*
300	*ṭḷáθa ʾə́mma ~ ṭḷaθá-mma, ṭḷá ʾə́mma ~ ṭḷá-mma*
400	*ʾárba ʾə́mma ~ ʾarbá-mma*, etc.

In natural speech the phrases for 200 and above are usually combined into a single stress group and the initial *ʾə-* of *ʾə́mma* is elided. In these phrases the numeral preceding *ʾə́mma* is a masculine form numeral, although historically *ʾə́mma* is feminine. When it is combined with another numeral, the noun remains in the singular form. When standing independently and designating an unspecified number of 'hundreds', it has the plural form *ʾə́mmaye*.

12.1.5. *Thousands*

1,000	*ʾalpa*
2,000	*tré ʾálpe*

3,000	*ṭláθa ʾálpe*
4,000	*ʾárba ʾálpe*, etc.

Unspecified plural: *ʾalpaye.*

12.1.6. *Combination of Numerals*

Cardinals are combined by the conjunction *w* in descending order, e.g. *ʾálpa-w ʾə̀tà-mma šə́nne* 'one thousand six-hundred years' (B1:7), *ʾə́šti-w xàmša šére* 'sixty-five poems' (B1:15), *ʾə́mma-w xamšî̀-fə̀lse* 'a hundred and fifty fils' (B1:20), *ʾálpa-w ʾə̀ččá-mma-w ʾə́šti-w tré* '1962'.

12.1.7. *Cardinals with Pronominal Suffixes*

Distinct forms of the cardinals 2-10 are used when they are combined with a pronominal suffix. There are two alternative forms for the numeral '2' in these constructions:

2	*tərwə́θnən*	'the two of us'
	tərwəθnéxu	'the two of you'
	tərwəθnéy	'the two of them'
	tráθnən	'the two of us'
	traθnéxu	'the two of you'
	traθnéy	'the two of them'
3	*ṭláθnən*	'the three of us'
	ṭlaθnéxu	'the three of you'
	ṭlaθnéy	'the three of them'
4	*ʾarbáθnən*	'the four of us'
	ʾarbaθnéxu	'the four of you'
	ʾarbaθnéy	'the four of them'
5	*xamšáθnən*	'the five of us'
	xamšaθnéxu	'the five of you'
	xamšaθnéy	'the five of them'

6	ʾəštáθnən	'the six of us'
	ʾəštaθnéxu	'the six of you'
	ʾəštaθnéy	'the six of them'

7	šawwáθnən	'the seven of us'
	šawwaθnéxu	'the seven of you'
	šawwaθnéy	'the seven of them'

8	tmanyáθnən	'the eight of us'
	tmanyaθnéxu	'the eight of you'
	tmanyaθnéy	'the eight of them'

9	ʾəččáθnən	'the nine of us'
	ʾəččaθnéxu	'the nine of you'
	ʾəččaθnéy	'the nine of them'

10	ʾəṣraθnən	'the ten of us'
	ʾəṣraθnéxu	'the ten of you'
	ʾəṣraθnéy	'the ten of them'

In these constructions the stress is often moved forwards to the place it occupies in the isolated form of the numeral, e.g. *ʾárbaθnən* (cf. *ʾárba*), *xámšaθnən* (cf. *xámša*), etc.

12.2. Ordinals

A distinct ordinal form is used for 'first', viz. *qamáya*, fs. *qaméθa*, pl. *qamáye*. The remaining ordinals are expressed by combining the cardinal with the genitive particle *D*. The cardinals 2–10 have the appropriate form in accordance with the gender of the noun:

	With ms. nouns	With fs. nouns	With pl. nouns
1st	qamáya	qaméθa	qamáye
2nd	t-tre	t-tə́rtə	t-tre
3rd	t-ṭláθa	t-ṭə́lləθ	t-ṭláθa
4th	t-ʾárba	t-ʾárbe	t-ʾárba
5th	t-xámša	t-xámməš	t-xámša
6th	t-ʾə́šta	t-ʾə́ššət	t-ʾə́šta
7th	t-šáwwa	t-ʾə́šwa	t-šáwwa

8th	*t-tmánya*	*t-tmáne*	*t-tmánya*
9th	*t-ʾə́ččʾa*	*t-ʾə́ččʾa*	*t-ʾə́ččʾa*
10th	*t-ʾə́ṣra*	*t-ʾə́ssər*	*t-ʾə́ṣra*

The feminine forms of the cardinals 2–10 in these constructions are used inconsistently. There is a tendency to generalize the use the masculine forms after all nouns. The genitive particle is usually bonded with the preceding noun.

Examples: *ʾúrza qamáya* 'the first man', *báxta qaméθa* 'the first woman', *ʾárxe qamáye* 'the first guests', *ʾúrzət tré* 'the second man', *báxtət tə́rte ~ báxtət tré* 'the second woman', *ʾárxət tré* 'the second guest'; *ʾúrzət ṭláθa* 'the third man', *báxtət ṭə́lləθ ~ báxtət ṭláθa* 'the third woman', *ʾárxət ṭláθa* 'the third guest', etc.

Ordinals from 11th onwards are, likewise, expressed by the particle *D* and the appropriate cardinal:

11th	*t-xadássər*
12th	*t-trə́ssər*
13th	*t-təltássər*, etc.

12.3. Fractions

The words for 'half' and 'quarter' are as follows:

| 'half' | *pálga* |
| 'quarter' | *čárək* |

Constructions such as 'one and a half', 'two and a half' etc. are formed by attaching the 3ms. suffix *-e* to the word *palga* thus: *xa-w palge, tre-w palge* (Literally: 'one and its half', 'two and its half'). Although in origin the 3ms. pronoun, the ending *-e* has become fossilized in this context and is used also when the preceding item is feminine, e.g. *xa-kista-w palge* 'one and a half bags'.

The word *čárək* is a loan from Kurdish. It is usually given an Arabic plural pattern, e.g. *ṭláθa čăwárək* 'three quarters'.

Other fractions may be expressed by the structure *xa mən* + cardinal, e.g. *xá mən-ṭlá* 'a third', *xá mən-xámša* 'a fifth'.

12.4. Days of the Week

xošéba (m.)	'Sunday'
trušéba (m.)	'Monday'
ṭlaθušéba (m.)	'Tuesday'
ʾarbušéba (m.)	'Wednesday'
xamšušéba (m.)	'Thursday'
rúta (f.)	'Friday'
šábθa (f.)	'Saturday'

The days Sunday—Thursday are derived historically from the phrases **xa b-šabba* 'the first in the week', **tre b-šabba* 'the second in the week', etc. The /e/ vowel in the component *-šeba* has apparently arisen by the following development **šabba* > **šaʾba* > **šǝʾba* > *šéba* (see §2.5.2.).

12.5. Names of Months

kánun qamáya	'December'
kánun xaráya	'January'
ʾǝšwǝṭ	'February'
ʾáðǝr	'March'
nísǝn	'April'
yār	'May'
xzírǝn	'June'
támuz	'July'
ṭábbǝx	'August'
ʾílul	'September'
čéri qamáya	'October'
čéri xaráya	'November'

12.6. The Seasons

sǝ́twa	'Winter'
báhǝr, bé-nisane	'Spring'
qḗṭa	'Summer'
čéri	'Autumn'

PARTICLES

13.1. Preliminary Remarks

The term 'particle' is used in a broad sense to include all items that do not fall into the categories of noun, pronoun, adjective or verb. Some of the particles take nouns as their complement to express relations between elements in a clause, others take clauses as their complement to express relations between clauses. These two classes of particles are termed 'prepositions' and 'clausal conjunctions' respectively. The large residue of particles that do not fall into one of these two classes have various disparate functions, including adverbs, quantifiers, determiners, connectives and interrogative particles. Apart from the prepositions, most particles are uninflected. We bring together here all the particles except the quantifiers and determiners, which are discussed in the chapter concerning the syntax of nominals §14.9.

13.2. Adverbs

There is no productive adverbial inflectional ending that can be used freely to create adverbs from nouns or adjectives. The ending *-ayiθ* is occasionally used by educated speakers to form adverbials, e.g. *prišáyiθ* 'specifically' (B1:10), *šotapayìθ*ˡ 'socially' (B15:72). This inflection, however, must be considered a literary borrowing from Classical Syriac rather than a living feature of the spoken dialect. A phonetically reduced reflex of the Syriac ending may, nevertheless, be tentatively identified in the spoken dialect in the words referring to languages such as *surǝθ* 'in Sureth' (< *sūrāʾìθ*) and *qurdǝθ* 'in Kurdish'. These words, however, are now often treated syntactically as nouns rather than adverbs, e.g. *y-ámrǝx ʾáxni b-súrǝθ*ˡ 'We say in Sureth' (A8:23), where the word is governed by a preposition.

   Several adverbs and adverbial phrases of Aramaic origin are nouns in the absolute state without an inflectional vowel, e.g. *ʾǝ́dyo* 'today' (< *ʾǝdyom*). Some adverbs have the ending *-aye*, e.g. *qamáye* 'formerly', *baráye* 'outside', *gawáye* 'inside', *šuraye* 'at first'. In fast speech the final */e/* is sometimes

elided, resulting in the forms *qamáy, baráy, gawáy*. It is possible that this ending has evolved from the absolute state of the feminine singular: *qamáye < *qamayəθ < *qaðmayaθ* (cf. Syr. *qaḏmāyaṯ* 'at first').

Some spatial adverbs have endings that are related to those of demonstrative pronouns, e.g. *támma* 'here', *tămáha* 'over there' (in sight), *táma* 'there' (out of sight); cf. *ʾáwwa* 'this', *ʾăwáha* 'that' (in sight), *ʾaw* 'that' (out of sight).

In a number of cases, an adverb is a noun with a nominal inflectional ending or a prepositional phrase consisting of a preposition and noun. Adverbs such as these are not particles and are best referred to as 'adverbial expressions'. This category is open ended and will be exemplified in more detail in the chapter on the syntax of nominals (§14.13.).

We give here a full inventory of adverb particles and a selection of the basic adverbial expressions that complement these.

(i) *Spatial adverbs*

ʾáxxa, láxxa	'here'
ʾaxxáne, laxxáne	'here, hereabouts'
támma	'here'
tămáha, tămáʾha	'there (in sight)'
táma	'there (out of sight)'
hódəx	'beyond'
húdxa	'beyond'
baráye, baráy	'outside'
qam-tắra	'outside'
wắdər	'outside'
gawáye, gawáy	'inside'
ʾúḷḷuḷ	'above'
ʾə́ltəx	'below'
rama	'above'
reša	'above'
xóθa	'below'
bár-eli	'upwards'
bár-təxti	'downwards'
qámθa, qáma	'in front'
báθra, bára	'behind'
la-qámθa, la-qáma	'in front, forwards'
la-báθra, la-bára	'behind, backwards'
réša xtáya	'upside down'
l-xə́rxəθ	'upside down, back to front'

(ii) *Temporal adverbs*

hadíya, díya	'now'
ʾə́dyo	'today'
ʾə́dlɛle	'tonight'
ʾə́ššeta	'this year'
kúš-šət	'every year'
bázzune	'last year', 'next year'
bzúne	'two years ago' (rarely used)
tábzune	'three years ago' (rarely used)
táltalune	'four years ago' (rarely used)
tə́mməl	'yesterday; tomorrow'
b-óma xéna	'the day before yesterday; the day after tomorrow'
təmməl b-lɛle	'last night'
qédamta	'in the morning'
mbádla	'in the morning'
m-lɛ́le	'early morning, before dawn'
ʾasə́rta	'in the evening' (approx. 5–8 pm)
bə́rmaše	'evening'
jálde	'early'
qedámta jálde	'early in the morning'
qamáye	'at first'
qámθa	'formerly'
xárθa	'afterwards'
gá-gaθa	'sometimes'

(iii) *Interrogative adverbs*

ʾɛ́ka	'where? whither? how? (marginal)'
m-ɛ́ka	'from where?'
ʾíman	'when?'
dax, dáxi	'how?'
kəmá	'how much, how many?'
ta-mó, ṭla-mó, qa-mó	'why?'

(iv) *Adverbs of manner*

hádəx	'like that'
hátxa	'like this'
hatxáne	'(approximately) like this'
jálde	'quickly'
níxa	'slowly'

| *pánde* | 'slowly' |
| *spay* | 'well' |

13.3. Prepositions

Prepositions are either placed directly before the following word or are linked to it by an annexation construction containing the subordinating particle *D*. The practice of combining the preposition with *D* is not completely consistent and is not found at all with some prepositions. There is a greater tendency to use *D* before demonstratives and the interrogative pronoun *ʾɛni* than before other words. Monosyllabic prepositions are frequently linked with their nominal complement in one stress group. This is always the case with those that have a base consisting of a single consonant, such as *b-* 'in', *l-* 'to'.

Most prepositions can take pronominal suffixes. In some cases a different allomorph of the preposition is used before the suffixes, e.g. *max* 'like', but *maxwáθi* 'like me'.

13.3.1. ʾax *'like'*

This preposition is normally combined with the following word in the same stress group, e.g. *ʾax-bràta*ˈ 'like a girl' (B7:1), *ʾax-tré ṭabàqe*ˈ 'like two floors' (B2:3), *ʾax-qamàye*ˈ 'like before' (A4:34). The /a/ vowel is often centralized to [ə] by a process of attenuation (§2.3.5.). This is not represented in the transcription, e.g. *ʾax-nàša*ˈ [ʾəx-ˈnæːšæ] 'like a human' (A19:1), *ʾax-nɛ̀šra*ˈ [ʾəx-ˈnəʃræ] 'like an eagle' (A24:56).

It is linked to a following demonstrative pronoun or the interrogative pronoun *ʾɛ́ni* by the particle *D*, e.g. *ʾax-d-àwwa*ˈ 'like him' (A26:34), *ʾax-d-àyya*ˈ 'like this one' (A21:6), *ʾax-d-ó-dewa ḳòra*ˈ 'like that blind wolf' (A10:5), *ʾax-d-an-ṭ-íla míθe tàma*ˈ 'like those who have already died there' (A14:70), *ʾax-d-ɛ́ni?* 'like whom?'

When it is combined with pronominal suffixes, two constructions are available. The suffixes may be attached to the base form *ʾaxwaθ-*, e.g. *ʾaxwáθi* 'like me' (A26:48). Third person suffixes may be extended by the independent genitive particle, e.g *ʾaxwáθe dìye*ˈ 'like him.' (A25:44). Alternatively the base *ʾax-* may be combined with suffixes by means of the independent genitive particle *diy-* without taking the suffixes directly, e.g. *ʾax-díye* 'like him' (A4:3), *ʾax-dìyux*ˈ 'like you (ms.)' (A4:26), *ʾax-dìyax*ˈ 'like you (fs.)' (A8:77).

13.3.2. b- *'in, at, on, by means of'*

This particle is regularly prefixed to the following word, e.g. *b-lèle* 'at night' (A15:8), *b-semàlta* 'by a ladder' (A23:28). When the word to which it is prefixed begins with /ʾ/, this is sometimes elided, e.g. *b-iθàθi* 'with my hands' (A17:32), *b-aqláθa dìya* 'with its feet' (A23:19). This elision is regular before demonstrative pronouns, e.g. *b-o năra* 'with that axe' (A30:23), *b-áyya dána* 'at this time' (A15:7), *b-ánna čakàlle* 'in these slippers' (A6:7) and also before the noun *ʾalaha* in the oath *b-álaha* 'by God'. The /ʾ/ at the beginning of many nouns, however, is retained, e.g. *b-ʾùrxa*ˈ 'on the road' (A15:1), *b-ʾìðe dìye* 'in his hand' (A22:30), *b-ʾaṣàrta*ˈ 'in the evening' (A22:31).

When the particle stands before a consonant, the cluster is often broken by an epenthetic vowel, which is placed either after the particle or in front of it. This is not represented in the transcription, e.g. *b-ġðàðe* [bəɣˈðæːðe] 'with each other' (A4:50), *b-lèle* [ʾəbˈleːle] 'at night' (A26:3).

When in contact with an unvoiced consonant, the preposition is often devoiced to [p], e.g. *b-súrəθ* [p-ˈsuːrəθ] *ʾatíqta* 'in ancient Syriac' (A24:6), *b-kú-mənna* [p-kuː-mənnæ] 'by any of them' (A41:8). Devoicing takes place before a vowel in a few fixed expressions including *p-àqla* (< *b-ʾaqla*) 'on foot' (B5:37) and *p-ápe* (< *b-ʾape*) 'beyond' (A12:21). In such cases the devoicing is represented in the transcription.

The preposition sometimes undergoes total assimilation to the labial consonants /m/ and /p/, e.g. *b-màlla* [m-ˈmællæ] 'against the mullah' (A22:34), *b-mašìna* [m-mæːʃiːnæ] 'with a machine' (B10:59), *b-panjarìye* [p-pændʒæˈɾiːje] 'at the window' (A4:38).

In some cases the preposition loses all phonetic realization. This occurs before labial consonants, probably by weakening of an initial gemination, e.g. *màšxa* [< m-məʃxæ < b-məʃxæ] 'with oil' (B5:40), *məlxàwa* [< m-məlˈxɑːwɑ < b-məlˈxɑːwɑ] 'with a threshing fork' (B5:85), and also elsewhere, especially on words bearing the nuclear stress, e.g. *pθíxla tăra qðila*ˈ (< *b-qðila*) 'She opened the door with a key' (A18:3), *har-gubbằn-ix* (< *b-gubbān-ix*) *wîðəlle.*ˈ 'We made it exactly according to a spirit-level' (A17:20), *ʾən-háwe ṭḷà* (< *b-ṭḷà*) *ʾaqláθa*ˈ 'if it is with three legs' (A22:3). On strongly stressed words in focus it may be omitted even before initial /ʾ/, e.g. *kut-ʾárba ʾaqlət-gàne páyəš tólya*ˈ 'Every sheep is hung up by his own legs' (D2:55).

When the preposition takes pronominal suffixes, these are usually attached to the base form *biy-*, which stands independently with its own stress, e.g. *bíyi, bíyux, bíyəx,* etc. A third person suffix may be extended by the independent genitive particle, e.g. *bíye díye* 'with him' (A14:8), *bíya dìya*

'with her' (A4:26). Sometimes the first component is contracted and the suffix is expressed only on the genitive particle, e.g. *bi-díye* (B5:126). If the independent genitive particle is used with 1st and 2nd person suffixes, no corresponding suffix occurs on the preposition base, e.g. *bi-diyi, bi-diyux.*

An alternative, less commonly used, base form for suffixes is *ʾbb-*, which stands independently, e.g. *qéθa ʾbbux¹* 'It hits you' (D1:8). The pronominal suffix is attached to the basic form *b-* in constructions with the existential particle, e.g. *ʾiθbe, ʾibe* 'There is in it', *líθbe, líbe* 'There is not in it' (§8.20.1.). In such cases the phrase has the status of a suffix.

Before demonstrative pronouns the preposition *b-* is sometimes combined with the subordinating particle *D*, e.g. *b-d-ó-qɛsa* 'with that wood' (B5:145), *ràba xðéle b-d-a-bràta¹* 'He was very happy with that girl' (A14:96), *moríwa dána b-d-àwwa mə́ndi¹* 'They spent time in this' (B15:72).

Sporadically the prosodically independent base form *biy-* is used for constructions where the preposition occurs before a noun. In such cases the *biy-* base is combined with the subordinating particle *D*, e.g. *kúlla mpurpə̀ssela¹ bíyət plàše¹* 'They were all scattered by wars' (B4:5).

A phrase with the form *bəd-* or *bud-* is used before nouns or demonstratives. This appears to be in origin a combination of the preposition *b-* with the particle *D*, but now is treated as a separate preposition. This is reflected by the fact that it is not used in complete free variation with the basic preposition *b-* (§16.1.11). It normally has the sense of 'about, concerning' before a noun or demonstrative pronoun, e.g. *bəd-bròni* 'about my son' (A14:92). It, moreover, keeps its phonetic shape in all contexts and exhibits distinct phonotactic properties, in that an initial /ʾ/ of a demonstrative is sometimes not elided after the /d/ of the phrase, e.g. *bəd-ʾáwwa náša* 'concerning this man' (A30:41). Pronominal suffixes are attached by combining the phrase with the independent genitive particle, e.g. *bəd-díye* 'about him'.

13.3.3. bahs, bas *'about, concerning'*

This is in principle connected to a noun by the subordinating particle *D*, e.g. *báhsət šúli* 'about my job'. Forms with the subordinating particle contracted are also used, e.g. *bahs-šúli.* The subordinating particle regularly occurs, however, before a demonstrative pronoun or the interrogative pronoun *ʾéni*, e.g. *báhs d-áwwa mə́ndi* 'about this thing', *bahs-d-éni?* 'about whom? Pronominal suffixes are attached by combining the preposition with the independent genitive particle, e.g. *bas-dìyux* 'about you' (A8:41).

13.3.4. baθǝr, bar *'behind, after'*

This may be used in a spatial or temporal sense. It is generally placed before the following word without the subordinating particle D, e.g. *báθǝr qðàle* 'behind his neck' (A22:38), *báθǝr tằra* 'behind the door' (A23:25), *báθǝr ṭḷá-yarxe* 'after three months' (A17:28), *bar-tre-yòme*ˈ 'after two days' (A22:17). When it has a temporal sense, it is sometimes combined with *mǝn*, e.g. *m-báθǝr xámša daqìqe*ˈ 'after five minutes' (A22:23), *m-báθǝr Mằmo* 'after Mǎmo (= after his death)' (A26:89). The preposition is occasionally attached to a following word by annexation with the subordinating particle D, e.g. *kályɛle báθrǝt xàwri*ˈ 'He is standing behind my friend'. The subordinating particle is regularly used after the preposition before a demonstrative pronoun and the interrogative pronoun *ʾɛni*, e.g. *báθǝr d-ɛ̀-maθa*ˈ 'behind that village' (A24:30), *ʾu-báθǝr d-ɛ̀ni ṭā́yǝn?*ˈ 'and who should I look for?' (A26:9).

Pronominal suffixes are added directly to the preposition, e.g. *ʾay-mṭúšyǝlla bàre*ˈ 'He hid her behind him' (A26:47), *qímɛle xóne dìye*ˈ *Čǝ̀kko*ˈ *báθre* 'His brother Čǝkko stood up after him' (A26:69), *mxáðrǝn bàrux*ˈ 'I shall search after you' (A25:64). Third person suffixes are often extended by the independent genitive particle, e.g. *ʾu-ṣáṭyɛle bára dìya*ˈ 'and he swooped after her' (A24:56). In such constructions the suffix on the preposition may be contracted, e.g. *kályɛle báθǝr dìye*ˈ 'He is standing behind him'.

13.3.5. barqul- *'opposite'*

This is joined in an annexation relation to a following nominal, e.g. *ʾáw kályɛle barqúlǝt bàbe*ˈ 'He is standing opposite his father', *ʾáw kályɛle barqúlǝ d-o-xèna*ˈ 'He is standing opposite the other'. The annexation ending is usually contracted, e.g. *dmíxɛle bárqul d-ay-kàwe*ˈ 'He slept opposite that hole' (A10:4), *plíṭe bárqūl mðitèy*ˈ 'They came out opposite their town' (A4:28). It takes pronominal suffixes, e.g. *ʾáw kályɛle barqùli*ˈ 'He is standing opposite me', *hon-láxxa barqùlux*ˈ 'I am here opposite you' (A52:19).

13.3.6. bēn, bēl *'between'*

The preposition regularly has the form *bēn*, with the original final /n/, when it is used before a plural nominal without a co-ordinated component, e.g. *bēn-ʾisàre*ˈ 'between the rocks' (B9:4), *bēn-trè ṭuráne*ˈ 'between two mountains' (B4:1). The vowel is sometimes shortened, e.g. *bǝn-nā́θ sùsta*ˈ 'between the ears of the horse' (A12:5). When a pair of items are coordinated

('between A and B'), the preposition may have the form *bēn* or *bēl*. The second item may be introduced simply by the connective particle *w*, e.g. *bēn-ʾarbá-mma-w ʾə̀štá-mma šə̀nne*' 'between four-hundred and six-hundred years' (B6:31), *ṭuránə ṯ-ína bēl-ʾIráq ʾu-Tùrkiya*' 'the mountains that are between Iraq and Turkey' (B3:3). The preposition may be repeated before the second item, e.g. *bě́n ʾaturàye*' *ʾu-bě́n barzanàye*' 'between the Assyrians and the people of Barzan' (B19:1). The second item may be introduced by the preposition *l-*. In such cases the form *bēl* is generally used before the first item, no doubt by assimilation to the *l-*, e.g. *bēl-pánxa l-pə̀nxa*' 'between one grinding wheel and the other' (B5:91), *bēl-šádla l-šə̀dla*' 'between one sapling and the other' (B5:103), *bēl-ʾắra*' *l-ʾằra*' 'between one plot of land and the other' (B5:131), *bēl-túra l-ṭùra* 'between one mountain and another' (B5:147), *bēn-Səttíye l-Fàrxo*' 'between Səttiye and Farxo' (A25:29).

Pronominal suffixes are added to the base *bēn-/bēl-* in co-ordinated constructions, e.g. *ʾáwwa ḥákəm béni ʾu-bènəx*' 'He will arbitrate between me and you' (A47:3), *béli ʾə̀llux*' 'between you and me' (A4:7). Plural pronominal suffixes in constructions without a co-ordinated member are generally attached to the base *benaθ-*, e.g. *benàθən* 'between us' (A17:9), *benaθéy* 'between them'.

The subordinating particle *D* is used before a demonstrative pronoun, e.g. *bēl-d-áyya l-d-àyya*' 'between this and that' (B5:115), *bélən ʾu-bēl-d-ánna dèwe*' 'between us and these wolves' (A14:49). This is not the case, however, if the co-ordinated member is introduced only by the connective particle *w*, e.g. *bēn-ʾáskar-t málkət Ìrən*' *ʾu-ʾàw*' 'between the army of the king of Iran and him' (A11:16).

The sense of 'in between' without any explicit complement is expressed by *be-palga*, e.g. *ʾu-yatə́xwa xāṣ-koδə́nta rēš-d-án qərṭàle*,' *be-pàlga*' 'We would sit on the back of the mule on top of those baskets, in between (them)' (B5:138). This expression can also be used in constructions with two co-ordinated members, e.g. *ʾáw kályɛle be-pálgət kúrsi ʾu-mề̀z*' 'He is standing between the chair and the table'.

13.3.7. *č̣ənnəḳɛr- 'around'*

This preposition, which is a loan from Kurdish (çarnikar), is connected to the following word by annexation, e.g. *č̣ənnəḳɛ́rət gùda*' 'around the wall' (B5:191), *č̣ənnəḳɛ́rət swàna*' 'around the eves' (B5:195). Pronominal suffixes are attached directly to it, e.g. *č̣ənnəḳɛ́re* 'around it (m.)' (B5:183), *č̣ənnəḳɛ̀ra*' 'around them' (B5:202). Third person suffixes may be extended by the

independent genitive particle, e.g. *čännəkére díye* 'around him' (A8:71), *čännəkéra dìya*ˈ 'around it (f.)' (B5:105).

13.3.8. darqul- *'against'*

This preposition, which resembles *barqul-* 'opposite' in form, is used in a more abstract sense to express opposition and enmity. It is joined in an annexation relation to a following nominal, e.g. *ʾàw darqúlət màlkɛle* 'He is against the king'. The annexation ending is usually contracted, e.g. *dárqūl d-a-məndìla*ˈ 'They are against that thing' (A12:55). It takes pronominal suffixes, e.g. *ʾu-xákma darqúle dìye*ˈ 'and some were against him' (A7:20).

13.3.9. gu *'in'*

This is always connected to the following word in the same intonation group, e.g. *gu-yàma* 'in the sea' (A13:10), *gu-ða-lawùrta*ˈ 'in a valley' (A14:17), *gu-ʾìlàna*ˈ 'in the tree' (A13:12), *síqle gu-šmàyya*ˈ 'He went up into the sky' (A13:10). It is linked to a following demonstrative pronoun or the interrogative pronoun *ʾéni* by the subordinating particle *D*, e.g. *gu-d-o-qàṣra*ˈ 'in that palace' (A14:41), *gu-d-áyya ṭàrma*ˈ 'in this porch' (A13:6), *gu-d-ánna gùde*ˈ 'in these skins' (A14:18), *gu-d-ɛ́ni máθa?* 'in which village?'

Pronominal suffixes are attached to the related base form *gaw-* rather than to *gu-*, e.g. *ənwe ʾiθ gáwe*ˈ 'There are grapes in it (m.)' (A12:9), *ʾána hon-sxáya gàwa*ˈ 'I am swimming in it (f.)' (A25:61), *mattíwala xabúše gawèy*ˈ 'They would put the apples in them' (B15:51). When the suffix is third person, the form is sometimes extended by combining it with the independent genitive particle, e.g. *ʾiθ ða-yàwna gáwe díye*ˈ 'There is a dove in it' (A12:24), *npílle ʾáp-aw gáwa dìya*ˈ 'He also fell in it' (A25:90).

13.3.10. hal *'until, as far as'*

Examples: *hal-ʾaṣárta plìxɛle*ˈ 'He worked until evening' (A16:5), *hal-yómət ʾàrpa*ˈ 'until the fourth day' (A21:39), *hál yomət-mɛ̀θi*ˈ 'until the day they die' (A26:7), *hal-hadíya* 'until now' (A26:91), *hal-ʾíman* 'until when?' (A26:56), *hal-làxxa*ˈ 'up to here' (A20:3), *m-áxxa hál qaṣrət-mìra* 'from here until the palace of the amir' (A26:68), *mən-yále zóre ʾu-hal-gòṛe*ˈ 'from young children to old people' (B16:4), *hal-gu-réšət ṭúra* 'up to the top of the mountain' (A14:49).

It is sometimes connected to a demonstrative pronoun by the subordinating particle *D*, e.g. *hál d-ɛ-dánət mṭéla l-yàla*ˈ 'until the time that she

came to the boy' (A25:4), *hal-d-o-yómə qárya ṭòk̭e*ˈ 'until the day when the *ṭok̭e* bird sings' (A30:3). It is often, however, followed by a demonstrative pronoun without this particle, e.g. *hál ʾo-yómət ʾáp-ʾana mèθən*ˈ 'until the day that I also die' (A4:43), *hál-ʾɛ-gət ʾána mát̯yən ʾə́lle dìye*ˈ 'until the time I reach him' (A26:80).

It does not take pronominal suffixes directly, but must be combined with another preposition, e.g. *zílli hal-k̭ə̀slux*ˈ 'I went as far as you'.

13.3.11. kəs- *'by, at the home of'*

This is connected directly to a following nominal, e.g. *mattátla xa-kawázət míya kəs-réša* 'Put out for her a jar of water by her head' (A21:7), *díṛele kəs-bábe dìye*ˈ 'He returned to his father's home' (A4:7), *wírre kəs-bràta*ˈ 'He went into the home of the girl' (A17:24).

It is connected to demonstrative pronouns and the interrogative pronoun *ʾɛni* by the subordinating particle D, e.g. *ʾáwwa nabláxle kəs-d-ày*ˈ *yan-ʾáy nabláxla kəs-d-àwwa?*ˈ 'Should we take him to her or take her to him?' (A4:3), *múttəlla kəs-d-ó K̆ărim-addìn.*ˈ 'He put it next to Karimaddin' (A14:31), *ríqle kəs-d-à ʾilána*ˈ 'He ran to the tree' (A14:27), *qu-sɛ́ kəs-d-anna-šwàwən*ˈ 'Go to these neighbours of ours' (A5:1), *kəs-d-éni?* 'at whose home?'

Pronominal suffixes are attached to the base form *kəsl-*, e.g. *kə́sle, k̭ə́slux, kə́sli*, etc. Forms with the third person suffixes may be extended by the independent genitive pronoun, e.g. *kə́sle díye, kə́sla díya*, etc.

13.3.12. l- *'to, for, upon'*

This preposition is derived from two different prepositions in earlier Aramaic, namely **l-*'to, for' and **ʿal* 'upon'. Examples: *si-dúṛ l-šôpux*ˈ 'Go back to your place' (A15:20), *masqánne l-bèθa*ˈ 'I shall take it up to the house' (A22:19), *šuxa-l-šə́mme* 'praise be to his name' (A6:10), *hóle tíwa l-k̭èpa*ˈ 'He is sitting on a stone' (A15:13). When the nominal to which it is attached begins with a consonant, an epenthetic vowel is often inserted either before or after the particle. These are not reprepresented in the transcription, e.g. *Č̆úxo híwle bále l-bèθa*ˈ [lə-bɛːθæ] 'Č̆uxo set off for home' (A7:12), *mosáqtəlla bráta l-bèθa*ˈ [ʾəl-bɛːθæ] 'She took the girl up to the house' (A25:7). On some rare occasions the stress is retracted onto the preposition with a following epenthetic, in which case the epenthetic is represented in the transcription, e.g. *jmíla lə̀-ġðaðe*ˈ 'They gathered together' (A26:1).

Occasionally the /l/ is assimilated completely to the consonant, e.g. *ṣaléwa gàwṛa*ˈ *l-šùqa*ˈ [ʾəʃ-ʃuːqɑ] 'Her husband would go down to the market'

(A22:1). In the adverbials *la-qáma* 'forwards' and *la-bára* 'backwards' the initial *la-* element is unlikely to be the preposition *l-* but rather should be identified as the Kurdish word 'side, direction', which is used in some other adverbial expresssions, e.g. *la-zràqət yóma*ˈ 'in the direction of the rising of the sun' (A8:22).

The laryngal consonant /ˀ/ at the beginning of a word is usually not elided when the preposition is attached, e.g. *θéla ṣlèla*ˈ *l-ˀárxət be-Xàmmo*ˈ 'She came down to the water-mill of the family of Xammo' (A19:1), *mattíwala l-ˀằra*ˈ 'They would put it onto the ground' (A12:3), *šqúl ˀáwwa qésa l-ˀìdux*ˈ 'Take this stick in your hand' (A22:26). It is only sporadically elided from the beginning of nouns, e.g. *dáqne díye mṭáya l-ằra*ˈ 'His beard reached the ground' (A15:13). It is regularly elided, however, before demonstrative pronouns, e.g. *ṭ-ásqəx l-áwwa ṭùra*ˀ ˈ 'Shall we go up to this mountain?' (A17:4), *xulamwáθa l-áy-gota ˀu-l-àyya*ˈ 'servants on that side and this one' (A4:37), *mṭéle l-án tre-képe t-qítla b-ġðằðe*ˈ 'He reached the two stones that knocked together' (A24:20).

The preposition is sometimes linked to demonstrative pronouns by the subordinating particle *D*, e.g. *mṭye l-d-o-nèra*ˈ 'They arrived at that river' (A14:58), *ˀźθγεle l-d-ay-ˀilàna*ˈ 'He came to that tree' (A13:10), *brōn-málka tíwεle l-d-a-tàxta*ˈ 'The son of the king sat on the throne' (A14:43).

When the preposition is combined with pronominal suffixes, these are either attached directly to the *l-* base or are attached to a longer base form *ˀəll-*. The phonotactic distribution of these two pronominal forms is different. The lighter forms with the *l-* base are the so-called L-suffixes, which form inseparable affixes of verbs or the existential particle *ˀiθ/liθ*. The heavier form with the base *ˀəll-* is generally prosodically independent and bears its own stress, e.g. *hàtxa mjuwźble ˀźlli málka*ˈ 'The king replied to me in this way' (A17:34), *mattí ˀíða ˀəlle*ˈ 'They place a hand on it' (B5:100). They are often combined with the independent genitive pariticle, especially when the suffix is third person, e.g. *ˀáxni t-yawźxla xa-b-ṭḷàθa ˀźlle díye*ˈ 'We shall give him threefold (if it is lost)' (A7:10), *mamṭátla ˀźlla dìya*ˈ 'Deliver them to her' (A4:16). The two pronominal forms also differ in their functional distribution (for further details see §16.2.2.).

In some marginal cases the preposition has the form *ˀal-* when it has the sense of 'upon', preserving more conservatively the original phonetic shape *ˀal-, e.g. *ˀal-ˀằra*ˈ 'on the ground' (A21:5), *ˀal-rùše díye*ˈ 'on his shoulder' (A22:18), *ˀal-ṭúrət Jazíra Bòta*ˈ 'on the mountain of Jazira Bota' (A26:19). This may be the result of influence from the C. Urmi dialect, where the preposition 'upon' regulary has this form.

13.3.13. max *'like'*

This is a common variant of *ʾax*, which has evolved historically by prefix-ing the relative particle *ma* ('what, that which'). It is normally combined with the following word in the same stress group, e.g. *max-tàla*ˈ 'like a fox' (A17:35), *max-qə̀šta*ˈ 'like a bow' (A25:28). The /a/ vowel is often centralized to [ə], though this is not represented in the transcription, e.g. *max-šeðàna*ˈ [məx-ʃe·ˈðæːnæ] 'like a madman' (A26:9).

It is linked to a following demonstrative pronoun or the interrogative pronoun *ʾéni* by the particle *D*, e.g. *max-d-áy* 'like that one' (A4:16), *max-d-ó-t Leliθa*ˈ 'like that of Leliθa' (A52:15), *max-d-éni*ʔ 'like whom?' When it is combined with pronominal suffixes, these are either attached to the base form *maxwaθ-*, e.g. *maxwáθi* 'like me', *maxwáθux* 'like you', or are linked to the base *max* by means of the independent genitive particle *diy-*, e.g. *max-díyi* 'like me', *max-díyux* 'like you'.

13.3.14. mən, m- *'from, with'*

This preposition represents the merging together of two prepositions that were distinct in earlier Aramaic, viz. **men* 'from' and **ʿam* 'with'. It is used either in its full form *mən*, e.g. *mən-máθa*ˈ 'from the village' (A48:1), *xa-mən-zaráye* 'one of the farmers' (A4:31), *mən-xuráne díye* 'with his friends' (A4:2), or in the abbreviated form *m-*, e.g. *m-yə́mma dìya* 'from her mother' (B10:22), *m-kɛ́rbi* 'out of my anger' (A2:11), *m-tàma* 'from there' (A20:7). The full form is more frequently used when it has the comitative sense of 'with'. An epenthetic vowel is sometimes pronounced after the /m/ of the short form, especially when the following word begins with a consonantal cluster, e.g. *m-ġðàðe* [mə-ɣˈðæːðe] 'with each other' (A25:65), *m-yabìše* [mə-yæːbiːʃe·] 'from raisins' (B5:12).

Before nouns beginning with the laryngal /ʾ/ there is a tendency to retain the laryngal and use the long form *mən*, e.g. *mən-ʾə̀rba*ˈ 'from a sheep' (B7:20), *mən-ʾilàne*ˈ 'from the trees' (A25:44), *mən-ʾằra*ˈ 'from the ground' (A25:43). When the laryngal is elided, which is commonly the case before adverbial particles such as *ʾaxxa* 'here' and *ʾɛka* 'where', and also expressions with the word *ʾalaha* 'God', the short form of the preposition is used, e.g. *qu-plúṭ m-àxxa*ˈ 'Get out of here!' (A16:11), *m-ɛ́ka*ʔ 'from where?' (A17:3), *m-alàha*ˈ 'from God' (A3:3).

The preposition is connected to a demonstrative pronoun in two ways. It is sometimes used in its full form and connected to the pronoun by the particle *D*, e.g. *mən-d-ɛ-ṭàsa* 'from that bowl' (A15:11), *xákma mən-d-ò-šə̀mra*

'Some of the soot' (A4:60), *mən-d-ánna bnàθì* 'with these daughters of mine' (A25:15), *m-áwwa náša* 'with this man'. Alternatively it is connected in its short form directly to the pronoun with elision of the initial laryngal, e.g. *m-ó-yoma* 'from that day' (A26:75), *ðà-m-aw* 'one from that one' (A7:19), *m-an-kòče* 'some of those hornless sheep' (A7:24), *m-an-képe ṭ-íla tàma*⌐ 'some of the stones that are there' (A14:70).

Before pronominal suffixes, the preposition has the base *mənn-* with a geminated /n/, e.g. *qəm-šaqə̀lle mə́nnux*⌐ 'He took it from you' (A17:35), *y-oðíwa yabìše mə́nna*⌐ 'They would make raisins from them' (B5:210), *la-hérwət mə̀nni*⌐ 'Do not speak angrily with me' (A1:18), *ʾìtli šúla mə̀nnux*⌐ 'I have business with you' (A21:33). Forms with pronominal suffixes are sometimes combined with the independent genitive particle when the suffix is third person, e.g. *nèxət mə́nne díye*⌐ 'You will be relieved of him' (A10:10), *ʾu-pìšele mə́nne díye*⌐ 'and he stayed with him' (A14:76), *dàməx mə́nna díya*⌐ 'Let him sleep with her' (A13:2). Occasionally these constructions are contracted with the suffix being elided from the preposition base, e.g. *xa-yasə́qwa mən-díye* 'Somebody went up with him' (B5:158). If the independent genitive particle is used with 1st and 2nd person suffixes, no corresponding suffix occurs on the preposition base, e.g. *mən-dìyux*⌐ (A12:35).

The base form *mənn-* is occasionally used before a noun in combination with the subordinating particle D, e.g. *xaṣìre*⌐ *y-awa-zqíre mə́nnət zàle*⌐ 'The mats were woven from reeds' (B5:201), *ṣálənwa mə́nnət xóni* 'I used to go down with my brother' (B5:170).

13.3.15. qa- *'to, for', object marker*

Examples: *qa-brònux*⌐ 'for your son' (A21:8), *qa-šèra*⌐ 'for the festival' (B5:69), *qa-ʾálaha*⌐ 'to God' (A15:17), *maláxa mŭṛə̀šle*⌐ *qa-ràbbən*⌐ 'The angel woke the monk' (A15:8). It is connected to a demonstrative or the interrogative pronoun *ʾɛni* by the subordinating particle D, e.g. *qa-d-áwwa ʾixála* 'for this food' (A22:31), *qa-d-áyya bráta* 'to this girl' (A21:2), *qa-d-ánna heywàne*⌐ 'to these animals' (A27:33), *qa-d-ày*⌐ 'to her' (A4:22), *qa-d-àni*⌐ 'to them' (A27:8).

Pronominal suffixes may be attached in two ways. The independent genitive particle *diy-* may be combined with *qa-* and bear the suffix, e.g. *qa-dìyi*⌐ 'to me' (A22:31), *qa-dìyux* 'to you (ms.)' (A8:36). Alternatively the suffixes may be attached to the base form *qal-*, e.g. *qàlux*⌐ 'for you (ms.)' (A26:62), *qàləx* 'to you (fs.)' (A18:13), *qàlən*⌐ 'to us' (B15:42).

13.3.16. qam *'before'*

This preposition is usually attached directly to the following word in the same intonation group. It may be used either in a spatial or temporal sense. Examples with a spatial sense: *qam-tằrət bòya*⌐ 'before the door of the hole' (A20:9), *qam-ʾénux*⌐ 'before your eyes' (A15:15), *qam-ʾaqlaθὲy*⌐ 'in front of their legs' (A16:9). Temporal sense: *qam-mxéθət madənxa*⌐ 'before the rise of dawn' (A8:51), *qam-dàna*⌐ 'beforehand' (A4:30).

Sporadically it is connected to a following nominal by annexation, e.g. *qámət gə̀ppa*⌐ 'in front of the cave' (A12:7). Before a demonstrative pronoun or the interrogative pronoun *ʾéni* the subordinating particle *D* is regularly used, e.g. *qam-d-o-gə̀ppa*⌐ 'before that cave' (A8:28), *qam-d-àwwa déwa*⌐ 'before this wolf' (A10:3), *qám d-áyya qə̀ṣṣət*⌐ 'before this story' (A16:5), *qam-d-éniʔ* 'before whom?'

Pronominal suffixes are added directly to the preposition when it has a spatial sense, e.g. *qáme* 'before him' (A25:50), *qámux* 'before you (ms.)' (A15:20), *qàməx* 'before you (fs.)' (A22:20), *qámi* 'before me' (A24:33). Third person suffixes are often extended by the independent genitive particle, e.g. *qáme díye*⌐ 'before him' (A25:50). When used in a temporal sense, pronominal suffixes are generally not added directly to the base *qam-* but rather on the preposition *mən* that is combined with it, e.g. *ʾáw qam-mə̀nnux hóle ʾə́θya l-áxxa*⌐ 'He has come back here before you' (A22:39), *ʾu-xoránux ṭ-íla qám-mənnux zíle mɛθóye Bə́lbəl Hazàr*⌐ 'your friends who went before you to bring Bəlbəl Hazar' (A8:47).

13.3.17. qamθ-

The form *qamθ-* expresses the spatial relation 'in front of'. It has a narrower distribution than *qam-* and is used mostly after verbs of movement to express the sense of 'meeting' somebody. It is connected to a nominal by annexation or takes pronominal suffixes, e.g. *ríqa qímle plíṭle qámθət bróne dìye*⌐ 'He ran out to meet his son' (A14:95), *ṣlí qamθə-d-áwwa nàša*⌐ 'Go down to meet this man' (A15:6), *mádre xúwwe plíṭele qàmθe*⌐ 'Again the snake came out before him' (A1:11), *ṣə́lyɛle qámθe dìye*⌐ 'He came down to meet him' (A15:6). Occasionally it is used in other contexts, e.g. *l-qámθe dìye*⌐ *ʾíθ xa-čòl*⌐ 'Before it lies barren countryside' (A8:21).

13.3.18. qamoθ-

The form *qamoθ-* is used like *qamθ-* after verbs of movement to express the sense of 'meeting', e.g. *xúwwe plíṭele l-qamòθe*⌐ 'The snake came out to

meet him' (A1:18), *ʾàxni ṣáləx qamóθe díye¹* 'We shall come down to meet him' (A4:25), *yáwəx xàbra¹ ta-t-pálṭi l-qamòθən¹* 'We give word for them to come out to meet us' (A4:30).

13.3.19. reš- *'upon'*

In origin this preposition is the noun *reša* 'head' used as a locative adverbial and attached to a following nominal in a contracted annexation construction without the subordinating particle D, e.g. *rēš-bárka dìya¹* 'on her knees' (B5:175). The vowel of the preposition is often shorted to /ə/, e.g. *rəš-ṭùra¹* 'on a mountain' (A20:2), *rəš-qaràwət¹* 'on the bed' (A21:6), *rəš-rúše dìye¹* 'on his shoulders' (A13:10).

It is connected to a following demonstrative pronoun or the interrogative pronoun *ʾɛni* by the subordinating particle D, e.g. *rəš-d-ò-dapa¹* 'on that board' (A22:27), *rəš-d-ay-ʾilána* 'on that tree' (A13:11), *rəš-d-ɛ-ʾɛna¹* 'on that spring' (A15:1), *rēš-d-án qərṭàle¹* 'on those baskets' (B5:138), *ʾu-xá-wăzir díye rəš-d-áwwa-kursa¹ xa-rəš-d-ăwàha¹* 'one minister sitting on a chair and one on another chair' (A14:43), *rəš-d-éni?* 'on whom?'

The form of the preposition is sometimes contracted further to *rš-* or *š-*, e.g. *ʾo-rábbən múttəlla ʾáqle díye rš-ắqəl bàxta¹* 'The monk put his leg onto the leg of the woman' (A16:11), *múttəlla rš-d-àn bəzmáre¹* 'He placed them on the nails' (A17:28), *dáryəlla š-qaràwət¹* 'They put her on the bed' (A21:7), *mátti š-nùra* 'They put it on the fire' (B5:65).

When the /š/ of the preposition is in contact with a following voiced consonant, it is often pronounced voiced. This is not represented in the normalized transcription, e.g. *š-gùda¹* [ʒ-ˈguːdæ] 'on the wall' (B5:192), *š-d-ó* [ʒ-d-oː] *huðàla¹* 'on that fodder stack' (B5:113).

Pronominal suffixes are added to the base *reš-*, e.g. *réše* 'on him', *réšux* 'on you (ms.)', *réši* 'on me'. Third person suffixes may be extended by the independent genitive particle, e.g. *réše díye* 'on him', *réša díya* 'on her'. In such constructions the suffix on the preposition is sometimes contracted, e.g. *rēš-dìye* 'on it' (B5:67). When used with the pronominal suffixes, it is sometimes combined with the preposition *b-*, e.g. *b-réša* 'over them' (A25:48), *b-rèša* 'on it' (A12:47).

The use of the word 'head' as a preposition is no doubt influenced by the semantic range of the equivalent word in Kurdish *ser*, which may mean both 'head' and 'upon'.

13.3.20. šawp-, šop- *'instead, in the place of'*

This is the noun *šawpa* 'place, trace' used adverbially. When used with this adverbial function the diphthong is frequently contracted to /o/ (§2.4.2.). It is combined with the following nominal in an annexation relation, e.g. *dáx páyəš málka šáwpət bròni?ˈ* 'How will he become king in place of my son?' (A8:4), *múttəlle šópe dìye*ˈ 'He put him in his place' (A25:51), *hálli bə́sra šópət ləxma*ˈ 'Give me meat instead of bread', *šópə d-áw* 'instead of him'. It takes pronominal suffixes, e.g. *šópux* 'instead of you', *šópən* 'instead of us'.

13.3.21. t-la *'without'*

Examples: *t-la-zùze*ˈ 'without money' (A24:23), *t-lá mìya*ˈ 'without water' (B5:14), *t-lá mɛxòlta*ˈ 'without food' (B5:114), *t-lá marăwàθɛle ʾo-márga?ˈ* 'Is the meadow without owners?' (A25:60). It is connected to a following demonstrative pronoun by the subordinating particle *D*, e.g. *t-lá d-o-náša* 'without that man', *t-lá d-áw* 'without him'. Pronominal suffixes are expressed by combining it with the independent genitive particle, e.g. *t-lá díyi* 'without me', *t-lá díyux* 'without you'. Occasionally the preposition *b-* is placed before the genitive particle, e.g. *t-la-b-dìyi* 'without me' (A24:9).

13.3.22. ṭla-/ta- *'to, for', object marker*

Either of the two variant forms of the preposition, *ṭla-* or *ta-*, are used before nominals, e.g. *maláxa mə́re ṭla-ràbbən*ˈ 'The angel said to the monk' (A15:7), *ʾáwwa qṭìlle ṭla-ʾárya*ˈ 'He killed the lion' (A11:1), *híwəlla quṣárta ta-màlla*ˈ 'They gave the pot to the mullah' (A5:8), *də́ṛṛa ta-ʾaθrɛ̀y*ˈ 'They returned to their land' (A4:27).

They are connected to demonstrative pronouns and the interrogative pronoun *ʾɛni* by the subordinating particle *D*, e.g. *mtúnyəlla qəṣṣə́tte kúlla ṭla-d-o-sàwa*ˈ 'He told all his story to the old man' (A14:76), *pálga ṭla-d-áy ʾu-pálga ṭla-d-àw*ˈ 'half for her and half for him' (A4:46), *bronət-málka mə́re ta-d-an-wăzìre*ˈ 'The son of the king said to the ministers' (A14:40), *ʾo-bába sáwa mə́re ta-d-àni*ˈ 'The old timer said to them' (A14:85), *ṭla-d-ɛ́ni?* 'for whom?'

Pronominal suffixes are added to the base form *ṭlal-*, e.g. *ṭlále* 'to him', *ṭlálux* 'to you (ms.)', *ṭláli* 'to me', etc. Forms with the third person suffixes may be extended by the independent genitive pronoun, e.g. *ṭlále díye* 'to him', *ṭlála díya* 'to her'. The form *ta-* may be combined with pronominal

suffixes by means of the independent genitive particle, e.g. *ta-dìyi*ˈ 'to me' (A25:84).

13.3.23. xo-, xoθ- *'under'*

This is generally attached directly to the following word in the short form *xo-*, e.g. *xo-kosìθe*ˈ 'under his hat' (A23:6), *xo-réša dìya*ˈ 'under her head' (A24:17), *xo-ðà ʾilána,*ˈ 'under a tree' (A35:12). Occasionally the longer form *xoθ-* is used, e.g. *ʾáxni xoθ-tagbártət màlkəx*ˈ 'We are under the administration of the king' (A8:80).

The subordinating particle *D* is sporadically used to connect the preposition to a nominal without a demonstrative, e.g. *xó-t máθa* 'under the village'. It is regularly used before a demonstrative, e.g. *xo-d-áwwa jùlla*ˈ 'under this cloth' (A25:49), *xo-d-ò-kepa*ˈ 'under that stone' (A12:27), *xo-d-à ʾilána*ˈ 'under that tree' (A35:12).

Pronominal suffixes are attached to the base form *xoθ-*, e.g. *xóθe* 'under him', *xóθux* 'under you (ms.)', *xóθi* 'under me'. Third person suffixes may be extended by the independent genitive particle, e.g. *xóθe díye* 'under him', *xóθa díya* 'under her'.

Sometimes *xo-/xoθ-* is combined with the preposition *mən* even when static location is intended, e.g. *ʾu-m-xòθe*ˈ *y-oðíwa nùra*ˈ 'and under it they would put fire' (B5:183).

The original initial /t/ of this preposition is preserved in some proverbial sayings, e.g. *ʾìði txo-kèpɛla*ˈ 'My hand is under a stone' (D2:20), *míya txo-tùna*ˈ '(He is like) water under straw' (D2:42).

13.4. Miscellaneous Uninflected Particles

These may operate within a clause or may function as clausal conjunctions.

ʾap, ʾup	'also', connective particle (§18.1.3.)
ʾaxči	'just'
ʾəlla	'if not, except, but' (§19.5.5.)
ʾən	'if' (§19.5.)
ʾina	'but', presentative particle (§18.1.5.)
ʾo	vocative particle
balki	'perhaps'
bas	'only'
biš	'more' (§14.8.1.)

ču	'none'
ga	'almost', connective particle (§15.1.1.11., §18.1.6.)
hade	'just, hardly'
hala	'still (not)' (§15.11.1.)
halbat	'of course'
ham	'also, even, again'
hammaše, hammaša	'always'
har	'just, still, always, again' (§15.11.)
hatta	'even'
he	'yes'
heš, həš	'still; (not) yet; (no) longer' (§15.10.)
hič	'none' (§14.9.18.)
ka-	'while' (§19.3.14.)
k̂ačune	'at least'
la	'no, not'
lo	'or'
mədre	'again'
məjjəd	'really'
nagəstən	'suddenly'
nəmu, ləmu	asseverative particle, 'why?' (§17.9.1.)
săbab, sab	'because'
w	'and' (§14.11., §18.1.1.)
xaṭər	'because'
xo-, xu-	intensifying particle (§17.9.2.)
yan	'or'
ye, yehe	'yes'
zor	'hardly, barely'
-ži	'also', connective particle (§18.1.4.)

SYNTAX

THE SYNTAX OF NOMINALS

14.1. EXPRESSION OF DEFINITENESS

14.1.1. *Preliminary Remarks*

The term 'definiteness' can refer to a cognitive phenomenon in the act of linguistic communication or to a feature in the grammatical structure of a language. It is important to distinguish these, since the definiteness of something on the cognitive level is not always signalled by the grammatical structure. When a nominal is said to be definite on the cognitive level, this refers to the informational status of a nominal. The crucial factor is the judgement by the speaker concerning the identifiability of the referent by the hearer. If the speaker assumes that the hearer can identify which specific referent he is referring to by the nominal, the nominal is treated by the speaker as definite in status. This assumption is typically made when the referent has been mentioned previously or at least is associated in some way with the context or situation that is being talked about, or when the nominal has a unique referent, as is the case with proper nouns. If, on the other hand, the speaker assumes that the hearer cannot identify which specific referent he is talking about, the nominal is treated as indefinite in status. The grammatical expression of this definiteness varies across languages.

In Aramaic the distinction between the definite and indefinite status of nominals was originally expressed grammatically by the distinction between the 'determined state' and the 'absolute state' respectively. In the NENA dialects, this original grammatical means of expressing the distinction has broken down, but other devices have been developed to compensate for its loss. In the C. Barwar dialect, as in other NENA dialects and indeed as in many other languages, the cardinal numeral 'one' (*xa* m., *ða* f.) is often used as an indefinite article that is a grammatical signal of the indefinite status of the nominal. The dialect has not, however, a corresponding definite article, though, as we shall see, there are embryonic signs of this developing.

In this section we shall be concerned with the usage of the particle *xa* in its function as an indefinite article.

14.1.2. *The Distribution of the Cardinal Indefinite Particle*

The masculine form of the cardinal indefinite particle *xa* is often used with nouns of feminine gender, although the feminine form *ða* is available. This reflects a general phenomenon in the numeral system, whereby the distinction between the masculine and feminine forms of the numerals is in the process of decay, with the masculine form replacing the feminine. Examples:

ða-bráta (A25:25)	*xa-bráta* (A4:32)	'a girl'
ða-màθa (A48:1)	*xa-máθa* (A15:10)	'a village'
ða-dùkθa (A12:54)	*xa-dùkθa* (A10:1)	'a place'
ða-qàṭu (A14:2)	*xa-qàṭu* (A23:19)	'a cat'
ða-káwe (A18:22)	*xa-kàwe* (A10:4)	'a window'
ða-yáma (A11:7)	*xa-yàma* (A12:30)	'a sea'
ða-lawùrta (A14:17)	*xa-lawùrta* (A22:38)	'a valley'
ða-kɛ́rtə qésa (A10:6)	*xa-kɛ́rtə qèsa* (A12:69)	'a bundle of wood'
ða-qə̀ṣṣət (A14:35)	*xa-qə́ṣṣət* (A4:31)	'a story'

The feminine words *gaya* (*ga*) and *bena*, both meaning 'time, instance', regularly take the masculine *xa* in adverbial phrases such as *xa-ga* 'once', *xa-gaya xeta* 'another time, again', *xa-bena* 'for a while, after a while/then', e.g.

(1) *málla Naṣrádin xá-ga bǎyɛ́wa mbašə̀lwa pàča.*ˈ 'Once mullah Naṣradin wanted to cook pača.' (A5:1)

(2) *xá-ga xéta plíṭṭəla Leliθa.*ˈ 'Again Leliθa came out.' (A51:12)

(3) *málka hóle xə́zya xá-ga xéta xə̀lma.*ˈ 'The king has had a dream again.' (A1:12)

(4) *šuréla xá-bena xéta bxàya.*ˈ 'They began to cry again.' (A25:7)

(5) *tíwela xá-bena hàdəx.*ˈ 'They sat for a while like that.' (A26:17)

(6) *zàlɛwa,*ˈ *xá-bena xzéle m-rə̀ḥqa xá-mdi xwàra.*ˈ 'He was going along and (after) a while he saw in the distance something white.' (A14:28)

The cardinal particle *xa* is not used with all nominals that have indefinite status on the cognitive level. Certain general tendencies can be discerned in its usage, though there are no categorical rules. These patterns of usage of the indefinite particle have been found in other NENA dialects (cf.

Khan 1999: 195–203, Khan 2002: 245–251, Khan 2004: 225–231). The English indefinite article has a far wider distribution among nouns with indefinite status and it is often appropriate to use the indefinite article in English translation where no *xa* particle appears in the dialect.

In general, the indefinite particle *xa* occurs with an indefinite countable nominal with a referent that is individuated and salient in some way but tends to be omitted when the referent lacks this feature. The particle picks out one of a class of items denoted by the description of the noun. It is used or omitted in accordance with the degree to which the speaker wishes to focus on a referent of the nominal or on the descriptive content of the class denoted by the nominal respectively.

14.1.2.1. *Particle Used*
There is a tendency to use the particle in the following circumstances:

(i) Nominals with a topically prominent referent
In such cases the referent of a nominal with the particle acquires salience due to its prominent topical role within the following text. This is clearly seen by the regular use of the particle to introduce a protagonist at the beginning of a narrative, e.g.

(7) *ʾíθwa **xa-nàša**' gu-ða-màθa,' rába rába duglàna-wewa.' mdagə́lwa mən-nàše,' y-ámər hàtxɛle wíða fə́llən,' hàtxɛle wíða fə́llən.' rába məndiyáne y-awə̀ðwala,' béna náše là hăməníwa ʾə́lle díye.'* 'There was a man in a village who was a great liar. He would tell lies about people, saying so-and-so did such-and-such, so-and-so did such-and-such. He would do all kinds of (deceptive) things to them and people did not believe him.' (A48:1)

(8) ***xa-nàša**' sìqɛwa' l-ṭùra' qṭála ʾə̀rwe.'* 'A man had gone up into the mountains to kill sheep.' (A31:1)

(9) *ʾíθwa **xa-màlka**' ʾáwwa málka xzéle xa-xə̀lma.' ʾu-qédamta mə́re'*… 'There was (once) a king. This king had a dream. In the morning he said…' (A1:2)

In (7)–(9) the nominal has a specific, unique referent. This is not, however, the crucial feature that conditions the use of the particle. A nominal that has a non-specific referent that plays a prominent role in the following discourse is often marked with the particle due to this textual prominence, e.g.

(10) ***xa-náša*** *y-azə̀lwa*ˈ *ʾíθwa maθwáθa qurbèni.*ˈ *šaqə́lwa* ***čánta*** *mə̀nne-u*ˈ *máttu lə́xma gàw,*ˈ *y-azə́lwa ǧyàda,*ˈ *bέθa bèθa.*ˈ 'A man would go to villages that were near us. He would take a bag with him, in which he put bread, and would go from house to house making invitations.' (B5:20)

(11) *ʾasqə́xwa márzə Z̨àwa.*ˈ *šaqlə́xwa* ***xa-ʾə̀rba*** *mə́nnən,*ˈ *ʾu-ʾurxa-ʾùrxa,*ˈ *ʾu-parmə́xwale har-táma l-márzə Z̨àwa.*ˈ *ʾu-y-oδə́xwa nùra.*ˈ *mṭawə̀xwale táma.*ˈ 'We would go up to the banks of the Zab. We would take a sheep with us and slaughter it there, on the trip, on the banks of the Zab. We would make a fire and roast it there.' (B3:6)

In (10) the phrase *xa-náša* does not refer to one specific man who would take invitations to the villages each time there was a wedding. Rather the sense is that one man went around on each occasion, but not necessarily the same man, i.e. one unspecified item of the class denoted by the nominal. Similarly in (11) *xa-ʾə̀rba* refers to one item of the class of sheep that was slaughtered on each occasion, but obviously not the same item.

In (12) both the man and the woman play a prominent role in the ensuing discourse. The nominal phrase containing the two coordinated nouns is treated as a unit and has only one indefinite particle:

(12) *ʾíθwa xa-gáwṛa-w bàxta.*ˈ *ʾíθwala bnòne.*ˈ 'There was a husband and wife. They had children.' (A 22:1)

We may include in this category the regular use of the indefinite particle before a noun denoting a period of time in adverbial expressions with enduring relevance in that they set the temporal frame for the following discourse. The most common adverbial construction of this nature in narratives is *xa-yoma* 'one day', e.g.

(13) *xá-yoma qə́ryεle mə́re ṭla-réšət màθa*ˈ *ʾáwwa šə̀mma mšaxəlpùle.*ˈ 'One day he appealed to the head of the village saying "Change this name."' (A7:2)

(14) *xa-yóma síqe-wawa l-ṣèda.*ˈ 'One day they had gone up (the mountains) hunting.' (A25:2)

(15) *xa-yòma*ˈ *qímla zílla mə̀ra*ˈ *ṭ-ázəx l-ʾə̀rwe.*ˈ 'One day they set off and said "Let's go to the sheep."' (A25:23)

In (16), which occurs at the beginning of a narrative, the frame setting adverbial and the two protagonists are all marked with the indefinite particle:

(16) *xá-yoma ʾíθwa xá-qaša ʾu-xà-malla.*ˈ 'One day there was a priest and a mullah.' (A2:1)

(ii) Contrasted members of a set

There is a tendency to use the particle when the indefinite nominal is presented as one member of a limited set of items in some kind of contrastive opposition to other members of the set. The set is assumed to be identifiable, either since it is mentioned explicitly or at least implied. In such cases the nominal has salience due to this contrastive opposition, e.g.

(17) *ʾap-ánna péši trè jwíne.*ˈ **xa-jwìna**ˈ *gawàye,*ˈ *xà*ˈ *qam-tằra.*ˈ 'They again form two teams, one team inside and one outside.' (B11:11)

(18) *qímɛle ʾap-Fárxo šqíləlle zòrna,*ˈ *mxáya zòrna,*ˈ *bejíye hóla* **xa-gòta**ˈ *ʾśrwa* **xa-gòta**.ˈ 'Farxo also took up the pipe and played pipe music, the young lambs were one side and the sheep on one (other) side.' (A25:31)

In some cases only one member of the set is explicitly given, the other members being implied. This is often found in clauses containing a universal quantifier, in which the construction has a distributive sense, e.g.

(19) *qəm-mpatpᵊtla*ˈ *kút-xa qəm-xašálle* **ða-gòta**.ˈ 'He tore them apart and threw everybody down to one side.' (A25:56)

(20) *kút-yum* **ðà-brata** *gawśrwa.*ˈ 'Every day he would marry a girl.' (A14:1)

(21) *bɛθ-qòra,*ˈ *ʾan-náše mìθe*ˈ *ʾáni y-amrśxxa bɛθ-qòra.*ˈ *fa-y-azìwa.*ˈ *kút-xa ʾítle* **xa-mìθa**.ˈ 'The cemetery, (in which were) the dead people, we call the place they lie (literally: we call them) the cemetery. The people would go (there). Each person has a dead (family member).' (B5:56–57)

(22) *díya kút-bɛθa ʾítle* **xa-tanùra**.ˈ 'Now every house has an oven.' (B10:93–94)

(23) *θáni yómət ʾéða y-oðᵊxwa duxràna.*ˈ *kút-xa maṣléwa* **xà-lagăna**.ˈ 'On the second day of the festival (of Easter) we would make a memorial. Everybody would take down a pan (of food).' (B10:2)

The distributive sense is expressed in (24) and (25) by the repetition of the particle:

(24) *xá-b-xa bɛ́θa y-orəxwa gáwe mbarxə̀xwa ʾéθa.*ˈ 'We would go into one house after another and offer festival blessings.' (B6:15)

(25) *xa-xá-ga márət bɛ́θa mbašə́lwa ʾixála ʾimə-t hóya dànət ʾixála.*ˈ 'Sometimes (i.e. on one occasion and on another occasion) the owner of the house would cook food when it was time for food.' (B6:16)

In a related construction, the particle is used with the adjective *xena* (f. *xeta*) 'other' in references to a further member of a set of items that is assumed to be identifiable, e.g.

(26) *paḷṭíwa mən-bɛ̀θa*ˈ *y-oríwa gu-**xa-bɛ́θa xèna**.*ˈ 'They would leave one house and enter another house.' (B15:7)

(27) *ʾáp-xa lìθ láxxa gu-bɛ́θa.*ˈ *ʾayále díye hóle mšùdrəlla **xa-dúkθa xéta**.*ˈ 'There is nobody here in the house. He has sent his children to another place.' (A22:28)

(28) *ʾíman ṭ-àθyət,*ˈ ***ða-kəsta-xéta** max-d-áy yawə̀nnəx.*ˈ 'When you come back, I'll give you another purse like that one.' (A4:16)

When the indefinite noun has a possessive pronominal suffix and so denotes one member of a set of items in the possession of the referent of the suffix, the particle is obligatory, e.g. *xa-xòri* 'a friend of mine' (B15:88), *xa-xóni* 'a brother of mine' (A18:16), *xa-nàši* 'a relative of mine' (A18:16), *xa-màmi* 'a maternal uncle of mine' (B8:7), *xá-ʾərwən* 'a sheep of ours' (A10:5).

(iii) Portion of a mass
The particle is used with a noun that by itself denotes an undelimited mass to express a single countable portion of this mass, e.g.

(29) *qàša*ˈ *ʾu-šamàša*ˈ *ʾi-mṣàli*ˈ *b-réše-u béθa dérɛ míye b-réše dìye.*ˈ *ʾu-máxa **xa-mə́šxa** gu-be-ʾéne dìye.*ˈ 'The priest and the deacon pray over him and his family and they put water on his head. They put some oil on his forehead.' (B6:36)

(30) *màsta*ˈ *xə́lya mɛθə̀xxe,*ˈ *marəθxə̀xxe.*ˈ *qàyər xánči.*ˈ *dérəx **xa-màsta** gáwe,*ˈ *p̌éša màsta.*ˈ 'Yoghurt—we would fetch milk and boil it. It would cool slightly. We would put a portion of yoghurt in it and it would become yoghurt.' (B10:26)

(31) *ʾu-talíle b-**xa-qèsa**.*ˈ 'They hang it onto a piece of wood.' (B6:38)

Similarly, nouns meaning 'piece of' or the like are typically preceded by the particle, e.g. *xa-qə̀ṭṭət qèsa*ˈ 'a piece of wood' (B10:100).

A noun of mass is given the particle when its description is delimited by an attributive modifier of some kind and is thereby presented as one member of a set of types, e.g.

> (32) *ʾíθwa xa-ʾùpraˈ məšxàna,ˈ ʾúpra smòqa.ˈ* 'There was an oily clay, red clay.' (B10:68)

(iv) Focus on unity
The particle is regularly used when the speaker wishes to give prominent focus to the unity or uniqueness of the referent. This focus is expressed on the prosodic level by putting the nuclear stress on the particle, e.g.

> (33) *ʾíθwalən šawwá ʾabôneˈ gu-máθa dìyən.ˈ píšela mútte gu-Mar-Qiyóma kúlla gu-ðà qáwra.ˈ* 'We had seven bishops in our village. They were all laid in one grave in (the church of) Saint Qiyoma.' (B2:6)
>
> (34) *ʾána xà-yoma kə́slux la-pə́šən.ˈ* 'I won't stay with you a single day (longer).' (A12:40)
>
> (35) *ʾána ðà-bratɛn.ˈ* 'I am an only daughter.' (A34:7)

14.1.2.2. *Particle Omitted*
The indefinite marker tends to be omitted in the following circumstances, in which the referent of the nominal is low in individuation and salience.

(i) Nominals with a referent that play an incidental role in text
Nominals often lack the indefinite marker when their referent does not play a prominent, durable role in the text, but is only incidental and is part of supportive background material. In (1), for example, the 'old man' marked with the particle has a degree of durability of reference, but the 'load of wood' that he was carrying and the 'stone' on which he was sitting are incidental. Likewise in (2) the 'basket' in which the eggs and bread were placed plays no significant role in the text. In all cases the nominals have specific referents:

> (1) **xa-náša sàwa**ˈ *ʾúmre díye…, yáʿni də́qne díye mṭáya l-ằra,ˈ hóle ṭína* **kə́rtət qèse**ˈ *l-xàṣe.ˈ hóle tíwa l-***kèpa**,ˈ *hàtxa.ˈ ʾánna pìðəlla mənne díye,ˈ ʾap-šlàma lə́la də́ryəlle.ˈ* 'An old man, whose age…that is his beard reached the ground, was carrying a load of wood on his back. He was sitting on a stone, like this. They passed by him, but did not even greet him.' (A15:13)

(2) *mšádrən mɛxòlta ʾɔ́lle díye,¹ ʾixàla.¹ qìmtɛla,¹ šlìqta¹ bèʾe,¹ šàwwa bèʾe.¹ ʾu-muttɛ́θela ṭḷáθi ləxme¹ gu-**čànta**.¹ mə̀ra bábi nábəlla gu-jàma¹ hàlle!¹* ' "I shall send food to him, some food." She boiled eggs, seven eggs, and put thirty loaves of bread in a basket. She said "Father, take them to the mosque and give them to him." ' (A17:11)

The omission of the particle with the word *məndi* 'thing' can be explained in the same way in (3) and (4), where it refers to something that is incidental and not referred to in what follows. By contrast in (5) and (6), where *məndi* has the particle, it refers to something that is talked about in the ensuing discourse:

(3) *ʾáθət ʾána mbàšlən **mə́ndi**.¹* 'Come and I shall cook something.' (A22:14)
(4) *tìwle,¹ xílle **mə̀ndi**¹* 'He sat down and ate something.' (A15:1)
(5) *ʾána ʾáxxa nšéli **xa-mə̀ndi**.¹* 'I have forgotten something here.' (The speaker then goes on to talk about the thing he had forgotten to mention earlier) (B5:35)
(6) *ʾámər ʾálla dìya¹ ṭ-amrə̀nnəx **xa-mə̀ndi**.¹ mə́ra mùr.¹* 'He said to her "I shall tell you something." She said "Tell (me)." ' (A16:7)

In some cases the particle is omitted before a nominal with a referent that has a certain durability in the ensuing clauses of a section of discourse, but lacks textual salience due to the fact that the section of discourse in question is not in the foreground of the disourse as a whole, but supplies background information. This applies to (7), in which the 'lion' clearly plays a dominant role in the chain of clauses that is cited, but these are not in the main foreground of the narrative, but rather provide explanatory background information as to how the protagonist of the section lost his hand:

(7) *zílle xa-béna **ʾárya** θéle ṭálbe dìye,¹ ʾáwwa qṭìlle ṭla-ʾárya,¹ ʾína ʾárya ʾíðe díye qəm-axə̀lla.¹* 'A lion once attacked him. He killed the lion, but the lion ate his hand.' (A11:1)

(ii) Listing members of a set
In contexts where a member of a set is presented as one of a list of many rather than being presented in distinct opposition to another member, the particle is sometimes omitted, e.g.

(8) *qímle **'áqla xéta**… qəm-parə̀mla.*ˈ 'He cut off another leg (one of a series).' (A22:5),

(iii) Where the existence of a referent is negated or questioned
In negative or interrogative constructions that deny or question the existence of a referent, where the nominal clearly does not denote a referent that saliently stands out from the class of items denoted by the description of the noun, the particle is often omitted, e.g.

(9) *la-**bàba** 'ítle,*ˈ *la-**yə̀mma** 'ítle.*ˈ 'He has neither a father nor a mother.' (A14:16)

(10) *har-'àwwɛle*ˈ *'ən-'ítle nawàge,*ˈ *'ən-'ítle **bàba**,*ˈ *'ən-'ítle **yə̀mma**,*ˈ *'ən-'ítle xonăwàθa?*ˈ 'Is he alone or does he have grandchildren, does he have a father, does he have a mother, does he have brothers?' (A17:16)

(11) *m-éka mɛθə̀nnux **nasàrta**ˈ ta-t-nasrə̀nnux qèse ṭ-oðə̀nnux **gə̀šra**,*ˈ *šáwrəx réše réše dìye?*ˈ 'From where should I bring you a saw so that I could saw the wood to make a bridge, over which we could cross?' (A17:3)

(12) *Mar-Yuḥánna lá-mṣele kút-xa dréle **qáwwət míya** b-rèše.*ˈ 'Saint John could not put a scoop of water over everybody.' (B6:10)

When, however, the noun is presented as standing out distinctly as a single individual member of a identifiable set, the particle may be used. In (13), for example, the phrase *xa-səryóqa* has the sense of 'not even one single member of the set of twigs':

(13) *mɛθíwa səryòqe,*ˈ *ṭárpa qắṭíwa y-azìwa.*ˈ *mɛθíwa 'an-qése naqìðe.*ˈ *kúlla torə̀xwala.*ˈ *'áxni la-morə̀xwa **xa-səryóqa** gu-béθa 'ən-la-torə̀xwale.*ˈ *torə̀xwala kúlla baràye.*ˈ 'They would bring thin pieces of wood. We would break them all. We would not bring a single twig into the house without breaking it. We would break everything outside.' (B10:70)

(iv) Focus on descriptive content
The particle tends to be omitted in a variety of contexts in which attention is being directed to the description or descriptive content of the nominal rather than to a referent. This is clear in cases such as (14) and (15) in which a specific referent of a nominal is first introduced into the narrative by a phrase containing the particle and then the definition of

the descriptive content of the nominal is clarified in a subsequent clause, in which the nominal is indefinite but without the particle:

(14) *ʾìθwa*ˈ ***xa-ràbbən,*** ˈ *tíwɛwa gu-xa-gəppìθa.*ˈ...***ràbbən*** ˈ *yắðət-mà-yle.*ʔˈ ***ràbbən*** ˈ *ʾáwwa ṯ-i-sàxəð l-ʾálaha*ˈ *ʾu-ṯ-i-mṣàle-u*ˈ *lé-y-ʾaxəl bə̀sra-w*ˈ *ʾáw y-amríle* ***ràbbən.*** ˈ 'There was once a monk who lived in a cave....Do you know what a monk is? A monk is somebody who worships God, who prays and does not eat meat. He is called a monk.' (A15:1–4)

(15) *múttela* ***xa-sállət mìya.*** ˈ *múttela qam-ʾaqlaθè̀y.*ˈ ***sállət míya*** *yắðət mèla.*ʔˈ *béna míya kɔ́lye gu-sàlla.*ʔˈ 'They had put out a basket of water, they put it in front of their legs. Do you know what a basket of water is? But, can water stay in a basket?' (A16:9–10)

Similarly in (16) the first mention of 'a mountain' introduces a specific referent and has the particle, whereas the following occurrence of the noun without the particle occurs in an appositional phrase that is intended to clarify the descriptive content of 'a mountain':

(16) *síqela gu-****xa-ṭùra,*** ˈ ***ṭúra*** *ʾisáre ramàne.*ˈ 'They went up into a mountain, a mountain (with) high rocks.' (A15:13)

In (17) the first noun 'a board' introduces a referent, but the second noun 'a ladder' in the double object construction ('to make something into something') denotes a change of description rather than a change of referent:

(17) *qímɛle mtúrṣəlla* ***xa-tàxta,*** ˈ *wíðəlla* ***semàlta.*** ˈ 'He constructed a board and made it into a ladder.' (A17:23)

Similarly the particle is omitted when attention is directed to the description of the class denoted by a noun rather than to a particular referent representing the class, e.g.

(18) ***báxta*** *xáčča zàbbun-ila.*ˈ 'A woman is rather weak.' (A10:12)

Further examples where the description or descriptive content is the main concern of the speaker:

(19) ʾắraq—ʾíθwa **masìna**.ˈ **masína** mturáṣtɛwa m-ʾùpra.ˈ 'As for arak, there was (a pot called a) *masina*. A *masina* was made from clay.' (B5:14)

(20) ʾàxniˈ kə̀slən ˈ **šàbθa**ˈ ʾíla šawwà-yomeˈ ʾu-yàrxaˈ ʾíle ṭḷaθì-yome.ˈ 'A week for us is seven days and a month is thirty days.' (A17:13)

(21) ʾína wírɛle gáwe díye **ʾàrya**ˈ ʾu-pḷíṭɛle **tèla**.ˈ 'A lion entered it and a fox came out (i.e. he entered proudly like a lion but came out stealthily like a fox).' (A17:34)

A noun that is a predicate in a copula clause and ascribes a descriptive property to the subject frequently lacks the particle, e.g.

(22) ʾáwwa- ži **zamàrɛle**.ˈ 'He is a singer.' (A11:4)

(23) ʾána ʾədlɛ́le **ʾárxa** ṭ-áwən láxxa kə̀sləx.ˈ 'Tonight I shall be a guest in your home.' (A17:24)

(24) ʾu-**xə́tna** l-béθa pɛ̀šena.ˈ 'I shall become a son-in-law in the house.' (A17:35)

If, however, a noun is qualified by an attributive description in the contexts described above, there is a greater tendency for it to be given the indefinite particle, since by such qualification its individuation is increased, e.g.

(25) **bəllòrta** ʾítla.ˈ mattə̀xla qa-yála zòra,ˈ mattə́xxa **wàṣla**,ˈ **xa-wáṣla rakìxa**.ˈ 'It had a pipe. We set it up for a young child, we set up a joining piece, a soft joining piece.' (B10:77)

(26) ʾáti **xa-náša xaràmət**.ˈ 'You are a villainous man.' (A16:11)

(27) dáwla ʾíle **xa-sandùqa**ˈ réše pθíxɛle dɛ́rɛ xə̀ṭṭɛ gáwe.ˈ 'The *dawla* is a box the top of which is open and in which they put wheat.' (B6:54)

14.1.3. *Stress Placement*

There is no clear-cut phonological difference between the usage of the particle *xa* as a cardinal numeral and its usage as a marker of indefiniteness. As a general rule, however, the particle is stressed when acting as a cardinal numeral in opposition to another cardinal, e.g.,

(1) ʾíθwa xá-ʾotəx yan-trè.ˈ 'There was one room or two.' (B5:199)

(2) xalmìwaˈ xà-siṭaˈ yan-trè-siṭeˈ 'They become one span or two spans thick.' (B5:207)

(3) pɛšíwa xá-lɛle trè.ˈ 'They stayed for one night or two.' (B5:234)

When functioning as a marker of indefiniteness the stress most commonly
falls on the nominal, as can be seen in the examples cited above. Retrac-
tion of the stress onto the particle occurs in some cases. This is found
mainly in the following contexts:

(i)   Temporal or spatial adverbial expressions:
   (4)   *xàrθa*ˈ *xá-yoma síqa l-gàre.*ˈ 'Then, one day, he went up onto the
         roof.' (A14:87)
   (5)   *ʾáyya xá-šeta hóla támma láxxa lélá mbaqorə̀llux.*ˈ 'They have been here
         for a year but have not asked for you.' (A26:78)
   (6)   *ʾáw máṣli xá-dukθa ṭ-óya šaxínta y-amrə́xwa gòma.*ˈ 'They deposit it in
         a warm place that we called a *goma*.' (B5:211)
   (7)   *málla Naṣrádin xá-ga băyéwa mbašə́lwa pàča.*ˈ 'Once mullah Naṣradin
         wanted to cook *pača*.' (A5:1)
   (8)   *tíwela xá-bena hàdəx.*ˈ 'They sat for a while like that.' (A26:17)

(ii) Before nouns that are annexed to a following noun:
   (9)   *xá-zawgət xoriyàθa*ˈ 'a pair of willow trees' (A26:90)
   (10) *xá-palgət sàʾət*ˈ 'half an hour' (A10:5)
   (11) *xá-boyət xùwwe*ˈ 'a snake's hole' (A9:6)
   (12) *xá-borət kèpe*ˈ 'a pile of stones' (A11:5)

The same applies to functionally similar constructions such as (13) and
(14), in which the indefinite noun is combined with a following noun in
apposition:

   (13) *xá-ṭena qésa* 'a load of wood' (A14:9)
   (14) *xá-reša tùma*ˈ 'a head of garlic' (B10:19)

(iii) Nouns qualified by the modifier 'other':
   (15) *ʾə́θyɛle xá-naša xèna.*ˈ 'Another man came.' (A12:9)
   (16) *xàrθa*ˈ *ṭ-áθe xá-ʾeða xréna zòra*ˈ 'Afterwards comes another small fes-
         tival.' (B6:8)

(iv) Before the word *məndi* 'thing':
   (17) *hálli xá-məndi ṭ-àxlən.*ˈ 'Give me something to eat.' (A26:57)
   (18) *băyəx xá-məndi gu-tằra qablítula.*ˈ 'We want you to pledge something
         for her at the door.' (B10:36)

(19) *ʾat-yắðət xá-məndi bas-dìyeʔ*ˈ 'Do you know something about it?'

(20) *xá-mdi xwàra*ˈ 'something white' (A14:28)

14.1.4. *Suffixed Cardinal Indefinite Particle*

The suffixation of the cardinal particle *xa* to the noun is attested in the phrase *xabra-xa* in (1) below. The particle here expresses the internal uniformity of the referent ('consensus, agreement') rather than its individuation:

(1) *ʾáw-w bàxta,*ˈ *Čəlkằze*ˈ *ʾo-yàla,*ˈ *wídla xàbra-xa.*ˈ 'He and the woman, that is Čəlkăze and the young man, made an agreement.' (A12:37)

14.1.5. *Pronominal Use of Indefinite Particle*

The cardinal particle *xa/ða* can be used as an indefinite pronoun independently of a noun, e.g.

(1) *bə́nyət-əlla ʾótəx tàma,*ˈ *qá-t mabə̀sma kút-yom xà.*ˈ 'You have built her a room there in order for her to entertain somebody everyday.' (A4:52)

(2) *ʾə́θyɛle xàʾa.*ˈ 'A certain person came.' (A7:24)

(3) *ʾu-ʾíθwa ṭawáltət bərràne,*ˈ *xa-ráqa báθər d-ò-xena.*ˈ 'There was the game of "groups", one person running after the other.' (B7:6)

(4) *béna xá-mənna mə́re de-yàlla!*ˈ 'Then one of them said "Go for it!"' (A44:3)

(5) *múθyɛle trè susăwáθa.*ˈ *xa-múxləlle mòlxa.*ˈ *ʾu-xá har-múšətyɛle mìya.*ˈ 'He brought two horses. He fed one salt. One he only gave water to drink.' (A34:31)

Such indefinite pronouns can be qualified by an adjective, e.g.

(6) *xa-gòṛɛle.*ˈ 'He is a great one (a great person).' (A26:72)

(7) *də-mxíli xa-xèna.*ˈ 'Strike me another one (another blow)!' (A52:24)

If the referent is feminine, there is a greater tendency to use the feminine form of the particle *ða* than there is when the particle is used before a feminine noun, e.g.

(8)   ʾína brónət málka θèleˈ ʾu-ðà mə́nne díye.ˈ 'Behold the son of the king
      has come and a girl is with him.' (A14:93)

(9)   dawqíwa bnáθa b-ʾíðət ġðáðe hàtxa,ˈ yáʿni ràbe doqíwa,ˈ ða-dwíqta ʾíðə
      d-a-xèta.ˈ 'The girls held each other's hand like this. Many held
      (hands), one holding the hand of the other.' (B12:1)

(10) ʾáyya Žíne ʾíθən trèʾe.ˈ ða-xàθelaˈ ʾu-ða-bàxtela.ˈ 'There are two of
      such (women called) Zine. One is his sister and one is his wife.'
      (A26:61)

(11) šqíləlla mən-d-ε-dὲrta,ˈ núbləlla zə̀dyəlla gu-ða-xèta.ˈ 'They took it
      from that enclosure, took it away and threw it into another one.'
      (A15:12)

(12) muttéθəlla ṭəḷḷə̀θ xəmməryáθa,ˈ m-an-xməryáθə tabzìye.ˈ muttéθəlla rəš-páršət
      ʾὲna,ˈ ða-smòqta,ˈ ða-xwàrta,ˈ ða-milànta.ˈ 'She laid down three beads,
      beads of a rosary. She put them on the stone slab of the spring,
      one red, one white and one blue.' (A25:34)

A few exceptions are attested, such as (13) and (14), in which the feminine
form of the adjective *xeta* is combined with *xa* rather than *ða*:

(13) ðà-b-ða šáqla-wˈ mattá xa-xèta.ˈ 'She takes them (*guttaθa* f. balls of
      dough) one by one and puts another in.' (B5:102)

(14) ʾap-xa-xéta ʾaxlàla.ˈ 'She eats another one (another leg *ʾaqla* f.).'
      (A18:21)

14.2. Gender

We shall restrict ourselves here to noting the use of the feminine singular
form of pronouns and verbal inflection in situations where they do not
refer to a distinct referent. These can be categorized as follows:

14.2.1. *Discourse Anaphora*

Feminine singular forms are used to refer anaphorically to the general,
propositional content of the surrounding discourse, e.g.

(1)   ʾən-ʾáwəd hàtxa,ˈ lèla spáy.ˈ 'If he does this, it is not good.' (A14:6)

(2)   ʾáyyət miràli ʾə̀lluxˈ kùlla wiðále.ˈ 'What I have told you—all of this
      he has done.' (A24:20)

(3) *mxéli sépa ʾǝlle,*ˈ *ču̓-mǝndi la-wìdla.*ˈ 'I struck a sword into him, but that (action) did nothing.' (A12:36)

(4) *xamlóxwa bìya.*ˈ 'We enjoyed the occasion.' (B5:33)

(5) *m-kǝs-gàne qǝm-mdabárra*ˈ *mxalóṣe xàye díye.*ˈ 'He fabricated it (what he had just said) to save his life.' (A39:6)

(6) *plìṭṭela*ˈ *gu-màθa,*ˈ *kút-xa qṭála ġðàðe.*ˈ 'It (what had happened) got about in the village and everyone fought with one another.' (A7:14)

(7) *hátxa la-hàwya.*ˈ 'This cannot be.' (A21:32)

(8) *šwiqáli táma-w θéli làxxa.*ˈ 'I have left it (the situation of the narrative) there and come here' (formula marking the end of a narrative). (A26:91)

(9) *b-àyyǝt mšúdrǝlli?*ˈ 'Did you send for me because of this?' (A21:35)

(10) *módi mqúma ʾǝllux?*ˈ *ʾo-qamáya miràle,*ˈ *ʾo-t-tré miràle.*ˈ '"What has befallen you?" The first one told it (= the event) to him, the second one told it to him.' (A17:31)

The normally masculine noun *mǝndi* is construed as feminine singular in (11), where it is singular, and (12), where it is plural, since in such cases it refers anaphorically to the general, propositional content of what precedes in the discourse, rather than to a specific referent:

(11) *ʾáyya mǝ́ndi lɛ̀-ʾaθya l-manšóye.*ˈ 'This thing is unforgettable.' (B15:8)

(12) *rába gáye wítɛla ʾánna mǝndiyàne.*ˈ 'Many times such things happened.' (B5:163)

In (13)–(15) the propositional content of what follows is referred to anaphorically by feminine singular inflection. In (13) the content in question is that of a subordinate clause that is construed as the subject of the preceding copula (*léla šǝklánta*). In (14) the feminine singular form *píštɛla* refers to the proposition 'the bees are going back and forth'. In (15) the feminine singular copula in the disclaimer *zàwdɛla mǝ́nni* 'it is too much for me' refers to the content of the following speech of the speaker:

(13) *ʾǝn-bábux ʾu-yǝ́mmux gu-bɛ̀θɛla,*ˈ *léla šǝklánta ṯ-ásqǝt l-gàre.*ˈ 'If your father and mother are in the house, it is not pleasant for you to go up onto the roof.' (D2:7)

(14) *ʾu-píštɛla ʾan-dǝbbòre*ˈ *har-zála-w θàya.*ˈ 'The hornets continued going back and forth.' (A20:8)

(15) *mìr-e-mən*᾿ *zàwdεla mə́nni,*᾿ *ʾána ṭ-amrənnèxu*᾿ *mšáxəlpu dukàne.*᾿ 'My lord,
       may I humbly suggest you change places (Literally: It is too much
       for me, let me say to you, change places).' (A26:65)

Expressions referring to mathematical operations are also treated as
feminine singular, e.g.

(16) *tré-gaye tré wíta ʾàrba.*᾿ 'Two times two equals four.'
(17) *xámša gáye xámša wáyεla ʾə́sri-w xàmša.*᾿ 'Five times five is twenty-
       five.'

Infinitives, which refer to a general activity unbound to a particular point
in time, are usually construed as feminine in gender when they function
as arguments in a clause, e.g.

(18) *qráya zàmət-ila.*᾿ 'Reading is difficult.'
(19) *mdaróye modìla?*᾿ 'What is winnowing?' (B5:97)

Occasionally the inanimate interrogative pronoun 'what?' is treated as
feminine when it relates to a situation with propositional content rather
than a distinct referent, e.g.

(20) *mo-ṭ-áθya b-rešèni?*᾿ 'What will come upon us?'

14.2.2. *General Speech Situation*

In direct speech the feminine singular is used in various expressions to
refer to the general speech situation, e.g.

(1)   *ʾáxxa biš-salàmət-ila.*᾿ 'Here it is safer.' (A30:51)
(2)   *há xèr,*᾿ *mòdila?*᾿ 'Is everything all right? What is it? (= What is the
       matter?)' (A17:29)
(3)   *ṣríxεle*᾿ *hàwərila!*᾿ *hàwərila! bέθi qìdle!*᾿ 'He cried "Woe! Woe! (literally:
       It is woe) My house has burnt down."' (A48:2)
(4)   *xwíṭla ʾə́lli.*᾿ 'I am confused (literally: It is mixed up for me).'

14.2.3. *Temporal Expressions*

The feminine singular is used in some temporal adverbial expressions to
refer to the general temporal situation in a narrative, e.g.

(1) *b-lɛ̀lela,'ᵖlíṭṭela zìltela' xzíθəlle xa-nàša.'* '(When) it was night, she went out and found a man.' (A22:36)

(2) *wítɛla b-lɛ̀le' maláxa mŭṛɔ́šle qa-ràbbən.'* 'In the night (literally: It became in the night) the angel woke the monk.' (A15:11)

(3) *píšla b-lɛ̀le,' sìqele' l-gàre.'* 'In the night (literally: It became in the night), he went up onto the roof.' (A25:52)

(4) *kpìnna' yómə ṭḷàθela.'* 'She went hungry when the third day came.' (A21:16)

(5) *wítɛla bar-ʾo-náša sáwa ṣə́lyele mtămòzəlla č̌ənnəkɛ́ra díya,' ʾáp-ʾaw ṣə́lyɛle mhayóre ta-d-o-sàwa.'* 'After the old man went down to clean around it (literally: It became after...), he also went down to help the old man.' (A14:77)

(6) *hə́nṭ-ila ṭ-àθe'* 'He will come very soon (literally: It is a little he will come).

(7) *ʾu-šaqláwa qúrbə l-ʾárbi, xamšî yomáθa.'* 'It would take about forty or fifty days.' (B5:12)

(8) *mə́dre ʾi-zamríwa-w šatɛ̀wa' hál y-oráwa gu-lɛ̀le.'* 'They again sang and drank until it was night (literally: until it passed into night).' (B5:18)

(9) *zílta láxxa tre-ṭḷà-yarxe,' ʾarbà-yarxe,' mə́re xa-béna xéta mjarbə̀nna.'* 'Two or three months, four months passed. He said "I'll test them again."' (A48:4)

(10) *píšla qúrbət xà-yarxa' ʾɛ́-ga málka mə́re ṭla-bàxte'* 'Almost a month went by and then the king said to his wife...' (A4:38)

(11) *y-oráwa kə́ma yàrxe.'* 'Several months would pass.' (B5:18)

(12) *palṭa-bàhər' y-oðə́xwa ʾùpra.'* 'When Spring came, we would collect the mud.' (B10:68)

In (9)–(12) the fs. verb forms appear to take the following plural nouns as their grammatical subject, but they should be interpreted as referring to the general temporal situation: '(Time) went by (for) two or three months, four months', etc.

14.2.4. *Object Pronoun*

In a number of expressions a 3fs. object pronoun on a verb has no clear referent. The purpose of this otiose object appears to be to denote the telicity of the verb. In (1), for example, the verb phrase *mtagbə̀rra* denotes that the man administers something and achieves a result, whereas the form *mtagbər* without the object could be construed as non-telic, denoting

that he administers without necessarily achieving a result. In (2) the verb *qəm-jarála* denotes not only that the cat engaged in the activity of urinating, but also that it completed the activity, fully emptying its bladder. The same applies to the act of defacation in (3). In (4) and (5) the object pronoun conveys the sense of finality in the act of surrender.

(1) *bíš-yăðe mtagbə̀rra.*˥ 'He knows better how to deal with things.' (A30:2)

(2) *qáṭu krìbla,*˥ *qəm-jarála gu-nùra.*˥ 'The cat was angry and urinated in the fire.' (A34:8)

(3) *kúṭ-ile xíləlla xa-ràmši-məndi*˥ *gu-bὲθi*˥ *ʾáθe xarὲla gu-béθi.*˥ 'Everyone who has eaten my dinner or the like (i.e. any food) in my house, let him come and defecate in my house.' (A7:5)

(4) *lá qəm-mattúla qam-màlka.*˥ 'He did not surrender to the king.' (A27:1)

(5) *m-xúwwe hon-muxə̀rwəlla.*˥ 'I have wrecked it with the snake' (i.e. I have wrecked my relationship). (A1:10)

An intransitive verb may be given a complement of a prepositional phrase containing a 3fs. non-referential pronominal suffix. Again the effect is to express telicity and hence greater salience and force, e.g.

(6) *ʾána zála har-zílən bìya.*˥ 'I have absolutely gone with it!' (i.e. I am finished!) (A14:25)

14.2.5. *Meteorological Expressions*

In some expressions relating to the weather a 3fs. inflection is used without any explicit subject, e.g. *támməl rìtɛla*˥ 'Yesterday it rained', *bṭ-àrya*˥ 'It will rain', *ʾə́dyo šaxìnta*˥ 'Today it is hot'. In such cases the subject should be understood as the feminine noun *dunye* 'world, weather', which is used in other meteorological expressions such as *dúnye ràya*˥ 'It is raining', *dúnye šaxìnta*˥ 'It is hot', *dúnye xəmmànta*˥ 'It is hot'. Note also expressions of temperature such as (1)–(3), where the implicit subject again can be interpreted as *dunye*:

(1) *qəm-xăðíla hátxa t-la-qɛralὲy.*˥ 'They wrapped them up, like this, so that they would not be cold.' (A8:12)

(2) *wítɛla xáčča b-yóma xə̀mma.*˥ 'It became rather hot during the day.' (A14:68)

(3)   *ta-ṭ-óya šaxínta b-sə́twa ʾəllèy.*ˈ 'So that it will be warm for them in the winter.' (B14:9)

14.3. Demonstrative Pronouns

14.3.1. *Preliminary Remarks*

The demonstrative pronouns may qualify a noun or stand independently. When they qualify a noun, they are regularly placed before the noun, e.g. *ʾáwwa gáwṛa* 'this man', *ʾáyya báxta* 'this woman', *ʾánna náše* 'these people', etc. They may be combined with nouns that have possessive pronominal suffixes, e.g. *ʾáwwa ʾərbi* 'this sheep of mine' (A10:3), *ʾáwwa bèθux* 'this house of yours' (A11:11), *ʾáw kawsèy* 'that hair of theirs' (A8:14), *ʾaw-nǎre* 'that axe of his' (A14:12), *ʾo-qɛ́se dìye* 'its wood' (B5:84), *ʾáy bráti* 'that daughter of mine' (A40:10), *ʾɛ-bratɛ́ni* 'that daughter of ours' (A21:25), *ʾáyya róxi* 'this soul of mine' (A26:82), *qu-sɛ́ kəs-d-anna-šwàwən*ˈ 'Go to these neighbours of ours' (A5:1).

Independent demonstrative pronouns may stand in any syntactic position in a clause, including subject, predicate, direct object of a verb or complement of a preposition or particle. In the majority of attested cases they are in subject position:

(i) Subject
   (1)   *ʾaw-tíwɛle xaràya.*ˈ 'He sat last (in the queue).' (A17:31)
   (2)   *xa-bèna,*ˈ *dmìxɛle ʾáw.*ˈ 'Then he went to sleep.' (A24:40)
   (3)   *ʾay-θéla dmíxla gu-ʾótəx dìya.*ˈ 'She came back and went to sleep in her room.' (A17:26)
   (4)   *klìθɛla-ay.*ˈ 'She stood.' (A31:10)
   (5)   *ʾáwwa zílɛle b-ʾùrxa.*ˈ 'He went on his way.' (A17:12)
   (6)   *w-áyya šurèla*ˈ *ṭlába mən-ʾálaha ta-t-mɛ́θa ʾup-ày.*ˈ 'She began to ask God to let her also die.' (A26:87)
   (7)   *hadíya lèla ṣyáməlla ʾáni.*ˈ 'Now they do not fast.' (B16:12)
   (8)   *sằbab*ˈ *ăwáha škèle*ˈ 'because that one complained' (A25:32)

(ii) Predicate
   (9)   *ʾítwa náše šuléy ʾawwɛle líθən?*ˈ 'There were people whose job was this, is that not so?' (B5:135)
   (10) *ʾannɛla ʾeðăwáθə diyɛ́ni.*ˈ 'Our festivals are these.' (B6:16)

(iii) Direct object

    (11) *ʾaw-y-oðə̀xwa.*ˈ 'We would do that.' (B10:49)

    (12) *ʾu-hóla mšu̯yðánta mən-d-ó-yoma ṱ-íla xzíθəlle ʾàw.*ˈ 'and she has been mad from the day that she saw him.' (A4:12)

    (13) *ʾáwwa xá-ga xéta dɛréle gu-mìya.*ˈ 'They put it again in water.' (B6:44)

    (14) *dáx pɛrmánne ʾàwwa?*ˈ 'How can I slaughter him?' (A15:9)

    (15) *ṱ-awðə̀tla ʾày̯ya?*ˈ 'Will you do this?' (A25:75)

    (16) *ʾáxc̃i muθéli ʾànna.*ˈ 'I have only brought these.' (A7:22)

    (17) *pálšəx ʾáni* 'Let us fight them.' (A14:52)

(iv) Complement of a preposition or particle

    (18) *b-xa-ʾúrxa t-ʾày̯*ˈ 'in a way of her own' (A8:48)

    (19) *pálga ṱla-gàwṛa*ˈ *pálga ṱla-d-ày̯*ˈ 'half for her husband and half for her' (A10:6)

    (20) *ḳáwa ṱla-d-àni.*ˈ 'Let it be for them.' (A15:18)

    (21) *yawə̀lla qa-d-ày̯.*ˈ 'He gives it to her.' (A4:22)

    (22) *mút farqù̯θɛla,*ˈ *gu-d-áyya dɛ́rta ʾaw-gu-d-ăyàha?*ˈ 'What is the difference (whether it is) in this enclosure or that one?' (A15:12)

    (23) *ṱ-áθe xa-ʾárxa ʾax-d-àwwa*ˈ *gu-bèθi.*ˈ 'A guest comes like this into my house.' (A26:34)

    (24) *kúlla ʾaqára ğắrəg máxe m-d-àw.*ˈ 'The whole farm must spread some of this (on the crops).' (B5:138)

    (25) *ʾa-d-áy̯ ṃláyəlla kùlle míya*ˈ *ʾa-d-áw har-mə̀lya.*ˈ 'She fills hers all with water. His was continuously full.' (A17:25)

    (26) *ʾàna*ˈ *dárdi léla d-àyya.*ˈ *dárdi ʾíla t-ʾá-t gu-panjărìye.*ˈ 'My suffering is not from this (game), my suffering is from that one at the window.' (A26:66)

The independent demonstrative pronouns function as 3rd person personal pronouns. The distribution of the independent demonstrative pronouns is wider than that of 1st and 2nd person personal pronouns, which can occupy the subject, direct object or predicate positions of clause, but cannot be the complement of prepositions.

14.3.2. *The Function of the Demonstrative Pronouns*

When examining the function of the demonstrative pronouns a distinction should be made between their use to refer to visible objects in the extra-linguistic speech situation and their use to refer to referents within

the discourse. As indicated in §7.4., when used to refer to extra-linguistic objects the pronoun system can be said to be 'hearer orientated', in that the deictic centre for all pronouns is the hearer. It consists of three series:

'speaker deixis'	ʾáwwa kθáwa 'this book (near me)'
'far deixis'	ʾăwáha kθáwa 'that book (remote from me and you)'
'default'	ʾo-kθawa 'that book (with you)'

The far deixis form may be intensified by replacing the /a/ with /aʾ/ in the stressed syllable: ʾăwáʾha kθáwa 'that book (very remote from me and you).

Examples from the text corpus:

(1) qu-šqúlla ʾáyya skìnta.ˈ 'Get up and take this knife.' (A15:8)

(2) yába là dámxəx gu-d-áwwa qáṣra.ˈ dámxəx l-wàᵈḍər.ˈ 'Let's not sleep in this palace. Let's sleep outside.' (A12:11)

(3) y-ásqəx mέθəx míya mən-d-ăwàha ṭúra.ˈ 'We shall go up and fetch water from that mountain over there.' (A39:9)

(4) réšux mattánne gu-d-yàha káweˈ ṭ-íla pyàša.ˈ 'I shall put your head in that opening over there that remains.' (A25:62)

(5) mére kèle bέθa díya.ʔˈ ʾaw-xášu xa-badəkkεle.ˈ màra ʾăwáʾha qáṣra ṭ-it-xzàyəlle.ˈ 'He said "Where is her house?" He thought it was a hut. They said "That villa that you can see over there."' (A40:11)

(6) mátɣεle xa-káwtət ʾ̀ərwe,ˈ ʾíbe tre-ṭláθa ʾálpa rέš-ʾ̀ərwe.ˈ qəm-qaréla ʾan-šavàneˈ mére d-ɛ̀nila ʾan-ʾ̀ərwe.ʔˈ 'He came to a flock of sheep, in which there were two or three thousand head of sheep. He called the shepherds and said "Whose are those sheep (which are in your keeping)?"' (A32:14)

(7) šqíləlla qamáye ðá-kista dàwe.ˈ mére ʾáy ṭlàləxˈ…mjunəgníla hàtxa.ˈ…mére …ʾíman ṭ-àθyət,ˈ ða-kista-xéta max-d-áy yaw`ənnəx.ˈ 'He first took out a purse of gold pieces. He said "This is for you"…She shook them like this…He said…"When you come back, I'll give you another purse like that one (you are holding)."' (A4:15–16)

(8) kúlla ʾan-waríðəx qăṭ̀ənna.ˈ 'I shall cut all those roots of yours.' (A25:64)

(9) ʾay-mòdila.ʔˈ 'What is that (by you)?' (A21:8)

The structurally least complex form, which is designated here as 'default', is used when the item is with the hearer in the deictic centre. Since it is in

the deictic centre, it does not have a deictic function, i.e. it does not point the attention of the hearer to a specific point in the surrounding environment. Rather it simply indicates that the item in question is identifiable somewhere in the accessible situation of the hearer. It would be, in fact, more accurate to translate it simply by the English definite article, which, likewise, is non-ostensive. The 'speaker deixis' and 'far deixis' forms, on the other hand, have ostensive force and point the attention of the hearer to a specific point in the environment.

Several NENA dialects have only two series of demonstratives. These consist of a speaker deixis form and a default form. e.g. J. Arbel:

Speaker deixis	Default
ʾiyya	*ʾo*

The speaker deixis form form always points to a specific point close to the speaker. The default form may be used in a deictic or non-deictic sense. When used in a deictic sense, it expresses 'far deixis', pointing to an item that is remote from the speaker and hearer. When used in its non-deictic sense, it does not point the hearer's attention to any specific point but simply indicates that the referent is identifiable somewhere in the environment (cf. Khan 1999: 208–219). It has this non-deictic sense when it refers to an item that is with the hearer. This two pronoun system consisting of a speaker deixis and default form is more archaic than the three pronoun system that is found in C. Barwar and numerous other NENA dialects. The three pronoun system developed by creating a new form to take over from the default form to express far deixis. As a result, the original default form now only has a non-deictic sense.

When used to refer to items within the discourse rather than to items in the extra-linguistic situation, demonstrative pronouns generally have an anaphoric function, i.e. they form a referential link with some item elsewhere, usually earlier, in the discourse. Of the three series of pronouns, it is the default (*ʾo-kθawa*) and speaker deixis (*ʾawwa kθawa*) forms that are most frequently used with this anaphoric function. The default form, as is the case when used to refer to extra-linguistic items, does not point to any specific place in the discourse, but simply indicates that the referent of the item is accessible somewhere in the discourse environment, typically in the discourse history. The nearest functional equivalent in English is the definite article, which is often the most natural translation. It is used with a nominal, for example, when the referent of the nominal has been explicitly mentioned in the preceding discourse, e.g.

(10) *ʾíθwa* **xa-málka** *gu-ða-màθa.*ˈ **ʾo-màlka**ˈ *ʾíθwale tə̀rte bnáθa.*ˈ 'There was a king in a village. That/the king had two daughters.' (A25:1)

(11) *ṣáljt xázjt* **xa-képa** *l-márzjt yàma.*ˈ *dérjt ʾíðux xo-d-***ò-kepa***.*ˈ 'Go down and you will find a stone on the shore of the sea. Put your hand under that/the stone.' (A12:27)

(12) *b-ʾúrxa tfiqele* **xá-xuwwe** *bìye.*ˈ **ʾo-xúwwe** *mə́reˈ hà-našaˈ lèkjt zála?*ˈ 'On the road a snake met him. The snake said "Hey, man, where are you going?"' (A1:4–5)

(13) *ṭaxnìwala,*ˈ *pə́ši* **qàmxa.**ˈ **ʾo-qàmxa**ˈ *mɛθɛ́wale bèθa.*ˈ 'They would grind it and it would become flour. They would bring the flour home.' (B5:15–16)

It is sometimes used with proper names when these have been mentioned previously, e.g.

(14) *ʾo-Barzə́kko zíla dmìxa.*ˈ 'Barzəkko went and slept.' (A12:10)

(15) *ʾaw-mtunéle ʾaw-xə́lma qa-d-ó Xáno Lapzèrin.*ˈ 'He told the dream to Xano the Golden Hand.' (A10:9)

It may also be used to mark a nominal with a referent that has not been explicitly mentioned earlier but is accessible from the preceding discourse by virtue of its typical association with some element in the content of this discourse (associative anaphora). Such uses of the demonstrative can normally only be translated by the English definite article, e.g.

(16) *ʾína m-báθər maqðàliˈ* **ʾaw-qə̀ṭma**ˈ *šaqlìtuleˈ mxamìtule.*ˈ 'After she burns me, take the ashes and keep them.' (fire typically produces ashes) (A26:85)

(17) *qímta zílta kjs-d-***aw-šwawèy.***ˈ 'She went to their neighbour.' (people located at home typically have a neighbour) (A10:9)

(18) *mə́tyɛle xa-káwtjt ə̀rwe,*ˈ *ʾíbe tre-ṭláθa ʾálpa rēš-ʾə̀rwe.*ˈ *qjm-qaréla* **ʾan-šavàne**ˈ *mə́re…* 'He came to a flock of sheep, in which there were two or three thousand head of sheep. He called the shepherds and said…' (A32:14)

(19) *ʾína… xa-qáṣra rába šapìra.*ˈ… *brōn-málka tíwele l-d-***a-tàxta**.ˈ 'Behold a beautiful palace… The son of the king sat on the throne'. (A14:42–43)

(20) *ʾáy šwíqtəlwa májma tàma.*ˈ *qáṭu wìrtɛla,*ˈ *npílta gu-d-**án panjàne**ˈ mqurə̀dxela.*ˈ 'She (the servant) had left a tray there. A cat came in, fell into the glasses and they shattered.' (A4:53)

On numerous occasions the speaker deixis pronoun is used with the same anaphoric function, viz. when the nominal has been explicitly mentioned in the previous discourse (21–24), with previously mentioned proper names (25), or when the referent of the nominal is accessible by associative anaphora (26):

(21) *ʾíθwa **xa-màlka**.*ˈ ***ʾáwwa málka** xzéle xa-xə̀lma.*ˈ 'There was a king. This king had a dream.' (A1:2)

(22) *ʾíθwa **xá bàxta**,*ˈ *ʾìtwala*ˈ *xa-bróna šə̀mme díye Kărìm-addin.*ˈ …***ʾáyya bàxta**ˈ kùt-yum*ˈ *goyàwa,*ˈ *maxláwa ṭla-bróna dìya.*ˈ 'There was a woman, who had a son called Karimaddin. … Everyday the woman would beg to feed her son.' (A14:4)

(23) *xa-màlka*ˈ *kút-yum ðà-brata gawə̀rwa.*ˈ *mbádla qayə̀mwa qaṭə̀lwala.*ˈ ***wăzìr**ˈ xðìrre xðìrre,*ˈ *bnáθa prìqla.*ˈ *kút-yum ðà,*ˈ *lìθ.*ˈ ***ʾáwwa wăzìr** ʾíθwale ða-bràta.*ˈ 'A king would marry a girl everyday. In the morning he would get up and kill her. The minister searched and searched, but the girls had run out. Every day (he had killed) one and there were no more. The minister had a daughter.' (A14:1)

(24) ***súla** modìle?*ˈ *ʾáwwa yáʿni zə́blət haywàne.*ˈ …***ʾáwwa súla** dax-maṣlɛ̀wale?*ˈ 'What is manure? It is the muck of animals. … How did they take the manure down?' (B5:134–135)

(25) *ṭ-amrə̀nnux ða-xéta šə̀mma Čùxole.*ˈ *ʾáwwa Čúxo xằye gu-xà-maθa.*ˈ 'I shall tell you another (story) called Čuxo. This Čuxo lives in a village.' (A7:1)

(26) *sìqɛle*ˈ *ə̀rxe,*ˈ *síqɛle gu-kotằla,*ˈ *rəš-kotằla də̀ryəlle gu-mìya.*ˈ *ṣ̀əlyɛle*ˈ ***ʾáwwa ʾažvàna**.*ˈ 'He went up to the water-mill, he went up to the water duct (of the mill) and placed him on the water duct in the water. The mill caretaker came down.' (a water-mill is typically administered by a caretaker) (A22:42)

Since the referents in the examples cited above are all internal to the discourse, the speaker does not use the speaker deixis demonstratives to point to an item that is physically close to him. Rather they express a virtual or psychological closeness to the speaker, the purpose of which is often to give prominence to the referent in the staging and perspective with which it is presented. The default demonstrative, on the other hand,

is neutral with regard to perspective and personal engagement. The choice of the perspective with which the speaker wishes to present the referent in a particular point in the discourse is a subjective one. Speaker deixis demonstratives are often used to give prominence to the referents that play a prominent role in the text, as is the case in examples (21)–(26).

In a similar way, anaphoric reference is expressed by independent demonstrative pronouns, with the speaker in most cases chosing either the default demonstrative or the speaker deixis form according to the perspective with which he wishes to present the referent. Default independent pronouns indicate that the referent is identifiable somewhere in the discourse and are unspecified as to perspective or speaker engagement, e.g.

(27) *ʾaw-məlyále tópe díye spày.*ˈ 'He loaded his gun well.' (A31:7)

(28) *ʾay-θéla dmíxla gu-ʾótəx dìya.*ˈ 'She came back and went to sleep in her room.' (A17:26)

(29) *xárθa ʾáni mə́ṭyela tàma*ˈ *l-márzət yàma.*ˈ 'Then they arrived there, by the shore of the sea.' (A14:37)

Speaker deixis independent pronouns are used to give prominence to a referent in close perspective. They are often used to refer to protagonists in a narrative and other textually prominent referents, e.g.

(30) *ʾáwwa plíṭele gu-ða-dúnye xèta,*ˈ *šə́mša milànta,*ˈ *ʾắra milànta.*ˈ 'He opened it and he came out into another world, with a blue sun and a blue land.' (A14:26)

(31) *ʾáyya rìqtɛla*ˈ *ṣlìθɛla*ˈ *hàwərila!*ˈ 'She ran and went down (crying) "Beware!"' (A24:42)

(32) *ʾánna pìðela mánne díye,*ˈ *ʾap-šlàma léla də́ryəlle.*ˈ 'They passed by him, but did not even greet him.' (A15:13)

There may be a shift in the type of demonstrative that is used to refer to one particular referent in different sections of the discourse, which reflects changes in perspective. This is illustrated in (33), an extract from a narrative that involves two protagonists, the Leliθa monster and the daughter-in-law of the family. The narrative begins with the arrival of the Leliθa. In this section she is the most salient and most active character and is presented with close perspective by the speaker deixis demonstrative *ʾayya* [1]. In the course of the narrative, however, the daughter-in-law becomes the most salient character, who has the most control over the flow of events. This is reflected by the use of the speaker deixis pronouns *ʾayya* [2] and [4],

whereas Leliθa is referred to by default demonstratives, viz. *ʾay* [3] and
[5], and the attributive demonstrative in *ʾɛ-Leliθa*.

(33) *hadìya¹ ʾíθwa xa-Lelíθa θíθa mən-Č̦ā̂l.¹ θéla ṣlèla¹ l-ʾárxət be-Xàmmo.¹*
xa-náša ʾíθwale ʾàrxe¹ šə́mme díye Xàmmo-wewa.¹ ʾíθwale kàlθa,¹ ʾíθwale
*bnòne.¹ **ʾáyya** [1] ṣlèla,¹ dréla šláma ʾəllèy.¹…ʾu-**ʾáyya** [2] gu-dyàṛta¹*
mòdi wídla?¹ qìmla,¹ qəm-ʾač̦màle tằra.¹ ʾu-b-pálgət béθa wídla nùra.¹…
*ʾu-**ʾɛ-Lelíθa** θèla.¹ **ʾáy** [3] kúlla dònɛla,¹ dòna,¹ mə̀šxa.¹…ʾu-**ʾáyya** [4]*
har-šaqláwa mən-d-àn šíše¹ mattàwa¹ ʾə́lla dìya¹ hál ʾɛ́-gət qəm-qaṭlàla.¹
*qəm-qaṭlàla,¹ **ʾáy** [5] pìšla tàma.¹* 'Now, there was a Leliθa who
came from Č̦āl. She came down to the water-mill of the family
of Xammo. A man had a water-mill and his name was Xammo.
He had a daughter-in-law. He had sons. **She** (Leliθa) came down
and greeted them.…What did **she** (the daughter-in-law) do on
her return? She closed the door and in the middle of the house
she made a fire.… **The Leliθa** came. **She** was all (made of) fat,
fat, oil.… **She** (the daughter-in-law) was constantly taking the iron
bars and putting them into her, until she killed her. She killed her,
and **she** (Leliθa) remained there.' (A19:1–6)

A further example is the extract in (34), in which the protagonist Xano
is referred to by a speaker deixis demonstrative [2] and subsequently by
a default demonstrative [3]. This can be correlated with a difference in
discourse prominence. The section beginning with the speaker deixis
demonstrative [2] is a foregrounded section that advances the narrative.
The following section with the default form [3] supplies elaborative back-
ground information, which recapitulates an earlier, previously mentioned
event. It is worth noting that the clause with the default pronoun [1],
which refers to the king, also conveys repetitive background material,
since it comes immediately after a speech of the king in which he reports
his dream:

(34) ***ʾaw**-[1]mtunéle ʾaw-xə́lma qa-d-ó Xáno Lapzèrin.¹ **ʾáṛwa** [2] mə́re*
*b-àlaha¹ har-xá-məndi ʾìθ b-áyya dúkθa ṭ-íle wìra.¹ **ʾáw** [3] xzèle ʾo-dídwa*
ʾɛ́ka wìrre.¹ '**He** (the king) told the dream to Xano the Golden Hand.
He (Xano) said (to himself) 'By God, there must be something
in this place where it entered'. **He** (Xano) had seen where the fly
had entered.' (A11:9)

Similarly in (35) the speaker deixis demonstrative [1] is in a clauses that initiates a section describing a foreground event. The default dexis demonstrative [2], which refers to the same character, can be interpreted as elaborative information, which supplements the previously described event rather than advancing the narrative:

(35) **ʾáwwa** *[1] b-lɛ́le qìmɛle.*¹ *gáwṛa díya mqulə́bzəlle də́ryəlle gawàya.*¹ **ʾáw** *[2] píša b-áy-gota xètɛle.*¹ 'He got up in the night. He rolled over her husband and put him in the middle. He came to be on the other side.' (A30:53)

In constructions expressing a contrastive opposition between two items, the two different demonstratives are used to separate distinctly the two items, since they present them with different virtual spatial locations in the staging of the situation. In (37) and (38) the demonstratives express associative anaphora. The 'boys' in (37) are typically associated with a school and the table and its sides in (38) are associated with the act of sitting:

(36) *ʾɛ-dánə ṱ-ìla ṛíše,*¹ *kút-xa gu-šwíθət gàne,*¹ **ʾáyya** *gu-qáṣṛət bába dìya,*¹ **ʾáw** *gu-čádre dìye*¹ 'When they woke up, each in their own bed, she in the palace of her father and he in his tent...' (A4:5)

(37) *bróna díya gu-mədrása kút-yum y-awéwa mxáya l-**aw**-yàla,*¹ *šqála čánta d-**àwwa**,*¹ *šṛàṭa məndiyáne.*¹ 'Her son everyday in school would beat one child, take the bag of another, tear things.' (A14:5)

(38) *holá-ʾəθye tìwe,*¹ *báxta tíwta l-**àyya**-gotət mɛ́s,*¹ *ʾu-gáwṛa tíwa l-**ày**-gota.*¹ 'They came and sat down, the wife sitting on this side of the table and the husband sitting on the other side.' (A4:57)

The virtual spatial separation is sometimes enhanced by using spatial adverbs, e.g.

(39) *díwən t-xále díye hóla dwìqta.*¹ *ʾáyya díwən làxxɛla*¹ *ʾaw-gàrele.*¹ 'The meeting room of his uncle is full. The meeting room is here and that is its roof.' (A23:14)

The speaker deixis demonstratives are sometimes used primarily to express close emotional engagement with the referent with an evaluative sense, which may be negative or positive. This is the case in (40)–(42), which are extracts from direct speech. This speech is uttered by the speakers to

themselves in the absence of the referent of the nominal. The demonstra-
tives, therefore, are not anaphoric nor are they used to point the attention
of a hearer to an item in the extra-linguistic situation:

(40) *ʾáyya xmàrta!*ˡ 'That she-ass!' (A10:10)

(41) *mo-čára ṭ-óðəx ṭla-d-ʾáyya qáṭu t-la ʾaxlàlɛni?*ˡ 'What solution can we
      find for this cat so that it does not eat us?' (A44:1)

(42) *b-álaha hóle híwəlle rə́sqa d-áwwa gáwṛa* 'By God, he has provided the
      sustenance of this husband (of mine).' (A10:7)

Speaker deixis demonstratives are occasionally used with a nominal that
introduces a new referent into the discourse, when the speaker has a
particular personal interest in the referent. In (43), for example, a speaker
deixis demonstrative is used with the word 'bridge', which does not yet
exist in the extra-linguistic situation, nor has it been mentioned in the
preceding discourse. The speaker, however, proposes building such a
bridge. In (44) the speaker has a strong personal interest in the pot of
gold, which she introduces here for the first time in her speech to her
neighbour, although the object itself is not visible in the speech situation.
In English such demonstratives are most naturally translated by the indefi-
nite article, though in some contexts a translation with a demonstrative
is also possible:

(43) *xàli*ˡ *lá ʾawðə́xle* **ʾáwwa gə̀šra**ˡ *šáwrəx réša réša d-ánna mìya?*ˡ 'Uncle,
      should we not make a bridge for it so that we can cross over this
      water?' (A17:3)

(44) *xá-dukθa hon-xzíθa hátxa dàwe,*ˡ **ʾáyya** *qadáltə dàwe.*ˡ 'In a certain
      place I have found gold coins like this, a/this pot of gold coins.'
      (A10:9)

A demonstrative may have an anaphoric function when the referent in
question is visible in the speech situation. In (45), for example, the func-
tion of the default demonstrative *ʾan-* is to indicate that the arrows which
the speaker shows to the hearer are those that have been mentioned
previously in the discourse history. It does not point the hearer's attention
to the referent. This is done by the presentative particle *ho*. In (46) the
speaker deixis subject pronoun *ʾanna* points to the ring and scarf in the
speech situation, but the default demonstrative *ʾani* in the predicate has an
anaphoric function binding the reference to the preceding discourse:

(45) *θéli hó ʾan-ṭḷá gerə-qə̀šta.*' 'I've come back and here are the three arrows of a bow (to which reference was made earlier).' (A12:46)

(46) *ʾína ʾáyya ʾisə́qθa ʾu-yalóxta d-ɛnila?*' *hóla ʾisə̀qθa,*' *hóla yalə̀xta.*' *máṭo mda-glónna gàni*' *ṭ-ámrən ʾánna léla ʾàni.*' 'But whose is this ring and scarf? Here is a ring and here is a scarf. How can I make myself lie and say that these are not those (belonging to the girl I mentioned)?' (A26:12)

The far deixis demonstrative is occasionally used to refer to items that are internal to the discourse. The usual context for this is where two or more members of a set are presented in a contrastive opposition. One member is typically presented with either a speaker deixis or default deixis demonstrative and the other and any further members are given a far deixis demonstrative. The function of the far deixis demonstrative is to separate the members of the set clearly in the virtual space of the discourse, e.g.

(47) *mattíwala gu-d-ɛ́ məššára xá, tré, ṭḷàθa.*' *manɛ́wa hal-ə̀ṣra.*' *ə́ṣra gu-d-àyya,*' *ə́ṣra gu-d-**yàha**,*' *ə́ṣra gu-d-**yáha** xèta,*' *hàtxa.*' 'They would plant them in the paddy field, one, two, three and count up to ten. Ten in this (row), ten in that one, ten in that other one, and so forth.' (B7:13)

(48) *gu-mắḥàll-ži*' *kút-yum gánu kθɛ́θa d-àwwa,*' *ɛ́-ga y-azə́lwa fɛ́ka d-**ắwàha**.*' 'Every day in the neighbourhood he would steal the chicken of one person, then go (and steal) the fruit of another.' (A14:7)

(49) *brōn-málka tíwɛle l-d-a-tàxta.*' *ʾu-xá-wăzīr díye rəš-d-áwwa-kursa*' *xa-rəš-d-**ắwàha**.*' 'The son of the king sat on the throne, one minister (sat) on this chair and one on that one.' (A14:43)

(50) *zílla dwíqla náwba l-**ắyắ'ha** qunjə́lta t-hódəx,*' *ʾáyya gu-d-ɛ-qunjə́lta xèta.*' 'They went and kept a guard in that far corner, and one in that other corner.' (A18:3)

Sometimes only one member of the set is explicitly mentioned, the other(s) being implied, e.g.

(51) *kút-xa ṭla-gáne šuréle dwàqa.*' *ṣúdrət Səttìye*' *ʾáwwa xálqa nɛ̃lle,*' *Fárxo qəm-xazéle ṣàdra. Čìxàlo,*' *m-**ya-góta xèta**,*' *qəm-xazéla ʾína xzéle ṣádra dìya,*' *krìble.*' 'Each of them started grasping the other. The button of the blouse of Səttiye was torn off and Farxo saw her breast.

Čixalo, on the other side, saw them and noticed that he saw her breast, and became angry.' (A25:29–30)

In (52) the narrator uses a far deixis demonstrative to express the physical distance of one referent from another:

(52) *mə́ra Fárxo tu-tămàʾha.*¹ *Fárxo tíwɛle rəš-d-wáʾha kèpa.*¹ 'She (Naze) said "Farxo sit far over there." Farxo sat on that far stone (i.e. far from Naze).' (A25:17)

In (53) the far deixis independent demonstrative is used contrastively to make it clear that the reference is to somebody other than the person mentioned in the previous clause:

(53) *Səttìye*¹ *šmìla*¹ *bába díya hóle mùtta*¹ *jallàde,*¹ *b-jáldi réšət Fàrxo.*¹ *săbab*¹ ***ʾăwáha*** *škèle,*¹ *mə́re lìθba fáyda.*¹ 'Səttiye heard that her father had appointed executioners, who would cut off the head of Farxo. This was because he (i.e. Čixalo not Farxo) had complained. He (the king) said "It is no use" (he should be executed).' (A25:32)

In principle a noun that has an attributive demonstrative is definite in status, i.e. the speaker assumes that the hearer is able to identify the referent. The only exception is where the speaker uses the speaker deixis form to introduce into the discourse a new referent in which he has a particular interest (43–44). We have seen that anaphoric reference is generally expressed either by the default or speaker deixis demonstratives, the use of the far deixis being marginal. A noun that is definite in status, however, is not obligatorily combined with an anaphoric demonstrative. It can also be left without any demonstrative. We have discussed above the circumstances that motivate the speaker to use different demonstratives for anaphoric reference in discourse. Here we shall examine the motivation to omit a demonstrative on a definite noun that has an anaphoric connection with the preceding discourse. In general the heavier morphology with the explicit anaphoric demonstrative (*ʾo-kθawa*) is a more powerful anaphoric device that is used when the noun is disjoined to a greater extent from its anaphor. This disjunction is not brought about only by

textual distance but also by boundaries in the discourse structure. Indeed, the heavy morphology can be used as a device to mark boundaries.[1] This is illustrated in the passage (54) below, which describes the preparation of yoghurt butter know as *čìta*. The passage can be divided into four section according to its content. The noun *masta* 'yoghurt' is introduced in section (ii). At the onset of section (iii) the second mention of the noun is marked by a demonstrative. The third mention of the noun, however, has no demonstrative, since it occurs in a clause that is closely connected with what precedes and is not separated from the previous mention by a discourse boundary. The fourth mention of the noun at the onset of section (iv), however, has a demonstrative again, since it is separated from the previous mention by a discourse boundary. The same applies to the noun *mə̀šxa* 'butter'. The second mention has no demonstrative, since it is not separated from the first mention by a discourse boundary. The third mention, however, at the onset of the section (v) has a demonstrative.

(54) *(i) xə̀lya t-heywàne¹ t-ʾə́rwe ʾən-tawràθa,¹ xə̀lya marəxθ̀ile¹ ʾu-šoqíle péša dắraj ḥắrára dìye taqríban ʾàrbi.¹ (ii) déri marè̀θa bíya.¹ ʾi-mxamèla.¹ déri xa-júlla b-réša qá-t hár-hawe šaxìnta¹ múddət tmánya sàʾăte.¹ ʾi-páyəš ʾo-xə̀lya¹ páyəš* **màsta (1)**.*¹ (iii)* **ʾɛ-màsta (2)***¹ ʾi-dɛríla gu-gùða.¹ ... ʾi-dɛréla gáwe dìye¹ ʾu-yi-mắyìle¹ ... xa-rŭbaʿ sáʾa,¹ ə̀srí daqìqe,¹ pálgə sə̀ʾa.¹ ʾi-šɛš̃ila ʾi-šɛš̃ila¹ hal-***másta (3)*** *ʾi-péša ʾax-mìya.¹ (iv)* **mə̀šxət (1)** *gu-d-***á-masta (4)*** *ʾi-jắmi l-ġðàðe.¹ ʾi-jắmi l-ġðàðe,¹ ʾi-mpalṭìle.¹* **mə̀šxa (2)** *páyəš xòðe.¹ ʾu-dáwwe dɛréla gu-xa-qu̞sxáne gò̞rta.¹ (v)* **ʾáwwa mə́šxa (3)** *y-amrə́xle čìta.¹*

'(i) They boil the milk of animals, of sheep or cows, and let its heat become about forty degrees. (ii) They put rennet in it. They keep it. They put a cloth over it so that it remains warm, for eight hours. The milk then becomes **yoghurt (1)**. (iii) They put **the yoghurt (2)** in a churn....They put it in it and churn it...for quarter of an hour, ten minutes, half an hour, they shake it and shake it until **the yoghurt (3)** becomes like water. (iv) They gather together **the butter (1)** of **the yoghurt (4)**. They gather it together and take it out. **The butter (2)** becomes separated. They put the *dawwe* (yoghurt water) in a large pot. (v) We call **this butter (3)** *čìta*.' (B6:37–40)

---

[1] The cross-linguistic evidence for fuller coding being used at the boundaries of discourse units is examined by Huang (2000: 309ff.).

In certain constructions a demonstrative pronoun is regularly used. The use of the default demonstrative is the norm, for example, with a noun that is the head of a restrictive relative clause. As elsewhere, this demonstrative does not point to any particular place in the discourse but rather indicates simply that the referent is identifiable in the accessible context. The close syntactic dependence of the relative clause on the head forces the search for the identity of the referent to be made in the relative clause rather than the preceding discourse, even if the referent has been mentioned previously, e.g.

(55) *ɔ̀θyεle **ʾo-yáⱡət** bắyàwale.ˈ 'The young man whom she loved came.' (A12:42)

(56) **ʾa-pálla** t-wawa-rəš-qalùnkaˈ wíðtəlla hátxa ṣlìθεla.ˈ 'She moved the burning coal that was in the pipe like this and it fell.' (A11:21)

(57) *ɔ̀θyεleˈ wíðεle ʾa-dúkθa nišànqa,ˈ **ʾa-dúkθa** t-wéwa ʾo-dídwa wíra tàma.ˈ 'He came and marked the place, the place where the fly had entered.' (A11:10)

In some cases the noun has not been referred to in the preceding discourse and the scope of the anaphora can only be internal to the nominal phrase, e.g.

(58) hál **ʾo-yómət** mɛ̀θənˈ har-ʾúrxət ʾálaha dóqən b-ìði.ˈ 'Until the day I die I shall always keep to God's way.' (A15:21)

The head noun may have a non-specific, generic referent. In such cases the the scope of the anaphora is generally internal to the nominal phrase and a translation with an indefinite article is most natural in English, e.g.

(59) mən-sab-ʾɛ̀-ʾotəx t-là-hawe gáwa ṣópa,ˈ yáʿni ꝑεšáwa tàlga hal-qedámta,ˈ ʾáp-xa le-maṣéwa damǽxwa gáwa dìya.ˈ 'Since a room that did not have a stove in it would become icy by the morning and nobody would be able to sleep in it.' (B15:26)

The demonstrative pronoun on the head noun of a restrictive relative should still be regarded as anaphoric in function in that it relates the noun to some other item in the discourse, viz. the description in the relative clause. Although the default demonstrative here and elsewhere are often most appropriately translated by the English definite article and, like the English article, does not have ostensive force, it still differs from the English

article in some respects. Crucially the default demonstrative always has an anaphoric function and is not used simply as a marker of definiteness. This is shown by the fact that, unlike the English article, it is not used with a noun whose referent is identifiable by virtue of its descriptive content, independently of context or dependent modifiers, when this noun has no anaphoric connection with the preceding context, e.g. 'the sun':

(60) *šàšma həš-lèla mxíθa l-ṭuráne.*ˈ 'The sun has not yet struck the mountains.' (A26:37)

A relative clause that does not have a head noun must have a pronominal head in the form of a demonstrative. Again, the demonstrative is anaphoric, in that it binds its referent to the content of the dependent relative clause. The referent may be specific or, more commonly, non-specific. When it is non-specific, it generally has no anaphoric connection with what precedes and the scope of the anaphora is internal to the nominal phrase, e.g.

(61) *ʾo-ṭ-íle plíxa ʾàw bṭ-áxəl.*ˈ 'He who has worked will eat.' (A21:15)
(62) *ʾo-t-maṣèwa*ˈ *ʾítwale ʾśrwe ràbe.*ˈ 'Whoever had the means, had many sheep.' (B10:54)
(63) *ʾo-t-ʾítle ʾśrwe,*ˈ *ʾo-t-ʾítle tàwre*ˈ *y-áwe xzída gəlla.*ˈ 'Somebody who has sheep or somebody who has cattle has harvested grass.' (B5:108)
(64) *ʾa-t-la-ṣaléwa kawsa-díya* 'she whose hair did not come down (when combed)' (B10:68)
(65) *ʾan-t-wéwa gu-Lèvi*ˈ 'those who were in the Levies' (B10:52)

Occasionally a default anaphoric demonstrative is used on a newly introduced item that is described further in subsequent clauses as in (66). In such cases the specifying clauses are not syntactically embedded in a relative construction. The demonstrative nevertheless binds the noun to what follows, in that it introduces the expectancy that what follows will assist in its identification:

(66) *ʾu-qèṭa,*ˈ *bár ṭ-ìla-dwàqa,*ˈ *qám t-màṭi*ˈ *gắrəg maxṣtla darmàna,*ˈ *qá-t ʾan-márre la-ʾáθi ʾślla dìya,*ˈ *mtarśmza,*ˈ *yán ṭarpáθa díya xàrwi,*ˈ *xabúšta xàrwa.*ˈ 'In summer, after it bears fruit, before (the apples) become ripe, you must apply chemical (insecticide), so that the diseases do not afflict it, (whereby) it wilts or its leaves are harmed and the apple tree is harmed.' (B5:106)

An adjective that stands independently of a head noun is generally nomi-
nalized by taking a pronominal head. If the resultant phrase is definite,
the head is a demonstrative (see §14.7.). The default demonstrative is
generally used when the speaker wishes to express anaphora rather than
deixis, e.g.

> (67) *ʾíθwa xa-màlka.*ꞌ *ʾìθwale*ꞌ *ṭḷà bnóne.*ꞌ...***ʾo-gòṛa***ꞌ *mə́re*...'There was a
>   king. He had three sons....The elder one said...' (A24:4)
> (68) *θéle xa-náša swarìyya,*ꞌ *rakáwa.*ꞌ *ṣléle rəš-xa-ʾɛ̀na.*ꞌ... *θéle xá rakáwa xèna,*ꞌ
>   *swarìyya.*ꞌ *zílle rəš-ʾɛ̀na.*ꞌ...***ʾo-qamàya***ꞌ *ʾámər ʾòh*ꞌ *zúzi munšìli.*ꞌ 'A
>   horseman, a rider came. He alighted at a spring....Another rider
>   came, a horseman. He went to the spring....The first one said
>   "Oh, I have forgotten my money."' (A15:1–2)
> (69) *fa-náše kúlla pàlṭi*ꞌ *xa-maryóse* ***ʾo-xréna*** *mìya.*ꞌ 'All the people go out
>   and scatter water on one another.' (B6:10)

If the adjective is modified by an intensifier or by the comparative particle
biš, the demonstrative pronoun is combined with the relative particle *D*,
e.g.

> (70) *ʾo-t biš-daqìqa.*ꞌ 'the one that (is) thinner' (B10:49)

The independent demonstrative head may be placed before a genitive
phrase consisting of the particle *D* and a dependent noun, e.g.

> (71) *púwuš m-ɛ́ni mənnèle.ʔ*ꞌ *ʾo-t ràzza.*ꞌ 'What type of hay is it? That of
>   rice.' (B5:113)
> (72) *ʾína mástət ʾə́rwe rába biš-basimtɛ́la biš-príštɛla mən-d-a-t-tàwre.*ꞌ 'But the
>   yoghurt of sheep is much better and more choice than that of
>   cattle.' (B5:173)

The pronominal heads of headless relative, genitive or nominalized adjec-
tives are occasionally expressed by a speaker deixis demonstrative. This
may have either intra-linguistic reference (73) or extra-linguistic reference
(74–75):

> (73) *núbləlle kəs-xá m-ánna ṭ-óði tásmə sàwle.*ꞌ 'He took it to one of those
>   people who make shoelaces.' (A11:12)

(74) *ga-béna ʾánna kúlla ṯ-íla zála léla mṣáya b-an-ʾárbi bnàθa?*ˈ 'Well, cannot all these people who are going (to fight) prevail against the forty girls?' (A12:58)

(75) *ʾáyya smóqta ʾila də̀mmi*ˈ *ʾu-ʾáyya milánta ʾila ròxi,*ˈ *ʾu-ʾáyya xwárta ʾila nə̀šmi.*ˈ 'This red one (bead) is my blood. This blue one is my spirit. This white one is my soul.' (A25:35)

A demonstrative is the norm after the particle *har* in constructions with the sense of 'the same', e.g.

(76) *šaqlíle-har-ʾo-lə̀xma.*ˈ 'They take the same bread.' (B6:49)

(77) *tə́rwəθna mubrèla*ˈ *hàr ʾo-yóma.*ˈ 'The two of them gave birth on the same day.' (A25:4)

(78) *híwɛle xábra ṯla-wă̆zìr*ˈ *har-b-ò-lɛle.*ˈ 'He gave word to the minister on the same night.' (A4:34)

(79) *dìya*ˈ *ʾahwalótte šuxlə̀pla,*ˈ *lɛla-ʾax-qàmθa,*ˈ *ʾina šèra*ˈ *har-ʾo-šèra,*ˈ *har-o-ʾiqàra.*ˈ 'Now circumstances have changed. It is not like formerly, but the festival is the same festival, the same respect (is shown).' (B5:72)

In (80) and (81) the demonstrative expressing 'the same' is anaphorically bound to a dependent noun in an annexation construction. The particle *har* is used only in (80):

(80) *ʾap-ʾáni har-ʾó-mdi-t xabùšela.*ˈ 'They are the same thing as apples.' (B5:218)

(81) *ʾap-ʾána b-ay-ʾúrxa d-ànnən ʾóθya.*ˈ 'I have come on the same way as these people.' (A8:58)

14.3.3. *Stress Position in Stress Groups*

When an attributive demonstrative is combined with a noun in a single stress group, the stress may fall on the demonstrative or on the noun (§6.5.). The normal position of the stress is on the noun. When it is placed on the demonstrative, it generally increases the anaphoric force of the demonstrative. This is particularly clear when the demonstrative takes a nuclear stress in expressions such as *har-ò-yoma*ˈ 'on that very same day' (B5:48). The nuclear stress is put on the demonstrative also in cases where the previous mention of the referent occurred a long way back in the discourse history. Example (1) comes after a lengthy section of

discourse at a scene away from the spring. In this clause the reference to the spring is reinvoked:

(1) ʾu-díṛ́ele ṣ́ályɛle rəš-d-ɛ̀-ʾena.¹ 'He went back down to that spring.' (A26:32)

This may be contrasted with (2), which occurs earlier in the discourse when the scene is still set at the spring and the referent of 'the spring' is more accessible:

(2) ʾánna bnáθe díye rəš-d-ɛ-ʾɛ̀na-wawa.¹ 'His daughters were by that spring.' (A26:25)

In cases such as (3) and (4) the anaphoric connection is powerfully asserted since the speaker judges that some clarification of reference is necessary:

(3) qímɛle zìlɛle¹ múθya xákma gòlde,¹ síṛə́lla b-gàne.¹ wíðəlla gān-díye ʾax-də̀bba,¹ ʾò-naša.¹ 'He went and brought some skins and tied them on himself. He made himself like a bear, that man.' (B18:5)

(4) ʾína yómət ʾéðə ṣlìwa¹ təltássər b-ʾə̀čča¹ ʾɛ́-šetət wìrra¹ qúrbət tré-ʾalpe ʾu-xamš-əmmà-naše¹ ʾítwa ḥ̀ðìre¹ ʾò-yoma.¹ 'On the day of the Festival of the Cross, the thirteenth of September last year, about two thousand five hundred people were present, on that day.' (B15:93)

Stress is sometimes put on the demonstrative of a noun that is modified by a syntactically dependent relative clause, which has the effect of binding the head more closely with its modifier. This is often found when the head noun is low in semantic content, especially ʾó-məndit 'the thing that' or temporal expressions such as ʾó-yomət 'the day that', ʾɛ́-šetət 'the year that', e.g.

(5) ʾó-məndit ʾàna xílli¹ 'the thing that I ate' (A2:8)

(6) ʾó-yomət xə́zya dúnye ráye tèle¹ záwnət lèbewa.¹ 'The day he saw that it was raining foxes, it was the time of tricks.' (A1:24)

(7) ʾɛ́-šetət mɛ̀θi¹ 'the year they were to die' (A4:57)

Referential binding is also the purpose of the stress on the demonstrative in constructions such as (8) and (9). These are correlative type constructions, in which the speaker wishes to signal the tight dependency of the second member with what precedes by means of the stressed demonstrative:

(8) *ʾɛ́kɛla ṭɛ́ra díya θíθa tíwta báθər d-ɛ̀-maθa.*¹ 'Where her bird had come—she settled behind that village (= She settled behind the village where her bird had come)' (A24:30)

(9) *là-palṭət,*¹ *hal-ṭ-amrə̀nnux plùtgena*¹ *ʾɛ̀-ga pálṭət.*¹ 'Do not come out, until when I say to you "Come out!", at that time you should come out' (A14:67)

14.3.4. *Discourse Anaphora*

An independent demonstrative pronoun may refer to the propositional content of the surrounding discourse rather than to a referent. In such cases of discourse anaphora the demonstrative is often a feminine speaker deixis form, e.g.

(1) *ʾap-ʾáyya qbilàli.*¹ 'I accept also this.' (A15:17)
(2) *ʾàyya*¹ *kùlla*¹ *b-lɛ̀lela.*¹ 'All this is at night.' (A25:67)

Alternatively an attributive demonstrative may be combined with a noun that refers to the propositional content of what precedes, e.g.

(3) *fa-l-d-áw ṭùxsa,*¹ *ʾáxni ʾó-yoma y-óðexi ʾáp-ʾaxni musàrde.*¹ 'In this manner we perform (the festival of) *musarde* on that day.' (B6:11)

14.3.5. *Combination of a Demonstrative Pronoun with the Indefinite Particle*

A default attributive demonstrative may be combined with the indefinite cardinal particle *xa*. The forms are as follows:

ms.	*ʾó-xa ~ ʾo-xáha*
fs.	*ʾá-ġða ~ ʾa-ġðáha*
pl.	*ʾán-xa ~ ʾan-xáha*

Examples: *ʾó-xa náša, ʾo-xáha náša* 'the man', *ʾá-ġða baxta, ʾa-ġðáha báxta* 'the woman', *ʾán-xa náše, ʾan-xáha náše* 'the people'.

As can be seen, the feminine form of the cardinal numeral preserves its original consonant (*ġða* < *xða* < *ḥḏā*), whereas this is elided in other contexts (*ða*). Note also that the cardinal *xa* is used also with plural nouns, which is not the case in other contexts. The *–aha* ending in the alternative forms presumably arose by analogy with that of the far deixis pronouns.

The usual function of this construction is to indicate that the referent of the noun is accessible in the memory of the hearer rather than in the current discourse history. The indefinite particle by itself indicates to the hearer that the referent is newly introduced and not accessible. Its combination with the anaphoric demonstrative is used as a device to signal that it is newly presented in the current discourse but nevertheless recoverable from some discourse or experience that took place on some other occasion in the past. It is, therefore, less easily accessible than referents that have a connection with the preceding discourse. Examples:

(1) *θéle ʾo-xa-náša ṭ-in mírəllux támməl ṭ-aθe ʾədyo.*ʾ¹ 'Has that man come who I said to you yesterday would come today?'

(2) *θéle ʾo-xa-náša ṭ-ít xəzyəlle támməl.*ʾ¹ 'Has the man whom you saw yesterday come?'

(3) *txárət ʾo-xa-náša t-wéwa láxxa qam-šàbθa.*ʾ¹ 'Do you remember the man who was here a week ago?'

(4) *txárət ʾa-ġða-báxta ḳóre t-wáwa gu-màθa.*ʾ¹ 'Do you remember the blind woman who was in the village?'

(5) *txárət ʾán-xa xonăwáθa ḳóre t-wéwa gu-màθa.*ʾ¹ 'Do you remember the blind brothers who were in the village?'

Examples from the text corpus:

(6) *txárət* **ʾan-xa**-*tré t-mutəpqíwalən b-ġðàðe.*ʾ¹ 'Do you remember the couple that we brought together?' (A4:45)

(7) *ʾána* **ʾo-xà qáša**ˈ *ṭ-ín ʾóθya gu-Ṭiyàre,*ˈ *qəm-doqə́tli xošə́tli gu-gòma.*ˈ 'I am the priest who (you remember) came to Ṭiyare, whom you seized and confined in the basement stable.' (B17:15)

(8) *ʾu-hádəx ʾíθwa* **ʾán-xa** *sobáθət kàslən,*ˈ *buxɛrìyewa.*ˈ 'The stoves (you remember) in our community were thus, they were smoke ducts.' (A4:60)

(9) **ʾo-xá**-*məndi ʾíle xəzwa ʾóθyəlli*ˈ *léle xàlma.*ˈ 'The thing (that I remember seeing) is a vision that came to me, it is not a dream.' (A8:7)

In (10) the referent of the noun 'washing-board' is, in fact, mentioned in the immediately preceding discourse. The demonstrative + indefinite particle construction, however, makes an anaphoric connection with an earlier conversation in the memory of the interlocutor rather than with the mention in the current discourse. Similarly in (11) 'the blind wolf' is mentioned in the preceding question of the woman. The demonstrative

+ indefinite particle construction in the response of the husband, how-
ever, makes an anaphoric connection with the story about the wolf that
the woman remembers rather than with the mention of the wolf in her
current question:

(10) *qəm-qaṭlíle b-xaṭoryàθa,*ꜞ ***'an-xá xaṭoryáθa*** *ṯ-ínwa màrəllux*ꜞ *mási jùlle
bíya.*ꜞ 'They killed him with washing-boards, the washing-boards
which I was telling you they used to wash clothes with.' (B19:9)

(11) *xá-yoma mbuqə́rra mə́ra mòdi m-áyya qə́ṣṣət díye 'o-déwa ḵòra.*ꜞ *mə̀re*ꜞ *ʾərwən*ꜞ
'o-xá-dewa ḵóra *dmìxa gu-ṭúra.*ꜞ *kút-yum xá-ʾərwən y-arə́qwa y-ásəq
qám…d-o-dèwa,*ꜞ *ʾaw y-axə̀lwale.*ꜞ 'One day she asked saying "What
is this story about the blind wolf?" He said "Our sheep—the blind
wolf (you remember me talking about) is sleeping in the mountains.
Every day one of our sheep would run up to that wolf and he
would eat it."' (A10:5)

14.4. ANNEXATION CONSTRUCTIONS

As described in §10.16., when one noun is annexed to another by means
of the particle *D* (§4.4.), the first noun in the phrase is a head noun and
the second is a dependent modifier. The modifier noun is, in principle,
restrictive in function. Various types of semantic relationship exist between
the head and the modifier, including:

(i) Item—possessor, e.g. *ṣáwlət màlka*ꜞ 'the shoe of the king' (A17:28),
*ʾárxət be-Xàmmo*ꜞ 'the water-mill of the family of Xammo'
(A19:1).

(ii) Part—whole, e.g. *yománət yàrxa*ꜞ 'the days of the week' (A17:15),
*kotằlət ʾə̀rxe*ꜞ 'the channel of the water-mill' (A22:45).

(iii) Vessel—contents, e.g. *xa-kawázət mìya*ꜞ 'a pot of water' (A21:10),
*ða-qə́nnət dəbbòre*ꜞ 'a nest of hornets' (A20:6).

(iv) Item—affiliation, e.g. *ʾáġət Č̣ằl* 'the lord of Č̣āl' (A19:2), *málkət
Màġrəb*ꜞ 'the king of Morocco' (A28:37), *ʾánna nášət màθa*ꜞ 'these
people of the village' (A48:2), *brónət màlka* 'the son of the king'
(A32:21).

(v) Item—material, e.g. *xa-ṭásət dàwa*ꜞ 'a goblet of gold' (A15:11), *šíšət
pràzla* 'bars of iron' (A19:4).

(vi) Time—event, e.g. *dánət kawùθra* 'lunch-time' (A22:22).

(vii) Item—attribute, e.g. *xále díye t-ḥaqqùθa*ꜞ 'his real uncle' (A23:28).

(viii) Item—identification, e.g. *ʾáθṛət Bàrwər* 'the land of Barwar' (B4:1),
        máθət ʾÉ̆n-Nune 'the village of ʾɛn-Nune' (B1:9).

(ix)   Evaluation—item, e.g. *qaṭòleˈ t-mušəlmàneˈ* 'murderers of Muslims,
        murderous Muslims' (B2:2)

(x)   Action—participant, e.g. *qyámtət màranˈ* 'the resurrection of our
        Lord' (B5:55), *xyáptət xə̀tnaˈ* 'the washing of the groom' (B15:74).

The annexation particle is generally suffixed to the head noun. As described
in §10.16., this is sometimes contracted, e.g. *ʾénə mìya* 'the spring of water'
(A11:17), *šōp-rèšux* 'the place of your head' (A24:51). On some occasions,
on the other hand, the particle is prefixed to the dependent noun, e.g.
də́mma t-tèla 'the blood of a fox' (A32:21). For the sake fo the following
discussion, the two constructions may be represented by the two variant
phrases *kθawət qaša* and *kθawa t-qaša* 'the book of the priest'.

   Annexation is recursive, in that a series of more than two nouns may
be connected together in annexation, e.g. *tằrət béθət xa-nàšaˈ* 'the door of
the house of a man' (A15:7), *púmmət líntət nepùxtaˈ* 'the mouth of the jar of
syrup' (A23:21). Such recursive constructions may exhibit a combination
of both the *kθawət qaša* and the *kθawa t-qaša* constructions, e.g. *brátət málka
t-Mà̀ġṛəbˈ* 'the daughter of the king of Morocco' (A28:17).

   The head of an annexation construction may consist of two or more
nouns. These may be conjoined together with the particle *w*, in which
case the annexation particle is attached to the last noun only, e.g. *bába-w
yə́mmət yàlaˈ* 'the father and the mother of the boy' (A15:9). An alternative
construction that is attested is one in which the nouns are coordinated
without the *w* conjunction and both take the *D* annexation particle, e.g.
ʾáqlət ʾíðə d-áy-baxta 'the legs of, the hands of that woman' (A10:10).

   When an adjective or non-attributive modifier qualifies a definite head
noun, this is placed after the head noun, before the dependent annexed
noun, if it is non-contrastive, e.g.

(1) *le-y-basə́mli ʾo-béθa zórət yə̀mmi.ˈ* 'I do not like the small house of my
     mother.'

Examples from the text corpus: *ʾɛ-káwe díye zórtə ṣòpaˈ* 'this small window
of the stove' (B15:25), *ʾúmra ʾatíqa t-Màr-Sawaˈ* 'the ancient church of
Saint Sawa' (B3:19), *ʾúmra xáθət Mar-Sàwaˈ* 'the new church of Saint Sawa'
(B3:23), *l-a-páθa xétət nèraˈ* 'on the other side of the river' (A14:50), *ṭḷá
šarbəṭáne xéne t-qèseˈ* 'three other wooden canes' (A24:53).

If the adjective is restrictive and contrastive, two constructions are commonly used. The adjective may remain next to the head noun and take the nuclear stress. If, for example, my mother has two houses, one small and one big, I could say:

(2) *le-y-basə́mli ʾo-bɛ́θa zòrət yə́mmi,*¹ *bás basə́mli ʾo-gòṛa*¹ 'I do not like the *small* house of my mother, but I like the *big* one.'

Example from the text corpus: *m-d-ay-góta xètə šaqíθa*¹ 'from the other side of the channel' (A9:4).

Alternatively the contrastive attribute is placed after the dependent noun in a nominalized appositive phrase consisting of the adjective with a demonstrative head (*ʾo-zoṛa* 'the small one', *ʾo-goṛa* 'the big one')

(3) *le-y-basə́mli bɛ́θət yə́mmi ʾo-zòṛa,*¹ *bás basə́mli bɛ́θa díya ʾo-gòṛa.*¹ 'I do not like the *small* house of my mother, but I like her *big* house.'

When the head noun is indefinite, the adjective is placed either after the head noun or after the dependent noun, according to the degree of prominence the speaker wishes to give the adjective, e.g.

(4) *díya xzéli xa-bóya góṛət də̀bba.*¹ 'I have just now seen a big hole of a bear.'

(5) *díya xzéli xa-bóyət də́bba gòṛa.*¹ 'I have just now seen a big hole of a bear.'

In (5) the adjective has greater prominence than in (4). This could be paraphrased by a non-restrictive relative clause in English: 'a hole of a bear, which was big'. Additional prominence is given to the postposed adjective by putting it in a separate intonation group:

(6) *díya xzéli xa-bóyət də̀bba*¹ *gòṛa.*¹ 'I have just now seen a hole of a bear, which was big.'

The structural difference between the *kθawət qaša* construction and the *kθawa t-qaša* construction reflects different degrees of prosodic bonding between the nouns. The first noun in the *kθawa t-qaša* construction is prosodically more independent than the first noun in the *kθawət qaša* construction. This is reflected by the fact that an intonation group boundary would not normally fall immediately after a head noun in a *kθawət*

qaša construction, but this is possible in the case of one in a *kθawa t-qaša* construction, e.g. *rìxa*ˈ *t-xa-kàlləš*ˈ 'the scent of carrion' (C8:5), *ṭə́ḷḷəθ bnáθa xène*ˈ *t-Băkùrku*ˈ 'three other girls, of Băkurku' (A26:24).

If the head noun has a possessive suffix, the annexation particle is obligatorily attached to the following dependent noun, e.g. *julléy t-yáwne* 'their clothes of doves' (A14:80), *sawăwáθən t-qámθa* 'our ancestors of former times' (B3:21), *kísti t-tŭ̀tun* 'my bag of tobacco' (A11:9). The same applies to head nouns modified with a following quantifier, in that the annexation particle is not attached to the quantifier but to the dependent noun, e.g.

(7) *mjămí náše kúlla t-màθa.*ˈ 'All the people of the village gather together.' (B5:110)

The *kθawa t-qaša* construction is a 'heavier' form of coding than the more compact *kθawət qaša* construction. This heavy coding is sometimes used to give particular salience to a newly introduced referent that plays an important role in the discourse, e.g.

(8) *ʾíθwa xa-málka t-Yằman.*ˈ 'There was a king of Yemen.' (A14:36)
(9) *xazéla xá parizàda,*ˈ *xá šapìrta,*ˈ *brátət málka t-Màġrəb.*ˈ 'They saw a princess, a beautiful one, the daughter of the king of Morocco.' (A28:17)
(10) *ʾúmra ʾatíqa t-Màr-Sawa,*ˈ *ʾáwwa pís̆ele bə́nya qúrbə qam-šaww-ə́mma xáms̆i tmany-əmmà-šə́nne.*ˈ 'The old church of Saint Sawa was built about seven hundred and fifty or eight hundred years ago.' (B3:19)

When these referents are mentioned subsequently in the discourse, they are typically present with the lighter coding of the *kθawət qaša* construction, e.g.

(11) *ʾu-ʾáp-yaha bráta xéta ṭ-íla brátət málkət Màġrəb*ˈ *ʾáp-ʾay qəm-šaqə̀lla Bèjəm,*ˈ *qəm-mɛθèla.*ˈ 'The other girl, who was the daughter of the king of Morocco, Bejəm took her also and brought her back.' (A28:37)

The heavy coding of the *kθawa t-qaša* construction may be used to give prominence to the clause as a whole. This is the case in (12), where the speaker gives added force to his assertion by uttering it in three separate intonation groups, the boundary of one of them falls between the components of the annexation construction:

(12) *lɛ-šàwqən¹ máttu bə̀sra¹ t-ʾə́zza ʾɛ-Núne gu-pùmme.¹* 'I shall not let him put the meat of the nanny-goat Nune in his mouth.' (C7:6)

In (13) the heavy coding of the *kθawa t-qaša* construction is used in a temporal expression to mark a clear episodic boundary in the narrative:

(13) *wítɛla b-lèle,¹ dána t-dmàxa,¹ xílela mə̀ndi.¹ wítɛla dána t-dmàxa,¹ xəmmə̀rθa,¹ xəmmárθə šə̀nθa,¹ šqìltəlla,¹ muttɛ́θəlla rəš-ṣádrət xmáθa dìya.¹* 'At night, the time of sleep, they ate something. At the time of sleep, she (Leliθa) took a bead, a bead of sleep, and put it on the chest of her mother-in-law.' (A19:3)

The looser prosodic connection between the two components in the *kθawa t-qaša* construction is sometimes used as a device to give prominence to the dependent noun rather than to the phrase as a whole. This applies to cases where the speaker wishes to give prominence to a non-restrictive dependent noun that supplies new, supplementary information about a referent that has been previously introduced. In many cases the prominence is enhanced by presenting the dependent noun with the annexation particle in a separate intonation group, e.g.

(14) *ṭə́ḷḷəθ bnáθa xène¹ t-Bӑkùrku¹* 'three other girls, (who were those) of Bӑkurku' (A26:24)
(15) *sab-šqíllux xa-xabùšta¹ m-gu-d-àwwa¹ màna¹ t-málka-w maləktθa.¹* 'Since you took an apple from this plate, which belongs to the king and queen.' (B15:71)
(16) *qímela zíle xə́zye ʾína dùs¹ xa-képa hàtxa¹ ʾu-ða-yàdde gáwe díye,¹ t-prə̀zla.¹* 'They went and saw that it was true, there was a stone like this, with a handle in it, which (was) of iron.' (A14:13)

On some occasions the dependent noun is separated from the head noun by intervening material. In such cases the looser *kθawa t-qaša* construction is always used, e.g.

(17) *ʾáwwa xa-nišànqɛle¹ t-ʾáθṛa d-è-ga.¹* 'This is a symbolic act of the country at that time.' (B5:153)
(18) *zmaryáθa basímewa t-ʾáθṛa tàma.¹* 'The songs of the land there were beautiful.' (B5:11)
(19) *ʾína ḥurrắs ʾíθwa t-málka ṭ̂-ila mútte tàma.¹* 'But there were guards of the king who were posted there.' (A14:92)

(20) *kúlla píše qalíbe hátxa t-gùpta.*' 'They would all turn into cheese moulds.' (B16:25)

(21) *ʾɛ-kosíθa múṣlǝlla gu-ʾɛ́ne díye t-Čùxo.*' 'He lowered the hat of Čuxo over his eyes.' (A7:19)

Note that in (21) the definite noun *kosiθa* 'hat' has a demonstrative pronoun. This has the correlative function of binding the noun to the annexation particle *D* in the phrase *t-Čuxo*. It invites the hearer to seek the means of identifying the referent of the noun 'hat' in the surrounding discourse. Since it has not been mentioned previously, the source of identification is the subsequent genitive phrase.

When one or more nouns are presented as alternative dependent nouns on one head, the alternative nouns may be listed with the annexation without repeating the head, e.g.

(22) *šǝ́xtǝt ḥaywàne,*' *t-tàwre,*' *koðǝnta,*' *t-ʾǝ̀rwe*' 'the muck of animals, of oxen, a mule, of sheep' (B5:105)

The head noun of an annexation construction may be replaced by a pronoun in the form of a default demonstrative, e.g.

(23) *ʾíθwa tré màlke,*' *xonăwàθa.*' *xá gu-Bàbǝl-wewa,*' *xá gu-Nìnwe.*' *ʾo-t-Bábǝl muxánna mǝn-xóne díye gu-Nìnwe.*' 'There were once two kings, brothers. One was in Babylon and one in Nineveh. The one in Babylon missed his brother in Nineveh.' (A13:1)

(24) *ʾo-t-Nínwe mɛ́re...* 'The one (= the king) of Nineveh said...' (A13:14)

(25) *lá-mɛθǝt m-an-t-qanàne.*' 'Don't bring those with horns.' (A7:24)

(26) *ʾína mástǝt ʾǝ́rwe rába biš-basimtɛ́la biš-príštɛla mǝn-d-a-t-tàwre.*' 'But the yoghurt of sheep is much better and more choice than that of cattle.' (B5:173)

Occasionally a demonstrative from the speaker deixis series is used, e.g.

(27) *ʾánna-t ʾárxe har-y-oðíwa nùra gu-bɛ́θa.*' 'People who had mills would always make a fire in the house.' (A19:4)

The pronominalized annexation phrase may be used as a non-restrictive appositive to a preceding noun, e.g.

(28) *xóne díye ˀo-t-Nìnwe*˥ *mɛ́re*… 'His brother from Nineveh said…'
     (A13:3)

(29) *márɛle xóne díye xá-ga xéta ˀo-t-Bàbəl*˥ 'His brother from Babylon once
     more says…' (A13:7)

(30) *y-oðə́xwa nahìra,*˥ *ṭàxin,*˥ *ˀa-t-šìšme.*˥ 'We used to make lamp oil, *tahini*,
     which is from sesame.' (B10:82)

This construction is also used as a restrictive appositive when it is in
contrastive opposition with another such appositive, e.g.

(31) *bɛ́θa ˀo-t-xáli gòrɛle*˥ *bas-bɛ́θa ˀo-t-mámi zòrɛle.*˥ 'The house of my mater-
     nal uncle is big but the house of my paternal uncle is small.'

(32) *yále ˀan-t-xáli gòrela*˥ *bás-yále ˀan-t-mámi zòrela.*˥ 'The children of my
     maternal uncle are big but the children of paternal uncle are
     small.'

The dependent component of an annexation construction may be used
with the annexation particle alone, without a head noun, when it consti-
tutes the predicate of a clause, e.g.

(33) *mára ˀan-ˀə́rwe d-ènila?*˥ *mára t-ˀÁjdən tèla.*˥ 'They said "Whose are
     those sheep?" They said "(They are the sheep) of Ajdən the fox."'
     (A32:16)

(34) *trè ˀɛnáθa ˀítlən.*˥ *ˀáyya y-amrə́xwa t-šə́ttət tàxela*˥ *ˀáyya t-rɛ́šət máθa dìyən-ila.*˥
     'We have two springs. One we call the one of the lower district,
     the other the one of the upper district of our village.' (B10:61)

(35) *gáre y-awéwa yáˁni t-ˀúpra, ṭìna.*˥ 'A roof was of earth, mud.'
     (B5:145)

(36) *lɛ́wət d-áwwa ˀàθra.*˥ 'You are not of this country.' (A25:82)

(37) *dárdi lɛ́la d-àyya.*˥ *dárdi ˀíla t-ˀá-t gu-panjărìye.*˥ 'My suffering is not
     from this (game). My suffering is from that woman who is at the
     window.' (A26:66)

(38) *záwna wíyɛle t-šlàma.*˥ 'The time has become one of peace.'
     (A1:26)

The copula may be omitted, as in (39–41). In such constructions the dis-
connection of the dependent component from the preceding noun that
is expressed by the position of the annexation particle is used as a signal
of predicative relationship, e.g.

(39) *búrra t-xmìra.*ꞌ 'The *burra* pot is for yeast.' (B10:76)

(40) *qariyáθa y-áwi hàtxa.*ꞌ *ʾanna t-mìya.*ꞌ 'Gourds are like this. They are for water.' (B10:75)

(41) *sə́twa tàlga*ꞌ *màrkən*ꞌ *áwwa t-dùša,*ꞌ *áwwa t-mə̀šxa,*ꞌ *áwwa t-jàjək,*ꞌ *áwwa t-gùpta.*ꞌ 'In the winter (we had containers known as a) *markən*, one was for honey, one was for butter, one was for *jajək*, one was for cheese.' (B8:11)

When a nominal expressing a quantified measurement is combined with a nominal denoting what is quantified, the two are juxtaposed in an appositional relationship without being linked with an annexation particle, e.g. *xá-reša tùma*ꞌ 'a head of garlic' (B10:19), *xá-ṭena qə́sa* 'one load of wood' (A14:9), *xa-kílo dàwe* 'a kilo of gold pieces' (A14:94), *xa-záwga ʾ`ene* 'a pair of eyes' (D2:62); *xá-qapla qèse*ꞌ 'a bundle of wood' (A30:6), *ʾarbí dráye pàrča*ꞌ 'forty yards of material' (A28:10). Note also the expression *xa-darya* 'a deal of, many', e.g. *xa-dárya nàše* 'many people' (B5:135). This corresponds to the syntax of quantifiers and cardinal numerals, which likewise are not connected to the noun by an annexation particle (*raba qɛsa* 'much wood', *xa-qɛsa* 'one piece of wood'). The contrast between the use of annexation in *xa-káwtət ʾ`ərwe*ꞌ 'a flock of sheep' (A32:14) and the lack of it in *xa-bə́rra ʾ`ərwe bàθre*ꞌ 'with a horde of sheep behind him' (A7:21) reflects the fact that in the latter the first noun has the function of a quantifying modifier whereas in the former it is the head of the nominal phrase. The two elements of the phrase in such quantifying constructions may be split by intervening material, e.g. *xà-ṭena wéwa dáwa*ꞌ 'It was one load of gold' (A7:11).

In some cases apposition rather than annexation is used also in phrases expressing containers and their contents, e.g. *xa-qadálta dàwe*ꞌ 'a pot of gold' (A10:7), *jarréta lóxma zeðàye*ꞌ 'a bag of pitta breads' (A30:5), *xa-marə́gla gòṛa*ꞌ *xə̀lya*ꞌ 'a big pan of milk' (A28:10).

14.5. Pronominal Suffixes

14.5.1. *Distribution of Short and Long Forms of Suffixes*

Some of the pronominal suffixes on nouns and prepositions exist in variant forms, which differ in phonetic length. This applies to the 1pl. suffix and 3pl. suffixes, which exist in short and long forms:

	Short form	Long form
1pl.	-ən	-ɛni
3pl.	-a, -ɛ	-ay, -ɛy, -ey

The long form of the 1pl. suffix is not prosodically conditioned since it occurs both in pause at the end of an intonation group and also within the body of an intonation group. The motivation is rather semantic. The heavier morphology of the suffix is used as a device for endowing it with a degree of prominence to express a 1pl. reference that is exclusive of the hearer, i.e. 'ours but not yours'. The prominence is, therefore, contrastive in nature. This contrast is seen clearly in examples such as (1) and (2), in which the head noun is presented in opposition to another noun with a 2nd person suffix:

(1) ʾáxni šabθɛ̀ni˺ šawwà yománela˺ ʾu-yarxɛ́ni ṭlaθì yómele.˺ . . . ʾáxtu šabθɛ́xu ʾíla ʾəštà-yome˺ ʾu-yarxɛ́xu ʾíle ʾəsri-w-ʾəč̣č̣à-yome.˺ 'Our week is seven days and our month is thirty days. . . . Your week is six days and your month is twenty-nine days.' (A17:14)

(2) y-amríwa ʾáxni bằyəx˺ ṭalbə́xxa bratɛ̀xu˺ qa-d-ó bronɛ̀ni.˺ 'We want to ask (for the hand of) your daughter for our son.' (B5:1)

Elsewhere the exclusive long -ɛni suffix is typically used by speakers when they refer to aspects of the life and customs of their community to hearers who do not belong to this community, e.g.

(3) ʾu-y-azìwa˺ šaqlìwa,˺ mən-kùl béθa˺ šaqlìwa rə̀zza,˺ šaqlìwa qàlya,˺ šaqlìwa lə̀xma,˺ mən-kùlla béθə maθɛ́ni.˺ 'Then they went and took from every house rice, they took meat fat, they took bread, from every house in our village.' (B7:1)

(4) hal-ʾaṣə́rta ʾáw háwe šulɛ̀ni.˺ 'Until evening this is our job.' (B6:11)

(5) ʾáxni bɛθɛ̀ni˺ har-ṭìna-wɛwa.˺ 'Our houses were only made of mud.' (B10:57)

(6) qaplɛ̀ni mattə́xwa l-gáre.˺ 'We put our bundles (armfuls of bedding) on the roof.' (B10:60)

(7) dukáne líθən rába dášta qamɛ̀ni.˺ 'There are not many places with open fields that are available for us (in Barwar).' (B11:31)

When the 1pl. reference is inclusive of the hearer, the short form is used, e.g.

(8) *ʾay-xá-yoma har-t-yằða*ˈ *ṯ-íle míθa brònən.*ˈ . . . *p̌éša ʾáy ʾàxxa,*ˈ *b-šópət brònən.*ˈ 'She will surely know one day that our son is dead. . . . Let her stay here in the place of our son.' (A4:39)

(9) *lá xazə́xle brònən.*ˈ 'We shall not see our son.' (A25:11)

(10) *maqðə̀xle bɛ́θən.*ˈ 'Let's burn our house.' (A26:51)

(11) *qu-sɛ́ kəs-d-anna-šwàwən.*ˈ 'Get up and go to these neighbours of ours.' (A5:1)

The short form is, however, also used in contexts where the reference of the 1pl. suffix is exclusive, e.g.

(12) *ʾáxni lɛ́le šùlən.*ˈ *har-sa-xúpla ʾáti b-gànəx!*ˈ 'It is not our job. Go and wash her yourself!' (A27:25)

(13) *máxyəxəlla máθən kúlla l-míla-w l-kóma m-báθre dìye.*ˈ 'We have covered all our village with blue and black after he left.' (A4:32)

The short form should, therefore, be regarded as the unmarked form that can be used for both exclusive and inclusive reference, whereas the long form is the marked form, which expresses only exclusive reference.

The long form of the 3pl. suffix, which consists of a diphthong, is the most frequently used form of the suffix. It is found in all prosodic positions, e.g.

(14) *ʾu-šwiqála mðíta-w də́r̠r̠a ta-ʾaθrèy.*ˈ 'They left the town and returned to their land.' (A4:27)

(15) *tá-t šaqlíle nəšmèy*ˈ 'so that they could take away their soul' (A4:59)

(16) *bálki ʾadətéy hàtxɛla.*ˈ 'Perhaps their custom is that.' (A4:36)

(17) *bratéy gwìrtɛla.*ˈ 'Their daughter is married.' (A30:29)

The occasional retraction of the stress from the long form of the suffix to the penultimate syllable appears, however, to be prosodically motivated since it tends to occurs within the interior of intonation groups and not at their boundary, e.g.

(18) *ʾap-xmárey šqìləlla*ˈ *dawérey ṭrìðəlla.*ˈ 'They also took their asses and drove away their mules.' (A7:15)

The use of the short form of the 3pl. pronominal suffix, in which the diphthong is contracted to the monophthong *-ɛ* or *-a*, is pragmatically motivated. It tends to be restricted to contexts where the suffix is predictable and has low information value, especially when it is coreferential with the subject of the clause. This is no doubt due to the fact that in these contexts the suffix is less likely to be confused with the basic nominal inflectional ending *-a*, e.g.

(19) *príməlla sosiyàθa,*¹ *dáryəlla réše dìye.*¹ 'They had cut their locks and laid them on him.' (A31:10)

(20) *xákma ṭeníwa xàṣa*¹ *masqíwale bàdra.*¹ 'Some carried it on their back and brought it up to the threshing floor.' (B5:81)

(21) *xayúθa qəm-mšaxəlpìla.*¹ 'They changed their livelihood.' (B5:75)

(22) *ʾu-xákma mxulṣàla gána.*¹ 'Some saved themselves.' (B6:18)

The contracted form of the suffix is frequently used also on numerals, where no confusion with the nominal inflectional ending is possible, e.g. *tə̀rwəθna* 'the two of them' (A25:2), *tràθna* 'the two of them' (A25:6), *ṭḷáθna* 'the three of them' (A24:3), *šáwwaθna* 'the seven of them' (A23:15). Occurrences of the long form on numerals are also found, e.g. *tráθney* 'the two of them' (A26:89), *ṭḷaθnèy* 'the three of them' (A28:37).

14.5.2. *Suffixes on the Independent Genitive Particle*

The pronominal suffixes of a noun may be suffixed directly to it or by the mediation of the independent genitive particle *diy-*. The genitive particle is placed after the noun in an annexation relationship, the initial *d-* being in origin the annexation particle:

3rd pers.	ms.	*béθa díye ~ béθe díye*	'his house'
	fs.	*béθa díya*	'her house'
	pl.	*béθa diyéy*	'their house'
2nd pers.	ms.	*béθa díyux*	'your (ms.) house'
	fs.	*béθa díyəx*	'your (fs.) house'
	pl.	*béθa diyéxu*	'your (pl.) house'
1st pers.	s.	*béθa díyi*	'my house'
	pl.	*béθa díyən ~ beθa diyéni*	'our house'

Note that when the 3ms. form of the genitive particle is combined with a noun, the 3ms. suffix (-*e*) may optionally be attached also to the noun, which, in fact, is the more frequent construction.

The annexation between the head noun and the particle may undergo various degrees of contraction. The final inflectional vowel of the noun is sometimes reduced to the central vowel /ə/, e.g. *ʾărátʰə díye* 'his lands' (B5:73), *m-zorútʰə dìyən* 'from our childhood' (B3:10), *təxrúnyə dìyən* '(according to) our memory' (B3:10). On several occasions the inflectional ending of the head noun is completely elided, e.g. *brōn-díye* 'his son' (A14:36), *brōn-díya* 'her son' (A14:5), *bēθ-dìye* 'his house' (B5:18), *šū́l dìya* 'its job' (B5:90), *ʾắθər dìyən* 'our country' (A14:91), *nāš-dìyən* 'our people' (B15:9), *taqān-díye* 'its branches' (B5:206), *xəzmān-dìye* 'his relatives' (B5:60).

The distribution of the independent genitive particle and the motivation for its use differs according to the suffix. When the pronominal suffix is 3ms. or 3fs., the genitive particle construction is the norm. This is no doubt a device to disambiguate the pronominal suffixes -*e* (3ms.) and -*a* (3fs.) from the simple nominal inflectional endings. Examples: *qále díye* 'his voice' (A25:43), *kosíθa díya* 'her hat' (A25:83), *júlle díye* 'his clothes' (A25:33). When two nouns are conjoined in a tightly-knit phrase, one genitive particle may serve for the phrase as a whole, e.g. *bábe yə́mme díye* 'his mother and father' (A25:11).

The genitive particle is occasionally omitted after 3ms. and 3fs. suffixes. This occurs in principle where the interpretation of the suffix is highly predictable from the context and it has low information value. A typical context for this omission is where the suffixes are attached to words referring to body parts or implements and they refer unambiguously to the subject of the clause or a topical referent in the discourse, e.g.

(1) *mə́xyəlla ʾíðe hátxa gu-narṭómə sùsa.*ˈ 'He put his hand like this on the snout of the horse.' (A12:65)

(2) *ʾáwəð ʾíðe xo-d-ò képa.*ˈ 'He put his hand under the stone.' (A12:30)

(3) *ṣléla də́mme rəš-pàθe.*ˈ 'Blood flowed down onto his face.' (A24:40)

(4) *ʾáwwa náša lə́bbe pqìle.*ˈ 'This man—his heard burst.' (A31:2)

(5) *ʾə́ne pθìxtɛla.*ˈ 'His eye is open.' (A31:6)

(6) *šqíltəlla kosíθa díya hátxa m-rèša.*ˈ 'She took off her hat from her head.' (A25:82)

(7) *ʾáwwa mə́xyɛle sɛ́pe l-qðálə d-o-sùsa.*ˈ 'He drove his sword into the neck of the horse.' (A12:61)

(8) *ʾo-yála zóra žàreˈ šqíla ʾaw-nằre mə́nne díye.*ˈ 'The poor young boy took that axe of his with him.' (A14:12)

When the reference of the suffix on a direct object is different from that of the subject, there is a greater tendency for the 'heavier' construction with the genitive particle to be used, e.g.

(9) *'ína 'árya 'íðe díye qəm-axə̀lla.*' 'The lion ate his hand.' (A11:1)

The particle is sometimes omitted before other types of inanimate inalienable possessions, e.g.

(10) *de-qíma mtúnyəlla qəṣṣə́tte kúlla ṭla-d-o-sàwa.*' 'He told all his story to the old man.' (A14:76)

(11) *mtagbə́rwala gʸān-díye xayùθe.*' 'He would support his life himself.' (B5:74)

Animate inalienable possessions such as family relations in general take the genitive particle, e.g. *bábe díye* 'his father' (A32:31), *yə́mme dìye* 'his mother' (A14:5), *xóne díye* 'his brother' (A25:1), *xále díye* 'his uncle' (A25:45), *bába dìya* 'her father' (A14:1), *bróna dìya* 'her son' (A14:4).

The genitive particle is sometimes omitted after a 3rd person singular suffix when the nominal phrase as a whole has reduced information value due to its status in the discourse. This is exemplified in (12). Here 'his dream' in the initial announcement 'Anybody who knows…what he saw in his dream…' has the gentive particle (*xə́lme diye*), but later in the discourse, where this announcement is repeated and does not convey new information, the narrator uses the 'lighter' form without the particle to express the same (*xə́lme*):

(12) *'áwwa málka xzéle xa-xə̀lma.*'…*kút yắðe…mòdile xə́zya b-**xə́lme díye**' b-yawə́lle 'ə̀mma dáwe.*'…*'o-xúwwe mə̀rre*' *hà-naša*' *lèkət zála?*' *máre b-álaha hon-zála kəs-màlka.*' *málka hóle xə́zya xa-xə̀lma.*' *màra*' *kút-yắðe mòdile xə́zya b-**xə́lme** w-amə̀rre*' *bəd-šáqəl 'álpa dàwe.*' 'This king had a dream.…Anybody who knows…what he saw in his dream, he will give him a hundred gold coins.…The snake said "Hey, man, where are you going?" He said "By God, I am going to the king. The king has had a dream and says that anybody who knows what he saw in his dream and tells him will have a thousand gold pieces."' (A1:2–5)

Conversely, when a noun with a suffix is repeated in a clause that expresses climax (13) or one that reiterates a fact to express its importance (14–15),

the genitive particle sometimes occurs in the second, more prominent, clause but not in the first:

(13) *qəm-maxéla ʾáqla biš-xɛlàna,*˄ *qəm-parèla ʾáqla dìya.*˄ 'He struck her leg harder and burst her leg.' (A33:12)

(14) *ʾó Kắrə̀m,*˄ *bábe mìtle.*˄ *bábe díye mìtle.*˄ 'Now, the father of Karim died. His father died.' (A14:4)

(15) *dwíqəlle, nšíqəlle, múttəlle šôpe.*˄ *múttəlle šópe dìye.*˄ 'He held him, kissed him and put him in his place. He put him in his place.' (A25:51)

The genitive particle with pronouns other than the 3ms. and 3fs. have a different distribution.

The particle is often used when the head noun is an unadapted loan-word, e.g. *bắlam diyéy* 'their boat' (A14:39), *ḥầð̣ð̣ díyi* 'my luck' (A1:4), *quwāt-díyən* 'our forces' (A14:53), *qə̀ṣṣət díyux* 'your story' (A14:33). They are also generally used after a proper name, e.g. *Fárxo diyèxu* 'your Farxo' (A25:21), *be-Hέdo diyèni* 'our family of Hɛdo' (B8:1).

On common nouns with nominal inflectional endings, however, the suffixes of the 1st and 2nd person and 3pl. tend to be attached directly without the mediation of the genitive particle. Some cases are, nevertheless, found where the genitive particle is used with these suffixes. This mostly occurs when the speaker wishes to give some kind of prominence to the suffix. In this group of suffixes it is the 1pl. suffix that is expressed by the genitive particle with the greatest frequency. In most cases where the particle is used for the 1pl. suffix, the speaker is referring to a referent that belongs to his community but not to that of the hearer, i.e. the 1pl. suffix is 'exclusive'. The exclusive interpretation arises from the prominence that the heavy coding of the construction gives to the suffix, which is contrastive in nature ('ours not yours'). This can be compared to the exclusive 1pl. function of the long suffix *-ɛni* described above (§14.5.1.). The construction with the genitive particle is frequently used with the nouns denoting the location of the speaker's community, such as *maθa* 'village' and *ʾaθṛa* 'country', its people, institutions or aspects of its life, e.g.

(16) *ʾíθwalən šawwá ʾabòne*˄ *gu-máθa dìyən.*˄ 'We had seven bishops in our village.' (B2:6)

(17) *klá klá làxxa!*˄ *ʾáwwa ʾắθṛ dìyən-ile.*˄ 'Stop, stop here! This is our land.' (A14:91)

(18) *ʾu-gníwəlla ʾərwe*' *ʾu-mupíðəlla b-ḥŭdừd*' *yáʿni ʾáṭra d-áy-gotət diyèni.*' 'They stole the small cattle and took them over the border, that is (the border of) the country on our side.' (B5:161)

(19) *har-mədre-táma xzélən nāš-dìyən.*' 'Again we saw our relatives.' (B15:9)

(20) *ʾáxni ʾax-ṭ-íx bənyəlle ʾúmra díyən gu-ʾĒn-Nùne*' 'When we built our church in 'ɛn-Nune…' (B6:31)

(21) *ʾáti díya píšlux málka dìyən,*' *málkət maymùne.*' 'You have now become our king, the king of the monkeys.' (A14:45)

(22) *sab-áxni xluláne dìyən*' *hammáše y-oðəxwala*' *čeriyăwàθa.*' 'because we always used to hold our weddings in Autumn.' (B5:18)

(23) *ʾu-rába pšìṭṭɛwa xayúθa díyən gu-maθwáθa.*' 'Our life in the villages was very simple.' (B15:12)

In some cases the genitive particle has the long form of the 1pl. suffix, e.g.

(24) *ʾànnɛla ʾəðăwáθə diyéni.*' 'These are our festivals.' (B6:16)

(25) *náše diyèni*' *ʾi-ṣémi ṭḷá yomàne.*' 'Our people fast for three days.' (B6:21)

The 1pl. suffix is given additional prominence in (26) by expressing it as an independent phrase with a demonstrative head (*ʾo-diyən* 'our one') and placing this in apposition to the noun:

(26) *máx gášrə Z̧àwa d-o-dìyən*' 'like the bridge over our Zab' (A30:51)

The genitive particle with a 1s. suffix is rarely attested in the text corpus. In (27) it is clearly a contrastive focus:

(27) *ʾu-qále díye rába basìmɛwa.*' *mút qála dìyi?*' 'His voice is very beautiful. What is *my* voice (in comparison)?' (A25:43–44)

In some cases the speaker appears to be giving prominence to the intrinsically exclusive nature of the 1s. reference, e.g.

(28) *bằyən xáðrən gu-ʾúpra díyi xazènne.*' 'I (the king) want to go around my own land to see it.' (A14:47)

(29) *mumèθɛwən,*' *kə́mət ʾúrzət dúnye ʾáθa báθri le-y-azàna*' *ṭla-hìč-ʾurza.*' *bas-ʾə́n ʾáθya xá-baxta nabláli qa-kut-t-bằya,*' *yən-qa-xóna dìya,*' *ʾána bṭ-azàna.*'

*mə́ra ʾàwwɛle qawla-díyi.*ꟷ '"I have taken an oath that however many men in the world may come after me I shall not go to any man. But, if a woman comes to take me to anyone she wants, or to her brother, I shall go."' She said "This is my word (i.e. which I made to myself, not to anybody else)."' (A8:78–79)

Likewise 2nd person suffixes are rarely expressed by the genitive particle. The cases that are attested in the text corpus can be interpreted as having the purpose of giving the suffix some kind of prominence. In (30)–(32) the exclusivity of the 2nd person reference is given distinctness. In (30) and (31) this is the exclusivity of a family or community. In (32) it connotes the sense of uniqueness to the head noun:

(30) *xəzmayúθa ʾíla manáy ʾən-xá náša dìyux*ꟷ *yan-xá bráta díyux hot-híwəlla qa-ðà-maθa,*ꟷ *píše xɔ̀zme.*ꟷ *ʾən-ʾàti*ꟷ *mã́θalan xa-xɔ̀zmux*ꟷ *ʾə́n xa-nāš-dìyux*ꟷ *ʾə́n xa-gwíra m-ðá-maθa xéta ʾə́θye kɔ̀slux,*ꟷ *ʾánna y-amríla xɔ̀zme yáʿni.*ꟷ 'The meaning of family relationship is (as follows). If you have given somebody of your family or a daughter of yours to a certain village (in marriage), (the two families) become relatives. If a relative of yours, a person of your family or somebody married (into your family) comes to you, they call these people family relatives.' (B5:232)

(31) *ku-brónət bə́r-naša ʾáθe l-d-áy jăzíra qamàye,*ꟷ *ʾáwwa ṭ-áwe málka diyèxu.*ꟷ 'Whichever human being comes to the island first, he will be your king.' (A14:46)

(32) *liθ bə̣r-náša hátxa b-aw-pɔ̀sla díyux.*ꟷ *m-hàdəx qəm-yăðə́nnux.*ꟷ 'There is nobody with that figure of yours (i.e. it is unique to you). That is how I knew you.' (A8:41)

In (33) the prominence gives added force to the assertion of a pragmatic relation that is contrary to expectation:

(33) *ʾáwwa rèši*ꟷ *ṭ-áθe xá-yoma pràma*ꟷ *bəd-ʾiθáθa dìyux.*ꟷ *ʾàti parmə́tle réši.*ꟷ 'This head of mine will one day be cut off by your own hands. *You* will cut off my head.' (A14: 35)

The genitive particle may be used independently of a head noun. If it functions as an ascriptive predicate that assigns a property to the subject of the clause, it requires no pronominal head, e.g.

(34) ʾánna ʾálpa-w xamšá-mma dìyuxila˩ ʾánna ʾálpa-w xamšá-mma dìyila.˩ 'These one thousand five-hundred are yours and these one thousand five-hundred are mine.' (A1:20)

(35) ʾáp ʾanna-júlle ṭ-ilà-llux˩ ʾu-ʾáyya xmárta dìyila.˩ 'Also the clothes that are on you and this donkey are mine.' (A6:12)

(36) ʾáwwa béθa dìyəxile bráti?˩ 'Is this house yours, my daughter?' (A40:13)

(37) bəxyóna lέle dìyux.˩ 'Crying is not for you.' (A38:7)

In other contexts the genitive particle without a head noun requires a pronominal head in the form of a demonstrative pronoun. This pronoun is anaphoric and functions like the anaphoric pronoun at the head of a relative clause (see §14.3.2.), in that it binds the reference to the description in the following modifier phrase, e.g.

(38) ʾan-díyən tíwla tàma.˩ 'Those (people) of ours settled there.' (B8:5)

(39) ʾánna dìyən˩ wídla tàgbir.˩ 'These (people) of ours made a plan.' (B19:5)

(40) rába xá-mdi prìšela júllux gu-d-ánna diyéni.˩ 'Your clothes are something special compared to ours.' (A35:10)

(41) b-àlaha˩ ʾána har-ʾa-díyi zála xìšta.˩ 'By God, that (fate) of mine has gone (= I'm doomed).' (A14:29)

We should include in this section the idiomatic phrases relating to family relations exemplified in (42)–(44):

(42) bábe díye ʾu-d-áni ʾəθyela.˩ 'His father and his father's family came.' (A4:55)

(43) txírre béθət bábe ʾu-d-àni.˩ 'He remembered the house of his father and his family.' (A14:87)

(44) ʾέ-ga b-lέle tíwəx kəs-xáli d-àni.˩ 'That night we sat with my uncle and his family.' (B15:57)

Since the phrase ʾu-d-ani in this construction does not have a pronominal head, it must be construed as a modifier of the head noun babe (diye) 'his father', co-ordinated with the suffix modifier of the noun 'his', rather than a head coordinated with the head 'his father'. The meaning, therefore, is 'the father of him and of them', i.e. his father and the family of his father. The head noun may take other suffixes, e.g. babi ʾu-d-ani 'my father and my father's family'.

14.6. REFLEXIVE AND RECIPROCAL PRONOUNS

When a pronoun is reflexive, i.e. it is coreferential with the subject of the clause, it is generally expressed by attaching a pronominal suffix to the noun *gana*. This is a noun of Kurdish origin meaning 'soul, life, body'. It still retains its original meaning in some contexts, e.g.

(1) *ʾən-lá-ʾawðət b-xábra dìyi*⸗ *gánux šaqlə̀nna.*⸗ 'If you do not do as I tell you, I shall take away your life.' (A15:20)

(2) *y-aθéwa m-bár hàdəx*⸗ *xámša ʾə̀štà ganáθa.*⸗ 'Afterwards, five or six people would come.' (B5:77)

(3) *ʾína xa-senìye*⸗ *dáwa xaṣe-díye xá-xuwwe zòra,*⸗ *réšət nàša*⸗ *ʾu-gánət xùwwe*⸗ 'He saw a gold tray on which there was a small snake with the head of a man and the body of a snake.' (A14:31)

It is used as a respectful address, e.g.

(4) *ha-gàni,*⸗ *lèkət zála?*⸗ 'Hey, my dear, where are you going?' (A15:6)

(5) *háyyo ya-gáni ṭ-amrànnux.*⸗ 'Come, my dear, let me tell you something.' (A22:36)

It is used with the function of a reflexive pronoun in the following contexts:

(i) Direct object

(6) *zdíθəlla gána dìya*⸗ *kəsle-dìye.*⸗ 'She threw herself down beside him.' (A37:18)

(7) *ʾáp-ʾaw qəm-qaṭə́lle gān-dìye,*⸗ *zadéle gān-díye tàma.*⸗ 'He also killed himself and threw himself there.' (A38:15)

(8) *mtugbəràli gáni.*⸗ 'I have looked after myself.' (A1:11)

(9) *mrázgət gànux.*⸗ 'Prepare yourself.' (A6:4)

(10) *gáwṛi θéle mṭáši gànux!*⸗ 'My husband has come, hide yourself!' (A22:29)

(11) *xúš šqúl gànux*⸗ *si-l-bèθa.*⸗ 'Go, take yourself off, go home.' (A23:39)

(ii) Complement of a preposition

(12) *wídla ʾixála ʾáy b-gàna*ˈ *ʾu-b-pəlxána b-gána zála-w θáya gu-bɛ̀θa.*ˈ 'She made the food by herself and did the chores by herself, going to and fro in the house and she ran the house.' (A21:40)

(13) *ʾáwwa ʾərbi*ˈ *m-gáne díye θéle ríqle l-ṭùra.*ˈ 'This sheep of mine has come and run to the mountain of its own accord.' (A10:3)

(14) *bašláxla b-gànən.*ˈ 'Let's cook them by ourselves.' (A2:2)

(15) *ma-lat-ðáya b-gánəx qàrθɛla?*ˈ 'Don't you know yourself that it is cold?' (A20:1)

(16) *ʾay-gu-gána mtuxmɛ̀nna.*ˈ 'She thought to herself.' (A21:19)

(17) *la qɛ́mən jàlde*ˈ *ta-ṭ-óðən pəlxàna*ˈ *ṭla-gàni*ˈ *ta-ṭ-àxlən?*ˈ 'Should I not get up early to work for myself, so that I can eat?' (A21:19)

(18) *m-kəs-gàne qəm-mdabárra*ˈ *mxalóse xàye díye.*ˈ 'He made this up by himself (literally: from himself) to save his life.' (A39:6)

(iii) Complement of a noun in annexation

(19) *maxbánət gàne-wewa.*ˈ 'He was a lover of himself (= selfish).' (A3:1)

(20) *ʾɛ–dánə ṭ-ìla ŕíše,*ˈ *kút-xa gu-šwíθət gàne*ˈ… 'When they woke up, each one in his own bed…' (A4:5)

(21) *šqílle dăbánjə gáne dìye.*ˈ 'He took his pistol.' (A27:2)

When the pronominal suffix is 1pl., the effect of using the reflexive pronoun is to express exclusivity ('ours not yours'):

(22) *gu-ʾáθṛət gʸànən*ˈ *ràbəxwa xə́ðye pṣíxe.*ˈ 'In our own land we were very happy and cheerful.' (B16:6)

(23) *ʾíθwalən ʾurxáθət gʸànən.*ˈ 'We used to have our own (customary) ways.' (B5:1)

(iv) Apposition

(24) *ʾìtli gáni šɛ́ra hon-wìðəlle*ˈ 'I have myself a poem that I composed.' (B1:14)

In some of these syntactic positions a reflexive pronoun that is coreferential with the subject may also be expressed by a pronominal suffix or demonstrative pronoun. This applies to reflexive pronouns that express the beneficiary of the action, which may be expressed by L-suffixes or prepositional phrases without *gan-*, e.g.

(25) *qémən šaqlónni xákma mòndi mónni b-ʾìði.*ˈ 'I shall get up and take for myself a few things, with me in my hand.' (A23:5)

(26) *bằyánni ʾómma bnàθa.*ˈ 'I want for myself a hundred girls.' (A25:74)

(27) *si-bnílux dúkθət tré-gəldət tàwre.*ˈ 'Go and build for yourself in a place (the size of) two ox skins.' (A11:11)

(28) *dwíqle ʾàskar ʾólle díye.*ˈ 'He recruited an army for himself.' (A11:15)

(29) *y-áθe mzabónwa ṭla-d-àw-u yómme díye.*ˈ 'Then he would come back and sell them for himself and his mother.' (A14:10)

(30) *ṭla-d-áy dráyɛla xàčča*ˈ *ṭla-d-áw ràba.*ˈ 'For herself she pours out a little and for him a lot.' (A17:25)

Also reflexive possessive pronouns are frequently expressed by pronominal suffixes, e.g.

(31) *ʾay-lwíštəlla júlla dìya.*ˈ 'She put on her clothes.' (A14:91)

(32) *móxyəlla ʾíðe hátxa gu-narṭómə sùsa.*ˈ 'He put his hand like this on the snout of the horse.' (A12:65)

An L-suffix expressing a direct object is used with a reflexive sense when the preceding clause has a *gan-* phrase in direct object position, e.g.

(33) *xá-paṛa ʾawódla gáne ʾax-qòšta,*ˈ *maxéla bēn-Səttíye l-Fàrxo.*ˈ 'One lamb made itself like a bow and pushed itself between Səttiye and Farxo' (A25:29)

The phrase *b-gan-* + suffix 'by oneself' denotes the agency of an action. If the sense of 'by oneself' is locative isolation rather than agency, the particle of isolation *xoð-* is used. This is optionally preceded by the prepositions *l-* or *b-*, e.g.

(34) *líθ ʾáp-xa gu-bèθa?*ˈ *móra là*ˈ *har-ʾàna,*ˈ *xòðiwən.*ˈ 'He said "There is nobody in the house?" She said "No, only me. I am alone."' (A22:32)

(35) *pìšela*ˈ *har-ʾàni-tre l-xoðéy.*ˈ 'Only those two remained by themselves.' (A20:9)

(36) *xá-naša l-xóðe lítle la-bába la-yómma la-ʾàp-xa,*ˈ *ʾáw y-amrìle*ˈ *lìtle náše.*ˈ 'A man by himself, who does not have a father, a mother or anybody, they say that he has no relatives.' (A17:17)

(37) *ʾə́rwe b-xoðèy,ˈ ʾína tawráθa ʾu-táwre ʾáni kút-xa b-xòðey.ˈ* 'Sheep were by themselves, cows and oxen, they were all by themselves.' (B10:55)

Occasionally the pronoun of isolation is combined with the cardinal numeral *xa*, e.g.

(38) *ʾáw xa-l-xóðe díye tămàha.ˈ* 'He is all alone there.' (A27:5)

The reciprocal pronoun *ġðaðe* is used in the following syntactic contexts:

(i) Direct object
   (39) *bróni ʾu-brátux xə́zyela ġðàðe.ˈ* 'My son and your daughter saw each other.' (A4:26)
   (40) *muxə́bla ġðàðe.ˈ* 'They loved (i.e. fell in love with) each other.' (A4:4)
   (41) *ʾu-ʾə́θyela xpíqe ġðàðe,ˈ nšáqa ġðàðe.ˈ* 'They came and hugged each other, kissing each other.' (A4:55)

(ii) Complement of a preposition
   (42) *mṣawθítu m-ġðàðe,ˈ ta-t-ṭúra ja-jálde pàrəq.ˈ* 'You should speak with one another, so that the mountain would finish quickly.' (A17:19)
   (43) *ʾu-xíllən kúllən m-ġðàðeˈ* 'and we all ate together' (A21:39)
   (44) *xắyi m-ġðàðeˈ ṭḷáθi šə̀nne-uˈ méθi m-ġðàðe.ˈ* 'They will live together thirty years and die together.' (A4:46)
   (45) *xá-bena ʾan-tre-maláxe t-wέwa ʾə́θye bìya,ˈ t-wέwa mutə́pqəlla b-ġðàðe,ˈ θéla p̣yáða táma tàma.ˈ* 'Then, those two angels who had brought her, who had caused them to meet each other, came passing by.' (A4:44)
   (46) *ʾu-ʾìtlənˈ ʾə́štá-maθwaθa qúrba l-ġðàðela.ˈ* 'We have six villages that are near to one another.' (B1:3)
   (47) *píšla nepúxta ʾu-práge gu-ġðàðe.ˈ* 'The syrup and the millet seed were mixed together.' (A23:21)
   (48) *sìqənˈ mjămòyəlla qése,ˈ dráya rəš-ġðàðe.ˈ* 'I went up and collected the wood and piled them up.' (A23:34)

Another means of expressing the reciprocity of an action is to use constructions expressing the two individual participants with the forms *xa/ða…xena/xeta* 'one…the other', e.g.

(49) *tằra c̃imtɛla baréy.ˈ xùyɛle.ˈ xa-mxàyɛle l-o-xéna.ˈ xa-mxàyɛle l-o-xéna.ˈ* 'She had closed the door after them and it was dark. One was beating the other, one was beating the other.' (A22:35)

(50) *ʾu-ʾíθwa ṭawáltət bərràne,ˈ xa-ráqa báθər d-ò-xena.ˈ* 'There was the game of "groups", (in which) one person runs after the other.' (B7:6)

(51) *dawqíwa bnáθa b-ʾíðət ġðáðe hàtxa,ˈ yáʿni ràbe doqíwa,ˈ ða-dwíqta ʾíðə d-a-xèta.ˈ* 'The girls held each other's hand like this. Many held (hands), one holding the hand of the other.' (B12:1)

(52) *y-amrə́xxe mxáya bèʾe.ˈ yáʿni šmáṭa bèʾe xa-d-o-xèna.ˈ* 'We call this "striking eggs", that is breaking the eggs of one another (literally: breaking eggs, one (breaking that) of the other).' (B5:58)

(53) *xa-maryóse ʾo-xréna mìya.ˈ maryástət míya xa-l-d-o-xréna mòdila?ˈ* 'All the people go out and scatter water on each other. What is (the significance of) scattering water over each other?' (B6:10)

(54) *ʾáni píšela màraˈ ða-ṭla-ða-xètaˈ* 'They started saying to one another…' (A12:60)

14.7. Adjectives and Appositives

Adjectives that modify a noun are generally placed after it. The attributive function of adjectives is reflected not only by their syntactic function of a modifier of a head noun but also by their inflection, in that attributive adjectives, unlike referential nouns, do not normally express gender differences in their plural form, e.g.

ʾurza sniqa	'a needy man'
baxta sniqta	'a needy woman'
ʾurze snìqe	'needy men'
baxtaθa snìqe	'needy women'

Most adjectives, furthermore, are not used referentially in the same way as nouns. The head noun can be omitted, but an adjective without a head noun must normally take a pronominal head in the form of an indefinite pronoun, when it is referentially indefinite, and in the form of demonstrative pronoun when anaphorically definite, e.g.

xa-sniqa	'a needy one (ms.)'
ʾo-sniqa	'the needy one (ms.)'
ða-sniqta	'a needy one (fs.)'

ʾɛ̄–sniqta	'the needy one (fs.)'
xakma sniqe	'some needy ones' (pl.)
ʾan-sniqe	'the needy ones' (pl.)

These pronominal heads are closely related to relative clause heads and, indeed, the constructions can be regarded as contracted relative clauses (ʾo-sniqa < ʾo-ṭ-ile sniqa 'the one who is needy'). If the adjective is extended by an intensifier or by the comparative particle biš, the relative particle is sometimes used in the phrase, e.g.

(1) ʾo-t biš-daqìqa᾿ 'The one that (is) thinner' (B10:49)

Adjectives nominalized with a demonstrative head are often definite by associative anaphora, typically when they express a member of a previously mentioned or implied set, e.g.

(2) ṭḷáθna bnóne díye zìlela᾿ gu-dùnye,᾿ ṭằyela᾿ ʾal-d-ò᾿ daṛmána ta-t-xázi qa-ʾɛ́nət…babèy.᾿ zílela mə́ṭye gu-ðá mðìta.᾿ ʾo-gòṛa᾿ mə́re ʾána pə́šᵊn láxxa gu-d-áyya mðìta.᾿ 'The three sons of his went on their way in the world, searching in order to find the remedy for the eyes of their father. They travelled and arrived in a certain town. The eldest one said "I shall remain here in this town."' (A24:3–4)

(3) zòre-wɛwa ʾánna xonăwáθi.᾿ ʾa-góṛta ʾànənwa.᾿ 'These brothers of mine were young. The edler one (of the children) was me.' (B8:13)

(4) ʾɛ́-ga xázət yále zòre᾿ ráqa báθər d-àn məndyáne᾿…ʾáp ʾan-gòṛe᾿ mjămìwa.᾿ 'Then you would see small children running after those things.…Also the older people would gather them.' (B15:69)

(5) ʾánna kúlla xìpla᾿ ʾan-zòre-w ʾan-ràbe-w᾿ 'They all washed, young and old.' (B10:69)

As discussed in §14.3.2., when the default demonstrative is attached to a noun, although often translated most idiomatically with the English definite article, it is always anaphoric in function and is not used with a noun that is definite by virtue of the descriptive content of the noun alone without any anaphoric connection with the surrounding discourse. For example, a noun referring to a generic class without any anaphoric connection to what precedes would be definite, since the class it refers to is assumed to be known to the hearer, but would not be combined with a demonstrative, e.g.

(6) *ʾárya héywən maxjəlàna y-áwe.*' 'The lion is a terrifying animal.'

An adjective with a default demonstrative head, on the other hand, may refer to a non-anaphoric generic class. In such cases English most idiomatically uses the indefinite article, e.g.

(7) *ʾo-góṛa gǎrəg lá-maxe ʾo-zòra.*' 'A big (person) should not hit a small (person).'

(8) *ʾan-góṛe gǎrəg lá-maxi ʾan-zòre.*' 'Big (people) should not hit small (people).'

(9) *ʾo-ḳóra xa-záwga ʾène bǎye.*' 'A blind man wants a pair of eyes.' (D2: 62)

The explanation appears to be that an expression such as *ʾo-gora* 'the big' is a reduced form of the relative phrase *ʾo-ṭ-ile goṛa* 'he who is big', in which the demonstrative is anaphoric within the phrase, in that it binds the referent of the pronoun to the description in the embedded relative clause. The construction, therefore, assigns the property to the head, like a predicative adjective, rather than presenting it as a component of the description of the head. This analysis is supported by the fact that resultative participles of atelic intransitive verbs may be combined with a demonstrative, e.g. *ʾo-zmíra zmárta xàwrile*' 'The one who has sung the song is my friend'. Such participles cannot be used as attributive modifiers of nouns but can only be used predicatively (§15.4.1.1.). A phrase such as *ʾo-zmira*, therefore, must be analysed as a reduced relative phrase in which the participle is predicative (*ʾo-ṭ-ile zmira*).

Generic phrases are definite since they refer to an entire class, inclusive of all its referents, which the hearer is assumed to be able to identify from its description alone. A demonstrative cannot have 'intra-phrasal' anaphora when a noun head is qualified by an adjective, e.g. *ʾo-naša goṛa* 'the big man', which must be anaphorically linked to the preceding discourse. Intra-phrasal anaphora is only possible in constructions with a genitive/relative particle *D*, or reduced forms of these constructions. This particle can be regarded as the anaphor of the demonstrative. It follows that the adjective in a phrase such as *ʾo-naša goṛa* cannot be regarded as being a reduced embedded relative 'the man who is big', whereas this analysis is applicable to the adjective in a phrase such as *ʾo-goṛa*, which can be regarded as a reduced form of *ʾo-ṭ-ile goṛa* 'He$_i$ who$_i$ is big'.

Likewise a demonstrative can have intra-phrasal anaphoric reference in annexation constructions, which contain the particle *D*. Again, the anaphor of the demonstrative must be this particle. Examples: *m-an-t-qanàne*' 'some

of those with horns' (A7:24), *gu-d-ó garrə zòrè* 'in the pool of young ones
(< *garrət zore*)' (B15:32), *gu-d-o-gárra dìya* 'in their pool' (B15:32). The ref-
erents of none of these are mentioned in the preceding discourse.

An indefinite nominalized adjective that has the indefinite cardinal
particle *xa/ða* as its head generally has a specific referent, e.g.

(10) *muttéθəlla ṭəḷḷəθ xəmməryáθa,¹ m-an-xməryáθə tabzìye.¹ muttéθəlla rəš-páršət
      ʾèna,¹ ða-smòqta,¹ ða-xwàrta,¹ ða-milànta.¹* 'She laid down three beads,
      beads of a rosary. She put them on the stone slab of the spring,
      a red one, a white one and a blue one.' (A25:34)

In some circumstances it can be used when the phrase has a non-specific
referent, provided that it is extracted from a known, limited set. In a
context such as (11), for example, the phrase *ða-smoqta* 'a red one' can
have either a specific ('one particular red one') or non-specific ('any of
the red ones') interpretation:

(11) A: *gu-sálla ʾíθ bêʾe xwáre ʾu-bêʾe smòqe.¹* B: *ʾána šáqlən ða-smòqta.¹* 'A: In
      the basket there are white eggs and red eggs. B: I shall take a red
      one'

The indefinite cardinal particle tends to be omitted, however, when the
existence of the set that it belongs to is unknown. A construction such as
that in (12), for example, would be used when the speaker has no evidence
that any big apples exist:

(12) *la-hálli ʾo-xabúša zòra,¹ ʾána bằyən gòṛa.¹* 'Don't give me that small
      apple, I want a big one.'

Similarly the cardinal particle is omitted in negative constructions when
the existence of the class is denied, e.g.

(13) *góṛa lìθ.¹* 'There is no big one.'
(14) *ʾíθwa-w lìθwa¹ bíš m-álaha gòṛa¹ líθwa gòṛa.¹* 'There was and there was
      not, there was no great one greater than God.' (A8:2)

Nominalized plural adjectives typically take the indefinite pronoun *xakma*
as their head when they refer to a specific group of referents extracted
from a set, e.g.

(15) A: *gu-sálla ʾíθ béʾe xwáre ʾu-béʾe smòqe.*ˈ B: *ʾána šáqlən xakma-smòqe.*ˈ 'A:
      In the basket there are white eggs and red eggs. B: I shall take
      some red ones.'

When the speaker is not referring to a delimited specific group, but to a
non-specific open-ended group, the indefinite pronominal head tends to
be omitted. This applies to contexts such as the following:

(16) *ʾu-čídɛle zóre-u gòre.*ˈ 'He invited young and old.' (A7:3)
(17) *xoš-sxí gu-d-ó garrə zòre.*ˈ 'Go and swim in the pool for young ones.'
      (B15:32)
(18) *ʾíθən . . . biš-šapìre mánni-w*ˈ 'There are some more handsome than
      me.' (A26:79)

It is found in proverbial contexts referring to generic classes, e.g.

(19) *b-núrət rašíye y-áqði məskène.*ˈ 'By the fire of wicked people the poor
      burn.' (D2:73)

Likewise the head is omitted in negative constructions where the existence
of any members of a set are denied, e.g.

(20) *ʾən-lìθ biš-zlíme mánnən,*ˈ *har-ṭ-àzəx.*ˈ 'If there are none more wronged
      than us, we shall continue on our way.' (A13:9)

It is important to note that these constructions with headless adjectives
are found also with non-telic resultative participles, which cannot function
as adjective attributes but only as predicates, e.g.

(21) *pálxi plìxe,*ˈ *y-áxli nìxe.*ˈ 'Those who have worked hard work but
      those who are inactive eat.' (D2:33)

It follows, therefore, that also these headless adjectives are not true nomi-
nalized adjectives but must be regarded as predicates of reduced relative
clauses without an explicitly expressed head ('those who are big', 'those
who have worked', etc.).

    When a plural adjective relating to a group of feminine gender has
a numeral as its head, the feminine form of the numeral may be used
although gender distinction is neutralized in the adjective inflection, e.g.

(22) *bálki mabə́rya tə̀rtè-xene.*[1] 'Perhaps it will give birth to two others.'
     (A5:8)

There are some items that act as attributes of nouns but distinguish between genders in their plural inflection. This applies to gentilic expressions ending in *-aya*, e.g.

ʾurza suraya	'a Christian man'
baxta surεθa	'a Christian woman'
ʾurze suraye	'Christian men'
baxtaθa surayaθa	'Christian women'

Furthermore, such gentilic expressions can be used as referential head nouns in a wider range of contexts than other adjectives, with a distribution that is equivalent to that of other nouns. Notably, they can be used as indefinite nouns with a specific referent, anaphorically definite and generically definite nouns without obligatorily being combined with the indefinite particle or a demonstrative pronoun, e.g. *suraya* 'a/the Christian'. They have a greater independence than other adjectives and have a lesser need for a head:

Specific indefinite	Anaphoric definite	Generic definite
xa-snɪqa	*ʾo-snɪqa*	*ʾo-snɪqa*
(xa-)suraya	*(ʾo-)suraya*	*suraya*

On distributional grounds, therefore, it would be more appropriate to interpret the gentilic forms in attributive position as nominal appositives rather than adjectives. Their status as nouns is reflected by greater independence and a noun-like feminine plural ending. The noun-like nature of gentilic forms is also identifiable in their semantic content, in that they have stability over time, denoting, in principle, the permanent constellation of properties of a class rather than contingent qualities. A distinction, therefore, can be made in terminology between 'quality-denoting' terms such as *snɪqa* and 'class-denoting' terms such as *suraya*. Both 'quality-denoting' and 'class-denoting' terms can function as attributes, but their morpho-syntactic behaviour is different.

  The feminine plural ending is regularly used with attributes ending in *-aya* when they are gentilic. Further examples:

baxtaθa huðayaθa	'Jewish women'
baxtaθa durnayaθa	'women from Dure'
baxtaθa ʾɛn-nunayaθa	'women from ʾƐn-Nune'
baxtaθa naxrayaθa	'foreign women'

The feminine plural ending is used also in the attributes *šulxaya* 'naked' and *xaya* (f. *xɛθa* recently given birth), which end in *-aya* but is not gentilic, e.g.

baxtaθa šulxayaθa	'naked women'
baxtaθa xayaθa	'women who have recently given birth'

This pattern of agreement in these lexical items has presumably arisen by analogy with gentilics. It has not, however, been extended to all non-gentilic adjectives ending in *-aya*, as shown by the following, all of which take the ending *-e* when they are attributes of feminine plural nouns:

baxtaθa xəpyaye	'barefooted women'
baxtaθa komaye	'black women'
baxtaθa qamaye	'the first women'
tawriyaθa rešaye	'the highest quality cows'

When nominals denoting professions such as *zamara* 'singer' and *raqaða* 'dancer' are used as attributes, they regularly agree with feminine plural nouns and should be regarded as class-denoting appositives rather than adjectival modifiers:

baxtaθa zamaryaθa	'singer women'
baxtaθa raqaðyaθa	'dancer women'

The nominal *xamθa* 'beautiful woman' also agrees with feminine plural nouns when it is used as an attribute:

baxtaθa xamaθa	'beautiful women'

The attribute of a noun is sometimes expressed by appositives consisting of other types of nouns, e.g. *súsa šɛ́na* 'a tame horse', *ʾúrza gáwṛa* 'a brave man' (A29:27), *xabúšta ʾixàlaˈ* 'an apple tree bearing edible fruit' (B5:104).

Speakers occasionally use the feminine plural ending on adjectives ending in *-ana*, but in all cases an alternative with the *-e* ending is available.

This applies to adjectives with the ending *-ana* that belong to the active participle patterns and also other forms, e.g.

baxtaθa ʾaxlanyaθa ~ ʾaxlane	'gluttonous women'
baxtaθa palxanyaθa ~ palxane	'hard-working women'
tawriyaθa maxjəlanyaθa ~ maxjəlane	'frightening cows'
baxtaθa hawnanyaθa ~ hawnane	'clever women'

In general, there is a degree of subjectiveness in the use of the feminine plural on non-gentilic adjectives. The motivation for giving the adjective the noun-type inflection *-aθa* may be to make the adjective more independent from its head for the sake of endowing it with greater prominence. Perhaps this is the reason why *-aθa* is normally used on the adjective *šulxaya* 'naked' in phrases such as *baxtaθa šulxayaθa* 'naked women', where it expresses a perceptually salient property! The feminine ending is sporadically found on non-gentilic adjectives that are in predicative position, e.g.

(23) *rəmyàθa hawetúwa!*ˡ 'May you (fpl.) be cursed ones!' (A26:27)

In such cases, again, the use of the feminine ending endows the adjective with the status of a noun ('cursed ones'). The effect is to present them as having the permanent time-stability typical of nouns. In (23) this strategy is used to give particular force to the curse.

Another way in which attributive adjectives are given prominence is to combine them with a default demonstrative, e.g. *xoni ʾo-goṛa* 'my big brother', *xaθi ʾa-zurta* 'my little sister'. As remarked above, the demonstrative supplies a head for the adjective. A construction such as *xoni ʾo-goṛa*, therefore, consists of two heads and the phrase *ʾo-goṛa* should be consider to have the status of a noun in apposition rather than an adjectival modifier. By giving the attribute this syntactic independence the speaker endows it with added prominence. The construction is used both when the attribute is restrictive and also when it is non-restrictive.

The construction is used with a restrictive attribute when the attribute contrasts between members of a known set designated by the noun, e.g.

(24) *ʾíθwa xa-màlka*ˡ *ʾíθwale ʾárbi bnòne.*ˡ **brə́n-diye ʾo-zòra**ˡ *ʾítwale ʾarbì šə́nne.*ˡ…**xóna ʾo-góṛa** *mə́re čú-məndi lax-xə̀zye.*ˡ 'There was a king. He had forty sons. His little son was forty years old. . . . The elder brother said…' (A12:1/17)

In such contrastive contexts this construction is used also with gentilic attributes, which, as we have seen, are best considered appositives even without the demonstrative, e.g.

(25) *ʾiθ tré-yale làxxa,*ˈ *xa-suràya*ˈ *ʾu-xa-huðàya.*ˈ *yála ʾo-suráya diyènile.*ˈ 'There are two children here, one Christian and one Jewish. The Christian child is ours'.

We can include here a similar type of construction that is used to express the name of animals, whereby the name is combined with a default demonstrative and this phrase is placed as an appositive after a noun expressing the class of animal it belongs to, e.g.

(26) *bắyən pərmə́tli ʾə́zza ʾɛ-Nùne.*ˈ 'I want you to slaughter for me the nanny-goat Nune.' (C7:3)

(27) *ta-mòdi*ˈ *ʾə́lla ʾáy ʾə́zza ʾɛ-Nùne?*ˈ *šqúl ða-xèta.*ˈ 'Why (do you want) only that nanny-goat Nune? Take another one.' (C7:6)

The name *Nune* in phrases such as *ʾə́zza ʾɛ-Nune* is treated like an attributive adjective and is given a head in the form of a default demonstrative. As in a phrase such as *xona ʾo-goṛa*, the attributive appositive *ʾɛ-Nune* picks out one member from a set, namely the flock of 'nanny-goats'. Further examples: *tawri ʾo-Xammo* 'my ox called Xammo', *tawərti ʾa-Ġazale* 'my cow called Ġazale'.

The attributive appositive that is combined with a demonstrative may also be non-restrictive. In such cases the identity of the noun is presupposed to be known independently of further description. The attribute, therefore, has greater prominence relative to the noun since it is the more informative part of the phrase. This inherent informativeness may in itself be sufficient motivation to give syntactic prominence to the attribute by using the appositive construction. In some cases, however, an additional motivation for giving syntactic prominence to the non-restrictive attribute by the appositive construction is to contrast it with the attribute of some other item in a set of entities. In (28), for example, the phrase *ʾa-qšîθa* 'thick' is non-restrictive since the dish known as *gərðo* is always thick, but it contrasts with the attribute 'watery' of the related dish known as *bušala* 'stew':

(28) *y-oðə́xwa gə̀rðo,*ˈ *bušàla.*ˈ **ʾay-gə́rðo ʾa-qšîθa,**ˈ *ta-duxràne,*ˈ *ʾina bušála t-ʾoðə́xwala ṭlàlən,*ˈ *xánči miyànta,*ˈ *la-ràba.*ˈ 'We would make *gərðo* and

stew. The thick *gərðo* is for church memorial festivals. But the stew, which we made for ourselves, was somewhat watery, though not too much.' (B10:17)

The sense here may be captured rather more closely by translating with an English non-restrictive relative clause: 'The *gərðo*, which is thick, is for church memorial festivals'.

The construction is used to express non-restrictive attributes also after proper names, which by their nature are presupposed to have an identifiable referent, e.g.

(29) *Náze ʾɛ-gòrta¹ mə́re Fàrxo,¹ máttu xa-képa làxxa.¹* 'Naze, the elder one,—Farxo said (to her) "Place a stone here."' (A25:16)

(30) *ʾɛ́-ga xáθi hàqya,¹—Jénni ʾɛ–gòrta¹—ʾámra…* 'Then my sister tells me—Jenny, the older one—she says…' (B15:39)

The syntactic status of the attributive phrases as appositives, which are heads parallel with the noun rather than dependent on it, is reflected by the fact that the particle *D* is attached to such appositives when the noun is governed by a noun in annexation or a preposition. The appositive is treated like an independent head that is directly governed by the governing noun or preposition. When the whole phrase is governed by a noun in annexation the particle *D* is used before both the initial noun and the appositive, e.g.

(31) *ʾən-xátta pc̦̃ìlle,¹ gnáyət táwra d-o-gòra.¹* 'If the line (drawn by the plough) is crooked, it is the fault of the big ox.' (D2:19)

(32) *təxrúθa dìyi¹ ʾu-t-xóni d-o-gòra.¹* 'They memory of myself and of my elder brother.' (B8:10)

(33) *bəsrət ʾəzzi d-ɛ-Nune* 'the flesh of my goat (called) Nune' (C7:13)

(34) *guði t-ʾəzzi d-ɛ-poše* 'my churn of my goat (called) White Spotted' (C5:3)

When the whole phrase is governed by a preposition, the particle is sometimes placed only on the demonstrative of the appositive, since some prepositions in principle are only followed by the particle before nominal phrases beginning with a demonstrative. In (35)–(38) the attribute is restrictive and in (39)–(41) it is non-restrictive:

(35) *yə́mma d-an-hambišā̀ye*ˈ *márɛla ṭla-br⌢ón d-o-zòra*ˈ 'The mother of the giants said to the young son…' (A12:7)

(36) *ʾó-xona zóra ʾámər ṭla-xonăwáθa d-an-xène*ˈ 'The young brother said to the other brothers…' (A12:23)

(37) *báθər ʾéða gòṛa*ˈ *y-áθe ʾarbì-yome*ˈ *báθər ʾéða d-o-gòṛa*ˈ *ʾìθena*ˈ *ʾéðət sulàqa.*ˈ 'After the Great Festival, forty days after the Great Festival, the festival of Ascension occurs.' (B6:5)

(38) *xo-túθa d-o-č̌úwa hox-xyàpəlle Š̌ə́mmo.*ˈ 'We wash Šəmmo under the smooth mulberry tree.' (B8:27)

(39) *mára ʾáp-ʾana dáqrən ʾax-déwa d-o-kòra.*ˈ 'He said "I am worth as much as that wolf, which is blind." (A10:5)

(40) *híwəlle bála l-gə́ppa d-o-l̩áya ʾu-qə̀ryɛle*ˈ 'He directed his attention to the cave, which was above, and cried…' (A8:57)

(41) *ʾu-tíwɛle xá-ga xéta xāṣ-súse díye d-o-kòma.*ˈ 'He sat once again on the back of his horse, which was black.' (A8:52)

The construction may be used as an appositive after 1st and 2nd person pronouns, e.g.

(42) *ʾáti ʾo-zóra lá ʾazèti.*ˈ 'You, the younger one, don't go.' (A30:2)

An attributive appositive introduced by a demonstrative may be placed in a different intonation group from that of the preceding noun, e.g.

(43) *hon-zàla*ˈ *yàwənna*ˈ *mattóyənna ks-ʾáyya xàθiˈ ʾɛ-gòṛta.*ˈ 'I went and delivered them to this sister of mine, the elder one.' (B15:89)

The prominence of such attributive appositives arises not only from the fact that as appositives they have more syntactic independence than modifiers, but also from the fact that they assign the noun to a property like a predicative adjective. As remarked earlier, they can, indeed, be regarded as reduced relative clauses: *xaθi ʾɛ-goṛta* 'my sister, the one (who is) big'. An adjective that assigns in this way is naturally more informative and prominent than one that is presented as part of the description of the noun. Occasionally an appositive attribute has an explicit embedded relative clause. Such constructions are usually non-restrictive, e.g.

(44) *m-yə̀mmin šmítəlla ʾáyya,*ˈ *m-bnōn-mámi ʾan-t-wɛ́wa gòṛe.*ˈ 'I heard this from my mother, from my cousins, who were older.' (B8:5)

(45) *béna ʾíθ linyàθa,ˈ lìne,ˈ linyáθa ʾan-ṭ-íla ʾàxḍaɾ.ˈ* 'There were pots, pots, pots, which are green.' (B10:75)

An alternative strategy for expressing a non-restrictive attribute is to repeat the noun in apposition together with an added adjective, e.g.

(46) *w-áyya tulləkθa,ˈ tulləkθa zórta mənnux,ˈ kʸálba zóra mónnux ṭ-àwe.ˈ* 'This hound, small hound, small dog, will be with you.' (A30:4)

An adjective that qualifies an indefinite noun is occasionally separated from the noun by an intonation group boundary, e.g.

(47) *ʾáy ʾítla xa-bərkeˈ gòɾta hátxa.ˈ* 'She has a pool, which is large like this.' (A25:56)
(48) *wírɛle gu-xà-ʾotəx xétaˈ gòɾta.ˈ* 'He entered another room, which was big.' (A14:30)
(49) *hóle xa-kullìxaˈ xa-bɛ̀θaˈ zóra táma hàtxa.ˈ* 'There was a hut, a house, which was small, (standing) there like this.' (A8:40)
(50) *xzéli xa-xə̀lmaˈ rába mazdiyàna.ˈ* 'I had a dream, which was very frightening.' (A11:6)

In such cases the indefinite noun is introducing a specific referent, i.e. one particular referent of the class of referents designated by the description of the noun. The adjective, therefore, is non-restrictive, since the noun already has a unique referent, i.e. it supplies further description of the referent that has been introduced. The placement of the adjective in a separate intonation group gives it an enhanced degree of prominence. This arises from the fact that it assigns the noun to a property like a predicative adjective. Such an adjective in a separate intonation group is, therefore, similar in function to a non-restrictive relative clause and can, indeed, be regarded as a reduced relative structure: *xa-bərkeˈ goɾta* 'a pool (one that is) large'. Indeed, it is usually appropriate to translate it with an English non-restrictive relative, as can be seen in the foregoing examples. This would be equivalent to a definite phrase such as *bərke ʾa-goɾta*, where the reduced relative construction has an explicit head: 'the pool the one (that is) big'.

An alternative strategy is to repeat the noun placed as an appositive after the first noun together with an added adjective, e.g.

(51) *qìmtɛla,*ˈ *šqílta xa-nerìya,*ˈ *neríya gòṛa.*ˈ 'She took a male goat, a large goat.' (A28:26)

The appositive status of the attribute is sometimes demonstrated by its combination with the indefinite particle *xa*, e.g.

(52) *ʾína ʾóθyɛle xa-yàla,*ˈ *xa-ʾaṣòṭa.*ˈ 'But a tiresome youth came (literally: a youth, a tiresome one).' (A17:7)

After a generic noun of mass an adjective with the status of a non-restrictive relative clause may be presented in a separate intonation group. Although the generic noun is definite in status, the adjective does not have a demonstrative head, e.g.

(53) *páyəšwa ʾax-xàlwa,*ˈ *brìza hádəx.*ˈ 'It would become *xalwa*, which was dry, like this.' (B7:22)

Some adjectival modifiers may be placed before the head noun. When in this position they are non-restrictive attributes. They are generally evaluative, expressing a subjective assessment of a known referent by the speaker, e.g.

(54) *ʾáw məskéna nàšɛle.*ˈ 'He is a poor person.'
(55) *ʾáw spáy nàšɛle.*ˈ 'He is a good person.'
(56) *ʾáw xə́rba nàšɛle.*ˈ 'He is a bad person.'
(57) *ʾáw táza mbašlànɛle.*ˈ 'He is a good cook.'

The subjective evaluative sense is sometimes ironic in nature, as is typcially the case with the adjective *hawnana* 'clever' in constructions such as (58):

(58) *ʾáw hawnána nàšɛle.*ˈ 'He is a clever person.'

The non-restrictive evaluative attribute of a nominal phrase that constitutes an ascriptive predicate of the clause is often given prominence by placing the nuclear stress on it. Since it is a subjective evaluation, it is inherently gradable and so susceptible of being intensified by strategies such as nuclear stress placement, e.g.

(59) *ʾáw spày nášɛle.*ˈ 'He is a good person.'
(60) *ʾána gắrəg hawə́nwa spày zúze šqíla.*ˈ 'I should have got a good sum of money.' (B1:19)

(61) *xòš-zuzəx wíðe.*˥ 'We have made good money.' (A14:18)

Such adjectives can also be placed after the noun. This is used to make more objective, factual statements, restricting the reference to a subset of the class denoted by the head noun, e.g.

(62) *ʾáw náša hawnànɛle.*˥ 'He is an intelligent man.'
(63) *ʾáw náša spày-ile.*˥ 'He is a good man.'
(64) *ʾáw mbašlána tàzɛle.*˥ 'He is a good cook.'

The two different functions of the adjective *spay* are seen in the following two examples from the text corpus. In (65) the speaker knows the person and gives a non-restrictive personal evaluation. In (66) the noun is referentially indefinite and the adjective is restrictive and so descriptive rather than evaluative:

(65) *bábux spày-našɛle.*˥ *xàwrən-ile.*˥ 'Your father is a good man. He is our friend.' (A14:61)
(66) *hálli xa-súsa spày.*˥ 'Give me a good horse.' (A12:62)

The Kurdish loan-word *xoš* 'good' can only be used as an evaluative adjective before the noun, e.g.

(67) *ʾáw xoš-nàšɛle.*˥ 'He is a good man.'
(68) *ʾáyya b-álaha xòš-məndila.*˥ 'This, by God, is a good thing.' (A14:9)

When the nominal phrase is definite, a fronted non-restrictive attribute is often expressed by a nominalized phrase consisting of a demonstrative head and an adjective, which is combined with the following noun in an annexation construction. Such non-restrictive attributes are also generally evaluative, e.g.

(69) *ʾo-məskénət xóni mṭéwale tə̀mməl.*˥ 'My poor brother arrived yesterday.'
(70) *ʾo-šeðánət xóni mṭéwale tə̀mməl.*˥ 'My mad brother arrived yesterday.'

The construction is used with the non-restrictive attribute *nixa* 'deceased' when referring to dead family members, e.g. *ʾo-nixət babi* 'my late father'.

A restrictive appositive, which picks out one member of a set, is not normally fronted in this way before a singular noun. It can only be annexed to a plural noun referring to all members of the set, e.g.

(71) *ʾo-goṛət xonăwaθa* 'the elder of the brothers'

Exceptions to this are attested with the ordinal adjectives *qamaya* 'first' and *xaraya* 'last', e.g.

(72) *w-áti θèləx,*ˈ *ʾa-qamèθa báxta θéləx.*ˈ 'Now, you have come. You are the first woman to come (literally: You have come, the first woman).' (A8:79)

(73) *ʾəsrì ʾotáxe*ˈ *hòla*ˈ *čime.*ˈ *ʾáni paθxɘ̀tla.*ˈ *ʾan-ṭ-íla pθìxe*ˈ *ʾačmɘ̀tla.*ˈ *máṭət ʾɛ-xaréθət ʾòtəx.*ˈ 'Twenty rooms are closed. You should open these. Close the ones that are open. You will reach the last room.' (A24:16)

The plural adjectives *priše* 'various, different' and *rabe* 'great, abundant' may be placed before or after the head noun. Their semantic range is more restrictive when they come before the noun, in that in this position they can only have a quantifying sense:

priše məndiyane	'various things'
məndiyane priše	'different/various things'
rabe məndiyane	'many things'
məndiyane rabe	'great/many things'

An adjective may be combined with further material that is dependent on it. This may take the form of a prepositional phrase, e.g. *gòṛe b-šɘ́nne* 'old in years' (B15:62). In some cases the adjective is combined with the dependent item in a nominal annexation construction, e.g.

(74) *ʾáyya dúkθe díye… qíθtət kèpe.*ˈ 'This place on him was wounded by the stones.' (B9:25)

Such constructions often exhibit tightly-knit asyndetic annexation, e.g. *kōm-paθa* 'black-faced, disgraceful', *xwār-paθa* 'white-faced, innocent', *xwār dəqna* 'white bearded = senior', *pθīx ʾena* 'open-eyed' (in the expression *miθa pθīx ʾene* 'dead with his eyes open'), *prīṭ-dína* 'destroyed of religion =

irreligious' (A30:28), *prīṭ-baba* 'destroyed of father = bastard' (C7:11), *xrīw-diyára* 'destroyed of houses = accursed scoundrel' (A30:24).

Note the constructions *ʾərbət xware* 'white sheep' and *ʾərbət kome* 'black sheep (goats)'. Here a noun is annexed to a plural adjective. The noun may be singular or plural in number, e.g. *xa ʾərbət xware* 'a white sheep', *raba ʾərbət xware* 'many white sheep'. These phrases express the affiliation of the sheep to a generic class that share the property of being 'white' or 'black' respectively, rather than expressing a property that is peculiar to one particular sheep or group of sheep. A similar construction is *xəṭṭat romaye* 'roman wheat, maize', properly 'wheat of (the class of) roman (wheat)'.

An adjective stands without a head when it occurs in an ascriptive predicate with the verb 'to be', which assigns a property to the subject of the predication, or in a predicate containing copula-like verbs such as *pyš* 'to become, remain', e.g.

(75) *gilándi rába gòṛɛle.*ˈ 'A scythe is very big.' (B5:143)
(76) *y-áwa hátxa zòre.*ˈ 'They are small like this.' (B6:52)
(77) *maštèwala*ˈ *qá-t xáčča péšawa rakìxta.*ˈ 'They would irrigate it so that it would become rather soft.' (B5:76)

As indicated in (§11.6.), some words of Aramaic stock that function like adjectives remain uninflected for gender and number. In some cases the explanation for this is that they are in origin adverbial expressions whose use has been extended to attributive positions. This applies, for example, to the words *qurba* 'near' and *rəḥqa* 'far', which are used as invariable attributes modifying nouns, e.g.

bɛθa qurba/rəḥqa	'a nearby/distant house'
maθa qurba/rəḥqa	'a nearby/distant village'
maθwaθa qurba/rəḥqa	'nearby/distant villages'

These words are nouns that are used in other contexts in adverbial phrases, modifying verbs. They may be accompanied by a preposition (78–79) or used without one (80–81)

(78) *xá-bena xzéle m-ráḥqa xá-mdi xwàra.*ˈ 'He suddenly saw from afar something white.' (A14:28)
(79) *mátyela l-qùrbət béθa.*ˈ *mátyela l-qúrbət qáṣrət màlka.*ˈ 'They came near to home. They came near to the palace of the king.' (A24:24)
(80) *mṭíθɛla qúrbət qàṣra.*ˈ 'He came close to the palace.' (A27:31)

(81) *qímtɛla šqíltɛla xa-bròna*ˈ *ʾu-nobàltəlle*ˈ *ta-ṭ-axlàle.*ˈ *muttéθəlle ròḥqa*ˈ *mən-màθa.*ˈ 'She got up and took a son (of hers) and took him for her to eat. She put him down far away from the village.' (A19:3)

They occur in the predicate of clauses containing the verb 'to be', where they were originally locative predicates, but evidently came to be re-interpreted as attributes, e.g.

(82) *ròḥqɛle qáṣra.*ˈ 'The palace is in the distance [locative]' > 'The palace is far [attribute].' (A24:48)
(83) *kúlla náše díye t-wéwa qùrba.*ˈ 'All his relatives who were in the vicinity [locative]' > 'All his relatives who were near [attribute].' (B8:38)

Due to their being re-interpreted as attributes in predicative position, they could then be used as attributives of nouns in a nominal phrase, e.g. *qaṣra ròḥqa* 'a distant palace', *bɛθa qurba* 'a near-by house', etc.

An attributive adjective is sometimes separated from its head noun by intervening material. The purpose of this is generally to give the adjective prominence by placing it in the default position of the nuclear stress at the end of the intonation group, e.g.

(84) *ṭắṭíye y-oðáxwa gòṛe.*ˈ 'We made big rugs.' (B10:79)
(85) *bálkət qámθa ʾíθwa núne gáwa díya gòṛe.*ˈ 'Perhaps formerly there were large fish in it.' (B3:11)
(86) *b-álaha hóle xa-púrya láxxa zòra.*ˈ 'By God there is a small light here.' (A14:25)
(87) *ʾína ðá qoṭíya hátxa zòra.*ˈ 'Behold a box, small like this.' (A12:51)
(88) *píšele màĵbur*ˈ *hà-ṭ-ile*ˈ *ríxa ʾóθya mánne díye spìsa.*ˈ 'He remained like that, of necessity, until a rotten smell came from him.' (A27:43)
(89) *ʾu-xá kóxwa gu-be-ʾéne díye kòma*ˈ 'with a black star on its forehead' (A8:62)
(90) *ʾánna zmaryàθəx*ˈ *m-ékət líptəlla hátxa basìme?*ˈ 'Where did you learn those songs of yours, which are so beautiful?' (A35:8)

When the adjective is given contrastive focal prominence, it is sometimes placed at the front of the clause, e.g.

(91) *ʾáy xwàra*ˈ *mṭalbále sùsa.*ˈ 'She requests a *white* horse (whereas her brother requested a black one).' (A8:62)

In some contexts an adjective without a head should be interpreted as the predicate of a reduced adverbial clause. This applies to cases such as the following:

(92) *yə́mmi zòrta mítla.*¹ 'My mother died (when she was) young.' (B8:14)

(93) *dəqnáy gắréwale bríza m-àxxa.*¹ 'He would shave their beard (while it was) dry from here.' (A11:14)

(94) *ṣléla xaššàne l-bɛ́θa.*¹ 'They went down to their home (while they were) sad.' (A14:20)

(95) *ʾu-qíməle màlka*¹ *xə̀ðya*¹ *gu-gàne-w*¹ 'The king left, (while he was) cheerful in spirits.' (A21:30)

(96) *ʾáy hár mšeyðòne*¹ *šwára nðáya gu-d-án ʾotáxe šluxɛ̀θa.*¹ 'She (the princess) is continually acting madly, leaping and jumping around (while she was) naked in the rooms.' (A4:17)

(97) *koðə́nta b-ìðiyawa*¹ *šulxɛ̀θa.*¹ 'The mule was in my hand, (while it was) bare-backed.' (B5:130)

(98) *dráya képe ʾáxni sxàya*¹ *šluxayà θa.*¹ 'He threw stones when we were swimming (while we were) nude.' (A25:20)

(99) *qəm-qabə́lle šláme tìwa l-ʾ̀ăra.*¹ 'He received his greetings (while he was) seated on the ground.' (A26:47)

(100) *Səttíye tu-láxxa xarɛ̀θa.*¹ 'Səttiye, sit here (while being) the last (i.e. in the last place).' (A25:16)

(101) *xánči t̰-amrə́nna qalùlta*¹ *qa-t-pàrqa.*¹ 'I'll tell it (the story) to you quickly (= it being quick) so that it will finish.' (A4:5)

Resultative participles of verbs with atelic actionality in some contexts appear to be attributes of a noun. Participles from such verbs cannot in principle have this attributive adjective function (see §15.4.1.1.). In examples such as (102)–(104), therefore, they must be regarded as the predicate of reduced relative clauses:

(102) *ʾàna*¹ *ʾíwənwa jásūs ʾə́θya tàma.*¹ 'I was a spy, (who had) come there'. (B17:16)

(103) *ʾíθwa xa-Lelíθa θíθa mən-Č̰ằl.*¹ 'There was a Leliθa, (who had) come from Č̰āl.' (A19:1)

(104) *ʾu-ʾən-íθən náše ʾə́θye m-maθwáθa xène*¹ 'If there are people (who have) come from other villages…' (B5:60)

Such resultative participles may be used in nominalized phrases such as
(105), which, as has been shown, should be regarded as predicates of
reduced relative clauses:

(105) *kúlla ʾə́θye ʾitléy šăráṭe ṭ-amríla qa-màlka.*˺ 'All (those who have) come
        have cases to tell the king.' (A17:31)

Resultative participles of verbs that take a double direct object (§15.13.7.)
take the second object as their direct complement without any linking
preposition, e.g.

(106) *díwən-t málka hóle m̥líθa náše ràbe.*˺ 'The audience chamber of the
        king is full of many people.' (A17:31)
(107) *ʾən-háwe pláṭa mən-ʾə́rxe ṭíša qàmxa,*˺ *lá hămə́nət ʾə̀lle.*˺ 'If he is com-
        ing out of the water-mill covered in flour, do not trust him.'
        (D2:61)
(108) *ʾaqára hóle dwíqa sɔ̀llər.*˺ 'The farm land is packed hard with
        frost.'

A noun may be modified by a following prepositional phrase. This is most
frequently a locative or partitive expression, e.g.

(109) *ʾu-náše gu-mð́íta kúlle mɛ̀θula.*˺ 'Bring all the people in the town.'
        (A8:32)
(110) *máθət Dùre*˺ *gu-Bárwər Bàla*˺ *m-záwna qamáya ʾìθwala*˺ *ʾarbà ʾumráne.*˺
        'The village of Dure in Barwari Bala from ancient times had
        four churches.' (B2:1)
(111) *xzíθəlle bába dìya*˺ *ʾu-ʾup-wắzīr mònne.*˺ 'She saw her father and also
        the vizier with him.' (A21:26)
(112) *ʾə́θyəx xa-néra benàθən.*˺ 'We came to a river between us (and the
        town).' (A17:9)
(113) *díya ʾə́lla xá-mdi dàwa bắyi,*˺ *ya-ṣlìwa,*˺ *ya-šəbbə̀rθa,*˺ *ʾisə́qθa mən-d-án
        yaqùre,*˺ *m-an-tàze.*˺ 'Now they only want something made of gold,
        a cross, bracelet, a heavy, fine quality ring.' (B10:40)

Such prepositional phrases may be combined with an adjective in the
modifying phrase, e.g.

(114) *mrázəgli xa-súsa xwàra,¹ ʾaqláθe díye kòmɛ,¹ ʾu-xá kə́xwa gu-b-ɛ́ne díye kòma.¹* 'Prepare a white horse for me, with black legs and a black star in its forehead.' (A8:62)

(115) *mabyóne ṭúra gu-čŏl ramànɛle.¹* 'It seems it is a high mountain in the countryside.' (A8:70)

The prepositional phrase modifier may be connected to the head noun by the relative *D* particle, e.g.

(116) *hát kléle zàga¹ t-rəš-čàdra.¹* 'until the bell that was over the tent stopped.' (A25:41)

A prepositional phrase may modify a demonstrative or personal pronoun, e.g.

(117) *ʾu-ʾáni l-xáṣe díye mrùpyəlla gu-díwən-t xále.¹* 'He threw those things on his back into the meeting room of his uncle.' (A23:14)

(118) *ʾáxni gu-ʾáθṛət Bàrwər¹* 'we in the land of Barwar' (B7:1)

(119) *ʾáxni gu-maθwàθa¹* 'we in the villages' (B5:52)

After a demonstrative head the relative particle is used when the prepositional phrase is a restrictive modifier, e.g.

(120) *ʾu-kút-xa ʾo-t-qáme díye qaṭə̀lle.¹* 'Everybody should kill the one in front of him.' (B19:6)

(121) *ʾá-t gu-ʾaqàra¹* 'the one (sowing place) in the farm land' (B5:95)

(122) *ʾa-t-bàθra¹* 'the one after her' (A25:17)

(123) *ʾá-t gu-panjằrìye¹* 'the one at the window' (A26:66)

14.8. COMPARATIVE CONSTRUCTIONS

Constructions denoting various types of comparison are expressed using the particles *biš* and *zawda/zoda.*

14.8.1. biš

This particle, a rare variant of which is *buš*, is an intensifier expressing a higher degree in comparative constructions. It is used in the following contexts:

14.8.1.1. *With Adjectives*

If the item with which the comparison is made is mentioned, this is introduced by the preposition *mən*, e.g.

(1) *ʾína mástət ʾə́rwe rába biš-basimtέla biš-príštɛla mən-d-a-t-tàwre.*ˈ 'But the yoghurt of sheep is much better and more choice than that of cattle.' (B5:173)

(2) *xázəx ʾən-ʾìθ náše biš-zlíme mánnən,*ˈ *dèṛəx.*ˈ *ʾən-lìθ biš-zlíme mánnən,*ˈ *har-ṭ-àzəx.*ˈ 'If we find that there are people more wronged than us, we shall return. If there are none more wronged than us, we shall continue on our way.' (A13:9)

(3) *ʾo-xéna biš-basìmɛle.*ˈ 'The other is more tasty.' (B15:55)

(4) *ʾaṣə́rta mɛθέwala ða-dúkθa bíš-qurba t-y-awέwa mìya táma.*ˈ 'In the evening they would bring them to a closer place where there was water.' (B5:160)

In (5) the particle is combined with the evaluative adjective *xoš*, which is placed before the head noun (§14.7.):

(5) *ʾíθən … biš-xoš-gùre.*ˈ 'There are better men.' (A26:79)

On some occasions the particle is separated from the adjective, as in (6)–(8):

(6) *qá-t bέθa bùš ṭ-awέwa qúwya*ˈ 'so that the house would be stronger' (B15:16)

(7) *ʾíθwa lìθwa*ˈ *biš-m-álaha góṛa čú-mdi lìθwa.*ˈ 'There was, there was not, there was nothing greater than God.' (A30:1)

(8) *ʾáxni bέθət be-bábi ʾatìqa-wewa.*ˈ *ʾína ramánɛwa biš-mən-qáṣṛət kùl-naše.*ˈ 'The house of the family of my father was old, but it was higher than the villas of everybody.' (B10:51)

The particle may be repeated to express intensity, e.g.

(9) *zílta zílta dax-ṭ-ìwa*ˈ … *mátu Gozáli xona-díya zìla*ˈ *hár biš-biš-xelántɛwawa m-àw*ˈ 'She went, she went, as Gozali her brother had gone, though she was even faster than him.' (A8:63)

The particle also expresses the superlative degree, e.g.

(10) *múr ʾɛ̀ni-mənnən¹ biš-šapìrtɛla.¹* 'Say which of us (three) is most beautiful.' (A25:17)

This can be made explicit by adding a phrase such as 'than all', e.g.

(11) *ʾáy biš-xámθɛla m-kùlla.¹* 'She is more beautiful than all (= the most beautiful of all).' (A25:26)

(12) *ʾáw biš-spáy-ile m-kùlla.¹* 'He is better than all of them (= the best of all).'

(13) *ʾáw biš-xə́rbɛle m-kùlla.¹* 'He is worse than all of them (= the worst of all).'

The superlative may also be expressed by a definite nominalized adjective, e.g.

(14) *Səttíye ʾɛ-gòrta-wawa¹ ʾu-Nàze¹ gawɛ̀θa¹ ʾu-Z̧íne ʾɛ-zòrtət kúlla.¹* 'Səttiye was the oldest one, Naze the middle one and Zine the youngest.' (A26:20)

This qualifies a nominal by being placed before it in annexation, e.g.

(15) *ʾo-baṣórət béθa ʾíwa trè ʾotáxe.¹* 'The smallest house was two rooms.' (B15:20)

The phrase *biš-spay* 'better, best' is used as an evaluative tag placed after a preceding sentence, e.g.

(16) *qu-qálbəx béθa biš-spày.¹* 'Come let's return home—(that is) better.' (A30:55)

(17) *dámxəx rəš-d-ò-gəšra.¹ dámxəx réše bìš-spay.¹* 'Let's sleep on that bridge. Let's sleep on it—(that is) better.' (A30:51)

The preceding sentence may be introduced by the subordinating complementizer *D*, e.g.

(18) *t-lá-hawənwa mbúqrəllɛxu biš-spày.¹* 'It would have been better if I had not asked you (literally: that I had not asked you is better).' (A26:27)

The particle *biš* is occasionally used alone in the sense of 'better', e.g.

(19) *bíš m-áyya dúkθa ʾɛ̀ka xázəx?*ˈ 'Where could we find (something) better than this place.' (A12:4)

14.8.1.2. *With Adverbs*

(1) *qəm-maxéla ʾáqla biš-xɛlàna.*ˈ 'He struck her leg harder.' (A33:12)
(2) *dráyɛle biš-hódəx mə́nna díya xáčča xàmra.*ˈ 'He put some wine further up from them.' (A12:49)
(3) *y-oráwa xa-dána biš-hòdəx.*ˈ 'Further time passed (literally: A time passed further on).' (B5:6)

14.8.1.3. *With Verbs*
When combined with verbs the particle may express a comparative degree of intensity, e.g.

(1) *xáčča biš-šlèla.*ˈ 'She became a little more calm.' (A4:17)
(2) *ʾay-hádəx biš-bǎ̀ya.*ˈ 'She wants this more (= She prefers this).' (A8:75)
(3) *bíš madqárre mən-d-ó déwa ṭ-axə́lwa ʾórbe dìye.*ˈ 'He (God) valued him more than the wolf that ate his sheep.' (A10:13)
(4) *dɛréwa xáčča tùna,*ˈ *biš-dawùqwa.*ˈ 'They put down a little straw, so that it became more compact.' (B5:146)

A particle placed before a verb may intensify the whole verbal predicate, including not only the verb but also gradable modifiers, e.g.

(5) *bíš yáwi ṭúnta ràbθa.*ˈ 'They will yield more abundant fruit.' (B5:103)
(6) *dɛrótla sùla líθən*ˈ *qá-t šéta b-šéta biš-mqărə́na tàza.*ˈ 'You put manure on it, you see, in order that from year to year it grows better.' (B5:105)

In negative clauses the particle may act as an intensifier of a negator giving the sense 'not at all'. It is placed either before or after the negator, e.g.

(7) *y-amríwa ʾáw bíš la-mzànzər*ˈ *yáwəl ṭéma pày̆ə̀šwa.*ˈ 'They said that it does not lose its taste at all. It keeps its taste.' (B10:76)
(8) *ʾáp-xa lá-biš-ile-mṣaya mqaców-əlla dìya.*ˈ 'Nobody was able to go near her at all.' (A4:6)
(9) *b-qèṭa*ˈ *bíš liθ-məṭràθa,*ˈ *ʾu-bíš liθ-tàlga.*ˈ 'In summer there are no rains at all and there is no snow at all.'

14.8.2. zawda, zoda

This particle is used as a comparative quantifier. It is usually, but not obligatorily, combined with the intensifier *biš*, the /*š*/ of which usually assimilates to the word, resulting in forms such as *biz-zawda* or *bi-zawda*.

   The particle may be placed after a noun or before it. When placed after the noun, it sometimes expresses an increase in quantity by the amount expressed by the noun, i.e. 'an additional *x*', e.g.

   (1) *y-oráwa . . . xákma dána . . . xá-sa'ət biz-zòda,*ˈ *qayə̀mwa.*ˈ 'Then, after some time had passed, one hour more, the resurrection would be celebrated (literally: he would arise).' (B5:54)
   (2) *bắyən 'álaha t-yawə́lli mə́ndi zàwda.*ˈ 'I want God to give me something more.' (A3:1)
   (3) *'ána bắyən 'aláha t-yawə́lli kùl-məndi bi-záwda.*ˈ 'I want God to give me more of everything.' (A3:3)

To express an excess of something ('too much . . .') constructions such as (4) are used:

   (4) *qəm-hawə́tli zúze záwda mən-làzəm.*ˈ 'You have given me more money than necessary (= too much money).'

The particle may also have a looser relationship with the preceding noun and have the sense of 'or more' in estimates of quantity. When used in this way, it is sometimes put in a separate intonation group from that of the noun, e.g.

   (5) *y-oráwa šaqláwa dàna*ˈ *rába gàye*ˈ *'ə̀štà yarxé*ˈ *xamšà yarxé*ˈ *biz-zàwda.*ˈ 'It would take time. Often it would take five or six months, or more.' (B5:3)
   (6) *šaqə́lwa mắθălan xamší kilo'é bi-zòda.*ˈ 'They would take, for example, fifty kilos or more.' (B5:125)

The phrase *(biz)-zawda mən* is used before a nominal expressing a quantity in the sense of 'more than . . .', e.g.

   (7) *'u-bréle díya b-xšáwən biz-záwda mən-'ə̀ččá-mma 'álpa nàše.*ˈ 'By now there have been born, I think, more than nine-hundred thousand people.' (B2:10)

(8) *záwda m-əmmà-kiloʾe*ꟾ *yúqra d-ɛ-gúrze dìye-wawa.*ꟾ 'The weight of that club of his was more than one hundred kilos.' (A29:14)

(9) *záwda mən-ʾarbá-mma sə̀nnele.*ꟾ 'It is more than four hunrdred years old.' (B6:31)

The particle may be used independently of a noun either as the argument of a verb or as an ascriptive predicate, e.g.

(10) *hállule bìš-zawda mən-kúlla náše.*ꟾ 'Give him more (food) than (you give) anybody else.' (B17:16)

(11) *yăðíwa mo-qádra dɛrɛ̀wa*ꟾ *t-lá-hawewa biz-zàwda*ꟾ *yáʿni t-la xarùwwa.*ꟾ 'They knew how much to put on, so that it was not too much and it spoilt.' (B5:191)

(12) *zàwdɛla mə́nni.*ꟾ 'It is too much for me (to tell).' (A26:65)

The particle may function as an adverb, e.g.

(13) *lá maspərə́xləx bi-zàwda.*ꟾ 'We shall not make you wait any more.' (A4:42)

(14) *xắyiwa biz-zàwda.*ꟾ 'They survived longer.' (B5:190)

(15) *mə́ra b-qáryən ʾu-hɛ̀š-biš záwda.*ꟾ 'I shall call still more.' (A8:72)

The particle is combined with the noun *sama* 'portion' in the phrase *sama zoda* to express the majority of a set of items, e.g.

(16) *xákma har-damxíwa l-ằra*ꟾ *ʾína sáma zóda ʾiyɛ́wala qaràwət.*ꟾ 'Some would even sleep on the floor (of the roof). Most people, however, had a bed.' (B5:204)

(17) *ʾína sáma zòda*ꟾ *y-oðíwa ʾắraq.*ꟾ 'Most people, however, would make arak.' (B5:213)

The phrase may also be used adverbially in the sense of 'mostly, most frequently', e.g.

(18) *yáʿni zɛpíwa tàlga*ꟾ*…ʾima-t-y-aθéwa tàlga*ꟾ *sáma zóda b-yárxət trèssər*ꟾ *yárxət xà.*ꟾ 'They would push off the snow…when it snowed, mainly in December and January.' (B5:196)

14.8.3. *Equality of Degree*

Equality of degree ('as big as you' etc.) is expressed in phrases with the preposition *ʾax/max* 'like', e.g.

(1) *ʾən-háwɛ ʾəṣrà ṭiyáre xéne⌐ ʾaxwáθux hawnàne,⌐ la-maṭétuwa l-àwwa lə́xma,⌐ ʾu-ʾattítuwa láxxa pɛšítuwa hátxa snìqe.⌐* 'If ten other men from Ṭiyare were as intelligent as you, you would not have reached this (necessity to beg for) bread and you would not be sitting here and become so poor.' (B17:16)

14.9. NON-ATTRIBUTIVE MODIFIERS

14.9.1. kut *'each, every'*

This particle is used before a singular indefinite noun and has a distributive sense ('each of the items of the set named by the noun'). It appears to be derived historically from the phrase **kul-xa-t < *kull-ḥaḏ-d* 'each one of'. It is normally combined with the noun in the same stress group, e.g. *kut-yàrxa⌐* 'each month' (A24:5), *kut-ṭéna* 'each load' (B5:181), *kut-mə́sta* 'each hair' (A27:10). The final consonant is often pronounced voiced when in contact with a following voiced consonant. The transcription, however, has been normalized and the letter is always written /t/. If the noun consists of at least two syllables, the stress is generally placed on the noun. The stress is retracted onto the quantifier particle in some cases where the noun has sufficient syllables to take it. This occurs mainly with phrases containing nouns that are qualified by a relative clause and so are themselves of attenuated information status, e.g. *kút-dukθət kále sùsi⌐* 'each place that my horse stops' (A26:27).

The quantifier particle is not combined with the indefinite particle *xa* before a noun. It may, however, be combined with *xa* when this is used pronominally, e.g.

(1) *kút-xa y-azə́lwa bḗθ-dìye.⌐* 'Every person went to his home.' (B5:18)
(2) *kút-xa xá-məndi y-áwe mbùšla.⌐* 'Everybody has cooked something.' (B5:48).

This phrase is used as an appositive to pronominal reference of all persons, e.g.

(3) *zonə́xwa kút-xa xà.*ˈ 'We would each buy one.' (B10:76)

It may also be used in a distributive sense before quantifiers or numerals that designate groups of entities, e.g. *kút kəma-ŝ̀ənne*ˈ 'every few years' (B10:59), *kút xamšássər yomàne*ˈ 'every fifteen days' (B10:73).

The particle may act as the head of a relative clause, which is evidence for the identification of the final consonant with the annexation/relative particle *D*, e.g.

(4) *kut-mεθéli xábra bəd-bròni,*ˈ *ʾən-míθa ʾən-ṣàxi,*ˈ *pálgət dáwi de-t-yánne ʾə́lle dìye.*ˈ 'Whoever brings me word about my son, whether he is dead or alive, I'll give him half of my gold.' (A14:92)

(5) *kút mὲθela*ˈ *t-yánne zúze ràba.*ˈ 'Whoever brings her, I shall give him a lot of money.' (A27:18)

(6) *kút y-azə́lwa záyənwa gótə d-o-xèna.*ˈ 'Everybody who went (there) stood next to another one.' (A8:31)

14.9.2. kul, kulla

The historically absolute form of this quantifier particle *kul* is always placed before a noun and never after it. In most cases it is used with a singular indefinite noun with the sense of 'every', i.e. the entire set of items named by the noun, e.g. *kúl-naša* 'every person' (B6:35), *kúl-məndi* 'everything' (B10:64), *kùl béθa* 'every house' (B7:1), *kúl-xalta* 'every (type) of food' (B15:64).

A short form *ku-* is used, which, due to its usage, is best interpreted as an abbreviation of *kul* rather than *kut*, e.g. *kú-məndit bằyət* 'everything you want' (A25:14), *ku-béθa* 'every house' (B7:7).

The particle *kul* may be combined with the indefinite particle *xa* before the noun, e.g. *kúl-xa náša* 'every person' (B6:9), *kúl-xa məndì* 'everything' (B7:15), *kúl-xa suràya* 'every Christian' (B6:1).

The quantifier *kul* is used with a plural noun when it is a generic expression that is intended to denote all items in the class named by the noun, e.g.

(1) *ʾáxni béθət be-bábi ʾatìqa-wewa.*ˈ *ʾína ramánεwa biš-mən-qáṣrət kùl-naše.*ˈ 'The house of the family of my father was old, but it was higher than the villas of anybody (anywhere).' (B10:51)

(2) *ʾu-har-d-ɛ-dána štéθa prìθɛwa-w*ˈ *kul-náše tre-ṭḷá-yomane šatìwa.*ˈ 'At that time drink was abundant. Everybody (as a general principle) would drink and eat for two or three days.' (B15:64)

The form *kulla*, with the *-a* inflectional ending, is used with singular or plural nouns. It is placed either before or after the noun.

(i) Before a singular definite noun *kulla* has the sense of 'the whole of, all (of)', e.g. *kùlla máθa* 'the whole village' (B6:14), *kúlla tunìθa* 'the whole story' (A29:12), *kúlla Bèrwər* 'the whole of Barwar' (B10:100), *kúlla dùnye* 'the whole world' (B6:1), *kúlla záwni* 'all of my time' (A4:43). In some isolated cases the particle is annexed to the noun by means of the D particle, e.g. *kúllət yóma* 'all of the day' (A14:15). When the noun is masculine, the quantifier sometimes has an anticipatory 3ms. pronominal suffix *-e*, e.g. *kúlle tàlga* 'all of the snow' (A25:43), *kúlle ʾo-nerìya*ˈ 'all of that goat' (A31:5), *kúlle ʾó-nura* 'all of the fire' (A31:8), *kúlle yòma* 'the whole of the day' (B7:4).

In a few cases the form *kulla* is used with a following indefinite noun to express the sense of 'every', e.g. *kúlla-məndi* 'everything' (A2:8), *kúlla nàša* 'everybody' (A8:3), *kùlla béθə maθéni*ˈ 'every house of our village' (B7:1). The absolute form *kul-* is more usual in this function.

(ii) When *kulla* is placed after a singular noun, the noun is always definite and the meaning of the quantifier is 'the whole of, all (of)', e.g. *ʾo-béθa kúlla* 'the whole of that family' (B5:21), *qəṣṣə́tte kúlla* 'the whole of his story' (A14:76), *ṭéni kúlla* 'all of my load' (A7:11). After a masculine noun, the quantifier sometimes has a co-referential 3ms. pronominal suffix *-e*, e.g. *ʾo-rázza kúlle* 'all of that rice' (B5:89), *qéṭa kúlle* 'all of the summer', (B5:107), *ʾixála kúlle* 'all of the food' (B6:5), *ʾaw-qáṣra kúlle* 'all of the palace' (A25:53). It may be placed after an independent demonstrative pronoun, e.g. *ʾaw-kúlla* 'all of that' (B10:91). The postposed quantifier may be separated from the noun by intervening material, e.g.

(3) *máxe ʾo-mə́šxa l-ġðáðe kùlle.*ˈ 'All the butter gathers together.' (B7:24).

(iii) When *kulla* is placed before a plural noun, the noun is always definite and the particle has the sense of 'all', e.g. *kúlla ʾaskərwáθi* 'all my armies' (A29:43), *kúlla bɛθwáθa díyən* 'all our houses' (B15:17), *kúlla náše* 'all the people' (B10:88). In such constructions the noun is a definite referential expression and not generic. It refers to a specific group of items in the class named by the noun, which can be indentified in the context. The particle may be placed before a demonstrative pronoun, e.g. *kúlla-ʾani* 'all

of them' (A13:9). It is sometimes linked to the pronoun by the annexation particle, e.g. *kúlla d-ànna* 'all of these' (A8:55).

(iv) When *kulla* is placed after a plural noun, the noun is always a definite referential expression rather than generic, e.g. *náše kúlla* 'all the people' (B6:10), *maymúne kúlla* 'all the monkeys' (A14:56), *míye díye kúlla* 'all its water' (B6:42). It may be placed after an independent demonstrative or personal pronoun, e.g. *ʾáni kùlla* 'all of them' (B7:17), *ʾáxtu kúllɛxu* 'all of you' (A8:85). The postposed quantifier may be separated from the noun or pronoun by intervening material, e.g.

(4)   *ʾánna xaqlàθa¹ zăríwala kùlla.¹* 'They would plough all these fields.' (B7:10)

(5)   *ʾánna píšla gu-lóbbe díye kùlla.¹* 'All these (words) weighed on his heart.' (A38:13).

(v) The particle may also be used independently of a noun. It may be used pronominally to refer to a specific referent that is identifiable in the context. This referent may be masculine singular (6), feminine singular (7) or plural (8):

(6)   *zadáwale kúlla m-gàre.¹* 'They throw all of it (= the snow *talga* m.) from the room' (B5:195)

(7)   *kúlla šáxna.¹* 'All of it (= the yoghurt *masta* f.) warms up.' (B5:65)

(8)   *kúlla mṭéla tàma.¹* 'They all arrived there.' (B2:8)

It should be pointed out, however, that the 3fs. suffix and the short form of the 3pl. suffix are homophonous with the nominal inflectional ending *-a* and so the form *kulla* could also be interpreted as having one of these suffixes. The particle is used also with the 3ms. suffix and the unambiguous long form of the 3pl. suffix, e.g.

(9)   *kúlle lwíša smòqa.¹* 'All of him was dressed in red.' (A12:19)

(10)   *kùlley¹ ta-t-máṭa míya ʾɔllèy.¹* 'so that the water would reach all of them.' (B6:11)

It is also used with 1st and 2nd person suffixes, e.g.

(11)   *kúlli b-xá-gaya pέšən kèpa.¹* 'All of me will become stone at once.' (A8:75)

(12) *b-tanúra kùllən yapə́xwa.*ˈ 'We all used to bake with an oven.'
(B10:95)

(13) *kúllux pə́šət kèpa.*ˈ 'The whole of you (ms.) will become stone.'
(A8:48)

(14) *kúllɛxu dmùxu.*ˈ 'All of you go to sleep.' (A14:56).

14.9.3. raba

This functions as a quantifier of intensity that modifies nouns, adjectives and verbs. When it has this function it is not inflected. It may also function as an adjective, in which case it is inflected for gender and number with the usual adjectival endings.

14.9.3.1. *Quantifier of a Noun*

It is placed either before or after the noun:

(i) Before the noun: *rába tàlga* 'much snow' (B10:47), *rába šlàm-əlləx* 'much peace to you' (A22:31), *ràba dána* 'a long time' (A28:2), *ràba ʾɛ́ba* 'a lot of shame' (B4:9), *rába xyàṭṭa*ˈ 'much sewing' (B10:45), *ʾan-yomáθa ṭ-awéwa ràba séra*ˈ 'the days when there was a lot of moonlight' (B11:3), *rába mə́ndi ṭemàna* 'a lot of valuable stuff' (A7:9), *rába náše* 'many people' (B5:66), *rába məndiyáne* 'many things' (A48:1), *rába gàye* 'many times' (B5:70). The particle may be separated from the following noun by intervening material, e.g.

(1) *qámθa rába y-áθe tàlga.*ˈ 'In the old days a lot of snow would fall.'
(B6:147)

(2) *rába ʾíθwa zálta-w θéθa maθwàθa.*ˈ 'There was a lot of coming and going among the villages.' (B5:234).

(ii) After the noun: *tálga ràba* 'much snow' (B5:108), *šúla ràba* 'a lot of work' (B5:19), *ʾúpra ràba*ˈ 'a lot of land' (A26:24), *mə́ndi ràba*ˈ 'a lot' (A26:63), *šuláne ràba*ˈ 'many jobs' (B11:17), *zúze ràba*ˈ 'a lot of money' (A27:18), *náše ràba*ˈ 'a lot of people' (B5:69). The particle may be separated from the noun by intervening material, e.g.

(3) *xə́lya ʾi-mjămə́xwa ràba.*ˈ 'We would collect a lot of milk.' (B10:21)

(4) *y-áθi náše m-wắdər ràba.*ˈ 'Many people come from outside.' (B5:69)

(5) *ʾu-náše y-áwa rába ʾə́θye m-maθwàθa.*ˈ 'Many people have come from the villages.' (B5:70)

(6) *líθwa məndiyáne t-zoníwa ràba.*ˈ 'There were not many things that they bought.' (B5:73)

14.9.3.2. *Inflected Adjective*

When the form modifies a noun, it is sometimes treated syntactically as an adjective and inflected for gender and number. The adjective has the sense of 'big (size)' or 'abundant, numerous (quantity)', e.g.

(1) *ʾə́θyele xa-máymun ràba.*⸗ 'A big monkey came.' (A14:45)
(2) *píšla máθa ràbθa.*⸗ 'It has become a big village.' (B10:94)
(3) *ʾašı̀rət ràbθa-wawa Jazíre Bóta.*⸗ 'Jazire Bota was a large community.' (A26:59)
(4) *bíš yáwi ṭúnta ràbθa.*⸗ 'They will give more abundant produce.' (B5:103)
(5) *ʾíθwa qáṣre ràbe.*⸗ 'There were big villas.' (B10:52)
(6) *ʾíwa bíye xmaṭáθa ràbe.*⸗ 'It had many needles in it.' (B10:49)

When it denotes quantity, it may also be placed before the noun, e.g.

(7) *rábe məndiyáne šmìli.*⸗ 'I have heard many things.' (A38:13)
(8) *rábe gúṛe y-awðìwala.*⸗ 'Many men (were needed to) make it.' (B10:79)

14.9.3.3. *Predicative*

The word may be used predicatively either as an uninflected quantifier or as an inflected adjective.

(i) Uninflected Quantifier:
(1) *ʾəští-šənne ràbɛla.*⸗ 'Sixty years are a lot.' (A4:48)
(2) *šáwwa xmáre ràbɛla.*⸗ 'Seven asses are a lot.' (A23:13)
(3) *mtagbə́rta díya biš-ràbɛla.*⸗ 'Its maintenance is more (= It requires more maintenance).' (B5:105)

(ii) Inflected adjective:
(4) *bár ṭ-iyáwa ràbθa*⸗ 'after it became abundant' (B5:168)
(5) *heywáne ràbe-wawa.*⸗ 'The animals were numerous.' (A27:36)
(6) *ma-t-wɛ́wa ràbe.*⸗ 'so numerous were they.' (B6:10)
(7) *ʾítwala mašı̆na t-wɛ́wa ràbe.*⸗ 'Those who were many (had large families) had a machine.' (B10:59)

14.9.3.4. *Independent Quantifier*

On some occasions the word functions as a quantifer independently of a head noun. If it refers to a large quantity of something expressed by a noun of mass, it has the form *raba*, e.g.

(1) *ṭla-d-áy dráyɛla xàčča*ˈ *ṭla-d-áw ràba.*ˈ 'For herself she pours out a little and for him a lot.' (A17:25)

If it refers to many items in a set, the plural inflected form *rabe* is generally used, e.g.

(2) *léðiwa ràbe*ˈ *Fárxo màṭole.*ˈ 'Many people did not know what Farxo was like.' (A25:78)
(3) *ràbe doqíwa.*ˈ 'Many held (hands).' (B12:1)
(4) *t-lá-ṣala rábe b-xa-bèna.*ˈ 'so that many (wheat grains) do not come down at once.' (B6:56)

14.9.3.5. *Intensifier of an adjective*
It is placed either before or after the adjective.

(i) Before the adjective:
(1) *xa-yála rába šapìra*ˈ 'a very handsome youth' (A25:58)
(2) *rába šapìrtɛwǝt.*ˈ 'You are very beautiful.' (A25:18)
(3) *rába hawnànɛle.*ˈ 'He is very clever.' (A17:21)

The particle is also used with active participle forms:

(4) *rába zamàra-wewa.*ˈ 'He was a great singer.' (A25:43)
(5) *rába raqáðetu š̀ǝmyǝn.*ˈ 'I have heard you are good dancers.' (A51:19)

The nuclear stress is placed on the particle to give it greater prominence:

(6) *xzéle xa-qáṣra ràba góṛa.*ˈ 'He saw a very large palace.' (A14:28)
(7) *tắrǝt 'úmra ràba zóra-wewa.*ˈ 'The door of the church was very small.' (B2:5)

In copula clauses the copula is sometimes placed on the particle in these circumstances:

(8) *ràbǝxwa x̀ǝðye pṣíxe.*ˈ 'We were very merry and joyful.' (B16:6)

On sporadic occasions the particle is separated from the adjective by intervening material:

(9)   *rába ʾítley xayúθa basímta bəd-àyya.*ˈ 'They have a very fine life in this.'
      (B5:106)

(ii) After the adjective:
  (10) *ʾó-lɛša páyəš raqíqa ràba.*ˈ 'The dough becomes very fine.' (B6:46)
  (11) *basíma ràba* '(May you be) very well (= Thank you very much).'

Although the default position of the nuclear stress is at the end of the intonation group, it is sometimes retracted and placed on the adjective rather than on the intensifying particle:

  (12) *zə́dyəlle gu-xa-dúkθa ʾamùqta rába.*ˈ 'He threw him in a very deep place.' (A22:40)
  (13) *sab-ʾáxtu hótu kc̃ixe rába.*ˈ 'because you are very tired.' (A14:56)

14.9.3.6. *Instensifier of a Verb*
It is placed either before or after the verb. In both constructions the nuclear stress is placed either on the intensifier or on the verb.

(i) Intensifier before the verb:
  (1) *ʾáti ràba băyánnux.*ˈ 'I love you a lot.' (A22:19)
  (2) *ràba xðéle b-d-a-bràta.*ˈ 'He was very happy with the girl.' (A14:96)
  (3) *rába zaləmwa.*ˈ 'He acted very unjustly.' (A27:1)
  (4) *gắrəg rába ʾáxlət xàm.*ˈ 'You must be very careful.' (B5:105)

The intensifier may be modified by the comparative particle *biš*:

  (5) *l-garăwàθa biš-rába mṭalíwala.*ˈ 'They played it most often on the roofs.' (B11:29)

(ii) Intensifier after the verb:
  (6) *xáyəm ràba.*ˈ 'It becomes very hot.' (B6:48)
  (7) *ṭrìsla rába.*ˈ 'She became very fat.' (A21:1)
  (8) *paxlə̀tli rába.*ˈ 'Forgive me greatly (= I'm very sorry).' (A1:11)

14.9.4. baṣora

This is used with the sense of 'small in quantity'. It may be placed after a noun as a modifier or be put in an ascriptive predicate. It inflects for gender and number like adjectives, e.g.

(1) *ʾap-dəndə́kka baṣòra.* 'Just a small piece.' (A18:27)

(2) *zrúta rába baṣórta ʾìθena.* 'There is very little cultivation.' (B5:75)

(3) *b-kúlla yóma zór maṣìwa* *xàzdi* *xá-mdi rába baṣòra.* 'In the whole day they can barely harvest something very little.' (B5:144)

(4) *ʾé̀-ga zúze baṣòrewa.* 'At that time money was scarce.' (B5:5)

It may be used independently of a head noun, e.g.

(5) *baṣóra mənnèy* *ʾi-pešíwa yáʿni t-la maṭíwa ʾékɛle bɛθèy.* 'A few of them remained without arriving at their house.' (B15:44)

In some contexts it expresses the 'minimum quantity', e.g.

(6) *ʾo-baṣórət béθa ʾíwa t-trè ʾotáxe.* 'The minimum amount (of rooms) of a house was two rooms.' (B15:20)

The expression *biš baṣora*, with the comparative particle, expresses the sense of 'less' or 'least':

(7) *hálli zúze biš-baṣòre.* 'Give me less money.'

(8) *hálli biš-baṣòra.* 'Give me less.'

(9) *qəm-hawə́nne biš-baṣóra mən-kullèy.* 'I gave him less than all of them (= I gave him the least).'

(10) *taqríban ʾo-bíš-baṣora ʾànəmwa šqíla.* 'It was I who received almost the least.' (B1:19)

The word is used adverbially in the form *baṣore* with a final *-e*, e.g.

(11) *rába baṣòre xazə́nne.* 'I rarely see him.'

(12) *ʾína biš-kəslə́ni xámra lè-y-oðìwa rába.* *yáʿni xànčĭ,* *baṣòre.* 'In general in our community they did not make wine much, only rarely.' (B5:213)

14.9.5. ǩēm

This particle, of Kurdish origin, is used in the sense of a 'few' members of a set of items. It may modify a following noun, e.g. *ǩēm naše* 'a few people', *ǩḕm baxtáθa* 'a few women' (B10:22), or stand independently of a head noun, e.g.

(1) *xa-ḵḗm y-óði hàtxa.*[1] 'A few do this.'

When in an ascriptive predicate position, it has the sense of 'small in quantity, scarce', e.g.

(2) *gə́lla ḵɜ̀m hawéwa.*[1] 'Grass was scarce.'

When combined with the comparative particle *biš*, it expresses the sense of 'less than', e.g.

(3) *bálki bíš-ḵēm mən-ʾəštà-mma šə́nnela.*[1] 'Perhaps it is less than six-hundred years old.' (B6:31)

14.9.6. ḵatte

This word is used independently in the sense of an 'odd number'. It is occasionally used as a quantifier denoting paucity, e.g. *ḵatte dukane* 'the odd place, a few places'.

14.9.7. xačča

This is a quantifier with the sense of 'a little quantity of' or 'a few'. It is placed before singular nouns of mass or plural count nouns: *xáčča tùna* 'a little straw' (B5:146), *xáčča ṭína* 'a little clay' (B5:190), *xáčča šula* 'a little business' (A16:4), *xáčča šarníye* 'a few sweets' (B5:40), *xáčča qése* 'a few pieces of wood' (A48:3). When denoting 'a few items' from a set, it is followed by the preposition *mən* 'from': *xáčča mən-d-án-našət bèθa*[1] 'a few of the people of the house' (B5:51).

The quantifier can be used independently of a head noun as a refer-ential expression:

(1) *ṭla-d-áy dráyɛla xàčča.*[1] 'She serves a small amount for herself.' (A17:25)

It may be used predicatively:

(2) *bar-náše xàčča wéla.*[1] 'after people became few.' (B5:197)

The word may function as a quantifying modifier of an adjective that expresses a gradable property. In most cases it is placed before the adjective:

(3) *xáčča zàmət i̯yáwa.*ˈ 'It was a little difficult.' (B5:3)

(4) *xáčča mə̀rya xónəx.*ˈ 'Your brother is rather ill.' (A32:27)

(5) *bɛ́θe díye xáčča rə̀ḥqa-wewa mən-máθa.*ˈ 'His house was rather distant from the village.' (A48:1)

It may function as an adverb, being placed either before or after the verb:

(6) *xáčča plìšela.*ˈ 'They fought a little.' (B5:163)

(7) *tu-maníxəx xàčča.*ˈ 'Sit let us rest a little.' (A26:17).

14.9.8. xanči

This is a quantifier that overlaps in meaning with *xačča.* It has the sense of 'a little quantity of' or 'a few' and is placed before singular nouns of mass or plural count nouns, e.g.

(1) *ṣále xánči ʾúpra gu-réšət kʸàlo.*ˈ 'A little earth falls on the head of the bride.' (B8:34)

(2) *xánči qámxa m-àxxa,*ˈ *xánči m-àxxa.*ˈ '(We put) a little flour here and a little here.' (B10:89)

(3) *xánči halúke ṭàrre*ˈ 'a few fresh plums' (B8:19)

The particle may be used independenly of a head noun, e.g.

(4) *qá-t ʾap-xánči maṭewalè̯y.*ˈ 'so that they would gain a little.' (B5:135).

It may be used predicatively, e.g.

(5) *sab-xànči y-áwe xə́lya.*ˈ 'because milk was scarce.' (B10:22)

(6) *ʾən-wɛ́wa xànči*ˈ 'If they were few…' (B10:6)

It may modify an adjective, e.g.

(7) *ʾína bušála t-ʾoðə́xwala ṭlàlən,*ˈ *xánči mi̯yànta.*ˈ 'But the stew, which we made for ourselves, was a little watery.' (B10:17).

It frequently functions as an adverb, e.g.

(8)   *šaxə́nwa xànči.*¹ 'It heated up a little.' (B5:154)
(9)   *hal-qayə̀rwa xánči.*¹ 'until it cooled a little.' (B5:164)
(10) *xánči šoqə́xwale gu-margə̀lta.*¹ 'We left it a little in the pan.' (B10:10)

A rare variant form of the particle is *xanča*, e.g.

(11) *ṣ́ala xánča xànča.*¹ 'They go down little by little.' (B6:56)

14.9.9. kəma

This is a quantifier that is used as follows.

14.9.9.1. *Interrogative Quantifier*

When used interrogatively it has the sense of 'how many' or 'how much'.
It may be combined with a head noun, which is either a plural count
noun or a singular noun of mass, e.g.

(1)   *ʾína kəmà-gaye zíllux ʾu-šqíllux ʾáyya.*ʔ¹ 'How many times have you gone
      and taken it?' (B15:90)
(2)   *ʾawwa ʾaskaríya dìye*¹ *ṭlà-kəma dánεla.*ʔ¹ 'For what time is this army of
      his for?' (A17:22)

It is sporadically separated from its head by intervening material, e.g.

(3)   *qá-t yă̆ðíwa kút-xa məššáre kə́ma b-ṣále míya gáwa dìya.*¹ 'so that everybody
      would know much water would go into his paddy field.' (B5:77)

The particle may be used independently of a head noun as an argument
of the clause, e.g.

(4)   *kəmà t-yátlì.*ʔ¹ 'How much will you give me?' (A24:5)
(5)   *kəmá ṱ-àxlət.*ʔ¹ 'How much will you eat?' (B5:33)

It may also function as an ascriptive predicate, e.g.

(6)   *sá̀ʾət kəmèla.*ʔ¹ 'The time is how much? (= What time is it?)' (A26:27)
(7)   *bắyən t-xazə́nne ʾúpra dìyi*¹ *kəmèla.*¹ 'I want to see how big my land is.'
      (A14:47)

On some occasions it is used adverbially, especially in expressions relating to cost, e.g.

(8) *kəmà zonə́tle?*¹ 'For how much will you buy him?' (A24:23)
(9) *xzi-kəmà ṭ-ázəl ʾáwwa táwra.*¹ 'See how much this ox will go for.' (A22:1)

Variants of these expressions have *b-* before the particle, e.g. *b-kəmà zonə́tle?*

14.9.9.2. *Indicative Quantifier*

When used indicatively it has the sense of 'some, several' and is always combined with a head noun, either a plural count noun or a singular noun of mass, e.g.

(1) *y-oráwa kə́ma yàrxe.*¹ 'Several months passed.' (B5:18)
(2) *kút-kəma yomáθa mbarəxšìwale.*¹ 'Every few days they would stir it.' (B4:212)
(3) *bróne díye tlìqa kəma-dána.*¹ 'His son was lost for some time' (A14:95)

When it has this function, it is frequently combined with the particle *xa* resulting in the form *xakma* (§14.9.10.). When the head noun is omitted, the form *xakma* is regularly used in place of *kəma*.

14.9.9.3. *Exclamatory Quantifier*

When it has an exclamatory function, it may be combined with a head noun, e.g.

(1) *ʾána kəmà dána ṭ-in-mṣalóye ṭla-márya ʾàlaha*¹ *ta-t-yawə́lli ʾə̀mma dáwe.*¹ 'I was praying to the Lord God so many times to give me a hundred gold coins.' (A6:10)

More frequently it is a modifier of an adjective (2) or an adverb (3):

(2) *kəma-basìmtɛla ʾixála!*¹ 'How delicious the food is!' (A21:31)
(3) *baxtáθa kə́ma zădíwa mən-xuwwàwe!*¹ 'How much the women feared snakes!' (B5:78).

14.9.10. xakma

This particle has been formed by the combination of *xa* with *kəma*. It is used in the sense of 'a small quantity of' or 'some (items/portion of a set)': *xákma məndiyàne*ꞌ 'some things' (B5:62), *xákma xabráne* 'some words' (A4:40), *xákma šə́nne xène*ꞌ 'a few more years' (B5:208), *xàkma dukáne*ꞌ 'some places' (B6:2). In some cases it is used with a singular noun of mass: *báθər xákma dàna*ꞌ 'after some time' (B165),

(1) *hálli xákma mə̀ndi*ꞌ *masqánne l-bὲθa.*ꞌ 'Give me some stuff to take up to the house.' (A22:19)

It may be used pronominally, independently of a head noun. In such cases it normally denotes groups of items that belong to a set, e.g.

(2) *xákma doqíwale xúwwa qaṭlìwale.*ꞌ *xákma zădìwa.*ꞌ 'Some took hold of the snake and killed it. Some used to be afraid.' (B5:78)
(3) *xákma la-ṣὲmi.*ꞌ *xákma ṣémi ṭḷá yomàne.*ꞌ 'Some do not fast. Some fast for three days.' (B6:21)
(4) *xákma dwáqa xáṣe dìye*ꞌ *ʾu-xákma darqúle dìye.*ꞌ 'Some (villagers) supported him and others were against him.' (A7:20)
(5) *náše mšuréla xnàqa,*ꞌ *xàkma náše,*ꞌ *ʾu-xákma mxulṣàla gána.*ꞌ *ʾu-xákma síqla garăwáθət bàte.*ꞌ *ʾu-xákma síqla dukáne ramáne qa-t-la-máṭi míya ʾə̀lla.*ꞌ 'People began to drown—some people, some saved themselves. Some went up onto the roofs of houses. Some went up onto high places so that the water would not reach them.' (B6:18)

Occasionally the particle has the form *xamka* by metathesis, e.g.

(6) *yápəxwale xámka yomàne.*ꞌ 'We would bake for a few days.' (B10:91)
(7) *xámka bə̀nya*ꞌ *ʾu-xámka là.*ꞌ 'Some built (such houses), some did not.' (B10:52)

14.9.11. xena (*f.* xeta, *pl.* xene)

Sporadically this word is attested in the form *xrena* (f. *xreta*, pl. *xrene*), in which the original */r/* has been preserved.

14.9.11.1. *Modifier of a Noun*
When functioning as a modifier of a noun, the word is always placed after the noun. A singular indefinite noun in such phrases generally has the

indefinite cardinal particle *xa/ða* 'a, one' and definite nouns singular and plural have demonstratives. The word means 'other', both in the sense of 'different, alternative' and also that of 'additional':

(1) *mattúli xá-šəmma xèna.*¹ 'Give me another name.' (A7:2)

(2) *m-ya-góta xèta*¹ 'from the other side' (A25:30)

(3) *ʾáwwa plíṭɛle gu-ða-dúnye xèta.*¹ 'He came out in another world.' (A14:26)

(4) *w-an-xonăwáθa xéne mə́ra* 'the other brothers said…' (A12:17)

(5) *ða-kista-xéta max-d-áy yawə̀nnəx.*¹ 'I shall give you another bag like that one.' (A4:16)

(6) *xa-béna xéta mjarbə̀nna.*¹ 'I shall test them another time (= again).' (A48:4)

The particle *ču-* may replace *xa/ða* before negated indefinite nouns:

(7) *čú-mdi xéna lìθən.*¹ 'There is nothing else.' (A4:43)

An indefinite singular noun does not have any preceding particle if it is a noun of mass: *tálga xèna*¹ 'more snow', *mə́ndi xéna kúlla* 'all else' (A21:14). Elsewhere an indefinite singular noun rarely lacks the preceding particle. The attested examples are listing constructions, expressing one of several items in a list rather than one that is in binary opposition to another item (8) or adverbial phrases (9), e.g.

(8) *qímle ʾáqla xéta… qəm-parə̀mla.*¹ 'He cut off another leg (one of the four).' (A22:5)

(9) *zílle ʾu-xyèle gu-mðíta xéta.*¹ 'He went and lived in another town.' (A18:11)

The head of the phrase may be an interrogative pronoun: *módi xèna?*¹ 'What else?' (A23:35), *ʾéni xèna?*¹ 'Who else?'

Indefinite plural nouns may have the indefinite determiner *xakma* 'some, a few' or a numeral: *xákma šə́nne xène*¹ 'a few more years' (B5:208), *trè-məndiyane xéne*¹ 'two other things' (A39:8), *ʾəsrà ṭiyáre xéne*¹ 'ten other people from Ṭiyare' (B17:16), *ʾəští-šə́nne xène*¹ 'sixty more years' (A4:48). It is, however, often left without any determiner:

(10) *ʾo-tájər núblɛle náše xène.*¹ 'The merchant brought other people.' (A14:72)

An adjective is placed after the particle if the adjective is presented as specific to the item in question:

(11) *xzéli xa-béθa xéna zòra.*ˈ 'I saw another house, (which was) small.'

(12) *xàrθa*ˈ *ṭ-áθe xá-ʾeða xréna zòra.*ˈ 'Then comes another festival, (which is) small' (B6:8)

If the adjective expresses a property that is common to the set of which the noun in question is one member, the particle *xena* is placed after the adjective:

(13) *xzéli xa-béθa zóra xèna.*ˈ 'I saw another small house (another one of the set of small houses).'

The noun may be omitted with the singular indefinite particle *xa/ða* or a demonstrative alone functioning as the head of the phrase: *xa-xéna* 'another one' (A23:27), *ða-xéta* 'another one' (A22:9), *ʾo-xéna* 'the other one' (A4:45), *ʾáyya xéta* 'this other one' (B12:2), *ʾan-xéne* 'the others' (A8:86). The singular indefinite particle is occasionally omitted in contexts where the item is presented as one of a list of members of a set:

(14) *qayə́mwa xéna ṭ-amə̀rwa*ˈ 'Another man (from the group) would get up and say…' (B5:9)

(15) *ʾáy y-oya-prìqta,*ˈ *mátta xéta šópa dìya.*ˈ '(When) that is finished, she puts in another in its place.' (B5:102).

It can act as the modifier of an interrogative pronoun in constructions such as *ʾu-mòdi-xenət xə́zya?*ˈ 'What else have you seen?' (A17:8).

14.9.11.2. *Adverbial*

The particle *xena* may be used adverbially with the sense of 'more, again':

(1) *ʾána xéna šúla la-pàlxən.*ˈ 'I shall not work any more.' (A23:40)

(2) *xéna ṛìšɛle.*ˈ 'He woke up again.' (A14:95)

(3) *xéna téla tèlɛle.*ˈ 'The fox was a fox again.' (A32:26)

When it occurs at the front of a clause, it is often largely devoid of semantic content, serving, it seems, as a discourse particle expressing some kind of boundary and prominence, e.g.

(4) *xéna políse mù t̯-óði?*ˡ 'Well, what should the police do?' (A8:9)

(5) *xéna ʾána qə́mən ʾázən ʾùmra.*ˡ 'Well, I shall go to church.' (A37:2)

(6) *xéna ṣlìθɛla.*ˡ 'Well, she went down.' (A4:37)

14.9.11.3. *Modifier of Quantifier*

On some occasions the particle is placed after a quantifier:

(1) *šqílənwa xáčča xéna qàlya*ˡ *ta-t̯-axlə́nne b-ʾùrxa.*ˡ 'I took a little more roasted meat to eat on the way.' (A23:10)

(2) *ʾən-hawétuwa də́ryəlli xáčča xéna biš-hódəx…*'If you had thrown me a little further along…' (A7:22)

(3) *xáčča xéna mumž̌ə̀lla.*ˡ 'She delayed a little more.' (A18:21)

14.9.12. mo, mu, mut, modi

This interrogative particle, in its various forms, may be used as a modifier of a noun, e.g.

(1) *ʾáwwa mò-t̆ăhər nášɛle?*ˡ 'What kind of man is he?' (A25:31)

(2) *mo-čára t̯-óðəx t̯la-d-áyya qát̯u t-la ʾaxlàlɛni?*ˡ 'What solution can we find for this cat so that it does not eat us?' (A44:1)

(3) *ʾáwwa mò-qalət báxyɛle?*ˡ 'What sound of screaming is this?' (A4:44)

(4) *ʾáwwa mut-qàlɛle?*ˡ 'What noise is this?' (A26:53)

(5) *ʾáyya mòdi mðítɛla?*ˡ 'What town is this?' (A26:26)

The particle may also function as an exclamatory modifier of nouns, e.g.

(6) *ʾína mù-brata!*ˡ 'But what a girl!' (A13:11)

More frequently the particle is used as an interrogative particle independently of a head noun, e.g.

(7) *mò-b̆ăyət?*ˡ 'What do you want?' (A13:13)

(8) *mòdi wídle?*ˡ 'What did he do?' (A25:19)

It is also used as an exclamatory interrogative in constructions such as (9) and (10), also occasionally in exclamatory assertions (11):

(9)   *mu-ṣṭímlux bὲθi?!*ˡ 'Why have you destroyed me (literally: my house)?!'
       (A15:14)

(10)   *mùt hole-pčĭla?*ˡ 'How could it be that it is crooked?' (A17:20)

(11)   *téla mo-ṭréle ʾəlla!*ˡ 'How the fox ran to it!' (A49:4)

14.9.13. ma-

This particle may be used in the same way as *mo* and its variants as an
interrogative modifier of a noun, e.g.

(1)   *ʾánna ma-brinànela gu-réšux?*ˡ 'What wounds are these on your head?'
       (A29:6)

(2)   *ʾánna ma-dàwɛla?*ˡ 'What (type of) gold are they?' (A7:13)

It may be used as an exclamatory modifier of a noun, e.g.

(3)   *ʾu-Bə́lbəl Hazár yăðátla ma-báxta xàmθɛla.*ˡ 'You know what a beautiful
       woman Bəlbəl Hazar is.' (A8:65)

It is occasionally used in other syntactic positions to mark prominence.
These include before adjectives (4), in exclamatory statements (5) and
before negated questions (6)–(7):

(4)   *mríle ma-dὺs téla.*ˡ 'The fox really became ill.' (A32:32)

(5)   *ma-píštət ḳawὲlla!*ˡ 'How you have become a ruin!' (A18:16)

(6)   *ma-lat-ðáya b-gánəx qàrθɛla?*ˡ 'Don't you know yourself that it is
       cold?!' (A20:1)

(7)   *ma-létu mṣŭwὲre?*ˡ ... *ma-létu gnìwe?*ˡ 'Have you not cursed? ... Have
       you not stolen (something)?' (B8:18).

For the use of *ma* in conjoining constructions see §14.11.

14.9.14. ʾɛni

This may be used as an interrogative modifier of a noun in the sense of
'which', e.g.

(1)   *ʾɛ́ni báxtɛla mubrὲθa?*ˡ 'Which woman has given birth?' (A25:6)

(2)   *ga-léðəx ʾɛkὲla,*ˡ *b-ɛ́ni dùkθɛla.*ˡ 'But we do not know where she is, in
       which place she is.' (A26:18)

(3)   *ga-ʾɛ́ni Ẑîne¹ ʾáxni lɛ̀ðəx.*¹ 'Now, which Zine we do not know.'
      (A26:61)

It may be separated from its head by intervening material, in which case
it is linked to the noun by the annexation particle *D*, e.g.

(4)   *ʾɛ́ni ʾítlɛxu t-náše t-máṣi mšáwθi mə̀nna.*¹ 'What people do you have
      who can talk with her?' (A4:13)

In (5) the particle is placed after the noun and is followed by a prepositional
phrase that restricts the scope of the question to a previously mentioned
known set of items:

(5)   *pə́nxa ʾɛ́ni mənnɛ̀le.*¹ 'Which of the (types of) grind wheel is it? (liter-
      ally: a grind wheel which of them is it?)' (B5:92)

It is more frequently encountered in the text corpus as an independent
interrogative with the sense of 'who', e.g.

(6)   *ʾɛ̀nile.*¹ 'Who is he?' (A2:7)
(7)   *ʾɛ̀ni híwle-lləx.*¹ 'Who gave it to you?' (A4:19)
(8)   *ʾɛ́nile qṭìlə̀lle.*¹ 'Who has killed him?' (A15:16)
(9)   *ʾɛ́ni b-záwən tàwra.*¹ 'Who will buy an ox?' (A22:2)

This usage no doubt developed from questions concerning members of
a set such as:

(10) *ʾɛ́ni mənnɛ́xu ṭ-àzəl.*¹ 'Which of you will go?' (A30:1)
(11) *múr ʾɛ̀ni-mənnən¹ biš-šapìrtela.*¹ 'Say which of us is the most beautiful.'
      (A25:17)

14.9.15. hatxa

This word may be used as an anaphoric determiner before a singular or
plural noun in the sense of 'such a', 'such', e.g.

(1)   *bróni lá-wuð hátxa mə̀ndi.*¹ 'My son, do not do such a thing.' (A14:6)
(2)   *liθ hatxa-mə́ndi.*¹ 'There is not such a thing.' (A25:69)
(3)   *liθ hátxa mə́ndi wíya gu-mðíta.*¹ 'Such a thing has not happened in
      the town.' (A22:2)

(4)   *hátxa pəlxána pàlxetì?*' 'Do you do such work as this?' (A23:32)

(5)   *málka krìble*' *bud-hàtxa məndiyáne.*' 'The king became angry about such things.' (A25:8)

It may be used independently of a head noun as a subject or object argument in a clause, e.g.

(6)   *hátxa la-hàwya.*' 'Such a thing should not be.' (A21:32)

(7)   *si-hátxa múrgən ṭla-màlka.*' 'Go, say thus to the king.' (A17:30)

(8)   *qa-mòt hátxa wáða bíyì?*' 'Why are you doing this to me?' (A25:42)

It can take a nominal plural ending, e.g.

(9)   *'ána gắrəg 'ámrən hatxàne.*' 'I must tell such things.' (A39:7)

It is used predicatively, e.g.

(10)   *hàtxɛla qə́ṣṣət.*' 'The story is this.' (A13:5)

(11)   *ta-módila 'áyya mðíta hàtxa?*' 'Why is the town like this?' (A4:31)

The particle may function as a modifier of adjectives, e.g.

(12)   *'íman ṭ-íle xə̀zyəlla,*' *hátxa šə́ṭránta-w šapìrta,*' *'ay-ṣrìxla.*' 'When he saw her, so beautiful and good-looking, she screamed.' (A4:4)

(13)   *'u-parošyáθa hátxa glòle*' 'pebbles, round like this' (A23:17)

(14)   *hátxa faqìra*' 'so poor' (A40:4)

It is frequently used adverbially, e.g.

(15)   *mjunəgníla hàtxa.*' 'She shook them like this.' (A4:15)

(16)   *dwíqəlla hátxa gu-'íðe dìye.*' 'He took her like this in his hand.' (A13:25)

(17)   *šìšále gáne hàtxa.*' 'He rocked himself like.' (A31:7)

14.9.16. hodəx

This is occasionally used as a deictic modifier of a nominal with the sense of 'yonder', e.g.

(1)   *m-támma hódəx ṭùra 'áθṛə d-ánna dèwele.*' 'From here to yonder mountain is the land of the wolves.' (A14:48)

It is combined with a demonstrative pronoun in expressions such as *l-ay-gōt-hòdəx t-šaqíθa*ˈ 'on the farther side of the channel' (A9:1). It is more commonly used as an adverbial meaning 'beyond, further', e.g.

(2) *m-táma hódəx ṱ-ázət máṱət xa-nèra.*ˈ 'Go onwards from there and you will reach a river.' (A14:50)

It is often combined with *biš*, e.g. *xáčča xéna biš-hódəx* 'a little further on' (A7:22). On some occasions it has temporal rather than spatial reference, e.g.

(3) *m-táma hòdəx*ˈ *ʾáxtu ʾu-gʸanèxu.*ˈ 'From then onwards you are by yourselves.' (A8:27)

14.9.17. *ču*

This is used as a negative determiner in the sense of 'not any.' The predicate of the clause in which it occurs is itself always negative, e.g.

(1) *ʾu-ṱlálux lan-šwíqa čù-məndi.*ˈ 'and for you I have not left anything.' (A2:11)
(2) *ʾána bsìmli*ˈ *čú-mdi liθ-bìyi.*ˈ 'I am cured, nothing is the matter with me.' (A4:20)
(3) *ta-t-čú-mdi là-ʾaθe bíye dìye.*ˈ 'so that nothing will happen to it.' (A7:9)
(4) *čù pəlxána la-pálxət ʾáti.*ˈ 'You shall do no work.' (A23:32)
(5) *hon-dáryəlle gu-xa-čále ʾamúqta lá-ʾaməs čù-ga čú-ga paləṱ.*ˈ 'I have put him in a deep hole and he will never be able to come out.' (A22:41)

The negation can be reinforced by prefixing the particles *la* and *har*, e.g.

(6) *la-har-ču-dúkθa lìθwa.*ˈ 'She was nowhere at all (to be found).' (A27:26)

14.9.18. *hič*

The particle *hič* is used with the same function as *ču* by some speakers, e.g. *hič-nàša*ˈ 'nobody' (A8:2). It may be combined with the indefinite article, e.g.

(1) *híč xa-náša lá-maṣe mεθéla Bə́lbəl Hazàr.*ˈ 'Nobody could bring back
    Bəlbəl Hazar.' (A8:25).

14.9.19. la

The negative particle *la* can be used as a modifier of an adjective, e.g. *fə́l-
fəl…là-xšilta* 'uncrushed pepper' (B10:21), *miya la-rθixe* 'unboiled water'.

14.9.20. fəllən, pəllən, flan

This word, in its various alternative forms, is used as a modifier of a noun
with the sense of 'such-and-such', e.g.

(1) *sí-mur ta-pə́llən wăzɨ̀r.*ˈ 'Go and tell such-and-such a minister.'
    (A4:38)
(2) *ʾána síqli fə́llən dùkθa.*ˈ 'I went up to such-and-such a place.' (A10:9)
(3) *só l-bέθət flàn-naša.*ˈ 'Go to the house of such-and-such a man.'
    (A8:8)

In (4) it modifies a pronoun, e.g.

(4) *mó-t mára fə̀llən ʾàti?*ˈ 'What do you, so-and-so, say?' (B5:9)

It may be used independently, e.g.

(5) *hàtxεle wíða fə̀llən.*ˈ 'So-and-so did such-and-such.' (A48:1)
(6) *hà-pəllən*ˈ *lὲkət zála?*ˈ 'Hey so-and-so, where are you going?' (A1:11)

14.9.21. ʾay

This is marginally used instead of *ʾεni* with the sense of 'which', e.g.

(1) *ʾáti xázət ʾày-mənna bằyət.*ˈ 'See which one you like.' (A14:80)

14.10. Repetition of Constituents

The repetition of constituents in a clause has various functions, which can be classifed as follows.

14.10.1. *Intensity*

Adjectives and adverbs are repeated with an intensifying function, e.g.

(1) *máglət gilándi xá-mdi gòɾɛle…ṭla-d-án mɛrgáne góɾe gòɾe.*¹ 'The scythe is something big…for the very big meadows.' (B5:144)

(2) *ʾíθwa ṭawalyáθa rábe ràbe.*¹ 'There were very many games.' (B7:4)

(3) *pálṭi wɛ̀rde,*¹ *béhɛr y-áwɛ príše prìše.*¹ 'Flowers come out, in Spring there are lots of different kinds.' (B5:176)

(4) *y-aθíwa baxtáθət màθa,*¹ *ʾi-mbašlìwa,*¹ *m-qúrbə qúrbət márət xlùla.*¹ 'Women of the village who were close (relatives of) the head of the wedding would come and cook.' (B15:63)

(5) *lwíša júlle hátxa jálde jàlde.*¹ 'He put on his clothes very quickly.' (A4:55)

The expression *jalde jalde* is often abbreviated to *ja-jalde*, e.g.

(6) *mṣawθítu m-ġðàðe,*¹ *ta-t-ṭúra ja-jálde pàrəq.*¹ 'You should speak with one another, so that the mountain (journey) would finish very quickly.' (A17:19)

In (7) a plural attributive demonstrative is repeated to convey an intensi- fied quantity:

(7) *ʾánna ʾánna šazàde*¹ *ʾánna jwànqɛ,*¹ *ʾánna náše kulla-ʾəθye ṭlàbəlləx.*¹ 'These many princes, these young men, these people have all come to seek your hand.' (A8:77)

14.10.2. *Increment*

In some contexts nouns or adverbs are repeated to express gradual increase or progression, e.g.

(1) *t-la-nápəl ʾo-rɔ́zza ʾurxà-w-urxa.*¹ 'so that the rice does not fall along the road.' (B5:80)

(2) ṣléle ʾurxa-ʾúrxa xzéle ʾína ṗyáša dəbbòre.¹ 'He went down and along
     the way saw that they were becoming hornets.' (A10:10)

(3) y-àθi¹ góta góta d-ɛ̀-maθa.¹ 'They come alongside that village.'
     (B18:2)

(4) băláwala yabíšta xərqá xərqá gu-qðála díya mabyə̀nwa.¹ 'When she swal-
     lowed a raisin, it could be seen, ring by ring in her neck (as it
     went down).' (A8:63)

(5) qíməle sə́ṛyəlle b-réšət ʾilanáne ʾilanàne.¹ 'He tied it to the tops of the
     trees (one after the other).' (A39:12)

(6) ṣléla bě̀ʾe ʾàx-ʾaxxe díye.¹ 'The eggs ran down him here and here.'
     (A23:8)

(7) ʾan-tre-maláxe...θéla ṗyáða táma tàma.¹ 'Those two angels...came
     passing by.' (A4:44)

(8) garšíle níxa nìxa-w.¹ 'They gradually pull it out.' (B5:178)

(9) fa-jămíwa nàše,¹ níxa níxa níxa nìxa,¹ ṗešíwa xámša-w ʾə̀ṣra-w hál xamšə̀ssər.¹
     'The people would gather and would gradually become five, ten,
     up to fifteen.' (B5:61)

(10) xánči xànči¹ ṗɛrmə́xwa bi-dìye.¹ 'We would cut down with it little by
     little (a little at a time).' (B5:144)

14.10.3. *Distribution*

Nouns are repeated in some distributive expressions, e.g.

(1) qíma kút-yoma yóma ṣlàya.¹ 'Everyday he would get up to go down
     (to the pool).' (A14:79)

(2) y-azə́lwa čyàda,¹ bé̀θa bɛ̀θa.¹ 'He would go to make an invitation, at
     each house.' (B5:20)

(3) kút y-azə́lwa zayə̀nwa,¹ ṗíše xá ʾarb-ə́mma xamš-ə́mma náše réza rèza.¹
     'Everybody who went would stand, about four or five hundred
     people, in rows.' (A8:31)

14.11. Conjoining of Nouns in a Nominal Phrase

Two nouns in a compound nominal phrase are linked together by the con-
nective particle *w*. This may be attached as a clitic either to the beginning
of the second noun or to the end of the first noun. When in contact with
a consonant at the beginning of a word it is realized as *ʾu-* (< *ʾuw*), e.g.

(1)   *xá-yoma ʾíθwa xá-qaša ʾu-xà-malla.*ˈ 'Once there was a priest and a mullah.' (A2:1)

(2)   *lát-xila xa-lə́xma-w xa-bèta?*ˈ 'Have you not eaten a loaf of bread and an egg?' (A17:15)

(3)   *ṭ-ámrəx ʾána w-àti*ˈ *xóna-w xàθa.*ˈ 'Let's say I and you (we are) brother and sister.' (A16:8)

(4)   *sab-kʸálo-w xə́tna ʾíwa málka-w maləkθa.*ˈ 'since the bride and groom were the king and queen.' (B15:71)

The conjoining may have a concomitative sense, e.g.

(5)   *xá-gaya y-asqə̀xwa*ˈ...*kút-xa-w táxte dìye.*ˈ 'Sometimes we went up (onto the roof)...everybody with his bed.' (B10:58)

In such cases the two items are not coordinated but rather the first has greater prominence. This may be reflected in verb agreement, in that the verb in some cases agrees only with the first item. In (6), for example, the verb is singular:

(6)   *kə́lyɛle gu-tắrət bɛ́θa ʾáw ʾu-ʾə̀y.*ˈ 'He stood at the door of the house together with her.' (A4:55)

When three or more items are linked in a chain, the connective particle is usually attached to each item before the one at the end of the chain, e.g.

(7)   *ʾíwa záwnət qə́ṭla-w də́mma-w pràma.*ˈ 'It was a time of killing, blood and slaughter.' (A1:24)

(8)   *qə́ryəlle wazīr-díye ʾu-xákma guràne*ˈ *ʾu-báxte dìye.*ˈ 'He called his minister, a few courtiers and his wife.' (A4:40)

(9)   *bắyən lá-ʾaθi b-xàšša*ˈ *ʾu-bxáya-w jnàna.*ˈ 'I do not want them to come in sadness, weeping and singing dirges.' (A4:33)

The connective particle is used in some contexts as an intensifier of a gradable relation or quality. In (10), for example, it intensifies the comparative adverbial:

(10) *b-qáryən ʾu-hèš-biš záwda.*ˈ 'I shall call yet louder.' (A8:72)

It is used in constructions expressing a range of items with the prepositions *mən*...*ʾu-hal* 'from...to' in order to express increased extension, e.g.

(11) *kùllən,*ˈ *mən-yále zóre ʾu-hal-gòṛe*ˈ 'all of us, from young children all the way to old people' (B16:4)

(12) *m-ó-yoma dwíqəlle Mắmo gu-hàbsa,*ˈ *ʾu-hàl-ʾədyo.*ˈ 'From that day he has held Mắmo in prison, all the way until today.' (A26:75)

Lists of items, which are presented individually rather than linked together in a composite whole, are in some cases expressed without any connective particles, e.g.

(13) *gə̀rwe,*ˈ *ṣàwle,*ˈ *júlle rìxe,*ˈ *júllə jərjè̀t*ˈ 'stockings, shoes, long clothes, clothes of purple fabric' (B10:30)

(14) *y-awéwa wásta bra-qðàla,*ˈ *brɛθáθe rìxe*ˈ *y-oðə̀xwala.*ˈ 'There was the chest (of the blouse), the collar, long sleeves, which we would make.' (B10:45)

(15) *ʾu-kúl-məndi y-áwe pə̀rya,*ˈ *xàlta,*ˈ *štè̀θa,*ˈ *m-kùl-məndi.*ˈ 'Everything was in abundance, food, drink, (something) of everything.' (B15:63)

A noun may be repeated to make the class denoted by it more general. In most cases the second occurrence of the noun is introduced by the particle *ma-*. The connective particle *w* may optionally occur before the *ma-* particle (*X ma-X* ~ *X ʾu-ma-X*), e.g.

(16) *jawə́tta ṭla-pràma*ˈ *ʾanna qése ma-qèse.*ˈ 'A chopper was for chopping wood and the like.' (B5:141)

(17) *ʾáxxa xuwwáwe ma-xuwwáwe lɛ̀-y-aθɛ l-d-áwwa gáš̌ra.*ˈ 'Here snakes and the like will not come onto this bridge.' (A30:49)

(18) *kúl-məndi dɛréwa bìya.*ˈ *harmòne*ˈ *ʾu-ma-harmòne,*ˈ *hɛrmìye,*ˈ *spaṛ̀gle.*ˈ 'They would put everything on it. Pomegranates and the like, pears, quinces.' (B8:31)

(19) *xóna mənnɛ̀xule,*ˈ *lɛ́la ta-t-ʾamráti ṭlíba ma-ṭlìba.*ˈ 'He is your brother, you should not say (that he) is a fiancé or something.' (A25:22)

On some occasions, instead of prefixing the *ma-* particle, the first consonant of the second occurrence of the noun is replaced by a different consonant, resulting in a word that has no meaning in isolation, e.g.

(20) *ʾána háwən Qára Tè̀ždin,*ˈ *maθyánət xárje-w bárjət boṭanàye.*ˈ 'I am Qara Teždin, the collector of taxes and the like of the people of Botan.' (A26:34)

A related strategy is to repeat the word with a change of internal vocalic pattern, e.g.

(21) *bráte díye muttúla qáṣre ʾu-qaṣòre.*⌐ 'His daughter established villas and palaces.' (A40:7)

We may include here the combination of stem I and stem II resultative participles in order to express intensity in contexts such as (22) and (23):

(22) *bəd-p̣ḗšət b-šòp̣i,*⌐ *bríxta mburàxta.*⌐ 'You will stand in my place, (you are) greatly blessed. (A40:15)

(23) *pàqəð bába ʾazíza,*⌐ *xqìra,*⌐ *gu-d-áyya dúnye mxùqra.*⌐ 'Welcome dear, esteemed father, honoured in this world.' (A40:12)

In (24) the second resultative participle is from a cognate quadriliteral verb:

(24) *qč̌ípewəx mqorəč̌pewəx.*⌐ 'We are cut down and harvested.' (A51:8)

Another practice is to place the generic word *məndi* 'thing' in apposition to the noun, e.g.

(25) *kút̠-ile xíləlle xa-ràmši-məndi*⌐ *gu-bèθi*⌐ *ʾáθe xarèla gu-béθi.*⌐ 'Everyone who has eaten my dinner or the like (i.e. any food) in my house, let him come and defecate in my house.' (A7:5)

14.12. NUMERALS

Cardinal numerals are placed before the counted nominal, which follows in apposition. The nominal is in the plural after all numerals above 'one', unless it is a loanword that has not been adapted to Aramaic morphology and does not take plural inflection. The only exception to this is the word *ʾəmma* 'hundred', which remains singular when preceded by numerals, e.g. *tré ʾə́mma* 'two-hundred', *t̠ḷáθa ʾə́mma* 'three-hundred', *ʾárba ʾə́mma* 'four-hundred'. The word *ʾalpa* 'thousand', by contrast, is made plural after numerals, e.g. *tré ʾálpe* 'two-thousand', *t̠laθa ʾalpe* 'three-thousand', *ʾárba ʾálpe* 'four-thousand'. The word *ʾəmma* is plural in expressions such as *ʾəmmàyət šə́nne*⌐ 'hundreds of years' (B15:92).

In principle, the cardinal numerals from 1 to 10 exist in both masculine and feminine forms in agreement with the gender of the noun they are combined with. In practice, the masculine form is in the process of becoming the default form in the dialect and is used with both masculine and feminine nouns (§12.1.1., §14.1.2.). It is worth noting that the levelling is regular in certain common multiplicative expressions. These include phrases containing the word *ʾəmma* 'hundred', which is historically feminine, but regularly takes the masculine form of numeral. We should also mention expressions containing the feminine nouns *gaya* and *bena* 'time, instance', which regularly take the masculine cardinal *xa* rather than *ða*, viz. *xa-gaya, xa-bena* 'once' (§14.1.2.).

Most nouns ending in the singular nominal inflectional ending *-a* that have a plural in *-ane* or *-aθa* can also form a plural with the shorter ending *-e*, e.g. *tăra* m. 'door' (pl. *tărane, tăre*), *qawra* f. (pl. *qawraθa, qawre*). In exceptional cases all three plural endings are used, e.g. *yoma* m. 'day' (pl. *yomane, yomaθa, yome*). In the case of most such nouns, the shorter plural form with the *-e* ending tends to be used after numerals, whereas the long form is used for plurals denoting groups of an unspecified number of items. There is a particular tendency for the short form to be used with the numeral 'two'. In all cases, however, these are only tendencies and not absolute rules, e.g.

tăra	'door'
tre tăre	'two doors'
ṭla tărane	'three doors'
raba tărane	'many doors'
pəqqa	'frog'
tre pəqqe	'two frogs'
ṭla pəqqaθa	'three frogs'
raba pəqqaθa	'many frogs'
yoma	'day'
tre yome	'two days'
ṭla yome ~ yomane ~ yomaθa	'three days'
raba yomane ~ yomaθa	'many days'
gaya	'time'
tre gaye	'two times'
ṭla gaye	'three times'
raba gayaθa	'many times'

The *-e* plural ending of *ʾiða* 'hand' and *ʾaqla* 'foot' is regularly used in the fixed expression *ʾiðe ʾu-ʾaqle* 'arms and legs' / *ʾaqle ʾu-ʾiðe* 'legs and arms', whereas the plurals *ʾiθaθa* and *ʾaqlaθa* are normal elsewhere, e.g.

(1) *dawɛ́ra ʾíðe-w ʾàqle.ˈ* 'A mule (is a man's) arms and legs.' (B5:124)
(2) *šə́ryəlla ʾáqle w-ìðe.ˈ* 'He untied the legs and arms.' (A10:13)

The nouns *baxta* 'woman' and *yəmma* 'mother', which have human referents, have the feminine plural ending *-aθa* in all contexts.

  This alternation between short and long plurals is rare in nouns ending in the singular feminine endings *-ta* and *-θa*. A few nouns with the feminine ending *-ta* or *-θa* in the singular that have a plural in *-aθa* may be given the plural ending *-e* after numerals, e.g.

kθɛθa	'chicken'
tərte kθaye	'two chickens'
raba kθayaθa	'many chickens'

Nouns that form a plural by reduplication of the final consonant in many cases use a simple plural in *-e* after numerals, e.g.

pəčča	'piece'
tre pəčče	'two pieces'
raba pəččače	'many pieces'

Numerals are sometimes repeated in order to express distribution, either within one event (3) or across different events (4):

(3) *kút-xa mə́nnən ṱ-ámrəx máttəx ṱḷàθa ṱḷáθa tebálle.ˈ* 'We each put down, let's say, three marbles.' (B11:25)
(4) *xa-xá-ga márət bɛ́θa mbašə́lwa ʾixála ʾímət hóya dànət ʾixála.ˈ* 'Sometimes the owner of the house would cook food when it was time for food.' (B6:16)

Numerals may be used independently of a head noun as an argument in a clause, e.g.

(5) *xà-qaṭlitu,ˈ trè-qaṭlitu,ˈ mò bṱ-óðəx b-ánna?ˈ* 'You may kill one, you may kill two, but what will we do with (all the rest of) them?' (A14:44)

(6) *ʾáyya kìsta*⸗ *hóle mxožə́bnəlla max-xà.*⸗ 'He has reckoned this bag as one.' (A6:3)

(7) *ʾaṣ̀ərta*⸗ *tre-ṣléla.* 'In the evening two men went down.' (A14:15)

(8) *ʾánna tréʾe zərə̀k-ila.*⸗ 'These two are strong.' (B11:4)

(9) *pɛ́šət làxxa*⸗ *gu-bɛ̀θa*⸗ *xòna*⸗ *mən-d-ánna bnàθi.*⸗ *ʾítli ṭə̀ḷḷəθ.*⸗ 'Stay here in the house, brother, with these daughters of mine. I have three.' (A25:15)

When an ordinal number is used independently of a head noun, it generally takes a pronominal head in the form of a demonstrative, e.g.

(10) *ʾo-qamáya miràle,*⸗ *ʾo-t-tré miràle.*⸗ 'The first one said it, the second one said it.' (A17:31)

These phrases may be used in apposition to a nominal with the same function as appositives consisting of a demonstrative head and an adjective (§14.7.). They are either non-restrictive appositives, e.g. *Ẑìne,*⸗ *ʾa-t-tɔ̀rte*⸗ 'Zine, the second one' (A25:20), or restrictive appositives with a contrastive function, e.g. *ʾɛ́-ga ʾɛ-t-tré* 'the second time (as opposed to the first), secondly' (B15:19).

When the number of times is left imprecise, two or more numerals are placed together asyndetically, e.g. *xa-tré-yarxe xéne* 'one or two months later' (A1:16), *tre-ṭḷà-yarxe*⸗ 'two or three months' (A48:4), *xámša ʾə́štà ganáθa*⸗ 'five or six people' (B5:77), *ʾə́šta šàwwa manzàle*⸗ 'six or seven rooms' (B10:52), *qám šáwwi tmáni šə̂nne* 'seventy or eighty years ago' (B5:179), *yómə ṭḷáθa ʾárba* 'on the third or fourth day' (A14:91).

A group of numbered items may be presented as a single whole by placing *xa* before the phrase, e.g.

(11) *mattìwa*⸗ *ṭ-ámrəx xá xámša dinàre.*⸗ 'They would deposit let's say a sum of five dinars.' (B5:6)

This construction is particularly common when two or more numerals are juxtaposed to express approximation, e.g. *xa-ʾárba xamšà béʾe*⸗ 'four or five eggs' (A23:6), *xa-tmánya ʾəsrà-maθwaθa*⸗ 'a (group of) eight or ten villages' (B15:61), *xa-ʾə́šta šàwwa yòme*⸗ 'a (period of) six or seven days' (A24:48).

Distributive expressions relating to groups of numbered items may be formed by combining the particle *kut/ku* with the numeral phrase, e.g. *ku-tmánya yománe* 'every eight days' (B7:15), *kút xamšássər yomàne*⸗ 'every fif-

teen days' (B10:73), *kút-ṭla šə́nne xa-béna* 'once every three years' (A14:61), *ʾu-kut-šéta xa-gáya* 'once every year' (B10:68).

When a cardinal qualifies a definite noun, the numeral generally takes an anticipatory suffix in constructions such as *ṭláθa t-bnóne dìye*' or *ṭláθa bnóne díye* 'His three sons (literally: the three of them, [of] his sons)' (A24:3).

The following examples illustrate various ways in which multiples ('*x*-fold', '*x* times as much') are expressed:

(12) *ʾína qəm-xazə́nnəx ʾáti rába hawnànta,*' *biš-mə́nni xa-tə̀rte.*' 'I see that you are very clever, twice as much as me.' (A40:16)

(13) *ʾən-háwe dàwa-ži*' *ʾáxni t-yawə́xla xa-b-ṭlàθa ʾə́lle díye.*' 'Even if it is gold, we shall give him threefold.' (A7:10)

(14) *ṭarpána biš-góṛa tə́rte gáye mən-màglɛwa.*' 'A scythe was twice as big as a sickle.'

(15) *ʾo-qáṣra ʾo-náša hàdəx-ile wíðəlle,*' *ʾəsrà-gaye béna qamáya.*' 'The man made the palace in such a way (that it was) ten times (bigger than) before.' (A12:22)

Expressions relating to the clock: *sáʾət kəmèla?*' 'What time is it?', *sáʾət ʾàrbɛla*' 'It is four o'clock', *sáʾət ʾə́ṣra b-lèle*' 'ten o'clock at night', *sáʾət xa-w-pàlgʸe*' 'half past one', *sáʾət xa-w čàrək*' 'a quarter past one', *sáʾət tré ʾu-ʾə̀ṣra*' 'ten past two', *čárək ṭla-ʾə̀ṣra*' 'a quarter to ten', *xámša ṭla-ṭlàθa*' 'five to three', *ʾə́ṣra pyáša xámša daqìqe*' 'five to ten'.

Numerical expressions relating to the calendar: *yárxət trè*' 'February', *yárxət ʾə̀ččʿa*' 'September', *təltássər b-ʾə̀ččʿa*' 'the thirteenth of September' (B15:92), *təltàssər b-yérxa*' 'the thirteenth of the month' (B16:22); *b-ʾarbìye* 'In the (19)40s' (B5:161), *šḗt ʾarbíye-u l-àxxa*' 'from the (19)40s onwards' (B5:179).

Numerical expressions relating to age:

(16) *kəmá šə̀nne-wət?*' 'How old are you?'

(17) *ʾána ʾə́sri šə̀nnewən.*' 'I am twenty years old.'

(18) *ʾáni qúrbət ʾə́ṣra trésər šə̀nnèwa.*' 'They were around ten or twelve years old.' (B15:32)

(19) *ʾɛ́-gə ʾána ʾúmur díyi ʾə̀štà-šə̀nnewa*' 'when I was six years old' (B15:32)

(20) *záwda mən-ʾarbá-mma šə̀nnele.*' 'It (the church) is more than four-hundred years old.' (B6:31)

(21) *ʾìwabi*' *ʾə̀ṣrá šə̀nne.*' 'I was ten years old.' (B5:130)

(22) *brón-diye ʾo-zòra*' *ʾítwale ʾarbì šə̀nne.*' 'His youngest son was forty years old.' (A12:1)

(23) *mṭéle ʾə́šti šáwwi šə́nne.*ˈ 'He reached sixty or seventy years old.'
      (A24:1)

(24) *ʾàna*ˈ *šawwà-šə́nne,*ˈ *ʾə̀štá-šə́nne šáwwa plíṭεwən mən-tàma.*ˈ 'I left there
      when I was seven or six years old.' (B15:30)

(25) *taqríban ʾánna xamší-šə́nne ʾùmri*ˈ *ʾána làn-mirəlla.*ˈ 'I have not told it
      (the story) for almost fifty years.'

'Ago' is expressed by the preposition *qam-* 'before', e.g. *qám šáwwi tmáni*
*šə̀nne*ˈ 'seventy or eighty years ago' (B5:179), *qúrbə qam-šaww-ə́mma xámši*
*tmany-ə̀mmà-šə́nne*ˈ 'about seven hundred and fifty or eight hundred years
ago' (B3:19). Occasionally *qam-* is omitted, e.g.

(26) *ʾáwwa yála yíwəlle ʾálaha ʾə́lla díya ʾə̀štà yárxe.*ˈ 'God gave this baby to
      them six months ago.' (A15:9)

Other numerical expressions relating to periods of time:

(27) *ʾánna ṭḷà yománela mə́ṭye.*ˈ 'They arrived in three days.' (A25:76)

(28) *píšla ṭḷa-yàrxe.*ˈ 'They stayed for three months.' (A14:84)

(29) *ʾána tré-yome làxxεwən.*ˈ 'I have been here for two days.'

(30) *hóle tíwa gu-xa-gəppìθa*ˈ *ʾarbì-šə́nne.*ˈ 'He has been dwelling in a cave
      for forty years.' (A15:4)

(31) *ʾána ʾanna-šawwá-šə́nne hon-θàya.*ˈ 'I have been been travelling (on
      my way here) for these (last) seven years.' (A37:17)

(32) *ʾánna xamšassə́r-šə́nne ṣópa lánwa xə̀zya.*ˈ 'I had not seen a stove for
      fifteen years.' (B15:23)

(33) *hál xámši-w xámša šə̀nne*ˈ *y-awέwa sxáða ʾalàha.*ˈ 'For fifty-five years they
      were worshipping God (and then stopped doing so).' (A15:17)

(34) *xá-saʾət qam-dàna*ˈ 'an hour beforehand' (B5:119)

(35) *m-díya ʾarpà-saʾəte*ˈ 'in four hours from now' (B1:13)

Mathematical operations:

(36) *xámša záyəd tré y-áwði šàwwa.*ˈ 'Five plus two makes seven.'

(37) *xámša náqəṣ tré y-áwði ṭḷàθa*ˈ 'Five minus two makes three.'

(38) *xámša gáye ṭḷáθa y-áwði xamšəssər*ˈ 'Five times three makes fifteen.'

(39) *tré-gaye tré wíta ʾàrba.*ˈ 'Two times two is four.'

(40) *xámša gáye xámša wáyεla ʾə́sri-w xàmša.*ˈ 'Five times five is twenty-
      five.'

(41) *ʾə́ṣra qa-tré y-áwði xàmša*ˈ 'Ten divided by two makes five.'

(42) *píšela mnáyəlla l-xà-xa.*¹ 'They began counting them one by one.'
     (A6:3)

Percentages are expressed thus: *xámši mən-ʾə́mma*¹ 'fifty percent', *ʾə́mma mən-ʾə́mma*¹ 'a hundred percent'.

14.13. ADVERBIAL EXPRESSIONS

Many nominals are used with the function of adverbials without an explicit marking of their relation by a preposition.

The majority of these are temporal expressions, e.g. *xa-yóma* 'one day' (A25:2), *yóma qamàya* 'on the first day' (A25:14), *hàr ʾo-yóma* 'on the same day' (A25:4), *yómət trè* 'on the second day' (A21:14), *yómət xyáptət x̀tna*¹ 'on the day of the washing of the groom' (B15:74), *yòma*¹ 'during the day' (B5:27), *qédamta* 'in the morning' (A1:2), *pálgət yòma*¹ 'at midday' (B5:62), *ʾaṣə́rta* 'in the evening' (A21:12), *šábθa* 'on Saturday' (A25:90), *dánət kawùθra* 'at lunchtime' (A22:22), *dánət xa-rámša* 'at dinner time' (A21:12), *xá-xa-gaya* 'sometimes' (B3:9), *xá-ga xèta* 'another time' (A48:4), *ʾánna šə́nne xaráye* 'in recent years' (B3:9), *ʾə́-šetət wìrra* 'last year' (B15:93), *qéṭa* 'in the summer' (B5:107), *sə́twa* 'in winter' (B5:107), *qàmθa* 'formerly' (B5:179), *xàrθa* 'afterwards, then' (A13:15).

The adjectives *qamaya* 'first' and *xaraya* 'last', when used adverbially, have the adverbial ending -*e: qamaye* 'at first', *xaraye* 'finally' (< *qamayəθ*, *xarayəθ*; see §13.2.). Note the phrases *bánta qamàye* 'for the first time' (B5:1), *ʾax-d-ɛ́-ga qamàye*¹ 'as before' (A27:31), *bánta xaráye* 'finally' (A29:65), and *béna xaràye*¹ 'finally' (B5:43), in which the noun is modified by the adverbial forms rather than by adjectives that agree with the head noun. Elsewhere the adjectival form is used, e.g. *béna qamáya* (A12:22), *béna xaráya* (A12:47).

In a few such temporal adverbials the nominal is in the absolute state with no inflectional vowel, e.g. *kut-yom* 'every day', *ʾədyo* 'today' (< *ʾəd-yom*), *kúššət* 'every year' (< *kut-šat*).

Temporal adverbial expressions with prepositions are also used. Some of these are parallel to the phrases cited above, e.g. *b-qéṭa* 'in summer' (B5:19), *b-sə́twa* 'in winter' (B5:145). The sense of 'in the day(time)' and 'in the night(time)' are regularly expressed by phrases with the preposition *b-*, e.g.

(1) *ʾó dewə̀rrəš b-yóma y-azə́lwa l-ṭùra,*¹ *b-lèle y-aθéwa.*¹ 'The vagabond used to go to the mountains in the day and come back at night.' (A12:46)

Occasionally nouns are used without prepositions as adverbials expressing
static spatial location, e.g.

(2)   *ʾíman-t y-awíwa bèθaˈ* 'when they were at home' (B5:128)
(3)   *ʾasṛ̀tla xa-dúkθa.ˈ* 'Tether her in some place.' (A12:29)
(4)   *tíwtɛla márzət yàma.ˈ* 'She sat on the sea shore.' (A13:12)
(5)   *béθe díye šáttət màθa-wewa.ˈ* 'His house was at the bottom of the
       village.' (A29:15)

Note also the expression *be-pàlga* (< *beθ-palgā*) 'in the middle' (A24:24).
The noun *šawpa* 'place' is often used adverbially without a preposition. In
such cases the diphthong /aw/ is generally contracted (§2.4.2.), e.g.

(6)   *de-puš-ŝòpux!ˈ* 'Stay in your place (where you are).' (A14:20)
(7)   *ʾáwwa píšle málka šópət bábe dìye.ˈ* 'He became king in place of his
       father.' (A12:70)

A further example is *xaṣa* 'back' in constructions such as

(8)   *ʾu-yatóxwa xāṣ-koðónta.* 'We would sit on the back of the mule.'
       (B5:138)

We may include here also the nouns *rəḥqa* 'distance' and *qurba* 'vicinity',
which are used adverbially and attributively (§14.7.), e.g.

(9)   *muttéθəlle rə̀ḥqaˈ mən-màθa.ˈ* 'She put him down far away from the
       village.' (A19:3)
(10)   *kúlla náše díye t-wéwa qùrbaˈ* 'all his relatives who were in the vicin-
       ity' (B8:38)

The adjective *rama* 'high' may be used as a locative adverbial, e.g.

(11)   *bíš y-awéwa ráḥat ràma.ˈ* 'It was more comfortable above.' (B5:204)

The adjectives *baraya* 'external' and *gawaya* 'internal' have the adverbial
ending *-e* when used adverbially: *baraye* 'outside', *gawaye* 'inside'.
    More frequently a noun without a preposition is used to express an
adverbial denoting movement towards a place, e.g. *kút-xa y-áθe bēθ-dìyeˈ*
'Everybody returns home' (B5:155), *mɛθéle bèθaˈ* 'They bring it back
home' (B5:164), *zílɛle šúle dìyeˈ* 'He went to his work' (A21:16), *xákma*

*síqla garăwáθət bàte*ˈ 'Some went up onto the roofs of the houses' (B6:18), *maṣlέwala ʾə̀ṛxe*ˈ 'They took it down to the water-mill' (B5:15), *ṣláya npála ʾằrɛle*ˈ 'It falls onto the ground' (A10:11), *qəm-xašə́lle ʾằra*ˈ 'He threw him on the ground' (A28:36), *ʾaw-ʾέne díye npíltɛla ʾisə̀qθe*ˈ 'His eye fell onto his ring (= he noticed his ring)' (A26:31). Movement towards can also be expressed by a preposition in these contexts, e.g. *dírṛa l-bèθa*ˈ 'She returned home' (A22:47), *si-l-bèθa*!ˈ 'Go home!' (A23:39), *qédamta y-ázi náše l-ʾùmra*ˈ 'In the morning people go to church' (B6:23).

Adjectives are occasionally used as adverbials of manner, e.g. *qəm-maxéla ʾáqla biš-xɛlàna*ˈ 'He struck her leg harder' (A33:12), *ʾína ṣláya xɛlànɛle*ˈ 'It (the river) is flowing down in spate' (A14:58), *ṭríθa qùwya*ˈ 'She rode hard' (A8:70), *qa-t xắyən spáy ʾàxxa*ˈ 'so that I can live well here' (A3:3).

The adverbs *ʾaxxa* 'here' are *tama* 'there' in some contexts are treated syntactically like nouns, in that they may take pronominal suffixes, e.g. *ʾáxxi hóle mràya*ˈ 'It hurts me here (literally: My here hurts)', *ṣléla bé̕e ʾàx-ʾaxxe díye.*ˈ 'The eggs ran down him here and here (literally: his here and here) (A23:8), or occur in an annexation construction, e.g. *déwe ʾu-haywáne ṭ-áxxa ṭ-axlìlən.*ˈ 'The wolves and the animals here (literally: of here) will eat us' (B9:11), *xayúθət táma dàx-ila?*ˈ 'What is the life there like? (literally: the life of there)' (B5:107).

THE SYNTAX OF VERBS

15.1. The Function of the Verbal Forms Derived from the Present Base

The verbal forms are categorized here according to their structure. The stem I root *qṭl* 'to kill' is used to illustrate these. The forms derived from this root given below will be used as general labels to designate all variations and inflections of forms that fall within the category. The label '*qaṭəl* form', for example, will be used to designate all verb forms that consist of the present base without prefixed or suffixed particles, including not only stem I verbs with strong consonants, such as *garəš* 'He pulls', *ṣarəx* 'He shouts', etc., but also stem II, stem III and quadriliteral verbs as well as all weak and irregular verbs, e.g. *mšadər* 'He sends, *mapləx* 'He uses', *mkankəš* 'He drags', *qayəm* 'He rises', *xaze* 'He sees', *mšare* 'He begins', *maṣle* 'He brings down', *mčawče* 'He twitters', etc.

When discussing the function of forms derived from the present base *qaṭəl-*, a distinction must be made between verbs with an initial laryngal /ʾ/ and verbs with an initial strong radical. The reason for this is that the distribution of preverbal particles such as *ʾi-* and *bəd-* on initial /ʾ/ verbs is different from their distribution on verbs with a strong initial radical. Initial /ʾ/ verbs are in general consistent and conservative in their use of the particles whereas in verbs with initial strong consonants the particles are frequently elided. The divergent distribution of the prefixed particles in the two groups of verbs has arisen from differences in phonetic structure rather than any semantic distinction. The crucial difference, it would seem, is that in initial /ʾ/ verbs the particle normally replaces the /ʾ/ and becomes the onset of the first syllable of the word, e.g. *ʾi + ʾazəl > y-azəl* 'He goes', *bəd + ʾazəl > ṭ-azəl* 'He will go'. Since the particle is the onset of the syllable, it is protected from elision. Another factor is that the number of syllables in the form has not been increased. When the particles are attached to a verb with an initial strong consonant, on the other hand, they constitute a separate syllable, adding to the morphological weight of the form. In this environment they have become more vulnerable to elision. In the description of the function of forms derived

from the present base, therefore, these two groups of verbs will be treated separately. Initial /ˀ/ verbs will be designated as group A and other verbs as group B. Since group A is the more conservative one with regard to the preverbal particles, the main classification of functions will be based on the distribution of the particles in verbal forms from this group.

15.1.1. qaṭəl

The form *qaṭəl* has a wide range of functions. These include the expression of both realis and irrealis. It can be regarded as the default, unmarked form in relation to the forms with prefixed particles such *ˀi-qaṭəl* and *bəd-qaṭəl*, which have more specific functions.

15.1.1.1. *Narrative Present (Realis)*
One realis function of the *qaṭəl* form is to denote foreground events in a narrative. These express a perfective aspect and present the actions as punctual events with their deictic temporal centre in the present. They should not be interpreted as expressing imperfective progressive aspect, which is a function that is in principle not expressed by the *qaṭəl* form.

Examples from groups A and B:

(1) *ṣàlya,¹ ˀap-xa-xéta ˀaxlàla.¹* 'She goes down and eats also another one.' (A18:21)

(2) *ˀu-ˀáyya zánjìr ˀáwra ˀánna warîðət qðàle,¹ kasxàla¹ ˀu-nàpəl.¹* 'The chain goes into the veins of his neck and cuts them. He falls down.' (A26:81)

(3) *ˀáwwa bíye bə-b-sùseʼ ˀáwər gu-xa-gə̀ppa.¹* 'He together with his horse enters a cave.' (A28:3)

(4) *ˀàzəl,¹ ˀàzəl,¹ ˀàzəl,¹ ˀu-màṭe,¹ máṭe l-čádrət bábe dìye.¹* 'He goes, goes and goes and arrives, arrives at the tent of his father.' (A28:33)

(5) *yátu l-xáṣət dawéra,¹ ˀáp-ˀaw ˀàzəl.¹ ˀázəl di-di-dì¹ ṭapéle xále dìyeʼ gu-d-ày-maθa.¹* 'He sits on the back of a mule and he also sets off. He goes along and catches up with his uncle in that village.' (A28:11)

(6) *mən-lə́bbe díye qìða,¹ dére xèla,¹ naʕàlle ˀo-šə̀ryóxa.¹ ˀu-ˀáθe šaqə́lla xa-ˀáqrət bə̀ṭma.¹ šaqə̀lla¹ ˀu-šamə̀ṭla¹ taqàne.¹* 'Out of his fervour, he applies force and pulls the tether apart. He goes and takes the stock of a terebinth tree. He takes it and breaks off the branches.' (A28:20)

(7) *ˀàsqi,¹ ˀína xazèla¹ qáwra pθìxta.¹* 'They go up and find the open grave.' (A25:91)

15.1.1.2. *Performative Present (realis)*
Another perfective use of the *qaṭəl* is to express the performative present,
i.e. the action denoted by the verb is performed by the act of uttering
it. The form is not, however, regularly used with all verbs that have per-
formative function. Clear performative usage has been indentified in the
verbs *qbl* 'to accept, permit' and *ymy* 'to swear', e.g.

(1) *qáblən ʾàzət.*ˈ 'I permit you to go.'
(2) *là-qablən ʾázət.*ˈ 'I forbid you to go.'
(3) *yamyannux b-ʾumrət Čamme.* 'I swear to you by the church of Čamme.'
    (C2:19)

The performative *qaṭəl* verb may be preceded by the particle of imme-
diacy *də-/de-*, e.g.

(4) *də-yamyannux b-awwa kəxwa.* 'I swear to you by this star.' (C2:25)
(5) *də-yamyannux b-aw Mar Sawa.* 'I swear to you by Saint Sawa.'
    (C2:42)

With other verbs speakers express performative function by the com-
pound infinitive + copula construction (§15.4.2.), which is the normal
means of denoting progressive action, e.g. *mqawólən ṭ-àθən*ˈ 'I promise I
shall come'.

15.1.1.3. *Habitual Action (Realis)*
In class A verbs imperfective habitual action that includes the present is
normally expressed by the *ʾi-qaṭəl* form with the *ʾi-* prefix in main clauses.
The *qaṭəl* form, however, is sporadically found with this function in main
clauses in the text corpus, e.g.

(1) *ʾu-máxa xa-mášxa gu-be-ʾéne dìye*ˈ *ʾoðíle rúšma ʾax-ṣlìwa.*ˈ 'They put some
    oil on his forehead and make the sign of the cross.' (B6:36)

The *qaṭəl* form of class B verbs, on the other hand, is frequently used to
express the present habitual, e.g.

(2) *kut-béθa mbášəl xa-mòndi.*ˈ 'Every household cooks something.'
    (B5:64)

(3) *náše jắmi qa-šèra.*ˈ 'People gather for the saint's festival.' (B5:69)

(4) *šáqli lèša,*ˈ *mattíle š-xá párša pṭòxa.*ˈ 'They take the dough and put it on a wide stone.' (B6:46)

(5) *xə́lya mɛθəxxe,*ˈ *marəθxəxxe.*ˈ *qàyər xánči.*ˈ *dérəx xa-màsta gáwe,*ˈ *péša màsta.*ˈ *ʾu-ʾey-màsta*ˈ *péša xamùsta.*ˈ 'Yoghurt—we fetch milk and boil it. It cools slightly. We put a portion of yoghurt in it and it becomes yoghurt. That yoghurt becomes sour.' (B10:26)

The *qaṭəl* form of class A verbs is more frequently used in verbs expressing habitual aspect that are in subordinate protasis clauses of temporal sentences, e.g.

(6) *ʾímət ʾàθya,*ˈ *mzàngər zága.*ˈ 'When it (the cat) comes, the bell will sound.' (A44:2)

(7) *fa-l-gàre*ˈ *ʾíman ṯ-aryáwa dùnye,*ˈ *ʾíθwalən mandòrta.*ˈ 'On the roof, when it rained, we had a roller.' (B5:145)

(8) *ímət ʾàza másta,*ˈ *qéθa b-ɛ̀-ʾaqla*ˈ *ta-t-dèra.*ˈ 'When the yoghurt (churn) moves, it strikes her leg and returns back.' (B7:24)

15.1.1.4. *Actual Present (Realis)*

The *qaṭəl* form is in some cases used imperfectively to refer to a situation that holds in the present but is not necessarily a permanent, habitual property of the subject of the verb. This usage is restricted lexically to a few verbs that have a non-dynamic actionality. They include verbs expressing mental processes or states and verbs of perception, viz. *by* 'to want', *txr* 'to remember', *yðʾ* 'to know', *xšw* 'to think', *zdʾ/zdl* 'to fear', *ṣbr* 'to dare', *mṣy/ʾmṣ* 'to be able', *xzy* 'to see'. The only class A verb in this set is the variant form *ʾmṣ* 'to be able', which is attested in the *qaṭəl* form without a *y-* prefix in the contracted negated forms *la-məṣ* (< *la-ʾaməṣ*) 'He cannot', *la-mṣət* (< *la-ʾamṣət*) 'You cannot', etc. Examples:

(1) *mò bằyət?*ˈ 'What do you want?' (A26:73)

(2) *ʾáp-ʾana bằyən mtanə́nnux ða-qə̀ṣṣət*ˈ *dìyi.*ˈ 'I also want to tell you a story of mine.' (A14:35)

(3) *kut-bắye páləš mánni páləš mə̀nni.*ˈ 'Whoever wants to fight with me, let him fight with me.' (A12:60)

(4) *lá-bằyən dèrən.*ˈ 'I do not want to return.' (A4:43)

(5) *tàxrena*ˈ *kúlla náše qìmela*ˈ *síqe l-hàwar.*ˈ 'I remember that all the people got up and went up (the mountain) at the alarm.' (B5:162)

(6) *yắðət ʾaw-ʾɛ́nile?*ˈ 'Do you know who he is?' (A4:2)

(7) *lèle-xəzya čŭ-náša*⸾ *bas-yắðəx hóla tlíxe ʾánna bàte.*⸾ 'Nobody has been seen, but we know that the houses have been destroyed.' (A29:52)

(8) *la-yắðət mo-qálət bə̀xyɛle?*⸾ 'Do you not know what the sound of weeping it is?' (A4:45)

(9) *lɛ́ðən* (< *la yăðən*) *kʸɛ̀le.*⸾ 'I do not know where he is.' (B9:9)

(10) *míðən* (< *mo yăðən*) *ʾo-bɛ́θa ʾɛ̀kɛle.*⸾ 'I do not know where that house is.' (A12:63)

(11) *ʾu-ʾána xắšwən ʾáp-brōn-málka b-tàrəs.*⸾ 'I think, furthermore, that the son of the king will be cured.' (A8:88)

(12) *mɑ́re la-zằðət?*⸾ *mɑ́re la-zằðən.*⸾ 'He said "Are you not afraid?" He said "I am not afraid."' (A11:2)

(13) *la-ṣábrəx ṭ-òrəx.*⸾ 'We do not dare enter.' (A14:40)

(14) *mɑ́re mɑ́syət mtányət tuníθa t-la-xàṣla?*⸾ *mɑ́ra hɛ-màsyən.*⸾ 'He said "Can you tell a story that does not end?" She said "Yes, I can."' (A36:2)

(15) *šùqli.*⸾ *lá-maṣən díya tanə̀nna.*⸾ 'Leave me alone. I cannot tell (the story) now.' (A18:32)

(16) *lá-məṣ* (< *la-ʾaməṣ*) *xónux daréli gu-səndàna.*⸾ 'Your brother cannot put me in prison.' (A26:44)

(17) *lá-mṣən ṭ-ásqən xazyànnux.*⸾ 'I cannot go up and find you.' (A34:29)

(18) *bábi tə́mməl ʾáyya mðíta xu-kòmta-wawa?*⸾ *xázəx ʾɔ́dyo hóla xwɛ̀rta.*⸾ 'Father, was this town not black yesterday? We see today that it is white.' (A4:36)

The default time reference of such *qaṭəl* forms is the present. They may also be used in clauses that are dependent on clauses containing past verbs either syntactically or at least in the discourse structure. In such circumstances they have a relative time deixis and refer to the past, e.g.

(19) *ʾan-wăzíre gríšela sɛ́pa-w qɑ́šta-w gèra*⸾ *bắyi máxi ṭla-d-an-maymùne.*⸾ 'The ministers drew their sword as well as their bow and arrow, intending to strike the monkeys.' (A14:44)

(20) *Mir-Zắndin qìmɛle*⸾ *bắye qaṭə̀lle.*⸾ 'Mir-Zandin got up, wanting to kill him.' (A26:67)

(21) *θéle b-lɛ́le xðàra*⸾ *bắye ṭ-áxəl xà-məndi.*⸾ 'He came at night searching, wishing to eat something.' (A43:1)

(22) *jírtɛla gu-qàwwa*⸾ *ʾu-yìwtəlle ʾɔ́lle díye.*⸾ *šɔ̀tyəlle.*⸾ *ʾaw-mìðe.*⸾ 'She urinated in a pot and gave it to him. He drank it. He did not know.' (A24:37)

(23) *qəm-šawúqla xa-bóya zòra hátxa,*¹ *bás mujárrad šə́kwánta mášya ṭ-áwra-w pàlṭa.*¹ 'He left a small hole like this, through which only an ant could go in and come out.' (A36:4)

When used to express a temporary state in the actual present or with past time reference the *qaṭəl* forms of these verbs never take the *ʾi-* prefix. The verbs are occasionally used in these contexts in the compound infinitive + copula form, which is the usual form for the expression of progressive action in other verbs (§15.4.2.).

15.1.1.5. *Deontic Future (Irrealis)*

Among the various forms of irrealis expressed by the *qaṭəl* form is deontic modality. In such cases while occurring in a main clause without being subordinated to another verb, it conveys an element of will and expresses various degrees of intention, obligation, request, and permission regarding a future action. In this function the verb in principle has perfective aspect. In most cases it presents the action as a complete event with a start and endpoint. Sometimes it does not have a clearly delimited endpoint, but it must have a start point future to the present moment.

Main clause verbs in the first person used in a deontic function generally express the intention of the speaker, e.g.

(1) *ʾázən ʾóðən qázəd d-àwwa gə́ppa.*¹ 'I shall go and make towards this cave.' (A39:3)

(2) *ʾána qémən ʾázən ʾùmra.*¹ 'I shall go to church.' (A37:2)

(3) *ʾána har-ṣálən mðìta*¹ *mέθən ʾixàla*¹ *ʾu-ʾàθena.*¹ 'I shall just go down to the town to bring food and shall come back.' (A26:30)

In the verb *ʾmr* 'to say' the modality can be interpreted as expressing either intention or a request for permission from the hearer:

(4) *ʾamrə̀nnəx xá-məndi.*¹ 'I shall tell you something./Let me tell you something.' (A4:15)

(5) *ʾamrə́xlux xà-mdi xéna.*¹ 'We shall tell you something else./Let us tell you something else.' (A39:8)

Questions in the *qaṭəl* forms such as (6–9) are deontic expressions whereby the speaker addresses the hearer expecting him to impose an obligation (deontic necessity) or give permission (deontic possibility):

(6) *mó ʾamràna.ʾ*ˈ 'What should/can I say?' (A26:33)
(7) *mò ʾawðéna ʾána hadíya.ʾ*ˈ 'What should/can I do now?' (A26:13)
(8) *mó ʾàwəð.ʾ*ˈ 'What should/can he do?' (A28:20)
(9) *lὲka ʾazéxi.ʾ*ˈ 'Where should we go?' (A26:18)

Such questions in the 1st person can be transposed into the 3rd person in indirect questions, e.g.

(10) *léðe gu-d-έni kúrsi ʾàtu.*ˈ 'He does not know in which chair he should sit.' (A40:14)
(11) *léði mò ʾáwði.*ˈ 'They do not know what they should do.'

Deontic *qaṭəl* forms in the 2nd and 3rd person express a variety of types of will on the part of the speaker, including request, recommendation and permission, e.g.

(12) *ʾáxtu kúllεxu ʾazítu bὲθa.*ˈ 'All of you should go home.' (A8:85)
(13) *yába hὰyyo,*ˈ *ʾaθìtu.*ˈ *c̃ìdetu.*ˈ 'Come, you (are requested to) come. You are invited.' (A7:3)
(14) *ʾámrət ṭla-màlka.*ˈ 'You should say to the king…' (A1:6)
(15) *ʾázət táwrux pεrmὲtle.*ˈ 'You should go and slaughter your ox.' (A7:2)
(16) *xúwwe ʾázəl dúke dìye.*ˈ 'Let the snake go to its place.' (A1:8)
(17) *xà-bena ʾázi náše.*ˈ 'People should go (only) once.' (B15:91)
(18) *kút-yom pálṭət ʾu-xàðrət,*ˈ *ʾáṣərta ʾáθət bὲθa.*ˈ 'Every day go out and wander about and then in the evening come back home.' (A14:62)
(19) *hàtxa ʾoðéti b-náše!*ˈ 'This is what you should do to people!' (A22:47)

This type of deontic *qaṭəl* may occur in indirect speech in a subordinate clause, e.g.

(20) *múr ṭla-xònəx*ˈ *qa-t ʾədyo*ˈ *ʾáwði tàgbir*ˈ *ʾásqi l-ṣὲda.*ˈ 'Tell your brother that today they should make a plan to go out hunting.' (A26:43)

The use of the form to express iterative actions as in (18) and (19) above can be accommodated in the interpretation of it as a perfective form, in that the speaker uses the form that is appropriate to express each individual perfective occurrence of the iterated situation.

    The various deontic expressions described above can be negated, e.g.

(21) ʾána là-ʾaθən mə́nnux.ˈ 'I shall not come with you.' (A6:6)

(22) là-ʾawrən gu-máθa.ˈ 'I shall not go into the village.' (A25:34)

(23) là-mṣawθət!ˈ 'Do not speak!' (A26:89)

(24) là-daqrət bíye.ˈ 'Do not touch him.' (A26:74)

(25) la-ʾáθət ṭ-áwðət čǜ-məndi.ˈ '(There is no requirement for) you to come and do anything.' (A28:22)

(26) ʾáp-xa mənnéxu la-ʾàmər:ˈ ʾána múθyənna Bə́lbəl Hazàr.ˈ 'None of you should say "I have brought back Bəlbəl Hazar."' (A8:82)

(27) ʾáp-xa la-jáwəj mən-gu-ʾAmedìa.ˈ 'Let nobody move from Amedia.' (A25:27)

Deontic *qaṭəl* forms may be preceded by various preverbal particles:

(i) *xoš*

The particle *xoš* is in origin the imperative of the verb *rxš* 'to go'. It is most frequently attested with verbs with 3rd person subjects, though it can be used with all persons. Examples:

(28) ʾu-bέθux xoš-ʾàqəð ˈ 'and may your house burn down.' (A17:6)

(29) xoš-ʾáθa ʾàp-anna ˈ 'Let them also come back.' (B8:4)

(30) bas-ʾέni t-xzéla ʾày xoš-ʾáza gu-jahànnam.ˈ 'But let my eye, which saw her, go to hell.' (A16:2)

(31) ku-mándi bắyi xoš-ò̀ði.ˈ 'Let them do whatever they want.' (A14:46)

(32) xoš-ʾáwər ʾu-ʾáxəl ʾu-šáte gu-pərdèsa-w ˈ 'Let him enter and eat and drink in Paradise.' (A2:8)

(33) kúlla xoš-dàmxi.ˈ 'Let everybody sleep.' (A14:56)

(34) ʾáxči xoš-qàyəm ˈ xazyánne xàmša daqíqe.ˈ 'Let him rise for me to see him for only five minutes.' (A4:49)

(35) suràye ˈ xoš-ʾámrəx ʾánna ʾùrze,ˈ xà b-nošéy ˈ ʾu-ʾi-zamríwa ràwe.ˈ 'The Christians, let's say the men, by themselves, would sit in a reception room and sing *rawe*.' (B15:75)

It is placed before the negative particle *la* in negative deontic expressions, e.g.

(36) xóš la-ʾàθe!ˈ 'Let him not come!'

(ii) *də-, de-*

The particle *də-/de-* may be related to the adverbial particle *diya* 'now'. It is more frequently attested as a prefix to imperative forms than to deontic *qaṭəl* forms.

(37) *də-mjămə́xlən jarrèta.*ˈ *ʾázəx xá-mdita xèta.*ˈ 'Let's put together a food-bag for ourselves. Let's go to another town.' (A30:41)

(38) *ʾu-ʾáti də-ráqðət šešátla gànəx.*ˈ 'You should dance and shake yourself.' (A27:11)

It may be used in deontic questions such as (39), in which the speaker addresses the hearer expecting him to impose an obligation or give permission:

(39) *de-maxə̀xle?*ˈ 'Should we beat him?' (A14:8)

It is placed before the negative particle *la* in negated deontic expressions, e.g.

(40) *ʾáti də-la-dàmxeti!*ˈ 'Do not sleep!' (A29:19)

(41) *ʾámər ham-ma-yxàləf,*ˈ *ʿAbda-Raḥmā́n də-la-ʾàrəq.*ˈ 'He said "That's all right, (only) don't let ʿAbda-Raḥmān get away."' (A23:30)

(42) *ʾálaha də-là-ʾawəð!*ˈ 'God forfend!' (A27:37)

The particle may be combined with *xoš*, e.g.

(43) *də-xoš-gàwra.*ˈ 'Let her marry.' (A26:79)

(iii) *šut*

As with the other particles, this occurs in both positive and negative deontic expressions, e.g.

(44) *ʾən-maṣya šut-ʾoðala.* 'If she can, let her do it.' (C1:11)

(45) *šút la-ʾàθe!*ˈ 'Let him not come!'

15.1.1.6. *Predictive Future (Irrealis)*

The *qaṭəl* is used to predict a future event. In class A verbs that are not negated this is restricted to predictions that the speaker is not completely certain about and that he is not guaranteeing will be fulfilled. This can be designated as a modal future, e.g.

(1) *bálki ʾàθya.*ˈ 'Perhaps she will come.' (A8:49)

(2) *bálki ʾáθe xa-yóma ʾɛ-bráta kɛ̀rba mə́nni.*ˈ 'Perhaps a day will come when that girl will be angry with me.' (A14:98)

(3) *ʾàp-təmməl ʾáxləx mə́nna.*ˈ 'We may (perhaps) eat them also tomorrow.'
(A2:2)

(4) *qa-mò ʾóðət ʾatxa-šùla?*ˈ 'Why would you do this thing?' (A8:17)

The form is perfective, since it presents actions delimited with a start
and end point or at least with a start point. The form may also express
iterative aspect. In this context the form can still be interpreted as perfec-
tive, in that the speaker uses the form that is appropriate to express each
individual perfective occurrence of the iterated situation, e.g.

(5) *bálki ʾáθe kùt-yum*ˈ 'Perhaps he will come everyday.'

Non-modal future verbs, by which the speaker asserts that something will
take place and is committed to the truth of this assertion, are expressed
by the *bəd-qaṭəl* form with the prefixed future particle (cf. §15.1.5.). When
negated, however, the *qaṭəl* form in group A verbs is used to express both
the modal predictive future, where the action is uncertain (6–7), and also
the non-modal future, which predict events that the speaker is certain will
take place (8–10), e.g.

(6) *bálki lá-ʾawðən xàbrux.*ˈ 'Perhaps I shall not do as you say.' (A21:43)
(7) *dàx la-yăðə́nne?*ˈ 'How could I not know?' (A14:90)
(8) *ʾáti xúwwe là ʾaxə́lləx.*ˈ 'The snake will not eat you.' (A24:39)
(9) *málla ṭ-axə́lla ʾaw-lá-ʾaxəl čú-mdi sab-rùtɛla.*ˈ 'The mullah will eat it
and he will eat nothing because it is Friday.' (A2:4)
(10) *qázi ṭ-awə́dla ṭlàlux,*ˈ *lá-ʾawədla ṭlàli.*ˈ 'The judge will make a decision
in your favour, he will not make it in my favour.' (A6:8)

In class B verbs the *qaṭəl* form is used to express the modal and non-modal
future in both positive and negated clauses, e.g.

(11) *qaṭlə̀nnux.*ˈ 'I shall kill you.' (A15:4)
(12) *ʾàna maθyánne.*ˈ 'I shall bring her back.' (A27:30)
(13) *bálki qàrmən.*ˈ 'Perhaps I shall win.' (A1:4)
(14) *brátət màlka*ˈ *pálṭa l-gàre.*ˈ 'The daughter of the king will come out
onto the roof.' (A27:11)
(15) *ʾaw-máyəθ ʾu-ʾùpra páyəš bíyi.*ˈ 'He will die and his land will remain
for me.' (A26:25)
(16) *ʾo-Mar-Mùše*ˈ *xɛlànɛle,*ˈ *maxèlɛxu.*ˈ 'Saint Muše is strong. He will strike
you.' (B18:7)

When expressing the future, the *qaṭəl* form may have its deictic centre in the past, as is the case with (17) where it occurs in the context of a past narrative:

(17) *hádəx m-bar-t-gwìrra,¹ ʾaláha qəm-yawə́lla xa-bròna.¹ ʾìma?¹ ʾɛ́-šetət mèθi.¹*
      ʾɛ́-šetət mɛ́θi qəm-yawə́lla xa-bróna zòra.¹ 'So, after they married, God gave them a son. When? The year they would die. The year they would die, He gave them a small son.' (A4:57)

15.1.1.7. *Conditional Constructions (Irrealis)*
The *qaṭəl* form is used in the protasis of conditional sentences referring to present or future time, e.g.

(1) *ʾən-ʾána ʾamránnux módile xə́zya málka b-xòlme,¹ ʾánna ʾálpa dáwe pălə̀tla,¹ pálga ṭlàli¹ pálga ṭlàlux?¹* 'If I tell you what the king saw in his dream, will you divide those thousand gold pieces, half for me and half for you?' (A1:6)

(2) *bas-ʾə́n ʾáθya xá-baxta nabláli qa-kut-t-bằya,¹ yən-qa-xóna dìya,¹ ʾána bṭ-azàna.¹* 'But, if a woman comes to take me to anyone she wants, or to her brother, I shall go.' (A8:78)

(3) *ʾən-lá-ʾoðət b-xábrət ʾalàha,¹ b-talqèti.¹* 'If you do not do the word of God, you will be obliterated.' (A8:97)

(4) *ʾən-lá-ʾazən mšàyðən.¹* 'If I do not go, he will go mad.' (A4:27)

The *qaṭəl* form occurs in the apodosis when there is a degree of uncertainty concerning the occurrence of the situation. This is attested in contexts where two possible alternative situations are referred to, e.g.

(5) *ʾən-íle mìθa,¹ gárəg mèθən.¹ ʾu-ʾən-àθe¹ ʾáθyən mànne.¹* 'If he is dead, I must die. If he comes back, I shall come back with him.' (A8:61)

(6) *ʾən-ʾóðət xàbri,¹ ʾòðət.¹ ʾən-lá ʾòðət,¹ kliθà-llux-ila.¹* 'If you do as I say, you will do so (so be it). If you do not do so, it is up to you.' (A8:44)

15.1.1.8. *Irrealis Complement Clauses*
The *qaṭəl* form occurs in subordinate clauses that are complements of various verbs and expressions when the action of the verb in the subordinate clause is as yet unrealized. It is used after verbs expressing desire and permission (e.g. *by* 'to want', *šwq, qbl* 'to permit'), and also in complements of various other verbs and predications where the action is as yet unrealized relative to the main clause. The *qaṭəl* form in the subordinate

clause expresses perfective aspect, in that it presents the action as an event with start and endpoint or at least one that is delimited by a start point future to the present moment. It may also be used to denote an iterative activity. In this function it is still perfective, since the speaker uses the form that is appropriate to express each individual perfective occurrence of the iterated situation.

The verb of such subordinate clauses is sometimes introduced by the subordinating particle *D*. This particle is, however, often omitted. Its omission is particularly common after the verb *by* 'to want', e.g.

(1) *ʾáp-ʾana bắyən ʾàzən.*ˈ 'I also want to go.' (A1:5)
(2) *bắyən ʾamrə̀nnəx.*ˈ 'I want to tell you.' (A4:41)
(3) *bắye ʾáθe xazèlux.*ˈ 'He wants to come and see you.' (A4:24)
(4) *ʾána bắyən mə̀nnəx*ˈ *ʾàwwa xóni*ˈ *ʾoðátle xá-ga xéta mădəɼɑ́tle nə́šma dìye.*ˈ 'I want you to make my brother (alive) again and return his breath to him.' (A8:80)
(5) *bắyəx xá-məndi gu-tằra qablítula.*ˈ 'We want you to pledge her something on the doorstep.' (B10:36)

On some occasions, the particle occurs before the verb of the complement clause, e.g.

(6) *bắyən ṯ-àzən.*ˈ 'I want to go.' (A8:65)
(7) *bắyən ʾálaha t-yawə́lli mə́ndi zàwda.*ˈ 'I want God to give me something more.' (A3:1)

Examples with other verbs:

(8)   *ʾáp-xa la-qáblət ṯ-áwər gu-bèθa.*ˈ 'You should not allow anybody to come into the house.' (A23:25)
(9)   *də-šúqlən dàmxəx.*ˈ 'Allow us to us sleep.' (A15:8)
(10) *ʾu-hálle ṣàle,*ˈ *šáməṭ qðále dìye.*ˈ 'Let him go down (the mountain) and break his neck.' (A15:13)
(11) *léle ṣbára ṯ-áwər xà.*ˈ 'Nobody dares enter.' (A32:32)
(12) *ʾo-t-léle plíxa là sápər ṯ-áxəl.*ˈ 'Whoever has not worked should not expect to eat.' (A21:15)

The negative particle *la* is sometimes used in clauses that are the complement of the verb *zdʾ* 'to fear', reflecting a negative deontic dimension to the situation, e.g.

(13) *hon-zála réšə d-ò gə́šra,*ˈ *ʾína ràba zdáʾaˈ t-là-naplən gu-d-a-yáma.*ˈ 'I went over the bridge, fearing greatly that I would fall into the sea (= wishing that I would not fall).' (A11:7)

The *qaṭəl* form occurs in complements of expressions of obligation consisting of the impersonal forms *gắrəg, lazəm, bắye* ('it is necessary'), the former of these being the most common one. The complement clause is not introduced by the particle *D*, e.g.

(14) *gắrəg ʾàmrəx.*ˈ 'We must say.' (A4:38)
(15) *gắrəg ʾàθət.*ˈ 'You must come.' (A7:9)
(16) *gắrəg ʾázi bēθ-be-xə̀tna.*ˈ 'They must go to the house of the groom.' (B5:36)
(17) *gắrəg rába ʾáxlət xàm.*ˈ 'You have to be very careful.' (B5:105)
(18) *bēl-šə́dla l-sə̀dla*ˈ *gắrəg mátteti xa-xamšá ʾaqlàθa.*ˈ 'Between the saplings you must leave about five steps.' (B5:103)
(19) *lázəm ʾaxlə̀nne.*ˈ 'I must eat him.' (A47:5)
(20) *hadíya bắye mpalṭə̀tle.*ˈ 'Now you must take him out.' (A26:77)

The negative particle is placed before the verb in the complement clause, e.g.

(21) *gắrəg là-ʾamrət hátxa.*ˈ 'You must not say that.' (A18:10)

The *qaṭəl* form occurs in complements of the verb *mṣy* 'to be able' and also of various other expressions denoting possibility (or lack of it). The particle *D* is used in these constructions, though not consistently, e.g.

(22) *máṣəx ṭ-àmrəx.*ˈ 'We can say.' (B4:3)
(23) *máṣəx ʾàmrəx.*ˈ 'We can say.' (B15:16)
(24) *máṣi mṭàli gáwa.*ˈ 'They can play in it.' (B11:30)
(25) *har-là-mṣən ṭ-amrə́nnux.*ˈ 'I just cannot tell you.' (A11:2)
(26) *ʾáp-xa lɛ́le mṣáya ʾɛ-šắrəṭ ṭ-awə̀dla.*ˈ 'Nobody can fulfil the condition.' (A25:70)
(27) *ʾána bi-zóda m-hódəx là-maṣən ʾoðə́nnux*ˈ *čù məndí.*ˈ 'I cannot do anything more for you than that.' (A8:44)
(28) *láx mṣáya ʾázəx ʾamrə̀xla.*ˈ 'We cannot go and tell her.' (A4:39)
(29) *le-y-bárya ʾáyya ʾo-šúla ʾoðə̀xle.*ˈ 'It is not possible for us to do this thing.' (A8:10)
(30) *lá-hoya yóma qamáya xə́tna t-xazéla kʸàlo.*ˈ 'On the first day it is not possible for the groom to see the bride.' (A4:36)

15.1.1.9. *Irrealis Clauses Introduced by Prepositions*

The *qaṭəl* form is sometimes used in a clause introduced by the preposi-
tional phrases *qam* 'before', *ha-t*, *hal ʾɛ-gət*, *ta* 'until' or *t-la* 'without', which
refer to an event that has not yet taken place from the perspective of the
verb in the main clause, e.g.

(1) *qam-ṭ-àθi*ˈ *mpáləṭle mən-hàbsa.*ˈ 'Before they return, release him from
     prison.' (A26:72)

(2) *qám t-qáre ʾax-dìga,*ˈ *šáqlət mən-d-ó ʾixàla.*ˈ 'Before it calls out like a cock,
     take some of the food.' (A24:16)

(3) *qam-máṭe šéta ʾúmre dìye,*ˈ *ʾi-nablíle l-ʾùmra.*ˈ 'Before he reaches a year
     in age, they take him to the church.' (B6:35)

(4) *wúr gu-d-áwwa bèθa,*ˈ *čúmle tắra bàrux*ˈ . . . *ha-t-gáwṛi ʾàzəl.*ˈ 'Go into this
     room and close the door behind you . . . until my husband goes.'
     (A22:26)

(5) *ya-ʾàlaha,*ˈ *háwe ṣáxi hál-ʾɛ-gət ʾána máṭyən ʾə́lle dìye.*ˈ 'Oh God, let him
     be well until I reach him.' (A26:80)

(6) *mə́ra də-klìgən!*ˈ *pàlṭən m-gáwe.*ˈ *mə́re là*ˈ *ta-ṭ-óðən qápəx ʾàp ṭla-réšəx,*ˈ *baʿdèn
     pàlṭət.*ˈ 'She said "Stop! I (want to) get out of it." He said "No,
     not until I make a lid also for your head, then you come out."'
     (A20:3)

(7) *ʾu-màsta*ˈ *ʾáxlət mónna qrúšta díya t-la-xàrwa.*ˈ 'You should eat the yoghurt
     without the crust being spoilt.' (A30:5)

(8) *Qaṭina xətnɛle t-la-mbarxile.* 'Qaṭina is a groom without being wed.'
     (A50:15)

15.1.1.10. *Purpose Clauses (Irrealis)*

The *qaṭəl* form is used in clauses expressing purpose. These clauses are
sometimes introduced simply by the particle *D*. In many cases, however,
this is combined with the particles *qa* or *ta*, e.g.

(1) *ʾána paqðənnɛxu*ˈ *ṭ-azítu b-ʾúrxa maṭítu ʾə̀lla.*ˈ 'I shall instruct you so that
     you go on the road and reach her.' (A8:27)

(2) *ʾáti qam-ʾə́nə d-ánna botanàye*ˈ *mšádərra ṭ-ázi méθi xàrje.*ˈ 'Before the eyes
     of these people of Botan, send them in order to go and collect
     taxes.' (A26:72)

(3) *xonăwáθi mvắdo mvằdo*ˈ *t-la-ʾazítu b-míya ʾap-àxtu.*ˈ 'My brothers, move
     out of the way so that you do not go with the water (i.e. so that
     you are not carried away by the water).' (A39:12)

(4)   *xánč̣i ṭ-amrə́nna qalùlta*ˈ *qa-t-pàrqa.*ˈ 'I'll tell it to you quite quickly so that it will finish.' (A4:5)

(5)   *ṣráxɛle qa-t-šằma*ˈ *brátət màlka.*ˈ 'He is shouting so that the daughter of the king hears.' (A21:16)

(6)   *dɛrə́tla sùla líθən*ˈ *qá-t šéta b-šéta biš-mqărắna tàza.*ˈ 'You put manure on it, you see, in order that from year to year it grows better.' (B5:105)

(7)   *mšaxnánne ʾixàla*ˈ *ta-ṭ-áxləx ʾána-w ʾáti m-ġðàðe.*ˈ 'I shall heat the food so that you and I may eat together.' (A22:31)

(8)   *mṭamrə́tle spáy ta-t-là dáyəṛ.*ˈ 'Bury him well so that he does not return.' (A22:37)

(9)   *ʾáwwa ṭéni páyəš nṭìra*ˈ *ta-t-čú-mdi là-ʾaθe bíye dìye.*ˈ 'This saddle bag will be guarded so that nothing will happen to it.' (A7:9)

(10)   *la qə́mən jàlde*ˈ *ta-ṭ-óðən pəlxàna*ˈ *ṭla-gànì*ˈ *ta-ṭ-àxlən?*ˈ 'Should I not get up early to work for myself, so that I can eat?' (A21:19)

Occasionally the *D* particle is elided before the initial consonant of class B verbs, e.g.

(11)   *băyánna bìya*ˈ *b-sùsa*ˈ *b-rášən diyéy kùlla,*ˈ *ta-ṣályən maθyànne.*ˈ 'I want them all with their horse and rations, in order for me to go down to bring him back.' (A25:75)

(12)   *táxtɛla mútte hàtxa*ˈ *ta-ṣáli tàma.*ˈ 'They have put a board like this in order to go down there.' (A22:10)

15.1.1.11. *After Particle of Imminent Future* ga-

The element *ga-*, most likely in origin the noun *gaya* 'time, instance', takes a verb in the *qaṭəl* form introduced by the subordinator *D* as its complement to express the imminent future ('is about to...'), e.g.

(1)   *ga-ṭ-àθən.*ˈ 'I am about to come.'

The subordinator *D* is often elided before consonants:

(2)   *ga-t-pàrqən*ˈ ~ *ga-pàrqən.*ˈ 'I am about to finish.'

(3)   *ga-t-màṭəx*ˈ ~ *ga-màṭəx.*ˈ 'We are about to arrive.'

The construction is attested in the text corpus in (4):

(4)   *ʾə́θyɛla ʾàrye.*ˈ *ʾ̀əθye,*ˈ *ʾə́θye,*ˈ *š-lέwa mátye ʾəlle-dìye,*ˈ *há há ga-mátya ṭ-axlàle,*ˈ *də́ryəlla bòče.*ˈ *də́ryəlla bòče,*ˈ *qíme tre-xùre.*ˈ 'The lions came. They came,

but they had not yet reached him. "Hah, hah" she is about to eat him. So, he cast the seeds. When he cast the seeds, two willow trees grew up.' (A18:26)

15.1.1.12. *Generic Relative Clauses*

The *qaṭəl* form is used in a relative clause that has a non-specific antecedent rather than one referring to a specific referent, e.g.

(1) *ʾalpá-dáwe bəd-yáwəl ṭla-kút ʾamárre mòdile xə́lme.*ˈ 'I shall give a thousand gold pieces to whomsoever tells me what my dream is.' (A1:12)

(2) *kút ʾásəq qamáya xazéla ʾɛ-dalíθa brìθəll-aniˈ parə̀mla.*ˈ 'The first one who goes up and sees the vine growing on those (trees) cuts it down.' (A26:91)

(3) *kút-dukθa ʾáza ʾàwraˈ ʾáp ʾayya-xéta bàra lázəm háwya.*ˈ 'Every place that she goes to and enters, the other has to follow after her.' (B12:2)

(4) *ʾan-ṭ-óði koðə̀nta,*ˈ *ṭ-awéle tùna.*ˈ 'Those who keep (literally: do) mules have hay.' (B5:108)

15.1.1.13. *In Subordinate Clauses with Past Time Reference*

On numerous occasions, the *qaṭəl* form is used in subordinate clauses in the contexts described above also when the main clause contains a past form verb. Such *qaṭəl* forms have past time reference, with their deictic centre in the tense of the main clause, e.g.

(1) *ʾu-bằyéwa palə́ṭ-u plìṭle.*ˈ 'He wanted to come out and he did come out.' (A22:45)

(2) *sə̀lyɛleˈ ta-t-ʾázəl ʾùrxa.*ˈ 'He went down to set off on the road.' (A15:5)

(3) *ʾu-tằra čìməlle ta-t-lá-ʾawər ʾáp-xa nášа gàwa.*ˈ 'They closed the door so that nobody would go into it.' (A23:24)

(4) *qímtɛla šqíltɛla xa-brònaˈ ʾu-nobàltəlleˈ ta-ṭ-axlàle.*ˈ 'She got up and took a son (of hers) and took him in order for her to eat him.' (A19:3)

(5) *ʾu-síqle ta-t-áxəl mə̀ndi.*ˈ 'He went up to eat something.' (A21:8)

(6) *ʾáy wela-ʾá-bráta xarɛ́θət mṭúmra gu-Dùre,*ˈ *qam-maqimìlən.*ˈ 'That was the last girl to be buried in Dure before they evacuated us.' (B1:12)

(7) *ʾu-zílela ha-ṭ-ázi máṭi l-ʾáθṛət . . . d-áw . . . bábə d-a-bràta.*ˈ 'They travelled until they reached the land of the girl's father.' (A29:36)

15.1.2. qaṭǝlwa

The *qaṭǝlwa* form, with the past verbal affix *-wa*, always has past time reference. It has both realis and irrealis functions.

15.1.2.1. *Narrative Past (Realis)*

In a few cases the *qaṭǝlwa* form is used in narrative perfectively to express an event in the past. The clauses in which it occurs can be interpreted as having a background function, preliminary to an ensuing foreground section of the narrative. In (1), for example, the event of the woman going to church and her kidnap by Arab horsemen is part of the preliminary section of the narrative, which sets the scene for the following foregrounded events. In (2) the event of the baby Leliθa going out to eat a child is presented as the setting for the following foregrounded scene in which the people of the village come to the king in panic. In (3) the main prominence in the speaker's narration of events is on the reaction of the other man to the speaker's blows, the act of the speaker striking him being preliminary to this. Similarly in (4) the main prominence is given to the event resulting form the Leliθa's biting of the man's leg:

(1) *ʾazáwa ʾúmra qa-t-qarwàwa,ˈ dášta ṃalyáwa rakáwe ʾarabàye.ˈ* 'She went to church to take communion and the plain filled with Arab horsemen.' (A37:2)

(2) *gu-dargúšta qɛmàwa,ˈ šaryáwa bănúda dìyaˈ ʾu-ʾazáwa gu-màθa,ˈ ʾaxláwa xa-bròna,ˈ ʾaθyàwa,ˈ damxàwa.ˈ ʾáp-xa lè-y-yăðewa bíya díya.ˈ y-aθɛ́wa škáya qa-màlka.ˈ málka ṭ-áwǝt basìma,ˈ ʾáyya mut-máθɛla?ˈ ʾánna mut-ḥàrs-it mattóye?ˈ bróni hóle xỉla ʾǝdlɛ̀le,ˈ gu-dargúšta dmìxa.ˈ* 'She (the baby Leliθa) stood up in the cradle, untied her bands, went into the village, ate a child, then came back and went to sleep. Nobody knew about her. They came (repeatedly) to complain to the king. "King, may you be healthy, what kind of village is this? What kind of guard are you appointing? My son was eaten tonight while asleep in his cradle."' (A18:1)

(3) *maxǝ́nwale sɛ́pa gu-xàṣe.ˈ yáha máre mù-mxelux gu-xáṣi.ˈ tabzɩ̀ya qítla bíyux.ˈ maxǝ́nwale rúmxi ʾɔ́lle dìyeˈ mù-qítle bíyi?ˈ* 'I struck a sword on his back and he said "What did you strike on my back", (I said) "A rosary has hit you". I struck my spear into him (and he said) "What has hit me?"' (A12:20)

(4) *xá-ʾaqle ʾaxlàwale,ˈ qɔ́ṭma kúlle ṣléle gu-páθa dìya.ˈ* 'She (the Leliθa) bit (literally: ate) one of his legs and the ash all fell into her face.' (A18:23)

This perfective narrative use of the *qaṭəlwa* form can be regarded as stand-
ing in a relationship to the narrative *qaṭəl* form (§15.1.1.1.) that is similar
to the relationship of *qṭilwale* to *qṭille* in narrative (§15.2.2.). In both cases
the form of the pair with the explicit marking of the past with the *-wa*
particle denotes a prior event that is off the line of the main narrative
foreground. Although the form *qaṭəlwa* when used in this function may in
some cases be felicitously translated by the English pluperfect (e.g. 'She
had gone to church…') , it is important to note that it expresses an event
and not a resultant state. Any resultant state is only an implicature not a
component of its meaning. When the speaker wishes to express a resul-
tant state directly, the compound construction consisting of the resultative
participle and the past copula is used (§15.4.1.).

15.1.2.2. *Past Habitual (Realis)*
The *qaṭəlwa* form is occasionally used with class A verbs to refer to habitual
actions in the past, expressing an imperfective aspect in the past indicative,
though in the majority of cases the past habitual of this class of verb is
expressed by the *ʾi-qaṭəlwa* form with the *ʾi-* prefix. Examples from the text
corpus in main and subordinate clauses include the following:

(1) *kút-yum ʾazáwa l-ṭúra maθyáwa ða-kɛ́rtə qɛ́sa l-xáṣa dìya.* 'Everyday she
would go to the mountains and bring a bundle of wood on her
back.' (A10:6)
(2) *tŭtun-žìgən ̀ z̆àrìwala ̀ ʾánna xaqlàθa ̀ z̆àríwala kùlla. ̀ ʾawðíwala zrùta. ̀*
'They would cultivate tobacco. They would plough all the fields
and make them into ploughed land.' (B7:10)
(3) *ʾasríwala dàsta. ̀* 'They would bind it (the tobacco) in bundles.'
(B7:16)
(4) *mən-ʾəmmàyət šə́nne ̀ duxránət Mar-Sáwət ʾoðìwale ̀ ʾìwa təltássər b-ʾə́čča. ̀* 'For
hundreds of years the memorial of Saint Sawa which they observed
was on the thirteenth of September.' (B15:92)
(5) *ʾina bušála t-ʾoðə́xwala ṭlàlən, ̀ xánči miyànta, ̀ la-ràba. ̀* 'But the stew,
which we made for ourselves, was somewhat watery, though not
too much.' (B10:17)
(6) *ʾimət-ʾaθíwa barzanáye kə̀sle, ̀ y-ámər…* 'When the people of Barzan
came to him, he would said…' (B19:1)

In class B verbs the *qaṭəlwa* form without the prefix is very frequently used to express past habitual action, e.g.

(7)   *bašlíwa ṛə̀zza.*ˈ *bašlíwa šɔ̀rba.*ˈ 'They would cook rice. They would cook soup.' (B7:3)

(8)   *qemíwa mṭalìwa,*ˈ *raqðìwa,*ˈ *zamrìwa.*ˈ 'They would get up and play, dance and sing.' (B7:4)

(9)   *ʾan-ṣ̌ə̀dle*ˈ *šalxìwala mən-táma*ˈ *maxɛ́wala gu-məššàra.*ˈ 'They would uproot the seedlings from that place and plant them in the paddy field.' (B7:11)

(10) *béna halbát mɛθɛ́wa štɛ̀θa-w,*ˈ *yáʿni ʾằraq,*ˈ *ʾu-m-xàmra-w*ˈ *zamrìwa-w*ˈ *xamlìwa.*ˈ 'Then they would, of course, bring drink, arak together with wine, and they would sing and enjoy themselves.' (B5:62)

(11) *kút-xa šáqəlwa xákma xəzmān-dìye,*ˈ *masə́qla kəsle-díye ṭla-fṭàrta.*ˈ 'Each person would take some of his relatives and take them up to his home for breakfast.' (B5:60)

The form may be used also to express iterative action that took place over a short interval of time, e.g.

(12) *máre ʾána bằyən Səttìye.*ˈ *ʾáy biš-šapìrtɛla Səttíye*ˈ *ʾu-dɛréwa képe hátxa biyɛ̀ni.*ˈ 'He said "I love Səttiye. Səttiye is the most beautiful" and threw stones (repeatedly) at us.' (A25:20)

(13) *xà-gaya,*ˈ *daríwa xà-fə́lsa.*ˈ *ɛnéy yawíwala l-ṭùra*ˈ *ʾu-xaṣéy ʾəl-gàrra.*ˈ 'On one occcasion they were throwing a coin (repeatedly). They turned their eyes to the mountain and their backs to the pool.' (B15:33)

15.1.2.3. *Continuous Situation in the Past*
We have seen in §15.1.1.4. that a small set of verbs denoting mental processes or states are used in the *qaṭəl* form to express a situation that holds in the actual present but is not necessarily a habitual property of the subject. When such verbs are used in the *qaṭəlwa* form, they may denote, accordingly, a continuous situation at a particular period in the past rather than a habitual property of the subject, e.g.

(1)   *ʾu-bằyéwa palə̀ṭ-u plìṭle.*ˈ 'He wanted to come out and he came out' (A22:45)

(2)   *ʾap-qṭála bằyə́nwa qaṭ̀ənwale.*ˈ 'I even wanted to to kill him.' (A1:17)

(3)   *ʾáyya Čə̆lkằze Bằdal Sahàre*ˈ *yằðàwa*ˈ *ʾáwwa hóle θàya.*ˈ 'This Čəlkăze Bădal Sahare knew that he was coming.' (A12:33)

The *qaṭəlwa* form is used with these verbs also to express a habitual situation, e.g.

(4) *ʾu-mdi bắyə̀xwa¹ zaqróxwa ʾàxni.¹* 'Whatever we wanted we used to knit.' (B10:46)

(5) *yắδíwa mo-qádra dɛrɛ̀wa.¹* 'They knew how much (soil) to put on.' (B5:191)

15.1.2.4. *Conditional Constructions*

The *qaṭəlwa* form is used in the protasis of conditional constructions. These may refer to real iterative situations in the past (1–3). Alternatively, the *qaṭəlwa* form may be used to refer to a hypothetical condition in the past, which was not fulfilled, or to a hypothetical condition in the present or future, which the speaker assesses to be impossible to fulfil (4–6). Such hypothetical conditions refer to a single event or an iterative event. The verb can be interpreted as expressing perfective aspect, presenting the action as an event delimited by a start and end point, or at least with a start point. In the case of iterative actions, the speaker uses the form that is appropriate to express each individual perfective occurrence of the iterated situation. Verbs expressing mental processes and states such as *by* 'to want' in (3) are exceptions. In main clauses the *qaṭəlwa* form of these verbs are used imperfectively to express a continous situation in the past and this applies also to their usage in the syntactic context under discussion here. Examples:

(1) *ʾu-ʾən-xàčča¹ xáčča xa-béna ʾaryàwa-dunye¹ dɛrɛ́wa xáčča tùna,¹ biš-dawùqwa.¹* 'If it rained, they put down a little straw, so that it was more compact.' (B5:146)

(2) *ʾən-parə́qwa ʾĬšwuṭ,¹ ʾáw ʾəsrí-tmanya yomáθa yan-ʾəsrí-ʾəčča yomànɛle,¹ y-azə́xwa ṭùra.¹* 'If February was finished—it is twenty-eight or twenty-nine days long—we would go to the mountains.' (B5:152)

(3) *ʾən-bắyə́xwa tùma,¹ ṭla-mbašàlta,¹ kèfən-ile.¹* 'If we wanted (to use) garlic for cooking, it was up to us.' (B10:24)

(4) *ʾən-maxéwala xa-xéna xaθmàwa¹ ṭ-axlàwale.¹* 'If he had hit another (blow), she would have healed and eaten him.' (A50:14)

(5) *ʾən-maṣéwa ṭ-axə̀lwala,¹ lèla xamúṣe.¹* 'If he could have eaten them, (he would not have said that) they were sour.' (A43:4)

(6) *ʾən-maṣə̀nwa,¹ ṭ-aθə̀nwa.¹* 'If I could, I would come.'

Note the usage of the *qaṭəlwa* form to refer to a hypothetical perfective event in the past that did not actually take place in contexts such as (7)–(10) or a hypothetical condition in the future, which the speaker assesses to be unlikely to take place (11)–(12):

(7) *ʾó-yoməт goрàṇwa,*ˈ *ʾə́θγεle ʾáwwa ʿafrə́t gnìwəlli.*ˈ 'The day I would have got married, this demon came and stole me away.' (A13:14)

(8) *ʾap-ʾàti*ˈ *m-gə́b ṭ-aθə́twa méθəтwali zùze,*ˈ *šqíllux xa-šəndòxa.*ˈ 'So you, instead of coming and bringing me money, took a rock.' (A1:25)

(9) *m-ə́ka ṭắγə̀nwalux ʾána.*ˀ|ˈ 'From where could I have sought this for you?' (A30:23)

(10) *ṭúwe t-xazə̀nwale!*ˈ| 'If only I had seen him!'

(11) *bas-xáθi Nozáli xazə̀nwala.*ˈ 'If only I could see my sister Nozali.' (A8:57)

(12) *pešə̀nwa mevan diya.* '(If only) I could become her guest.' (C2:1)

15.1.2.5. *Other Subordinate Clauses*

The *qaṭəlwa* form is used in the various other types of subordinate clauses that the *qaṭəl* form is used in. It has past tense reference and is dependent, in principle, on a past verb, which may express perfective or imperfective aspect, e.g.

(1) *băyéwa paḷə̀ṭwa.*ˈ 'He wanted to come out.' (A22:45)

(2) *lá-qabəlwa ʾáxni saxə̀xwa.*ˈ 'He did not allow us to swim.' (A25:20)

(3) *lé γ-šawqíwa mṭàlənwa mənnéγ.*ˈ 'They did not let me play with them.' (B15:33)

(4) *ràqənwa*ˈ *ta-t-mbašlánwa-w qítli bìyux.*ˈ 'I was running in order to cook and I knocked into you.' (A27:42)

(5) *pεrmə́xwala qá-t ʾε-qálya mbarzə̀xwale.*ˈ 'We would slaughter them in order to dry the fat tail.' (B5:139)

(6) *qam-ṭ-asə́qwa мáre ṭla-bnàθe.*ˈ 'Before he went up he said to his daughters…' (A26:85)

(7) *ʾi-pešíwa γáʿni t-la maṭíwa ʾékεle bεθèγ.*ˈ 'Only a few of them remained without arriving at (the place) where their house was.' (B15:44)

On some sporadic occasions the *qaṭəlwa* form is used in a subordinate clause that is dependent on a main clause containing a *qaṭəl* form. In such cases the *qaṭəl* form of the main has past time reference. This is attested in constructions with the verbs *bγ* 'to want' and *mṣγ* 'to be able' in the main clause, e.g.

(8)   *bắye qaṭə̀lwale.*ˈ 'He wanted to kill it.' (A10:2)

(9)   *lá-bắye ṭ-awə́ðwa lèbe.*ˈ 'He did not want to play tricks.' (A29:36)

(10) *'u-lóxma t-la-qṣáya là-mṣən ṭ-axlónwale.*ˈ 'I could not eat the bread without breaking it.' (A30:13)

It is far more common for a *qaṭəl* form with past time reference to occur in a subordinate clause dependent on a past tense verb (§15.1.1.13.).

15.1.2.6. *After Particle of Imminent Future*

The *qaṭəlwa* form is used after the particle *ga-* to express imminent future in the past in expressions such as the following:

(1)   *ga-ṭ-aθə̀nwa.*ˈ 'I was about to come.'

15.1.3. 'i-qaṭəl

15.1.3.1. *Habitual*

The function of this form is, in principle, to express an imperfective habitual aspect with present tense reference, i.e. the deictic centre of the tense is the time of speaking. The action of the verb is presented as a characteristic and sometimes permanent property of the subject of the clause.

In class A verbs the 'i-qaṭəl form is regularly used when the speaker wishes to express this type of imperfective aspect, e.g.

(1)   *qédamta y-ázi náše l-'ùmra,*ˈ *y-óði qurbàna.*ˈ 'In the morning the people go to church and take communion.' (B6:23)

(2)   *xə́ṭṭe y-ázi ðá gòta*ˈ *'u-túna y-ázəl ðá gòta.*ˈ 'The wheat grains go onto one side and the straw goes onto the other.' (B5:97)

(3)   *'áyya y-amrə́xla mămaðta.*ˈ 'We call this "baptism."' (B6:8)

(4)   *qam-dàna,*ˈ *y-áxli kawùθra.*ˈ 'Beforehand they eat lunch.' (B5:36)

(5)   *xàrθa*ˈ *y-aθélɛni 'èða*ˈ *'éðət be-yàlda.*ˈ 'Then we have a festival (literally: a festival comes to us), the festival of Christmas.' (B6:12)

(6)   *y-asríle b-xàwla.*ˈ 'They tie it with a rope.' (B6:38)

(7)   *y-átwi fáṭri qamàye.*ˈ 'They sit and have breakfast first.' (B5:71)

(8)   *'u-y-aчmíla hátxa qa-t-là-napli m-gáwe díye.*ˈ 'They close them like this so that they do not fall out.' (B6:51)

As we have seen (§15.1.1.3.), the present habitual of class B verbs beginning with a strong consonant is often expressed by the *qaṭəl* form without

the *ʾi-* prefix. Habitual action of verbs of this class is on many occasions also expressed by the *ʾi-qaṭəl* form. The choice of the speaker to use the *qaṭəl* form or the *ʾi-qaṭəl* is not completely random but is motivated to a large extent by differences in discourse prominence. In general the *ʾi-qaṭəl* form tends to be used in clauses denoting situations to which the speaker wishes to draw particular attention in a section of discourse. Consider the following passage:

(9) *[1] ṭɔ̀lme¹ ʾíman-t qámxa* **lešíle** *lɛ̀ša¹ ʾu-ʾi-x*ǎ*me,¹* **dɛ́rɛ** *xmíra gáwe* **ʾi-x**ǎ**me,¹ ʾi-mɛ́θi** *sèla.¹ sèla¹ prɛ̀zlɛle.¹ ʾáw dax-ṭ-ámrəx ʾax-ṣinìyele¹ bas-gòṛa.¹* **ʾi-mattíle** *š-kɛ̀pe,¹ xóθe díye y-óði nùra.¹ ʾo-séla* **ʾi-x**ǎ**yəm.¹** *[2]* **šáqli** *lɛ̀ša,¹* **mattíle** *š-xá párša pṭòxa,¹ š-xa-mɛ̌z hátxa pṭòxa.¹ xa-qɛ̀sa¹ glòla¹* **ʾi-zɛpíle** *rèše díye,¹* **nablíle** *ʾu-***mɛθéle** *hàl-ɛ-gət* **páyəš** *raqíqa.¹ ʾó-lɛša* **páyəš** *raqíqa ràba.¹ [3]* **ʾi-šaqlíle** *b-gʸèra,¹ yáʾni xa-qɛ̀sa,¹ ʾu-***dɛréle** *rəš-d-ó-sela ṭ-íle núra xóθe xamìma.¹* **ʾi-bàšəl.¹ ʾi-bàšəl.¹ maxəðríle** *xá-ga l-ày-gota,¹ xá-ga l-ày-gota,¹ hal-d-ɛ́-gət* **bàšla.¹** *ʾáwwa y-ámrile ṭɔ̀lme,¹ ṭ ̀ɔmθa.¹*

'*Ṭəlme*: When they knead the dough and it rises, they put yeast in it and it rises, they bring a griddle. The griddle is made of iron. We could say that it is like a tray, but bigger. They put it on stones and make a fire under it. The griddle becomes hot. They take the dough and put it on a wide stone, on a wide table like this. They push a round stick of wood on it, moving back and forth, until it becomes thin. The dough becomes very thin. They take it with a rolling pin, that is a stick of wood, and put it on the hot griddle with fire under it and it cooks. It cooks, they turn it on one side and on the other, until it cooks. They call this *ṭəlme, ṭ ̀ɔmθa* (sing.).' (B6:45–47)

This passage contains a description of the various actions that are undertaken and events that take place in the preparation of the flat breads known as *ṭəlme*. Both *qaṭəl* and *ʾi-qaṭəl* forms of class B verbs are used to express these actions and events (marked in bold). The clauses containing the *ʾi-qaṭəl* forms can be interpreted as denoting the ones that the speaker is inviting the hearer to pay particular attention to.

In section [1] of the passage all class B verbs are in the *ʾi-qaṭəl* form except *lešíle* and *dɛ́rɛ*. In the preparation of the dough, its rising (*ʾi-x*ǎ*me*) is presented as the crucial event that will allow the process of baking to advance. This importance is expressed also by the repetition of the verb. The kneading (*lešíle*) and adding of yeast (*dɛ́rɛ xmíra gáwe*) are auxiliary

activities. The bringing onto the scene of a griddle (*ʾi-mɛ́θi sèla*) and the activities associated with setting it up (*ʾi-mattíle š-kèpe, ʾi-xàyəm*) are presented as noteworthy features of the preparation of this type of bread.

In section [2] only the verb in the phrase *xa-qèsa¹ glòla¹ ʾi-zɛpíle rèše díye¹* ('They push a round stick of wood on it') is in the *ʾi-qaṭəl* form. This is being presented as the central and most noteworthy activity in this section. The taking of the dough and placing it on a flat surface are preparatory to this. The description of the moving of the stick back and forth until the dough becomes thin is an elaboration of the central activity.

In [3] the activity of using the rolling-pin (*gʸera*), which is a noteworthy referent that is here newly introduced into the discourse, is expressed by a *ʾi-qaṭəl* form (*ʾi-šaqlíle*). The *ʾi-qaṭəl* form is used also to express the event of cooking, which is the climax of the preparation of the bread (*ʾi-bàšəl*). This event is given additional prominence by repeating the mention of it. The acts of putting the dough on the griddle and the turning the dough over on the griddle, which are expressed by *qaṭəl* forms, are preparatory to this event.

Some further examples are the following:

(10) *ʾáni xɘ́ṭṭe huwèdi sáma zóda¹* ***ʾi-zăríla*** *t-là maštóye,¹ y-amrɘ́xxa dèmi.¹ ʾáni* ***zɑ́ri*** *gu-ṭùra.¹* 'The *huwedi* wheat they generally sow without irrigation, they call it "unirrigated" (*demi*). They sow it in the mountains.' (B5:94)

(11) *ʾən-ʾíθ pàwxa,¹* ***ʾi-marmíle*** *gu-hàwa.¹ xɘ́ṭṭe y-ázi ðá gòta¹ ʾu-túna y-ázəl ðá gòta.¹* ***párši*** *m-ġðàðe.¹* 'If there is wind, they raise it in the air. The wheat grains go onto one side and the straw goes onto the other. They separate.' (B5:97)

(12) ***ʾi-doqíla*** *šàna.¹ ʾu-sulámməš* ***doqíle*** *lóši xa-jùlla¹ qa-t-lá nɛsìla-w¹ ʾu-****dɛ́rɛ*** *gu-ʾamàna,¹* ***garšíle*** *níxa nìxa-w.¹* 'They (the beekeepers) would take hold of the honeycomb. They would hold the hive whilst wearing a cloth so that the bees would not sting them. They put it into a vessel and took it way slowly.' (B5:178)

These consist of series of clauses containing both realis *qaṭəl* and *ʾi-qaṭəl* forms of class B verbs. The *ʾi-qaṭəl* forms can be interpreted as occurring in the clauses to which the speaker wishes to draw particular attention, whereas the *qaṭəl* forms are ancillary to these. In (10) the main point the speaker is making is that *huwedi* wheat is cultivated without irrigation. The statement that they sow it in the mountains is an elaboration to this central point. In (11) the raising (*ʾi-marmíle*) of the threshed harvest

in the air is a central activity of the process of winnowing that is here newly introduced into the discourse and is of high information value. The clause with the *qaṭəl* form 'They separate' (*párši*), on the other hand, is an elaborative repetition of the preceding statement that 'The wheat grains go onto one side and the straw goes onto the other'. In (12) the key activity that the speaker draws attention to is the taking hold of the honeycomb (*ʾi-doqíla*). The following clauses containing *qaṭəl* forms offer a supplementary elaboration on the details of this activity.

The *ʾi-qaṭəl* form may be used to express imperfective habitual actions in the past. This is found where there is a past tense verb in the adjacent context expressing an action that is closely connected, either syntactically or on a discourse level, with that of the *ʾi-qaṭəl* verb. The *ʾi-qaṭəl* verb takes the tense of the past verb as its deictic centre. In most cases the *ʾi-qaṭəl* verb occurs in a clause that follows the clause(s) containing a past tense verbs, e.g:

(13) *kut-qedàmta¹ xadámta d-ɛ-bráta mɛθyáwala čày¹ ʾu-ṭàmta,¹ ʾu-y-àsqa.¹*
'Every morning the servant of that girl brought her tea and breakfast, then would go back.' (A4:50)

(14) *zonìwala,¹ xálət xɔ̀tnɛle.¹ zabə́nwa ʾilàna,¹ b-ɛ́-ga náše xéne ʾi-zòni.¹* 'They would buy it—it was the uncle of the groom (who bought it first). He would sell the tree. Then other people would buy it.' (B10:28)

(15) *y-azə́lwa l-bɛ̀θa-w¹ y-ámər čìdetu.¹* 'He would go to the house and say "You are invited."' (B5:22)

(16) *ʾu-bár mtămɔzíwale rə̀zza,¹ béna níxa nìxa,¹ hál qayə̀mwa.¹ ʾíθwale xà-yarxa,¹ trè-yarxe hatxáne,¹ ṭḷàθa,¹ béna ʾi-sàmɔq.¹* 'After they cleaned the rice, …(they did this) until it gradually grew. It took one month, two or three and then it would become brown.' (B5:79)

The past tense verb occasionally follows the *ʾi-qaṭəl* form. This is found where the *ʾi-qaṭəl* form and the past tense verb form a particularly closely knit unit, as in (17), where the *ʾi-qaṭəl* form is a verb of movement:

(17) *ʾúrza y-áθe y-asə̀ṛwale.¹* 'Another man would come and tie it up.' (B5:85)

15.1.3.2. *Persistent Situation*

Verbs of non-dynamic actionality from the set listed in §15.1.1.4., which are used in the *qaṭəl* form when expressing the actual present, may be used

in the *ʾi-qaṭəl* form to express the temporal persistence of a situation. The situation is not a permanent, habitual property of the subject referent. This construction is found where the verb is modified by the particle *har* 'still' in which the speaker asserts the persistence a situation where there is some expectation that it will not persist, e.g.

(1) *har-xáθe ʾi-bằyela.*ˈ 'He still loves his sister.' (A18:16)

The motivation for using the *ʾi-qaṭəl* form rather than the *qaṭəl* form would, therefore, again be to draw particular attention to the situation, in this case due to its unexpectedness.

15.1.3.3. *Narrative Present*
The *ʾi-qaṭəl* form is used on a few sporadic occasions as a narrative present referring to a single specific event and not a repeated habitual action. This is only attested in the text corpus with the verb *ʾmr*. The normal form of expressing the perfective narrative present is by the *qaṭəl* form without the *ʾi-* prefix (§15.1.1.1.). Examples:

(1) *plíṭla šamála šéve lhàya.*ˈ *y-ámər bàbi,*ˈ *bràti,*ˈ *ʾáyya dū̀s-ila.*ˈ 'She came out glowing like a night candle. He said "My dear, my girl, it is true."' (A38:14)
(2) *y-ámər ya-ʾàlaha,*ˈ *qa-mòt hátxa wáða bíyi?*ˈ 'He said "Oh God, why have you done this to me?"' (A25:42)
(3) *kúlla musɔ̀qle.*ˈ *béna y-ámər Tóma:* 'He took it all up. Then Toma said…' (A52:25)

This perfective use of *y-amər* cannot be reconciled with the basic habitual function of the *ʾi-qaṭəl* form in all other contexts. A possible explanation is that this usage of *y-amər* is an archaism, preserving a vestige of an earlier function of *ʾi-qaṭəl*. It is likely that the *ʾi-qaṭəl* form originally had a progressive function.[1] The form *y-amər* could, therefore, be survival of the progressive used as a narrative present. The new progressive form based on the infinitive, which has supplanted the progressive use of the *ʾi-qaṭəl* form in the present state of the dialect, is sometimes used with this narrative function (§15.4.2.3.). It is relevant to note that the verb *ʾmr* 'to say' exhibits another conservative feature in narrative, in that it is regu-

---

[1] Cf. Khan (2007b).

larly used in the *qṭille* form to express the preterite and is in principle not used in the narrative resultative form *qṭilεle* (§15.4.1.3.) The *qṭille* form, which is used in all NENA dialects, can be regarded as the earlier type of narrative preterite.

15.1.4. ʾi-qaṭəlwa

In class A verbs the *ʾi-qaṭəlwa* form is the normal means of expressing repeated, habitual activities in the past, e.g.

(1) *nášət xátna y-azìwa¹ l-bēθ-be-kʸàlo.¹* 'The family of the groom would go to the house of the bride's family.' (B5:1)

(2) *ʾá mεxólta nášət kʸàlo y-oðíwala.¹* 'The family of the bride would make that food.' (B5:7)

(3) *kúlle náše y-aθέwa y-atwíwa béθət xòtna.¹* 'Everybody would come and sit in the house of the groom.' (B5:25)

(4) *y-atwíwa ʾəsri,¹ ṭḷàθi¹ ʾárbi náše y-atwíwa zmára rqàða.¹* 'Twenty, thirty, forty people would sit singing and dancing.' (B5:13)

(5) *ʾíθwa dáwla-w zòrna y-amróxwale.¹* 'There was (what) we used to call the drum and pipe.' (B5:24)

(6) *y-oróxwa gu-ʾùmra.¹* 'We would go into the church.' (B15:2)

The *ʾi-* prefix is only sporadically omitted from verbs of class A that have this function. In class B verbs, on the other hand, the past habitual is frequently expressed by the *qaṭəlwa* form without the *ʾi-* prefix (§15.1.2.2.). The *ʾi-qaṭəlwa* form in verbs of this class tends to be used when the speaker wishes to give it discourse prominence.

The *ʾi-qaṭəlwa* form of a class B verb is often used in a clause that is the main point of a particular section of discourse, whereas clauses that elaborate on the assertion made by this clause have *qaṭəlwa* forms, e.g.

(7) *ʾáxnən zòrəxwa,¹ ʾi-zădóxwa ʾap-mən-rabíye dìyən.¹ ʾέ-gət y-azóxwa xa-xlùla,¹ xazóxwala rabíye díyən tíwe mən-ʾawahàθən,¹ mən-babăwàθən,¹ lé-y-maṣəxwa ṣabróxwa ʾazòxwa¹ qarbənóxwa ʾəllèy.¹ qa-mò.ʾ¹ sàb¹ rába mattóxwa ʾiqára ʾəllèy¹ zădóxwa mənnèy.¹* '(When) we were young, we were afraid of our teachers. When we went to a wedding and we saw our teachers sitting with our parents, with our fathers, we did not dare approach them. Why? Because we felt great respect for them and we feared them.' (B15:10)

(8) *[GK: zaqrituwa?] zqára ʾi-zaqróxwa ʾàxni,¹ hè.¹ zaqróxwa bluzàt,¹ zaqróxwa gòrwe.¹ b-gànən zaqróxwa,¹ ʾu-mdi băyòxwa¹ zaqróxwa ʾàxni.¹* '[GK: Did

you knit?] We used to knit, yes. We knitted blouses, we knitted
socks. We knitted by ourselves. Whatever we wanted we knitted.'
(B10:46)

(9) ʾi-zaqróxwa šàle.ˈ ʾašitnàyeˈ qəm-mpalṭíla ʾáwwa šáłət qðàla,ˈ hàšya,ˈ ʾána
hon-zqìrta mə́nne.ˈ ʾáni zaqróxwa táma bèθa.ˈ kúlla b-ʾìðən zaqróxwa,ˈ
b-ʾìðən.ˈ 'We would knit shawls. The people from Ashitha produced
the neck shawl, out of lace. I have knitted with this. We used to
knit these at home. We knitted everything by hand.' (B10:50)

In (7) the general statement that 'we were afraid (ʾi-zădóxwa) of our teach-
ers' is the main point of the section. The subsequent clauses elaborate on
this by offering an illustration and explanation. In (8) the main assertion
that 'we used to knit' has the ʾi-qaṭəlwa form (ʾi-zaqróxwa). This is followed
by a series of clauses with qaṭəlwa forms (zaqróxwa) that expand on this by
giving examples of the kind of clothes that were knitted. The ʾi-qaṭəlwa
form in (9) introduces a section about shawls by asserting the main point
of the section, namely that 'we would knit (ʾi-zaqróxwa) shawls'. The fol-
lowing clauses elaborate on this general statement by presenting further
details about the process.

Two verbs that are set up in a contrastive opposition are sometimes
given prominence by using the ʾi-qaṭəlwa form, as is the case in (10), where
the 'sowing' is set up in contrast to the 'harvesting':

(10) ʾan-xə́ṭṭe zăríwala…čèri zăríwala.ˈ ʾíθwa rába ʾi-zăríwala čèri.ˈ bèhɛr,ˈ
b-yárxət xámša, ʾə̀šta,ˈ ʾi-xazdìwala.ˈ 'They would sow the wheat…in
Autumn they would sow it. Many people sowed it in Autumn. In
Spring, in May or June, they would harvest it.' (B5:15)

In some cases the clause that contains a ʾi-qaṭəlwa form does not have
greater discourse prominence than adjacent clauses with qaṭəlwa forms
by virtue of its content. Rather, its prominence arises from its position
in the structure of a section of discourse. The speaker sometimes gives
prominence to a clause by using the ʾi-qaṭəlwa form to flag the clause as
a boundary in a section of discourse. In the text corpus a number of
examples are found where the ʾi-qaṭəlwa form is used in this way to mark
a clause that occurs at the onset of a discourse unit. Consider the fol-
lowing passages:

(11) zìlɛlaˈ ʾəmmáyət náše maθóye Bə́lbəl Hazàr.ˈ ʾi-maṭíwa tàma.ˈ qála qamàya,ˈ
xɛríwa b-áqlət susèy,ˈ píša hal-bə́rkət súsa kèpa.ˈ qáłət trè,ˈ ʾó Bə́lbəl Hazàr!ˈ

xɛríwa Bə́lbəl Hazár lìθ.�spät mattíwa bála b-áqlə susèy,˺ ʾìna,˺ ʾap-aqlə-d-àw,˺ hál be-palge-díye píša kèpa,˺ ʾáxc̆i rešət-sùsa˺ ʾu-palge-díye bàr-elì˺ léle píša kèpa.˺ ʾu-qarɛ́wa qálət ṭl̩̀àθa.˺ 'Hundreds of people went to bring back Bəlbəl Hazar. They would arrive there. At the first cry, they would look at the legs of their horse (and see that the part) up to the knees of the horse had become stone. On the second cry "Bəlbəl Hazar!," they looked but Bəlbəl Hazar was not there. They checked the leg of their horse and behold, the leg itself, until the middle of the horse had become stone. Only the head of the horse and its upper half had not become stone. They would cry a third cry.' (A8:30–31)

(12) xà-gaya,˺ daríwa xà-fəlsa,˺ ʾɛnéy yawíwala l-ṭùra˺ ʾu-xaṣéy l-gàrra.˺ ʾi-daríwa xà-fəlsa˺ ʾu-ṣalíwa xárθa gu-gárra xázi ʾó-fəlsa ʾèkɛle.˺ kú-t šaqə̀lwale˺ aw-qrìmwale.˺ 'Once they were throwing a coin, turning their eyes to the mountain and their backs to the pool. They threw a coin then went down into the pool to find where the coin was. Whoever picked it up had won it.' (B15:33)

(13) y-amríwala c̆áppe bùke.˺ ʾáyya mpalṭíwala kʸàlo˺ ʾu-mattíwala xáṣət koðə̀nta,˺ sab-qámθa lìθwa rába susyáθa.˺ xáṣət koðə̀nta ʾi-mattìwala,˺ ʾu-y-azíwa xaðrìwa˺ barəbárət màθa˺ hal-ɛ́-gət mamtíwala bɛ́θət gáwr̩a dìya.˺ 'They called this c̆appe buke. They would bring the bride out and put her on the back of a mule, since in the old days there were not many horses. They would put her on the back of a mule and they would go and take her around the village, until they brought her to the house of her husband.' (B15:65–66)

(14) ʾan-t-naplíwa l-ʾàrra,˺ ʾáni lè-y-axliwala náše.˺ ʾáni daríwala qam-qənyàne.˺ ʾi-mjămíwala gu-gunìya˺ ʾu-daríwala gu-gòma,˺ qa-mpalṭíwa mənnèy˺ daríwa qam-tawriyàθa˺ qam-qənyàne˺ qa-t-ʾaxlíwa mənnèy.˺ 'People did not eat those that fell on the ground. They gave these to the animals. They gathered them in a sack and put them in the basement stable, so that they could take from them and give them to the cows and animals for them to eat.' (B15:50)

In (11) the arrival of the participants on the scene is expressed by a ʾi-qaṭəlwa form but the speaker uses qaṭəlwa forms to describe their subsequent actions on the scene. The intention is not to present the act of arrival as the most prominent one from the point of view of its content. Rather the purpose of the ʾi-qaṭəlwa form is to signal that it has prominence from the point of view of the discourse structure in that it marks the onset of a span of discourse describing the actions of the suitors at the scene of Bəlbəl Hazar's cave.

In (12) the second mention of the act of throwing the coin is expressed by a *ʾi-qaṭəlwa* form (*ʾi-daríwa*). The purpose is not to present this act as more noteworthy than the acts that follow it. Rather it is used to mark a boundary in discourse structure, namely the onset of a sequence of clauses describing the game at the pool. Similarly in (13) the second mention of the placing of the bride on the back of a mule, which is expressed by a *ʾi-qaṭəlwa* form, marks the onset of a sequence of clauses that describe the event known as *čappe buke*.

The *ʾi-qaṭəlwa* form in (14) marks the beginning of a span of discourse that elaborates and expands on the previous general statement that they gave the fallen apples to the animals. It coincides with a shift from general to specific perspective.

On some occasions the *ʾi-qaṭəlwa* form is used to signal the closure of a discourse section. Again, the primary purpose is not to give particular prominence to the semantic content of this final action in the section, but rather to use it as a boundary marker in the discourse structure. This is the case, for example, in (15), where the man's going to sleep is the final event of his working day, but is not intended to be interpreted as the most important one:

(15) *kút-yum šúle díye mòdi-wewa?ᵃ¹ šaqə̀lwale táwre díye¹ ʾu-šaqə̀lwa xmáre díye¹ qèdamta¹ y-azə́lwa zắrèwa¹ ʾu-y-aθéwa l-bèθa,¹ y-axə́lwa mə́ndi ʾi-damə̀xwa.¹*
'Everyday what was his job? He would take his ox and take his ass early in the morning and go to cultivate (his field). He would then come back home, eat something and go to sleep.' (A21:4)

15.1.5. bəd-qaṭəl

The prefixed particle *bəd-* in this form is generally phonetically reduced in natural fast speech to *bt-*, *t-* or *b-* (cf. §8.6.2.), e.g. *ʾána bt̬-àzən¹* 'I shall go' (A8:51), *t̬-azítu* 'You shall go' (A8:27), *b-tàrəṣ* 'He will be cured' (A8:33).

15.1.5.1. *Predictive Future*

One of the basic functions of the *bəd-qaṭəl* form is to express the future tense. In cases where the subject of the verb is 3rd person or where it is a non-agentive 1st or 2nd person, this is generally a predictive future, e.g.

(1) *b-nayə̀sli¹ t̬-axə̀lli.¹* 'He will bite me. He will eat me.' (A1:17)
(2) *ʾáp-ʾana b-qaṭə̀lli.¹* 'He will kill me also.' (A42:3)
(3) *ʾáy hóla dmìxta.¹ yómət ʾàrbi b-qéma.¹* 'She is asleep. On the fortieth day she will get up.' (A24:17)

(4) *táma b-xázət xa-ṭúra ramàna.*ˈ 'There you will see a high mountain.' (A8:47)

(5) *b-qlábtux b-xazə́nna Bə́lbəl Hazàr mə́nnux.*ˈ 'When you return I shall see Bəlbəl Hazar with you.' (A8:52)

(6) *ʾáy šaqíθa bṭ-áza.* 'The channel will flow.' (A8:11)

(7) *kút-yom ṭ-áθì làxxa.*ˈ 'They will come here every day.'

The form is perfective, since it presents actions delimited with a start and end point or at least with a start point. The form may also express iterative aspect (7). In this context the form can still be interpreted as perfective, in that the speaker uses the form that is appropriate to express each individual perfective occurrence of the iterated situation.

The predicted events may be about to occur in the very near future, as is shown by (8) and (9), where the verb is used with the adverb 'now':

(8) *hadíya ṭ-àθya Zíne,*ˈ *ʾarbí bɛrbiyáθa mə̀nna.*ˈ 'Now Zine is going to come with forty bridesmaids.' (A26:78)

(9) *díya ṭ-áθi pɛrmìlən.*ˈ 'Now they are going to come to slaughter us.' (A4:54)

The expression of imminence may be intensified by the phrase *hənṭ-ila* 'It is a little' (Kurd. hind), e.g.

(10) *hə́nṭ-ila ṭ-àθe*ˈ 'He will come very soon'

The *bəd-qaṭəl* form is used as a future tense in direct or indirect interrogative clauses, e.g.

(11) *ʾɛ́ka b-kále Gozàli?*ˈ 'Where will Gozali stay?' (A8:51)

(12) *xázəx mò-ṭ-awəð.*ˈ 'Let's see what he will do.' (A4:21)

(13) *xázən mó bṭ-amə̀rri.*ˈ 'I'll see what he'll say to me.' (A8:43)

15.1.5.2. *Deontic Future*

When the verb has an agentive 1st singular subject the *bəd-qaṭəl* form generally has a modal sense expressing deontic intention, e.g.

(1) *b-ṣàlyən*ˈ *b-tápqən bìye.*ˈ 'I shall go down to meet him.' (A4:21)

(2) *ʾàp-ʾana bṭ-ázən šúla*ˈ *pàlxən.*ˈ 'I also shall go and work.' (A23:1)

(3) *b-zonə́nne b-xamšî dinàre.*ˈ 'I shall buy it for fifty dinars.' (A24:23)

(4) *ṭ-yawə́nnux zùzux.*ˈ 'I shall give you your money.' (A1:10)

The intention may be to perform the action in the immediate future, e.g.

(5) *hadíya b-zadrànna gáni.*ˈ 'Now I am going to shake myself.' (A24:27)

When expressing deontic intention the *bəd-qaṭəl* form is occasionally combined with the particle of immediacy *də-/de-*, e.g.

(6) *ʾána də-ṭ-amrə́nnox ʾó-mdi-t taxrə̀nne.*ˈ 'I shall tell you what I remember.' (B15:1)

(7) *pálgət dáwi de-t-yánne ʾə́lle dìya.*ˈ 'I shall give him half of my gold.' (A14:92)

When the verb has an agentive 1st plural subject, the form often has a cohortative modal sense (Let's…), e.g.

(8) *bṭ-àrqexi.*ˈ 'Let's flee.' (A30:41)

(9) *bas-ṭ-ázexi ṭalbə́xla m-bába dìya.*ˈ 'But let us go and ask her father for her hand.' (A29:38)

(10) *b-súrəθ léðən mú y-amrìle,*ˈ *ṭ-ámrəx mtagəbràna.*ˈ 'I do not know what they call it in *surəθ*, let's say "governor."' (B6:47)

The form may express deontic obligation. In such cases the verb generally has an agentive 2nd person subject, e.g.

(11) *ʾati bṭ-àzet.*ˈ 'You should go.' (A8:46)

(12) *ṭ-azítu qam-d-o-gə̀ppa,*ˈ *ʾaw-gə́ppa rába ramànɛle.*ˈ *b-qarìtu:*ˈ *ʾó Bə́lbəl Hazàr!*ǁ 'You should go to the cave, the cave is very high. You should cry "Oh Bəlbəl Hazar."' (A8:28)

(13) *b-zɛ̀nət*ˈ *gótət d-an-xoránux xène*ˈ *ʾu-b-qàrət.*ˈ *ṭ-ámrət ʾó Bə́lbəl Hazàr!*ǁ 'You should stand next to the others, your friends, and call out. You should say "Oh Bəlbəl Hazar!"' (A8:48)

Occasionally the form expresses deontic obligation also in other persons, e.g.

(14) *ṭ-ázəl ṭalə́bla m-be-bába diya.*ˈ 'He should go and ask her father's family for her hand.' (A29:39)

(15) *ʾə́lla b-šaqlə̀nna*ˈ *xáθət Mir-Ẓ́ándin barxə̀nna-llux.*ˈ 'But I must first take the sister of Mir Zandin to marry her to you.' (A26:39)

When used in questions the form can sometimes be interpreted as express-
ing deontic obligation ('What should he do?') or deontic possibility ('What
can he do?'), whereby the speaker addresses the hearer expecting him to
impose an obligation or give permission, e.g.

(16) *políse mù ṭ-óði?*ˈ 'What should/can the police do?' (A8:9)
(17) *mó ṭ-oðèna?*ˈ 'What should/can I do?' (A1:17)
(18) *mò ṭ-ámrən ʾána?*ˈ 'What should/can I say?' (A26:34)

It is occasionally used to express deontic possibility in other contexts, for
example in the expression *ṭ-amrət* 'you could say', which is used to intro-
duce comparative descriptions as in (19) and (20):

(19) *rqàðɛla,*ˈ *ʾu-píšla ṭ-ámrət xlùlɛle táma.*ˈ 'They danced and you could
     say that (= it seemed that) there was a wedding there.' (A35:7)
(20) *ʾo-kɔ̀lša*ˈ *rába qùwyɛwa,*ˈ *yáˁni m-bár xá ʾəṣrá yomàθa,*ˈ *yáˁni ṭ-amrɔ́tte*
     *dabɔ̀šwa,*ˈ *kúlla ṭ-amrɔ́tte dabɔ́šwa xá kèpa yáˁni,*ˈ *képa-w kɔ̀lša.*ˈ 'After
     about ten days, you could say concerning it (= it seems) that it
     stuck together, you could say concerning it (= it seems) that the
     gypsum all stuck together in a single stone.' (B5:185)

15.1.5.3. *Conditional Constructions*
The *bəd-qaṭəl* form is used in the apodosis of conditional sentences. In
the majority of cases it expresses an action that is temporally sequential
to a hypothetical situation in the future. As elsewhere the form should
be interpreted as perfective, expressing a complete action with start and
end point or an action that is at least delimited with a start point that is
sequential to the situation described in the protasis, e.g.

(1) *ʾən-háwe t-tɔ̀rte ʾaqláθa,*ˈ *ʾána b-zawnɔ̀nne.*ˈ 'If it were two legged, I
     would buy it.' (A22:5)
(2) *ʾən-hawéli bràta*ˈ *t-yánna qa-bronèxu.*ˈ 'If I were to have a daughter, I
     would give her to your son.' (A25:8)
(3) *ʾən-kpìnni,*ˈ *ṭ-axlɔ̀nne.*ˈ 'If I am hungry, I shall eat it.' (A23:5)
(4) *ʾən-šắrəṭ díyi qəm-yăðɔ̀tla,*ˈ *xo-b-gawrànnux.*ˈ 'If you know (the answer
     to) my test, I shall indeed then marry you.' (A25:62)
(5) *ʾən-ʾamrɔ́nnux ʾáp-ʾati b-šànət.*ˈ 'If I tell you, you will faint.' (A11:2)
(6) *ʾən-ʾánna mtăməmɔ̀tla,*ˈ *ʾána t-yànna-llux.*ˈ 'If you fulfil these (conditions),
     I shall give them to you.' (A12:2)
(7) *ʾən-ʾaxlílən šəkwáne ṭ-axlílən.*ˈ 'If the ants eat us, they shall eat us.'
     (A14:52)

In some cases it expresses a future action that follows logically from a given, real situation in the present denoted by the protasis clause, e.g.

(8) *ʾən-íle xwarzàyi,¹ ṭ-áθe t-yăðéla ʾánna mòdila.¹* 'If he is my nephew, he will come and he will know what these are.' (A25:49)

(9) *ʾən-réšət bábe díye ʾax-ṭùra,¹ ʾu-hóle qṭíla l-Tătár-i Slemán-i Sə̀ndi,¹ lèka bṭ-ázəl.ꟾ¹* 'If the head of his father is like a mountain and he has been killed by Tătar-i Sleman-i Səndi, where will he go?' (A28:8)

15.1.5.4. *Discourse Dependency*

In conditional constructions such as those illustrated in §15.1.5.3. the action in the apodosis is presented from the viewpoint of the situation in the protasis and always has a future reference relative to this viewpoint. On some occasions the *bəd-qaṭəl* form expresses dependency on a preceding clause outside of conditional constructions. In such cases the action in the *bəd-qaṭəl* clause is not presented from the viewpoint of the preceding clause and so does not necessarily have future time reference. It may have present time reference. The form is perfective, delimited either by a start and end point or at least by a start point that is sequential to what precedes. It may also express iterative aspect, but still should be interpreted as perfective, in that it expresses one occurrence of an event that is representative of the iterated situation. The *bəd-* prefix in these constructions has lost the function of future temporal reference but expresses only dependency. This dependency make take the form of temporal sequentiality as in (1)–(5), e.g.

(1) *ʾə́rbe máxe l-ġðàðe,¹ ṭ-ázi xa-fàtra,¹ ʾal-salíqə zòrna.¹ máxe zórna xa-salíqa xèna,¹ ʾə́rbe b-dèri,¹ b-ganèy.¹* 'He gathers the sheep together and they go off for a while according to the tune of the pipe. He plays another tune on the pipe and the sheep return, by themselves.' (A25:27)

(2) *ʾu-zílele ṭ-ázəl ʾáθrət bàbə d-ɛ-bráta.¹* 'He set off and went to the land of the girl's father.' (A29:34)

(3) *b-léle qímla šárya bănúda dìya,¹ ṭ-àza,¹ pθíxla tắra qðìla.¹* 'At night she got up, untied her bands, then went and opened the door with a key.' (A18:3)

(4) *ʾu-šuréle ʿajòze¹ yáʿni kčàxa.¹ ʾu-t-lá xàləṭ¹ ṭ-ámər ya-ʾálaha šqùlli.¹* 'He had started to get incapable and tired and, in order for him not to commit an error, he says "Oh God, take me!"' (A15:19)

(5) *báθər ʾéða gòṛa¹ y-áθe ʾarbì-yome¹ báθər ʾéða d-o-gòṛa¹ ʾìθena¹ ʾéðət sulàqa.¹ …xàrθa¹ ṭ-áθe xá-ʾeða xréna zòra,¹ y-amríle ʾéðət musàrde.¹* 'After the Great

Festival, forty days after the Great Festival, the festival of Ascension takes place.... Afterwards comes a small festival, which is called *musarde*.' (B6:5–8)

In some cases the *bəd-qaṭəl* form does not express temporal sequentiality but only some kind of relevance to a preceding clause. Consider (6) and (7):

(6) *báwθə Ninwàye¹ ʾáp-ʾay ʾìtwa.¹ ṣemìla.¹ ṭ-ámri díge-w kθàye¹ ʾáp ʾan-zóre xtàye.¹* 'The Rogation of the Ninevites was also observed (in our community). They would fast during it. They would say "The cocks and the chickens, and also the small lowly creatues (should observe the fast)." ' (B16:15)

(7) *ʾána háwən Qára Tèždin,¹ maθyánət xárje-w bárjət boṭanàye.¹ ṭ-áθe xa-ʾárxa ʾax-d-àwwa¹ gu-bèθì¹ ʾu-pálət léðən lèkele zála,¹ léka là!¹* 'I am Qara Teždin, the collector of all taxes of the people of Botan, and a guest comes like this into my house and leaves without me knowing where on earth he was going!' (A26:34)

In (6) the clause introduced by the verb *ṭ-ámri* consitutes an elaboration of the preceding statement that people would hold a fast, which could be paraphrased 'with regard to this fasting they say....' In (7) the *bəd-qaṭəl* form verb *ṭ-áθe* denotes an action that is to be interpreted in the context of the speaker having a high social position, which is expressed by the statement 'I am Qara Teždin, the collector of all taxes of the people of Botan'. In (6) and (7) the *bəd-qaṭəl* verbs do not express sequentiality but nevertheless they are in some way dependent on what precedes. In (6) it may be said that the clause with the *bəd-qaṭəl* form introduces background to the preceding foreground, whereas in (7) the form introduces a foregrounded statement that is to be interpreted against the preceding background.

The fact that the use of the *bəd-qaṭəl* form may be motivated by the broad property of relevance to what precedes implies that it could be used anywhere within a section of discourse, since, in principle, all clauses would be in some way relevant to what precedes. This is how we should understand its use with the verb *ʾmr* 'to say' within sections of expository discourse such as (8) and (9), where they have habitual aspect:

(8) *m-lɛle mbàdla táma,¹ yáʿni mbarxìwa.¹ y-aθéwa qàša.¹ har-gu-bèθa¹ y-asríwale gnùna-w¹ yáʿni ṭ-ámrəx mbarxìwale.¹* 'In the early morning they would perform the blessing (of the wedding ceremony) there. A priest

would come. In the house they would tie the band. We say "They blessed it."' (B5:30)

(9) *béna bálki ʾo-nàša,ˈ ʾo-xə̀tna t̯-ámrəx,ˈ ʾo-ʾừrza,ˈ lè-y-awe táma.ˈ* 'Perhaps the person, we say the groom, the man, was not there.' (B5:18)

These *bəd-qaṭəl* forms of *ʾmr* are used interchangeably with the *ʾi-qaṭəl* form, e.g.

(10) *y-atwíwa b-dawère,ˈ ʾɛ́-ga b-dawère,ˈ . . . koðə̀nta y-amrə́xxa.ˈ* 'They would sit on mules, at that time (they sat) on mules, .. a *koðə̀nta* ('female mule') we call it.' (B5:28)

In (11) the *bəd-qaṭəl* form is used in clauses that depend on what precedes in that they have the status of non-restrictive relative clauses qualifying a head noun in the first clauses. This is similar to the elaborative function in (6) above:

(11) *kút-naša gu-ʾƐ̄n-Nún̓e ʾítle xaqlàθa,ˈ b-zărèlaˈ zrừta,ˈ ʾən-t̯-awə́dla bustàne,ˈ ʾən-t̯-awə́dle kù-mdi-t bằye.ˈ* 'Everybody in 'Ɛn-Nune has fields, which he cultivates, or he makes into an orchard or whatever he wants.' (B4:2)

15.1.5.5. *Negation of* bəd-qaṭəl *Forms*

The negative particle cannot be combined with the *bəd-qaṭəl* form. To express the negative, the negated form of the *qaṭəl* or *ʾi-qaṭəl* form is used, viz. *la-qaṭəl* or *la-y-qaṭəl* respectively. As described in §8.9., there are various phonetic variants of the *la-y-qaṭəl* form, which exhibit various degrees of contaction, viz. *le-y-qaṭəl, lɛ-qaṭəl*, e.g.

(1) *ʾána là-ʾaθən mə́nnux.ˈ t̯la-mò la-ʾáθət mə́nni?ˈ sí là-ʾaθən mə́nnux ʾána.ˈ* ' "I shall not come with you." "Why won't you come with me?" "Go away, I shall not come with you."' (A6:6)

(2) *qázi t̯-awə́dla t̯làlux,ˈ lá-ʾawədla t̯làli.ˈ* 'The judge will make a decision in your favour, he will not make it in my favour.' (A6:8)

(3) *lá maspərə́xləx bi-zàwda.ˈ* 'We shall not make you wait more.' (A4:41)

(4) *lè-y-axlena.ˈ* 'I shall not eat.' (B5:35)

(5) *ʾána m-axxa-húdxa lè-y-azən.ˈ* 'I shall not go beyond here.' (A12:23)

(6) *ʾána là-y-asqən.ˈ* 'I shall not go up.' (A32:29)

(7) *bas-lè-y-yənna bnáθi-llexu.*ˈ 'But I shall not give my daughters to you.'
(A12:17)

The *ʾi-qaṭəl* form is used elsewhere to express imperfective habitual aspect. As remarked above, however, the positive *bəd-qaṭəl* form is intrinsically perfective. The explanation appears to be that the positive future perfective form asserts that a specific action will take place at a particular point in time whereas its negated form should properly be interpreted as expressing an enduring property of the subject referent rather than referring to an event that is bound to a particular point in time. When a speaker says *ṭ-axlən* 'I shall eat', he is asserting that there will be a particular point in time when he will eat. When he says *le-y-axlən*, on the other hand, the sense is 'I have the property of not eating'. The salience of the particular point in time of an action is diffused when it is negated to the extent that an imperfective form is used. The use of the negated *qaṭəl* form, viz. *la-qaṭəl*, should, likewise, be interpreted as expressing a non-punctual habitual imperfective aspect.

A parallel to this diffusion of the salient temporal punctuality of a perfective form by negation is found in the imperative. Imperative forms express a more salient, immediate command than deontic *qaṭəl* forms. Although imperatives can be negated, there is a greater tendency for negated commands to be expressed by *qaṭəl* forms than is the case with positive commands (for further details see §15.7.). In some NENA dialects, furthermore, a negated command can only be expressed by a *qaṭəl* form.

15.1.6. bəd-qaṭəlwa

15.1.6.1. *Conditional Constructions*

The *bəd-qaṭəlwa* form, with the past converter suffix *-wa*, is used in the apodosis of conditional sentences that refer to a hypothetical condition in the past, which was not fulfilled (1–2), or to a hypothetical condition in the present or future, which the speaker assesses to be impossible to fulfil (3–4). The verb form expresses an action that is temporally or logically sequential to the situation expressed in the protasis. Since it is delimited by a starting point that is sequential to what precedes, it is inherently perfective, e.g.

(1) *ʾən-mbaqrə̀twa,*ˈ *t-yawə́nwalux zùze,*ˈ *bás là mbuqə́rrux.*ˈ 'If you had asked, I would have given you money, but you did not ask.'

(2) *ʾən-yăðə́nwa manay-díye mòdiwa,*¹ *ṯ-amrə̀nwalux,*¹ *bas-là yăðə́nwa.*¹ 'If I had known what its meaning was, I would have told you, but I did not know.'

(3) *ʾən-maṣə̀nwa,*¹ *ṯ-aθə̀nwa,*¹ *bás lè-y-maṣən.*¹ 'If I could, I would come, but I cannot.'

(4) *ʾən-hawə́twa gu-ʾáθṛa dìyi,*¹ *kú-məndi băyə́twa t-yànwalux.*¹ 'If you were in my country, I would give you whatever you wanted.' (A26:57)

The form may also express iterative aspect. In this context the form can still be interpreted as perfective in that the speaker uses the form that is appropriate to express each individual perfective occurrence of the iterated situation, e.g.

(5) *ʾən-maṣə́nwa t-yawə́nwalux zúze kùt-yum,*¹ *t-yawə̀nwalux,*¹ *bás le-y-maṣə̀nwa.*¹ 'If I had been able to give you money every day, I would have given it to you, but I could not.'

(6) *ʾən-maṣə́nwa t-yawə́nwalux zúze kùt-yum,*¹ *t-yawə̀nwalux,*¹ *bas le-y-màṣən.*¹ 'If I could give you money every day, I would give it to you, but I cannot.'

15.1.6.2. *Deontic Constructions*

The *bəd-qaṭəlwa* form is used in questions relating to counterfactual situations in the past. They are of a deontic nature, in that the speaker addresses the hearer expecting him to impose an obligation (deontic necessity: 'What should I have done?') or give permission (deontic possibility: 'What could I have done?'), e.g.

(1) *ʾína m-èka*¹ *ṯ-óðənwale gə́šra?*¹ 'But from where could I have made him a bridge?' (A17:18)

(2) *gúrzə šə́rmux xo-ʾána ṯ-azə́nwa bìya?*¹ '(Why) should I have been finished off by your stupid club (literally: the club of your behind)?!' (A52:17)

15.1.6.3. *Discourse Dependency*

The *bəd-qaṭəlwa* form is used outside of conditional constructions in clauses that are in some way dependent on the preceding discourse. In such cases the verb always expresses an iterative action. Various types of discourse dependency are attested in the text corpus. In (1) and (2) the *bəd-qaṭəlwa* verbs are temporally sequential to what precedes:

(1) *čɛrxìwala máθa¹ xáṣə dawère.¹ y-amríwa čáppe bùkela.¹ ʾay-ṭ-aθyàwa,¹ ṭ-oràwa,¹ maxyáwa…mə̀šxa¹ ʾu-ṭ-oðáwa ṣlìwa,¹ mə̀šxa,¹ gu-tắrət qàṣra.¹* 'They would take her (the bride) round the village on the back of mules. They called it *čappe buke*. (Then) she would come back, enter (the house) and make with oil…and make (the sign of) the cross in oil on the door of the house.' (B10:34–35)

(2) *la-θéle rēš-ṣàwma.ʔ¹ b-šaqlə́xwa kúlla ʾamànən,¹ kùlla b-šaqlə́xwala¹ dérəxwa qə́ṭma mxallə̀xwala.¹* 'When the beginning of the (Lent) fast came, we would take all our vessels, we would take them all and put ash on them to clean them.' (B16:7)

Other types of dependency are exhibited by the verb forms in the following examples:

(3) *qam-ṣàwma¹ ʾíθ xošébə bnàθa.¹ bnáθa kúlla bṭ-azíwa bèθa,¹ b-šaqlíwa ʾixála mən-d-áwwa d-áwwa d-àwwa,¹ ṭ-azíwa gu-xa-ṭùra,¹ ṭ-atwìwa,¹ ṭ-axlìwa,¹ b-šatìwa.¹* 'Before the fast (of Lent) was Girls' Sunday. All the girls went home, took food from here and from there, then went to a mountain, where they sat, ate and drank.' (B16:18)

(4) *ʾa-ʾilána mzabnìwala y-amróxxa.¹ ṭ-aθéwa xə́zme dìye¹ ṭ-amə̀rwa¹ hé gállək nàše,¹ ʾéni záwən ʾilàna.ʔ¹ xa-náša díye ṭ-ámərwa ʾána zonə́nna b-ə̀ṣra,¹ šaqlíwa ʾə́ṣra dinàre.¹ ʾu-xéna ṭ-ámərwa zonə́nna b-xamšàssər,¹ šaqlíwa xamšàssər.¹* 'They sold the tree, as we say. His relatives would come and (one) said "Hey, everybody, who will buy the tree?" One relative of his would say "I shall buy it for ten" and they would receive ten dinars. Another would say "I shall buy it for fifteen" and they would receive fifteen.' (B5:42)

(5) *ʾíθwalən ʾùmra¹ Mar-Gwìrgis¹…ʾu-réše dìye¹ ʾiwàwa¹ wídta ṭla-plàša.¹ ṭ-awríwa nàše¹ gáwa gáwət ʾùmra,¹ rèše,¹ xazíwala kùlla dukáne,¹ palšìwa.¹* 'We had the church of Saint George…The top of it was designed for war. People would enter into the church, (go up) on top of it, and they would see all places, when there was fighting.' (B2:3)

(6) *lá-mṣəxwa ṭ-óðəxwa čú-mdi qam-tàlga.¹ ma-t-y-aθéwa tàlga,¹ y-aθèwa,¹ lá-mṣiwa ʾə̀p-axxa palṭíwa.¹ ṭ-attóxwa béna gu-bèθa.¹* 'We could not do anything on account of the winter. So much snow fell that people could not go out even to here. We sat in the house.' (B16:27)

In (3) the clause containing the first *bəd-qaṭəlwa* verb, *bṭ-azíwa*, opens a section of discourse that elaborates on the preceding general statement that

the festival of Girls' Sunday took place. The dependency expressed by
the verbal form binds it semantically to what precedes signalling that the
description of the specific event in the clause is intended to be understood
as a component of the festival. This example also contains a subsequent
chain of *bəd-qaṭəlwa* forms (*b-šaqlíwa*...*ṭ-azíwa*...*ṭ-atwìwa*...*ṭ-axlìwa*,
b-šatìwa). The clauses containing these verbs are also elaborative of the
initial general statement. Most of them can also be interpreted as tem-
porally sequential to the clause immediately preceding it. The semantic
dependency in these clauses consists of both the relation of specific to
general and also temporal sequence.

Example (4) is similar to (3). The first *bəd-qaṭəlwa* verb, *ṭ-aθέwa*, occurs
in a clause at the onset of a section of discourse that describes the spe-
cific events of the general event of selling the tree. The discourse depen-
dency, therefore, is the relationship of specific to general. The subsequent
bəd-qaṭəlwa verbs (*ṭ-ámərwa*...*ṭ-ámərwa*) are, likewise, specifying this general
event, but also are temporally sequential to what immediately precedes
them.

The clause containing the *bəd-qaṭəlwa* verb in (5) occurs at the onset
of a section that elaborates on the preceding statement concerning the
roof of the church.

The relationship of the verb *ṭ-attέxwa* in (6) to what precedes is one of
effect to cause, i.e. people could not go out on account of the snow and
for this reason we sat in the house.

15.1.6.4. *Negation of* bəd-qaṭəlwa *Forms*

There is a similar constraint against combining the negative particle with
the *bəd-qaṭəlwa* as there is with the *bəd-qaṭəl* form. To express negation, the
negated *qaṭəlwa* and *ʾi-qaṭəlwa* forms are used suppletively, e.g.

(1) *xà-mənnεxu b-tarέwa*ˈ *ʾu-xéna là tarέwa.*ˈ 'One of you would get wet
    and the other would not get wet.' (A17:18)

(2) *ʾən-háwε ʾəṣrà ṭiyáre xéne*ˈ *ʾaxwáθux hawnàne,*ˈ *la-maṭétuwa l-àwwa lóxma,*ˈ
    *ʾu-ʾattítuwa láxxa pεšítuwa hátxa snìqe.*ˈ 'If ten other men from Ṭiyare
    were as intelligent as you, you would not have reached this miser-
    able condition, you would not be sitting here and have become so
    poor.' (A17:16)

(3) *ʾáp-ʾən mbaqràtwa,*ˈ *le-y-yawə́nwalux zùze.*ˈ 'Even if you had asked, I
    would not have given you money.'

15.1.7. qəm-qaṭəl

15.1.7.1. *Preliminary Remarks*

This form is used before pronominal L-suffixes, i.e. *qəm-qaṭəlle*, *qəm-qaṭəlla*, *qəm-qaṭəllɛ*, etc. The L-suffixes may express the direct object or the indirect object. It expresses a past perfective aspect. As has been remarked (§15.1.1.1.), the *qaṭəl* form without additional affixes may express a present perfective. The *qəm-qaṭəl* form has been formed by attaching the prefix *qəm-* to this perfective *qaṭəl* base. The *qəm-* prefix is likely to be a fossilized form of the old suffix conjugation form *qaddəm* 'He did (something) beforehand'.[2] In some isolated cases before initial /ʾ/ verbs, the subordinating *D* particle is inserted between the *qəm* and the verb, e.g. *qəm-ṭ-amə́rra* 'He said to her' (A4:4).

There is no functional difference between the *qəm-qaṭəl* form and the *qṭille* form, which also expresses past perfective aspect. The *qəm-qaṭəl* form is used as a more versatile means of expressing the past perfective with L-suffixes. Direct or indirect pronominal objects of the 3rd person may be expressed by incorporation into the past base *qṭille* form, e.g. *qṭille* 'He killed him', *qṭilale* 'He killed her', *qṭilile* 'He killed them'. The *qəm-qaṭəl* form is the usual means of expressing pronominal objects of the 1st and 2nd person on a past perfective verb and it expresses 3rd person objects interchangeably with the *qṭille* form with object incorporation.

15.1.7.2. *Recent Past Events*

In conversational discourse the normal function of the *qəm-qaṭəl* form is to express with perfective aspect the occurrence of a punctual event in the recent past. The margin of the recent past may extend up to the present moment. The form may be used, therefore, when the endpoint of the event is witnessed in the present moment. It is appropriate to translate the form in such contexts by the English perfect of recent past. Examples of this are found in the text corpus, mainly in sections of direct speech, e.g.

(1) *ʾáti qəm-xalṣàtli¹ mən-d-áwwa mòθa.*¹ 'You have saved me from death.' (A14:35)

---

[2] In many NENA dialects the prefix has an /a/ vowel (*qam-*). In Barwar the attenuation of the /a/ to /ə/ is regular and the form contrasts with the particle *qam* 'before', which generally preserves the /a/ (§2.3.5.). In the C. Sulemaniyya and C. Sanandaj dialects the auxiliary verb *qaddəm* has developed into the form *tam-* with the elision of the first syllable and devoicing of the medial *d*.

(2) *xzi-ʾaláha lá qəm-msapélən l-iθàθa.*ˈ 'See, God has not delivered us into their hands.' (B9:26)

(3) *ʾáwwa Màr-Múše qəm-mayéla ʾáyya biyéxu.*ˈ 'St. Muše has brought this upon you.' (B18:17)

(4) *qəm-jarbə̀tlɛni*ˈ *xázəx ṭ-áθəx hayoràxlux lo-là.*ˈ 'You have tested us to see whether we would come to help you or not.' (A48:6)

When it has this function, it is sometimes combined with the deictic copula, which refers to the grammatical subject of the verb, e.g.

(5) *hóla qəm-qaṭlìle.*ˈ 'They have killed him.' (A28:27)

The results of such events that occur in the very recent past are likely to have some relevance in the present. It is important to note, however, that the *qəm-qaṭəl* form does not assert the existence of a resultant state in the present, rather it is only an implicature. If the speaker wishes to assert that such a resultant state holds at present, the compound form consisting of resultative participle and copula is used (§15.4.1.). This applies also to constructions with verbs with stative actionality such as *yð* 'to know', where the *qəm-qaṭəl* form is most appropriately translated by the English present, e.g.

(6) *máre ʾɛ̀kɛle bɛθéxu?*ˈ *mára fə̀llən dùkθa.*ˈ *máre qəm-yăðð̀nne.*ˈ 'He said "Where is your house?" She said "In such-and-such a place." He said "I see" (literally: I have (now) know it).' (A22:14)

15.1.7.3. *Past Perfective in Narrative*

The *qəm-qaṭəl* form is used in narrative as a preterite to refer to punctual events in the past with a perfective aspect, e.g.

With direct pronominal object suffixes:

(1) *θéla qəm-mparqíli m-gu-ʾiθàθux.*ˈ 'They came and saved me from your hands' (B17:15)

(2) *záwna qəm-ʾawə́dlux lebàna.*ˈ 'The time made you a trickster.' (A1:22)

(3) *qəm-ṭarádle θéle zìlle*ˈ *be-ʾámte dìye.*ˈ 'He drove him away and he went back to his aunt's house.' (A23:33)

(4) *ʾàna*ˈ *ṭḷà-yome*ˈ *qəm-mjarbə̀nna.*ˈ 'I tested her for three days.' (A21:36)

(5) *θéle xa-náša qəm-šaqə́lle ʾo-kàrmi.*ˈ 'A man came and took away my orchard.' (A17:30)

(6) *qəm-ʾač̌màle tắra.*ˈ 'She closed the door' (A19:4)

With indirect pronominal object suffixes:

(7) *ʾá-dana qəm-amə̀rra.*¹ 'Then he said to them.' (A52:3)

(8) *ʾáw qəm-mjawə̀bla.*¹ 'He replied to her.' (A25:65)

(9) *qəm-hawíla xáčča ʾixàla.*¹ 'They gave them some food.' (A8:12)

(10) *qəm-yálli šùla.*¹ 'He gave me a job.' (A23:34)

On some occasions in a narrative the *qəm-* prefix is omitted from the form in verbs that follow an initial *qəm-qaṭəl* form in a closely knit sequence. The resulting reduced forms consist only of the *qaṭəl* base and L-suffixes, but still have past time reference, e.g.

(11) *θéla jə̀nne,*¹ *qəm-šaqlìle,*¹ *nablìle,*¹ *mattìle*¹ *ʾal-ṭúrət Jazíra Bòta.*¹ 'Jinn came and took him. They took him away and put him on the mountain of Jazira Bota.' (A26:19)

(12) *rwèle*¹ *qəm-doqále p-àqle,*¹ *xrrr garšále nablále gu-čàčma.*¹ 'He became drunk and she grasped him by his legs, dragged him along and took him to the bathroom.' (A17:26)

(13) *qəm-čarxíle dawqìle.*¹ 'They surrounded him and caught him.' (A28:24)

(14) *qəm-šaqə́lla mɛθèla.*¹ 'He took her and brought her back.' (A28:37)

(15) *ʾáti qəm-asṛátla ʾáqli w-iθàθi,*¹ *mrapátli làxxa.*¹ 'You bound my legs and hands and left me here.' (A10:12)

(16) *kúlla qəm-mɛθíla qaṭlìla.*¹ 'He brought them all and killed them.' (A12:70)

(17) *qəm-doqə́tli xošə́tli gu-gòma.*¹ 'You seized me and confined me in the basement.' (B17:15)

15.1.7.4. *Conditional Constructions*

The *qəm-qaṭəl* form may be used in the protasis of a conditional construction. In such contexts it may have not only past, but also present or future time reference, e.g.

(1) *ʾən- kúlla qəm-maxíla bə̀rrèy*¹ *ʾáw qəm-dawqíle ʾo-qésa ṭ-íle be-pàlga,*¹ *θèla*¹ *xá mən-d-ánna ṭ-íla qam-tằra,*¹ *θéle qəm-dawə̀qle,*¹ *xsìrra ʾan-gawáye.*¹ 'If they have broken up all their group or have seized the piece of wood that is in the middle, if one of those who are outside has come and seized it, those inside have lost.' (B11:9)

(2) *ʾən-šắrəṭ díyi qəm-yăδə̀tla,*¹ *xo-b-gawrànnux.*¹ *ʾən-šắrəṭ díyi là qəm-yăδə́tla,*¹ *réšux mattánne gu-d-yàha káwe*¹ *ṭ-íla p̣yàša.*¹ 'If you know (the answer

to) my challenge, I shall indeed marry you. If you do not know
(the answer to) my challenge, I shall put your head in that opening
that remains.' (A25:62)

15.1.8. qəm-qaṭəlwa

The *qəm-qaṭəl* form may be augmented with the past suffix *-wa*. As is the
case with the *qəm-qaṭəl* form, the *qəm-qaṭəlwa* is used only with L-suffixes.

    The basic function of the *qəm-qaṭəlwa* form is to denote an event in the
past with the deictic temporal reference point in the present, just as is the
case with the *qəm-qaṭəl* form. The difference between the two forms is that
in conversational discourse *qəm-qaṭəl* refers to the recent past, the margin
of which may extend up to the present moment, whereas the *qəm-qaṭəlwa*
form is detached temporally from the present. The action expressed by
the *qəm-qaṭəlwa* form, however, is not necessarily in the remote past. It
may have occurred a few minutes prior to the present moment. There
is, in fact, a degree of overlap between the absolute temporal reference
of *qəm-qaṭəl* and *qəm-qaṭəlwa*. Informants, however, tend to judge that it
is not felicitous to use the *qəm-qaṭəl* form to refer to an event that took
place on the previous day or prior to it, whereas the time reference of
qəm-qaṭəlwa can be extended indefinitely into the past. The relationship
between *qəm-qaṭəl* and *qəm-qaṭəlwa* in conversational discourse may be
summarized as follows:

(i)   Immediate past temporal reference
     qəm-qaṭəl:
         'I have just now seen him'   *diya qəm-xazənne*

(ii) Recent past temporal reference
     qəm-qaṭəl:
         'I saw him five minutes ago'[3] *qəm-xazənne qam xamša daqiqe*
     qəm-qaṭəlwa:
         'I saw him five minutes ago' *qəm-xazənwale qam xamša daqiqe*

---

[3] It should be noted that in English the present perfect is not used in a clause containing
certain time adverbials although the event has relevance for the present moment.

(iii) Remote past temporal reference
      qəm-qaṭəlwa:
          'I saw him yesterday'   *qəm-xazənwale təmməl*
          'I saw him a year ago'   *qəm-xazənwale qam-xa šeta*

Examples (1) and (2) below from expository texts contain *qəm-qaṭəlwa* forms
functioning as a preterite. Note that in (2) the preterite form *qəm-ʾoðə́nwale*
is used with the same time reference as the adjacent form *qəm-ʾoðə́nne*,
which is also used as a preterite, as is usual in narrative:

(1) *ʾína báte qámθa ṭìna-wɛwa.¹ ʾu-píšwala ṭ-amróxwa qàṣre,¹ béna ʾáwwa*
     lɛ́ y-amróxwa bàte¹ y-amróxwa qàṣra.¹ sab-bíš muntêwalɛ¹ šə́mma díya
     qəm-mšaxəlpìwale.¹ 'Formerly, however, houses were made of mud.
     They (the houses) became villas, as we called them. We did not
     call them houses, we called them villas. Since (people) were more
     prosperous, (they built bigger houses) and they changed the name
     of them.' (B5:198)

(2) *ʾáyya šètə¹ t-zílli l-ʾàθra,¹ ʾƐ́nə Nùne,¹ ʾáxc̆i là gu-ʾƐ́nə Núne qəm-ʾoðə́nne ʾéða,¹*
     qəm-ʾoðə́nwale gu-Dòhok,¹ har-mədre-táma xzélən nāš-dìyən,¹ maplóšlən bé̮e
     smòqe¹ sá̮ət ʾárba-w pálge qèdamta.¹ ʾu-mən-táma zílwalən xílwalən ṭàmta.¹
     'This year, when I went to the land, 'Ɛn-Nune—but I did not
     spend the festival in 'Ɛn-Nune, I spent it in Dohok—again we saw
     our relatives, we knocked red eggs together at half past four in the
     morning. Then we went and ate breakfast.' (B15:9)

The *qəm-qaṭəlwa* form is rarely found in narrative sections of stories in the
text corpus. When it is used in this context, it tends to be used to denote
an event that took place at a point in the past that is detached temporally
from that of the events in the surrounding narrative line, in that it took
place at some period in the remoter past. It does not denote a resultant
state that acts as the background against which the narrative takes places
and so should not be characterized as a pluperfect or past perfect. Such
a state, however, may be an implicature and it is often appropriate to
translate the form by the English pluperfect, e.g.

(3) *béna ʾurxa-ʾùrxa,¹ qəm-jayə̀rwala.¹ ṣlèla¹ jòre.¹ mə́re məšxàne!¹ káde məšxàne!¹*
     ṣléla b-júlle dìye,¹ šqáləlla mšày̮əlla.¹ 'Now, on the way, he urinated (at
     a point detached from the immediate situation) / he had urinated.
     The urine flowed down. He said "They're oily! The *kade* cakes are
     oily." It ran down onto his clothes.' (A30:46)

15.1.9. ṣadle

The irregular form *ṣadle* 'He is afraid', which is conjugated with L-suffixes, is used to express imperfective aspect to refer to the actual present. It is treated like verbs derived from the present base and can take the prefix *ʾi-* and the affix *wa* in a variety of forms with imperfective function. The *ʾi-* prefix is optionally added when it has a habitual imperfective aspect. The *wa* affix gives the form a past time reference:

ṣadle	'He is afraid (now)'	= *qaṭəl*
(ʾi-)ṣadle	'He is afraid (habitually)'	= *ʾi-qaṭəl*
ṣadwale	'He was afraid'	= *qaṭəlwa*
(ʾi-)ṣadwale	'He was afraid (habitually)'	= *ʾi-qaṭəlwa*

The forms without the *ʾi-* prefix may also be used deontically, e.g. *la-ṣàdlux* 'Do not be afraid!' (B9:26). Perfective past or future tenses can only be expressed by the regular verb *zdʾ*.

15.2. The Function of the Verbal Forms Derived from the Past Base

15.2.1. qṭille

15.2.1.1. *Recent Past Events*
In conversational discourse the normal function of the *qṭille* form is to express with perfective aspect the occurrence of a punctual event in the recent past. The margin of the recent past may extend up to the present moment. The form may be used, therefore, when the endpoint of the event is witnessed in the present moment. It is appropriate to translate the form in such contexts by the English perfect of recent past. Examples of this are found in the text corpus, mainly in sections of direct speech, e.g.

(1) *gáwṛi θéle mṭáši gànux.*ˈ 'My husband has come back. Hide yourself!' (A22:29)

(2) *xázəx mŭdəṛìlux,*ˈ *ṭla-mò?*ˈ 'I see you have brought them back. Why?' (A17:14)

(3) *mu-ṣṭímlux bèθi,*ˈ *ʾáti wídlux hátxa hátxa bìyi?*ˈ 'Why have you ruined my house and done such a thing to me?' (A15:14)

(4) *txírri xá-məndi xèna.*ˈ 'I have (just) remembered something else.' (B15:45)

(5) *šwiqáli táma ʾu-θéli l-àxxa.*ˈ 'I have left it there and come here' (closing formula of a story). (A4:60)

The results of such events that occur in the very recent past are likely to have some relevance in the present. It is important to note, however, that the *qṭille* form does not assert the existence of a resultant state in the present, rather it is only an implicature. If the speaker wishes to assert that such a resultant state holds at present, the compound form consisting of the resultative participle and copula is used (§15.4.1.). This applies also to constructions with verbs with stative actionality such as *yð'* 'to know', where the *qṭille* form is most appropriately translated by the English present, e.g.

(6) *ʾu-hadíya ðíli ʾána manáy díyux mòdila*ˈ *ʾu-t-màlka.*ˈ 'Now I know what you mean and what the king means.' (A17:35)

(7) *har-šúqla tàma.*ˈ *la-bắyən ʾo-qàṣra.*ˈ *ʾámər hé xàli*ˈ *ðìli díya.*ˈ ' "Leave it alone over there. I don't want (anything to do with) that palace." He said "Well, uncle. Now I know." ' (A25:53)

(8) *rábe məndiyáne šmìli.*ˈ *ʾáti làt-glaya ṭláli,*ˈ *ʾána ðìli.*ˈ 'I have heard many things. You are not revealing (the truth) to me. I know (the truth).' (A38:13)

The basic meaning of the *qṭille* form here is ingressive, expressing the event of entering into the state denoted by the verbal lexeme in the recent past ('I have just come to know'). The existence of a resultant state is an implicature. Verbs that acquire this ingressive sense in the *qṭille* form characteristically express a continuous state rather than iterative action in the imperfective *qaṭəl* base forms, e.g. *yăðe* 'He knows', *yăðewa* 'He used to know'. They should be distinguished from verbs that express the entering into a state in their basic lexical meaning, e.g. *ʾtw* 'to sit down', *kly* 'to stand up', *kpn* 'to become hungry'. The latter type of verb can be interpreted as having an ingressive sense in the *qṭille* form, e.g. *tiwle* 'He has sat down' (= he has entered the state of sitting), *klele* 'He has stood up' (= he has entered the state of standing), *kpinne* 'He has become hungry'. This ingressive sense, however, arises from the telic lexical meaning of the verb rather than from the *qṭille* form, as is shown by the fact that the imperfect *qaṭəl* base forms of these verbs characteristically express iterative rather than continuous action, e.g. *y-atwənwa tama* 'I used to sit there', *ʾi-kalewa tama* 'He used to stand there', *har ʾi-kapənwa* 'He was always becoming hungry'.

The function of the *qṭille* form is occasionally exploited to denote an event that is about to take place in the immediate future by presenting it as if it has just happened, e.g.

(9)   *mítli m-kə̀pna.*ˈ 'I have (almost) died of hunger = I am dying of hunger.' (A27:31)

(10) *ʾána zìlli kəs-bábi.*ˈ 'I have (almost) gone to my father = I am going just now to my father.' (A14:102).

(11) *ṣríxɛle yàba*ˈ *qídle bɛ̀θi!*ˈ *qídle bɛ̀θi!*ˈ 'He cried "Oh my house has (almost) burnt down! = My house is burning down."' (A48:4)

The *qṭille* form is sometimes used to express a perfective event that overlaps with the present moment in that it takes place by virtue of the utterance of the clause, i.e. in a performative function. The verbs in (12) and (13) can be interpreted in this way:

(12) *mə́re bắyən ṭalbə́nna brátux ṭla-xòni.*ˈ *mə́re hiwàli.*ˈ 'He said "I want to ask for the hand of your daughter for my brother." He said "I give her to you."' (A32:11–12)

(13) *xa-zawə́nwala ʾamə̀rwa*ˈ *ʾána puxlàli ṭlálux.*ˈ 'One would buy it and say "I (hereby) relinquish it (and give it back) to you."' (B8:38)

When the endpoint of the past event is adjacent to the present moment, the *qṭille* form is sometimes combined with the deictic copula, which refers to the grammatical subject of the verb, e.g.

(14) *hóle dìṛre.*ˈ 'He has returned.' (A22:39)

(15) *Mir-Žándin hóle θèle.*ˈ 'Mir-Zandin has come.' (A26:46)

15.2.1.2. *Past Perfective in Narrative*

In narratives the *qṭille* form is used as a preterite to refer to punctual events in the past with a perfective aspect. This usage is abundantly attested in the narratives of the text corpus, e.g.

(1) *θéle xa-náša swarìyya*ˈ *rakáwa.*ˈ *ṣléle rəš-xa-ʾɛ̀na.*ˈ *tìwle,*ˈ *xílle mə̀ndi,*ˈ *štéle mìya.*ˈ 'A horseman, a rider came. He alighted at a spring. He sat down, ate something and drank some water.' (A15:1)

(2) *b-lɛ̀le,*ˈ *zìlla,*ˈ *síqla xa-máθa xèta.*ˈ 'At night they went off, and went up to another village.' (A15:10)

(3) *zílla báre báre dìye.*ˈ *wírre gu-xa-bòya.*ˈ 'She went after him. He entered
     a hole.' (A20:5)

(4) *mṭéle gárre dìye*ˈ *wírre kəs-màlka.*ˈ 'His turn came and he entered into
     the presence of the king.' (A1:7)

(5) *ʾáwwa málka xzéle xa-xə̀lma.*ˈ 'This king had a dream' (A1:2)

(6) *bréla ðá xadúθa gu-d-ò-ʾalma.*ˈ 'A (great) joy arose among the people.'
     (A4:56)

(7) *ʾaw-bxéle ʾu-mquhə̀rre.*ˈ *tíwle bxàya.*ˈ 'He wept and became sad. He sat
     down weeping.' (A37:6)

The event that is referred to by the *qṭille* form may extend over a long
period of time. The crucial feature is that the speaker presents the event
with perfective aspect, i.e. a complete, delimited event. This applies to
cases such as the following:

(8) *píšla xà-šabθa,*ˈ *tré šabbàθa,*ˈ *kpìnna.*ˈ 'A week, two weeks went by and
     they became hungry.' (A20:9)

(9) *píšla yóma ṭla-yòma,*ˈ *yóma ṭla-yòma,*ˈ *píšla b-šə̀nne.*ˈ 'She went on (like
     this) from day to day, day to day, she went on for years.' (A21:1)

The *qṭille* form is occasionally used in contexts where the action is itera-
tive, consisting of a series of punctual events in the past. The speaker
uses the perfective *qṭille* form to focus on one of these punctual events as
representative of the series. The iterativity of the event is an implicature
of the context, e.g.

(10) *mxéla l-ġðàðe*ˈ *ha-t-ṭláθna mìtla.*ˈ 'They beat one another until the
     three of them died.' (A22:35)

Conversely, a series of *qṭille* forms are sometimes used in narrative to
express a gradual execution of a single event, each form expressing a
component phase of the event, e.g.

(11) *ʾu-sìqla-w*ˈ *ʾu-sìqla-w*ˈ *ʾu-sìqla-w*ˈ *ʾu-sìqla-w*ˈ 'She (gradually) came up
     and up and up and up.' (A4:17)

15.2.1.3. *Future Perfect*

The *qṭille* form is occasionally used with the function of a future perfect,
i.e. it refers to a future event that occurs prior to another future event. In

such constructions, the form expresses past time, in accordance with its
normal usage, but its deictic centre has been shifted from the present to
some point in the future, e.g.

(1) *har-qítla bìyux,*ˈ *qaṭlílux ṭ-axlílux.*ˈ 'As soon as they hit you, they will
    kill you and eat you.' (A22:29)

(2) *dánət kawùθra,*ˈ *har-wéla dánət kawùθra,*ˈ *xzélux xa-náša θàya,*ˈ *málla bṭ-àθe,*ˈ
    *ṭ-áwər gu-bèθa,*ˈ *yáʿni xamšá daqíqela hal-ʾəṣra*ˈ *ʾáti ʾàθeti.*ˈ 'At lunchtime, as
    soon as lunchtime has come and you have seen a man coming—the
    mullah will come and enter the house—after five or ten minutes
    you should come back.' (A22:22)

15.2.1.4. *Conditional Constructions*

A function of the *qṭille* form that is related to that of the future perfect
is its use in the protasis of conditional constructions to express a possible
event in the future that is temporally and/or logically anterior to the situ-
ation described in the apodosis, e.g.

(1) *ʾən-kpìnni,*ˈ *ṭ-axlə̀nne.*ˈ 'If I get hungry, I shall eat it.' (A23:5)

(2) *ʾən-mpŭqèli*ˈ *garšə́tli ṭla-gére mə́nne dìye.*ˈ *ʾu-ʾən-là mpŭqéli,*ˈ *ʾána pálxən b-réše
    bắlằš.*ˈ 'If I split it, you will produce for me three arrows from it. If
    I do not split it, I shall work over it for free.' (A12:44)

(3) *ʾən-báxtux muθéla bràta*ˈ *ʾu-báxti muθéla bròna,*ˈ *brátux qa-bròni.*ˈ *ʾən-báxti
    muθéla bràta*ˈ *ʾu-báxtux muθéla bròna,*ˈ *ʾa-bráti qa-brònux.*ˈ 'If your wife
    gives birth to a girl and my wife gives birth to a boy, your daughter
    (will be married) to my son. If my wife gives birth to a daughter
    and your wife gives birth to a son, my daughter (will be married)
    to your son.' (A25:2–3)

(4) *ʾən-θèli*ˈ *xó bàxtiwət.*ˈ *ʾu-ʾən-là-θeli,*ˈ *kú-məndit ʾáwðət wùð.*ˈ 'If I come
    back, then you are my wife. If I do not come back, do anything
    you want.' (A25:66)

(5) *qrèla!*ˈ *ʾən-mjuwə̀bla,*ˈ *xo-ʾànən ʾóθya kə́sləx.*ˈ *ʾən-là mjuwə́bla,*ˈ *ʾàtit θíθa kə́sli.*ˈ
    'Call them! If they answer you, then indeed it is me who has come
    to you. If they do not answer you, you have come to me.' (A26:4)

(6) *ʾən-θéla ṣláya ʾàxxa,*ˈ *xákma náše ʾàxxa,*ˈ *ʾən-mboqə̀rra mə́nnux,*ˈ *ʾánna d-ɛnìla,*ˈ
    *múr ga-ʾánna t-ʾÁjdən tèlɛla.*ˈ 'If they come down here, some people
    (come down) here, if they ask you "Whose are these?", say "Well,
    these belong to Ajdən the fox."' (A32:17)

15.2.1.5. *Possible Events in the Future*

The *qṭille* form is occasionally used in other contexts expressing a possible event in the future. It is found, for example, in constructions with *balki* 'perhaps'. Here there is no necessary implication of anteriority to a subsequent event:

(1) *bálki zílli b-ʾùrxa,ˈ ʾu-kpìnni.ˈ* 'Perhaps I shall go on the road and shall become hungry.' (A23:5)

(2) *ṯ-àzən ˈ xàzəx ˈ bálki lá-hawe tàma,ˈ bálki là-pliṭle l-úrxi.ˈ* 'I shall go. Let's see, perhaps he will not be there, perhaps he will not go out onto the road to meet me (literally: onto my road).' (A1:10)

It is also used in the contexts of oaths to refer to an event that has not yet taken place, e.g.

(3) *b-rèšux ˈ b-réšət bàbux,ˈ ʾàxa.ˈ la-tíwle pə́ška gu-púmmux blìlux ˈ d-áy ʾəzza-a-Nùne,ˈ lá-xillux bə̀sra.ˈ* '(I swear) by your head and the head of your father, Agha, (that) a piece of the goat Nune will not enter (literally: settle in) your mouth and you will not swallow it, you will not eat its meat.'

15.2.2. qṭilwale

The *qṭilwale* form, which is augmented by the past tense affix *wa*, has the same distribution as that of the *qəm-qaṭəlwa* form described in §15.1.8. The basic function of the *qṭilwale* form is to denote the occurrence of an event in the past with the deictic reference point in the present. The difference between the *qṭille* form and the *qṭilwale* form in conversational discourse is that *qṭille* refers to the recent past, the margin of which may extend up to the present moment, whereas *qṭilwale* is detached temporally from the present. The action expressed by the *qṭilwale* form, however, is not necessarily in the remote past. It may have occurred a few minutes prior to the present moment. There is, in fact, a degree of overlap between the absolute temporal reference of the *qṭille* and the *qṭilwale*. Informants, however, tend to judge that it is not felicitous to use the perfect *qṭille* to refer to an event that took place on the previous day or prior to it, whereas the time reference of *qṭilwale* can be extended indefinitely into the past.

It is misleading to interpret the *qṭilwale* form as a pluperfect or past perfect, since its basic meaning is not to denote a state that held at the time of a past action as a result of an event further in the past. It denotes

an event rather than a resultant state, although such a state may be an implicature of the verb form.

The relationship between *qṭille* and *qṭilwale* in conversational discourse may be summarized as follows:

(i) Immediate past temporal reference
     qṭille:
          'He has just now come'   *diya θele*

(ii) Recent past temporal reference
      qṭille:
          'He came five minutes ago'[4]   *θele qam xamša daqiqe*
      qṭilwale:
          'He came five minutes ago'   *θewale qam xamša daqiqe*

(iii) Remote past temporal reference
      qṭilwale:
          'He came yesterday'   *θewale təmməl*
          'He came a year ago'   *θewale qam-xa šeta*

In some expository discourse or direct speech in the text corpus the *qṭilwale* form is used as a narrative preterite interchangeably with *qṭille* narrative preterites, e.g.

(1) *ʾáyya šètəˈ t-zílli l-ʾàθ̣ra,ˈ ʾÉnə Nùne,ˈ ʾáxč̌i là gu-ʾÉnə Núne qəm-ʾoð̣ə́nne ʾéð̣a,ˈ qəm-ʾoð̣ə́nwale gu-Dòhok,ˈ har-mədre-táma xzélən nāš-dìyən,ˈ muplə́šlən bé̆e smòqeˈ sáʾət ʾárba-w pálge qèdamta.ˈ ʾu-mən-táma **zílwalən xílwalən** t̠àmta.ˈ* 'This year, when I went to the land, 'Ɛn-Nune—but I did not spend the festival in 'Ɛn-Nune, I spent it in Dohok—again we saw our relatives, we knocked red eggs together at half past four in the morning. Then we went and ate breakfast.' (B15:9)

(2) *ʾána gš̀iqli,ˈ **xzéwali** qa-t-ʾó-fəlsa ʾéka npìlle.ˈ* 'I looked and saw where that coin fell.' (B15:34)

(3) *ʾu-hadíya **zilwàli**ˈ **xzéwali** qá-t ʾo-ʾúmra tlìxɛle kúlla.ˈ* 'Recently I went and saw that the church was completely destroyed.' (B3:20)

---

⁴ It should be noted that in English the present perfect is not used in a clause containing certain time adverbials although the event has relevance for the present moment.

(4) *mə́ra ṭlaθá dèwe,¹ tré-mənna qṭìlə̀lla¹ ʾu-ʾo-xéna mṣurbíyəlle gu-də̀mma¹ ʾu-rìqɛle m-qáme díye.¹ ʾu-ʾáy hal-hadíya ʾə́θya l-bàli,¹ sáb **plíṭwalən** qàmθe díye.¹ yále zóre qáme qàme.¹* 'They said "(There were) three wolves, it killed two and drenched the other in blood and it (the wolf) ran away from it." I remember this until now, since we children went out to meet it.' (B15:49)

(5) *ʾáp-ʾanna məndyáne taxrə̀nna mə́jəd.¹ yáʿni y-áθi l-bàli¹ ʾu-ʾána zòra¹ ʾu-ʾúp ʾɛ-ga-**píšwalən** gòre.¹* 'Indeed I remember also these things. I recall them (from the time when) I was young and also when we grew up.' (B15:73)

(6) *ʾána táxrən hal-hadìya¹ zòrəxwa ʾáxni,¹ y-azə́xwa kalə́xwa m-qamàye¹ sab-yalúnke zòre¹ ʾímə **klíwala** gu-ʾúmrə dìyən,¹ yáʿni táxsət ʾétə dìyən,¹ maklíłən qamàye.¹* 'I remember until today that we were young and we went and stood at the front, for when young children stood in the church, it was a rule of our church that they would make us stand at the front.' (B15:82)

(7) *txárət ʾan-xa-tré t-**mutəpqíwalən** b-ġðàðe?¹ hɛ̀.¹ mə́re ʾu-xaráye ṭlíba díya qəm-šaqlə̀xle.¹ ʾáy pìšla.¹* ' "Do you remember the couple that we brought together?" "Yes". He said "and in the end we took her betrothed and she remained alive." ' (A4:45)

Examples of *qṭilwale* preterites are found also in some poetry texts of the corpus, e.g.

(8) *xa-čarxona črixwala¹ kribta kribta l-ṣadrət gə̀ppa wirwala¹ ču məndi la xzewala¹* 'She took a short turn around. Very angry she went back into the cave. She saw nothing.' (A51:12)

The *qṭilwale* form is rarely found in the narrative sections of the stories of the text corpus. In cases where it is used, it expresses an event that is not sequential to the verb in the main narrative line that precedes it. It occurred prior to it (9–10) or, in some cases, overlapped with it temporally (11). Although the form can often be felicitously translated by the English pluperfect, it is important to note that it expresses an event and not a resultant state. Any resultant state is only an implicature not a component of its meaning. When the speaker wishes to express a resultant state directly, the compound construction consisting of the resultative participle and the past copula is used (§15.4.1.):

(9)   *dɛ́rya ʾíðe b-brōn-dìye.*ˈ *brōn-díye qìmwale.*ˈ *mɛ́re ha-bábi mò bắyət?*ˈ 'He put
      his hand on his son. His son had woken up (at some point prior
      to this, implying that he was at that point awake). He said "Hey,
      father, what do you want?"' (A9:6)

(10) *kút-yoma ṣàle,*ˈ *wíðwale xa-dúkθa mṭašéwa tàma.*ˈ 'Every day he would
      go down—he had made (at some prior point) a place to hide in
      (implying that it was in existence for him to use).' (A14:81)

(11) *nč̆íltəlle rèše-w*ˈ *rùše-w*ˈ *kúlla rupɛ̀θəlla.*ˈ *ʾáp-ʾaw mìtwale*ˈ *har-a-dàna.*ˈ 'She
      pulled its head and its shoulder apart and threw everything down.
      At the same time he also died.' (A12:53)

15.3. The Verb 'to be'

The verb 'to be' can be expressed in various ways. These include the basic
copula, the deictic copula, the existential particle and a form of the verb
hwy. In general, these perform different functions. The factors that deter-
mine which particular form is used include the semantic and information
status of the predicate and subject components and the communicative
salience of the proposition expressed by the clause as a whole.

15.3.1. *The Present Basic Copula*

The present basic copula exists in two forms, enclitic and independent.
These must be distinguished when determining its function. The position
of the enclitic copula in the clause must also be taken into account. In the
majority of cases the enclitic form is attached to the end of the predicate,
e.g. *brónux spày-ile*ˈ 'Your son is good', though in some circumstances it is
attached to the subject, e.g. *ʾáw-ile spày*ˈ 'He is good'. The independent
form bears its own stress and typically occurs between the subject and
predicate, e.g. *brónux ʾíle xàwri*ˈ 'Your son is my friend'.

15.3.1.1. *Enclitic Copula Attached to the Predicate*
The enclitic copula attached to the predicate may be regarded as the
functionally unmarked form of the basic copula. It is used irrespective
of the time stability of the predicate. The predicate may express a per-
manent property of the subject, e.g. *brónux spày-ile*ˈ 'Your son is good'. It
may identify the referent of the subject with that of the nominal of the
predicate, which is typically a permanent relationship, e.g. *ʾăwáha gáwṛa
brònən-ile*ˈ 'That man is our son'. The predicate may also express a contin-

gent situation that is not necessarily a permanent property of the subject, e.g. *brónux kpìnɛle*ˈ 'Your son is hungry'. Examples from the text corpus:

(1) *ʾáθra rába basìmɛle.*ˈ 'The country is very beautiful.' (B5:148)
(2) *ʾána ṭaxànɛwən.*ˈ 'I am a miller.' (A32:10)
(3) *bráta zamàrtɛla.*ˈ 'The girl is a singer.' (A25:68)
(4) *hadíya ʾáti màlkən-it*ˈ 'Now you are our king.' (A14:46)
(5) *sìwən dìyən-ile.*ˈ 'It is our border.' (A14:48)
(6) *ʾána ʿAbda-Raḥmằn-iwən.*ˈ 'I am Abda Raḥmān.' (A23:26)
(7) *rába kc̃ixɛwən.*ˈ 'I am very tired.' (A18:32)
(8) *xòðiwən.*ˈ 'I am by myself.' (A22:32)
(9) *c̃ídɛwət ʾaṣɛ́rta ṭla-xa-ràmša.*ˈ 'You are invited in the evening to dinner.' (A22:17)

The predicate may be combined with the particles *heš* 'still' and *har* 'already, still', which demonstrate that the situation is not permanent, implying an end-point or starting-point, e.g.

(10) *brónux héš kpìnɛle.*ˈ 'Your son is still hungry.'
(11) *brónux hár kpìnɛle.*ˈ 'Your son is already hungry.'
(12) *ʾáw héš màlkɛle.*ˈ 'He is still king.'
(13) *ʾáw hár màlkɛle.*ˈ 'He is already king.'

When expressing a contingent situation the enclitic copula is occasionally combined with the deictic copula, e.g.

(14) *hóle qúrbət nùrɛle.*ˈ 'He is near to the fire.' (A23:9)

It is unmarked with regard to the referential nature of the subject argument, in that it is used both with subjects that have a specific referent, as is the case in examples adduced so far, and also with those that denote a generic class, as in (15)–(16):

(15) *gilándi rába gòrɛle.*ˈ 'The scythe is very big.' (B5:143)
(16) *jawə́tta t-prɔ̀zlɛla.*ˈ 'The sickle is made of iron.' (B5:140)

The construction exhibits functional unmarkedness with regard to the topical status of the subject. The subject is normally definite, i.e. its referent is identifiable, but there is no restriction on the topicality of the subject referent. The topicality of this referent depends on the degree to which it

has been evoked in the immediately preceding discourse or in the speech situation. If it has been explicity mentioned in the immediately preceding discourse, it is high in topicality, e.g.

(17) *'ána xzéli brònux.*ˈ *brónux spày-ile.*ˈ 'I have seen your son. Your son is good.'

Such nominals can be pronominalized, e.g.

(18) *'ána xzéli brònux.*ˈ *'áw spày-ile.*ˈ 'I have seen your son. He is good.'

A nominal may also be definite, with an identifiable referent, by virtue of the fact that it is anchored to the preceding discourse by a some element within it, such as a pronominal suffix or an annexed noun with a referent that has been evoked previously, although the referent of the nominal itself has not been evoked. In such cases the nominal is lower in topicality and cannot be pronominalized, e.g.

(19) *kut-šéta y-ázən l-màθa.*ˈ *nášət máθa spày-ila.*ˈ *yawíli féke mən-kɛrmàne.*ˈ 'Every year I go to the village. The people of the village are good. They give me fruit from the orchards.'

A nominal may also be definite by virtue of the fact that it is inferable as being a component associated with the situation evoked in the preceding discourse, although it is not specifically mentioned in it. Also in such cases it is lower in topicality, arguably lower even than when anchored, and cannot be pronominalized, e.g.

(20) *kut-šéta y-ázən l-màθa.*ˈ *náše spày-ila.*ˈ *yawíli féke mən-kɛrmàne.*ˈ 'Every year I go to the village. The people are good. They give me fruit from the orchards.'

This topicality scale of definite nominals may be summarzied by the following hierarchy, in which the symbol > denotes 'of higher topicality than':

Explicitly mentioned > Anchored > Inferable

First and second person pronouns are high in topicality by virtue of the fact that their referents are given in the speech situation, e.g.

(21) *ʾána spày-iwən.*¹ 'I am good.'
(22) *ʾáti spày-iwət.*¹ 'You are good.'

It can be seen, therefore, that the construction in which the enclitic copula is attached to the predicate is used irrespective of the topicality of the subject nominal.

The construction is also unmarked with regard to the communicative salience of the proposition of the clause as a whole. This is reflected by its usage irrespective of the factivity of the proposition. It is used both in factive and non-factive propositions. Clauses expressing assertive, factive propositions are high in communicative salience in that the speaker is committed to its factuality. Non-factive propositions do not involve such commitment and are low in communicative salience. This applies, for example, to interrogative clauses, in which the proposition is being questioned, e.g.

(23) *bróne díye spày-ile*¹ 'His son is good'
(24) *bróne díye spày-ile?*¹ 'Is his son good?'

The present enclitic copula sometimes has a past tense reference in clauses that are syntactically subordinated to or closely associated with a clause with a past verb form, e.g.

(25) *Fárxo mòre*¹ *ʾáp-ʾana mṭálən mənnèxu.*¹ *zòrele.*¹ 'Farxo said "I also shall play with you." He was young.' (A25:87)
(26) *ʾu-ʾɛ-Lelíθa θèla.*¹ *ʾáy kúlla dònɛla,*¹ *dòna,*¹ *mòšxa.*¹ *ʾína θéla l-tằra.*¹ 'The Leliθa came. She was all (made of) fat, fat, oil. She came to the door.' (A19:4)
(27) *ṣlèla,*¹ *ṭfiqla muʿàlləm.*¹ *muʿàlləm,*¹ *dəkkána gòrṭɛla.*¹ 'She went down and met the teacher. The teacher—the shop (he was in) was big.' (A22:18)
(28) *qìmtɛla*¹ *wíðtəlle ʾixàla,*¹ *bèʾe.*¹ *qèdamtɛla.*¹ 'She made him food, some eggs. It was early morning.' (A23:4)

15.3.1.2. *The Independent Basic Copula*

The independent basic copula is marked with regard to the nature of the predicate and subject and also with regard to the communicative salience of the proposition expressed by the clause.

There are restrictions with regard to the type of predicate and subject that occur in this construction. The predicate is identificatory or expresses

a permanent property of the subject, which is typically an intrinsic defin-
ing property rather than an acquired property. It is not used when the
predicate denotes a contingent situation. The subject of the construction
is always high in topicality. There is no restriction, however, regarding the
referential status of the subject, in that it may have a specific referent or
denote a generic class. This is illustrated in the following examples,

(1) *ʾána ʾíwən Rustắmo brōn-t-Ẓ̀àlo.*ˈ 'I am Rustam son of Zāl.' (A29:63)
(2) *ʾána ʾíwən Yúwəl Yuḥànna.*ˈ 'I am Yuwəl Yuḥanna.' (A1:1)
(3) *ʾáxni ʾíwəx màlke.*ˈ 'We are kings.' (A18:8)
(4) *ʾáwwa ʾíle sulàqa.*ˈ 'This is the (festival of) Ascension.' (B6:7)
(5) *béθət Qára Téždin qìdle.*ˈ *Qára Téždin ʾíle xə̀tne díye.*ˈ 'The house of
      Qara Teždin has burnt down. Qara Teždin is his brother-in-law.'
      (A26:55)
(6) *ʾíθwalən ṣàwma,*ˈ *yáʿni ʾéða y-aθéwa mən-ṣàwma.*ˈ *ṣáwma ʾíle xamšî̀ yomáθa.*ˈ
      'We had a fast, that is the festival came after a fast. The fast is fifty
      days.' (B5:52)
(7) *ʾáxxa ʾíθena dàwla.*ˈ *dáwla ʾíle xa-sandùqa*ˈ *réše pθíxɛle dérɛ xə̀tte gáwe.*ˈ
      'Here there is a drum. The drum is a box, with an open top, in
      which they put wheat.' (B6:54)
(8) *θáyɛle qàša*ˈ *ʾu-sára gnùnɛle.*ˈ *ʾó gnúna ʾíle nišànqa.*ˈ 'The priest comes
      and ties the band. The band is a symbol.' (B5:44)
(9) *ʾu-kùt-xa*ˈ *ʾítle gómət gʸànɛ,*ˈ *ʾítle dúka mruzágta y-amráxla dùna.*ˈ...*góma
      ʾíle gawàye,*ˈ *dúna ʾíle qam-tằra.*ˈ 'Everybody has his own basement
      stable and a place prepared (for feeding), which we call a *duna*
      (feeding pen).... The basement stable is inside and the feeding
      pen is outside.' (B5:110)
(10) *xàrθa*ˈ *y-aθélɛni ʾèða*ˈ *ʾéðət be-yàlda.*ˈ *ʾéðət be-yálda ʾíle wéθət Mšîxa.*ˈ 'Then
      we have (another) festival, the festival of Christmas. The festival of
      Christmas is (in commemoration of) the birth of Christ.' (B6:12)

The high topicality of the subject item in (4)–(10) arises from the fact that
its referent has been referred to in the immediately preceding discourse,
where it is an item of central concern. In the case of full nominal sub-
jects, moreover, the nominal itself has typically been mentioned in the
preceding clause, as can be seen in the examples. Constructions such as
(1)–(3) with 1st person pronominal subjects, however, often occur at the
beginning of speech. One factor contributing to the high topicality of the
subject referent could be that the referent of the pronoun is present and
observable by the hearer in the speech situation. Another factor is that

such clauses are typically used at the beginning of a speech in which the first person referent plays a prominent role in the subsequent clauses. We may call this forward pointing topicality. This is the case, for example, with the discourse following the clause adduced in (1) above, which is reproduced below:

(11) *ʾána ʾíwən Rustắmo brōn-t-Ẓàlo,ˈ …hon-ʾə́θya ṭlábəlla bràtux,ˈ nablə́nna ṭla-bàbi.ˈ* 'I am Rustam son of Zāl…I have come seeking the hand of your daughter, in order to take her to my father.' (A29:63)

A construction with an independent copula is marked with regard to communicative salience. It is used in clauses expressing assertive, factive propositions, which are high in communicative salience in that the speaker is committed to their factuality, but it is not used to express non-factive propositions such as interrogative clauses, in which the proposition is being questioned. If the clause is interrogative, the enclitic copula on the predicate is used. This is illustrated in (12), which contains assertive and interrogative clauses:

(12) *ʾàxniˈ kəslənˈ šàbθaˈ ʾíla šawwà-yomeˈ ʾu-yàrxaˈ ʾíle ṭlaθì-yome.ˈ ʾáxtu šabθéxu ʾəštà-yomela?ˈ yarxéxu ʾəsri-w-ʾə́čč̣à-yomele?ˈ* 'A week for us is seven days and a month is thirty days. Is your week six weeks? Is your month twenty-nine days?' (A17:13)

The communicative salience of the construction gives the clause a degree of independence from the preceding discourse. This is often exploited to express some kind of reorientation in the discourse. When the subject is a 3rd person pronoun or a nominal that has been mentioned in the preceding discourse, the construction is generally used to express some kind of elaborative background on what precedes. It can be seen as a device to mark a boundary or discontinuity in the flow of the discourse. This is a common discourse usage of contructions with communicative salience. Alternatively communicative salience of the construction is sometimes exploited to give prominence to a statement deemed to be of particular importance. This applies especially to clauses with a 1st or 2nd person pronominal subject (1–3). These often occur at the beginning of a section of discourse.

When the subject of the independent copula is pronominal, in some cases it is expressed only by the inflection of the copula and is not realized by an independent pronoun, e.g.

(13) *ʾɛ-màsta*ˈ *ʾi-dɛríla gu-gùða.*ˈ *gúða mòdile.*ʔˈ *ʾíle gáldət xa-hèywən.*ˈ 'They put the yoghurt in a churn. What is a churn? It is an animal skin.' (B6:38)

(14) *xéla díya mòdile*ˈ *t-mazvə̀rra.*ʔˈ *ʾíla mìya.*ˈ 'What is its power, which turns it? It is water.' (B6:53)

(15) *baʾúθət ninwàye*ˈ... *léle ʾéða diyàna.*ˈ *ʾíle ʾéða qàwmi.*ˈ 'The Rogation of the Ninevites is not a religious festival. It is a national festival.' (B6:17)

Occasionally the independent copula with its own stress is placed after the predicate, e.g.

(16) *ʾána Qára Tèždin ʾíwən.*ˈ 'I am Qara Teždin.' (A26:68)

(17) *ʾána brònux ʾíwən.*ˈ 'I am your son.' (A18:7)

(18) *ʾáw har-xá-mdi ʾìle.*ˈ 'It is something.' (A14:25)

15.3.1.3. *Enclitic Copula Attached to the Subject*

When the subject of the clause is high in topicality, the copula in some instances does not stand independently with its own stress but rather is cliticized to the subject, e.g.

(1) *ʾáyyɛla ĉ̇ta.*ˈ 'This is butter.' (B6:41)

(2) *ʾu-ʾáyyɛla kùlla.*ˈ 'This is all (the story).' (A4:24)

(3) *ʾáw-ile síṛa bìya.*ˈ 'It is tied to it.' (B6:55)

(4) *xúwwele qṭìla!*ˈ 'The snake is killed!' (A24:42)

These constructions share with the independent copula construction the feature of having subjects with topical prominence. In the examples cited above, the referent of the subject has been referred to in the immediately preceding discourse where it is of central concern. The clauses are, however, unmarked with regard to the nature of the predicate, in that they may express either a contingent or a permanent property of the subject. They are also unmarked with regard to the communicative salience and assertiveness of the proposition of the clause as a whole. This is shown by the fact that the construction is used in interrogative clauses containing interrogative words that are in the subject position, e.g.

(5) *ʾénile gu-bèθa.*ʔˈ 'Who is in the house?'

(6) *ʾénile zaqàra.*ʔˈ 'Who is a weaver?'

Such constructions, therefore, are close in function to clauses with the copula cliticized to the predicate, which are likewise unmarked with regard to the nature of the predicate and the communicative salience of the clause. They differ only in the marked status of the subject referent, in that this must be an item that is topically prominent. The placement of the copula on the interrogative subject as in (5) and (6) can be interpreted as a reflection of the topical prominence of the interrogative word. It is not topically prominent by virtue of being informationally given, but rather since it is what the question primarily requests information about.[5] Moreover it has a feature analogous to what has been described above as forward pointing topicality. This is because the referent of the interrogative constituent is typically expected to be identified in the subsequent discourse.

The notion of forward pointing topicality also explains the attachment of the copula in (7) to the adverbial *hádəx*, which is linked as a correlative to the following prepositional phrase:

(7) *ʾítli ðá bratət-màma¹ hádəx-ila šṭrànta¹ max-d-àwwa yóma.¹* 'I have a cousin. She is as beautiful as this sun (lit. She is thus beautiful, like this sun).' (A7:17)

15.3.2. *The Deictic Copula*

As is the case with the independent basic copula, the deictic copula exhibits certain restrictions with regard to the nature of the predicate and subject and also with regard to the communicative salience of the proposition expressed by the clause. It is generally used when the predicate expresses a contingent situation that is not necessarily a permanent property of the subject. It may be used without any other clause constituents to draw attention to the location of a referent in the current speech situation, e.g.

(1) *mə́re kèla ṭóṭo?¹ mə́re hòla.¹* 'He said "Where is grandma?" He said "There she is (as we speak)."' (A7:24)

In many cases it is combined with a locative adverbial in the predicate. Examples from the text corpus:

(2) *yonáθa hóla reše-reše-dìye.¹* 'Doves are over him.' (A25:58)

---

[5] For the topicality of interrogative words see Steedman (2000: 659).

(3)   *hóla skínta mə̀nne.*ˈ 'A knife is with him (= he has a knife).' (A30:21)

(4)   *ʾu-hóla wajjúwe díya làxxa.*ˈ 'and her personal effects are here.'
      (A21:9)

(5)   *baxtáθən hóla yaqúre tərwə̀θna.*ˈ 'Our wives are both pregnant.' (A25:2)

(6)   *xə́tna hóle zína l-gàre.*ˈ 'The groom is standing on the roof.' (B8:34)

Examples (2)–(6) all express contingent situations that hold at the moment
of speaking, but are not presented as permanent. The subjects are of
various different types of informational value including newly introduced
referents (2)–(3), referents that are anchored by a pronominal suffix to the
a previously mentioned referent (4) or to the participants of the speech
situation (5) and a referent that is explicitly given in the preceding dis-
course (6).

   The construction with the deictic copula is occasionally used where the
predicate is intended to express a permanent property of the subject. In
such cases the subject is generally a referent that has been newly intro-
duced into the discourse, e.g.

(7)   *xa-bráta hóla tàma.*ˈ 'A girl is there.' (A25:68)

(8)   *ʾƐ̄n-Nùne*ˈ *hóla npílta gu-ʾáθṛət Bàrwər.*ˈ 'Ɛn-Nune lies in the land of
      Barwar.' (B4:1)

(9)   *qìmɛle,*ˈ *šə́mmət máθa díye wéwa Barwòre.*ˈ *ʾámte dìye*ˈ *hóla gu-Sàrzar*ˈ *ʾu-xále
      dìye*ˈ *hóle gu-Daštàne.*ˈ 'The name of his village was Barwore. His
      aunt is in Sarzar and his uncle is in Daštane.' (A23:1)

(10) *ʾíθən xə̀ʾa*ˈ *hóle gu-Kàrkuk.*ˈ 'There is a person, he is in Kirkuk.'
      (A16:1)

(11) *kúlla pəlxàna,*ˈ *pəlxánət béθa hóle b-qðàli.*ˈ 'All the work, the work of
      the house is my duty (literally: is on my neck).' (A21:27)

The deictic copula may be used to express a permanent property in a
clause that has a topical, informationally given, subject. In such cases the
speaker draws special attention to the proposition expressed by the clause
rather than to the referent of the subject, e.g.

(12) *ʾaw-ʾɛ́ne díye npíltɛla ʾisə̀qθe*ˈˈ *ʾámər hà!*ˈˈ *hóla gwìrta!*ˈˈ 'His eye fell on his
      ring and he said "Ah, she is married!"' (A26:31)

In (12) the deictic copula gives particular prominence to the proposition
that 'she is married' due to the fact that the speaker is surprised by the
discovery of this unexpected situation.

In principle the subject of a deictic copula has a specific referent and does not denote a generic class. Examples are sometimes encountered that appear to go against this principle, such as (6) above where the subject *xə́tna* ('the groom') is referring generically to the groom in any wedding. In such cases the speaker is no doubt presenting the subject as if it were a specific case of the class concerned for the sake of vividness.

Constructions with the deictic copula are marked with regard to communicative salience, as is the case with the independent basic copula. It is used in clauses expressing assertive, factive propositions, which are high in communicative salience in that the speaker is committed to their factuality, but it is not used to express non-factive propositions such as interrogative clauses, in which the proposition is being questioned. If the clause is interrogative, the enclitic copula on the predicate is used.

(13) *baxtáθən hóla yaqùre.*[1] 'Our wives are pregnant.'
(14) *baxtáθən yaqùrela?*[1] 'Are our wives pregnant?'

If a question does not relate to the factuality of a proposition, the deictic copula may be used, e.g.

(15) *qa-mó brónux hóle gu-bɛ̀θa?* 'Why is your son in the house?'

The deictic copula is also used in an assertion that is embedded in a question, e.g.

(16) *lá-mərɛxu ʾáyya quṣárta hóla b-ʾùrxa?*[1] 'Did you not say that this cooking pot is on the way (to giving birth)?' (A5:5)

In general the deictic copula is a device for drawing the particular attention of the hearer to something in the immediate speech situation. This may be a property of the subject expressed in the predicate that is observable in the immediate situation, but not necessarily a permanent property, or a permanent property that is unexpected. Alternatively it may be a referent that is newly introduced into the discourse and, therefore, worthy of particular attention. In some cases, both of these conditioning factors may be operative. The ultimate decision as to whether a basic copula or a deictic copula is used, however, depends on the degree of prominence that the speaker wishes to give to the subject referent or the predication in a particular discourse context. Consider, for example, (17):

(17) *xa-šaqòlɛle*ˈ *mkùlčele*ˈ *ʾu-xa-xèna*ˈ *ða-ʾàṭma*ˈ *hóla sàxi.*ˈ *mɘ́re ʾáyya ʾàṭma*ˈ *nablátla ʾɘlla-dìya.*ˈ 'One is a shank, it is stripped (of its meat). Another, a thigh, is in good condition. He said (to the servant) "Take this thigh to her."' (A30:30)

Here both the 'shank' and the 'thigh' are newly introduced referents and the predications concerning them both denote contingent situations that exist at the time of speaking. The narrator, however, wishes to give greater prominence in the discourse to the 'thigh' since this is the concern of the following speech.

The deictic copula may be used to draw attention to the situation as a whole expressed by a clause when this marks the onset of a section of discourse and provides the background for what follows. Consider the wider context of (5) cited above:

(18) *málka mɘ́re ṭla-d-o-xóne fã̀qìra,*ˈ *mɘ́re xòni*ˈ *baxtáθɘn hóla yaqúre tɘrwɘ̀θna.*ˈ *ʾɘn-báxtux muθéla bràta*ˈ *ʾu-báxti muθéla bròna,*ˈ *brátux qa-bròni.*ˈ *ʾɘn-báxti muθéla bràta*ˈ *ʾu-báxtux muθéla bròna,*ˈ *ʾa-bráti qa-brònux.*ˈ 'The king said to the poor brother, he said "My brother, our wives are both pregnant. If your wife gives birth to a girl and my wife gives birth to boy, your daughter (will be married) to my son. If my wife gives birth to a daughter and your wife gives birth to a son, my daughter (will be married) to your son."' (A25:2–3)

The predicate of the independent basic copula, on the other hand, expresses that a certain property is a permanent feature of the subject but does not specify whether this property is observable in the immediate speech situation. Similarly the independent basic copula does not draw attention to the subject of the clause, since it is already activated in the consciousness of the hearer due to its high degree of topicality.

It is likely that the basic copula originated as a presentative construction, similar in function to the deictic copula that is in use today. This explains the use of the L-suffixes in the 3rd person, which originally expressed the object of the presentative. At some stage this old presentative would have lost its presentative function and been cliticized to the predicate, in conformity with the syntactic position of verbal inflection. This would have been accompanied by the emergence of a new presentative device in the form of the deictic copula. The construction with basic independent copula placed before the predicate, e.g. *brónux ʾíle xàwri*ˈ 'Your son is my

friend' is likely to reflect a transitional stage of this development which
has survived in the modern dialect. As remarked, this construction does
not have an attention-drawing function to the same degree as the deictic
copula, but it nevertheless has greater communicative salience than the
construction with the enclitic copula.

The deictic copula may be used with past tense reference in the context
of clauses with past verb forms, e.g.

(19) *xa-pàṛa,¹ wiðále gáne max-qə̀šta.¹ Fárxo ʾu-Səttíye hóla kəs-ġðàðe.¹* 'One
lamb made itself like a bow. Farxo and Səttiye were together.'
(A25:28–29)

(20) *qímɛle ʾap-Fárxo šqíləlle zòrna,¹ mxáya zòrna,¹ bejíye hóla xa-gòta¹ ʾə́rwa
xa-gòta.¹* 'Farxo also took up the pipe and played pipe music, the
young lambs were one side and the sheep the other.' (A25:31)

(21) *hóla ʾiθáθa gu-lèša,¹ lyáša kùbbe,¹ ʾu-ʾə̀θyɛle¹ bába dìya¹ ʾu-wằzīr.¹* 'Her
hands were in dough, while kneading the meat-balls, and her
father and the vizier came.' (A21:26)

(22) *múṣlyəlla dìwən.¹ díwən t-xále díye hóla dwìqta.¹* 'He brought them down
to the meeting room. The meeting room of his uncle was full.'
(A23:14)

The deictic copula may be combined with the expressions *heš* 'still', *hal-
díya* 'until now', and *har* 'already, still', which imply that the situation has
an end-point or starting-point and is not permanent, e.g.

(23) *ʾáy heš-hóla gu-gòma.¹* 'She is still in the basement stable.' (A18:22)

(24) *jullə́kθa hóla hár qrúšta rèša.¹* 'As for the bowl (of yoghurt)—here, its
crust is still on it.' (A30:24)

(25) *ʾáp-ʾo-ṭḷaθa qəm-pɛrmìle.¹ ʾu-dəbbóre hár-hola qam-tä́rət bòya.¹* 'They
slaughtered also the third one. The hornets were still before the
door of the hole.' (A20:9)

(26) *hal-díya hóla gu-móxən ʾáyya ʾáxni.¹* 'Until now this is in our memory.'
(B16:12)

Occasionally the deictic copula is placed after the predicate, e.g.

(27) *ʾárye dìye¹ kəs-báxte dìye hóla.¹* 'His lions are with his wife.' (A18:19)

(28) *ʾə́ne pθìxtɛla,¹ bas-ṭlìya hóle.¹* 'His eye is open, but he is asleep.'
(A31:6)

The deictic copula is sometimes used to present a nominal, denoting its existence without ascribing any property to it in a predicate, e.g.

(29) *hóla ʾisə́qθa dìya.*ˈ 'Here is her ring.' (A25:69)
(30) *hóla zeðàye.*ˈ 'Here are the breads.' (A30:24)
(31) *hóʾla mìya.*ˈ 'Here is some water.' (A28:18)

15.3.3. *The Copula in Subordinate Clauses*

The distinction between the various copula constructions described above are neutralized in subordinate clauses that are introduced by the conditional particle *ʾən* and the general subordinating particle *D.* The latter has various functions, such as a relativizer and complementizer, and is often combined with other particles. If a copula clause occurs in such clauses, the enclitic copula is always used, rather than the independent or deictic copula, and this is attached to the particle at the head of the clause, e.g.

(1)   *ʾən-íle mìθa,*ˈ *gắrəg mèθən.*ˈ 'If he is dead, I must die.' (A8:61)
(2)   *ʾən-ít xonèni,*ˈ *háyyo tu-ʾáxxa kəslèni.*ˈ 'If you are our brother, come and sit here with us.' (A39:7)
(3)   *ʾən-íle xwarzàyi,*ˈ *ṭ-áθe t-yăðéla ʾánna mòdila*ˈ *ʾu-módi lèla*ˈ *xo-d-áwwa jùlla.*ˈ 'If he is my nephew, he will come and know what these are or are not under this cloth.' (A25:49)
(4)   *si-prúmle ʾáwwa yála zòra*ˈ *ṭ-íle gu-dudìya.*ˈ 'Go and slaughter this baby boy who is in the cradle.' (A15:8)
(5)   *xìləlle ʾo-ʾixála ṭ-íle kə̀sle.*ˈ 'He ate the food that was in front of him.' (A23:5)
(6)   *xáðrəx xázexi xa-nàša*ˈ *ṭ-íle palàxa.*ˈ 'Let's look for a man who is a hard worker.' (A21:3)
(7)   *ʾánna yắði ṭ-íle duglàna.*ˈ 'They know that he is a liar.' (A48:3)
(8)   *lɛt-xzáya bíye díye ṭ-íle mìθa?*ˈ 'Don't you see that he is dead?' (A17:2)

15.3.4. *Copula on Focused Elements*

The distinction between the various types of copula is neutralized also when the speaker wishes to place a particular focus on one argument of the clause. In such circumstances only the enclitic copula is used, even where in equivalent clauses without such argument focus the deictic or

independent copula occurs. The enclitic copula is attached to the focused element, whether this be the subject or a component of the predicate of the clause. The focused element bears the nuclear stress and is typically moved to the front of the clause if is not already situated there. This type of construction is used when the speaker wishes to put a contrastive focus on one argument. In what follows the focus is represented in the translation with italics:

(1) A: *bróni hóle gu-bɛ̀θa.*ˈ B: *là,*ˈ *bàbux-ile gu-béθa,*ˈ *lá brònux.*ˈ 'A: "My son is in the house". B: "No, *your father* is in the house, not your son."'

(2) A: *bróni hóle dmíxa gu-bɛ̀θa.*ˈ B: *là,*ˈ *gu-kɛ̀rmɛle dmíxa,*ˈ *lá gu-bɛ̀θa.*ˈ 'A: "My son is asleep in the house". B: "No, he is asleep *in the orchard*, not in the house."'

(3) A: *ʾáwwa ʾíle xɔ̀tna.*ˈ B: *là,*ˈ *qrìwɛle ʾáwwa,*ˈ *lá xɔ̀tna.*ˈ 'A: "This is the groom". B: "No, this is the *best-man*, not the groom."'

(4) A: *ʾáwwa ʾíle mtúrṣa mɔn-kɛ̀pa.*ˈ B: *là,*ˈ *mɔn-qɛ̀sɛle mtúrṣa,*ˈ *lá mɔn-kɛ̀pa.*ˈ 'A: "This is made of stone". B: "No, this is made of *wood*, not of stone."'

Examples from the text corpus:

(5) *ʾáwwa lɛ̀le kálba.*ˈ *ʾàtit kálba.*ˈ 'He is not a dog. *you* are a dog' (A11:2)

(6) *ʾáni xšíwela dɔ̀bbɛla táma.*ˈ 'They thought the bear (not the bees) was there.' (A10:7)

The contrastive focus may be an informationally given referent, as in the following:

(7) A: *ʾɔ́dyo xzéli xónɔt Dawîð ʾu-brōn-màme. brōn-máme ʾíle zaqàra.*ˈ B: *là,*ˈ *xònele zaqára,*ˈ *lá brōn-màme.*ˈ 'A: "Today I saw the brother of David and his cousin. His cousin is a weaver". B: "No, *his brother* is a weaver, not his cousin."'

This neutralization applies only to strong focus, as is the case with contrastive focus. It is not necessarily used with a simple new information focus, as is seen in constructions such as the following:

(8) A: *ʾɛ́nile gu-bɛ̀θa?*ˈ B: *brònux hóle gu-béθa.*ˈ 'A: "Who is in the house?" B: "Your son is in the house"'.

(9) A: *ʾɛ̀nile?* B: *ʾáw ʾíle xòni*ˈ 'A: "Who is he?" B: "He is my brother"'.

15.3.5. *Past Copula Placed after the Predicate*

The past copula may be placed after or before the predicate. Constructions with the copula after the predicate are unmarked with regard to the nature of the subject and predicate and also with regard to the communicative salience of the proposition expressed by the clause. The predicate may express a permanent situation in the past (1–6) or one that is contingent to a particular moment or space of time and exists only temporally (7–9). The subject may have a specific referent or denote a generic class. In most cases the copula is cliticized to the predicate:

(1) *yə́mme díye yə̀mmi-wawa*.ˈ…*bábe díye bàbiwa.*ˈ 'His mother was my mother…His father was my father.' (A32:31)

(2) *ʾÍšwuṭ rába krèt-iwa gu-ʾàṭṛa.*ˈ 'February was very bad in our country.' (B5:152)

(3) *maṛúθa mturáṣṭɛwa m-qèsa.*ˈ 'The snow shovel was made of wood.' (B5:196)

(4) *ʾína báte qámθa ṭìna-wɛwa.*ˈ 'Formerly, however, houses were made of mud.' (B5:198)

(5) *fa-xayuθéy b-dawèrɛwa.*ˈ 'Their livelihood was in the mule.' (B5:126)

(6) *xóne díye fãqìra-wewa.*ˈ 'His brother was poor.' (A25:1)

(7) *gu-bèθa wéwa,*ˈ *har-zála-w θàya.*ˈ 'He was in the house, walking back and forth.' (A6:1)

(8) *b-yárxət šàwwɛwa,*ˈ…*xošèbɛwa.*ˈ…*koðə́nta b-ìði-yawa*ˈ *šulxèθa.*ˈ…*ʾána šobànənwa xáčča.*ˈ 'It was in the month of July…it was a Sunday…The mule was in my hand…I was suffering from a bit of a cold.' (B5:130)

(9) *w-áw xamìmɛwa,*ˈ *pšìra,*ˈ *ṣ́lya gu-tàlga.*ˈ 'It was warm, (the snow) melted and it dropped down into the snow.' (B5:154)

The unmarkedness of the construction with regard to the communicative salience of the proposition it expresses is shown by the fact that it is used both in assertive, factive clauses and also in non-factive, interrogative clauses, e.g.

(10) *xónux gu-bèθɛwa.*ˈ 'Your brother was in the house.'

(11) *xónux gu-bèθɛwa?*ˈ 'Was your brother in the house?'

On some occasions the copula bears its own stress, e.g.

(12) *ʾáni milàne ʾiyɛ́wa.*ˈ 'They were green.' (B5:218)

(13) *xá gáwṛa xɛlána-w zàxma wéwa.*ˈ 'He was a powerful, tough man.' (A27:1)

(14) *sab-qyámta b-lèle ʾiyáwa.*ˈ 'because Easter was at night.' (B5:53)

15.3.6. *Past Copula Placed before the Predicate*

Constructions with the copula placed before the predicate are likewise unmarked with regard to the nature of the predicate, in that it may express a permanent (1–7) or contingent (8–9) situation. There is no past form of the deictic copula and the construction Subject—*ʾiwa*—Predicate, therefore, corresponds to both that of the independent present copula (Subject—*ʾile*—Predicate) and that of the deicitc copula (Subject—*hole*—Predicate).

(1) *məlxáwa ʾiwa mtúrṣa m-qèsa.*ˈ 'The winnowing fork was made from wood.' (B5:87)

(2) *w-áw ʾiwéwa malàxa.*ˈ *ʾáw yăðéwala ʾáyya tuníθət Bəlbə́l Hazàr.*ˈ 'He was an angel. He knew the story of Bəlbəl Hazar.' (A8:25)

(3) *gáʾat tə́rte xzéle málka dúnye ráya dèwe.*ˈ *xə́lmət málka ʾiwa ʾúp-ʾaw zàwna.*ˈ 'The second time the king saw (in his dream) that it was raining wolves. Also that dream of the king was (like) the time.' (A1:24)

(4) *ʾu-ʾáy ʾiyéwa qə́ṣṣət yáʿni rə̀zza.*ˈ 'That was the story of rice' (B5:87)

(5) *dawèra*ˈ *ʾiwa xa-mə́ndi ʾax-ṭ-ámrəx ʾíde-w ʾàqle y-amrə́xla*ˈ 'The mule was something that was (as important to somebody as) "his hands and his legs," as we say.' (B5:124)

(6) *Nìnwe*ˈ *ʾiwáwa pétəxt ʾaθoràye.*ˈ 'Nineveh was the capital of the Assyrians.' (B6:17)

(7) *ʾíθwa xa-Xáno Lapzèrin.*ˈ *b-ʾə́ṣəl díye ʾiwéwa qărăčàya.*ˈ 'There was a certain Xano the Golden Hand. In origin he was a gypsy.' (A11:1)

(8) *hadíya mšárəx qəṣṣə́ttət Mǎ̆mo-w Zîne.*ˈ *Mǎ̆mo*ˈ *ʾiwewa gu-ʾAlàn*ˈ *ʾu-Zíne ʾiwáwa gu-Jazíre Bòta.*ˈ 'Now we shall begin the story of Mămo and Zine. Mămo was in ʾAlān and Zine was in Jazire Bota.' (A26:1)

(9) *m-bar-hàdəx*ˈ *qemìwa*ˈ *mzabóne ʾilàna.*ˈ *náše ʾiwa kòpa.*ˈ 'After that they would sell the tree. The people were below.' (B5:42)

When the clause expresses a permanent situation, the subject typically has topical prominence, as is the case in Subject—*ʾile*—Predicate constructions. In the examples occurring in the text corpus, the topical prominence generally results from the fact that the referent has been evoked in the

immediately preceding context. Note that in (5), however, the referent has not been previously activated, but it plays a central role in the following context.

When the copula is placed before the predicate, the clause has some kind of communicative salience. This is reflected by the fact that it is restricted to assertive, factive clauses and is not used in non-factive, interrogative clauses. The communicative salience in the examples occurring in the text corpus can in most cases be shown to have a discourse function. The clauses generally mark some kind of semantic boundary in the discourse. In (1) and (2) the copula clauses constitute an explanatory elaboration concerning a referent that has been evoked in the preceding context that breaks the flow of the discourse. Also in (3) the construction is used in a clause that is explanatory of what precedes. The clause in (4) is a summarizing remark, which marks the end of a section. The constructions in (5)–(7) occur at the beginning of a section of discourse that supply important preliminary material. The same applies also to (8), where the construction is used to express a contingent situation. In (9) the copula clause denotes a contingent situation that is circumstantial to the event referred to in the previous clause and does not carry the narrative line forward.

In (10) the past copula is used in a different type of function, namely to introduce a time adverbial at an episodic boundary of discourse. The copula here gives morpological weight to the initial adverbial expression and is not translatable directly into idiomatic English:

(10) *ʾiwa sáʾət tmánya qédamta xzéli xákma náše θàya¹ mən-ʾÉ̆n-Nune ta-Dùre.¹*
     'At eight o'clock in the morning I saw some people coming from ʾƐn-Nune to Dure.' (B1:11)

15.3.7. *The Negative Copula*

The present and past negative copula forms refer to states, both permanent (1–3) and contingent (4–6), in the present and past respectively. They correspond, therefore, to both the basic and deictic forms of the positive copula:

(1) *ʾáwwa lèle kálba.¹* 'He is not a dog.' (A11:20)
(2) *léwət d-áwwa ʾàθra.¹* 'You are not from this land.' (A25:82)
(3) *xu-léwa ṭaxxána brōn-taxxanèθa?¹* 'Was he not a miller the son of a miller-woman?' (A32:28)

(4)   *dárdi léla d-àyya.*ˈ 'My suffering is not from this.' (A26:66)
(5)   *lɛ̀wa yómət šábθa.*ˈ 'It was not Saturday.' (A14:58)
(6)   *ʾína lɛ́wa mə́dre gnàyux.*ˈ 'But it was not your fault again.' (A1:25)

15.3.8. *The Existential Particles*

The existential particle *ʾiθ*, together with its variant forms (§8.20.1.), expresses either a permanent (1–3) or a contingent (4–6) situation:

(1)   *ʾíθən xa-ṭùra.*ˈ 'There is a mountain.' (A24:11)
(2)   *ʾíθən biš-gùre mánni.*ˈ 'There are better men than me.' (A26:79)
(3)   *ʾítli ð́á bratət-màma.*ˈ 'I have a cousin.' (A7:17)
(4)   *ʾíθən tàma*ˈ *ṭə́ḷḷəθ bnáθa xène.*ˈ 'There are there three other girls.' (A26:24)
(5)   *ʾána ʾíθ šùla qámi.*ˈ 'There is work in front of me (to do).' (A24:45)
(6)   *ʾítli xákma xabráne ṱ-amrə̀nnəx.*ˈ 'I have a few words to say to you.' (A4:40)

The existential particle is sometimes combined with the deictic copula, e.g.

(7)   *hóla ʾíθən jə̀nne gáwa!*ˈ 'There are jinn in it!' (A22:33)
(8)   *hóle ʾíθən xà*ˈ *kəs-ṭòṭo*ˈ *sàwta.*ˈ 'There is somebody at the home of the old woman.' (A24:44)
(9)   *qam-ʾárya hóle ʾíθən*ˈ *gə̀lla.*ˈ *ʾu-qam-ʾə́zza hóle ʾíθən*ˈ *bə̀sra.*ˈ *šqúl bə̀sra*ˈ *m-qam-ʾə́zza*ˈ *dríle qam-ʾàrya.*ˈ *ʾu-gə̀lla*ˈ *šqúlle m-kəs-ʾàrya*ˈ *dríle*ˈ *qa-ʾə̀zza.*ˈ 'Before the lion there is grass and before the she-goat there is meat. Take the meat from before the goat and put it before the lion. Take the grass from the lion and offer it to the she-goat.' (A24:15)
(10) *qàwra*ˈ *ʾíθən xa-káwe gàwa*ˈ *ʾu-hóle ʾíθən jawə̀tta,*ˈ *jawə́ttət práma qèse.*ˈ *ʾi-qéma xa-dalíθət xùwwe*ˈ *ʾi-xə̆́ða l-án tre-xoriyàθa.*ˈ *kút ʾásəq qamáya xazéla ʾɛ-dalíθa brìθəll-ani*ˈ *parə̀mla.*ˈ 'There is a hole in the grave. There is a chopper, a chopper to cut wood. A wild vine grows up and winds around those two willow trees. The first to see the vine growing on those (trees) cuts it down.' (A26:91)
(11) *hóle ʾíθən bóya zòra.*ˈ 'There is a small hole.' (A20:5)
(12) *hóle ʾíθən làxxa*ˈ *stə̀rra.*ˈ 'There is here a storeroom.' (A23:17)

These examples express both contingent (7–9) and permanent (10–12) situations. The crucial conditioning factor for the use of the deictic copula

is not the nature of the situation expressed by the predicate, but rather the discourse prominence that the speaker wishes to give to the referent introduced by the clause. In (7) the force of the deictic copula is to express the unexpectedness of the existence of jinn. In the remaining examples the referent introduced plays a prominent role in the ensuing discourse. In (8) the man at the home of the old woman is the protagonist of the following narrative. In (9) the grass and the meat are in the centre of attention in what follows. In (10) the deictic copula is used with the clause introducing the 'chopper' but not in the one introducing the 'hole' in the grave. It is the activity associated with the chopper that is the concern of the following discourse, as shown in the cited example, whereas the 'hole' is only an incidental referent. In (11) and (12) the referent introduced acts as the spatial setting for the following section of discourse.

The past existential particle (ʾiθwa) and the negative existential particle (liθ, liθwa) are, likewise, used to express a permanent (13–15) or contingent (16–18) situation. They are not, however, combined with the deictic copula:

(13)   *ʾíθwa xa-màlka.*¹ 'There was a king.' (A1:2)
(14)   *lìθən dắràje,*¹ *ta-ṣáli gu-gòma.*¹ 'There are not steps for them to go down into the basement stable.' (A22:10)
(15)   *ʾɛ́-ga líθwa bə̀rqa.*¹ 'At that time there was not electricity.' (B10:45)
(16)   *ʾíθwa bráta dmíxta kə́sle dìye.*¹ 'There was a girl sleeping with him.' (A26:6)
(17)   *líθ ʾáp-xa gu-bɛ̀θa?*¹ 'Is there nobody in the house?' (A22:32)
(18)   *lìθwale quṣàrta.*¹ 'He did not have a cooking-pot.' (A5:1)

The noun that is introduced by an existential particle may refer to a specific item, as in the majority of the examples above, or to a class (18). Further examples of constructions with class nouns:

(19)   *ʾíθən bə̀ṭma.*¹ 'There is the terebinth tree.' (B5:220)
(20b) *ʾíθwa ʾắraq.*¹ 'There was arak.' (B5:11)
(21)   *ʾíθwa lə́xma y-amrə́xwa zeðàye.*¹ 'There was bread that we called *zeðaye.*' (B5:15)
(22)   *ʾíθwa xyáptət xə̀tna.*¹ 'There was the washing of the groom.' (B5:25)

There is no clear functional distinction between the short and long variants of the existential particles. They appear to be in free variation. In

a series of two parallel clauses containing the particles, however, a short variant is often followed by a long variant, giving the final clause of the pair end-weighting, e.g.

(23) *xùyɛle,ˈ púrya lìθ,ˈ bərqa lìθən.ˈ* 'It is dark. There is no light and there is no electricity.' (A23:29)

(24) *čù-qala líθ.ˈ čú-qala líθən mənnèy.ˈ* 'There is no sound. There is no sound of them.' (A18:15)

On many occasions the present existential particles (*ʾiθ, liθ*) occur in the context of past form verbs and have past tense reference, sharing their deictic centre with these verbs.

(25) *qímela xìlela.ˈ qímela šqílela xa-ʾamána xànči zóra.ˈ múttəlla kəs-réša dìya.ˈ ṣáwθa lìθən.ˈ* 'They ate. Then they took a small container and put it at her head. There was no speech (with this).' (A21:17–18)

(26) *múttəlla gu-ʾaṭnàbəlˈ ʾu-nùbləlla.ˈ ʾáw ʾítle ða-ʾótəx ʾax-d-àyya,ˈ zùrtɛla,ˈ qaráwət d-àwwaˈ ʾu-t-yə́mme díye,ˈ ʾu-ʾal-ʾằraˈ líθ čù-məndi,ˈ lá kursìyaˈ ʾu-la-čù-məndi.ˈ* 'They put her in a car and took her off. He had one room like this one, it was small, his bed and his mother's, on the floor there was nothing, no chair, nothing.' (A21:5)

15.3.9. *The Verb* hwy

In addition to the various copulas and the existential particles, the verb 'to be' may be expressed by the verb *hwy*, which is inflected in all verbal bases. Many of the inflections of this verb supply functions that are not expressed by the copulas or existential particles, though in some cases there is functional overlap.

15.3.9.1. qaṭəl

15.3.9.1.1. *Realis*
The *qaṭəl* form of *hwy*, without any prefixed particle, is occasionally used in a realis sense, referring imperfectively to a situation in the present, e.g.

(1) *ʾu-zeðàyaˈ ʾíla biš-xlìmta.ˈ xlìmta hóya.ˈ* 'A *zeðaya* bread is thicker. It is thick.' (B6:49)

(2) *ʾu-xàkma dukáneˈ xà-yoma háwe ʾéða.ˈ* 'In some places the festival is for one day.' (B6:2)

(3) *hal-ʾaṣə́rta ʾáw háwe šulɛ̀ni.*ˈ 'This is our activity until the evening'
     (B6:11)

(4) *yómət ʾə́sri-w xámša háwe ʾɛ̀ða.*ˈ 'The twenty-fifth day is the festival'
     (B6:13)

(5) *ʾína ʾáyyət xúmṣa har-xúmṣa háwe xwarnàya.*ˈ 'But the dish consisting
     only of *xumṣa* is whitish.' (B10:16)

(6) *ʾɛ̀-ga*ˈ *Rustám ʾo-mtánɛ mə́nne y-ámri ʾɛ́-gə damə̀xwa,*ˈ *ṭḷaθà yomáθa*ˈ *ʾu-ṭḷaθà
     lɛlăwáθa háwe dmìxa.*ˈ 'Now, they say of Rustam that when he slept,
     he would be asleep for three days and three nights.' (A29:2)

(7) *har-dmáxta dìyən*ˈ *biz-zóda gu-bɛθwàθa hóya.*ˈ 'Our sleeping is mostly
     in the houses.' (B15:27)

(8) *qedámta hál bar-kawùθra*ˈ *šə́mša y-óya bàθər ṭúra,*ˈ *fa-ṭə̀lla háwe*ˈ *qam-ṭùra.*ˈ
     'In the morning, until after lunch, the sun is behind the mountain
     and there is shade at the front of the mountain.' (B3:2)

These examples exhibit differences regarding the referential status of the
subject and the nature of the predicate. They may be divided into three
categories.

(i)   In (1)–(5) the subject has generic reference and the predicate denotes
      a permanent situation.
(ii) In (6) the subject has a specific referent and the predicate refers to
      a habitual, iterative situation.
(iii) In (7)–(8) the subject has generic reference and the predicate refers
      to a habitual, iterative situation.

The functional profile (i) may also be expressed by the basic copula.
Indeed, in (1) the independent basic copula is used in a parallel clause.
As we shall see, in this profile the predicate may also have the *ʾi-qaṭəl*
form of *hwy*. Clauses with the profiles (ii) and (iii), with habitual iterative
predicates, are usually expressed by the *ʾi-qaṭəl* form of *hwy* rather than
the copula. A parallel to (6) with *y-áwe* rather than *háwe* is, in fact, used
by the speaker later in the same text (*ṭḷaθà yomáθa*ˈ *ʾu-ṭḷaθá lɛlăwáθa y-áwe
dmíxa* A29:19). Also in (8), the *ʾi-qaṭəl* form *y-óya* is used in a preceding
parallel clause. All the occurrences of the *qaṭəl* form of *hwy* cited above,
therefore, can be regarded as variants of the more usual *ʾi-qaṭəl* form. They
are unlikely to have arisen by the phonetic elision of the *ʾi-* prefix, since
the *ʾi-qaṭəl* form is *y-awe* (< *ʾi-hawe*), in which the prefix is followed by a
vowel and so is protected from elision. The *qaṭəl* form here is more likely
to be an extension of the irrealis *qaṭəl* (§15.3.9.1.2.). The crucial feature

of the example above is that the predications lack specificity either due to the subject being a generic class term or due to the predicate being habitual. A predicate with this lack of specificity and distinctness is closer semantically to an irrealis predicate than a more individuated one that denotes a specific situation relating to a specific referent.

The form occurs more frequently in verbs expressing habitual aspect in subordinate temporal clauses. The subordinating particle *D* of the temporal conjunction is usually prefixed to the verb, e.g.

(9) *lé-y-maṣi mṭáli b-ɛ-dắn ṯ-áwe yòma.*ˈ 'They cannot play when it is daytime.' (B11:2)

(10) *ʾáyya ṭawálta mṭalíwala rába b-sòtwa,*ˈ *ʾɛ-gə ṯ-áwe tàlga,*ˈ *š-garăwàθa.*ˈ 'They played this game a lot in the winter, when there was snow, on top of the roofs.' (B11:16)

(11) *ʾáp-xa la-xazèla,*ˈ *ʾa-dánə ṯ-áwe ṭlìya yála.*ˈ 'Nobody sees it, when the child is asleep.' (B10:77)

(12) *ʾu-ʾɛ́gət ṯ-áwe xá mənnɛ́ni qúrbə d-o-xèna,*ˈ *har-maxə̀nne*ˈ *tăbálli l-tăbálle dìye,*ˈ *ʾaw-mìtle,*ˈ *ʾaw-prìqle,*ˈ *ʾaw-xsìrre.*ˈ 'When one of us is near to the other, I strike my marble against his marble and he dies, he is finished, he has lost.' (B11:27)

(13) *ʾɛ́-gət háwi náše ràba*ˈ *hálbat búš náša b-ṛáyəš b-gáne dìye.*ˈ 'When there are many people, of course a person feels himself more.' (B15:15)

15.3.9.1.2. *Irrealis*

The most usual function of the *qaṭəl* form of *hwy* is to express irrealis, which cannot be expressed by any of the copula forms or existential particles. It occurs in the same irrealis contexts as the *qaṭəl* form of other verbs, which have been described in §15.1.1.5–10.

The form may be used in a main clause, where it often expresses deontic modality, e.g.

(1) *háwət basíma ràba.*ˈ 'May you be very well.' (A5:7)

(2) *háwət hə́šyər ʾítlən jɛ̀nne.*ˈ 'Be careful, we have jinn.' (A22:26)

(3) *ya-ʾàlaha,*ˈ *háwe ṣáxi hál-ʾɛ-gət ʾána mátyən ʾə́lle dìye.*ˈ 'Oh God, let him be well until I reach him.' (A26:80)

(4) *hóya mxíθa l-mìla.*ˈ 'Let it be (= let's say it was) covered in blue.' (A4:29)

This also applies to the expression *la hoya* 'It should not be', 'It is not allowed', 'It is not possible', e.g.

(5) *lá-hoya yóma qamáya xə́tna t-xazéla kʲàlo.*ˈ 'It is not allowed for the groom to see the bride on the first day.' (A4:36)

(6) *yəmmi la-hòya*ˈ *ʾàna*ˈ *xàθi lá-ʾazən xazə́nna.*ˈ 'It is impossible for me not to go and find my sister.' (A37:9)

(7) *sab-lá-hoya biš-pθìθa.*ˈ 'It (the space between the beams) should not be wider.' (B5:189)

Questions in the *qaṭəl* forms such as (8) and (9) are deontic expressions whereby the speaker addresses the hearer expecting him to impose an obligation (deontic necessity) or give permission (deontic possibility):

(8) *de-màṭo hóya?*ˈ 'How can it be/should it be?' (A30:21)

(9) *mò-hoyali gwárta-w?*ˈ 'What can marriage be to me?' (A16:5)

On some occasions the modality is epistemic, in that it expresses a less than complete commitment to the truth of the proposition by the speaker. Examples (10)–(11) fall into this category, in which the speakers express disbelief that the situation could exist:

(10) *ʾána háwən Qára Tèždin,*ˈ *maθyánət xárje-w bárjət boṭanàye,*ˈ *ṭ-áθe xa-ʾárxa ʾax-d-àwwa*ˈ *gu-bèθi*ˈ *ʾu-páləṭ lέðən lὲkɛle zála,*ˈ *lέka là!*ˈ '(How could it be that) I am Qara Teždin, the collector of all taxes of the people of Botan, and a guest comes like this into my house and leaves without me knowing where on earth he was going!' (A26:34)

(11) *ʾána háwən šέx d-áyya hὲnna*ˈ *ʾu-náše lá-ʾaθa l-diwàni,*ˈ *ʾu-lá-hawa ʾàrxi,*ˈ *yátwi háwa rὲḥqa.*ˈ '(How could it be that) I am the sheikh of this place and people do not come to my reception and do not become my guest, but sit far away.' (A7:7)

The form is used in the protasis of conditional sentences referring to present or future time, e.g.

(12) *ʾən-háwe t-tὲrte ʾaqláθa,*ˈ *ʾána b-zawnə̀nne.*ˈ 'If it were two legged, I would buy it.' (A22:5)

(13) *ʾən-hawéli bràta*ˈ *t-yánna qa-bronὲxu.*ˈ 'If I were to have a daughter, I would give her to your son.' (A25:8)

(14) *ʾən-hóya rázi šə́nna díya pălàla,*ˈ *pálga ṭla-d-áy ʾu-pálga ṭla-d-àw,*ˈ *maqimὲxle.*ˈ 'If she will be happy to share her years, half for her and half for him, we shall resurrect him.' (A4:46)

In (15) it takes the past time reference of the verb of the main clause as its deictic centre:

(15) *ʾən-háwe yále ràbe,*¹ *mə́re ʾɛ́ni máxe sar-amòða?*¹ 'If there were many children, he (the priest) said "Who will be the first to be baptized?"' (B8:44)

It is used in subordinate clauses that are complements of various verbs and expressions denoting deontic obligation, when the action of the verb in the subordinate clause is as yet unrealized, e.g.

(16) *bắyən ṭ-áwət láxxa b-sắʾət tmànya.*¹ 'I want you to be here at eight o'clock.'

(17) *hammáše míya gắrəg háwa ʾə́lle dìye.*¹ 'Water must be on it constantly.' (B5:78)

(18) *kút-dukθa ʾáza ʾàwra*¹ *ʾáp ʾayya-xéta bàra lázəm háwya.*¹ 'Every place that she goes to and enters, the other has to be (i.e. to follow) after her.' (B12:2)

Contrast (19) in which the expression *lazəm* expresses epistemic necessity, in which the subordinate clause expresses what the speaker believes is a real situation, rather than one that has not yet been realized:

(19) *lázəm ʾawwa-ràba ferə́ssɛle.*¹ 'He must be a heroic warrior.' (A29:43)

In such cases the word *lazəm* is sometimes placed at the end of the clause, e.g.

(20) *ʾu-xa-mašmóye-wewa ʾə́llɛ̀ni lázəm.*¹ 'Somebody must have been listening to us.' (A35:19)

The form is used in clauses expressing purpose, e.g.

(21) *ʾána bắyən ʾaláha t-yawə́lli kùl-məndi bi-záwda,*¹ *ta-t-xayúθi hóya spày.*¹ 'I want God to give me more of everything, so that my life will be good.' (A3:3)

(22) *ʾíθwa kočɛrnáyət qurðàye*¹ *ʾánna ʾi-ṣáli dàšta*¹ *šaxínta háwi b-sə̀twa.*¹ 'There were Kurdish nomads, who went down to the plain in order to be warm in Winter.' (B18:1)

(23) *ʾu-mkasɛ̀wala-w¹ mattíwala xa-dúkθa šaxìnta¹ ṯ-amríxxa gòma.¹ ṯ-óya šaxínta mkasɛ̀wala.¹* 'Then they would cover them and place them in a warm place, which we call a basement-stable. In order for it to be warm they would cover them.' (B5:12)

As can be seen in several of the examples cited above, *qaṭəl* forms may be used in clauses that have past form verbs in the surrounding context and in such cases they have past time reference, with their deictic centre in the tense of the adjacent verbs.

15.3.9.1.3. *Generic Relative Clauses*
The *qaṭəl* form of *hwy* is used in a relative clause that has a generic ante-cedent rather than one referring to a specific referent, e.g.

(1) *hézuke mòdila.ʾ¹ táli xàwla¹ b-xa-ʾilána ṯ-óya góṛta rába ramànta.¹* 'What is swinging? They hang a rope on a tree that is large and very high.' (B6:7)

(2) *kúl naša ṯ-awéle xa-bròna.¹* 'Everybody who has a son.' (B6:35)

(3) *ʾo-ṯ-awéle ʾərwe¹ y-áwe xzida ṭàrpa.¹* 'Anybody who had sheep, would harvest leaves.' (B5:108)

(4) *ʾáw máṣli xá-dukθa ṯ-óya šaxínta y-amríxwa gòma.¹* 'They bring them down to a place that is warm, which we called a "basement stable."' (B5:211)

(5) *kút-dukət ṯ-óya bis-senàẏ,¹ sab-ràba-ʾiyewa tálga.¹* 'In whatever place was easiest, since there was a lot of snow.' (B5:195)

15.3.9.2. qaṭəlwa
The *qaṭəlwa* form of *hwy* is occasionally used as a realis past form, refer-ring imperfectively to a situation in the past, e.g.

(1) *ʾotáxe gòṛe hawéwa.¹* 'The rooms were big.' (B10:51)

(2) *kút-xa hawéwale xà.¹* 'Everybody used to have one.' (B10:11)

(3) *ʾáxni lá raba-ʾi-mapəlxɛ̀xwala.¹ ʾína hawɛ̀walən.¹* 'We did not use it (raisin syrup), but we used to have it.' (B10:18)

(4) *mqarbəníwa l-màθa¹ sab-tàlga hawéwa,¹ liθwaley ʾixála.¹* 'They would come near to the village, since there was snow and they did not have food.' (B15:37)

(5) *kul-máθət ʾítla ʾùmra¹ ʾan-maθwáθa hawéwaley šèra.¹* 'Every village that had a church—these villages had a saint's festival.' (B6:22)

In these examples from the text corpus the subject refers to a class rather than to a specific referent in the class. Examples (1)–(3) refer to a permanent situation, whereas (4)–(5) may be interpreted as having a predicate with habitual/iterative aspect. The verb 'to be' in clauses with the profile of (1)–(3) may also be expressed by the past copula (§15.3.5.–6.) or past existential particle (§15.3.8.).

The *qaṭəlwa* form is also attested as a realis past form in the protasis of temporal clauses (generally with the subordinating particle *D* attached to it), e.g.

(6) *ʾɛ́-gə ṯ-awéwa má̆θă̆lan báwθə Ninwàye¹ yapóxwa làzəm háwɛ ṯə́lme.¹* 'When it was, for example, the fast of Nineveh, we had to bake ṭəlme.' (B10:95)

Elsewhere the *qaṭəlwa* form is used to express irrealis, which cannot be expressed by the past copula or existential particle, e.g.

(7) *xéna ʾən-hawéwa bə̀sra,¹ . . . dɛ̀rəxwa bə́sra.¹* 'If there was meat, . . . we would serve meat.' (B10:19)
(8) *ʾa-šábθa qamɛ́θa dɛréwa gu-məššàra¹ qa-t-rə́zza ṯ-awéwa spə̀y.¹* 'During the first week they would put it in the paddy field in order for the rice to be (grow) well.' (B5:135)
(9) *hátxa y-asṛ̀iwa baxtáθa,¹ ḥátta lá-hawɛwa sarḳ̀ole.¹* 'Women tied them (on their head) so that they did not have an uncovered head.' (B10:42)
(10) *ʾó-bena ʾa-ʾilàna¹ ta-zonìwa náše.¹ ta-zonìwala,¹ ta-t-hawéwa hayàrta¹ ta-xə̀tna.¹* 'This was so that people would buy the tree, so that they would buy it, so that it would be a help for the groom.' (B8:36)

15.3.9.3. ʾi-qaṭəl

When the *ʾi-* prefix is added to the *qaṭəl* form of *hwy*, the initial /h/ is generally elided, e.g. *y-awe* < *ʾi-hawe*. Occasionally, however, speakers use the forms without the elision of the /h/.

This form is used in place of the copula or existential particle when the proposition expressed by the clause has a generic property. This is conditioned by the generic nature of the subject argument or of the predicate. The *ʾi-qaṭəl* form is used when the subject argument is a generic class term without a specific referent, e.g. *tálga xwàra y-áwe¹* 'Snow is white.' In this example it is the subject that contributes to the generic nature of

the proposition. The predicate expresses a permanent property. The form is also used when the subject argument has a specific referent and the predicate expresses a habitual, iterative situation, e.g. *kút-yom brónux làxxa y-áwe*ˈ 'Everyday your son is here.' In such cases it is the predicate that contributes to the generic nature of the proposition rather than the subject. In many cases where the form is used both of these factors are operative, in that the subject is a generic class term and the predicate expresses a habitual, iterative situation, e.g. *kut-šéta tálga gu-ṭùra y-áwe*ˈ 'Every year there is snow in the mountains.'

Examples from the text corpus with generic class terms as subjects and predicates expressing a permanent property:

(1) *lóxma prìša y-áwe.*ˈ 'Bread is different.' (B5:99)

(2) *lawàše*ˈ…*ʾi-maxéla l-tanùra.*ˈ *tanùra*ˈ *y-áwe xamìma.*ˈ 'They put *lawaše* in the oven. The oven is hot.' (B6:48)

(3) *ʾáw qəqwána gu-ṭùra y-áwe.*ˈ 'The partridge is in the mountains.' (B5:147)

(4) *ʾítlɛni halùke,*ˈ *ʾap-ʾáni har-gu-ʾaqàra y-áwa.*ˈ *ʾap-ʾáni rába basìme y-áwa.*ˈ *ʾap-ʾáni y-áwa smòqe*ˈ *zère*ˈ *basìme.*ˈ 'Plums, we have plums. These are only in the farmland. These are also very tasty. They are red and yellow, (they are) delicious.' (B5:222)

(5) *fa-ʾáw qunjìyáθe dìye*ˈ *d-áy mandòrta*ˈ *y-áwa bòzye*ˈ *y-áwe bóya bìye.*ˈ 'The ends of the roller are bored, there are holes in them' (B5:193)

As is shown by (4), generic class terms may be pronominalized. The subject may be distributive denoting 'each one' of the class concerned, e.g.

(6) *kút-xa y-áwe gu-bèθe*ˈ *ʾu-heywáne y-áwa mə́nne dìye.*ˈ 'Everybody is in his home and his animals are with him.' (B5:116)

Examples containing a subject with a specific referent and a predicate expressing a habitual, iterative situation:

(7) *béna Rustắmo ʾέ-gət dàməx*ˈ *ṭḷaθà yomáθa*ˈ *ʾu-ṭḷaθá lɛlắwáθa y-áwe dmíxa lɛ-ṛ̀àyəš.*ˈ 'Now, when Rustam slept, he would be asleep for three days and three nights and not wake.' (A29:19)

(8) *b-šə́ryăwáθa šaxìnta y-óya dúnye.*ˈ 'During the festivals the weather (literally: the world) is hot.' (B6:25)

Examples with both generic subjects and habitual, iterative predicates:

(9) *sab-ʾáxni xluláne kə́slən šàbθa y-áwa.*ˈ 'since in our community wed-
     dings are on a Saturday (i.e. each time there is a wedding it takes
     place on a Saturday).' (B5:46)

(10) *ʾap-ʾə́rxe b-gàrre y-áwa.*ˈ 'Also the water-mills are by turns (i.e. each
     time people use a water-mill they take it in turns).' (B5:90)

As we have seen, constructions with the basic copula may also be used
to express the permanent property of a generic subject. In this profile,
therefore, there is free variation between *y-awe* and the copula. This is seen
in cases such as (11), where both forms are used in the same context:

(11) *mandórta ʾíle kèpa*ˈ *gòṛa y-áwe,*ˈ *yáʕni y-áwe mtúṛṣa xāṣ-d-ó-məndi.*ˈ 'A
     roller is a stone, which is large and is made specially for this thing.'
     (B5:193)

15.3.9.4. ʾi-qaṭəlwa

The *ʾi-qaṭəlwa* form of *hwy* is used as a realis past form, referring imperfec-
tively to a situation in the past. It is attested in the text corpus in clauses
with a variety of profiles.

(i) Clauses with a subject argument referring to a specific referent and
with a predicate expressing a permanent property, e.g.

(1) *Mar-Sáwa y-awéwa xa-qaddìša.*ˈ 'St. Sawa was a saint.' (B6:27)

(2) *ʾúmra qúrbət bɛθ-qorayàθa y-awéwa.*ˈ 'The church was near the cem-
     etery.' (B5:56)

(ii) Clauses with a subject that is a class term and a predicate expressing
a permanent property, e.g.

(3) *qălúnka bazə́kka díya rìxa y-awéwa.*ˈ 'The stem of the pipe was long.'
     (B7:19)

(4) *ṭaxníwa y-oðíwa qámxa daqìqa y-awéwa.*ˈ 'They would grind it and
     make it into flour that was fine.' (B10:88)

(5) *ʾa-t-la-ṣaléwa kaws-díya y-awéwa ràba xɛlàna-w*ˈ *xlìma,*ˈ *dɛríwa ʾúpra.*
     '(A woman) whose whose hair would not (comb) down, (since) it
     was very abundant and thick,—they would apply the (oily) mud.'
     (B10:68)

(iii) Clauses with a subject that is a class term and a predicate that can be interpreted as expressing habitual/iterative aspect, e.g.

(6) *ʾu-réšət púnda ʾùḷḷul y-awéwa.*ˈ 'The top of the wick was upwards (on each of these occasions).' (B15:83)

(7) *qéṭa xə̀mma y-awéwa rába.*ˈ 'Summer was very hot (each year)' (B11:34)

(8) *rába gáye ráya palə̀ṭwa,*ˈ*...palə̀ṭwa*ˈ *qèsa y-awéwa b-íðe díye.*ˈ 'On many occasions the shepherd went out...He went out with a wooden stick in his hand.' (B15:48)

The verb 'to be' in clauses with profiles (i) and (ii) may also be expressed by the past copula.

15.3.9.5. bəd-qaṭəl

When the prefix *bəd-* is attached to *hawe*, the /h/ is elided and the prefix reduced to a voiceless stop resulting in the form *ṭ-awe*. This form is used to denote a situation in the future, which cannot be expressed by the copula forms or the existential particle. The aspect expressed by the form is either perfective, e.g. *támmal ṭ-áwən láxxa sáʾət tmànya*ˈ 'Tomorrow I shall be here at eight o'clock', or habitual, e.g. *kút-yom ṭ-áwən láxxa sáʾət tmànya*ˈ 'Everyday I shall be here at eight o'clock,' which can be still interpreted as perfective in that the speaker uses the form that is appropriate to express each individual perfective occurrence of the iterated situation. Examples from the text corpus:

(1) *ʾáwwa náša fằqìra*ˈ *ṭ-awéle xá bronà.*ˈ 'This poor man will have a son.' (A8:3)

(2) *ṭla-d-èni ṭ-óya béta?*ˈ 'The egg will be for whom? (D1:3)

(3) *ʾáyya dàx-ṭ-awya?!*ˈ 'How will this be?!' (A7:7)

(4) *mó-ṭ-oya ʾàyya?*ˈ 'What will become of her?' (A4:38)

With a 1st person subject it is often used to express intention, e.g.

(5) *ʾàxxa ṭ-óyən*ˈ *hál-o-yoma mèθən.*ˈ 'I shall be here until the day I die.' (A4:45)

(6) *ʾána bṭ-áwən mə̀nnəx.*ˈ 'I shall be with you.' (A8:68)

With 2nd and 3rd person subjects it may have a deontic sense, e.g.

(7) *ʾína Nozáli ʾu-Gozàli¹ bt̠-áwi m-gēb-brònux¹ gu-d-áwwa bḕθux.¹* 'But Nozali and Gozali will be in place of your son in this house of yours.' (A8:95)

(8) *ʾàxxa t̠-óyət.¹* 'You will be here.' (A30:20)

(9) *málka t̠-áwət basìma.¹* 'King, you will (I hope) be well.' (A1:14)

15.3.9.6. qəm-qaṭəl

The *qəm-qaṭəl* form, which functions as a perfective past tense, is used only with pronominal suffixes as an alternative to the *qṭille* form. It may be used with the verb *hwy* when the verb takes an indirect object suffix, e.g.

(1) *qəm-hawéla xáθa yak̠ànta.¹* 'An only sister was born to them (literally: was to them).' (A18:1)

15.3.9.7. bəd-qaṭəlwa

This is attested in contexts where it is used to express the future in the past, i.e. a perfective action that is in the future from the perspective of some point in the past, e.g.

(1) *ʾána bíθənnux θíθən bàθrux.¹ w-ana-lɛ́ðən t̠-awə́twa ʾáti xàyən palt̠ə́twa mə́nni.¹ júlli mattə́twala gu-gùda¹ ʾu-bánətwa ʾo-gúda b-rèša.¹* I loved you and followed you, while not knowing that you would turn out to be treacherous to me, that you would put my clothes in the wall and build the wall over them.' (A14:101)

In (2) it is used to express discourse dependency, which is a function exhibited by other verbs in the *bəd-qaṭəlwa* form (cf. §15.1.6.3.). The clause is an elaboration of what is stated in the clause before it:

(2) *ʾíθwalən ʾùmra¹ Mar-Gwìrgis¹ ʾax-tré t̠abàqe¹ t-bàte¹ ʾíθwabe yáʿni xàmši,¹ tmaní mètre t̠-awéwabe,¹ ʾə́mma mə̀tre¹ ramùθe.¹* 'We had the church of Saint George, which had what was similar to two floors of a house, that is it was fifty, it was eighty metres, even a hundred metres in height.' (B2:3)

15.3.9.8. qṭille

The *qṭille* form of *hwy* denotes the occurrence of a specific event in the past with perfective aspect.

It may refer to a situation as a complete event in the past, having a finite duration with a starting-point and end-point, which may be followed by another event that is sequential to, e.g.

(1) *tre-ṭlá yománe wéla b-ʾúrxa t-là-xala,¹ ʾu-t-là-štaya.¹ xuláma Bangína mə́re ṭla-Mămo¹* 'For two or three days they were on the road without food and without drink. (Then) the servant Bangina said to Mămo…' (A26:16)

(2) *tmánya yománe wéle táma xlùla.¹* 'The wedding took place there (during a period of) eight days.' (A32:25)

It is used to report the birth of a child, e.g.

(3) *Z̨ắl wéle ʾə́lle díye bròna.¹* 'A son was born to Zāl.' (A28:2)

The form may have a present perfect sense in that it expresses a past event with present relevance. In such cases the endpoint of the event coincides with or is close to the present, e.g.

(4) *malkúθi péša ṭlàləx,¹ wéləx hawnànta,¹ b-ʾiqárət ṣáwθa basìmta,¹ ʾu-màqul.¹* 'My kingdom will be for you, since you have been (up until this moment) clever, with the honour of sweet and fine words.' (A40:16)

(5) *dáx šaqlítuley yàlən?¹ dáx bárya ʾàyya?¹ mòdi wéle?¹* 'How can you take our children away? How can that come about? What has happened?' (A8:9)

Rather than denoting a complete event bounded by a start and an end, the form is sometimes used ingressively to denote the start of a situation without any definite endpoint. Another event mentioned in the ensuing discourse, therefore, may take place while this situation still holds rather than sequential to its completion, e.g.

(6) *dí zìlla dána¹ θèla dána¹ ʾu-saʾə̀tɛla¹ wéla ʾaṣə̀rta.¹ b-áyya dàna,¹ ʾə́θyɛ́le fằqih.¹* 'Time passed, the hours passed, and it became evening. At that time (i.e. during the evening) the jurist came.' (A22:28)

(7) *wéla hádəx xə̀ðye.¹ qímela músqəlla b-dáwla-w zòrna,¹ dré́θət tòpe¹ ʾu-hádəx wídla xlùla.¹* 'They became so happy. (In their happiness) they brought them up (to the palace) with drum and pipe, the firing of rifles, and so held the wedding.' (A4:56)

(8) *wéla máṭra xɛlànta*ˈ *máṭra màṭra.*ˈ *ʾáni-ži mòdila wíðe?*ˈ *qìmela*ˈ *kúlla wíre gu-xa-gə̀ppa.*ˈ *mára kálya màṭra.*ˈ 'There was heavy rain (i.e. it started raining heavily), a lot of rain. What did they do? They all went into a cave (while it was raining). They said "Let the rain stop."' (A14:11)

(9) *yómət ṭḷàθa*ˈ *kúl-məndi wéle hàzər*ˈ *ʾu-Gozáli tíwɛle tràb xaṣ-súsa.*ˈ 'On the third day everything was (= became) ready. (When this situation held) Gozali sat, thump, on the back of the horse.' (A8:38–39)

(10) *wéla dánət mḥaṣòle.*ˈ *ʾáy báxta mḥuṣə̀lla.*ˈ 'It became the time of giving birth and the woman gave birth.' (A8:6)

(11) *šqíllux zúze wélux lebána ʾàx-zawna.*ˈ 'You took the money and became tricky like the time.' (A1:22)

Conversely it may denote a situation with an endpoint without specifying the onset. In (12) the speaker uses the *qṭille* form to express the fact that his name was still the same at the end of a party during which he had expected it to be changed.

(12) *táwri xìllux.*ˈ *mə́ndi xìllux,*ˈ *kúlla xìllɛxu,*ˈ *štêlɛxu,*ˈ *mubsə̀mlɛxu*ˈ *hár šə́mmi wele-Čùxo.*ˈ 'You ate my ox. you ate such-and-such. You ate everything. You drank. You enjoyed yourselves. But my name was still Čuxo (at the end of the party).' (A7:4)

15.4. Compound Verbal Constructions

15.4.1. *The Resultative Participle Combined with the Verb 'to be'*

15.4.1.1. *General Remarks*

The resultative participle (*qṭila* I, *mquṭla* II, *muqəṭla* III) relates to a situation that results from a past event. It exhibits a semantic profile that includes both dynamicity and stativity. In this respect it shares features with verbs, which typically express dynamic events, and with adjectives, which denote properties with a degree of durability and stability in time. The morphological form should be regarded as indeterminate with regard to dynamism and stativity in that it may have a dynamic (verbal) or stative (adjectival) interpretation according to the context in which it is used.

The resultative participle occurs in the predicate of a clause with the basic copula or the deictic copula. The interpretation of the participle

with regard to dynamicity depends on (i) the actionality of the verb by virtue of its lexical meaning and (ii) the transitivity of the clause.

It is convenient to adopt here the classification of the actionality of verbal events proposed by Vendler (1957, 1967). These include statives, activities, achievements and accomplishments. Verbs with stative actionality denote a durative, homogeneous state, e.g. *to believe*. Activities are durative, homogeneous dynamic events, e.g. *to run*. The homogeneity of states and activities is shown by the fact that any interval during which they take place can be divided into homogeneous sub-intervals. They are said to be 'atelic' events, in that they do not have an inherent, internal endpoint. Achievements and accomplishments, by contrast, are 'telic' since they have an inherent endpoint by virtue of their meaning. They contain an internal boundary, whereby they are non-homogeneous at two sub-intervals of the action. They include a dynamic component and an endpoint (*telos*) attained by the completion of the event. The difference between achievements and accomplishments lies in the feature of durativity. The dynamic component of achievements is not durative, e.g. *to sit down*, whereas durativity is present in the dynamic interval of accomplishments and can be quantified by a temporal adverbial indicating a period of time, e.g. *to boil* ('The water boiled in five minutes'). A further type of actionality is that of 'punctual' verbs, which denote atelic dynamic events that have only minimal duration. As with other types of atelic events, punctual events are homogeneous and do not result in a clear state that is defined by the event, e.g. *to sneeze*.

This scheme of classification may be summarized in the following table:

	durative	dynamic	homogeneous
stative	+	−	+
activity	+	+	+
achievement	−	+	−
accomplishment	+	+	−
punctual event	−	+	+

The resultative participle may occur in a predicate of an intransitive clause. Such constructions contain only a subject argument, which is the affected participant in the event. The participle in these clauses may have a verbal or adjectival interpretation. The crucial conditioning factor is the actionality of the verb.

   If the actionality of the verb is telic, the resultative participle can have both a verbal and an adjectival interpretation. In the verbal interpretation, the predicate expresses the telic event including both its dynamic and final static endpoint, the subject of the clause being either the agent or the experiencer of the event. In the adjectival interpretation, it expresses only the resultant state of the endpoint. Verbs of this nature falling into the category of achievements, according to the classification described above, include, for example, *ʾtw* 'to sit down', *kly* 'to stand up', *ṭlʾ* 'to go to sleep', *dmx* 'to lie down, go to sleep', *rkw* 'to mount (an animal)', *mṭy* 'to arrive', *npl* 'to fall down', *pqʾ* 'to split', *sps* 'to rot', *ʾsy/ṣy* 'to get stuck', *gðl* 'to become frozen':

(1) *ʾáw hóle tìwaˈ*   'He has sat down' (verbal)
                              'He is seated' (adjectival)
(2) *ʾáw hóle ṭlìyaˈ*   'He has gone to sleep' (verbal)
                              'He is asleep' (adjectival)
(3) *ʾáw hóle npìlaˈ*   'He has fallen' (verbal)
                              'He is (lying) fallen' (adjectival)

The adjectival function of the resultative participle of such verbs is demonstrated by the fact that it can function as an attributive modifier of the participant that is affected by the event, i.e. the subject noun, e.g.

(4) *ʾaw-náša hóle tìwaˈ*   'The man is seated'
     xzáyənne ʾaw-náša tìwaˈ 'I see the seated man'
(5) *ʾaw-yála hóle ṭlìyaˈ*   'The child is asleep'
     xzáyənne ʾaw-yála ṭlìyaˈ 'I see the sleeping child'
(6) *ʾaw-yála hóle npìla.ˈ*   'The child is (lying) fallen'
     xzáyənne ʾaw-yála npìla.ˈ 'I see the fallen child'

Furthermore the adjectival interpretation of the copula predicate is shown by the fact that it can be combined with the adverbial *heš* 'still' in cases where the resulting state is not permanent, e.g. *héš hóle tìwaˈ* 'He is still seated', *héš hóle ṭlìyaˈ* 'He is still asleep'.

   The category of telic achievements include various verbs that denote ingressiveness into a state. The subject of these is typically an experiencer rather than an agent, e.g. *psx* 'to become merry', *xðy* 'to become happy', *krb* 'to become angry', *myθ* 'to become dead, die':

(7) *ʾáw hóle xə̀ðya*ˈ   'He has become happy' (verbal)
                              'He is happy' (adjectival)
     naša xəðya   'A happy man' (adjectival attribute)
(8) *ʾáw hóle mìθa*ˈ   'He has died' (verbal)
                              'He is dead' (adjectival)
     naša miθa   'A dead man' (adjectival attribute)

Various telic intransitive verbs have a dynamic component with some degree of quantifiable durativity and so should be classified as accomplishments, although in some cases the subject is inanimate. These include, for example, *m-qrn* 'to grow up', *m-nṭy* 'to succeed', *rθx* 'to boil', *č̆mč̆* 'to wither', *qry* 'to study (i.e. to apply one's mind purposefully to the acquisition of knowledge), be educated':

(9)   *bróni hóle mqŭrə̀na*ˈ   'My son has grown up' (verbal)
                              'My son is grown up' (adjectival)
      brona mqŭrəna   'A grown-up son' (adjectival attribute)
(10) *míya hóla rθìxe*   'The water has boiled' (verbal)
                              'The water is boiling' (adjectival)
      miya rθixe   'Boiling water' (adjectival attribute)
(11) *ʾáw hóle qə̀rya*ˈ   'He has studied' (verbal)
                              'He is educated' (adjectival)
      naša qərya   'An educated man' (adjectival attribute)

If the resultative participle in an intransitive clause is from an atelic verb, which by its nature does not express an event with an inherent resultant state, only a verbal interpretation is possible. The participle does not function as an adjective expressing a state, as shown by the fact that it cannot serve as an attributive adjectival modifier of the affected participant of the event nor can it be combined with the adverbial *heš* 'still'. Attested atelic intransitive verbs include those classified as activities and statives.

Activity verbs include, for example, *zmr* 'to sing', *bxy* 'to weep', *spr* 'to wait', *plx* 'to work':

(12) *ʾaw-náša hóle zmìra*ˈ   'The man has sung' (verbal)
      **naša zmira*
(13) *ʾaw-náša hóle plìxa*ˈ   'The man has worked' (verbal)
      **naša plixa*

Punctual activities include such verbs as *tpθ* 'to sneeze', *m-tnx* 'to sigh'

 (14) *ʾaw-náša hóle tpìθa*ˈ   'The man has sneezed'
    **ʾnaša tpiθa*
 (15) *ʾaw-náša hóle mtùnxa*ˈ 'The man has sighed'
    **naša mtunxa*

Stative verbs include, for example, *zdʾ* 'to fear, be afraid':

 (16) *ʾaw-náša hóle zdìya*ˈ   'The man has feared'
    **naša zdiya*

The resultative participle is combined with the copula also in the predicate of transitive clauses, which contain an argument in addition to that of the subject. In such constructions the participle always has a verbal interpretation. The participle and the copula agree with the subject, e.g.

 (17) *ʾaw-náša hóle dwíqa bàxta.*ˈ 'The man has seized a woman.' (verbal)

Perfective transitive events are typically telic, in that they result in a state which constitutes an inherent endpoint. The affected participant in the event is generally the goal of the action, in (17) 'a woman', rather than the subject referent. A resultative participle can only be used adjectivally when it is a predicative or attributive adjective of the affected participant of a telic event. It follows that the participle can be used adjectivally in a passive construction such as (18), in which the affectee of the event is subject. This is shown by the fact that it can be combined with the adverb *heš* 'still', which can only be used in relation to states, e.g.

 (18) *ʾay-báxta hóla dwìqta*ˈ 'The woman is seized' (adjectival)
    *ʾay-báxta héš hóla dwìqta*ˈ 'The woman is still seized' (adjectival)
    ʾay-baxta dwiqta   'The seized woman' (attributive adjective)

Such passive constructions can also have a perfective verbal interpretation, e.g.

 (19) *ʾay-báxta hóla dwìqta*ˈ 'The woman has been seized'

The agent is optionally expressed in a phrase introduced by the preposition *l-* or *mən*. This can be used both when the participle has a verbal interpretation and also when it is adjectival, e.g.

(20) *ʾaw-qðíla hóle mtúrṣa l-baznàye* 'The key has been made by Baz people' (verbal)
       ʾaw-qðíla hóle mtúrṣa l-baznàye 'The key is made by Baz people' (adjectival)
       qðila mturṣa l-baznaye 'A key made by Baz people' (adjectival attribute)

In transitive clauses such as (17) the resultative participle and the copula agree grammatically with the subject of the clause, which refers to the agent, rather than the object, which refers to the affectee, so only a verbal interpretation is possible. Furthermore, the grammatical agreement with the subject, which is the agent of the event, forces the participle to be interpreted with an active rather than passive voice. This active interpretation is further demonstrated by the fact that pronominal objects are expressed by attaching L-suffixes, which are used elsewhere to express the pronominal object of active verbs, e.g.

(21) *ʾaw-náša hóle dwìqəlla* 'The man has seized her'
       cf. *ʾaw-náša b-dawə̀qla* 'The man will seize her'

The behaviour of the resultative participle in the various structural configurations discussed above may be summarized in the table below:

	Function	Grammatical agreement
Intransitive telic	Verbal/adjectival	Grammatical subject
Intransitive atelic	Verbal	Grammatical subject
Transitive active	Verbal	Grammatical subject
Transitive passive	Verbal/adjectival	Grammatical subject

The following historical development of the construction may be hypothesized. The resultative participle was originally an adjectival form qualifying the affectee of an event, denoting the resultant state of the affectee in a telic intransitive event or a transitive event. When used predicatively an ambiguity developed between the interpretation of the function of the construction as the expression of the resultant stative property (adjecti-

val) or the verbal event that brought about the state (verbal). The verbal interpretation was extended by analogy to intransitive atelic predicates, which do not result in any state and could not by themselves provide the semantic basis required for the formation of the resultative participle. It was also extended by analogy to transitive active predicates. The feature of agreement with the grammatical subject was extended by analogy from the original intransitive/passive construction to the transitive active construction.

Regarding the copula component of constructions with the resultative participle, this can be either the deictic copula or the basic copula. As has been shown in §15.3.1.–§15.3.2., one of the conditioning factors for selecting one particular type of copula is the nature of the predicate. The enclitic basic copula and the deictic copula are used with predicates expressing either contingent or permanent properties but the independent basic copula is used only with predicates expressing permanent properties that, typically, are intrinsic to the nature of the subject referent and have not been acquired. It follows that it is in principle not appropriate to use the independent copula with the resultative participle, which, whether adjectival or verbal, expresses an acquired property of the subject. There are sporadic exceptions to this principle, such as (22), where the speaker appears to have used the independent copula in order to present the property of being betrothed as a permanent property of the woman in question:

(22) *lέðeti ʾàyya˥ ṭ-íla mən-háš t-la-bràya˥ ʾáyya ʾíla yíwta qa-dìyi?˥ bàxtila.˥*
'Don't you know that she has been betrothed to me since before she was born? She is my wife.' (A25:39)

15.4.1.2. *Function in Non-Narrative Discourse*
We shall now examine in greater detail the function that these resultative constructions have when used verbally.

It is important to make a distinction between its usage in narrative texts and its usage in non-narrative discourse.

In non-narrative discourse the resultative form is used to denote the result of a past verbal event that is in existence in the present. It is generally appropriate to translate it with the English present perfect. The deictic copula is used with the participle to draw particular attention to a current situation. There is a certain amount of subjectivity in the use of the deictic copula, but it is generally employed in assertive clauses to draw attention to a resultant state that has some kind of relevance to the

immediate present moment in time, e.g. *hole ʾəθya* 'He has come'. In interrogative clauses the enclitic copula is used, e.g. *ʾəθyɛle?* 'Has he come?' The construction is negated in both assertions and questions by the negative copula, e.g. *lɛle ʾəθya* 'He has not come', *lɛle ʾəθya?* 'Has he not come'.

   The expression *hole ʾəθya* 'He has come' denotes that the subject has the property of 'having come', which is the result of a prior event of coming. It asserts the existence in the present of the result of an event without referring directly to any specific event that brought about this result. Therefore, without further specification by a time adverbial in the clause or by the discourse context, the statement *hole ʾəθya* denotes that he has the property of 'having come' as a result of some unspecified event of coming that occurred some time in the past. There is no restriction on when the event occurred other than that it was some time before the present. The *qṭille* form,[6] by contrast, refers directly to a specific event in the past and not to its result. The event has typically occurred in the recent past and this may extend up to the present moment. The expression *dìya θéle*[ˈ] 'He has come just now' would be used to assert the occurrence of a specific event that has just taken place. Likewise the *qṭilwale* form *θewale* denotes the occurrence of a specific event in the more remote past.

   It may be the case that the result of the actions of *qṭille* and *qṭilwale* have some kind of relevance in the present. This is especially the case with regard to *qṭille*, which, in conversational discourse, is often translated most appropriately with the English 'perfect of recent past'.[7] Such resultant present relevance is, however, an implicature of their use rather than a component of their meaning. As remarked, the endpoint of an event expressed by *qṭille* may be the present moment. The *qṭille* form *θele* 'He has come' would be used by a speaker when he sees a person walking through the door of his home and the greeting said to the visitor on his arrival would be *b-šɛ̀na θélux!*[ˈ] 'You have come in peace!' The resultative form refers to a resultant state that holds at a period that is not adjacent temporally with the endpoint of the event. The resultant state is disconnected from the event temporally in that the resultative form is typically used after some time has elapsed after the event, crucially when none of the event can be witnessed directly. The resultative form *hole ʾəθya* 'He has come', for example, would be used when a guest is sitting in the house

---

   [6] For the sake of conciseness we shall dispense with noting in all cases the fact that the *qəm-qaṭəl* and *qəm-qaṭəlwa* forms are suppletive variants of transitive perfective *qṭille* and *qṭilwale* forms when pronominal suffixes are added.
   [7] For this type of English perfect see Comrie (1976: 60).

and nothing of the event of his coming is to be seen. The form *θele* would be used if any phase of the event of coming can be seen directly by the speaker, even if this is only the static endpoint of his standing at the door. One says *dìya θéle*[1] 'He has come just now' referring explicitly to the fact that the endpoint of the event coincides with the present moment, but the expression **diya hole ʾəθya* would not be felicitous. The resultative form is disconnected from the event also referentially in that it does not make any direct reference to the specific event that caused the result in question.

The result expressed by the resultative form may be an actual perceptible situation or an experiential property of the subject referent, e.g.

(1) *hón xíla gə̀rðo.*[1] 'I have eaten stew.'
(2) *xílli gə̀rðo.*[1] 'I have eaten the stew.'

Example (1) may be interpreted as asserting that at the present moment there is a perceptible result of my having eaten stew at some unspecified time in the past, e.g. I had a large stew for lunch and cannot eat much dinner. This construction could also be interpreted as asserting that I have the permanent property of being in the state of having eaten stew, i.e. it has been part of my life experience. In this interpretation it denotes that on some occasion, possibly on more than one occasion, I have eaten stew, though not necessarily recently. The purpose of the deictic copula in both interpretations would be to draw attention to the relevance of the past event to the present moment in time. In both cases there is a degree of indeterminateness concerning the event. The verbal form implies the existence of at least one unspecified member of the set of past events of eating. In the first interpretation the implication from the discourse context in which it is used (e.g. in response to the question 'Why do you not want to eat your dinner?') is that there was only one unspecified event. In the experiential interpretation the possibility remains open that there were more than one. In example (2) the *qṭille* form, by contrast, refers to the occurrence of one specific event that occurred at a specific point in time in the recent past. In such a construction the noun *gərðo* would, therefore, normally be definite with a specific identifiable referent.

The context may force a definite interpretation of an object nominal of a resultative construction, e.g.

(3) A: *ʾékɛle gə̀rðo?*[1] B: *hón xíləlle gə̀rðo.*[1] 'A: "Where is the stew?" B: "I have eaten the stew."'

(4)   A: *ʾɛ́kɛle gə̀rðo.ʾ¹* B: *xílli gə̀rðo.*¹ 'A: "Where is the stew?" B: "I have eaten the stew." '

The difference between these is as follows. The resultative construction in (3) asserts a present state that is disconnected temporally from the event that caused it, so the event must have happened at some time in the past that is not adjacent to the present moment, e.g. several hours ago or yesterday. The *qṭille* form would be used as in (4) when the endpoint of the past event is adjacent to the present, i.e. I have just now eaten it, where a translation with the English perfect of recent past would be appropriate.

The indeterminateness of the event signified by the resultative form means that the individual referents of plural nouns or nouns of mass in the clause can be interpreted as being distributed over more than one event during a particular duration of time, e.g.

(5)   *ʾə́dyo hón xîla rába xabù̀še.*¹ 'Today I have eaten many apples.'
(6)   *ʾə́dyo hóla ʾə́θye rába nà̀še.*¹ 'Today many people have come.'
(7)   *ʾə́dyo hón xîla lə̀xma.*¹ 'Today I have eaten bread.'

Example (5), with a plural patient argument 'apples', can be interpreted as meaning that during the course of today up to the present moment there have been various occasions on which I have eaten apples. The consumption of 'many apples' may have been distributed over various events, with a few apples being eaten on each occasion. It could also be interpreted as denoting the result of a single event of apple eating. Likewise example (6), which has a plural subject argument, can be interpreted as meaning either that the 'many people' came separately in a series of discrete events or that they arrived together. The construction reports only that 'many people' are in the resultant state of 'having come', without denoting that this was the result of one or of a series of events. The interpretation of (7), which has a noun of mass 'bread' as an object argument, could be that I have eaten some bread on various occasions today or on only one occasion. Contrast this with the equivalent clauses with *qṭille* forms:

(8)   *ʾə́dyo xílli rába xabù̀še.*¹ 'Today I ate many apples.'
(9)   *ʾə́dyo θéla rába nà̀še.*¹ 'Today many people came.'
(10) *ʾə́dyo xílli lə̀xma.*¹ 'Today I ate bread.'

The *qṭille* form denotes a specific event and (8)–(10) must be interpreted as referring to single events. The adverbial *ʾə́dyo* 'today' would normally

force the interpretation that the endpoint of these events occurred before the present moment and so they must be translated with the English preterite.

In some circumstances the context indicates the specific event that caused the present result. If, for example, the clause contains a punctual time adverbial binding the event to a particular point in time with no duration, the event is fully specified. Clauses containing the resultative form combined with such time adverbials, therefore, assert the existence of a present state and the context signals that it has been caused by this specific event. These would still differ from corresponding clauses with the *qṭille* form, which assert the occurrence of the event but the existence of a present state is only a possible implicature, which may be cancelled. Note that in English the present perfect is not used when the clause contains such time adverbials, e.g.

(11) *xóni hóle ʾɔ́θya ʾɔ́dyo b-sáʾɔt ʾɔ́čča-w pàlge.*ˈ 'My brother came today at half past nine.'

(12) *xóni θéle ʾɔ́dyo b-sáʾɔt ʾɔ́čča-w pàlge.*ˈ 'My brother came today at half past nine.'

The construction (11) with the resultative form asserts that my brother is currently in the state of 'having come' and so would be the natural construction to use if he is still here. Construction (12) could be interpreted as implying that he is still here, but this implicature could be cancelled and the form would still be felicitous (13). Any corresponding denial of the existence of the present result with the resultative construction would not be felicitous (14), e.g.

(13) *xóni θéle ʾɔ́dyo b-sáʾɔt ʾɔ́čča,*ˈ *bás plíṭle báθɔr pàlgɔt-saʾɔt.*ˈ 'My brother came today at nine o'clock, but left after half an hour.'

(14) ?? *xóni hóle ʾɔ́θya ʾɔ́dyo b-sáʾɔt ʾɔ́čča,*ˈ *bás hóle plíṭa báθɔr pàlgɔt-saʾɔt.*ˈ 'My brother came today at nine o'clock, but left after half an hour.'

The functional features of the resultative that have been described above are also discernible in its negated form *lɛle qṭila*. The negative form *lɛle ʾɔθya* 'He has not come' can be analysed as meaning that he is currently not in a state of 'having come'. Thus no specific event is negated. The implication is that no event of coming has occurred at any time. The negative *la qṭille* form, on the other hand, negates the occurrence of a specific event in the recent past. The event has its specificity and definiteness

by being bound to a particular point in time in the discourse context. Consider (15):

(15) *lat-nxàpa!?ˈ xá ʾaxwáθi mìraˈ dráya šlámi ʾəllux¹ ʾu-ʾáti tíwa l-ṭìzux!ˈ lə́mo la-qìmlux?ˈ* 'Are you not ashamed!? A prince like me greets you and you sit on your bum. Why did you not get up?' (A26:48)

Here the question with the negated *qṭille* form *la-qìmlux* is intended to ask why the addressee did not get up specifically at the time that the speaker greeted him. The translation of such negated *qṭille* forms by the English perfect of recent past is appropriate in a context where an event was expected to occur and the endpoint of its occurrence was expected to be adjacent with the present. If somebody is expected to arrive at a house at a particular time, somebody in the house may say *θèle?* 'Has he come?' The response to this could be *là θéle* 'He has not come', which would deny that he has come at this expected specific point in time in the recent past, with no necessary implication that he will come in the future. After uttering this, it would be appropriate to assert an action that is sequential to this specific point in time, e.g. *là θéle.¹ ʾàzəx.¹* 'He has not come. Let's go'. The negated *qṭille* form *là-θela* in (16) from the text corpus should be interpreted in this way:

(16) *xéna ʾána qémən ʾázən ʾùmra,¹ ʾánna xonăwáθa là-θela.¹* 'Well, I shall go to church. These brothers have not come back (now when I expected them to come).' (A37:2)

Note also (17), in which the absence of expectation that the man will come in the future is made explicit:

(17) *xóni zílle ʾu-lá θèle.¹ ʾu-díya ʾána hon-xšáwa leš-ʾàθe.¹* 'My brother has gone and has not come back, and now I think he will no longer come back.' (A8:60)

The negated *qṭille* form can be combined with the temporal adverbial particles referring to the present moment, such as *heš* 'still' and *hal-diya* 'until now'. These underscore that the action that is negated was expected to happen at a point in the immediate past adjacent to the present moment, e.g. *heš-là θéle,¹ ʾàzəx!; hal-díya là θéle,¹ ʾàzəx!ˈ* These could be paraphrased: We have waited for him until the present moment, when he was expected to come, but he has not come at the expected time, so now let's go.

It would not be appropriate to use the negated *qṭille* form *là θéle* if there is still an expectation that the person will come. If there is such an expectation the negated resultative form *lɛle ʾəθya* would be used. The latter form asserts that he is currently not in a state of 'having come' but it does not assert that this state is permanent. This is because, as remarked in §15.3.7., the negative copula does not specify the permanency of the state. It may denote either a permanent or a contingent state. The form *lɛle ʾəθya*, therefore, could be used if the speaker expects this state to be temporary and assumes he will come at some point in the future. If the construction is combined with the particle *heš* 'still, yet' (e.g. *heš lɛle ʾəθya* 'He has not yet come'), the scope of the assertion is narrowed to the present moment, i.e. at the present moment he is not in a state of 'having come', which implies that he may come at some point in the future.

Since a negative resultative such as *lɛle ʾəθya* 'He has not come' has generic temporal reference ('at no time in the past'), it is normal to use this construction with negative generic time adverbials such as *ču-ga* 'never', e.g.

(18) *čú-ga lɛ́le ʾəθya.*¹ 'He has never come.'

(19) *čú-ga lát xə̀zyəlle?*¹ 'Have you not ever seen him?'

In what follows we shall present various examples from direct speech in the text corpus that contain resultative forms and *qṭille/qəm-qaṭəl* forms that should be translated by the English present perfect. The reasons that led the speaker to choose one form rather than the other will be examined in the light of the foregoing discussion.

(20) *sígən ʾáti bɛ́θi **muxrùlux**!*¹ ... *mə́ra **hàtxət wíða**?*¹ *mə́ra **hot-ṣṭìmǝlle** bɛ́θət xálux.*¹ 'Go away! You have destroyed my house! [*This is said to the culprit when still on the scene of the event. The endpoint of the event is the present moment*]' (A23:32)... 'She said "Have you done this?" She said "You have ruined the house of your uncle. [*Said by the mother of the culprit after an interval of time has passed since the endpoint of the event and the culprit has moved away spatially from the scene of the event*]"' (A23:39)

(21) *mə́ra málka ṭ-áwət basìma,*¹ *brátux **hóla číttəllux** ṭ-ázət kəslèni.*¹ *ʾáxni maxzə̀xxe bɛ́θa,*¹ *ʾáti ṭ-áθət mənnèni.*¹ *mə́re ʾáy bráti **híwənna** ta-xá-naša špìla.*¹ *gu-tanúra **qəm-čɛdàli**.*¹ 'They said "King, may you be healthy, your daughter has invited you to come to us. [*The event of the daughter's issuing the invitation is temporally and spatially detached from the present speech situation*] We shall show you the house. You

will come with us." He said "I have given this daughter of mine to a paralysed man. [*This event took place some time ago, at a temporal and spatial distance from the speech situation*] She has invited me to an oven (house) [*i.e. she has just invited me, I have just received the invitation now, here in temporal and spatial proximity to the speech situation*]"' (A40:9–10)

(22) ʾo-qamàya¹ ʾámər ʾòh¹ zúzi **munšìli.**¹ qémən dɛ̀ṛən¹ ʾázən šáqlən zùzi¹ m-rəš-ʾɛ́na.¹ . . . . . ʾàmər¹ mpáləṭla zùzi!,¹ ʾə́mma dináre ʾána **hon-mùnšəlla** láxxa.¹ lázəm yawə̀tla.¹ 'The other said "Oh, I have forgotten my money. [*i.e. 'I have just now forgotten', said while he is still on the road leading away from the place where the money was left, so the event is temporally and spatially close to the speech situation*] I'll return and go to take my money from on top of the spring." . . . He said "Bring out my money! I have forgotten one hundred dinars here. [*This is said after a longer interval of time has intervened between the present moment and the occurrence of the event*] You must give it (to me)."' (A15:2–3)

(23) mə́re xàli¹ xmàre,¹ šáwwaθna **hóla xíle** l-dèwa,¹ mə́re **qəm-mɛθə́nna** quṛṭanèy.¹ 'He said "Uncle, the asses, the seven of them have been eaten by wolves." [*The event happened some time ago, temporally and spatially remote from the speech situation*]. He said "I have brought their blankets. [*i.e. just now, referring to an event that is temporally and spatially adjacent to the speech situation*]"' (A23:15)

(24) Žíne mə̀ra¹ qà-mo **wídlux** hátxa?¹ ʾámər ʾána čú-məndi **lan-wìda.**¹ 'Zine said "Why have you done this? [*referring to a specific event that has just taken place in the recent past*]" He said "I have done nothing. [*since the resultative form does not have a specific time reference, the implication here is that I have not done anything untoward at any time. No doubt this lack of specific temporal reference is exploited by the speaker to make a more emphatic denial*]"' (A26:86)

(25) θéla baxt-xále dìye¹ mə́ra ha-ʾÚmmo **mùt wíða.**?¹ 'The wife of his uncle came and said "Ummo, what have you done?" [*an interval of time has intervened between the event and the speech situation. The arrival of the woman does not coincide with the endpoint of the event*]' (A23:22)

(26) míya ṣə́lyela b-rešèy.¹ mə́re há xàzəx¹ mù **wídlux** rábbən?¹ 'The water came down onto their heads. He said "Oh look, what have you done, monk? [*i.e. what have you just done? The endpoint of the event is close to the speech situation*]"' (A16:11)

(27) gaʾət-tré mə́dre y-azìwa¹ y-amríwa mù **wiðlɛ̀xu.**?¹ hal-lɛ̀ka yáʿni¹ xəyálɛxu mù-**qṭila.**?¹ 'Again they (the family of the boy) would go and say "What have you done? [*i.e. what have you done up to this point in time?*

What is your latest news?] How far (have you got with your thoughts)?"'
That is "What decision have you made? [*i.e. What are your most recent
thoughts on this matter. What is the latest news?*]"'' (B5:2)

(28) *šláma llə̀xu!*ˈ *b-šéna b-ṭawàθa!*ˈ *mə́re páqəð tù!*ˈ *tìwle.*ˈ *mə́re há xèr,*ˈ *mòdi
bắyət?*ˈ *mə́re b-álaha* **hon-ʾə̀θya**ˈ *ʾána bắyən ʾítli xáčča šùla mə́nnux.*ˈ
" 'Greetings to you!" "You are welcome!" He said "Please sit down!"
He sat down. He said "Now, what do you want?" He said "By
God, I have come [*time has elapsed since the endpoint of the event of his
coming. He is now seated*], since I have some business I'd like to do
with you."' (A16:4)

(29) *mə́ra ha-ʾÚmmo* **dìṛṛux!**ˈ 'She said "Hey, Ummo, you have returned!
[*This is said as Ummo comes into the house immediately after the endpoint
of the event*]"' (A23:33)

(30) *wáy b-šèna,*ˈ *š-rèši,*ˈ **qəm-paqðə̀tli.**ˈ 'Goodbye, I'm grateful, you
have instructed me (well). [*i.e. the event of your instructing me extended
up to the end of the speaker's visit, which is the speech situation*]' (A8:50)

In the assertive clauses in the foregoing examples the resultative compound
forms all have the deictic copula, which draws the hearer's attention to
a resultant state. In some cases, however, the enclitic copula is used in
assertions. This generally occurs in contexts where the assertion is for some
reason less informative. In many cases the enclitic copula is used when
the speaker wishes to give greater relative prominence to the contents of
an adjacent clause and so reduces the attention drawn to the clause with
the resultative construction. In (31) the speaker wishes to draw attention to
the purpose of her coming, expressed in the following dependent clause,
more than the fact that she has come. This applies also to the reply of her
interlocutor, in which the resultative also has an enclitic copula. Example
(32) exhibits a similar construction, in which the purpose clause is more
informative than the main verb:

(31) *ʾáy jal-jálde wírra ʾə́lle dìye*ˈ *mə́ra lá-dri xéłət gànux.*ˈ **ʾána θíθən** *mpalṭánnux
m-gu-sə̀jən.*ˈ *mə́re lát-θiθa ʾána mpalóṭəlli m-gu-sə̀jən.*ˈ **θíθət** *šqála ʾáyya
róxi mən-gu-gàni.*ˈ 'She quickly entered (and found) him. She said
"Do not struggle. I have come to bring you out of the prison."
He said "You have not come to bring me out of the prison. You
have come to take my spirit from me."' (A26:82)

(32) *ʾámra mòt ʾə́θya Qaṭína?*ˈ *mə́re* **ʾə́θyən** *bắyən sisisàmbər.*ˈ 'She said "Why
have you come Qaṭina?" He said "I have come to seek the sisi-
sambər."' (A50:11)

In (33) and (34), likewise, the speaker wishes to give less prominence to the main verbs than to the content of their complement clauses:

(33) *mára* **xzíθən b-xə̀lmi*** *xóni dàwəqlux*ꞌ *darélux gu-səndàna,*ꞌ *gu-hàbsa.*ꞌ 'She said "I have seen in my dream that my brother will seize you and put you into a cell, in jail.'" (A26:43)

(34) *ʾu-ʾána* **mìθɛwən*** *yáꞥni* **muméθɛwən** *b-ʾalàha,*ꞌ **mumèθɛwən,*** *kə́mət ʾúrzət dúnye ʾáθa báθri le-y-azàna*ꞌ *ṭla-hìč-ʾurza.*ꞌ *bas-ʾə́n ʾáθya xá-baxta nabláli qa-kut-t-bằya,*ꞌ *yən-qa-xóna dìya,*ꞌ *ʾána bṭ-azàna.*ꞌ 'I have sworn, that is taken an oath by God, I have taken an oath that however many men in the world may come after me I shall not go to any man. But, if a woman comes to take me to anyone she wants, or to her brother, I shall go.' (A8:78)

In (35) the main prominence is put on the circumstantial clause, which expresses a new tragic realization, rather than on the resultative verbs 'I have fallen in love with you' and 'I have followed you', which are presupposed facts:

(35) *mə́ra ʾána* **bíθənnux θíθən** *bàθrux*ꞌ *w-ana-lə́ðən ṭ-awə́twa ʾáti xàyən palṭə́twa mə́nni.*ꞌ 'She said "I have fallen in love with you and followed you, while not knowing that you would turn out to be treacherous to me."' (A14:101)

In (36) and (37) the lack of a deictic copula in the second clause reflects the fact that these function as elaborations of the previous clause, rather than prominent pieces of independent information:

(36) *ʾàna*ꞌ *hon-ʾə́θya,*ꞌ **ríqən** *qam-màmi.*ꞌ 'I have come, running away from my paternal uncle.' (A25:42)

(37) *b-óma xéna ʾáθeti ṭla-kawùθra,*ꞌ **čídət** *kəslèni.*ꞌ 'The day after tomorrow come to lunch, you are invited to our home.' (A22:14)

A different reason for a reduced level of informativeness of the resultative construction is illustrated by (38). Here the clause 'I have put the house in order' refers to an activity that the speaker performs every day and so would be expected to perform:

(38) *ʾámər hà yə́mmi*ꞌ *mùt mára?*ꞌ *ʾènile plíxa ʾə́dyo?*ꞌ *mə́ra bábi har-ʾàtit plíxa,*ꞌ *ʾu-xmára-w tàwra,*ꞌ *ʾu-ʾána mquzqáztən bèθa.*ꞌ 'He said "So, mother, what do you say? Who has worked today?" She said "My dear,

only you have worked, the ass and ox, and I have put the house
in order."' (A21:15)

15.4.1.3. *Function in Narrative*

In the narrative sections of folktales in the text corpus the resultative form
is frequently used with the function of a preterite to relate a specific punc-
tual event in the past without any assertion of the existence of a resultant
state in the present. When it has this function, it is normally used with
the enclitic copula rather than the deictic copula. Since in narrative it
denotes a punctual event rather than a durable resultant state, it may be
used to express a chain of sequential events, e.g.

(1) *qìmela¹ b-lèle¹ ṭrípəlla Ž̌ìne¹ ʾu-mùθyəlla,¹ núbləlla kəs-Mǎ̌mo.¹ núbləlla kəs-
Mǎ̌mo.¹ dmìxela.¹ r̀ištela,¹ zìptəllela¹ ṭla-Mǎ̌mo.¹* 'At night they went and
seized Zine and brought her, they took her to Mǎmo. They took
her to Mǎmo. They slept. She woke up and pushed Mǎmo (out of
bed). (A26:3)

(2) *nùbləlle¹ súsət Qára Tèždin,¹ grìšəlle m-rəš-gəlla¹ m-xàla,¹ sìṛəlle ʾo-d-áw
šópe dìye¹ ʾu-sìqɛle.¹ síqɛle məxyɛle l-tầra.¹* 'He took the horse of Qara
Teždin. He pulled it from the grass he was eating and tied his own
in its place, then went up. He went up and knocked on the door.'
(A26:29)

(3) *šqíləlla ṭása b-lèle¹ ʾu-núbləlla zə́dyəlla gu-ða-dèrta.¹ šqíləlla mən-d-ɛ-dèrta,¹
núbləlla zə́dyəlla gu-ða-xèta.¹* 'They took the bowl in the night, took it
away and threw it into a house enclosure. They took it from that
enclosure, took it away and threw it into another one.' (A15:12)

(4) *ʾáp-ʾawwa sìqɛle gu-ṭúra,¹ mən-xuráne díye píšele gu-ṭúra xá-yoma yóme trè.¹
dmìxela¹ b-lèle xá-ga¹ ʾə́θyela tré malàxe.¹* 'So, he went up into the moun-
tains with his friends and remained in the mountains one or two
days. One night they went to sleep and two angels came.' (A4:2)

The copula is sometimes omitted from the participle when it has this
narrative preterite function. This typically occurs in a series of clauses
that open with a verb with the copula. The clause or clauses without the
copula express events that are closely sequential to that of the opening
clause. The purpose of the speaker is to present these as components of
one overall event rather than as a series of discrete events. The initial
verb in the chain is often a verb of movement or the verb *qym* 'to arise',
which in narrative frequently loses its original meaning and is used simply
to mark the onset of a new event, e.g.

(5) ʾə́θyela jmìye.ˈ 'They came and gathered together.' (A22:2)

(6) ʾə́θyɛle wìra.ˈ 'He came and entered.' (A26:47)

(7) qímɛle ʾə́θya síqa l-gàre.ˈ 'He got up, came and went up onto the roof.' (A26:40)

(8) qímɛle múθya tùre.ˈ 'He got up and fetched twigs.' (A20:3)

(9) ʾay-qìmtɛla,ˈ wíðta qàwa.ˈ 'She got up and made coffee.' (A26:31)

Normally in such chains of events the clause with the participle without the copula has the same subject as the preceding clause, as is the case in the examples above. When there is a change in subject a copula is generally used, e.g.

(10) síqɛle máxya l-tằra ̀ˈ ʾu-plíṭṭela Səttìye.ˈ 'He went up and knocked on the door and Səttiye came out.' (A26:29)

(11) ʾə́θyɛle tíwa b-dìwən ̀ˈ ʾu-náše kúlla tìwela ̀ˈ gu-dìwən.ˈ 'He came and sat down in the reception room, and everybody else sat down in the reception room.' (A26:63)

These are not, however, absolute rules. The copula is occasionally omitted when there is a change of subject in a chain of events (12) and even in the first clause in a narrative sequence after direct speech (13)–(14):

(12) ʾu-sìqɛleˈ súse kə́lya tàma.ˈ 'He went up and his horse stopped there.' (A26:28)

(13) mára mɛθítule kə̀sli!ˈ múθye Bakúrko kə́sla dìya.ˈ 'She said "Bring him to me". They brought Bakurko to her.' (A26:84)

(14) ʾo-náša sàwaˈ mə́re ṭla-d-ó-yala zòra,ˈ mə̀reˈ ʾὲka ṭ-ázət?ˈ ʾána čú-dukθa lìtli.ˈ ṭ-ázən gu-jàma.ˈ xámən gu-jàma.ˈ ʾáwwa qíma zíla l-bὲθe díyeˈ ʾo-náša gòṛa.ˈ 'The old man said to the youth, he said "Where will you go?" "I have nowhere to go. I'll go to the mosque. I'll stay in the mosque." The elderly man got up and went to his house.' (A17:5–6)

In the case of a sequence of two verbs that are closely related and presented as a tightly knit unit in the same intonation group, the copula is sometimes put only on the second participle of the sequence. This is most often found where the first verb of the sequence expresses movement, e.g.

(15) ʾáwwa gáwṛa díya síqɛle l-Nìnwe,ˈ díṛa ʾə́θyɛle.ˈ 'Her husband went up to Nineveh, then returned and came back.' (A13:2)

(16) *ʾaw-ʾə́θya wìrɛle.*ˈ 'He came and entered.' (A34:14)

(17) *ʾáp ʾo-lɛ́le ʾə́θye ṣ̀ə̀kyela.*ˈ 'Also that night they came and complained.' (A18:7)

(18) *qlíba ṣ̀ə̀lyɛle.*ˈ 'He went back down.' (A30:32)

(19) *dmíxe-u ṭlìyela.*ˈ 'They lay down and slept.' (A4:50)

In narratives the preterite *qṭilɛle* form is used interchangeably with the *qṭille/qəm-qaṭəl* form, which is the other main narrative verb form. The narrator constantly shifts from one form to the other. These shifts often coincide with some kind of reorientation in the narrative, especially where there is a change in subject and the narrator directs attention to another character, e.g.

(20) *qímɛle lèle šə́tya qáwa.*ˈ *tíwɛle l-xáṣə súse dìye*ˈ *ʾu-díṛɛle ṣə́lyɛle rəš-d-ɛ̀-ʾɛna.*ˈ *ʾɛ-ʾɛ́na ṭ-ìle ʾə́θya qamáye réša.*ˈ *Qára Tɛ́ždin dìṛṛe*ˈ *θéle bɛ̀θa*ˈ *ʾámər hà*ˈ *báxta kɛ́le ʾàrxa?*ˈ 'He got up and did not drink the coffee. He sat on the back of his horse and went back down to the spring, the spring to which he had come previously. Qara Teždin returned home and said "Ah, wife, where is the guest?"' (A26:32–33)

(21) *síqɛle l-gàre*ˈ *maxzóyəlle Ǧazíra Bòta.*ˈ *Ẑîne*ˈ *ʾu-ʾán-xaddamyáθa díya ṣléla rəš-ʾɛ̀na.*ˈ 'He went up onto the roof to show him Jazira Bota. Zine and her maid-servants went down to the spring.' (A26:40)

(22) *ʾə́θyɛle,*ˈ *qam-tắrət bɛ́θa tíwele hàdəx.*ˈ *bábe díye θèle.*ˈ 'He came and sat down in front of the door of the house. His father came.' (A26:10)

(23) *Qára Tɛ́ždin zìlɛle,*ˈ *yíwəlla ʾíðe gu-ʾíðət Mằmo.*ˈ *Mắmo qəm-šaqə́lla ṣoṣiyáθət Ẑîne*ˈ *mattúla gu-ʾíðət Qára Tɛ̀ždin.*ˈ 'Qara Teždin went and put his hand in the hand of Mămo. Mămo took the locks of Zine and put them in the hand of Qara Teždin.' (A26:50)

On some occasions there is no change in subject across the transition from one verbal form to the other. In such cases some kind of reorientation on another dimension of the discourse can usually be discerned. In (24), for example, the shift from *qṭilɛle* for *qṭille* coincides with the start of a chain of clauses that narrate a new event, i.e. the eating of the third fox cub. In (25) the clause 'In this way they held the wedding' containing the *qṭille* form *wídla* is not presented as an event that is sequential to the previously mentioned events of 'bringing them up with drum and pipe' and 'firing rifles' but rather it recapitulates these preceding specific

events by a general statement. In (26) the section beginning 'They played three times and Mir-Zandin lost', which contains *qṭille* forms, may also be regarded as constituting a break in the tight chain of events of the previous clauses. Its function is to elaborate on the event of playing chess rather than to carry the discourse forward with new events. In a similar manner the clause with the resultative form in (27) elaborates on the preceding clause with the *qṭille* form:

(24) *qímela ʾap-ʾo-tré prìməlle,¹ xìləlle.¹ ʾìmət xílla ʾap-ʾo-trè,¹ píšla xà-šabθa,¹ tré šabbàθa,¹ kpìnna.¹ ʾáp-ʾo-ṭlaθa qəm-pɛrmìle.¹* 'They slaughtered also the second one and ate him. After they ate the second one, a week, two weeks went by, they became hungry and slaughtered also the third one.' (A20:9)

(25) *qímela músqəlla b-dáwla-w zòrna,¹ dréθət tòpe.¹ ʾu-hádəx wídla xlùla.¹* 'They brought them up (to the palace) with drum and pipe and the firing of rifles. In this way they held the wedding.' (A4:56)

(26) *qìmɛle¹ qə́ryɛle qa-Mằmo,¹ ʾə́θyɛle tíwa b-dìwən¹ ʾu-náše kúlla tìwela¹ gu-dìwən.¹ šúryela mṭawóle b-šə̀trənjàne.¹ ṭlá-gaye mṭuwɛ̀lla,¹ ríqle Mir-Żàndin.¹ lá-mṣele b-Mằmo.¹* 'Now, he called for Mằmo and he came and sat in the reception room, and everybody else sat down in the reception room. They began playing chess. They played three times and Mir-Zandin lost (literally: ran away) and was unable to beat Mằmo.' (A26:63)

(27) *wírre gu-bòye.¹ gu-bóye díye mṭúšyəlla gáne dìye.¹* 'He went into his hole. He hid himself in his hole' (A1:15)

The transition in the narrative between the two verbal forms is also attested where the narrator repeats the mention of an event of particular importance in the story. The shift of verbal form is no doubt exploited in such circumstances to mark off the repeated clause more sharply from what precedes in order to give it prominence, e.g.

(28) *ʾó-yomə ṭ-íle plíṭa málka m-bɛ̀θa,¹ ʾó-yoma bróne díye mìθɛle.¹ ʾó-yoma mìtle bróne díye.¹* 'On the day that the king left home, on that day his son died. On that day his son died.' (A4:10)

(29) *ʾáyya ʾaqə́rwa θìθa¹ gu-réšə d-o-bòya¹ qṭìltəlle.¹ qəm-qaṭlále ʾo-xùwwe.¹* 'The scorpion came to the opening of the hole and killed it. It killed the snake.' (A9:6)

(30) *ʾáwwa zdìlɛle.¹ zdìlle,¹ mə́re…¹* 'He became afraid. He became afraid and said…' (A21:33)

Certain verbs exhibit a clear tendency to have the preterite expressed by *qṭille* rather than the resultative in narrative. A common feature of this set of verbs is that they are typically matrix verbs that have a clause as their complement. The most conspicuous of these verbs is *ʾmr* 'to say'. When this introduces direct speech, which may be considered to be its complement, the verb is regularly in the *qṭille* form: *mɔ́re* 'He said', *mɔ́ra* 'She said', etc. Other matrix verbs that are generally put in the *qṭille* form when preterite in narratives include:

m-šry 'to begin':

(31) *mšuréla bxɔ̀ya.*ˈ 'She began to weep.' (A4:42)
(32) *šuréla ṣrɔ̀xa.*ˈ 'She began to shout.' (A25:82)

ṣbr 'to dare':

(33) *lá ṣbírra mṣuwə̀tla.*ˈ 'She did not dare to speak.' (A24:40)
(34) *ʾáp-xa mɔ́nna lá-ṣbirre rhíwle gu-dìwən.*ˈ 'Nobody dared speak to him in the reception room.' (A26:70)

mṣy 'to be able':

(35) *lá-mṣela mṣuwə̀tla.*ˈ 'She could not speak.' (A21:26)
(36) *ʾáyya bàxta*ˈ *lá-mṣela mxumɛ̀la ʾɔ́rwe.*ˈ 'The woman could not keep the sheep.' (A10:6)

kaze 'to attempt without success':

(37) *kízle mxɔ̀ya*ˈ *goyáθət sùsa,*ˈ *súsa la-jwìjle.*ˈ 'He tried to strike the sides of the horse, but the horse did not move.' (A28:33)
(38) *kízle mparpóle bìye:*ˈ *nàša,*ˈ *ʾánna xonăwàθila.*ˈ 'He tried (to dissuade him) by begging him "Man, these are my brothers."' (A12:10)
(39) *kízla bróni lá-wuð hátxa mə̀ndi.*ˈ 'She tried (to stop him by saying) "Son, don't do such a thing."' (A14:6)
(40) *kízle də-mxíli xa-xèna!*ˈ 'He tried (to persuade him by saying) "Strike me again!"' (A52:24)

The deictic copula is sometimes used with the resultative participle in narratives. In such cases the form has its usual non-narrative function of denoting a resultant state. It is generally used to present the background

to the main narrative line against which the punctual narrative events occurred. The deictic copula here takes the past time reference of the surrounding context. It is often appropriate to translate such background clauses with the English pluperfect. Examples:

(41) ʾu-dəryále gàne᾿ gu-bə̀rke,᾿ sxàyɛle.᾿ súse díye **hóle mrúpyəlle** gu-màrga.᾿ 'He immersed himself in the pool and swam. He had released his horse in the meadow.' (A25:56)

(42) ʾína ʾáw kéfe basìmta.᾿ **hóle də́ryəlle** gáne gu-mìya.᾿ ṣríxtɛla m-gu-bar-bèhn.᾿ 'He was enjoying himself. He had immersed himself in the water. She shouted from the casement.' (A25:59)

(43) dwíqele qa-ʾàrya᾿ ʾu-mùθyəlle.᾿ də́ryəlle gu-bèθa.᾿ ʾítle qàṣra.᾿ **hóle mubə́n-yəlle** qáṣra góṛa trè ṭabáqe.᾿ 'He caught the lion and brought it back. He put it in the house. He had a villa. He had built a large villa with two storeys.' (A27:3)

(44) zílla bára dìya᾿ ta-t-xazèla,᾿ ʾína la-har-ču-dúkθa lìθwa.᾿ **hóla príxta** zìlta.᾿ 'They went after her to find her, but she was nowhere. She had flown and gone away.' (A27:26)

(45) xa-náša sàwa᾿...**hóle ṭína** kértət qèse᾿ l-xàṣe.᾿ **hóle tíwa** l-kèpa,᾿ hàtxa.᾿ ʾánna pìðəlla mə́nne díye,᾿ ʾap-šlàma léla də́ryəlle.᾿ 'An old man...was carrying a load of wood on his back. He was sitting on a stone, like this. They passed by him, but did not even greet him.' (A15:13)

(46) **hóle tíwa** gu-xa-gəppìθa᾿ ʾarbì-šənne.᾿ qìmɛle᾿ mə́re mádam hàtxɛla̭᾿ ṭ-ázən ṭá̭yən báθər ḥaqqùθa᾿ ʾu-na-ḥaqqùθa.᾿ 'He had been dwelling in a cave for forty years. He arose and said "If (the world) is like that, I shall go and search for what is lawful and what is unlawful."' (A15:4–5)

(47) hadìya,᾿ ʾó-lɛlət mèθì,᾿ **holá-ʾəθye tìwe**,᾿ báxta tíwta l-àyya-gotət mḗs,᾿ ʾu-gáwṛa tíwa l-ày-gota.᾿ ʾo-yála zóra **hóla múttəlle** be-pàlga.᾿...maláxe **holá-ʾəθye tíwe** l-kàwe.᾿...ʾu-hádəx ʾíθwa ʾán-xa sobáθət kə̀slən,᾿ bux-ɛrìyewa.᾿ síqɛle xákma mən-d-ò-šə̀mra,᾿ wírɛle gu-naxírət xa-m-malàxe.᾿ ʾu-wídɛle pə̀θyo!᾿ tpìθɛle.᾿ ʾó-yala zóra mə́re b-ràxme!᾿ ʾax-ṭ-íle míra ʾo-zóra b-ràxme,᾿ ʾámər b-ráxme l-bàbux᾿ l-yə̀mmux.᾿ kút-xa mə́nna xámšì šə́nne xéne xǎyèla.᾿ qímela maláxe dìṛe.᾿ 'Now, the night they were to die, they had come and sat down, the wife sitting on this side of the table and the husband sitting on the other side. They had put the small child in the middle.... The angels had come and sat by the window.... There were those stoves in our community that were smoke ducts. Some of the soot went up and entered the nose of

one of the angels. He went "achoo!" He sneezed. The little boy
said "Bless you!" When the little one said "Bless you", he (the
angel) said "Bless your father and mother. May each live another
fifty years." The angels got up and returned.' (A4:57–60)

Occasionally the deictic copula is used when the construction expresses
a punctual event that is sequential to what precedes. The effect of this is
to draw particular attention to the event and mark it off distinctly from
what precedes. In (48) the main motivation appears to be to give particular
attention to the event due to its unexpectedness. It is not usual for a barber
to have to bring a ladder to cut a person's hair. In (49) the deictic copula
is used to mark the onset of a section narrating a battle between the hero
and his enemy. The section begins with the narrative formula *mara* '(The
story) says', which is generally used as a device to mark boundaries in the
discourse (§15.4.2.3 examples 19–23).

(48) *tíwεle Z̃àlo¹ qəm-tắrət qáṣre dìye¹ ʾo-ḥallàqa¹ hóle múθyəlla xa-semàlta¹*
múttəlla baθrə̀t rušáne díye.¹ 'Zāl sat before his palace. The barber
brought a ladder and placed it behind his shoulders.' (A29:2)

(49) *pìšεle¹ kízle mparpóle bìyeː¹ nàša,¹ ʾánna xonăwàθila,¹ ʾáxxa l-tàmma.¹ mára*
màrənnux¹ ʾáti grùš gánux¹ ʾánna dìya¹ kúlla parqə̀nna.¹ mára ʾáp-ʾaw hóle
plìša.¹ ʾáw-w ʾó-naša plàša,¹ plàša,¹ plàša¹ hál gu-mbadlàθa.¹ gu-mbadláθa
mxέθət yóma ʾó-naša tlìqεle.¹ 'He tried to dissuade him by begging
him "Man, these are my brothers" and so forth. "I'm telling you,
go away. I shall finish off all of these people here." Now, he fought
also him. He and that man fought. They continued fighting until
dawn. At dawn, the break of day, he disappeared.' (A12:10)

The use of the *qṭilεle* construction in narratives to express sequential
events in the past seems *prima facie* to be unusual. It is unlikely that the
normal function of *qṭilεle* to express present resultant states has been
here exploited to give vividness to past events. More effective means of
expressing such vividness are available to the narrator in the *qṭille* form,
which expresses events in the immediate past, or the perfective *qaṭəl*,
which expresses punctual events taking place in the present moment.
The resultant states expressed by the present perfect *qṭilεle*, moreover,
are temporally unbounded and would more naturally be used to express
temporally overlapping states rather than be concatenated to express
sequential situations.

A more satisfactory explanation is to regard this function of the *qṭilɛle* form in narratives to have originated in the use of the present perfect as an evidential verbal form. In many languages present perfect verb forms have developed the function of expressing past events for which the speaker has no direct evidence. Such forms are used when the speaker has not witnessed the event first hand, but has acquired knowledge of the event only by hearsay report or by inference from indirect evidence. The propensity of the present perfect to develop this function in languages is due to the fact that it does not present an event directly but only through its results (Comrie 1976: 108–110; Aikhenvald 2004: 112–115). The stimulus for the C. Barwar NENA present perfect to have its function extended in this way was probably given by language contact. A likely candidate for the source of this influence is Turkish. This language has an evidential verbal form (distinguished by the affix *-miş*), which is associated morphologically and functionally with the perfect. A relevant feature of the Turkish evidential form is that it is used in fictional narratives with no basis in reality, such as myths and folktales (Slobin and Aksu 1982; Aksu and Slobin 1986; Aksu-Koç 1988: 25), which are the type of narrative text where the *qṭilɛle* preterite is most often encountered in the C. Barwar dialect. A perfect verb form extended to express the evidential denotes perfective events rather than present states and so can be used felicitously to express sequential narrative events.

It should be noted, however, that in the C. Barwar NENA dialect, it appears that the *qṭilɛle* perfect form is not used with an evidential function outside of narrative contexts. In contexts that would typically trigger an evidential form, informants use both *qṭille* and *qṭilɛle* with their usual distinction in temporal-aspectual function, e.g.

(50) *márɛle xóni ʾšθyɛle qedàmta.*[1] 'He says that my brother came this morning.'

(51) *mabyónela xóni ʾšθyɛle qedàmta.*[1] 'It seems that my brother came this morning.'

(52) *márɛle xóni dìya θéle.*[1] 'He says that my brother has just come.'

(53) *mabyónela xóni dìya θéle.*[1] 'It seems that my brother has just come.'

Furthermore speakers use 1st person *qṭilɛle* forms in narratives. This is difficult to reconcile with an evidential function, which is characteristically used when a speaker has indirect evidence of an event in which he/she has not participated, e.g.

(54) *mára zílən l-tắrət pərdèsa*ˈ… *xìlən*ˈ *ʾu-šə̀tyən.*ˈ… *ʾu-ʾámər qáša ʾu-ʾàna?*ˈ *ʾámər də-klì!*ˈ *ʾámər hádəx ʾáp-ʾati ʾə̀θyət.*ˈ *ʾámər ʾə̀θyɛt.*ˈ *mə́ṭyət kəslè̥.*ˈ 'He says "I went to the door of Paradise…I ate and drank." …The priest says "And me?" He says "Wait!" He says "Meanwhile you also came." He says "You came and went up to them." (A2:7–9)

(55) *ʾána-ži m-kɛ́rbi ʾə̀θyən ʾá-kθɛθa múttənna rəš-núra ʾu-xìlənna.*ˈ 'I, out of my anger, came and put the chicken on the fire and ate it.' (A2:11)

(56) *ṣríxən hátxa biya-dìya.*ˈ *ʾáyya qəm-patlála gʸān-dìya*ˈ *ʾána xšíwən là maxyáli.*ˈ *qəm-patlála gʸān-dìya*ˈ… *qəm-maxyála ðà-p̣ena.*ˈ 'I shouted at it like this. It turned itself round. I thought it would not strike me. It turned itself round…It gave me a kick.' (B5:131–132)

In the light of the foregoing, it is easiest to regard the *qṭilɛle* preterite as a narrative verbal form, characteristic of fictitious discourse, which originally developed in imitation of the use of the Turkish evidential verbal forms with *-miş* in fictitious narrative. It did not, however, come to be used as a fully functional evidential form that could be used outside of narrative.

15.4.1.4. *Movement of the Enclitic Copula*

As remarked, positive assertive resultative constructions can have the enclitic or the deictic copula. If special prominence is given to a particular constituent of the clause, however, only the enclitic copula is used. In such circumstances this is moved from the participle and attached to the prominent constituent in question. In most cases the constituent that is given prominence in this way is placed before the participle, whatever its grammatical function in the clause, and so the movement of the enclitic is leftwards. In some constructions in narrative the enclitic moves rightwards and is attached to a constituent that occurs after the participle in the clause.

15.4.1.4.1. *Leftward Movement of the Enclitic*

In constructions where the enclitic copula is moved leftwards it is important to distinguish cases where the constituent that is given prominence bears the nuclear stress and cases where the nuclear stress is placed elsewhere in the clause. As a general rule, prominent items bearing the nuclear stress are clausal arguments expressing some kind of information focus, by which the speaker wishes to draw the hearer's attention to important new information. This may be termed 'narrow' focus, in that attention is drawn to one particular argument in the clause and not to the predicate or overall proposition as a whole. The normal default position for the

nuclear stress is at the end of the intonation group. Since the focused item is placed at the beginning of the clause the nuclear stress is in a marked position. Items given prominence that do not bear the nuclear stress, on the other hand, are generally not a focus of new information.

(i) *Narrow New Information Focus*
One type of narrow new information focus that is expressed by the attachment of the enclitic copula is contrastive focus. This is used when the speaker wishes to correct a misunderstanding by strongly asserting that one particular item should be selected for the role in question rather than the one currently entertained by the hearer, e.g.

(1) A: *xónux hóle xíla xabùša*ˈ B: *là,*ˈ *brònux-ile xíla xabúša.*ˈ 'A: "Your brother has eaten an apple." B: "No, *your son* has eaten an apple."'

(2) A: *xónux hóle xíla xabùša*ˈ B: *là,*ˈ *xàwxɛle xíla xóni.*ˈ *léle xabùša xíla.*ˈ 'A: "Your brother has eaten an apple." B: "No, my brother has eaten *a peach*. He has not eaten *an apple*.'"

(3) A: *xóni hóle xɔ́zya bratéxu qedàmta*ˈ B: *léle qedàmta xɔ́zya brátən,*ˈ *təmməl-ile xɔ́zyəlla.*ˈ 'A: "My brother saw your daughter this morning." B: "He did not see our daughter *this morning*, he saw her *yesterday*."'

Examples from the text corpus:

(4) *lɛ́wən θíθa b-xabrə dìye.*ˈ *ʾáyya xáθe dìyela.*ˈ *b-xábrət xáθə dìyən θíθa.*ˈ 'I did not come at his word. She is his sister. I came at the word of his sister.' (A8:85)

(5) *ʾànən múθyəlle.*ˈ '*I* (and not my brother) have brought it back.' (A24:31)

(6) *yába ʾànən mšúdrəlla!*ˈ '*I* (not God) have sent them!' (A6:4)

(7) *ʾànən xɔ́zyəlle,*ˈ *dìyile.*ˈ '*I* (and nobody else) have found it. It is mine.' (A14:15)

(8) *ʾànna*ˈ *Səttiyela muttɛ́θəlla láxxa.*ˈ '*Səttiye* (not anybody else) put these here.' (A25:36)

In principle when the speaker expresses a narrow focus on one particular argument of the clause, the proposition of the clause is presupposed to be known to the hearer and activated in his mind with the exception of the identity of the argument in question. In (1), for example, the clause *brònux-ile xíla xabúša*ˈ is used by the speaker when he presupposes that the hearer knows that somebody has eaten an apple, i.e. the presuppositional

background is '*x* has eaten an apple'. What the speaker is asserting, i.e. the new information that he is conveying, is that *x* is to be identified as 'your son'.[8] In many languages this type of argument focus can be expressed by a cleft sentence, e.g. 'It is your son who has eaten an apple', in which the assertion of the identity of the argument in focus is expressed by an identificatory predicate and the presupposition is placed in a subordinate relative clause. The constructions with copula movement such as *brònux-ile xíla xabúša*ˈ are not cleft sentences since the presupposition is not in a relative clause and, moreover, the copula agrees with the subject, even if this is the asserted argument, e.g. *ʾànən múθyəlle*ˈ '*I* have brought it' (= It was *me* who has brought it). The attachment of the copula to the focused argument and the placement of the nuclear stress on this argument are, nevertheless, properties of the predicate of a copula clause. It may be said, therefore, that the construction possesses some properties of a cleft sentence but does not have all the components of its structure.

Clauses exhibiting leftward movement of the copula may have two foci of contrast, in which case the subject is given preference for the attachment of the enclitic, e.g.

(9) *ʾàtit θíθa kə̀sli.*ˈ *lán ʾàna-ʾə̀θya kə̀sləx.*ˈ '*You* came *to me*. *I* did not come *to you*.' (A4:4)

(10) *yà-baxta*ˈ *lan-ʾàna ʾə́θya dmíxa gu-šwìθəx.*ˈ *ʾàtit θíθa dmíxta gu-šwìθi.*ˈ 'Woman, *I* have not come to sleep *in your bed*. *You* have come to sleep *in my bed*.' (A26:4)

The presuppositional background of these constructions would have two unknown variables, e.g. '*x* came to *y*' and the speaker is asserting the identity of both of these.

The intention of the new information focus may be to express exclusivity, e.g.

(11) *har-ʾàtit plíxa*ˈ 'Only *you* have worked.' (A21:15)

(12) *kúlla hóla qṭìle.*ˈ *bas-ànən šríṭa.*ˈ 'They have all been killed. Only *I* have escaped.' (B19:8)

The presuppositional background of these examples would be '*x* has worked' and '*x* has escaped' respectively.

---

[8] Cf. Lambrecht (1994: 228–233).

The leftward movement of the copula to express focus on one argument of a clause may be used in responses to questions concerning a particular argument, e.g.

(13) A: *ʾénile ʾə́θya qedàmta?*ˈ B: *xònile ʾə́θya qedámta.*ˈ 'A: "Who has come this morning?" B: "*My brother* has come this morning."'

(14) A: *módit xə́zya gu-bὲθa?*ˈ B: *kθàwux-in xə́zya gu-bɛ́θa.*ˈ 'A: "What have you seen in the house?" B: "I have seen *your book* in the house."'

Example from the text corpus:

(15) *ʾánna zmaryáθa m-ὲkət líptəlla?*ˈ *biš-basímela m-ănàha.*ˈ *ʾána gu-Hàlmun-in líptəlla.*ˈ ' "Where did you learn these songs from? They are more beautiful than the others." "I learnt them in Halmun."' (A35:9)

The presuppositional background of the questions in (13) and (14) is 'x has come this morning' and 'You have seen x in the house' respectively. The response to such questions concerning a particular argument, however, may also be expressed without fronting of the item in focus and leftward movement of the copula. An alternative type of response would put the item in focus at the end of the clause with the nuclear stress, e.g.

(16) A: *ʾénile ʾə́θya qedàmta?*ˈ B: *ʾə́θyɛle qedámta xòni.*ˈ 'A: "Who has come this morning?" B: "*My brother* has come this morning."'

(17) A: *módit xə́zya gu-bὲθa?*ˈ B: *xə́zyɛwən gu-bɛ́θa kθàwux.*ˈ 'A: "What have you seen in the house?" B: "I have seen *your book* in the house."'

This shows that narrow focus of new information alone does not necessarily bring about a construction with leftward copula movement. Rather it is used subjectively by the speaker to communicate information that is not only new but that he wishes to present as worthy of particular attention. It is more regularly used in contrastive constructions such as (1)–(8), where the speaker wishes to correct a misapprehension, than in responses to constituent questions.

It should also be noted that the leftward copula movement only occurs when the focus is exhaustive, i.e. when the item in focus is unique for the role in question. It is not used when the focused item constitutes one of a list of items that perform the role, e.g.

(18) *mə́re yə́mmi ʾénile plìxa?⸗¹ mə́ra bábi plíxɛt ʾàti,¹ ʾu-xmára-w tàwra¹ ʾu-ʾána mtugbártən bèθa.¹* 'He said "Mother, who has worked?" She said "My dear, you have worked, (also) the ass and the ox, and I have attended to the house."' (A21:13)

Observe that in the responses of (16) and (17) the copula that occurs with the resultative participle is an enclitic rather than a deictic copula. This reflects a tendency to use the enclitic copula in conversational discourse when the verbal form is in the presupposition of the clause and is not asserted. This is typically the case in responses to constituent questions when the verb is repeated.

The construction is sometimes used elsewhere in a more subjective fashion, in places where the speaker wishes to draw particular attention to an item, due to its unexpectedness or its importance in the context, e.g.

(19) *b-àyyət mšúdrəlli?⸗¹* 'Have you sent for me *for this reason*?' (A21:35)

(20) *ʾabàyele də́rya b-réša.¹* 'He put *his cloak* over her.' (A26:50)

(21) *ʾàmər¹ ʾáwwa tăréxu pc̗ìlɛle.¹ bábət bráta màra¹ m-ɛ̀kɛle pc̗íla?⸗¹ har-gubbằn-ix wíðəlle.¹* 'He said "This door of yours is crooked." The father of the girl said "How can it be crooked? We made it *exactly according to a spirit-level*."' (A17:20)

(22) *mə́ra màlka ṭ-áwət basíma.¹ ʾáwwa náša hàtxɛle wáða.¹ màra¹ mú ṭ-àwəð?⸗¹ xa-dúkθət gə́ldət tàwrən híwəlle báne béθa.¹* 'They said "King, may you be well. That man is doing such-and-such (i.e. building the fortress of Dəmdəma)." He said "What could he do? I have given him *the space of an ox skin* to build a house."' (A11:15)

(23) *Qára Téždin ʾíle xə̀tne díye.¹ yáʿni xáθət Mir-Zàndin-ile šqíla Qára Tèždin.¹* 'Qara Teždin is his brother-in-law, that is Qara Teždin has married *the sister of Mir-Zandin*.' (A26:55)

(24) *ʾu-suráye lèla jráṭa¹ sab-zargùlela lwíše.¹* 'The Christians were not slipping since they were wearing *sheepskin shoes*.' (B19:7)

(25) *xòš-zuzəx wíðe.¹* 'We have made *good money*.' (A14:18)

Constructions such as those in (19)–(25) are not making contrastive assertions to correct a misapprehension nor are they responses to an explicit constituent question. The section of the clause that is not in focus is not strictly a presupposition, i.e. it is not necessarily assumed to be a proposition that is active in the mind of the hearer. It is part of the assertion of the clause but with a lesser degree of prominence than the focused item. Its lack of communicative pronominence relative to the focused item is a

property that it shares with presuppositional material. The basic function of the leftward focus movement can, therefore, be identified as a means of marking an enhancement of prominence on the item in question without necessarily implying that the remainder of the clause is presuppositional. In (19)–(22) the motivation for the construction is that the argument in the clause is deemed by the speaker to be unexpected in the general situation described. In (23) it draws particular attention to the identity of the person whom Qara Teždin married, since this is the crucial point that defines the term *xətna* 'brother-in-law'. Likewise in (24) the speaker gives enhanced prominence to the 'sheepskin shoes' since these were the crucial reason why the Christians did not slip and so were the key to their success. In (25) prominence is given to an evaluative expression 'good money' in order to enhance the degree of evaluation.

Temporal adverbial expressions may be put into focus with the construction in order to convey immediacy, e.g.

(26) *bálki qam-xa-šàbθɛle ʾə́θya.*ˈ 'He has come perhaps just a week ago.' (A8:56)

The focusing of a gradable quantifier or intensifier with the leftward copula movement conveys an enhanced degree, e.g.

(27) *ʾána ràbɛwən plíxa gu-kérma.*ˈ 'I have worked very much in the orchard.'
(28) *ʾáw hàdele bárya.*ˈ 'He has just been born.'

In constructions such as (27) and (28) the elements that come after the focus are not necessarily presuppositional, but may be part of the assertion of the clause with a lesser degree of prominence than the focused item. In such constructions with quantifiers and intensifiers the nuclear stress is sometimes placed at the end of the intonation group rather than on the item bearing the copula, e.g.

(29) *ʾána rábɛwən plíxa gu-kèrma.*ˈ 'I have worked very much in the orchard.'
(30) *yóma hádele zrìqa.*ˈ 'The sun has just now risen.' (A26:37)
(31) *xúwwe ʾáxčile múdwa rìqa.*ˈ 'The snake just managed to escape.' (A1:15)

In constructions such as (29)–(31) the material after the item bearing the copula is part of the assertion. These examples show that the copula and

the nuclear stress placement may operate independently in the marking of prominence. The nuclear stress is in the default position at the end of the intonation group and signals that the predicate as a whole is asserted new information. The copula is used to give particular prominence to one item in this assertion. In such constructions the copula marks a weaker level of prominence than when it is combined with the nuclear stress. The item with the copula is, nevertheless, given more prominence than when there is no leftward copula movement at all, as in (32).

(32) *ʾána rába plíxɛwən gu-kɛ̀rma.*¹ 'I have worked very much in the orchard.'

Conversely the nuclear stress is occasionally moved forward to give particular prominence within the intonation group without the copula moving from its default position, e.g.

(33) *xzáyət-əlle ʾáwwa qàṣra?*¹ *kúlle b-qarqupyàθa bə́nyɛle.*¹ 'Do you see this palace? It is all built *of skulls*.' (A24:51)

(ii) *Topically Prominent Constituent*
A leftward moving copula may also be attached to a topically prominent constituent. A constituent with topical prominence has a referent that has been mentioned in the immediately prior discourse, with the result that it is not only assumed to be familiar to the hearer but also activated in his consciousness. It serves as the topic of the clause. Unlike an item in focus, the topic is not part of the assertion of the clause, rather it is the remainder of the clause that is asserted and that conveys new information about this topic.

Topical items with a leftward moving copula do not bear the nuclear stress. They are, therefore, given a weaker level of prominence than focused items that have both the copula and the nuclear stress.

Not all items that serve as a clause topic have the leftward moving copula attached to them. This construction is restricted to topics that the speaker wishes to give particular prominence. One context in which the construction is attested is where the item has been activated in the immediately preceding discourse and is repeated in consecutive clauses. This is the case in (1) and (2), in which the second occurrence of the item in question has a copula attached to it:

(1) *ʾáti rába wíðət spayìθa*¹ *ʾu-ʾátit pqiðə̀llən.*¹ 'You did a lot of good and you instructed us.' (A8:87)

(2) *mátti táxta hàtxa,ˈ ta-t-ʾàzi,ˈ líθən dăràjε,ˈ ta-ṣáli gu-gòma.ˈ táxtεla mútte hàtxaˈ ta-ṣáli tàma.ˈ* 'They placed a board like this, so that they could go (there)—there are no steps—so that they can go down to the basement. They placed a board like this, so that they could go down there.' (A22:10)

These constituents are anaphorically bound to the immediately preceding discourse and function as the informational starting point, i.e. topic, of the ensuing propositions. These can be regarded as two aspects of a broader notion of topic as a current item of concern in the discourse. The constituents would have this status even if they did not have the copula enclitic. The copula gives added coding, which enhances the prominence of this status. This 'heavy' coding of the clause initial topic is often used as a strategy to signal a boundary in the discourse. The purpose of signalling the boundary may be to mark the clause off distinctly from what precedes in order to give prominence to the content of the clause, which appears to be the motivation in (1) and (2). In (3) the strategy of boundary marking is used to mark a clear opposition between the actions of the subject referents in two adjacent clauses:

(3) *mbàdla,ˈ qyàmεla,ˈ kúlla bă̌yi ṭ-àzi,ˈ ʾáwwεle dmìxa Barzə́kko.ˈ* 'In the morning they got up and all wanted to go, but he, Barzəkko, was asleep.' (A12:8)

The construction may also be used to give topical prominence to the anaphoric element *hatxa* 'thus', which refers back to a situation in the preceding discourse. In (4) the purpose is to set the two clauses apart and present them as expressing separate events:

(4) *hátxən wíða be-xàli,ˈ hátxən wíða be-ʾàmti*ˈ 'I did such-and-such in the house of my uncle, I did such-and-such in the house of my aunt.' (A23:40)

(iii) *Other cases of leftward movement*
It is necessary to distinguish some other categories of construction which exhibit leftward movement of the copula enclitic. These include interrogative constituents, adverbials and certain subordinating particles.

(a) *Interrogative constituents*
The copula element of the resultative is generally attached to interrogative constituents. In some cases the interrogative constituent bears

the nuclear stress and it can be classified as the expression of a type of narrow focus. The remainder of the clause is presuppositional and the focus is put on the interrogative item. Unlike assertive clauses, however, the identity of the interrogative item is not being asserted but rather questioned. Examples:

(1) *ʾɛ̀nile plíxa ʾə́dyo?ꜝ* 'Who has worked today?' (A21:15)
(2) *ʾɛ̀nile qṭíləlle?ꜝ* 'Who has killed him?' (A28:7)
(3) *mòdit wíða?ꜝ* 'What have you done?' (A23:34)
(4) *yómə tré ʾɛ̀kɛtu dmíxe?ꜝ* 'Where did you sleep on the second day?' (A12:19)
(5) *m-ɛ̀kət ʾə́θya láxxa¹ ʾu-dàx-it ʾə́θya?ꜝ* 'From where have you come here and how have you come?' (A14:33)
(6) *dàx-it xíla kúlla?!ꜝ* 'How have you eaten all of it?!' (A2:11)

Such constructions are analogous to interrogative clauses such as (7) and (8) in which the question concerns one constituent:

(7) *ʾàtit qṭíləlle xúwwe?ꜝ* 'Was it you who killed the snake?' (A24:45)
(8) *ʾàtit múθyəlle ṭéri?ꜝ* 'Was it you who brought back my bird?' (A24:32)

In many cases, however, the nuclear stress is placed on the final word of the intonation group rather than on the interrogative constituent, e.g.

(9) *ʾɛ́nile plìxa?ꜝ* 'Who has worked?' (A21:13)
(10) *ʾɛ́nile qṭìləlle?ꜝ* 'Who has killed him?' (A15:16)
(11) *mǎnile máṣya zədyəlléy laxxàne?ꜝ* 'Who could have thrown them here?' (A8:15)
(12) *módit xázya qam-ɛ̀nux?ꜝ módit xàzya?ꜝ* 'What have you seen before your eyes? What have you seen?' (A24:31)
(13) *módin xázya b-xàlmi?ꜝ* 'What have I seen in my dream?' (A1:14)
(14) *ʾɛ́ni báxtɛla mubrèθa?ꜝ* 'Which woman has given birth?' (A25:6)
(15) *ṭla-módit ʾə́θya dmìxa¹ gu-šwìθi?ꜝ* 'Why have you come to sleep in my bed?' (A26:3)
(16) *ʾu-lé-y-yǎðən m-ɛ́kət ʾə́θya.¹* 'And I do not know from where you have come.' (A14:76)
(17) *yǎðət ʾɛ́kən dəryəlle?ꜝ* 'Do you know where I have put him?' (A22:44)

Such constructions, in which the nuclear stress is not on the interrogative constituent, have a different information structure, in that the question

is not focused exclusively on the interrogative constituent but rather on the proposition as a whole. The attachment of the copula enclitic to the interrogative constituent, therefore, cannot be motivated by its being in narrow focus. The interrogative constituent, nevertheless, is what the question primarily requests information about and so is given prominence by the copula, but this is a weaker level of relative prominence than constructions in which the constituent is marked both by the copula and by the nuclear stress.

(b) *Adverbials*

Narrow focus is sometimes given to an anaphoric adverbial by attaching the copula to it and giving it the nuclear stress. As in some of the examples of narrow focus on nominals cited above, the remainder of the clause is not always necessarily a presupposition. The purpose of giving the adverbial a high degree of prominence is to enhance its anaphoric function and bind it closely with what precedes, e.g.

(1) *muttéθəlle púmma gu-pùmmət¹ Fàrxo,¹ šuréla myàṣa¹ ʾὲ-danɛla kólye.*¹ 'She put her mouth on the mouth of Farxo and began sucking. At that time they stopped (crying).' (A25:5)

(2) *ṭalána yáˁni ṭalàna,¹ sab-šə́mša ʾέ-gət maxyàwa¹ ṭuráne ʾàtxɛna wíye.*¹ '(The word) *ṭalana* means "shady", since when the sun rose, the mountains became like that (i.e. became shady).' (B3:2)

(3) *bábi muttúle táma bὲθa.¹ zìllɛni,¹ təxrúθa dìyi¹ ʾu-t-xóni d-o-gòṛa.¹ ʾáwwa xóni tàmɛle bɔ́rya.*¹ 'My father set up home there. We went, as far as I remember, together with my older brother. This brother of mine was born there'. (B8:10)

In (4) this device of enhancing the force of the anaphoric binding of the adverbial is used in a clause that has the status of a relative clause. The effect is to bind the clause clearly to the preceding head noun:

(4) *ʾɛ-dúkθət mămədìwalən,¹ ʾax-xa-bányo zòra,¹ ʾátxa gu-ʾúpra nqìra,¹ kúllən tàmɛwəx mŭmə́ðe ṭ-íwəx bɔ́rye¹—ʾáwən pìšɛwa.*¹ 'The place in which they used to baptize us, like a small bath, dug into the earth, where all of us who were born were baptized—that has survived.' (B3:20)

An adverbial that does not bear the nuclear stress may have the copula attached to it, as in (5), where the copula is moved leftwards onto the tem-

poral adverbial in the clause ʾé-gɛla ḥŭdúde mùrme¹. This may be regarded as
a type of topical prominence, which is a weaker level of prominence than
the prominence expressed by both the copula and the nuclear stress. The
effect, as is generally the case with clauses with initial topically prominent
items, is to signal a boundary in the discourse. Although the initial item
is anaphorically bound to what precedes, its status as a communicative
starting point is enhanced. This is the case here, in which the clause in
question offers a piece of incidental information about the general histori-
cal situation, which is not directly connected to the event of the wedding
discussed in what precedes. This should be contrasted with the function
of the construction occurring earlier in the passage ʾè-ga-wewa gwíra xóni
Šə́mmo¹, in which the adverbial is given a stronger degree of prominence by
both copula movement (in this case a past copula) and by nuclear stress.
The speaker intends this clause to be bound closely with what precedes,
since it relates directly to the wedding.

(5) taxránne ṭla-xlúlət xóni Šə̀mmo¹ ʾé-gə t-wɛ́wa ríqe nàšeʾ¹ ṣə́lye Badɛrə̀ške,¹
    ʾáskar t-lɛ́wi síqta gu-ʾƐ̄n-Nùne,¹ ʾè-ga-wewa gwíra xóni Šə́mmo.¹ ʾəngləznàyeʾ¹
    ʾáskar-t lɛ́wi tàxrən.¹ ʾé-gɛla ḥŭdúde mùrme,¹ gu-Tùrki músqe.¹ 'I remember
    the wedding of my brother Šəmmo, when people had fled and
    come down to Badɛrəške. The Levy army went up to ʾƐn-Nune. It
    was then that Šəmmo married. I remember the English, the Levy
    army. At that time the borders were moved, they were moved up
    to Turkey.' (B9:21)

A similar strategy is exhibited by (6)–(8). Here the adverbs with an enclitic
copula but without the nuclear stress are linked correlatively to the fol-
lowing clause rather than being bound to what precedes. In (6) the fol-
lowing clause specifies the content of the adverb. Examples (7) and (8)
are adversative constructions. The initial adverbials set up an expectation
that is reversed in the second clause:

(6) bróni hátxɛla qaḍìya¹ málka hóle múθyəlla bráte dìye.¹ 'My son, the situa-
    tion is like this. The king has brought his daughter.' (A21:8)
(7) zílɛle ṭắya bràtux.¹ hádəx-ile wìḍa,¹ bás lèle xázyəlla.¹ 'He went to look
    for your daughter. He acted thus, but did not find her.'
(8) kəmá-gayəx tíwe m-ġðàðe,¹ har-lán màsya ʾaxwáθe dìye.¹ 'However many
    times we have sat together, I still cannot be like him.' (A25:44)

(c) *Subordinating Conjunctions*

In subordinate clauses opening with the general subordinating conjunction *D* or the conditional particle *ʾən* the copula is attached to the conjunction at the front of the clause.

The subordinating conjunction *D* may serve as the head of a relative clause (1–3) or the subordinative operator of other types of clause, e.g.

(1)   *mqawòlɛwən,¹ ʾap-ʾan-zúze kúlla ṱ-in šqìləlla¹ pằlə́nna pàlge.¹* 'I promise, I'll divide into halves also all the money that I took.' (A1:17)

(2)   *la-bằyən ʾáyya bráta ṱ-in-múθyəlla t-yằða qá-t ṱlíba díya hóle mìθa.¹* 'I do not want this girl whom I have brought to know that her betrothed has died.' (A4:33)

(3)   *t-lá marằwàθele ʾo-márga¹ ṱ-it-súsux dáryəlle tàma?¹* 'Is the meadow in which you have put your horse without owners?' (A25:60)

(4)   *ʾáx-ṱ-it-ʾáti šə̀tya,¹ ʾáp-ʾaw hàdəx.¹* 'As you have drunk, he also (has been treated) in the same way.' (A26:33)

(5)   *dáx ṱ-in-muθɛ́θəlla ʾa-béna xèta,¹ ʾay-béna ʾàna maθyánna.¹* 'Just as I brought her before, so this time I shall bring her.' (A27:30)

(6)   *ʾímə ṱ-íla múθyəlla ʾa-bráta ʾə́lle dìye,¹ mbùrxəlla.¹* 'When they brought that girl to him, they wedded her (to him).' (A16:6)

(7)   *xá-xeta qímela zìlela,¹ ha-ṱ-íla zíle čə̀myɛle.¹* 'They went (to help) once again, but by the time they had gone, it was put out.' (A48:4)

(8)   *lɛt-xzáya bíye díye ṱ-íle mìθa?¹* 'Don't you see that he is dead?' (A17:2)

On many occasions the copula bears the nuclear stress of the intonation group, e.g.

(9)   *ʾu-dírɛle ṣ́əlyɛle rə̀š-d-ɛ̀-ʾena,¹ ɛ̀-ʾéna ṱ-ìle ʾə́θya qamáye réša.¹* 'He went back down to the spring, the spring to which he had come previously.' (A26:32)

(10) *ʾó-yōm ṱ-ìle plíṱa¹ bróne díye mìθele.¹* 'The day that he went out, his son died.' (A4:32)

(11) *ʾánna dax-ṱ-ìla zíle,¹ Mằmo dáryəlle gu-zəndàna.¹* 'When they had gone, they put Măamo in jail.' (A26:74)

(12) *ʾax-ṱ-ìle wíra,¹ ʾíθwa dúkθa ta-t-kalèwa.¹* 'When he entered, there was space for him to stand.' (A22:30)

The placement of the copula on the subordinate particle in relative clauses can be related to the use of leftward copula movement to mark topically

prominent items. The referent represented by the *D* particle, which is that of the antecedent noun in the adjacent main clause, is clearly the main topical concern of the relative clause. Although such copula movement to mark topical prominence is an optional strategy in main clauses, it has been formalized as a fixed rule in subordinate relative clauses. It would appear that this was further generalized to other types of subordinate clause opening with the particle *D*.

Examples of leftward movement of the copula in protasis clauses opening with *ʾən*:

(13) *ʾən-in ʾàna ʾə́θya gu-šwíθəx,¹ qrégən xaddàməx.¹* 'If I have come to sleep in you bed, call your servants.' (A26:4)

(14) *ʾən-it ʾə́θya šúlət qaḥbùθa,¹ kəs-bábən Băku.¹* 'If you have come to fornicate, then (lodge) with our father Băku.' (A26:26)

The movement of the copula onto the conditional particle *ʾən* is likely to have arisen from the fact that the particle was originally followed by *D*, as is still the case in some NENA dialects.

15.4.1.4.2. *Rightward Movement of the Enclitic*

The default position for the nuclear stress of an intonation group is on the last item in the group. When the nuclear stress occurs in this position, therefore, it does not necessarily express 'narrow focus' on this one item but frequently expresses a 'broad focus' which includes the whole predicate of the clause.[9] The copula element may be shifted rightwards onto this word with nuclear stress at the end of the intonation group. This is done, however, only when the nuclear stress is expressing broad focus. The purpose of the construction, therefore, is not to express narrow information focus on the word, with the remainder of the clause presupposed. Rather, the clitic gives the item in question an enhanced prominence within the broad focus of the predicate, due to its importance or unexpectedness. In example (1) a group of men are transformed into sheep, which is presented as a surprising and pivotal development by the placement of the copula on the nouns at the end of the intonation groups. In (2) the rightward shift of the copula highlights the royal clothes, by which the king's son identifies himself, and this is an important turning point in the narrative.

---

[9] For the distinction between 'narrow focus' and 'broad focus' see Lambrecht (1994: 222).

As in (1), the importance of the event is expressed also by repetition. Similarly (3) puts prominence on the item *jănaza* 'funeral, death', which denotes an unexpected and portentous situation:

(1) *kúlla píše pàṛela,*ˈ *ʾ̀ṛwe.*ˈ *kúlla píše ʾ̀ṛwela.*ˈ 'They all became lambs, sheep. They all became sheep.' (A34:19)

(2) *ʾu-qímɛle lwíša júllə brónət màlkɛle.*ˈ *lwíšɛle jùlle.*ˈ *ʾu-sìqɛle.*ˈ 'Then he put on the clothes of the son of a king. He put on his clothes and went up.' (A24:35)

(3) *hadíya gáwṛəx píša jănàzɛle.*ˈ *mə́ra yá mút jănàza?ˈ* ' "Your husband is now dead." She said "Why is he dead?" ' (A10:13)

A subject argument that is not within the broad focus of the predicate is in some circumstances postposed at the end of the clause after the nuclear stress in the intonation group. This is the case in (4), which highlights the surprising achievement of financial success, but does not draw particular attention to the fact that it was the old woman rather than somebody else who was the agent of this action:

(4) *wíðta šûlɛla ṭóṭo.*ˈ 'The old woman made (good) business.' (A4:22)

In some cases the construction appears to be primarily intended to give prominence to the clause as a whole in order to act as a discourse boundary marker rather than to only the item bearing the clitic. Such clauses with enhanced prominence are often used to mark the boundary of a section of discourse. The boundary may be at the beginning or the closure of a section. In (5), for example, the construction opens a section of the narrative that is set in the cave of Leliθa. In (6) the construction occurs at the end of a series of clauses that is presented as a closely-knit sequence of events. This is followed by a section of direct speech, which is introduced by repeating the clause that closed the preceding section. In (7) the construction likewise marks the end of a chain of clauses that culminates in the arrival of the protagonist at a new spatial location:

(5) *qəm-maqə̀dla*ˈ *ʾawə́dla tărə̀kka,*ˈ *qṭilàle.*ˈ *wíra gu-gə́ppət Leliθɛle.*ˈ *ḥátta čámče t-dàwa!ˈ* *č̀əngále t-dàwa!ˈ* *kúbə čáy t-dàwa!ˈ* 'He burnt her (Leliθa), made her a corpse, killed her. He went into the cave of Leliθa. There were even spoons of gold, forks of gold, tea cups of gold!' (A32:23–24)

(6) *qìmtɛla*ˈ *šə́ryəlla ʾáqle w-ìðe*ˈ *ʾu-ṣə́lya l-bèθɛle.*ˈ *ṣə́lya bèθɛle,*ˈ *də-súq sùq*ˈ... 'She got up. He released her feet and hands and he went down to

his home. He went down to his home (and he said) "Go up…"'
(A10:13)

(7) *bronət-málka šríṭele l-a-gōt-hòdəx,¹ nèra.¹ zíla níxa níxa wíra gu-d-a-màθεle.¹*
'The son of the king escaped to the other side of the river. He went
along slowly and entered the village.' (A14:58)

Two events that are set up in opposition to each other may be given
enhanced distinctness by rightward movement of the copula onto the
nuclear stress bearing item. In (8) a mother lion stands back while her cubs
go down to a pool to drink water. These are presented as two opposing
events that occurred simultaneously. The prominence expressed by the
copula on the noun *mìyɛla* (< *miya-ila*) is not intended to put particular
informational prominence specifically on this item of the clause but rather
is intended to give an enhanced prominence and so distinctness to the
clause as a whole. This distinctness expressed in the syntax is motivated
by the desire of the speaker to present the two events in a clear opposi-
tion. The same applies to (9), in which the attack on the horse is set up
in opposition to the attack on the ox:

(8) *klìθεla-ʾay.¹ bnóna díya ṣólye šɔ́tye mìyɛla.¹* 'She stood. Her young went
down and drank water.' (A33:10)

(9) *xazéle xa-tàwra,¹ ʾÙmmo¹ xazéle tàwra¹ ʾu-parəmle réšə táwra.¹… zíla mɔ́ṭya
l-sùsele,¹ ʾap-súsa prìməlle.¹* 'He saw an ox. Ummo saw an ox and cut
off the head of the ox…. He went and came to the horse. He
slaughtered also the horse.' (A23:30)

15.4.1.5. *Resultative Participle Combined with the Past Copula*
The resultative participle may be combined with the past copula (for the
morphology of this compound form see §8.8.3. and §8.19.4.2.). This con-
struction, which may be designated as the past resultative, denotes a state
that existed in the past as the result of a prior event. It is typically used
to express the background against which a past event took place, e.g.

(1) *xa-ʾàġa,¹ ʾÙsman šɔ́mme díye,¹ θèle,¹ ʾárxa píšle kəs-Xošằba margáya.¹ ʾáwwa
šɔ́myɛwa bud-dìye¹ ʾíθwale ɔ́rwe ràbe.¹* 'An agha, whose name was
Usman, came and became the guest of Khoshaba from Marga.
He had heard concerning him that he had many small cattle.'
(C7:1)

(2) *baxt-xáli **šítɛwəlle** bèθa.¹ ʾu-θéla qáṭu wírra tàma.¹ ʾu-dəryáli šəndùxta,¹
qítla gu-nepùxta.¹* 'The wife of my uncle had plastered a room. A

cat came and entered. I threw a stone, but it hit some date syrup.'
(A23:36)

(3) *mɔ́re ha-brŏni,*ˈ *Mắmo,*ˈ *mà-lux*ˈ *tíwət xaššàna?*ˈ *mɔ́re bábi hắl ʾu-qə́ṣ̭ṣ̭ət hàtxɛla.*ˈ *mɔ́re ʾə̀dlɛle*ˈ *xa-bráta* **θíθɛwa** *dmíxta kə̀sli.*ˈ *ʾu-qímli qedàmta,*ˈ *la-xə̀zyàli.*ˈ 'He said "Ah, my son, Mắmo, why are you sitting (looking so) sad?" He said "Father, the situation is like this". He said "Last night a girl came and slept with me. I got up in the morning and did not find her."' (A26:10–11)

(4) *xá-yoma* **plíṭewa** *ṣ̭èda.*ˈ *zíle xa-dùkθa,*ˈ *málka dmìxɛle.*ˈ 'One day they had gone out hunting. They went to a place and the king fell asleep.' (A11:4)

Like the present resultative construction, the past resultative does not denote a specific event, but rather the existence of a state resulting from some event that took place at some unspecified time in the past. This may have been one single event taking place at one particular time or a series of iterative events. If it is one specific event, in principle it could have been presented as an event in a narrative sequence in a narrative verbal form such as *qṭille* or *qəm-qaṭəl*. The speaker, however, chooses to disjoin the events and background the first event by presenting its resultant state rather than the event itself, and thereby give more prominence to the temporally sequential foregrounded event that is expressed by the narrative verbal form. In (2) the speaker is explaining why his uncle had thrown him out of the house. This was because of an incident in which a cat entered a newly plastered room. The plastering of the room was not in itself the crucial event that brought about his expulsion. In (3) the reason Mắmo is sad is not because a girl came to him in the night, but rather because he could not find her in the morning. As can be seen, in most cases it is appropriate to translate the past resultative with the English pluperfect, which expresses backgrounding. In some cases, however, this is not the case, as in (3), where it is not idiomatic due to the presence of a temporal adverbial.

When the verb has telic actionality, the resultative participle in the construction normally has an adjectival sense, e.g.

(5) *ʾìθwa*ˈ *xa-ràbbən.*ˈ *tíwɛwa gu-xa-gəppìθa.*ˈ *θéle xa-náša swarìyya,*ˈ *rakáwa.*ˈ 'There was once a monk. He was dwelling in a small cave. A horseman, a rider came.' (A15:1)

The disjunction between the past resultative form and the foreground verb may be adversative in nature, especially when the past resultative form is negated, e.g.

(6) *xu-lanwa-mírəllux maxzə́tli xăzìna.¹ muxzélux ʾáwwa xăzìna-əlli.¹* 'Indeed I had not asked you to show me a treasure, but you showed this treasure to me.' (A14:23)

Since the construction expresses a background state rather than an event in a sequence, it may be placed after the clause expressing the event that is temporally posterior to it, e.g.

(7) *ʾup-ʾáyya šéta xzéli ṣòpa.¹ ʾánna xamšassə́r-šənne ṣópa lánwa xə̀zya.¹* 'Also this year I saw a stove. I had not seen a stove for fifteen years.' (B15:23)

In the foregoing examples, the past tense verbal forms in the foreground clause(s) are either *qṭille* or *qəm-qaṭəl*. These may express a recent event with an endpoint that coincides with the present moment, which are translated idiomatically with an English perfect of recent past, e.g.

(8) *gáwṛi θèle.¹ zílɛwa be-šwàwe.¹ xzi-θèle.¹* 'My husband has come back. He had gone to our neighbours' house. Look he has come back.' (A22:32)

In narratives the foreground event may be expressed by the compound *qṭilɛle* form, which in such contexts is used with the same function as *qṭille* and *qəm-qaṭəl* to denote an event rather than a resultant state (§15.4.1.3.), e.g.

(9) *ʾáwwa síqa-wewa l-ṭùra¹ l-ṣèda.¹ ʾə́θyɛle Tătár-i Slemán-i Sə̀ndi¹ mən-ʾÌrən.¹ ʾə́θyɛle gu-ṭùra¹ xə̀zyɛle¹ plíšela m-ġðàðe.¹* 'He had gone up into the mountains to hunt. Tătar-i Sleman-i Səndi came from Iran. He came into the mountains, found him and they fought together.' (A28:1)

(10) *qìmela,¹ ʾàw zílɛwa l-pəlxàna,¹ zràya.¹ qímela múttəlla gu-ʾatnàbəl.¹ ʾu-wajj-úwa díya kùlla,¹ ʾɛ-ʾótəx dìya.¹* 'They set off, he had gone to work, to cultivate (his field). They put her in a car, with all her effects, (the contents) of her room.' (A21:5)

(11) *gu-d-έ ṣlεθὲy'* *qáṭu wìrtεla'* *ʾáy šwíqtəlwa májma tàma.'* *qáṭu wìrtεla'* *npí-lta gu-d-án panjàne.'* 'While they were going down, a cat came in. She (the servant) had left a tray there. A cat came in, fell into the glasses.' (A4:53)

The construction is sometimes used in narratives in combination with a *qaṭəl* form that expresses a perfective historical present, e.g.

(12) *ʾu-ʾáwwa jǎket d-o-Kǎrim-addìn'* *píštεwa wằdər,'* *ʾáp-ʾay ṭεšíla dəmma.'* 'The jacket of Karimaddin had remained outside. They daubed it in blood.' (A14:20)

The past resultative may also be used in combination with a compound *qṭilεle* form that functions as a present resultative (present perfect). In such cases the past resultative expresses the background state against which the event of the present resultative took place. As discussed in §15.4.1.2., the present resultative does not primarily assert this event, but rather asserts the resultant state with the event itself being an implicature. In these contexts it is not appropriate to translate the past resultative into English by a past perfect, e.g.

(13) *ʾána muttέθənwa yománə šàbθa'* *ʾu-muttέθənwa yománət yàrxa.'* *ʾáti xa-béta hot-šqíləlla mən-šàbθa'* *píše ʾəštà-yome.'* *ʾu-xa-láxma hot-šqíləlle mən-yàrxa,'* *hóla píše ʾəsri-w-ʾəččà-yome.'* 'I put (in the basket the number of) the days of the week and I put (the number of) the days of the month. You have taken an egg from the week and they have become six days. You have taken a loaf of bread from the month, and they have become twenty-nine days.' (A17:15)

The construction may be used in combination with a form expressing habitual action in the past. Here it must be interpreted as having a distributive sense, denoting the background state of each of the set of actions denoted by the habitual verb, e.g.

(14) *ʾáni bədráθa tàma náše ʾi-raqδíwa.'* *sab-wíδəlwala ʾằra dàšta'* *ʾu-maṣíwa náše doqíwa ṭḷà'* *ʾarbà-reze xá-xa-gaye.'* 'The people would dance on those threshing floors. This was because they had made the ground level and the people could form three or four rows at once.' (B15:78–79)

As is the case with the present copula in the present resultative construction, the past copula is moved in certain circumstances.

In the text corpus examples are found of the leftward movement of the past copula to a gradable quantifier in (15), and to an interrogative constituent (16):

(15) *ʾíθwale xa-kàrma.' zríyənwale b-iθàθiˈ ʾu-rábənwa kčìxa bíye dìye.' ha-t-qa-mamṭə́nna ṭúnte dìye.' ʾímət mṭéla ṭúnte dìye,' θéle xa-nàša,' qəm-šaqə̀lla ʾɛ-ṭúnte díye.'* 'He had an orchard. (He said) "I had cultivated it with my hands and had very greatly toiled in it in order to make it produce its fruit. When its fruit became ripe, a man came and took its fruit."' (A17:32–33)

(16) *ʾína ʾána l-mòdinwa ṣə́lya?'* 'Why had I gone down?' (A26:35)

Note that in (15) the nuclear stress remains at the end of the intonation group, marking a broad focus of the whole predicate. The effect of the copula movement onto the quantifier (*rábənwa*) is to give this quantifier particular prominence within this broad focus for the sake of intensifying it.

In (17) the copula is attached to the object *xə́ṭṭa* 'plan' also without the nuclear stress. In this case the function of the copula is to express topical rather than focal prominence. The item has forward pointing topical prominence in that it is linked to the following complement clause:

(17) *xə́ṭṭa-wewa mùtta' yáʿni tré qəqwáne b-xà-kepa maxéwa.'* 'He had set a plan to kill two birds with one stone.' (A8:35)

The leftward movement of the copula is also attested in relative and other subordinate clauses introduced by the particle *D*, e.g.

(18) *xá-bena ʾan-tre-maláxe t-wéwa ʾə́θye bìya,' t-wɛ́wa mutə́pqəlla b-ġðàðe,' θéla pyáða táma tàma.'* 'Then, those two angels who had brought her, who had caused them to meet each other, came passing by there.' (A4:44)

(19) *hat-šmíṭle ʾɛ-sála t-wéwa zqìrəlla.'* 'Until the basket that he had woven shattered.' (A20:4)

(20) *ʾə́θyɛle ʾo-gàwṛa díya,' ʾo-t-wɛ́wa mùθyəlla.'* 'Her husband, who had brought her, came back.' (A12:53)

(21) *ʾəθyɛle¹ wíðɛle ʾa-dúkθa nišànqa,¹ ʾa-dúkθa t-wéwa ʾo-dídwa wíra tàma.¹*
      'He came and made a sign in that place, the place where the fly
      had entered.' (A11:10)

(22) *dɛ́ri míya rèše¹ ʾax-t-wéwa Mar-Yuḥánna dɔ́rya mìya¹ b-réšə Mšîxa.¹* 'They
      put water over him, as Saint John had put water on the head of
      Christ.' (B6:9)

(23) *mɔ́re bɛ́θi ṣṭìmla dɔ́bba.¹ ṭḷá-bnone xilìli,¹ báxta xilàli,¹ xáṭər ṱ-ínwa mḳonɔ́-
      drəlla.¹* 'The bear has ruined my house. I have eaten the three
      children, I have eaten the wife, all because I had rolled him (down
      the hill).' (A20:12)

Rightward movement of the past copula is attested in (24). The purpose
of this construction is to give particular prominence to the predicate as
a whole. The action of the hound is pivotal, in that it prevents the man
performing his day's work:

(24) *tullɔ́kθa síqta š-xà-ʾisarɛwa.¹* 'The hound had gone up onto a rock.'
      (A30:8)

15.4.1.6. *Resultative Participle Combined with the Verb* hwy

15.4.1.6.1. y-awe qṭila

This construction is used to express a state resulting from a prior action that
is of habitual occurrence. It is frequently found in the descriptive text B5.
In this text the speaker generally uses it to elaborate on a habitual situation
that has been referred to in the immediately preceding discourse, e.g.

(1) *y-asqíwa malwəšíwale jull-dìye¹ ʾu-y-atwìwa.¹ y-áwa wíðe xa-rámša yòma.¹
     y-áwa wíðe dùxwa.¹* 'They would come up (from the river) and dress
     him in his clothes. Then they would sit down. They would have
     made the evening meal during the day. They would have made
     duxwa'. (B5:26–27)

(2) *bína qɛ́mi qedámta nàše¹ ʾu-jằmi.¹ ... m-maθwáθa y-áwa ʾəθye¹ maθwáθa kúlla
     y-áwa lwíše júlle šàlla,¹ y-áwa mxùmle,¹ kusyàθa,¹ ʾu-mútte párre gu-rèša.¹*
     'The people get up the next morning and gather together. ... They
     have come from the villages, from the villages. All have put on
     the *šalla*. They have dressed up, with hats, in which they have put
     feathers.' (B5:46–47)

In (1) the *ʾi-qaṭəlwa/qaṭəlwa* verbs in the first half of the passage express
habitual actions in the past that occurred in temporal sequence. In (2) *qaṭəl*

forms are used to express sequential habitual actions in the present. In the second half of the passages the *y-awe qṭila* forms express states resulting from previous events that habitually exist when the aforementioned habitual actions take place. They are used to elaborate on the scene that has been evoked. By virtue of being states they must be interpreted as attendant circumstances rather than dynamic events that are temporally sequential to what precedes. It should be noted that the speaker uses the present auxiliary *y-awe* even when the preceding verbs are past tense forms, as in (1). In such cases it takes the past tense reference of the preceding verbal forms as its deictic centre. This reflects the dependency of the construction on the preceding discourse. Further examples:

(3) *béna mɛθɛ́wa mɛxòlta.׀ mɛxólta y-áwa mbúšle qawúrma-w ṛòzza,׀ ʾu-kəfṭàne.׀* 'Then they would bring the food. As for the food, they would have cooked *qawurma*, rice, meat-balls.' (B5:14–15)

(4) *ʾu-dɛṛìwa,׀ ʾu-y-óriwa mə́dre gu-ʾùmra,׀ šɛríwa rázət qurbàna.׀ ʾu-hál qedàmta׀—béna gu-d-ɛ-dàna׀ kút-xa y-áwe múθya bèta mə́nne.׀* 'Then they returned, went back into the church and began the communion mass. The next day—at that time everybody would have brought an egg with him.' (B5:58)

(5) *ʾɛ́-ga qɛ̀se׀ mattíwa qésa y-atwíwa réše dìye.׀ ʾan-xoriyáθa y-amrə́xxa qɛ̀se,׀ y-atwíwa rḕš-dìye.׀ ʾu-y-áwa mríze kúlla mɛxòlta,׀ kút-xa mútta gotə-ġðàðe.׀* 'On this occasion they would put out wood and sit down on it. They would sit down on wood of poplar trees, as we called them. They would have lined up all the food, each (item) placed beside the other.' (B5:67)

(6) *yáʿni maxəðríla ʾa-kʸàlo׀ qúrbət bèθa,׀ y-áθi máṭi l-bèθa.׀ m-bár máṭi l-bèθa׀—qam-dàna׀ y-áwa mrúzge xá ʾilàna.׀* 'That is, they take the bride around towards her house and come to her house. After they arrive at the house—beforehand they have prepared a tree.' (B5:38)

The resultative participle of telic intransitive verbs may have a verbal or adjectival interpretation, as is the case with *tiwe* in (7) and *dmixa* in (8):

(7) *fa-kul-náše kút-xa mɛθɛ́wa xăðáye díye ʾu-mattúwa tàma.׀ ʾu-y-áwa tíwe nàše׀ y-áwa mrúzge dùka.׀* 'Everybody used to bring his own lunch and set it out there. People would have sat down / would be sitting there and would have prepared space (for the food).' (B5:66)

(8) *béna Rustằmo ʾɛ́-gət dàməx׀ ṭḷaθà yomáθa׀ ʾu-ṭḷaθá lɛlăwáθa y-áwe dmíxa lɛ-ṛàyəš.׀* 'Now, when Rustam slept, he would be asleep for three days and three nights and not wake.' (A29:19)

The resultative participle of a transitive verb in the *y-awe qṭila* form may be used as a passive predicative adjective, e.g.

(9) *ʾíθwa tanùra,*¹ *ʾáx t-y-àmrəx,*¹ *hár ṭlá d-ò-məndi y-áwe mtúrṣa.*¹ 'There was an oven, as we say, which used to be made specially for this.' (B5:17)

(10) *fa-ʾáw qunjiyáθe dìye*¹ *d-áy mandòrta*¹ *y-áwa bə̀zye.*¹ 'The corners of the roller are bored (with holes).' (B5:193)

15.4.1.6.2. y-awewa qṭila

The examples of this construction that are attested in the text corpus mostly contain a resultative participle that functions as a predicative adjective. The construction expresses a state that habitually existed in the past. It often presents the attendant circumstances or background of a habitual event that is expressed by a *ʾi-qaṭəl/qaṭəl* form, e.g.

(1) *ʾi-bašə́lwa y-awə́xwa tíwe mbarxòše,*¹ *ʾúmma šə̀nne!*¹ 'It would cook (while) we would be sitting stirring it, for a hundred years!' (B10:12)

(2) *qayə̀mwa*¹ *qáša y-awéwa zína qamàye.*¹ *ʾu-ʾó-t šamáše báθre bàθre.*¹ '(When) the resurrection was celebrated (literally: He arose), the priest would be standing at the front and the deacons behind him.' (B5:55)

(3) *képa mεθέ̀wa m-gu-ṭùra.*¹ *y-azíwa l-ṭùra*¹ *y-awéwa ṭ̀šya ʾaw-képa*¹ *mattíwa darmàna.*¹ 'They would bring the stone from the mountains. They would go to the mountains. The stone used to be hidden, so they would plant gunpowder.' (B5:179)

It expresses a habitual property of the subject referent rather than an event and so does not express sequentiality. This is shown in (4), where the form *y-oyáwa dmìxta* expresses a habitual property that is not presented as sequential to that of eating, whereas the series of *qaṭəlwa* forms *y-axlàwa-w*¹ *damxàwa*¹ may be interpreted as denoting sequential events:

(4) *ʾíθwale xa-bràta.*¹ *gu-béθa har-y-oyáwa dmìxta*¹ *ʾu-xàla,*¹ *dmíxta-w xàla.*¹ *ʾítwala xa-qaráwət gò̀rta.*¹ *mεθíwala xadamyáθa díya ʾixàla,*¹ *y-axlàwa-w*¹ *damxàwa*¹ 'He had a daughter. She would always be asleep and be eating in the house, asleep and eating. She had a big bed. Her servants would bring her food, she would eat then go to sleep.' (A21:1)

15.4.1.6.3. hawe qṭila

This form is attested only sporadically in the text corpus. In (1) it is found in a construction with the word *balki* 'perhaps', in (2) it occurs in a relative clause with a generic antecedent and in (3) in a purpose clause:

(1) *bálki háwe ʾə́θya l-bɛθ-qòra.*' 'Perhaps he has gone to the cemetery.' (A25:91)

(2) *mrázgi kúlla mɛxòlta,*' *mắθắlan xə̀ṭṭe,*' *rə̀zza,*' *pràge,*' *šìšme,*' *kúlla ʾan-ṭ-áwa zəryə̀lla.*' 'In the same way they prepare all the food, for example wheat, rice, millet, sesame, everything that they have sown.' (B5:114)

(3) *bar-hàdəx,*' *y-aθέwa mdarὲwale*' *qa-t-lá-hawa píše sə̂xte.*' 'Then they would come and winnow it, so that impurities did not remain.' (B5:86)

15.4.1.6.4. hawewa qṭila

This construction is attested mainly in conditional sentences. It may denote a state resulting from a single perfective event, in which case it has a counterfactual sense (1–2). It is also used in factual conditions to denote a habitual state resulting from habitual, iterative events (3):

(1) *ʾən-ʾána hawə́nwa qṭíləlla ʾắyáha ʾaqə̀rwa,*' *ʾáwwa xúwwe ṭ-awéwa qṭíla ṭla-bròni.*' 'If I had killed that scorpion, that snake would have killed my son.' (A9:6)

(2) *ʾən-hawétuwa də́ryəlli xáčča xéna biš-hódəx biš-ʾamòqta,*' *táma mpulṭəllέxu mən-d-ànna*' *pazesór b-ʾəlyàθa,*' *hátxa b-qanàne.*' 'If you had thrown me a little further along, (where it is) deeper, I would have brought out for you from there some of those big sheep with fat tails and horns (big) like this.' (A7:22)

(3) *xéna ʾən-hawéwa bə̀sra,*' *ʾən-háwəxwa príme ʾə̀rwe,*' *dὲrəxwa bə́sra.*' 'If there was meat, if we had slaughtered sheep, we would serve meat.' (B10:19)

It is also used in counterfactual contexts outside of conditional constructions, e.g.

(4) *ʾána gắrəg hawə́nwa spày zúze šqíla.*' 'I should have got a good sum of money.' (B1:19)

(5) *t-lá-hawənwa mbúqrəllɛxu biš-spày.*' 'It would have been better for me not to have asked you.' (A26:27)

It is attested in deontic constructions expressing an unfulfilled wish, which is related to its function in counterfactual conditions, e.g.

(6) *ḳáwa xoš-ṭ-awéwa pìša.*¹ 'He should have remained alive.' (A7:20)

15.4.1.6.5. ṭ-awe qṭila (*future*)

In the text corpus there are some examples of the future form of *ṭ-awe* (< *bəd-hawe*) combined with the resultative participle of intransitive telic verbs. The function of such constructions is to express an imperfective future, denoting a continuous state, e.g.

(1) *hát ʾálaha yálli rə́sqi b-áyya kàwe,*¹ *ʾàxxa ṭ-áwən dmíxa.*¹ 'Until God gives me my sustenance through this window, I shall sleep here.' (A10:5)

(2) *ʾə́ští-šənne xéne ṭ-óya rəš-d-ɛ́-qora tíwta bxàya.*¹ 'She will sit for another sixty years weeping over that grave.' (A4:45)

15.4.1.6.6. ṭ-awewa qṭila

This is attested in the apodosis of counterfactual conditionals denoting a hypothetical perfective event in the past, e.g.

(1) *ʾo-šəndóxa ʾə́n-hawewa qíθa bìyi*¹ *ṭ-awə́twa qṭìləlli.*¹ 'If that rock had hit me, you would have killed me.' (A1:25)

15.4.1.6.7. wele qṭila

The combination of the resultative participle with the *qṭille* form of *hwy* is found only sporadically. It is attested in (1), where the speaker appears to be using it to give some degree of temporal limitation to the resultant state of a past action, i.e. it was the case that they made a fence, but now they want to make something else:

(1) *hadíya ʾɛ-dùkθa*¹ *wéla wíðəlla xa-šùra,*¹ *ʾáxčĭ bắyi ʾoðìla*¹ *xa-šúra bìš-goṛa.*¹ 'Now as for that place, they made a fence for it, but they want to make a bigger fence for it.' (B3:22)

15.4.1.7. *The Resultative Participle of the Verb* hwy

The resultative construction may contain the resultative participle of the verb *hwy*. Various functions of this can be distinguished.

(i) *'to become'*
When used with an ascriptive or identificatory predicate, it has an ingressive sense of 'becoming', expressing a present resultative state, e.g.

(1) *lɛt-ʾáti wíya xoš-náša ṱ-it-múθyəlla ʾánna zùze.ˈ záwna wíyɛle t-šlàma.ˈ* 'You have not become a good man and brought these coins. The time has become one of peace.' (A1:26)

(2) *bálki qam-dána háwa wíye xə́zme m-ġðàðe.ˈ* 'Perhaps beforehand they have become relatives of one another.' (B5:5)

(3) *ṭalána yáʿni ṭalàna,ˈ sab-šə́mša ʾɛ́-gət maxyàwaˈ ṱuráne ʾàtxena wíye.ˈ* '(The word) *ṭalana* means 'shady', since when the sun would strike the mountains, they became like that.' (B3:2)

Note that in (3) the resultative form is used in an apodosis of a temporal sentence that contains a habitual verb in the first clause (*maxyàwa*). The resultative must have a distributive sense, i.e. on each occasion when the sun struck the mountains, they became like that. Furthermore, since the resultative expresses a state, it cannot be interpreted as a sequential event but rather as an temporally overlapping situation (literally: 'At the time when the sun struck the mountains, they have become like that').

(ii) *Existential Function*
The form may be used to express the coming into existence of the subject. When the subject is inanimate, the verb has the sense of 'happening', e.g.

(1) *ʾáp-ʾayya p-aqə́nna ʾə̀llux,ˈ sab-wítɛla b-réši ʾup-àyya.ˈ* 'I shall tell you also about this, since this also happened to me.' (B15:85)

(2) *rába gáye wítɛla ʾánna məndiyàne.ˈ* 'Many times such things happened.' (B5:163)

(3) *hadíya mtánəx xa-qə̀ṣṣət¹ ṱ-íla wíta gu-Ṱiyàreˈ qám-plaša qamàya.ˈ* 'Now we'll tell a story that happened in Ṱiyare before the First World War.' (B17:1)

(4) *ʾɛ̀-gaˈ ʾánna məndiyáne wìyela.ˈ* 'Those things happened at that time.' (A19:9)

In (1) and (2) the events in question took place at a time that is remote from the present, but they are presented from the perspective of the speaker at the present moment. They can be interpreted as 'experiential perfects', i.e. events that are part of the speaker's life experience or at

least events that he has heard about in his life. Examples (3) and (4) are narrative uses of the resultative construction that are equivalent in function to the *qṭille* form (§15.4.1.3.).

When the subject of the verb is animate, it has the sense of 'to be born', e.g.

(5) *šetə-ṭə́ḷḷəθ wìtɛla.ˈ Səttìye.ˈ* 'In the third year Səttiye was born.' (A25:25)

(6) *ʾímə ṭ-íla wíta Səttìye,ˈ ʾáy biš-xámθɛla m-kùlla.ˈ* 'When Səttiye was born, she was the most beautiful of all.' (A25:26)

(7) *b-ay-dána lànwa wíθa.ˈ* 'At that time I was not born.' (B10:45)

(iii) *Temporal Expressions*

In narratives, the construction sometimes takes a nominal denoting a period of time as its subject in clauses that set the temporal frame for what follows. The subject nominals are placed after the verbal form, e.g.

(1) *wíyɛle yómət ṭḷàθa.ˈ ʾáwwa fṭìrɛle.ˈ ʾu-plìṭɛle.ˈ* '(When) the third day came, he had breakfast and went out.' (A22:24)

(2) *wìtɛla qèdamta,ˈ jə́nne ʾə́θyela,ˈ šqìlɛlla Zíne.ˈ nùblɛlla Jazíra Bóta.ˈ* 'In the morning, the jinn came and took Zine, took her away to Jazira Bota.' (A26:8)

(3) *wítɛla qedámta sáʾət ʾárpa b-lèle,ˈ rìšɛle.ˈ màlka.ˈ* '(When) the morning came, four o'clock in the morning, the king woke up.' (A17:27)

(4) *wítɛla dánət mabròye,ˈ tə́rwəθna mubrèla.ˈ hàr ʾo-yóma.ˈ* '(When) the time of giving birth came, they both gave birth on the same day.' (A25:4)

(5) *wítɛla dàna,ˈ mìṣela ʾə́rbɛ,ˈ páṛe mən-yəmmaθèy,ˈ mə́re…ˈ* '(When) the season came and the sheep sucked, the lambs sucked from their mothers, he said…' (A25:26)

As has been discussed in §15.4.1.3., the resultative form can be used in narrative with the function of a preterite rather than a present perfect. Judging by cases such as (4) above, however, where the following clause is in the *qṭille* form, it would appear that the resultative forms *wíyɛle* and *witɛla* here have their basic function of expressing a resultant state rather than an event, i.e. the state against the background of which the event described in what follows took place. In (1)–(5) the verbs can be interpreted as existential forms of *hwy*, correponding to the previous category ('the third day happened'). The gender agreement between the initial verb

form and the following temporal noun demonstrates that the noun is the grammatical subject.

Various examples are attested that exhibit a development of the afore-mentioned construction, whereby the resultative of the verb *hwy* is used before an adverbial prepositional phrase or an adverbial clause, which cannot function as the grammatical subject. In such cases the verb has a 3fs. form, which must be an impersonal subject, with the adverbial functioning as the predicate, e.g.

(6) *wítɛla b-lèle¹ maláxa mŭr̀əšle qa-ràbbən.¹* 'In the night the angel woke the monk.' (A15:11)

(7) *wítɛla b-lèle¹ xúwwe θèle.¹* 'In the night the snake came.' (A24:40)

(8) *xa-béna wítɛla hádəx b-lèle¹ máxyɛle taq-taq-táq l-tằra.¹* 'Then, at night, there was a knock at the door.' (A23:26)

(9) *wítɛla bar-ʾo-náša sáwa ṣə̀lyɛle mtằmòzəlla čə̀nnəḳéra díya,¹ ʾáp-ʾaw ṣə̀lyɛle mhayóre ta-d-o-sàwa.¹* 'After that old man went down to clean around it, he also went down to help the old man.' (A14:77)

In (10) the two constructions are combined, in that it contains both a prepositional phrase and a nominal without a preposition:

(10) *wítɛla b-lèle,¹ dána t-dmàxa,¹ xílela mɛ̀ndi.¹ wítɛla dána t-dmàxa,¹ xəmmɛ̀rθa,¹ xəmmárθə šɛ̀nθa¹ šqìltəlla,¹ muttéθəlla rəš-ṣádrət xmáθa dìya.¹* 'At night, the time of sleep, they ate something. At the time of sleep, she (Leliθa) took a bead, a bead of sleep, and put it on the chest of her mother-in-law'. (A19:3)

In the discourse structure of narratives, constructions with initial adverbials discussed in this section are disjunctive in function and mark the onset of new episode.

(iv) *Combined with the Existential Particle*

When the verb has an existential function, the copula is sometimes replaced by the existential particle (*ʾiθ, liθ*), e.g.

(1) *líθ wíya čù-məndi.¹* 'Nothing has happened.' (A29:22)

(2) *lìθ hátxa mə́ndi wíya gu-mðíta.¹* 'Nothing like that has happened in the town.' (A22:2)

Such constructions may refer to a situation that arises through a series of recurrent events, e.g.

   (3) *ʾíθwa rába xluláne¹ wíye gu-màθa.¹* 'Many weddings took place in the village.' (B15:73)

15.4.2. *The Infinitive Combined with the Verb 'to be'*

15.4.2.1. *General Remarks*

The infinitive may be combined with the various copulas and inflections of the verb *hwy* to form a compound verbal form.

   This construction originated historically as a locative predication, with the locative preposition *b-* 'in' attached to the infinitive. In some NENA dialects this preposition is still regularly used with the infinitive in the construction, e.g. C. Urmi *b-grašelə* 'he is pulling', but in C. Barwar the preposition is normally elided and is only heard sporadically. Examples attested in the text corpus include:

   (1) *hóle b-θáya ʾaxəllɛxu.¹* 'He is coming to eat you.' (A13:14)
   (2) *ṭ̀ɛre¹ hóla b-θáya l-qàle.¹* 'The birds are coming at (the sound of) his voice.' (A25:43)
   (3) *ʾu-ṭárpət dɛrúbər hóla b-nθàra.¹* 'The leaves of the wood are falling.' (A25:46)
   (4) *b-xyára b-zeδàye.¹* 'He looks at the pitta breads.' (A30:11)
   (5) *b-txárən* 'I remember' (B15:84)

The *b-* is regularly used only in the fixed phrase *b-xšawɛn* 'I think'.

15.4.2.2. *Progressive Function*

The infinitive may be combined with the deictic copula, the basic copula or the negative copula. When the basic copula is used, this is in its enclitic form. As has been shown in §15.3.1–§15.3.2., the enclitic basic copula and the deictic copula are used with predicates expressing either contingent or permanent properties but the independent basic copula is used only with predicates expressing permanent properties that, typically, are intrinsic to the nature of the subject referent and have not been acquired. As will be shown below, the infinitive compound construction expresses a transient activity that is not a permanent property of the subject and so it is in principle not appropriate to use the independent copula in the construction.

The basic function of the infinitive compound construction is to express progressive aspect, i.e. it denotes an activity that is taking place at the present moment but is not necessarily a permanent, habitual property of the subject of the verb.

In positive clauses the deictic or enclitic copula may be used with the infinitive. The copula may also be omitted altogether. In principle these three different constructions are used by the speaker to endow the clause with varying degrees of communicative salience. This salience scale may be represented as follows, in which the construction with the deictic copula is highest in salience and the form with no copula is lowest:

hole qṭala   > *qṭalɛle*   >   *qṭala*

In negative clauses only two degrees of communicative salience are expressed, one with the negative copula and one with the negative particle *la* alone:

lɛle qṭala   > *la qṭala*

The degree of salience depends on various factors. One consideration is the factivity of the proposition. Clauses expressing assertive, factive propositions are high in communicative salience in that the speaker is committed to its factuality. Non-factive propositions do not involve such commitment and are low in communicative salience. This is reflected by the fact that the deictic copula is normally used with the infinitive in conversation when the speaker wishes to draw particular attention to an activity that exists in the current speech situation, e.g. *hole θaya* 'He is coming'. In interrogative clauses, on the other hand, the enclitic copula is used, e.g. *θayɛle?* 'Is he coming?' In negative main clauses there is no formal distinction between assertive and interrogative propositions: *lɛle θaya* 'He is not coming', *lɛle θaya?* 'Is he not coming?' Examples from the text corpus:

(1) *hóla ṣláya rəš-ʾɛ̀na.* 'She is going down to the spring.' (A26:40)
(2) *hon-wáða ʾixàla.* 'I am making food.' (A21:27)
(3) *hóla dwáqa nàše.* 'They are seizing people.' (A25:80)
(4) *ʾáti hot-wáða xákma šulàne báxta mən-gáwṛa hot-šqàləlla ʾu-hot-baróxəlla l-gànux.* 'You are doing (bad) things, you are taking a woman from her husband and wedding her to yourself.' (A25:81)
(5) *dúnye hóla ràya.* 'It is raining.' (A26:46)
(6) *ṭắyət xònəx?* 'Are you searching for your brother?' (A8:64)
(7) *hár-dwaqət ràqqi?* 'Are you still insisting?' (A40:4)

(8) *ʾu-ʾə́dyo ʾáti lat-wáða b-xàbri.*¹ 'Today you are not doing as I said (you
     should).' (A22:43)

(9) *lat-mtaxmóne mən-nàše.*ʔ¹ 'Are you not thinking of the people?'
     (A25:60)

Another factor that contributes to communicative salience is the actional-
ity of the verb. Verbs that have a non-dynamic actionality, which express
mental processes rather than perceptible activities, exhibit a greater ten-
dency to have the enclitic copula when being used with progressive aspect
than do verbs with a dynamic actionality, with which the deictic copula
is used to a greater degree, e.g.

(10) *b-xšáwən gáwṛi θèle.*¹ 'I think my husband has returned.' (A39:18)

(11) *ʾana-txárən y-aθέwa xo-túθa čùwa.*¹ 'I remember they would come (and
      sit) under the smooth mulberry tree.' (B5:203)

(12) *ʾána xzáyən ʾan-maymúne…hóla xáləlla qṭàləlla.*¹ 'I see that they are
      eating and killing the monkeys.' (A14:52)

(13) *zdàləx.*¹ 'We are afraid.' (A14:40)

(14) *pšàmən rába.*¹ 'I am very sorry.' (A1:11)

(15) *ʾána mštawhórən m-bnòni.*¹ 'I am proud of my children.'

The degree of communicative salience also depends on the nature of the
grammatical subject. In some expressions with impersonal subjects the
infinitive is used without a copula. This applies to the verb *m-byn* 'to
appear', e.g.

(16) *mabyóne ṭúra gu-čól ramànɛle.*¹ 'It seems it is a high mountain in the
      countryside.' (A8:70)

(17) *mabyóne ʾiθ-xa-məndi gu-qə́ṣṣət.*¹ 'It appears that there is something in
      the story.' (A4:18)

Note also the regular omission of the copula on the infinitive in meteo-
rological expressions such as *dunye raya* 'It is raining' or *raya talga* 'It is
snowing. The grammatical subject *dunye* (literally: 'the world') refers to
the general situation.

For some of the verbs expressing mental processes the *qaṭəl* form is
often used to express the progressive aspect rather than the infinitive
construction. This applies to the verbs *by* 'to want', *yð* 'to know', *zdʾ/zdl*
'to fear', *ṣbr* 'to dare', *mṣy / ʾmṣ* 'to be able' and *xzy* 'to see' (§15.1.1.4.).
The infinitive construction is used in some circumstances to express the

progressive, but its distribution differs with each verb. It is rarely used at all with *by* 'to want, to like'. With *zdʾ* 'to fear' and *xzy* 'to see' it is used interchangeably with the *qaṭəl* form. With the verbs *yðʾ*, and *mṣy* there is a tendency to use it with negated forms of the verb rather than positive forms. Examples from the text corpus:

(18) *hon-băyəllux,ˈ ṱ-amrə̀nnux.ˈ* 'I like you so I shall tell you.' (A14:78)
(19) *lèla băyəlle?ˈ* 'Doesn't she want it?' (A30:32)
(20) *ʾána ˀə̀llux-in zdáʾa.ˈ* 'I am afraid for you.' (B9:27)
(21) *lɛn-zdáʾa ʾap-dəndə̀kθa.ˈ* 'I am not afraid, even a little.' (B9:17)
(22) *xzáyət ˀănáha naše-ṱ-île ráqa bàθri?ˈ* 'Do you see those people who are running after me?' (A7:17)
(23) *lɛt-xzáya bíye díye ṱ-île mìθa?ˈ* 'Don't you see that he is dead?' (A17:2)
(24) *làn-ðaʾa lékəla zílta.ˈ* 'I do not know where she has gone.' (A26:11)
(25) *lát-ðaʾa ʾo-ˀɛ̀nile?ˈ* 'Do you not know who that is?' (B15:81)
(26) *lán-mṣaya jwà̀ja.ˈ* 'I cannot move.' (A24:2)
(27) *lán-mṣaya mattánna b-ˀìði.ˈ* 'I cannot put it on my hand.' (A26:21)

A further factor that affects the communicative salience of the infinitive construction is its information status. This is reflected in the tendency for the enclitic copula rather than the deictic copula to be used when the verbal form is low in information value and the main information focus is on its complement. This is seen in (28) in which the verb *xðárən* 'I am going around, I am searching' in the answer to the question is presupposed to be known to the hearer, the main point of the utterance being the complement 'after my sustenance', which indicates the purpose of the bear's action:

(28) *ʾo-tèlaˈ mə́re há lèkət zála,ˈ ya-gáni də̀bba?ˈ b-álaha xðárən báθər rə̀sqi.ˈ* 'The fox said "Hey, where are you going, my dear bear?" 'By God, I'm going around (searching) after my sustenance.' (A20:1)

The compound infinitive is used to express a continuing situation that has been in existence for a specified period of time. Such constructions are translated by the English present perfect, e.g.

(29) *ʾu-ˀána ʾanna-šawwá-šə̀nne hon-θàya.ˈ* 'I have been travelling (literally: coming) for these (last) seven years.' (A37:17)

15.4.2.3. *Function in Narrative*

The infinitive construction is used in narrative discourse. In such contexts the infinitive has either the deictic, the enclitic copula or the copula is omitted altogether.

When the deictic copula is used with the infinitive in narrative contexts, the construction generally has its usual progressive sense. Its function is to express an event that is in progress and overlaps temporally with an adjacent punctual event. It is negated in the usual way by the negative copula. The copula takes the past time reference of the adjacent narrative as its deictic centre. The construction may be placed after the verb(s) with which it overlaps temporally. It may have the same subject referent as the preceding verb (1–2) or a different subject referent (3–5), e.g.

(1) *plíṭele zílɛle hóle gašòqe.*ˈ 'He went out, went off, watching.' (A22:24)

(2) *zílle kléle xóðe tằmàha.*ˈ *har-hóle xyára b-ó-ḍ̣abət ʾəngləznàya.*ˈ *hóle zdằʾa.*ˈ 'He went to stand alone far away. He kept looking at that English officer. He was afraid.' (B17:13)

(3) *sìqtɛla,*ˈ *ʾo-pàṛa*ˈ *hóle mbarbòre,*ˈ *har-mbarbòre,*ˈ *léle klàya.*ˈ 'She went up, while the lamb bleated and bleated, incessantly.' (A34:28)

(4) *ʾə́θyɛla xá-naša xèna,*ˈ *lwíša lwíšta smòqta,*ˈ *súsa smòqa,*ˈ *rúmxa smòqta.*ˈ *b-léle rúmxe díye hóla mxáya kizɜ̀kke,*ˈ *ma-ṭ-íle ʾo-náša ràba xɛlàna.*ˈ 'Another man came, dressed in red clothing, with a red horse, a red spear. In the night his spear was giving off sparks, so powerful was that man.' (A12:9)

(5) *ʾu-murízela mbádla jàlde*ˈ *síqela ʾəstəqbá̃l t-màlka,*ˈ *xéna ʾax-ṭ-óði ʾəstəqbá̃l t-màlke,*ˈ *b-iqàra-w*ˈ *ʾáyya hóla mparòje,*ˈ *káza xyára hàtxa*ˈ *ta-t-xazyále ṭlíba dìye,*ˈ *lèla xzayəlle.*ˈ 'They lined up in the early morning and went up to receive the king, as they (customarily) receive kings, with honour, while she was watching, peering like this to see her betrothed, but she does not see him.' (A4:35)

The construction with the deictic copula is used to express an event that is discovered to be in progress on the arrival on the scene of a character in the narrative, e.g.

(6) *sɜ̀lyɛle*ˈ *ʾína Mằmo-w Ẑìne*ˈ *hóla nšáqa g̃ðàðe.*ˈ 'He came down and (found) Mămo and Zine kissing each other.' (A26:46)

(7) *ʾína xazèla*ˈ *Ẑíne-w Mằmo*ˈ *hóla mɜ̀-g̃ðaðe mṣawóθe.*ˈ 'He sees Zine and Mămo while they were speaking with one another.' (A26:57)

The activities may be a sequential series of events that are not all exist-
ing simultaneously, but rather the overall event expressed by the series of
individual events is presented as temporally overlapping with the main
narrative, e.g.

(8) *ʾítwale xa-xurzàya,ˈ béθe díye šə́ttət màθa-wewa.ˈ šə́mme díye Bèžəm-wewa.ˈ*
     qəm-xazéle xále díye Rustắmo zàla.ˈ mə́re xáli lὲkεt zála?ˈ mə́re ʾáw lὲle šúlux.ˈ
     Béžəm módile wàða?ˈ **hóle dwáqəlle réšət xórta makyòpəlle,ˈ**
     yalúnke zóre hola-θáya ʾu-sáqa b-à-xorta,ˈ marpòyəlle
     réšət xórta,ˈ xórta hóla zyàna,ˈ ʾan-yalúnke zóre kùt-xa
     hóle zdáyəlle bar-ðá-gotət dúnye.ˈ *Rustắmo mə̀reˈ xwàrza,ˈ lá-wuð*
     hàtxa.ˈ 'He had a nephew, whose house was at the bottom of the
     village. His name was Bežəm. He saw his uncle Rustam going
     off. He said "Uncle, where are you going?" He said "That is not
     your business." What was Bežəm doing? He was holding the top
     of a poplar tree and bending it down, young children were com-
     ing and going up the poplar, he was letting the top of the poplar
     go, the poplar was springing up and he was flinging the young
     children in all directions. Rustam said "Nephew, don't do that."'
     (A29:15–17)

The infinitive construction with a deictic copula may denote an ongo-
ing event that overlaps temporally with a resultant state expressed by a
resultative participle, e.g.

(9) *ʾánna ṣàliˈ ʾína mò ṣáli!ˈ hóla susắwàθaˈ jə̀mye b-réše díyeˈ wáða hɘ̀lmaˈ b-*
     réše dìye.ˈ 'They went down but what (a surprise when) they went
     down. The horses were gathered over him, blowing onto him.'
     (A25:13)

(10) *hóle l-ɛ-gōt-hòdəx,ˈ də́rya ða-kùlla,ˈ dmíxa tàma,ˈ muṭəlya-gʸáne dìye.ˈ ʾáni hóla*
     wáða tàgbir.ˈ 'He was on the other side. He had put up a mosquito
     net and was lying there, pretending to be asleep, while they were
     making a plan.' (A30:42)

The construction with the deictic copula is used in a section of discourse
that presents a preliminary section that provides the background against
which a following series of punctual events in the foreground of the nar-
rative take place. In (11), for example, the forms *hóla nšàqəlle* and *hóla spára*
occur in a section of discourse that sets the scene for the main foreground

event of the passage, namely that one of the angels sneezed because of
the soot. It is noteworthy that the resultative participles in this preliminary
background section also have the deictic copula (§15.4.1.3.):

(11) *ʾo-yála zóra hóla múttəlle be-pàlga.*¹ *ʾáy **hóla nšàqəlle**,*¹ *nšàqəlle,*¹ *nšàqəlle,*¹
*xpáqəlle gu-ṣádra dìya.*¹ *ʾu-yáwəlle ṭla-bábe dìye.*¹ *ʾáp-aw nšàqəlle,*¹ *nšàqəlle,*¹
*nšàqəlle.*¹ *maláxe holá-ʾəθye tíwe l-kàwe.*¹ ***hóla spára** l-kàwe,*¹ *tá-t ʾímət*
*párqa dàna,*¹ *tá-t mattíle ʾo-yàla*¹ *tá-t šaqlíle nəšmèy.*¹ *ʾu-hádəx ʾíθwa ʾán-xa*
*sobáθət kə̀slən,*¹ *buxεrìyewa.*¹ *síqεle xákma mən-d-ò-šəmra,*¹ *wírεle gu-naxírət*
*xa-m-malàxe.*¹ *ʾu-wíðεle pə̀θyo.*¹ᵎ *ṭpìθεle.*¹ 'They put the small child in
the middle. She is kissing and kissing and kissing him and hug-
ging him to her breast. Then she gives him to his father. He also
kisses and kisses and kisses him. The angels have come and have
sat by the window. They are waiting by the window for the time
to finish, for them to put down the child so that they could take
away their soul. There were stoves in our community that were
smoke ducts. Some of the soot went up and entered the nose of
one of the angels. He went "achoo!" He sneezed.' (A4:58–60)

The infinitive construction is often used in narrative with a perfective
aspect to express an event that is sequential to what precedes. In such cases
the infinitive generally has the enclitic copula or the copula is omitted
altogether. Aspect, therefore, is a further factor that conditions the type
of copula marking on the construction.

The copula is typically omitted in a chain of clauses expressing closely
knit events after the subject of the verb chain has been identified by the
copula in the first clause. The copula is used when there is a change in
subject referent. This can be seen in examples (12)–(14) below. It should
be noted that the infinitive with a 3rd person enclitic copula followed by
a 3rd person pronominal suffix is identical in form to the equivalent con-
struction without the copula (e.g. *qṭaləlle* < *qṭaləle* + *-əlle* or *qṭala* + *-əlle*). The
presence of the copula cannot, therefore, be discerned in these forms.

(12) *yómə ṭḷàθa*¹ *márεle xóne díye xá-ga xéta ʾo-t-Bàbəl*¹ *yáwəlle xábra ṭla-náše*
*dìye*¹ *mára ṱ-ázəx ṣ̌èda.*¹ *ʾánna p̂làṱεla,*¹ *kúlla zála ṣ̌èda,*¹ *m-a-góta xéta*
*málka gnàwəlla gān-dìye.*¹ 'On the third day his brother, the one from
Babylon, says, again he makes an announcement to the people,
he says "Let's go hunting." They go out, they all go hunting, but
the king hides somewhere else.' (A13:7)

(13) *muθέθεla tré glàse.|¹ ṭla-d-áy dráyɛla xàčča|¹ ṭla-d-áw ràba.|¹ ʾa-d-áy ṃḷáyəlla kùlle míya|¹ ʾa-d-áw har-ṃə̀lya.|¹ štáyɛla-w práqɛla bíya dìya.|¹* 'She brought two glasses. Into hers she pours a little and into his a lot. She fills hers all with water. His was continuously full. They drink and finish it.' (A17:25)

(14) *yə́mma d-an-hambišàye|¹ márɛla ṭla-brə́n d-o-zòra|¹...ṗlàṭɛle,|¹ ʾáṗ-ʾaw qṭàləlle.|¹ wárɛle Barzə́kko ṭáləb d-àẏ,|¹ yə́mmət hambišàye.|¹...ʾáṗ-ʾay qṭàləlla.|¹ ʾo-ṣḷàyɛle.|¹ ʾítwale xolàma.|¹ súse díye mtaslóməlle ṭla-xolàma.|¹ wára gu-čádre dìye,|¹ dmáxa hal-mbàdla.|¹ mbàdla,|¹ qyàmɛla,|¹...mára də-mărušúle Barzə̀kko!|¹ hal-ʾímə dàməx.ʾ|¹ măróšəlle...qyáma zàla.|¹ zála, zàla,|¹ mṭáya,|¹ mṭáya kàrma.|¹...mṭáyɛle xa-náša xèna.|¹* 'The mother of the giants said to the youngest son...He went out and he (Barzəkko) killed also him. Barzəkko went in attacking her, the mother of the giants.... He killed also her. He went down. He had a servant. He handed over his horse to the servant. He entered his tent and slept until morning. In the morning they got up...They said "Wake Barzəkko! For how long will he sleep?" They woke him...and went on their way. They went a long way and arrived at an orchard.... Another man arrived.' (A12:6–9)

On some occasions a chain of clauses opens with an infinitive without the copula when the subject is identifiable from the context and the opening clause is closely connected semantically with what precedes. This is the case, for example, in (15), in which the infinitive chain begins after direct speech:

(15) *hállule xa-sùsa.|¹ tə́mməl mbádla ʾàzəl.|¹ šqála dárt-yoma xà-susa|¹ táwa xáṣe díye zàla.|¹* '"Give him a horse. Let him go tomorrow morning."' The next day he took a horse, sat on its back and went off.' (A12:59–60)

In some tightly knit verb sequences two infinitives are juxtaposed with the copula on the second one, reflecting the fact that they are treated as a single unit. This is attested where the first verb is *qym* (16) or a verb of movement (17), or where two verbs of similar meaning are juxtaposed (18):

(16) *qyáma sàqɛla.|¹* 'They rise and go up.' (A13:1)
(17) *ráqa θàyɛle.|¹* 'He runs and comes back.' (A29:50)

(18) *čarčóre ʾu-ṣráxɛla čə̃nnə̣kè̀ra*ˈ 'She screams and cries all around.'
(A51:15)

We should include here the use by narrators of the infinitive form *mára*
without a copula at various points in the text. The literal meaning of this is
'It says', the subject being the story itself. It is sequential to what precedes,
in that it marks an advance of the narrative. The narrator typically inserts
this formula at the beginning of new episodic sections, especially where
there is a change in spatio-temporal location. It is more idiomatically
translated into English by a discourse connective such as 'now', e.g.

(19) *mára yómət trè*ˈ *ʾay-là xílla.*ˈ 'Now the next day she did not eat.'
(A21:14)

(20) *mára qìmɛle*ˈ *qédamta híwɛle xàbra.*ˈ 'Now, the next day he gave word.'
(A26:45)

(21) *mára ṣə́lyɛle rəš-ʾèna.*ˈ *ʾáw ʾu-súse díye ṣə́lyela rəš-ʾèna,*ˈ *xə́zyəlla xákma*
*baxtáθa tàma.*ˈ 'Now, he went down to the spring. He and his horse
went down to the spring. He saw some girls there.' (A26:23)

(22) *mára qímɛle ʾə́θya síqa l-gàre.*ˈ 'Now, he came and he went up onto
the roof.' (A26:40)

(23) *mára Qára Téždin zìlele,*ˈ *yíwəlla ʾíðe gu-ʾíðət Mằmo.*ˈ 'Now, Qara Teždin
went and put his hand in the hand of Mằmo.' (A26:50)

On some occasions an infinitive construction that functions as a narrative
present with a perfective aspect has a deictic copula. In such cases the
intention of the speaker is to draw particular attention to the event in
question for some reason. The construction sometimes expresses an event
that was unexpected as a sequel to the preceding event. In (24) and (25),
for example, the speaker is astounded by what another character in the
narrative said after the event that is reported in the preceding clause. The
event of the horse bolting in (26) is also a sudden, unanticipated event. In
(27) the deictic copula signals the extraordinary action of the hero, which
ordinary men would not have been expected to carry out.

(24) *ʾə́θyəx xa-néra benàθən*ˈ **hóle màra**ˈ *bábi ṯ-óðəxle gò̀šra.*ˈ *mə́ri m-ɛ́ka*
*mɛθə́nne qèse,*ˈ *m-ɛ́ka mɛθə́nne bəzmàre*ˈ *ʾu-nasàrta,*ˈ *ta-ṯ-oðə́nne gò̀šra*ˈ *šằwər*
*réše réše.*ˈ 'We came to a river between us (and the continuation of
our journey). He says "My friend, let's make a bridge for it." I
asked from where I should bring him wood, from where I should

bring him nails and a saw so that I could make a bridge for him to cross over!' (A17:9)

(25) *nublìli* **hóle mára** *ṭlàli* *lè y-axlə́nna.* 'I took them, but he says to me "I shall not eat them."' (A17:14)

(26) *mbádla tíwa xáṣe díye 'u-plìṭɛle.* *'ɛ́-ga súsa kəmá-dana léle-xəzya šə̂mša,* **hóle pràxa.** 'In the morning he sat on its back and went out. Since the horse had not seen the sun for so long, it bolted (literally: flew off).' (A12:66)

(27) *kú-ṭ-ile ṣláya tàma* *lɛ̀la mṣáya bíye díye* **hóle qṭàlə́lla.** *Rustə̆mo ferə̀ssɛle.* 'All those who went down there could not defeat him and he killed them. Rustam was a mighty warrior.' (A29:60)

The deictic copula is also found where the narrator wishes to express some kind of boundary in the narrative. This may coincide with a shift in scene and subject referent. In (28), for example, the narrator shifts attention to the character Bežəm at a different location in the village. The chain of sequential clauses recounting his activities opens with an infinitive with a deictic copula. Subsequent events in the scene that are expressed by the infinitive construction have the enclitic copula or zero copula. In (29) the attention shifts to the character Zine in a different location from that of the preceding narrative. The adverbial *'axxa* 'over here' is used by the narrator to indicate a shift in scene. The clause expressing the opening event of this scene has a deictic copula (*hola ṭlaba*). The following clause, which can be considered to be an elaboration of the first, also has the deictic copula (*hola mara*). In (30) the clause with the deictic copula coincides with a change in subject. This clause may also be interpreted as the resumption of the main narrative foreground, the two preceding clauses being a preliminary background section. In (31) the speaker narrates the events of a dream. The deictic copula is used to mark the crossing of the bridge as a boundary in the discourse, presenting it as the onset of a chain of clauses that constitute a distinct overall event from what precedes. The clause is also presented as a new section of direct speech. Similarly in (32) the speaker uses the deictic copula to present the series of clauses narrating the second attempt to fire the bullets as a separate overall event from what precedes.

(28) *Béžəm hóle šə́ttət máθa mòdile wáða.'* **hóle zàla** *ða-gótət màθa* *mxáyəlla 'ɛ́-xòrta* *gu-d-an-bàte,* *kúlla tlàxəlla,* *b-lɛ̀le* *b-rəš-nàše,* *'u-ráqa θàyɛle.* 'Bežəm was at the bottom of the village. What does he do? He

goes to one side of the village and batters the houses with the poplar tree and destroys them all, at night, on the heads of the people, then he runs back.' (A29:50)

(29) *ʾɛ́-bena¹ ʾàxxa¹ Žíne **hóla ṭlába** mən-ʾalàha,¹ **hóla màra**¹ ya-ʾàlaha,¹ háwe ṣáxi hál-ʾɛ-gət ʾána máṭyən ʾə́lle dìye.¹ ṣlàyɛla Žíne¹ m-qúrbət hàbsa¹ ʾu-ʾáw xzàyəlla¹ ʾárbi bnáθa mə́nna dìya.¹* 'Then, over here, Zine pleads to God and says "Oh God, let him be well until I reach him." Zine comes down near to the prison and he sees her and forty girls with her.' (A26:80)

(30) *xá-yoma mumiθále gáne b-dùgle,¹ Ḥásan ʾÀġa.¹ léla ṣbára jáwji m-qáme dìye.¹ ʾárya **hóle mára** ṭla-də̀bba¹ de-ʾáti ṭabbàxtət.¹ sa-wuð-ʾìxàla.¹* 'One day Ḥasan Aġa pretended to be dead. They dare not leave him. The lion says to the bear "You are the cook. Go and make food."' (A27:40)

(31) *mə́re b-xə́lmi zála reša-réša ða-yáma rába gòṛta,¹ yáma xwàrta.¹ ʾíθwa tre-xoriyàθa,¹ gə̀šra.¹ mára **hon-zála** réšə d-ò gə́šra,¹ ʾína ràba zdáʾa¹ t-là-naplən gu-d-a-yáma.¹ m-táma zálən wárən gu-xa-gə̀ppa,¹ xa-ṭùra.¹* 'He said "In my dream I went across a great sea, a white sea. There were two poplars (forming) a bridge." He said "I went over the bridge, in great fear that I would fall into the sea. From there I went into a cave, a mountain."' (A11:7)

(32) *kú pušánga ṭ-íx mattóyəlle gu-d-ay-tòpe¹ čˇuruk-ile pláṭa.¹ ʾáw **hox-šqáləlle** zdáyəlle mattóye xa-xèna,¹ ʾap-áwwa čˇuruk-ile pláṭa.¹ har-mattóyəxəlle l-xáṣa qaṭlə̀xxa¹ har-pušánga čˇuruk-ile pláṭa.¹* 'Every bullet that we put in this gun comes out (as a blank) with a bang. We take it out and throw it away, then put in another one, but also that one comes out (as a blank) with a bang. We point it at her back to kill her, but the bullet comes out (as a blank) with a bang.' (B9:21)

It is relevant to note here that the narrative formula 'it (the story) says' is sometimes used with the deictic copula at the beginning of the story, whereas in the body of the narrative it is used without a copula (*mara*), e.g.

(33) *hóla màra:¹ ʾíθwa xa-màlka.¹* 'It says: There was a king…' (A1:1–2)

Another context in which the deictic copula is used when the infinitive construction has perfective aspect is where the construction expresses an event that is off the main narrative line and provides background information. This event is not necessarily sequential to what precedes. In (34)

and (35), for example, the construction with the deictic copula clarifies
the identity of the speaker:

(34) *zílle mə̀re*ˈ—*ʾáwwa Čixàlo hóle mára*ˈ—*zílle mə̀re*ˈ *málka ʾáti har-t-yàtli
      brátux?*ˈ 'He went and said—it is Čixalo who says this—he went
      and said "King, will you still give me your daughter?"' (A25:24)

(35) *mə́re ʾána mò,*ˈ *xo-là pə́šən šằvána-llux.*ˈ *Fàrxo hóle mára.*ˈ *mə́re ʾána bṭ̣-àzena.*ˈ
      'He (Farxo) said "What am I? I shall not become a shepherd for
      you"—Farxo says (this). He said "I shall go."' (A25:32)

15.4.2.4. *Habitual Function*

On some occasions the infinitive construction expresses an activity that
is of habitual recurrence but may not necessarily be taking place at the
time of speech. It is used to express an iterative rather than a permanent
durative situation. This differs from the *(ʾi-)qaṭəl(wa)* form, which may
express either an iterative or a permanent situation. The iterative function
can be considered to be an extension of the perfective narrative present
function described above, which would be appropriate to describe each
individual occurrence of the iterated situation.[10] It is relevant to note
that when the construction has this function, the infinitive is occasionally
replaced by the verbal noun, which expresses a single occurrence of an
action (§15.6.3.).

   The iterative events may be presented as sequential to one another.
In such cases the copula, if it is not attached to some other item in the
clause, is usually cliticized to the infinitive or omitted altogether, as is the
case with the perfective narrative present usage, e.g.

(40) *bár hàdəx,*ˈ *bár ṯ-ila-báxta pyáša rásmi tàma*ˈ *yáʿni wára gu-l-bɛ̀θa,*ˈ *θáyɛle
      qàša*ˈ *ʾu-sáṛa gnùnɛle.*ˈ 'After the woman becomes official there,
      that is she enters the house, the priest comes and ties the band.'
      (B5:44)

(41) *ʾíman-ṯ-ile náša mqằròne*ˈ *mjaròbele*ˈ *qa-t-xáze xayúθa biš-spằy.*ˈ 'When
      somebody grows up, he tries to find a better life.'

This iterative function of the infinitive construction expressing the perfec-
tive present is indeed found in narrative discourse itself, e.g.

---

[10] For perfective iterative forms in other languages see Comrie (1976: 31).

(42) *qímtɛla dóbba zìlta,¹ muθέθa ða-qánnət dəbbòre.¹ muθέθəlla muttὲθəlla¹ qam-tӑ̆rət¹ d-ó-boyət tèle.¹ har-dəbbóre zálɛla-w θáya dúrr dúrr dùrr.¹* 'The bear went off and brought back a hornets' nest. She brought it and put it before the door of the fox's hole. The hornets went constantly back and forth (literally: went and came back), durr, durr, durr.' (A20:6)

Further examples from non-narrative discourse in the text corpus are presented in (43)–(48), in most of which the copula is negative or is a clitic attached to a subordinating particle. Note that in (45)–(47) the construction is used in combination with the *qaṭəlwa* form and in (48) with the resultative form.

(43) *ʾən-la-ṣɛmóxla mӑ̀rəx.¹ ʾáxni gòre,¹ bas-ʾánna bnóne zòre¹ hadíya lèla ṣyáməlla ʾáni.¹* 'If we do not fast, we shall become ill. We older ones (still fast), but these young children now do not fast.' (B16:12)

(44) *háyyo làxxa,¹ b-áyya dúkθa ṯ-ìn táwa¹ gu-d-áyya ṭàrma.¹* 'Come here, in the place where I sit, in the porch.' (A13:6)

(45) *ʾíman ṯ-íx nabóle ʾan-tàwre,¹ ṣalwὲxwala.¹* 'When we took the oxen, we would tether them.' (B5:83)

(46) *ʾíman ṯ-ila-nabólle bòdra¹ m-gu-ʾӑ̀ra,¹ mattíwa xá y-amróxle . . . xa-jùlla¹ ʾabὰya y-amróxwale.¹* 'When they took it to the threshing floor from that ground, they would lay down what we called a "cloth"—we called it a "cloak."' (B5:80)

(47) *kú-mdit láyəp náša yála zòra¹ ʾáyya pyὰša gu-réšət náša.¹* 'Anything a person learns as a young child, this remains in the mind of somebody.' (B8:22)

(48) *ʾódyo kú-məndi ṯ-íwən šmáʾa ʾàxxa,¹ yómmi mtunὲθəlle ṭláli,¹ yӑ̆ðànne.¹* 'Today, everything that I hear here, my mother has told me and I know it.' (B8:15)

On some occasions the deictic copula is used with the infinitive when it has an iterative usage. As with the narrative usage, the motivation for the deictic copula is generally to direct particular attention to a clause that occurs at some kind of boundary in the discourse. In (49)–(51) the deictic copula occurs at the onset of a segment of discourse. Example (49) is the opening of a section of direct speech and (50) coincides with a shift in subject referent and also a temporal shift marked by the adverb 'now'. In (51) the deictic copula occurs at the onset of a chain of clauses in which there is a shift in subject referent. The situation described in this chain

of clauses also has prominence in the overall narrative, and this may be an additional motivation for drawing attention to it by the deictic copula. In (52) the deictic copula gives weight to the closing clause in a section describing the iterative situation in which a certain character in the narrative sings. The infinitive here has the *b-* preposition, the motivation for which here may also be to give the clause additional morphological end weighting.

(49) *kúlla náša hóle zála l-šùla.*ˈ *ʾàp-ʾana bṭ-ázən šúla*ˈ *pàlxən.*ˈ 'Everybody goes to work. I also shall go to work and work.' (A23:1)

(50) *hadíya hon-nšằyəlla*ˈ *ʾína d-ɛ́-ga taxrànna rába.*ˈ 'Now I forget things, but I remember well what (I learnt) then.' (B8:20)

(51) *mo-čára ṭ-óðəx ṭla-d-áyya qáṭu t-la ʾaxlàlɛni?*ˈ *ʾáxni pláṭa gu-bɛ̀θa,*ˈ *bắyəx ṭắyəx xá-məndi ṭ-àxləx,*ˈ *hóla xzáyəllən qáṭu ráqa báθrən xàləllɛni.*ˈ 'What solution can we find for this cat so that it does not eat us? When we go out into the house searching for something to eat, the cat sees us, runs after us and eats us.' (A44:1)

(52) *ʾímə ṭ-íle zmàra,*ˈ *bulbúle jmáʾela l-qàle.*ˈ *ʾu-ṭárpət dɛrúbər hóla b-nθàra.*ˈ 'When he sings, nightingales gather at his voice and the leaves of the wood fall.' (A25:46)

15.4.2.5. *Performative Function*

The infinitive construction is used in some performative verbs, which perform an action by their utterance rather than make a truth-evaluable description of a situation. In this function the construction has a perfective aspect, as in the narrative present and iterative functions. Characteristically of its perfective use elsewhere, there is a greater tendency to use the enclitic copula than when it expresses progressive aspect. Performative usage is attested in the verb *mqawole* 'to promise', e.g.

(1) *mqawòlɛwən,*ˈ *ʾap-ʾan-zúze kúlla ṭ-in šqìləlla*ˈ *pălə́nna pàlge.*ˈ 'I promise, I'll divide into halves also all the money that I took.' (A1:17)

The expression 'I say to you' in contexts such (2)–(4) also has a performative function, which no doubt explains why it is used with an enclitic copula:

(2) *márənnux plúṭ m-àxxa.*ˈ 'I say to you: Leave here!' (A12:5)

(3) *màrənnux*ˈ *ʾáti grùš gánux.*ˈ 'I say to you: Go away!' (A12:10)

(4) *w-áti mò ṯ-amrátli?*ˈ *máre ʾána marən-ə̀llux*ˈ *hé dũ̀s,*ˈ *ʾíθwalux ʾo-kàrma.*ˈ
    '"What will you say to me?" He said "I say to you: Yes, it's true,
    you had that orchard."' (A17:33–34)

15.4.2.6. *Movement of the Enclitic Copula*

The positive clitic copula of the construction may be moved to a con-
stituent that occurs before or after the infinitive in the same types of
environment that condition the movement of the copula in the resulta-
tive construction described in §15.4.1.4. This can be seen in several of
the examples cited already above. Further examples classified into their
various functional types are:

15.4.2.6.1. *Leftward Movement of the Enclitic*

(i) *Narrow Information Focus*

   (1) *ʾàtit wáða ʾixála?*ˈ 'Are *you* making food (not somebody else)?'
       (A21:27)
   (2) *ʾána spayùθən wáða.*ˈ 'I am doing *good* (not bad).' (A14:34)
   (3) *ʾáw xšíwa màšxɛle ṣláya mən-káde.*ˈ 'He thought that *oil* (not urine) was
       running down from the *kade* cakes.' (A30:47)
   (4) *m-ɛ̀kət θáya?*ˈ *b-álaha m-bɛ̀θən θáya.*ˈ 'Where are you coming from? By
       God, I am coming from home.' (A23:2)
   (5) *ʾána míya m-ʾɛ̀wən štáya.*ˈ 'I drink water (even) from the clouds.'
       (A26:34)
   (6) *díya bìš-ila maθóyəlla,*ˈ *bìš-ila hawə́lla.*ˈ 'Now they bring them more,
       they give them more.' (B10:40)
   (7) *ʾána hàden pláṭa*ˈ 'I am just now going out (to work)'. (A23:11)

(ii) *Topically Prominent Constituent*

   (1) *lat-mtaxmóne ʾáwwa qàṣra*ˈ *ṯ-íle kúlle qarqupyàθa?*ˈ *xa-qarqúpθɛla ṗyáša qa-
       rèšux.*ˈ 'Don't you think about this palace, which is all skulls. One
       (space for) a skull is remaining for your head.' (A25:60)
   (2) *ʾáxnix ṗyáša xə̀zme.*ˈ 'We are becoming relatives.' (B5:9)

(iii) *Interrogative Constituents*

   (1) *lèkəx zála?*ˈ 'Where are we going?' (A26:16)
   (2) *lékɛwət b-zàla?*ˈ 'Where are you going?' (A8:64)

(3) *ʾáti mòt wáða táma?*ˈ 'What are you doing there?' (A25:60)

(4) *ʾáyya mănile mtanóyəlla?*ˈ 'Who is telling this?' (A14:53)

(5) *ta-mòt mára hátxa?*ˈ 'Why are you saying that?' (A40:2)

(iv) *Subordinating Conjunctions*

(1) *ʾána ʾap-dìya*ˈ *ʾáyya ʾúrxa ṭ-ín ʾána zála bíya dìya*ˈ *lè-y manšə́nna hál yomət-màwθa.*ˈ 'I shall not abandon until the day I die the way that I am following now.' (A21:35)

(2) *ʾo-ká̆lša dɛrɛ́wale gu-juwàlɛ,*ˈ *mɛθɛ́wale l-màθa,*ˈ *xzí ʾékɛle béθux ṭ-it-bnàyəlle.*ˈ 'They put the gypsum in sacks and brought it to the village, wherever (literally: see where) your house that you were building was situated.' (B5:184)

(3) *ʾu-béna ʾíman ṭ-ila-pyáša gòṛe*ˈ *xáčča šúla biš-zàmət-ile.*ˈ 'When they become big, the work is a little more difficult.' (B5:105)

15.4.2.6.2. *Rightward Movement of the Enclitic*

This is found only where the construction is used with a perfective aspect, either to express a narrative present or an iterative event, i.e. where it is common to have an enclitic rather than a deictic copula. As in the resultative construction, the purpose of the rightward movement onto the final item of the predicate is to give prominence, but not narrow information focus, either to the item to which it is attached or to the clause as a whole. In the examples attested in the text corpus, the construction is used to give added prominence to the clause in order to signal some kind of boundary in the discourse, marking off the clause from what precedes or follows. In (1) the clause describing the tying of the bands marks the closure of the chain of events in the marriage ceremony. In (2) the construction occurs at the beginning of a segment of discourse that presents elaborative information on what precedes. In (3) the construction separates the second clause distinctly from the first to express a contrastive opposition between the action of Barzəkko and that of his companions.

(1) *bár ṭ-ila-báxta pyáša rásmi tàma*ˈ *yáʿni wára gu-l-bɛ̀θa,*ˈ *θáyɛle qàša*ˈ *ʾu-sáṛa gnùnɛle.*ˈ 'After the woman becomes official there, that is she enters the house, the priest comes and ties the band.' (B5:44)

(2) *ʾu-béna ʾíman ṭ-ila-pyáša gòṛe*ˈ *xáčča šúla biš-zàmət-ile.*ˈ *lə̆ʾánnahu pyáša gòṛtela*ˈ *mtagbárta díya biš-ràbɛla,*ˈ *ʾu-gắrəg rába ʾáxlət xàm.*ˈ 'When they become big, the work is a little more difficult. This is because, when

they become big, the job to maintain them is bigger, and you must
be very careful.' (B5:105)

(3) *'ánna kúlla dmàxɛla.*ˈ *Barzə́kko pyáša ḥàrəs-ile.*ˈ 'They all went to sleep.
Barzəkko became the guard.' (A12:9)

15.4.2.7. *Infinitive Combined with the Past Copula*
The infinitive may be combined with the past copula (for the morphology
of this compound form see §8.19.4.5.). This expresses the past progressive.
It is typically used in narrative to denote an action or situation that was
in progress in the past and overlapped temporally with the occurrence
of a punctual event, e.g.

(1) *zàlɛwa,*ˈ *xá-bena xzéle m-rə́ḥqa xá-mdi xwàra.*ˈ 'As he was going along,
he suddenly saw from afar something white.' (A14:28)

(2) *xà-yoma*ˈ *də́bba xðára-wawa gu-ṭuràne.*ˈ *tfíqla b-xa-tèla.*ˈ 'One day a bear
was wandering around the mountains. She met a fox.' (A20:1)

(3) *xðárənwa l-ày-goti,*ˈ *'áqli tíwla š-'áqlət bàxta.*ˈ 'I was turning over to
my (other) side and my leg settled on the leg of the woman.'
(A16:11)

(4) *mə́rəx 'ə́lla mtanìla*ˈ *'u-xa-mašmóye-wewa 'əllèni lázəm.*ˈ 'You said "You must
tell it" and somebody must have been listening to us.' (A35:19)

(5) *mə̆r̀ə̀yənwala,*ˈ *gu-ðà-'ắra.*ˈ … *qəm-maxyále púmma díya l-r̀əzza*ˈ 'I was
grazing it in a certain piece of land…. It put its mouth in the rice.'
(B5:131)

Note the preposing of the copula before the infinitive when the construc-
tion is combined with the particle *har* 'still' in (6). This can be compared
to the leftward movement of the copula onto initial adverbials in other
types of compound verbal constructions (e.g. *yóma hádele zrìqa*ˈ 'The sun
has just now risen' §15.4.1.4.1. example 30):

(6) *píšle yòma*ˈ *hár-wewa xðàra,*ˈ *xzéle xa-bəṣlíṣa zòra.*ˈ 'Day came and he was
still searching about, when he saw a small ray of light.' (A14:24)

If two or more infinitives are concatenated, the copula may be omitted
after its use on the first one of the series, e.g.

(7) *zílla xákma šə̀nne,*ˈ *málka hár xzàya-wewa,*ˈ *b-xzáya mbaqóre l-d-ò-naša.*ˈ
'Several years went by (during which) the king was investigating and
inquiring concerning the man.' (A8:5)

(8) *xéna ʾánna kúlleɣ,ˈ lá baxtáθa pyáša-wɛwa yaqùre,ˈ lá bnòneˈ ʾôzze maθòye,ˈ lá ʾarxàθa.ˈ* 'But all of these—the women were not becomng pregnant, the goats were not producing young, the mills were not (producing).' (A38:1)

The temporal overlap function of the form is used in (9) to present an explanation of a previous statement of a character in the narrative:

(9) *màrɛwaˈ har-ʾàwwɛleˈ ʾən-ʾítle nawàge.ˈ* 'He was saying (he meant by this) "Is he just him (alone) or does he have grandchildren?"' (A17:16)

The construction is used in non-narrative discourse to express the temporal overlap of an action with iterative events in the past. In the cases where this is attested in the text corpus the copula is placed before the infinitive. In §15.3.6. it has been shown that clauses in which the past copula is placed before the predicate express in principle some kind of communicative salience. This is likely to be the case here, since in both examples two clauses with the infinitive construction are set up in opposition. The preposing of the copula is used to mark off the two clauses distinctly from one another. Another factor for the preposing of the copula in the phrase *har-iwa-práma* of (10) may be the particle *har*, as is the case in (6) above:

(10) *ʾáy mòdi qtáʾa ṭárpa?ˈ qăṭìwale,ˈ xá har-iwa-práma zdáya l-ǎra-wˈ ʾan-xéne ʾiɣáwa báθre báθre wáða ṭàxeˈ* 'What is the cutting down of leaves? They cut them down, one person cutting and throwing them on the ground, while others were behind him making small piles.' (B5:118)

(11) *m-bar-hàdəxˈ qɛmìwaˈ mzabóne ʾilàna.ˈ náše ʾiwa kòpaˈ kùlla,ˈ ʾu-ʾáwwa gárewa ràma.ˈ ʾáwwa náše ʾiɣɛ́wa kúlla spára kòpa.ˈ ʾa-ʾilána mzabnìwala y-amrə́xxa.ˈ* 'After that they would sell the tree. The people were all below and he (the groom) was high up on the roof, all the people were waiting below. They sold the tree, as we say.' (B5:42)

Note also (12), in which the temporal overlap function with an ongoing situation is used to express a concessive sense. The ongoing negated situation can be considered to be iterative ('on no occasion have they asked for you'):

(12) *hadíya xonăwàθux,ˈ márətwa xonăwàθị,ˈ ʾáyya xá-šeta hóla támma láxxa léla mbaqorə̀llux.ˈ* 'Now your brothers—(although) you called (them)

"my brothers", it has been a year that they have been here but have not (even once) asked for you.' (A26:78)

As is the case with the present copula, the motivation for the preposing of the past copula is sometimes to cliticize it to constituents of the clause that stand before the infinitive. In (13) and (14), for example, it is cliticized to the subordinating particle *D*:

(13) *ʾán-zuzət ʾaθíwa mən-mzabántət ʾilàna˺ ʾíwa hayàrta˺ qa-kʸálo-w xə̀tna˺ ṭ-íwa gwàra.˺* 'The money that was received from the sale of the house was assistance for the bride and groom who were getting married.' (B15:67)

(14) *madàm ṭ-iwə́twa pláxa ʾátxa məndiyáne˺ ṭ-amrə́nnux mò-ʾoðət?˺* 'Since you have been doing such things, should I tell you what to do?' (A14:79)

15.4.2.8. *Infinitive Combined with the Verb* hwy

The copula in the infinitive construction may be replaced by various inflections of the verb *hwy* in certain contexts. The following forms are attested in the text corpus.

15.4.2.8.1. hawe qṭala

This form is found in the protasis of conditional constructions referring to a progressive action that overlaps temporally with that of the apodosis, e.g.

(1) *ʾən-háwe pláṭa mən-ʾə́rxe ṭíša qàmxa,˺ lá hằmə́nət ʾə̀lle.˺* 'If he is coming out of the water-mill covered in flour, do not trust him.' (D2:61)

15.4.2.8.2. y-awe qṭala

This is found in (1), where it expresses a habitual progressive, denoting an activity that was habitually in progress and overlapping temporally with another activity or situation. The construction here has past time reference by taking the past reference of the verbs in the preceding context as its deictic centre:

(1) *sab-xa-xa-gáye ʾi-maxéwa tmanyà saʾə̀tte˺ bar-ġðáðe t-là-klɛθa.˺ tmanyá saʾə́tte y-áwa mxàya˺ ʾu-náše dwìqe.˺* 'For, sometimes, they played for eight hours continuously without stopping. They would be playing for eight hours while the people held (each other).' (B15:77)

15.4.2.8.3. y-awewa qṭala

This form expresses a habitual progressive in the past. In (1)–(3) it is used to denote an activity that habitually overlapped with another activity or situation:

(1) *ṣalə́nwa y-awéwa rxàθa.*ˈ 'I would go down while it was fermenting.' (B5:212)

(2) *ʾíθwa ṭawalyáθa rábe ràbeˈ mṭalìwa.ˈ ʾò yómaˈ kúlle yòmaˈ y-awáwa mṭawòleˈ ʾu-nášət máθa kùllaˈ síqe mparóje biyèy.ˈ* 'There were many games that they played. They would be playing all that day and (while they were doing so) all the people of the village would go up to look at them.' (B7:4)

(3) *béna bálki ʾo-nàša,ˈ ʾo-xə̀tna ṭ-ámrəx,ˈ ʾo-ʾùrza,ˈ lə̀we táma.ˈ y-awéwa pláxa gu-mðinàθa mắθălan.ˈ* 'Perhaps the person, that is the groom, the man, was not there. He was working (at that time) in the towns, for example.' (B5:18)

In (4) and (5) it is used to express a habitual activity that was temporally delimited. The end of this activity is mentioned in the context. In (4) the people in question ceased to worship God when they had a son. In (5) the habitual bad behaviour of the child at school was short-lived since we are told in the following context that he was expelled:

(4) *hál xámšĭ-w xámša šə̀nneˈ y-awéwa sxáða ʾalàha,ˈ y-ámər ya-ʾalàha,ˈ yawə́tlən xa-bròna.ˈ ʾímət ʾaláha yíwle ʾəlléy bтрònaˈ šuréla manšóyəlle ʾalàha,ˈ là txára ʾálaha,ˈ ʾu-là-mṣalɛwa qa-ʾálaha.ˈ* 'For fifty-five years they were worshipping God, he (the man) would say "Oh God, give us a son." When God gave them a son, they began to forget God, they did not remember God and did not pray to God.' (A15:17)

(5) *qímla mšodə́rra brōn-díya mədràsa.ˈ bróna díya gu-mədrása kút-yum y-awéwa mxáya l-aw-yàla,ˈ šqála čánta d-àwwa,ˈ šràṭa məndiyáne.ˈ* 'She sent her son to school. Her son everyday in school would beat one child, take the bag of another, tear things.' (A14:5)

15.4.2.8.4. ṭ-awe qṭala

This construction is formed by combining the future *bəd-qaṭəl* form of *hwy* with the infinitive. In most cases it expresses a future progressive. It may be used to denote an activity that will be in progress when a perfective future action takes place, e.g.

(1) *ʾíman máṭən tə̀mməl,*¹ *ʾáw ṭ-áwe pláxa gu-bè̀θa.*¹ 'When I arrive tomorrow, he will be working in the house.'

(2) *qa-d-áwwa ʾáwəð xa-čè̀ra,*¹ *ʾən-ṭ-áwe ràqa,*¹ *qa-t-ʾáwəð xa-čè̀ra qa-gáne.*¹ 'so that he could find a solution, so that, if he had to flee, he could find for himself a solution.' (A18:17)

It may denote a perfective future action that has a quantifiable duration. This differs from the *bəd-qaṭəl* form, which is unmarked with regard to the durability of the action, e.g.

(3) *tre-ṭlá yománe xéne bṭ-áwət maṭróye xāṣ-sùsa.*¹ 'You shall ride on horse back two or three more days.' (A8:46)

The *ṭ-awe qṭala* form may also be used to express a temporally delimited habitual activity in the future. In (4) the existence of an endpoint is implied by the question 'until when?' In (5) the sense is that the horse will be screeching during each interval of time in which the salt strikes his legs:

(4) *hal-ʾìman ṭ-áwət hátxa mdagóle?*¹ 'For how long will you be telling lies?' (A26:56)

(5) *mə́lxa maxéla ʾaqláθe dìye,*¹ *ṭ-áwe súsa mṣarṣòre.*¹ 'Salt will strike his legs and the horse will screech.' (A24:12)

In (6) it is used as a modal progressive, expressing deontic possibility in a question, which is one of the functions of the *bəd-qaṭəl* form (§15.1.5.2. examples 16–18):

(6) *ʾè̀ka ṭ-áwe mašmóye?*¹ 'Where could he be listening?' (A35:20)

In (7) the form is used to express an iterative activity in the past that is temporally limited, which, as we have seen (§15.4.2.7.3.), is expressed elsewhere with the *y-awewa qṭala* form. The purpose of using the *ṭ-awe* form of *hwy* is to express sequentiality to what precedes, which is one of the functions of the *bəd-qaṭəl* form (§15.1.5.4.):

(7) *wírra šəkwánta qamɛ́θa šqilála ða-ḥábba ʾu-plìṭla.*¹ *wírra t-tárte šqilála ða-ḥábba-w plìṭla.*¹ *wírra t-ṭə́ḷḷəθ ða-ḥábba-w plìṭla.*¹ ... *ha-t-xáṣli ʾan-xə̀ṭṭe,*¹ *ʾan-šəkwáne ṭ-áwɛ ðà-ða wára.*¹ 'The first ant went in and took one grain, then went out. The second went in and took a grain and went out. The third went in (and took) a grain and went out ... and the ants were going in one by one until the wheat finished.' (A36:5)

15.4.2.8.5. wele qṭala

The perfective *qṭille* form of *hwy* is combined with the infinitive to express a complete event in the past that has a finite duration with a starting-point and end-point. The distinction between *wele qṭala* and other narrative verbal forms such as *qṭille* and *qṭilɛle* is that this infinitive form explicitly expresses duration in the past whereas the others do not specify this. Since the event expressed by this form has an endpoint, it can be followed by sequential actions, as is the case in (3) and (4):

(1) *mən-d-ɛ́-danət brèla¹ hál d-ɛ-dánət mṭéla l-yàla,¹ wéla bxàya.¹* 'From the time she was born until the time that she came to the boy she wept.' (A25:4)

(2) *ʾána kəmà dána ṭ-in-mṣalóye ṭla-márya ʾàlaha¹ ta-t-yawə́lli ʾə́mma dáwe.¹ ʾu-ʾáwwa huðáya wéle maṣyóθe nṭára ʾə́lli l-gàre.¹* 'I was praying to the Lord God so many times to give me a hundred gold coins. This Jew was listening and watching me on the roof (during this time period).' (A6:10)

(3) *har-wéla taq-táq mxàya¹ ʾu-taq-tàq,¹ xá-bena-w trè,¹ w-áwwa sqìdle.¹* 'They made a taq-taq knocking noise, taq-taq, once, then twice, then he became fed up.' (A14:68)

(4) *ʾàwwa¹ Xáno xzéle ʾo-dídwa plíṭle mən-naxírət málka mujə̀ble.¹ wéle spàra,¹ xárθa xá-ga xéta xzèle¹ ʾo-dìdwa¹ plíṭle mən-d-ó bórət kèpe.¹* 'Xano saw the fly come out of the nose of the king and was astonished. He waited (for some time) and then he saw the fly come back out of the pile of stones.' (A11:5)

Rather than denoting a complete event bounded by a start and an end, the form is sometimes used ingressively to denote the start of a situation without any definite endpoint. Another event mentioned in the ensuing discourse, therefore, may take place while this situation still holds rather than being sequential to its completion, e.g.

(5) *ʾána síqa l-ṣèda,¹ dúnye wéla ràya,¹ ʾána wírri gu-xa-gə̀ppa.¹* 'I went up hunting, it started raining and so I went into a cave.' (A28:6)

(6) *xá-ga xéta ṭlíbla mən-márya ʾàlaha,¹ kúlla wéla bráka ṭlìbla,¹ ṣléla mə̀ṭra.¹* 'Then they made a request from the Lord God, they all started kneeling and made a request, and (as a consequence) rain fell.' (A11:18)

(7) *ʾa-políse wéla pyáša b-xəmmèy.¹* 'The policemen began to become worried.' (A8:10)

15.4.2.8.6. wiyɛle qṭala

This form is attested in (1), where it is used to express an enduring but complete event in the past that has a finite duration with a starting-point and end-point. As we have seen, the same function is performed by *wele qṭala*. This arises from the fact that the *qṭille* and *qṭilɛle* forms are used interchangeably in narrative.

(1) *ʾɔ́θyɛle xa-nàša¹ xa-súsa smòqa,¹ kúlle lwíša smòqa,¹ wíyəx ṗláša m-ʾaṣə́rta hal-gu-mbadlàθa.¹ lan-mɔ́ṣya bíye dìye.¹* 'A man came, on a red horse, all dressed in red. We fought from evening until morning. I could not prevail against him.' (A12:19)

15.4.2.9. *Combined with Existential Particle*

The infinitive form *ṗyaša* is sometimes combined with the existential particle when the verb has the sense of 'to remain'. All the attested examples have the negative particle:

(1) *čú məndí lítla ṗyàša.¹* 'She no longer had anything.' (A26:59)
(2) *lítlux ṗyáša pə̀rṣət,¹ dìya qaṭlə́xlux.¹* 'You no longer have any opportunity (for escape), we shall kill you right now.' (A26:76)
(3) *liθ-ṗyáša ʾánna ṭ-amrə́xxa bòla díye.¹* 'No more of its heads, as we call them, remain.' (B5:97)

15.5. Other Constructions with the Infinitive

15.5.1. *General Remarks*

In some sections of the foregoing treatment of the compound infinitive construction with the verb 'to be' mention has been made of some contexts in which the auxiliary verb is omitted. Most examples of this omission cited above are infinitive constructions in narrative occurring after a preceding infinitive bearing the copula, or occasionally before a following infinitive bearing the copula. In such cases the infinitive without the copula expresses an event that is closely connected with that of the preceding or following clause respectively, in that they are presented as being components of the same overall event. In this section we shall examine further contexts in which an infinitive lacking a copula or form of the verb *hwy* is used.

With regard to the subject referent of an infinitive, this is in principle either explicitly expressed together with the infinitive or, if not expressed, it is the continuation of the subject referent of the preceding clause. An exception to this is where the infinitive has an impersonal subject. This is seen, for example, in (1), in which the infinitive *ṭắya* has an impersonal, unspecified 3pl. subject, which is not the subject of the preceding clause. This infinitive, moreover, is the first of a sequence of two infinitives, the preceding clauses having *qṭille* form verbs. The plural resultative participles in the following clauses demonstrate that the subject of the infinitive is 3pl.:

(1) *pílle šnèle.¹ ṭắya báθre díye la-xzàyəlle.¹ xárθa tfíqe bíye xázyəlle ʾína šə̀nya,¹ npìla.¹* 'He fell and fainted. They searched for him but did not find him. Then they came across him and found that he had fainted and fallen.' (A14:87)

In addition to narrative sequence, the infinitive is used in the contexts described below. When the infinitive lacks the verb 'to be' in these contexts, it is still treated as a verb with regard to its syntactic relation to the participants in the clause. The subject and direct object are combined with the infinitive as they are with verbs, the infinitive never being linked to these clausal participants by nominal annexation with the particle *D*.

15.5.2. *Temporally Overlapping Activity*

The infinitive may be used to express an activity that was being performed at the same time as that of the preceding verb. If the subject of the infinitive is the same as that of the preceding verb, the infinitive is normally used without any pronominal subject, e.g.

(1) *xa-núra ʾə́θyɛle b-lèle¹ ʾax-ʾáxxa sàqa.¹* 'A light came in the night, coming up right here.' (A29:23)
(2) *ʾàw¹ šaqə́lla gána Bakúrko ràqa,¹ ṣàle¹ kəs-Mǎ̀mo.¹* 'He, Bakurko, took himself off running and went down to Mǎmo.' (A26:78)
(3) *xzégən xònəx¹ ʾu-Mǎ́mo ṭ-íla tíwe mṭawóle b-sətrənjàne.¹* 'See your brother and Mǎmo who are sitting playing chess.' (A26:64)
(4) *síqle l-bèθa¹ pšìma-w¹ bxáya mxáya l-gáne dìye¹ bnóne díye t-la-ʾixàlɛla.¹* 'He went up to the house, sad, weeping, beating himself (thinking that) his children would be without food.' (A22:7)

(5) *xa-béna ʾóθyɛle xa-ʾaqúbra xāṣ-sùsa,¹ maṭròye,¹ ʾu-lwíša júllət xumàla,¹ ʾu-maṭróye xāṣ-súse dìye,¹ pyáða táma tàma.¹* 'Then a mouse came on the back of a horse, riding, dressed in fine clothes, riding on the back of his horse, passing by.' (A35:4)

In such contexts the infinitive is generally negated by the particle *t-la* 'without', e.g.

(6) *máxe zórna xa-salíqa xèna,¹ ʾə́rbe b-dèri,¹ b-gʸanèy,¹ t-la-mădóṛe la-šăvàna¹ ʾu-la-ʾàp-xa.¹* 'He played another tune on the pipe and the sheep returned, by themselves, without a shepherd driving them back or anybody.' (A25:27)

(7) *zeðàye¹ ʾáxlət mánna t-là-qṣaya.¹* 'You should eat the pittas without breaking them.' (A30:5)

(8) *ʾáni xə́ṭṭe huwèdi sáma zóda¹ ʾi-zăríla t-là maštóye.¹* 'The *huwedi* wheat they generally sow without irrigating.' (B5:94)

(9) *qəm-dárila ʾan-dáwwe heš-t-là bráza,¹ xánči t-la-bráza mɛθíwa xa-gə́lla y-amríle sə̀rmo.¹* '(When) they have poured out the *dawwe* while it is not yet dry, shortly before it becomes dry, they would fetch a herb called *sərmo*.' (B14:1)

In (10), from a poetic passage, a finite verb rather than an infinitive is used after *t-la*, in order to rhyme with the end of the preceding clause:

(10) *xámši yóme ṣimìla¹ qurbáne t-la qriwìla.¹* 'She fasted for fifty days without taking communion.' (A37:4)

The infinitive construction is also used when it has a different subject from that of the preceding verb. In such cases the subject is expressed by a nominal or independent pronoun, e.g.

(11) *xə́zyəlla náše jə̀mye¹ qúrbət qáṣrət màlka,¹ kút-xa mṣawóθe xà-məndi,¹ kút-xa mára xà-məndi.¹* 'He saw the people gathered near the palace of the king, each one saying something, each one telling something.' (A4:11)

(12) *sìqtɛla.¹ ʾáy hár mšeyðòne¹ šwára nðáya gu-d-án ʾotáxe šluxèθa.¹* 'She (the old woman) went up (to see her). She (the princess) is continually acting madly, leaping and jumping around naked in the rooms.' (A4:17)

(13) *w-ána qəm-maxèli*' *w-áti xyára bìyi.*' 'They beat me while you were looking at me.' (A2:10)

Again, the infinitive is generally negated by the particle *t-la* 'without', e.g.

(14) *qíməle jálde madə́nxa t-la-mxàya.*' 'He rose early while the dawn was not breaking (= before dawn broke).' (A8:51)

We have seen that also the infinitive with the deictic copula can be used to express an event that overlaps temporally with that of an adjacent clause (§15.4.2.3.). In principle this expresses a greater degree of independent duration. The infinitives in the foregoing examples, by contrast, are typically more closely knit with the activities expressed by the adjacent verbs with a lesser degree of independent duration.

In the foregoing examples the infinitive supplies a further description of the event. In some cases the infinitive may have an epexegetical relationship to a preceding clause, in that it supplies further explanatory information that is necessary for its interpretation. This applies to the following:

(15) *ʾána wídli spayùθa,*' *maxzóyəllux dàwa.*' 'I did a kindness by showing you the gold.' (A10:12)
(16) *ʾáwwa mò-tăhər nášəle?*' *là-ʾamrətti?*' *zála škáya ʾə̀lli?*' 'What kind of person is he (Čixalo)—won't you tell me?—going complaining about me?' (A25:31)
(17) *qa-mòt hátxa wáða bíyi,*' *mɛθóye dwáqəlla ʾùrxi?*' 'Why have you done this to me, bringing (snow) and blocking my road?' (A25:42)

An infinitive may be used in a clause preceding the main clause, expressing an activity or situation that was in existence when the event of the main clause took place, e.g.

(18) *ʾánna kút-danət jrà̭ṭa,*' *suráye dwaqèlla.*' 'Each time they slip, the Christians grab them.' (B19:7)
(19) *ʾáni xyàpa,*' *zílɛle yàwna*' *zdíθəlle lɛka-Səttìye.*' 'While they were bathing, the dove went and threw it by Səttiye.' (A25:72)
(20) *ʾáxni p̭lá̭ṭa gu-bɛ̀θa,*' *bắyəx ṭắyəx xá-məndi ṱ-àxləx,*' *hóla xzáyəllən qáṱu ráqa báθrən xàləllɛni.*' '(When) we go out into the house and search for something to eat, the cat sees us, runs after us and eats us.' (A44:1)

(21) *š-lá-praqa ʾo-pék dìye*ꞌ *ʾo-xáwri hádəx gabbàra,*ꞌ *xázəx wírre gawàye.*ꞌ '(While) my friend, who was a huge man, had not yet finished his measure (of whiskey), we saw him go inside.' (B15:58)

Also in these contexts an infinitive with a deictic copula may be used. The difference again is that the copula makes the clause less tightly knit with the adjacent clause and presents it as having a greater degree of independent duration.

15.5.3. *Cognate Infinitive*

On some occasions a finite verb is combined with an infinitive from the same root and stem. Such infinitives are placed either before or after the verb. The general purpose of this construction is to give prominence to the verbal predicate. It is found in a variety of different contexts.

The verbal predicate is sometimes given prominence in order to set it in contrastive opposition to a situation mentioned in the adjacent context, e.g.

(1) *ʾáwwa béθa xălàla-wewa*ꞌ *bás ʾáyya ṭása dàwa*ꞌ *gnàwa-wawa gnúta.*ꞌ 'That house was pure, but the bowl had been stolen.' (A15:18)
(2) *kusìθa,*ꞌ *har-ʾàmṛa-wewa,*ꞌ *gamríwa gmàra.*ꞌ 'A hat was only wool. They pressed it (they did not knit it).' (B10:50)
(3) *ʾína bróna lèla xíltəlle.*ꞌ *har-nobáltəlle muttéθəlle mattòye.*ꞌ 'But she did not eat the boy. She had just taken him and put him down.' (A19:7)
(4) *b-qéṭa lá-mṣəx doqèxle,*ꞌ *ʾəlla-qṭála qaṭlìwa náše.*ꞌ 'In summer we could not catch them, but rather people would kill them.' (B5:147)

The construction is used when the situation described is deemed by the speaker to be unexpected in the context, e.g.

(5) *ʾap-qṭála băyə́nwa qaṭlə́nwale.*ꞌ 'I even wanted to to kill him.' (A1:17)
(6) *ʾé-ga lánwa brìθa ʾána bráya.*ꞌ 'At that time I was not even born.' (B8:5)
(7) *práxa prìxle?*ꞌ 'Has he flown away?' (B9:6)

In many cases the cognate infinitive is used with a verb denoting an action that has particular importance. This is often reflected also by the repetition of the verb within the section of discourse in question, e.g.

(8) *ʾáyya y-amríla mandòrta,¹ yáˁni mandrále gàre¹ . . . qa-t-lá-ṣala dalòpe.¹ ʾu-b-sòtwa¹ ʾíθena ʾíma t-y-áθe ʾəryàna¹ ʾáy mandòre mándəri.¹* 'They call this a roller, that is it rolls the roof . . . so that leaking water does seep down (into the house). In the winter, when it rains, they would roll it.' (B5:193–194)

(9) *qayámwa bábət xòtna,¹ dawóqwala ʾíðə bábə kʸàlo.¹ yaˁni dwáqa dawóqwa ʾíðə-dìye¹ qá-t ʾó-məndi wèle.¹* 'The father of the groom would rise and shake the hand of the father of the bride. He would shake his hand (to confirm) that this has taken place.' (B5:10)

(10) *tre-šabbáθa qam-dána čèdi.¹ y-ázi maθwàθa,¹ čyàda čedíwa.¹* 'Two weeks beforehand they would invite (people). They would go to the villages and make invitations.' (B5:20)

(11) *har-ṭ-órən làxxa.¹ qṭála har-qaṭlìli.¹ ṭ-árqən b-o-kəndála hár qaṭlìli.¹* 'I shall go in here. They will kill me. If I run down the slope, they will kill me.' (B9:4)

The construction is used as an intensifier to express the extensive or far-reaching nature of the action, e.g.

(12) *ʾána zála har-zílən bìya¹* 'I have absolutely gone with it! (i.e. I am finished!)' (A14:25)

(13) *maṭréwa maṭróye xɛlàna.¹* 'He was riding hard.' (A8:39)

In (14) it is used to express the slow drawing out of the action:

(14) *šqílta réše mattóye mtútəlle l-ằra.¹* 'She took his head and slowly put it on the ground.' (A13:12)

In (15) and (16) the cognate infinitive is used to give prominence to the descriptive content of the action of the verb:

(15) *kút-xa y-amróxxe yáˁni ʾən-íle náša spày,¹ ʾó-yoma basímta ṭ-óya šəmša.¹ xàðexi.¹ ʾó-yoma hàtxa yáˁni¹ y-amróxla màra.¹* 'We would say to each person, if he was a good man, that on that day the sun will shine. We were having fun. It was like that on that day, we would just say such things (but not really mean it).' (B5:150–151)

(16) *ʾáy lèwa zwána zwánəlla.¹* 'They were not really buying it.' (B15:68)

In (17) the construction is used to make a forceful assertion to dispel the
doubt of a question posed by the interlocutor:

(17) *zaqrituwaʾ zqára ʾi-zaqráxwa ʾàxni,*¹ *hè.*¹ 'Did you knit? We indeed used
      to knit, yes.' (B10:46)

In the foregoing examples the cognate infinitive is the same stem as the
finite verb. In (18), by contrast, a stem I infinitive is combined with a stem
II verb. The stem II verb (*m-brz* 'to dry') is transitive whereas the stem I
form (*brz* I 'to become dry') is intransitive. The infinitive, therefore, does
not simply intensify the verb but expresses a telic outcome 'they dry the
rice so that it becomes dry', i.e. 'they dried the rice out':

(18) *bar-hádəx rázza mbárzi bràza.*¹ *masqíwale gàre,*¹ *masqíwa gä́r-t bèθa.*¹
      *mpaθèwale.*¹ *barázwa tàza.*¹ 'After that they dry the rice out. They
      would take it up to the roof, take it up to the roof of the house.
      They spread it out. It became thoroughly dry.' (B5:88)

15.5.4. *Purpose*

On some occasions an infinitive is used to extend the description of an
action in a preceding clause by denoting the purpose of the action rather
than an action that actually takes place during its time interval. This is
particularly common after verbs expressing movement, taking and fetch-
ing, e.g.

(1) *Žíne zílla dwáqəlla prìxla.*¹ 'Zine went to grab it, (but) it flew off.'
     (A25:72)
(2) *y-azíwa baxtáθa yàda.*¹ 'The women would go to weed.' (B5:78)
(3) *kùt-yum*¹ *ṣaléwa gàwṛa*¹ *l-šùqa*¹ *msawòqe.*¹ 'Every day the man would
     go down to the market to do shopping.' (A22:1)
(4) *ʾáp-ʾaw qímɛle šqíləlle tàwra*¹ *sə̀lyɛle*¹ *mzabònəlle.*¹ 'So, he took the ox
     and went down to sell it.' (A22:2)
(5) *mára lá-dri xélət gànux.*¹ *ʾána θíθən mpalṭánnux m-gu-sə̀jən.*¹ *máre lát-θiθa
     ʾána mpalóṭəlli m-gu-sə̀jən.*¹ *θíθət šqála ʾáyya róxi mən-gu-gàni.*¹ 'She said
     "Do not struggle. I have come to bring you out of the prison."
     He said "You have not come to bring me out of the prison. You
     have come to take my spirit from me."' (A26:82)
(6) *ʾáy kút-yom mpalṭáwala măṛòyəlla.*¹ 'She took them out every day to
     pasture them.' (A34:20)

(7) *ʾána šqìlənne¹ ʾáwwa qaṭíya mxáya ʾə́lle dìye.¹* 'I took this stick to strike at it.' (A29:23)

15.5.5. *Complement of Verbs*

The infinitive is used in the complement of verbs of perception, in which it expresses the action of the referent that is perceived. The perceived referent may be placed directly after the verb or is introduced by the presentative particle *ʾina*, e.g.

(1) *xzélux xa-náša θàya.¹* 'You saw a man coming.' (A22:22)

(2) *wírre kəslèy¹ xírre mtúle bàla¹ kút-xa mənnèy¹ réše mṭáya l-ṭùra.¹* 'When he went in to meet them, he looked and noticed that the head of each of them reached the (top of) the mountain.' (A39:5)

(3) *qímele plìṭa¹ xə́zya ʾína béθət Qára Téždin qàḍa.¹* 'He went out and saw that the house of Qara Teždin was burning.' (A26:53)

Object agreement pronouns on the verb, as in (4), indicate that the perceived item is raised into the matrix clause when there is no *ʾina* particle:

(4) *là hummə́nne.¹ ha-t-xazèla¹ bráta θàya.¹* 'He did not believe it, until he saw the girl coming.' (A26:79)

The verb of perception may be omitted with only the presentative particle being used, e.g.

(5) *mátti bála gu-yàma,¹ ʾìna¹ ʾa-sústət yamàθa¹ nabòləlla¹ Čəlkắze.¹* 'They looked at the sea and saw the mare of the seas taking away Čəlkăze.' (A12:34)

The infinitive is also used as the complement of various other verbs including those having the sense of 'beginning', 'learning', 'being busy' and the irregular verb *kyaza* 'to try', e.g.

(6) *šúryela mṭawóle b-šə́trənjàne.¹* 'They started to play chess.' (A26:63)

(7) *šurèla¹ jnàna¹ ʾu-bxàya¹ ʾu-mṣawóre ṭla-xóna-w Bakùrko.¹* 'She began to lament, weep and curse her brother and Bakurko.' (A26:83)

(8) *šuréle là-draya bála l-sə́trənjàne.¹ šuréle gašòqe¹ b-Ẑìne.¹* 'He began not to pay attention to the chess. He began to look at Zine.' (A26:66)

(9)　*ʾu-táwra píšle mangóle ʾáxxa l-tàmma.*ˈ 'The ox began to limp back and forth.' (A22:3)

(10)　*píštela mtanóye ða-qə̀ṣṣət*ˈ *ṭla-qàṭu.*ˈ 'She started to tell a story to the cat.' (A14:2)

(11)　*qímla zráʾa xabùše.*ˈ 'They began to cultivate apples.' (B5:75)

(12)　*ʾáy hár-lipla dmàxaˈ ʾu-xàla.*ˈ 'She learnt only how to sleep and to eat.' (A21:1)

(13)　*m-táma hòdəxˈ kúlla ʾan-ʾárba yàrxe,*ˈ *xámša yàrxe,*ˈ *y-áwɛ náše blíge mjămòye,*ˈ *mjămóye qa-sə̀twa.*ˈ 'From this time onwards, throughout four or five months, people are busy gathering, gathering for winter.' (B5:107)

(14)　*kízle qrày.*ˈ 'He tried calling.' (A48:5)

(15)　*kízle mxàyaˈ goyáθət sùsa,*ˈ *súsa la-jwìjle.*ˈ 'He tried to strike the sides of the horse, but the horse did not move.' (A28:33)

(16)　*kazíwa práməlla har-palṭìwa.*ˈ 'They tried to cut them down, but they kept growing up.' (A38:15)

Past forms of the verb *šry* II 'to begin' may also be followed by a finite verb rather than an infinitive, e.g.

(17)　*šuréle zmírre b-súsa smòqa.*ˈ 'He started singing to a brown horse.' (A25:11)

(18)　*šuréla xrìtla.*ˈ 'She started to gouge it out.' (A19:6)

(19)　*šúryela xílela m-ġðàðe.*ˈ 'They began to eat together.' (A21:21)

(20)　*šuréle ta-t-ʾàxəl.*ˈ 'He began to eat' (A21:12)

15.5.6. *Complement of a Noun*

On some occasions the infinitive is the complement of a noun, e.g.

(1)　*ʾíθwa rába ʾurxáθa mṭawòle.*ˈ 'There were many ways to play.' (B15:5)

15.5.7. *Complement of an Adjective*

(1)　*ʾáti mùdit har-blíga ṭlába m-alàhaˈ ta-t-yawə̀llux.*ˈ 'Why are always busy asking God to give (things) to you.' (A3:3)

(2)　*léla senáyi xzàyəlle.*ˈ 'It is not easy to see him.'

(3)　*zámətila wàðəlle.*ˈ 'It is difficult to do it.'

15.5.8. *Syntactic Position of a Nominal*

The infinitive is attested in various syntactic positions that are normally occupied by nominals. These include:

(i) *The Subject of a Clause*

   (1) *qráya zàmət-ila.*ˈ 'Reading is difficult.'
   (2) *mdaróye modìla?*ˈ 'What is winnowing?' (B5:97)
   (3) *ʾáθela myáθa ʾup-ʾày.*ˈ 'Death comes upon also her.' (A26:89)

(ii) *The Complement of a Naming Expression, e.g*

   (1) *ʾáwwa y-amrə́xxe wáða herìke.*ˈ 'We call this "making soft mud beds."' (B5:76)
   (2) *y-amrə́xxe mxáya beˀe.*ˈ *yáʿni šmáṭa beˀe xa-d-o-xèna,*ˈ *twàra.*ˈ 'We call this "striking eggs," that is knocking eggs together and breaking them.' (B5:58)

(iii) *The Complement of a Preposition*

   (1) *pláxa biš-spáyila mən-dmàxa.*ˈ 'Working is better than sleeping.'
   (2) *xa-béna xə́zya ʾə́θyɛle xa-xùwwe*ˈ *ʾax-pràxa.*ˈ 'Then he saw a snake come, as if flying.' (A14:31)
   (3) *máme díye t-wéwa max-qṭàləlle.*ˈ 'His uncle who had almost killed him.' (A25:70)
   (4) *ʾána mjămóye qèse,*ˈ *déwe blíge b-xmáre xàla.*ˈ 'While I was collecting wood, wolves were busy eating the asses.' (A23:35)

(iv) *The Complement of a Nominal in Annexation*

   (1) *jawə́ttət práma qèse*ˈ 'a chopper for cutting wood' (A26:91)

(v) *The Complement of the Existential Particle*

   (1) *ʾína gu-d-ɛ-dàna*ˈ *har-ʾíθ rqàða-w*ˈ *zmàra-w*ˈ *mɛθóye štèθa,*ˈ *ʾàraq-u*ˈ *xumlàna.*ˈ 'At that time there is constantly dancing, singing, serving of drinks, arak, and jollity.' (B5:71)

Although the infinitive in these constructions is in a syntactic slot appro-
priate for a nominal, the infinitive is still treated like a verb with regard
to its own internal complemetation. This is seen in (ii1), (ii2) and (iv1),
where the objects of the infinitives are juxtaposed (*wáða hɛrìke* 'making
soft mud beds', *mxáya bèˀe* 'striking eggs', *šmáṭa bèˀe* 'knocking eggs', *práma
qèse* 'cutting wood') rather than the infinitive being connected to it by a
nominal annexation with the particle *D*. In (iii4), furthermore, the object
is fronted before the infinitive (*b-xmáre xàla*). Note also that when the infini-
tive functions as the subject of a clause, it is often construed as feminine
in gender (i1–2).

15.6. The Verbal Noun

The verbal noun, which is formed by adding the feminine ending to the
infinitive, in principle denotes a single occurrence of an activity (§10.5.2.2.)
and so is inherently perfective in aspect. It may also be used to refer to
an iterative activity by denoting a single representative occurrence of this
iterated situation.

15.6.1. *The Nominal Nature of the Verbal Noun*

The verbal noun is treated syntactically in most respects like other nouns.
It may be used in a clause in positions that are appropriate for nouns, such
as subject position (1–2) or the complement of a preposition (3–5):

(1) *dánət plíṭla qyàmta.*¹ *šahárta qa-t-qyàmta pálṭa.*¹ 'The time when the
    resurrection has come. They keep vigil until the resurrection comes
    out.' (B5:54)

(2) *bár parqáwa qyàmta.*¹ 'After the resurrection (ceremony) had finished…'
    (B5:56)

(3) *ˀu-ˀáyya gu-dyàṛta*¹ *mòdi wídla?*¹ 'What did she do on her return?'
    (A19:4)

(4) *ˀən-bắyə́xwa tùma,*¹ *ṭla-mbašàlta,*¹ *kèfənile.*¹ 'If we wanted (to use) garlic
    for cooking, it was up to us.' (B10:24)

(5) *mhàyərrì*¹ *bəd-taxmàntux.*¹ 'Help me with your thought (on this matter).'
    (A21:2)

A nominal denoting the subject or object participant of the activity
expressed by the verbal noun must be combined with the verbal noun

by nominal annexation. This differs from infinitives, which are treated as verbs in this respect and have their participants juxtaposed. Examples:

(i) *Subject*

    (1) *qyámtət màran*ˈ 'the resurrection of our Lord' (B5:55)

    (2) *gu-práqtət ʾaṣə̀rta,*ˈ *bar-prìqla,*ˈ *mɛθɛ́wa juwàla.*ˈ 'At the end of the evening, after they finished, they would bring a sack.' (B5:86)

    (3) *b-zòr-maḷe*ˈ *ṭla-mapláxtət bèθa.*ˈ 'It is scarcely enough for the household to use.' (B5:215)

(ii) *Object*

    (1) *xyáptət xə̀tna*ˈ 'the washing of the groom' (B15:74)

    (2) *zrétət rə̀zza*ˈ 'the cultivating of rice' (B5:76)

    (3) *paláṭṭət ʾằraq*ˈ 'the production of arak' (B5:12)

    (4) *mtaráṣtət xə́lya* 'the preparation of milk' (B5:173)

    (5) *ʾu-qaðɔ́xwa yóma qamáyət ʾèða,*ˈ *baráxtət ʾéða xa-d-o-xèna.*ˈ 'We would spend the first day of the festival offering festival blessings to one another.' (B15:8)

15.6.2. *Cognate Verbal Nouns*

Verbal nouns are used with their cognate verbs in various contexts. It is found in anaphoric expressions such as those in (1) and (2), which express a perfective and iterative activity respectively:

    (1) *ʾu-píšele gu-d-ɛ-pyàšta*ˈ *há-ṭ-ila θíθa ʾámte dìye.*ˈ 'He remained in that situation until his aunt came.' (A23:7)

    (2) *ʾu-ʾan-baxtàθa*ˈ *kapšìwale,*ˈ *napšíwale gu-d-a-npàṣta*ˈ *ʾu-mattíwale l-qóma báθər xàṣey.*ˈ 'The women would gather it and shake it with the shaking (just mentioned) and put it into a pile behind their back.' (B5:85)

Similar anaphoric constructions are used in which the finite verb occurs in a preceding clause, e.g.

    (3) *mára qú ṣli-xzì!*ˈ *…gu-d-ɛ́ ṣlɛθèy*ˈ *qáṭu wìrtɛla.*ˈ 'She said "Go down and see!" While they were coming down (like this), a cat came in.' (A4:52–53)

A verbal noun is used with a cognate finite verb to express the intensity of a single perfective action, e.g.

(4) *θéle tálga xa-θèθa.*¹ 'Snow came with a (great) coming' (i.e. it snowed heavily).' (A25:41)

The use of a cognate verbal noun can be used to give additional morphological coding to a perfective event to mark a boundary in the discourse. This is the case with (5), in which the clause in question marks a an episodic boundary:

(5) *qlábta díya qlìbla*¹ *ʾu-kúlle bèrya*¹ *y-amráxxe xa-kerábso* 'She returned her return (= When she returned) and it had all grown into (the plant) we call *kerabso*.' (A34:17)

15.6.3. *The Verbal Noun Combined with the Verb 'to be'*

On some occasions the verbal noun is combined with the verb 'to be' following the model of compound verbal forms with the infinitive. This construction expresses an iterative action, by presenting one representative occurrence of the action. The compound infinitive construction can express the same iterative sense (§15.4.2.4.). Examples from the text corpus:

(1) *hár mkapáštət kisyáθət dàwela ṭóto.*¹ 'The old woman is all the time collecting bags of gold.' (A4:22)
(2) *rqàḍtɛla-w*¹ *xálta-w štèθɛla.*¹ 'They are dancing, eating and drinking.' (A14:46)
(3) *warwàrtɛla-w*¹ 'It (the bear) roars.' (A27:29)
(4) *maplàštɛwəlley*¹ *yśn mattáxwaley gu-ṣàwle.*¹ 'They would knock them together or we would put them in shoes.' (B15:5)
(5) *ʾən-ṭ-áwe jwàjta,*¹ *b-šàxən.*¹ 'If he moves (on one occasion), he warms up.' (B11:16)

Note that the verbal noun in (4) *maplàštɛwəlley* expresses the pronominal object with an *ʾəll-* phrase.

In (6) a verbal noun construction is juxtaposed with an infinitive construction. The former can be interpreted as expressing the iterated single events of the animal's roaring and the latter as denoting a continuous activity of singing:

(6) *ʾay-wàðtɛla*ˈ *nǎra-nǎ̃ra dìya*ˈ *ʾu-ʾáw zmàrɛle bíya.*ˈ 'She is giving off her roar and he is singing along with her.' (A27:14)

In (7), where the subject in the English translation is non-volitional, the copula takes the verbal noun as its grammatical subject:

(7) *qarqárte dìyela*ˈ 'He made a squeaking noise (literally: there is his squeaking).' (A30:9)

In (8) the form *jnanyaθa* can be interpreted as the plural of the verbal noun *jnanta* and, therefore, expresses a plurality of individual actions:

(8) *qímela ʾə̀θye.*ˈ *ʾɛ́-bena ʾáxxa kúlla jnanyà̃θɛla.*ˈ *ʾɛ́-ga zmárɛla b-tábut dìye.*ˈ 'They came and there they all lamented and sang (dirges) over his coffin.' (A26:83)

15.7. The Imperative Form

In most cases the imperative form is used perfectively to command the performance of a single delimited action with a clear start and endpoint, e.g.

(1) *prúmu rèše!*ˈˈ 'Cut off his head!' (A24:31)
(2) *hallúle ʾálpa dàwe!*ˈˈ 'Give him a thousand gold pieces!' (A1:14)
(3) *šqúlla yalə̀xθa!*ˈˈ 'Take the scarf!' (A4:18)
(4) *diya-méθu júlli malušùla!*ˈˈ 'Now bring my clothes and put them on (me)!' (A4:20)
(5) *wúð ða-spayúθa mə̀nni!*ˈˈ 'Do me a favour!' (A7:17)
(6) *háyyo ṣlí Kǎrî́m ʾáti gu-d-áwwa balùʿa.*ˈ 'Come Karim, go down into this conduit!' (A14:16)

Prohibitions may be expressed by negating an imperative form by the negative particle *la*. If this particle is combined with the verb in a stress group it typically takes the stress, e.g.

(7) *lá-wuð qàla!*ˈˈ 'Do not make a noise!' (A30:44)
(8) *lá-mur hàtxa!*ˈˈ 'Do not say that!' (A26:52)
(9) *bróni là qə̀tlúle!*ˈˈ 'Do not kill my son!' (A33:6)
(10) *là maštóla míya*ˈ 'Do not give them water to drink!' (A25:9)

On some occasions the imperative is used to command or prohibit a less clearly delimited action. In (11) and (12), for example, the imperatives 'work!' and 'search!' respectively clearly command the inception of the action but do not necessarily imply an endpoint. In (13) the actions commanded by the imperatives are most easily interpreted as iterative. The speaker is referring to the annual custom of Kurds to bring sheep into the village during transhumance and intends his command to apply to all future years.

(11) *xuš-p̣lùxən!*ˡ *ta-mú-t batíla tíwa gu-bὲθa?*ˡ 'Go and work! Why are you sitting idly in the house?' (A39:1)

(12) *ṭó-lɛxu xa-šúla ta-t-xɑ̌yitu bìye!*ˡ 'Search for a job for yourselves by which you may make a living!' (A30:1)

(13) *lá-masqu l-gárət ˀùmra!*ˡ *m-gu-gárət ˀúmra hóla náblula tămáha rὲḥqa!*ˡ *ṭla-mótu mɛθóyəlla gárət ˀùmra?*ˡ 'Don't take them onto the roof. Take them far away from the roof of the church. Why do you bring them on the roof of the church?' (B18:7)

In (14) and (15) the imperatives are negated by the particle *bassa* 'enough!' and command the end of an activity that is already in progress without any implied starting point:

(14) *bássa bxὲgən*ˡ *bássa wuð-tàzi.*ˡ 'Do not weep any more! Do not mourn any more!' (A26:88)

(15) *bássa ští ˀu-rwì!*ˡ 'Don't drink any more and get any more drunk!'

On numerous occasions the imperative is preceded by the particle of immediacy *də-/de-*. Most attested examples are positive commands, e.g.

(16) *də-šqúl ˀanna-zùze!*ˡ 'Take these coins!' (A1:27)

(17) *də-šùqla!*ˡ 'Leave it!' (A5:7)

(18) *de-mùrri!*ˡ 'Tell me!' (A4:26)

(19) *de-wúr gu-d-áwwa gùrba!*ˡ 'Go into this torso!' (A14:67)

The particle may be placed before an adverb of immediate time reference, such as 'today' in (20):

(20) *de-ˀə̀dyo,*ˡ *qu-p̣égən kàde!*ˡ 'Today, get up and bake *kade* cakes!' (A30:41)

In (21) the particle is placed before a 2nd person pronoun:

(21) *də-ʾáti xùš!*ꞈ 'You go!' (A39:1)

As has been discussed in §15.1.1.5., also the 2nd person of the *qaṭəl* form can be used deontically to express commands or prohibitions. This may be used perfectively to express single delimited actions, e.g.

(22) *súsux bắye t-kàle.*ꞈ *là-šoqət t-kále.*ꞈ *máxət ʾə́lle díye ta-t-ʾásəq pàyədle ʾo-ṭúra.*ꞈ 'Your horse will want to stop. Do not let him stop. Strike him so that he will go up and cross over that mountain.' (A24:11)

(23) *xazə́tla tərtè bnáθa*ꞈ *ṯ̣-áθi mə́θi qàhwa.*ꞈ *là-šaqlətle qáhwa mə́nna.*ꞈ *maxə́tle sə́pux ʾəl-qðalèy*ꞈ *pɛrmə̀tle rešéy.*ꞈ 'You will see two girls, who will come and bring coffee. Do not accept the coffee from them. You should strike your sword into their neck and cut off their head.' (A24:13)

(24) *ʾázət táwrux pɛrmə̀tle.*ꞈ 'You should go and slaughter your ox.' (A7:2)

It may also be used imperfectively to express general commands or prohibitions that are not delimited to a single action, e.g.

(25) *hàtxa ʾoðéti b-náše!*ꞈ 'This is what you should do to people!' (A22:47)

(26) *là-qablət*ꞈ *là bəṛ-náša ṯ̣-áwər gáwa*ꞈ *ʾu-là hɛ́wən.*ꞈ 'Don't allow any person or animal to enter it.' (A23:18)

(27) *là maṣíθət*ꞈ *ʾàni*ꞈ *saṭanyàθela*ꞈ 'Don't listen (to such things), they are little demons.' (A26:11)

The distinction between the imperative form and the deontic *qaṭəl* form, therefore, is not primarily one of aspect, although this may have some bearing on the choice between the two. The main factor is rather the communicative profile of the command. In principle a speaker uses the imperative when he wishes to give the command a high degree of salience. The deontic *qaṭəl* form is used when it has a lesser degree of salience. Various features contribute to this salience. One feature is immediacy. All other things being equal, an imperative expresses the will of the speaker for an action to be performed closer to the present moment than the *qaṭəl* form. Consider, for example, the pair of constructions (28) and (29), both of which are perfective in aspect. In (28) the speaker invites the addressee

to come immediately and join him swimming. In (29) the request relates
to an action of coming at a point further in the future:

(28) *ʾána hon-sxáya gàwa.*ˈ *bắyət t̠-áθyət sàxyət?*ˈ *də-háyyo sxà!*ˈ 'I am swim-
    ming in it. Do you want to swim? Come and swim!' (A25:61)

(29) *yómət t̠l̠àθa,*ˈ *ʾáθət kəslèni.*ˈ 'In three days time come to us.' (A22:17)

It is relevant to note that the particle of immediacy *də-/de-*, which is
commonly used with imperatives but only sporadically with deontic *qaṭəl*,
is likely to be related etymologically to the adverbial *diya* 'now'. In some
NENA dialects it is used in progressive contructions that express actions
that are taking place at the present moment (e.g. C. Ankawa *də-k-šatən* 'I
am drinking').

    As we have seen in (11) and (12), the action commanded by an impera-
tive may extend indefinitely into the future. In (14) the action has no
definite starting point. The relevant feature in all these cases is that the
speaker commands the action to begin or end immediately.

    The use of the imperative to express the command of iterative actions
cannot be motivated by temporal immediacy. The salience of the command
arises from its high degree of force, which is greater than in corresponding
iterative deontic expressions with *qaṭəl* forms such as (30):

(30) *kút-yom pálṭət ʾu-xàðrət,*ˈ *ʾáṣərta ʾáθət bὲθa.*ˈ 'Every day go out and wan-
    der about and then in the evening come back home.' (A14:62)

Another feature that contributes to salience appears to be the positiveness
of the command. All other things being equal, there is a greater tendency
to use the deontic *qaṭəl* form with a negative command than with a posi-
tive one, as reflected in (31) and (32), in which positive commands and
prohibitions with perfective aspect referring to immediate actions are
used side by side:

(31) *mə́ra hàyyo,*ˈ *hàyyo!*ˈ *madam-t̠-íwət ʾàti,*ˈ *hàyyo!*ˈ *là-ʾazət.*ˈ 'Come, come.
    Since it is you, come, don't go!' (A24:36)

(32) *ʾáti là pálxət.*ˈ *ʾáti tù.*ˈ *ʾàna pálxən.*ˈ 'Don't you work. You sit down. I
    shall work.' (A21:23)

Indeed, in some NENA dialects, such as C. Qaraqosh, negative com-
mands can only be expressed by negating the *qaṭəl* form (cf. Khan 2002:
351). In C. Barwar, as in many other NENA dialects, negation has been

extended to imperative forms, but the distribution of negated commands is still less than that of positive commands on account of the inherently lower degree of salience of a negated command. The fact that the particle *də-/de-*, which gives added salience to a command, is largely restricted to positive commands may also be a reflection of this inherently lower salience of negated commands.

All the uses of the imperative described above can be reconciled with the claim that the form is perfective. As already remarked, cases such as (11), (12) and (14) can be regarded as having an ingressive or terminative sense, which are features exhibited by other perfective forms. The occurrence of the imperative in iterative expressions can be explained as being the use of a perfective form appropriate to command an individual occurrence of the iterated action to command, by implication, the iterated action as a whole. It is relevant to note that in (13) the speaker uses in an adjacent clause the compound infinitive construction to refer to an iterative action (*ṭla-mótu mɛθóyəlla gárət ʾùmra?*[1] 'Why do you bring them on the roof of the church?'). As we have seen (§15.4.2.4.), the use of the infinitive construction to express an iterative action is an extension of its use to express a perfective narrative present. It can be said that the basic perfectivity of the form, which gives the commanded action delimited boundaries, results in its salience and it is this perfectivity that gives the sense of greater force in the command. The deontic *qaṭəl* form, on the other hand, may express either perfective or imperfective aspect. We may summarize the features contributing to the salience in imperative forms in the scales below, in which the symbol > should be read as 'more salient than'. All other things being equal, a command with the features on the lefthand side of the scales would be more likely to be expressed by an imperative than those with the features on the righthand side:

Perfective	>	Imperfective
Positive	>	Negative
Immediate	>	Non-immediate

The imperative may be extended by a variety of suffixes (§8.6.5.). Informants feel that these add additional force to the command like the prefixed particle *də-/de-*. In the text corpus they are attested only with positive commands, which is likely to be a reflection of the inherently lower salience of the negative commands. Another factor that determines the distribution of the imperative forms with added suffixes is their position within a section of discourse. When there are two or more imperatives in a sequence,

forms with added suffixes tend to be placed at the end of the sequence. The heavy morphological coding of the forms is used in such contexts to mark a final boundary of a discourse unit. The sequence may consist of two or more different imperatives in a closely knit unit as in (33–35) or the repetition of the same imperative as in (36) and (37), e.g.

(33) *dúṛu sógena kəs-babàxu.*ˈ 'Return, go to your father.' (A14:85)

(34) *xuš-plùxən!*ˈ 'Go and work!' (A39:1)

(35) *qu-pég̣ən kàde*ˈ 'Get up and bake *kade* cakes.' (A30:41)

(36) *sí-mur ta-pə́llən wazə̀r*ˈ *múrgena málka θèle.*ˈ 'Go and say to the minister so-and-so, say the king has come back.' (A4:33)

(37) *xùl!*ˈ *dànɛla.*ˈ *qìrra.*ˈ *xùlena!*ˈ 'Eat! It is time. It has got cold. Eat!' (B5:34)

In a few cases the imperative is used in narrative as a substitute for a perfective narrative verbal form. These are addressed to the person performing the action and are typically used when there is a transition between spatial locations that involves a verb of movement. The clause containing the imperative may open with a 3rd person subject pronoun as in (38) and (39):

(38) *qímtɛla zìlta,*ˈ *muθéθəlla quṣárta dìya.*ˈ *ʾa-zórta muttáθəlla gu-d-é quṣártət šwàwe*ˈ *ʾu-nubàltəlla.*ˈ *hadìya,*ˈ *ʾáw* **qu-šqúlla** *quṣàrta-w*ˈ *sí be-šwàwux.*ˈ *šláma-llɛxu šwàwe.*ˈ 'She went and brought her cooking pot. She put the small one in the cooking pot of the neighbours and took it (to her husband). Now, he—get up and take the cooking pot and go to the house of your neighbour! "Greetings to you neighbours."' (A5:4)

(39) *qáyəm yawə́lle ʾálpa dáwe xène.*ˈ *ʾáw xá-reša m-táma* **qú-si** *l-bɛ̀θa.*ˈ *ʾáp ʾan-tre-ʾálpe dáwe xéne* **mə̀θila**.ˈ *ʾu-***háyyo** *šláma-llux xóni xùwwe!*ˈ 'He gives him another thousand gold pieces. He—directly from there get up and go home. Bring back also those two thousand pieces of gold and come back "Greetings my brother snake! Peace and blessings!"' (A1:19–20)

Example (40) illustrates the use of an imperative for another type of narrative strategy. The negated imperative of the verb to say *lá-mur* 'Do not say!', which is presumably addressed to the hearer of the narrative, has the function of drawing special attention to what follows.

(40) *ʾu-lá-mur qáyəθ b-o-ṭ-íle də̀pne.*ˈ 'Guess what, (literally: Don't say) he knocked into the one next to him.' (A22:34)

The imperatives of the verbs *qym* 'to get up' and *ʾtw* 'to sit down' are often combined with the resultative participle: *qu-qíma!* 'Get up (ms.)!', *qu-qímta!* (fs.), *tu-tíwa!* 'Sit down (ms.)!', *tu-tíwta!* 'Sit down (fs.)!' In the plural, the plural inflection is used only on the participle: *qu-qíme!* 'Get up (pl.)!'; *tu-tíwe!* 'Sit down (pl.)'. In some cases in the plural the imperative element *qu-* or *tu-* is dispensed with altogether and the plural participle is used alone with imperative function, e.g.

(41) *páqðu tìwe.*ˈ 'Please, sit down.' (A15:8)
(42) *mára de-tìwe.*ˈ 'She said "Sit down."' (A21:28)
(43) *qíme so-mèθole ʾəlli-díyi.*ˈ 'Get up and go and bring him to me.' (A7:7)

15.8. The Verb *pyš*

This verb is used either with the sense of continuity ('to remain') or with an ingressive sense ('to become').

15.8.1. *Continuity*

(i) When it has the sense of 'remaining', it can be used absolutely, without any complement except for an optional adverbial, e.g.

(1) *péši xátna-w kʸálo tàma*ˈ *hal-xušéba.*ˈ 'The groom and bride stay there until Sunday.' (B5:51)
(2) *ʾáwwa y-asə́qwa mən-léle hal-ʾas̀ə̀rta*ˈ *ʾu-ʾə́rwe pešíwa gu-ṭùra.*ˈ 'He (the shepherd) would go up in the morning (and work) until evening. The small cattle would remain in the mountains.' (B5:158)
(3) *ʾu-napṣìwale,*ˈ *qá-t ʾan-rə́zza la-páyəš gàwe.*ˈ 'They shook it so that the rice did not remain in it.' (B5:84)
(4) *bắya pèša,*ˈ *péša ʾáy ʾàxxa,*ˈ *b-šópət brònən.*ˈ 'If she wants to stay, let her stay here, in place of our son.' (A4:39)

A perfective past form in narrative may express a situation enduring for a delimited period of time, e.g.

(5) *píšla ṭla-yàrxe.*ˈ 'They stayed three months.' (A14:84)

(6) *píšɛle gu-ṭúra xá-yoma yóme trè.*ˈ 'He remained in the mountains one or two days.' (A4:2)

In narrative the verb is sometimes used with the anaphoric adverbial *hadəx* 'like this, thus' to express a passage of time and a transition between episodes, e.g.

(7) *šə́ryela gu-d-ɛ́ ʾotél ʾo-yòma-wˈ píšela hàdəx.ˈ ʾaṣə́rta θìθɛlaˈ bǎ̀yi ṭ-áxli xa-ràmša.*ˈ 'They put up in the hotel that day and remained like that. The evening came and they wanted to eat dinner.' (A2:2)

(8) *ʾu-xílela ʾáni məndi-wˈ susăwaθéy də́ryəlla məndi ʾixàla.ˈ píšela hàdəx.ˈ ʾàmər…ˈ xuláma ʾámər ṭla-mìra.*ˈ 'They ate something and gave their horses some food. They remained like that. The servant said to the master…' (A26:17–18)

The verb in the *qṭille* form may express the onset of a situation with no definite endpoint, which is sequential to a preceding situation, e.g.

(9) *ðá-kθɛθa xilàla,ˈ ðá pìšla.*ˈ 'He ate one chicken and one remained.' (A2:3)

(10) *hár šə́mme píšle Čùxo.*ˈ 'His name still remained Čuxo (after the preceding event).' (A7:4)

When the subject is human, the verb can have the sense of 'remaining alive', e.g.

(11) *ʾu-xaráye ṭlíba díya qəm-šaqlə̀xle.ˈ ʾáy pìšla.*ˈ 'In the end we took her betrothed but she remained alive.' (A4:45)

(12) *káwa xoš-ṭ-awéwa pìša.*ˈ 'He should have remained alive.' (A7:20)

(ii) Finite inflections of *pyš* can be combined with an infinitive to express the uninterrupted continuity of an event or situation over a period of time, e.g.

(1) *ʾo-bróna ṭ-íle zíla ða-bážər xèta,ˈ yáʿni ða-mðìta,ˈ ða-màθa,ˈ píšle rába mparòje,ˈ maṣyóθe l-bɛ́θət bábe dìye.*ˈ 'The son who had gone to another town, that is a town, a village, remained watching intently, listening (for news) about his father's family.' (A18:12)

(2) *ʾu-píštɛla bxàya.*ˈ *píštɛla bxàya,*ˈ *ʾu-bxàya,*ˈ *ʾu-bxàya,*ˈ *xà-yoma-w*ˈ *trè-u*ˈ *xa-yàrxa-w*ˈ 'She continued weeping. She continued weeping and weeping and weeping, one day, two, one month.' (A4:44)

(3) *ʾo-píštɛla ʾan-dəbbòre*ˈ *har-zála-w θàya.*ˈ 'The bees continued to go back and forth.' (A20:8)

(4) *píšla béna gráša kúllət yóma mən-d-o-dùša*ˈ *hál ʾaṣə̀rta.*ˈ 'All day they continued to draw out that honey, until evening.' (A14:15)

In (5) the infinitive coming after the verb *pyš* is negated by the negative copula:

(5) *píšla bábe-u yə́mme-u xonăwáθa lèla hămóne.*ˈ 'His father and mother and her brothers continued not to believe it.' (A18:11)

It may also be combined with a resultative participle of a stative verb to express a similar sense, e.g.

(6) *ʾu-xílela ʾixàla*ˈ *ʾu-píše dmìxe.*ˈ 'They ate food and remained there asleep (i.e. they stayed the night there).' (A15:8)

15.8.2. *Ingressive*

(i) When it has the sense of 'to become', it is combined with a complement expressing an identity or property that is acquired by the subject, e.g.

(1) *m-bár ṭaxnìle,*ˈ *páyəš qàmxa*ˈ *masqíle bèθa.*ˈ 'After they grind it and it becomes flour, they take it up to the house.' (B5:99)

(2) *maštèwala*ˈ *qá-t xáčča péšawa rakìxta.*ˈ 'They would irrigate it so that it would become rather soft.' (B5:76)

(3) *ʾána píšli bàxtux.*ˈ 'I have become your wife.' (A25:65)

(4) *málla píšla quṣárta ta-màlla.*ˈ 'As for the mullah, the pot became the mullah's'. (A5:10)

(5) *Bárwər píštɛla kúlla m-Žáwa l-Xawóra t-là-maθwaθa.*ˈ 'All of Barwar, from the Zab to the Khabur became (a land) without villages.' (B1:10)

When an ingressive *pyš* is combined with a resultative participle from a transitive verb, the construction expresses a passive action. This will be discussed in greater detail in §15.9.3. below, e.g.

(6) *b-έ-šeta píšla Dúre muqyàmta-w* ' 'In that year Dure was evacuated.'
(B1:8)

(ii) The verb *pyš* with an ingressive function can be combined with an infinitive and have the sense of beginning the action in question, e.g.

(1) *ʾu-táwra píšle mangóle ʾáxxa l-tàmma.* ' 'The ox began to limp back and forth.' (A22:3)

(2) *píštela mtanóye ða-qə̀ṣṣət* ' *ṭla-qàṭu.* ' 'She started telling a story to the cat'. (A14:2)

(3) *píšela mnáyəlla l-xà-xa.* ' 'They began to count them, one by one.' (A6:3)

(4) *ʾáyya məškánta píštela mxàya* ' *dráya qə́ṭma gu-réša dìya.* ' 'The poor woman began to beat (herself) and put ash on her head.' (A14:22)

(iii) Ingressive *pyš* is occasionally combined with a perfective verbal form to convey the sense that the event in question is the final outcome of a chain of events. This is the case in (1), where it is combined with a perfective future *qaṭəl* form:

(1) *bas-tàma* ' *qə́ṣṣət dìyəx* ' *ʾu-t-xònəx* ' *péša màṭya* ' *l-xarayúθa dìya.* ' 'There your story and that of your brother will (finally) reach its end.' (A8:88)

A similar function is sometimes performed by a construction in which *pyš* is combined with the resultative participle of a telic intransitive verb, e.g.

(2) *tíwela tàma* ' *ʾu-xílela ʾixàla* ' *ʾu-píše dmìxe.* ' 'They sat there, ate food, then (in the end) went to sleep.' (A15:8)

(iv) Ingressive *pyš* is sometimes used in narrative before expressions of time to mark the beginning of a new episodic section. It may be used to denote the onset of a point in time, e.g.

(1) *píšle yòma* ' *hár wewa-xðàra.* ' 'Day came and he was still searching about.' (A14:24)

(2) *píštela ʾaṣ̀rta.* ' *gu-sáʾət ʾə́šta ʾaṣ́rta šáwwa gu-gnέθət yòma,* ' *hóle θéle Čùxo,* ' *xa-bə́rra ʾə́rwe bàθre.* ' 'The evening came. At six or seven o'clock in the evening, at dusk, Čuxo came, with a flock of sheep following him.' (A7:21)

(3) *píšta mbàdla.* ' *mbádla qìmɛle.* ' 'Morning came. In the morning he got up.' (A14:66)

In (1)–(3) above the expression of time can be construed as the grammatical subject of the verb. The expression of time may also be a prepositional phrase, as in (4). Here the grammatical subject of the verb, which is 3fs., must be impersonal:

(4) *píšla b-lèle,*⸢ *sìqɛle*⸢ *l-gàre.*⸢ 'At night he went up onto the roof.' (A25:52)

The verb *pyš* may also be used to denote the passage of an interval of time. In such contexts it has 3ms or 3fs inflection. The time expression appears not to be construed as the grammatical subject, judging by constructions such as (7), in which a 3ms. verb is followed by a feminine nominal phrase, and (8), where a 3fs. verb is followed by a masculine nominal phrase:

(5) *píšele xà-yarxa*⸢ *málka xzéle xa-xə́lma xèna.*⸢ 'A month later the king had another dream.' (A1:9)
(6) *píšle šǝnne rábe ʾárbe xámmǝš ʾə́ššǝt šǝnne la-zìlle.*⸢ 'For many years, four, five six years, he did not go there.' (A18:12)
(7) *píšele ða-šábθa xèta,*⸢ *ʾámǝr ṭla-báxta...* 'A week later, he said to his wife...' (A5:8)
(8) *pɛšáwa xa-yóma trè,*⸢ *hál barǝ̀zwa.*⸢ 'One or two days would go by until it became dry.' (B5:167)

15.9. The Expression of the Passive

Various constructions are used to express the passive of a transitive verb.

15.9.1. qṭil

The dialect exhibits a vestigial use of the past base stem *qṭil* to express a passive action. This is only used sporadically and is restricted to the 3rd person. As is the case with the *qṭille* form, the *qṭil* form expresses a specific event occurring in the past at a particular point in time, e.g.

(1) *mára prúmu rèše!*⸢ *ʾáwwa prìm réše.*⸢ 'She said "Cut off his head!" He—his head was cut off.' (A24:31)
(2) *báθǝr t-gníw Mar-Qayòma,*⸢ *qǝm-dawríle tằra.*⸢ 'After (the church of) St. Qayoma was plundered, they closed the door.' (D2:66)

(3) *móθi júlla dìya.*ˈ 'Her clothes were brought.' (A4:20)

(4) *brátux mùθya.*ˈ 'Your daughter has been brought back.' (A29:42)

(5) *ʾáy wela-ʾá-bráta xaréθət mṭúmra gu-Dùre.*ˈ 'That was the last girl who was buried in Dure.' (B1:12)

(6) *ʾína ʾan-tre-xéne píšela hál-danət ṱ-íxwa ʾáxni tàma,*ˈ *hál-šḗt ʾálpa ʾəččá-mma-w šáwwi tmànya,*ˈ *ʾíman t-moqìma Dúre.*ˈ 'But the other two remained until the time that we were there, until the year 1978, when Dure was evacuated.' (B1:5)

There are other signs of the fossilization of this construction in addition to the extreme infrequency of its use. The 3ms. form *qṭil* can be used also with 3fs. and 3pl. nominal subjects:

gawṛa qṭil	'The man was killed'
baxta qṭila ~ qṭil	'The woman was killed'
naše qṭili ~ qṭil	'The people were killed'

Example from the text corpus:

(7) *prim-ʾ ə̀rwe.*ˈ 'Sheep were slaughtered.' (B10:40)

If the agent of the action is expressed in the clause by a nominal phrase, this is not necessarily introduced by any preposition, e.g.

(8) *múθyəlla qaráwət dìya*ˈ *mùttəlla.*ˈ *béθa dwìq*ˈ *qaráwət dìya.*ˈ 'They brought her bed and laid it down. The house was filled by her bed.' (A21:7)

Both these features reflect a certain degree of opacity regarding the status of the patient argument as the grammatical subject of the verb. Lack of agreement of a verb with its grammatical subject would not in principle be possible elsewhere in the verbal system, but lack of agreement with a grammatical object would be permissible, especially with indefinite nominals as in (7). The lack of the preposition on the agent nominal in examples such as (8) is a property of a grammatical subject, suggesting that it is competing for this status with the patient nominal.

15.9.2. *Resultative Participle Combined with the Verb 'to be'*

As has been discussed in §15.4.1.1., the resultative participle of a transitive verb combined with the copula, or with the suppletive verb *hwy*, can express the passive. It denotes the result of a past verbal event without referring directly to any specific event that brought about this result. The construction has an inherent ambiguity in that in many contexts the participle may have a dynamic verbal interpretation or a stative adjectival interpretation, e.g.

(1) *xuwwe qṭìlɛle!ˈ* 'The snake has been killed / the snake is killed!' (A24:42)

(2) *ʾán baxtáθa barzanáye mə̀raˈ kɛ̀la ʾan-gúre xéne?ˈ mə́re kúlla hóla qṭìle.ˈ* 'The Barzan women said "Where are the other men?" He said "They have all been killed / They are all killed."' (B19:8)

(3) *bróni hóle xíla ʾədlèle.ˈ* 'My son has been eaten tonight.' (A18:2)

(4) *γába čìdetu xlúlə brōn-fə̀llən b-flàn-yoma.ˈ* 'You have been invited / you are invited to the wedding of the son of so-and-so on such-and-such a day.' (B5:21)

(5) *kúl máθa ṭ-íla tlíxta ʾìθ ʾùmra gáwa.ˈ* 'Every village that has been / is destroyed and has a church in it' (B6:34)

(6) *párša t-wéwa mútta b-rəš-Xuldə̀kka.ˈ* 'A flat stone that had been placed / was placed on top of Xuldəkko' (A51:20)

The agent may be expressed in such passive resultative constructions. This is usually marked by the preposition *l-*, e.g.

(7) *ʾən-réšət bábe díye ʾax-ṭùra,ˈ ʾu-hóle qṭíla l-Tătár-i Slemán-i Sə̀ndi,ˈ lɛ̀ka bṭ-ázəl?ˈ* 'If the head of his father is like a mountain and he has been killed by Tătar-i Sleman-i Səndi, where will he go?' (A28:8)

(8) *šáwwaθna hóla xíle l-dèwa.ˈ* 'The seven of them have been eaten by wolves.' (A23:15)

(9) *xabúša smóqa l-də̀bbɛle xíla.ˈ* 'The red apple has been eaten by the bear.' (D2:65)

(10) *nísa l-xúwwe m-xàwla ṣádle.ˈ* 'He who has been bitten by a snake is afraid of a rope.' (D2:39)

(11) *čìdət l-bràtux.ˈ* 'You have been invited by your daughter.' (A40:12)

(12) *xáθux Nasímo jlìwtɛla l-ʾarabàye.ˈ* 'Your sister Nasimo has been kidnapped by Arabs.' (A37:5)

(13) *mxuzdɛwən l-Tomən xali.* 'I have been shamed by Toman my uncle.'
     (A52:4)

On fronted agents in focus bearing the nuclear stress the preposition is
sometimes omitted, which results in an opacity of coding, in that both
the patient nominal and the agent nominal have the coding appropriate
for the grammatical subject, e.g.

(14) *ʾáyya yalə̀xta‖ bàbila zqírta‖ ʾu-xáθi Nasìmola mnuqášta.‖* 'This hand-
     kerchief was woven by my father and embroidered by my sister
     Nasimo.' (A37:12)

15.9.3. *Resultative Participle Combined with* pyš

The most productive means of forming the passive of a transitive verb is
by combining a form of the verb *pyš* with the resultative participle. The
tense and aspect of the construction are determined by the form of *pyš*.
It is frequently used in historical narratives with a perfective aspect to
refer to a specific event in the past. In such cases the verb *pyš* is in the
qṭille form or the *qṭilɛlɛ* form, which here is used in its narrative sense of
a preterite equivalent to *qṭille*, e.g.

(1) *rába mən-d-ánna maθwàθa‖ píšla prìme‖ . . . píšla qṭìle.‖ ʾu-píšla mšuxə́lpe
    maθwáθət qurðáye mušəlmàne.‖* 'Many (of the inhabitants of) these
    villages were slaughtered. . . . They were killed. They (the villages)
    were then changed into Muslim Kurdish villages.' (B1:2)

(2) *b-ɛ́-šeta píšla Dúre muqyàmta-w‖ kúlla máθwaθət Bɛ̀rwər,‖ sáma zóda
    t-maθwàθa,‖ píšla moqìme,‖ ʾu-tlìxe,‖ ʾumráne tlìxe,‖ ʾu-bustanáne mùqðe,‖
    ʾu-máθa šwíqta xăràba-w‖ náše ṭrìðe.‖* 'In that year Dure was evacuated.
    All the villages of Barwar, or most of the villages, were evacuated
    and destroyed. The churches were destroyed, the orchards were
    burnt, the village was left a ruin and the people were driven away.'
    (B1:8)

(3) *ʾíθwalən šawwá ʾabòne‖ gu-máθa dìyən.‖ píšela mútte gu-Mar-Qayyóma kúlla
    gu-ðà qáwra.‖* 'We had seven bishops in our village. They were all
    laid in one grave in (the church of) Saint Qayyoma.' (B2:6)

If a nominal expressing the agent is mentioned in the clause it is intro-
duced by the preposition *l-*, e.g.

(4) *ʾu-Dùre¹ píštɛla muqyàmta¹ muxràwta¹ šawwà gáye¹ l-xànpe¹ qaṭòle¹ t-mušǝlmàne.¹* 'Dure was evacuated and destroyed seven times by pagan murderers of Muslims.' (B2:2)

Constructions with a past perfective of *pyš* such as *pišle qṭila* or its equivalent in narrative *pišɛle qṭila* correspond in function to the obsolescent *qṭil* form.

In (5) the resultative participle of *pyš* is combined with the past copula:

(5) *ʾéða góṛa ʾíle xa-ṭùxsa¹ qyámtǝt Mšíxa báθǝr t-wéwa píša qṭìla.¹* 'The Great Festival is a ceremony (commemorating) the resurrection of Christ after he had been killed.' (B6:1)

In (6) a future form of *pyš* is used, in (7)–(8) an irrealis form and in (9) a past habitual form:

(6) *kú nǝ̀šma¹ t-màṭya¹ rǝš-gǝ́šrǝt Dalàle¹ ʾɛ-nǝ́šma bǝd-pɛ̀ša¹ prìmta,¹ qṭìlta.¹* 'Any soul that comes onto the bridge of Dalale—that soul will be slaughtered, killed.' (C8:5)

(7) *yába ʾána ṭ-àθǝn,¹ ʾáxči ʾǝn-yáwul ð̣ǎmǎ̀n¹ šɛ̀x¹ ʾáwwa ṭéni páyǝš nṭìra¹ ta-t-čú-mdi là-ʾaθe bíye dìye.¹* 'Well, I'll come, only if the sheikh gives a guarantee that this saddle bag will be guarded so that nothing will happen to it.' (A7:9)

(8) *kúl-xa náša…yalúnka zórǝt bàre¹ gǎ̀rǝg páyǝš mŭmǝ́ðða gu-ʾùmra.¹* 'Everybody…when a young child is born, he must be baptized in the church.' (B6:9)

(9) *hadíya mtánexi xa-tuníθa ʾatìqta¹ pɛšáwa mtunéθa gu-maθwàθa.¹* 'Now we shall tell an old story, which used to be told in the villages.'

Constructions with the resultative forms of *pyš* such as *hole piša qṭila / pišɛle qṭila* 'He has been killed / He is killed' and *pišɛwa qṭila* 'He had been killed / He was killed' are equivalent in function to the passive resultative forms *hole qṭila / qṭilɛle* and *qṭilɛwa*. The difference is that forms with *pyš* can only function as passives whereas the forms with the copula could in principle have a passive or active interpretation according to context. Speakers use the constructions with *pyš* to eliminate this opacity of diathesis. In (10) the motivation for using the unambiguously passive form *pišɛwa čǐde* may have been to distinguish it clearly from the active form *čɛdiwaley* in the immediately preceding discourse:

(10) *kúlla maθwáθa čædìwaley.*ꞌ *mən-kúlla maθwáθə ṭ-íla marzabánət ʾƐ̄n-Nùne,*ꞌ
      *xa-tmánya ʾəṣrà-maθwaθa*ꞌ *náše píšewa čə̀de.*ꞌ 'They invited all the vil-
      lages. From all the villages that were adjacent to ʾƐn-Nune, eight
      or ten villages, the people were invited.' (B15:61)

Occasionally *pyš* is used with the resultative participle of intransitive verbs.
Such constructions are used to convey the sense that the subject refer-
ent is non-volitional and the event is caused to take place by an external
agent. This is in conformity with the *pyš qṭila* passive construction, which
in principle has a non-volitional subject who is the undergoer of the
action. In (11), for example, the construction *pišla riqe* is used to express
the fact that the inhabitants of the villages were forced to flee against their
will. The 'active' form *riqla* 'they fled', by contrast, would in principle be
interpreted as having a volitional subject.

(11) *rába mən-d-ánna maθwàθa*ꞌ *píšla prìme*ꞌ *ʾu-xákma píšla rìqe-u*ꞌ *píšla qṭìle.*ꞌ
      'Many (of the inhabitants of) these villages were slaughtered. Some
      (were forced to) flee and were killed.' (B1:2)

15.9.4. *Resultative Participle Combined with* ʾθy

On some sporadic occasions the passive is expressed by a construction
consisting of a finite form of the verb *ʾθy* 'to come' with the undergoer
as subject and a resultative participle, e.g.

(1)   *b-rəš-d-àyya bráta*ꞌ *réšət bábe díye t-Ẓàlo*ꞌ *θéle twìra ràbe gáye.*ꞌ 'On account
      of this girl, the head of his father Zāl was broken many times.'
      (A29:39)

15.9.5. *Infinitive Combined with* ʾθy

In another type of periphrastic construction the verb *ʾθy* 'to come' is
combined with the infinitive of the verbal stem that expresses the action.
This construction is of more restricted use than that the *pyš* + resultative
participle construction. In most of the recorded examples the verb is
negated. The infinitive may be preceded by the preposition *l-*, e.g.

(1)   *har-Dúre lɛ̀-ʾaθya l-manšóye.*ꞌ 'Dure will never be forgotten.' (B2:7)
(2)   *ʾu-hál hadíya ʾáwwa məndiyáne píšela l-bàlən*ꞌ *ʾu-lɛ̀-ʾaθi l-manšóye.*ꞌ 'Until
      now these things remain in my mind and will not be forgotten.'
      (B15:1)

The *l-* preposition is sometimes omitted, e.g.

(3) *lágne lé-y-aθɛ xzàda.*ˈ 'Lagne are not harvested.'
(4) *lá-kulla danáne kúlla ṭawalyáθa ṭ-aθíwa mṭawòle.*ˈ 'Not all games would be played at all times.' (B11:1)
(5) *ʾáθe maxròpe.*ˈ 'It is sharpened.' (B11:17)

In (6) the instrument of the action is introduced by the preposition *b-*:

(6) *ʾána hon-màra*ˈ *ʾáwwa rèši*ˈ *ṭ-áθe xá-yoma pràma*ˈ *bəd-ʾiθáθa dìyux.*ˈ 'I say that this head of mine will one day be cut off by your hands.' (A14:35)

The construction may be used deontically to express deontic possibility or obligation, e.g.

(7) *ʾáy qəṣṣótta rìxtɛla.*ˈ *la-ʾáθya l-mtanòye.*ˈ 'It is a long story. It cannot be told.' (A25:52)
(8) *mára mòdi qə́ṣṣət.ʾ*ˈ *tànilɛni!*ˈ *móre là*ˈ *lɛ-ʾáθya mtanòye*ˈ *xáf náše šmǎʾəllɛni.*ˈ 'They said "What is the story? Tell us!" He said "No. It cannot/must not be told, lest people are listening."' (A35:10–11)

15.9.6. *Unaccusative Intransitive Verbs*

Numerous verbal forms exhibit an alternation of transitive and unaccusative intransitive usage. These can be used transitively with a volitional subject and an object complement that is the undergoer of the action or alternatively can be used intransitively with the non-volitional undergoer being made the grammatical subject. They are found in all verb stems (for a set of such verbs in stem III see §8.17.2.).

The translation equivalent in English may be a verb that exhibits a similar alternation, e.g.

*ʾáw šmíṭle kupàle.*ˈ 'He broke his stick.'
*ʾo-kupála šmìṭle.*ˈ 'The stick broke.'

*ʾáw ṣlíxle qèsa.*ˈ 'He split the wood.'
*ʾo-qésa ṣlìxle.*ˈ 'The wood split.'

*núra qəm-qaméla ṣùdri.*ˈ 'The fire scorched my shirt.'
*ṣúdri qmèla.*ˈ 'My shirt scorched.'

>*áni qəm-xanqìle.*¹ 'They drowned him.'
>*áw xnìqle.*¹ 'He drowned.'

>*áw mkuwə́rre >ằraq*¹ 'He distilled arak'
>*ằraq mkuwə̀rra.*¹ 'The arak distilled.'

>*áw mukíšle gùða.*¹ 'He deflated the skin.'
*gúða mukìšle.*¹ 'The skin deflated.'

In some cases the transitive alternative must be translated by supplying the matrix verb 'to cause' or a different lexical item, e.g.

>*áw mujrə́ṭle yàla.*¹ 'He caused the child to slip.'
>*o-yála mujrə̀ṭle.*¹ 'The child slipped.'

>*áw ṭríxle nàša.*¹ 'He caused the man to lie flat.'
>*o-náša ṭrìxle.*¹ 'The man lay down flat.'

>*áw tlíxle bə̀θa.*¹ 'He destroyed the house.'
>*o-béθa tlìxle.*¹ 'The house collapsed.'

In many cases an unaccusative intransitive alternative of a transitive verb is rendered idiomatically by an English passive. This applies, for example, to the verbs *qṭaʾa* 'to cut', *šqala* 'to take', which are normally used transitively:

(1) *mən-ə̀dyo*¹ *malkùθa*¹ *m-bnónux qằṭa.*¹ 'From today the kingship will be cut off from your sons.' (A8:96)
(2) *mðíta băyə́nna mbádla jálde kúlla >ax-qamàye,*¹ *muxwàrta.*¹ *>áwwa kóma šằqəl.*¹ '(By) early morning I want all the town as (it was) before, made white. Let the black be taken away.' (A4:34)

Numerous other verbs exhibit this alternation, e.g.

*gəlyále duzùθa.*¹ 'He revealed the truth.'
*duzúθa glèla.*¹ 'The truth was revealed.'

*páwxa qəm-mbalbə́lle kàwse.*¹ 'The wind ruffled his hair.'
*káwse mbulbə́lle qam-pàwxa.*¹ 'His hair was ruffled by the wind.'

*máwθət mámi qəm-mzarzèli.*¹ 'The death of my uncle shook me.'
*mzurzèli.*¹ 'I was shaken.'

*qəm-qaṭə́rre gə̀šra.*¹ 'He complete the arch of the bridge.'
*gə́šra qṭə̀rre.*¹ 'The arch of the bridge was completed.'

*ṣṭimlux bè̵θi.*¹ 'You have devastated my house.'
*ʾána ṣṭìmli.*¹ 'I am devastated.'

*burbəzíli zùze.*¹ 'I scattered the money.'
*zúze burbə̀zla.*¹ 'The money was scattered.'

*qəm-mxaθxə́θla xəzmayùθa.*¹ 'He renewed the family relationship.'
*xəzmayúθa mxuθxə̀tla.*¹ 'The family relationship was renewed.'

The alternations described above are not restricted to past pefective forms, as in the examples above, but apply also to forms with present or future time reference and imperfective aspect.

Even when an unaccusative intransitive usage is available, a transitive verb is sometimes made intransitive by the *pyš qṭila* construction, e.g.

(3) *ʾina kupáli píšla šmìṭṭa*¹ *ʾu-piláwe píšla šmìṭe.*¹ 'But my staff has broken and my shoes have broken.' (A37:17)

15.9.7. *Diathesis of Causative Verbs*

Causative forms of transitive verbs exhibit alternating diathesis. These may either take as their grammatical object the agent of the action that is being caused with the undergoer expressed as a second object or alternatively may take the undergoer of the action as the only grammatical object, e.g.

qṭala 'to kill':   *maqṭole* 'to cause to kill'

(1) *qəm-maqṭə́lli xàwri.*¹ 'He [AGENT$_1$] caused me [AGENT$_2$] to kill my friend [UNDERGOER].'
(2) *qəm-maqṭə́lle xàwri.*¹ 'He [AGENT$_1$] caused my friend [UNDERGOER] to be killed.'

When the grammatical object is the undergoer, as in (2), the caused action is presented with passive diathesis. The agent who is caused to perform the action need not be specified. If it is specified, it must be expressed in a prepositional phrase, as is the case in (4), unless it is a reflexive construction (5):

(3) *bàxta*' *be-băˋxət-ila.*' *maqəṭlàle gáwṛa.*' 'A woman is treacherous. She will cause her husband to be killed.' (A26:2)

(4) *ʾáwwa náša sáwa ṭla-mó qəm-maqəṭlə́tle bìyi?*' 'Why did you cause that old man to be killed by me?' (A15:18)

(5) *tre-ṭḷá-gaye mamxə̀xwala gánən.*' 'We used to cause ourselves to be struck two or three times.' (B5:84)

15.9.8. *Diathesis of Infinitives*

An infinitive of a transitive verb that is subordinate to a matrix verb can have active or passive diathesis. Examples of infinitives presented with passive diathesis are (1)–(4), in which the agents of the action denoted by the infinitive are not specified:

(1) *θíθεla xa-bràta*' *mxáya ṣáwla díya darmàna.*' 'A girl came in order for her shoes to be rubbed with polish.' (A16:2)

(2) *muttúla ʾixála xàla.*' 'They served food to be eaten.' (A15:11)

(3) *ʾáni kúlla băyíwa maxóle ʾu-maštòye.*' 'They all needed to be fed and given drink.' (B16:62)

(4) *ʾu-lεwəx naše t-manxope.* 'We are not people to be shamed.' (C1:14)

15.9.9. *Impersonal 3pl. Subject*

When the agent of a transitive action is not specified, an active verb may be given a 3pl. impersonal subject. Such constructions are often translated idiomatically into English as passives, e.g.

(1) *qəm-ṭarðíli mən-bὲθa.*' 'They drove me from the house = I was driven from the house.'

(2) *gu-Ẓàxo*' *bnáya wέwa xa-gə̀šra.*' 'In Zakho they were building a bridge (= a bridge was being built).' (C8:1–2)

(3) *ʾu-har-bənyàla xá-gaya xéta.*' 'They have already built it (the village of Dure) again (= It has already been built again).' (B2:7)

(4) *Qaṭina xətnεle t-la-mbarxile.* 'Qaṭina is a groom without them wedding him (= without being wed).' (A50:15)

(5) *be-palge sarxi dəmma.* 'They defile its middle with blood (= Its middle is defiled by blood).' (A52:22)

This use of an impersonal 3pl. subject is common in naming expressions with the verb *ʾmr* 'to say', e.g.

(6) *ʾáxni y-amrílən be-Hὲdo ʾáxni.*ˈ 'We—they call us (= we are called) the house of Hɛdo.' (B4:7)

15.10. Verbal Constructions with the Particle *heš*

15.10.1. heš *in Positive Clauses*

The particle *heš*, which is of Kurdish origin, is used to modify the verbal predicate in various ways. In positive clauses *heš* is used with the sense of 'still', expressing the persistence of an enduring situation. The form of the verb is one that can express such a situation, e.g.

(1) *ʾáy heš-hóla gu-gòma.*ˈ 'She is still in the basement stable.' (A18:22)
(2) *héš xúya xùyɛle.*ˈ 'It is still very dark.' (A30:36)
(3) *heš-hóle plàxa.*ˈ 'He is still working.'
(4) *heš-hóle dmìxa.*ˈ 'He is still asleep'.
(5) *heš-máṣe jàwəj.*ˈ 'He can still move.'

It may also be used with a verb expressing the persistence of an iterative situation, e.g.

(6) *ʾáw náša sàwɛle,*ˈ *bás heš-y-ázəl šúla kùt-yum.*ˈ 'He is an old man, but he still goes to work every day'.

15.10.2. heš + *Negator*

When the particle *heš* precedes a negator, the construction denotes the persistence of a negated situation and the sense of 'not yet'. This is in principle used with the negative copula or with a negated form of a verb that expresses an enduring or iterative situation. These are most commonly compound constructions with the resultative participle or infinitive, all of which express an enduring negated situation. It is generally cliticized to the negator and is often contracted to the form *š-*, e.g.

(1) *heš-lέle làxxa.*ˈ 'He is not here yet.'
(2) *heš-lέle ʾəθya.*ˈ 'He has not come yet.'
(3) *xalwála-w ʾap-xáčča xéna šóqa ṭla-mòja.*ˈ *qá-t ʾap-ʾáw zòrɛle,*ˈ *sab-qá-t š-lέwa mšúrya xála gὲlla.*ˈ 'Then she milks it and leaves a little more for the calf. This is because it is small and had not yet started to eat grass.' (B5:175)

(4) *ʾə́θγɛla ʾàrye.*ˈ *ʾə́θγe,*ˈ *ʾə́θγe,*ˈ *š-lɛ́wa mə́tye ʾəlle-dìye.*ˈ 'The lions came. They came, but they had not yet reached him.' (A18:26)

It may be used with infinitive constructions in subordinate clauses that lack the copula. In such cases the infinitive is often negated by the particle *t-la* 'without', e.g.

(5) *qəm-dári ʾan-dáwwe heš-t-là bráza.*ˈ 'They have poured out the *dawwe* while it is not yet dry.' (B14:1)

(6) *léðeti ʾàyya*ˈ *ṱ-íla mən-hə́š t-la-bràya*ˈ *ʾáyya ʾíla yíwta qa-dìyi?*ˈ 'Don't you know that she has been betrothed to me since before she was born?' (A25:39)

(7) *š-lá-praqa ʾo-pék dìye*ˈ *ʾo-xáwri hádəx gabbàra,*ˈ *xázəx wírre gawàye.*ˈ 'Before my friend, a huge man, had finished his measure (of whiskey), we saw him go inside.' (B15:58)

15.10.3. *Negator* + heš

When the negator precedes the particle, it has the sense of 'no longer', in that it expresses the end of an enduring or iterative situation that was previously in existence. It is attested with *qaṭəl* base forms expressing the end of an iterative situation in the future. The sequence *la-heš* generally contracts to *leš*, *lɛš*, *laš* or *ləš*, e.g.

(1) *léš-ʾaθəx hayorə̀xlux.*ˈ 'We shall no longer come to help you.' (A48:6)

(2) *qìmɛlɛ,*ˈ *mə̀ð̣ya*ˈ *ʾu-wíða tawqíˁ ʾu-kúl məndì,*ˈ *qá-t ʾáyya leš-dáre bas-dìya.*ˈ 'He signed and authorized it, and so forth, (pledging) that he would never again talk about it.' (A8:97)

(3) *leš-faydáləx qáṭlət gànəx.*ˈ 'It will no longer be of any use to you to kill yourself.' (A38:16)

It is found with the *qaṭəl* form of the verb *mṣy* 'to be able', used with habitual aspect and with future reference, e.g.

(4) *sab-ʾən-wèle šxánta ràba,*ˈ *léš-maṣət ʾatwət ṱḷaθà-metre*ˈ *rə́ḥqa mən-ṣùpa.*ˈ 'For if it has become very hot, you can no longer sit three metres from the stove.' (B15:25)

(5) *léš-maṣe-nə́ša palə́ṭle qále dìye.*ˈ 'A person can no longer utter his voice.' (B15:39)

(6) *ʾáqlət susɛ́xu ʾən-píšla kèpa,*ˈ *léš maṣítu jawjìtu.*ˈ 'If the legs of your horses have become stone, you will no longer be able to move.' (A8:28)

When the construction is used with the negative copula, the particle *heš* is inserted between the negator *la* and the copula, viz. *la-heš-ile*, e.g.

(7) *léš-ile gu-bèθa.*ˈ 'He is no longer in the house.'

In the text corpus this is attested in compound verbal forms consisting of the copula and the resultative participle or infinitive, e.g.

(8) *mo-t-àwəð?*ˈ *léš-ile màṣya.*ˈ 'What can he do? He can no longer do anything.' (A8:96)
(9) *léš-in xzàya,*ˈ *lán-mṣaya jwàja.*ˈ 'I can no longer see and I cannot walk.' (A24:2)
(10) *láš-it ðà'əlli?*ˈ 'Don't you know me any more?' (A12:65)
(11) *láš-iyewa mṣáya xǎyewa.*ˈ 'He could no longer make a living.' (A30:1)

In (12) the particle is used in a compound infinitive construction in which the copula has been omitted:

(12) *léš-awwa mṣáya máṭe čù-dukθa.*ˈ 'He can no longer reach any place.' (A37:14)

15.11. Verbal Constructions with the Particle *HAR*

The particle *har* is combined with verbs to perform numerous functions. These functions can be classified broadly into two opposing semantic domains, viz. extension and narrowing.

15.11.1. *Extension*

Under this head can be included various uses of the particle to express the extension and continuity of a situation.

The particle can be used as an intensifier to underscore the enduring nature of a situation, e.g.

(1) *har-dəbbóre zálɛla-w θáya dúrr dúrr dùrr.*ˈ 'The hornets constantly flew back and forth.' (A20:6)
(2) *har-bxàya-wawa.*ˈ 'They were constantly crying.' (A25:5)

(3) *har-ʾúrxət ʾálaha dóqən b-ìði.*ˈ 'I shall constantly keep to God's way.'
     (A15:21)

(4) *ʾu-ʾáti har-háwət baràye*ˈ *ʾu-sáprət ku-ṭ-áθe làxxa.*ˈ 'You be outside all the
     time and wait for whoever comes here.' (A22:23)

(5) *har-blíǵət b-kàsux.*ˈ 'You are always busy with your stomach.' (A23:10)

(6) *har-xwàrta wáwa.*ˈ 'It was always white.' (A4:36)

It occurs in this sense in clauses in which the copula is omitted, e.g.

(7) *ʾu-là-mṣalɛwa qa-ʾálaha.*ˈ *har-dbíše b-bronèy.*ˈ 'They did not pray to
     God. They were constantly attached to their son.' (A15:17)

(8) *ʾa-d-áy ṃláyəlla kùlle míya*ˈ *ʾa-d-áw har-mòḷya.*ˈ 'She fills hers all with
     water. His was constantly full.' (A17:25)

It may be combined with verbs denoting habitual or iterative activities
to express an intensified frequency. The verb is either in the *(ʾi-)qaṭəl* or
wele qṭala form, e.g.

(9) *ʾánna-t ʾárxe har-y-oðíwa nùra gu-bɛ́θa.*ˈ 'People who had mills would
     always make a fire in the house.' (A19:4)

(10) *xə́lma náša hár ʾi-xàze.*ˈ 'People always dream.' (A4:7)

(11) *ʾu-ʾáyya har-šaqláwa mən-d-àn šíše*ˈ *mattàwa*ˈ *ə́lla dìya*ˈ *hál ʾɛ́-gət qəm-
     qaṭlàla.*ˈ 'She (the daughter-in-law) was constantly taking the iron
     bars and putting them into her, until she killed her.' (A19:6)

(12) *kazíwa práməlla har-palṭìwa.*ˈ 'They tried to cut them down, but they
     kept growing up.' (A38:15)

(13) *har-wéla taq-táq mxàya*ˈ *ʾu-taq-tàq,*ˈ *xá-bena-w trè,*ˈ *w-áwwa sqìdle.*ˈ 'They
     continually made a taq-taq knocking noise, taq-taq, once, then
     twice, then he became fed up.' (A14:68)

When used with a verb expressing a non-iterative perfective action, it
expresses the sense of repetition of the action and can usually be trans-
lated 'again', e.g.

(14) *yómət ṭḷàθa*ˈ *har-ṣlèla.*ˈ 'On the third day she went down again.'
     (A22:18)

(15) *ʾən-lìθ biš-zlíme mə́nnən,*ˈ *har-ṭ-àzəx.*ˈ 'If there are none more wronged
     than us, we shall again go (on our way).' (A13:9)

The particle may have the sense of 'still', expressing the temporal persistence of a situation in contexts where there is typically some expectation that the situation would not persist. The clause either contains a copula or a compound infinitive verbal form, which expresses action in progress, e.g.

(16) *har-xàθila.*ˈ 'She is still my sister.' (A18:27)

(17) *ʾu-dəbbóre hár-hola qam-tắrət bòya.*ˈ 'The hornets were still before the door of the hole.' (A20:9)

(18) *hár-dwaqət ràqqi?*ˈ 'Do you still insist (on what you said)?' (A40:4)

When, however, the clause contains one of the set of verbs denoting mental processes which express the progressive by the *qaṭəl* form rather than the compound infinitive form (§15.1.1.4.), the verb is generally put in the *ʾi-qaṭəl* form, e.g.

(19) *har-xáθe ʾi-bằyela.*ˈ 'He still loves his sister.' (A18:16)

In this sense the particle may be used together with a verb negated by *la* or the negative copula. The final /r/ sometimes shifts to /l/ by assimilation to the initial /l/ of the negator, e.g. *hal-la* (< *har-la*), *hal-lɛle* (< *har-lɛle*), e.g.

(20) *ʾáy har-là-yawəlla.*ˈ 'It still does not give it back.' (A34:4)

(21) *hal-lèla gláya.*ˈ 'She (the mother) still does not reveal (the truth).' (A38:6)

It occurs with this sense in clauses from which the copula has been elided, e.g.

(22) *har-m-rəš-gàre,*ˈ *màra*ˈ 'While still on the roof, she said…' (A26:75)

(23) *bénə ṭə́ḷḷəθ mòdi wídle?*ˈ *hár mdagòle gu-máθa,*ˈ *ʾáwwa hàtxɛle wîða-w*ˈ *ʾáwwa hàtxɛle míra-w*ˈ *ʾáwwa hàtxɛle,*ˈ *dráya búxtən l-xá l-d-o-xèna*ˈ 'What did he do the third time? He continued to tell lies in the village "He did such-and-such. He said such-and-such," slandering this one and that one.' (A48:5)

The particle is used with a perfective verb as an intensifier to underscore sequentiality. It expresses the occurrence of an action that may not be expected to occur in sequence to what precedes. In most cases it is

appropriate to translate the particle in such contexts by 'still' (in a logical sense) or 'nevertheless', e.g.

(24) *kəmàt ṭ-árqena*ˈ *tópe har-ṭapyàli.*ˈ 'However much I run, a gun will still reach me.' (B9:3)

(25) *mqáwlət goràtle,*ˈ *t-yálla jùlla.*ˈ *ʾən-là,*ˈ *har-t-yálla júlləx b-kèfəx.*ˈ 'If you promise to marry him, he will give back the clothes. If not, he will still give you the clothes, if you want them.' (A14:83)

(26) *málka ʾáti har-t-yàtli brátux.*ʾˈ 'King, will you still give me your daughter?' (A25:24)

(27) *mə́re hár ṭ-azèna.*ˈ *mə́re hár ṭ-azèt.*ʾˈ *mə́re hɛ̀!*ʾˈ 'He said "I'll still go." He said "Will you still go?" He said "Yes!"' (A8:45)

(28) *ʾáwwa qṭílle xmàre,*ˈ *ʾu-qṭílle sùsa,*ˈ *qṭílle tàwra,*ˈ *ʾánna kúlla qṭilìle,*ˈ *har-mə́re ma-yxàləf.*ˈ 'He had killed the asses, killed the horse, killed the ox. He had killed them all. He (the uncle) still said "That is all right."' (A23:31)

It may be used with a negated verb with a similar function, e.g.

(29) *har-là-wela rázi.*ˈ 'She was still not satisfied.' (A30:34)

(30) *kəmá-gayəx tíwe m-ġðàðe,*ˈ *har-lán mə̀ṣya ʾaxwáθe dìye.*ˈ 'However many times we have sat together, I still have not been able to be like him.' (A25:44)

(31) *hal-la xzeli ʾu-hal-la swili.* 'I, nevertheless, have not found (anybody) and I, nevertheless, have not been satisfied.' (C3:8)

On some occasions *har* is replaced by the particle *hala*, which is attested in a few cases in the text corpus before a negative copula or negative existential particle, e.g.

(32) *síqɛle gu-réšət ʾAmedìya,*ˈ *ʾìna*ˈ *núrət xàle*ˈ *ṭ-íwa síqa l-tàma*ˈ *gu-zòma*ˈ *hála lèle čə́mya.*ˈ 'He went up to the top of Amedia and saw that the fire in the summer house of his maternal uncle, where he was making for, had still not gone out.' (A25:40)

(33) *ʾáwwa nàša*ˈ *hála lìtwale.*ˈ 'This man still did not yet have (a son).' (A8:5)

15.11.2. *Narrowing*

Under this head can be included the use of *har* to express temporal immediacy of sequence, as in (1)–(4), in which it is combined with a perfective verb with the sense of 'as soon as', e.g.

(1) *har-ðìlɛxu príqlən mən-ṭúra,ˈ dɛ́rən tòpe,ˈ kút-xa maxèlaˈ xánjər dìye,ˈ ʾo-ṭ-íle qáme díye qaṭə́lle.ˈ* 'As soon as you know that we have finished (coming over) the mountain, I shall fire a gun and everyone will strike with his dagger and kill the man in front of him.' (B19:6)

(2) *har-wéla dánət kawùθra,ˈ xzélux xa-náša θàya,ˈ málla bṭ-àθe,ˈ ṭ-áwər gu-bèθaˈ yáʿni xamšá daqíqela hal-ʾə̀ṣraˈ ʾáti ʾàθeti.ˈ* 'As soon as lunchtime has come and you have seen a man coming—the mullah will come and enter the house—after five or ten minutes you come back.' (A22:22)

(3) *har-qítla bìyux,ˈ qaṭlílux ṭ-axlìlux.ˈ* 'As soon as they hit you, they will kill you and eat you.' (A22:39)

(4) *ʾu-hadíya brátət màlkaˈ har-xázya ʾáxni zmára-w rqàðaˈ ʾáy jal-jálde ṭ-ásqa l-gàre.ˈ* 'Now, as soon as the daughter of the king sees that we are singing and dancing, she will quickly come up to the roof.' (A27:28)

Another form of temporal immediacy is illustrated in (5), in which the particle has the sense of 'directly':

(5) *har-ʾə́θyɛle mən-ṭúra réša-reša d-o-gàre.ˈ* 'He came directly from the mountain onto the roof.' (A23:14)

The particle may be used to express some kind of narrowing of the extent of action. In such cases it is usually appropriate to translate it 'just', e.g.

(6) *ʾína bróna lèla xíltəlle.ˈ har-nobáltəlle muttɛ́θəlle mattòye.ˈ* 'She did not eat the boy. She just took him and put him down.' (A19:7)

(7) *ʾána har-ṣálən mðìtaˈ mɛ́θən ʾixàlaˈ ʾu-àθena.ˈ* 'I'll just go down to the town to bring food and come back.' (A26:30)

(8) *har-ʾásqən gu-qáṣrət bàbi,ˈ har-šáqlən rìxa mánne.ˈ bálki xa-xóni, xáθi xázən,ˈ xa-nàši.ˈ* 'I shall just go up to my father's palace, I'll just have a quick look (literally: take a smell of it), perhaps I shall find a brother of mine, my sister, a relative or mine.' (A18:16)

(9) *har-sa-xúpla ʾáti b-gànəx!ˈ* 'Just go and wash her yourself!' (A27:25)

(10) *har-šúqla tàma.ˈ* 'Just leave alone over there.' (A25:53)

Also under the head of 'narrowing' can be included the function of *har* to act as an intensifier of an assertion, e.g.

(11) *xà-yoma,*᾿ *har-mítle bə-duzùθa.*᾿ 'One day he indeed really died.' (A27:42)

(12) *b-álaha hóle xa-púrya láxxa zòra*᾿ *ʾáw har-xá-mdi ʾìle.*᾿ 'By God, there is a small chink of light here. It is surely something.' (A14:25)

(13) *har-xá-məndi ʾìθ b-áyya dúkθa ṭ-íle wìra.*᾿ 'There must surely be something in this place where it entered.' (A11:9)

(14) *ʾáxni har-xònən-it.*᾿ 'You are indeed our brother.' (A39:12)

(15) *gằrəg ʾàmrəx.*᾿ *ʾay-xá-yoma har-t-yằða*᾿ *ṭ-íle míθa brònən.*᾿ 'We must tell (her). She will surely know one day that our son is dead.' (A4:38–39)

(16) *ya-ʾàlahi.*᾿ *xúya har-xùyɛle.*᾿ *har-déwe ṭ-axlìli.*᾿ *har-ṭ-ázən gu-d-ànna hambišáye*᾿ *har-hambišằye-ži ṭ-axlíli.*᾿ 'My God, it is very dark, either wolves are sure to eat me or I shall go to these giants and the giants are sure to eat me.' (A39:4)

(17) *mᾴre ʾána zála har-zílən bìya.*᾿ 'I'm indeed finished!' (A14:25)

It is used also to intensify a negated assertion (18) and a prohibition (19), e.g.

(18) *har-là-mṣən ṭ-amŕnnux.*᾿ 'I cannot tell you.' (A11:2)

(19) *har-la-šqúlla biš-spày.*᾿ 'Do not take it off, it is better.' (A39:14)

15.12. The Distribution of the Long Endings of Verbs

Various long endings of verbs are optionally used for the first person singular and plural and second person singular inflections of *qaṭəl* base forms that do not have further suffixes attached (§8.2.1.). An examination of their distribution in the text corpus shows that these long verbal inflections are conditioned by the position of their occurrence in the intonation group. In the vast majority of cases they occur at the end of the intonation group, immediately before the group boundary. They should, therefore, be considered to be a type of prosodic pausal form. They, moreover, normally take the nuclear stress. Examples:

(1) *bằyən t-yằðən ʾána ʾíman **mὲθena**.*᾿ 'I want to know when I shall die.' (A16:1)

(2) *ʾu-xátna l-béθa* **pèšena.**' 'And I shall become a son-in-law in the house.' (A17:35)

(3) *ʾána* **bt̰-àzena.**' 'I shall go.' (A25:32)

(4) *mó* **ʾamràna**?' 'What should I say?' (A26:33)

(5) *dánɛla* **jàwjexi.**' 'It is time for us to move.' (A30:44)

(6) *t̰-ázət ʾaskarìya,*' *lázəm* **ʾàzeti.**' 'You have to go to the army, you must go.' (A17:22)

(7) *xàrθa,*' **pàlṭeti**' *ʾap-ʾaṣə́rta hàdəx.*' *ʾu-ʾáti har-háwət baràye*' *ʾu-sáprət ku-t̰-áθe làxxa.*' *m-báθər xámša daqìqe*' *ʾáti* **ʾàwreti.**' 'Then, you go out, and in the evening (do) the same. You be outside all the time and wait for whoever comes here. After five minutes you should come in.' (A22:23)

(8) *xzí gàwṛa,*' *xzi-***maṣìθeti.**' 'Look husband, look listen!' (A22:15)

(9) *ʾáp-ʾati sì*' **pàlxeti.**' 'You also go and work.' (A23:2)

Another factor that conditions the use of a long inflectional form is discourse structure, in that the heavy morphology of a long form is sometimes used to mark a boundary of a discourse section. This is seen in (10), where the narrator repeats a key statement of the protagonist. The second version of the statement differs from the first in the use of the long form *mèθena* in place of the short form *méθən*. Both occur at the end of the intonation group. The motivation to use the long form appears to be to mark the end of the section of speech:

(10) *máre bắyən t-yắðən ʾána ʾìman méθən.*' *máre bắyən t-yắðən ʾána ʾíman* **mèθena.**' 'He said "I want to know when I shall die." He said "I want to know when I shall die." ' (A16:1)

This can be seen also in (11), in which the verbal phrase 'you obey me' occurs three times, in two instances of which at an intonation group boundary. The long form, however, is used in only one of these instances. This coincides with a discourse boundary in that it occurs at the end of a conditional construction. The short form before an intonation group boundary, however, does not coincide with such a discourse boundary, but rather at the end of a protasis, which requires completion by the following clause:

(11) *ʾən-ʾàti*' *mášmət ʾə̀lli*' **mašəmyàti.**' *ʾən-là mašə́myət,*' *sá méθɛle xònəx*' *ʾu-xza-ʾèkɛle.*' 'If you (want to) obey me, obey me. If you do not obey me, go and bring your brother and find where he is (yourself).' (A8:64)

In the exceptional cases where the long inflection does not occur at the intonation group boundary, discourse structure appears to be the primary motivation for the use of the long form, in that it occurs in a clause that closes a section of discourse. This is the case in (12), in which the clause in question occurs at the end of a section of speech:

(12) *šuréla mjawóde m-ġðàðe*⸍ *ʾéni náblǝx kǝs-d-ɛ̀ni.*⸍ *Žìne náblǝx kǝs-Mǎ̆mo*⸍ *lo-Mǎ̆mo náblǝx kǝs-Žíne.*⸍ *mǝ́ra là,*⸍ *bàxta*⸍ *be-bǎ̀xǝt-ila.*⸍ *maqǝṭlàle gáwṛa*⸍ ***nabléxi*** *Žìne kǝs-Mǎ̆mo.*⸍ 'They started arguing with one another regarding whom to take to whom. "Should we take Zine to Mǎ̆mo or Mǎ̆mo to Zine?" They said "No, a woman is treacherous. She will have her husband killed. Let us take Zine to Mǎ̆mo."' (A26:2)

The long inflection is virtually without exception avoided in the first of a series of two or more verbs in a single intonation group. This applies both to cases where a verb is followed by a complement clause and also to sequential series of verbs, e.g.

(13) *ʾána ʾàxxa **bǎ̆yǝn** zǎ̆réna.*⸍ 'I want to plough here.' (A30:8)
(14) *ʾáxni ṭla-mò **ṣálǝx** ʾáxni mpalṭóxle?*⸍ 'Why should we go down and release him?' (A26:77)
(15) ***qɛ́mǝn** torɔ̀nnɛy.*⸍ 'I'll get up and break them up.' (A30:22)

The optional long form of the 1pl. L-suffix *-lɛni*, which marks the pronominal subject of the *qṭille* form, or a pronominal object, exhibits a similar pattern of distribution. It is predominantly used at the end of an intonation group, e.g.

(16) *kúlla xarày̆e,*⸍ *tǝxrùθi,*⸍ ***plìlɛni.*** ⸍ 'In the end, I remember, we separated.' (B8:9)
(17) *ʾáwwa b-**tayɔ̀mlɛni.***⸍ 'He will finish us off.' (A30:41)
(18) *hóla xzáyǝllǝn qáṭu ráqa báθrǝn **xàlǝllɛni.***⸍ 'The cat sees us, runs after us and eats us.' (A44:1)
(19) *sparágle **ʾìtlɛni.***⸍ 'We have quinces.' (B5:218)
(20) *ṣlǎ̆wáθa kúlla **malǝpwalɛ̀ni.***⸍ 'He taught us all the prayers.' (B8:16)

The exceptional occurrences of the long form before the end of the intonation group often occur in clauses that mark the boundary of a section

of discourse. In (21), for example, the long form occurs in a clause that constitutes the opening of a section of discourse concerning Christmas:

(21) *xàrθa*ˈ **y-aθélɛni** *ʾèða*ˈ *ʾéðət be-yàlda.*ˈ 'Then we have (another) festival, the festival of Christmas.' (B6:12)

The 3pl. L-suffix has short forms with monophthong (*-la, -lɛ*) and long forms with a diphthong (*-ley, -lay*). The long forms with a diphthong exhibit a similar pattern of distribution to that of other long suffixes and can be considered to be prosodic pausal forms. They are attested predominantly at the end of an intonation group, e.g.

(22) *npílela-w néra* **nùbəlley.**ˈ 'They fell and the river carried them away.' (B3:9)

(23) *ʾɛ́-gə* **θèley,**ˈ *zílla l-d-ɛ́-maθə qurðàye.*ˈ 'When they came back, they went to that village of Kurds.' (B3:14)

(24) *ʾu-políse xzéla ʾan-yále jwànqe,*ˈ *qəm-mattíla b-sandùqe,*ˈ *qəm-hawíla xáčča ʾixàla-w*ˈ *qəm-xăðíla hátxa t-la-***qɛralèy***ˈ *ʾu-qəm-dɛréla gu-mìya.*ˈ 'The policemen found the two beautiful children, put them in a chest, gave them some food, wrapped them up, like this, so that they would not be cold, and put them in the water.' (A8:12)

Exceptional cases often occur in clauses that mark the boundary of a section of discourse. In (25), for example, it occurs at the end of an episodic section in a narrative:

(25) *fa-qímla šqílla ganèy.*ˈ *dawɛ́rə diyèy*ˈ *nálət ʾáqlə dawèra*ˈ *prìzlɛle.*ˈ *qəm-mattíla bə-l-ʿăkəs.*ˈ *qəm-ʾasṛìla.*ˈ *ʾu-***plíṭley** *mən-tàma.*ˈ 'So, they took themselves off. Their mules—the shoe of their mules' feet was made of iron. They put it on backwards. They tied them (the shoes) on and set off from there.' (B3:15–16)

It should be noted that this distribution of the long form of the 3pl. L-suffix differs from that of the long, diphthongal variants of the 3pl. suffix that is attached to nouns, which are used more regularly. One reason may be that the short form of the latter *-a* is identical with the singular nominal ending *-a*. It tends to be used mainly in contexts where the attribution of the noun to the 3pl. referent is highly predictable, such as inalienable possessions of the subject (see §14.5.1.).

15.13. THE EXPRESSION OF THE DIRECT OBJECT OF VERBAL FORMS

15.13.1. *Pronominal Direct Object*

The expression of the pronominal object on the various verb forms has been described in §8.19. We may recap here as follows. The direct pronominal object on verb forms derived from the present and imperative bases is expressed by L-series suffixes. These suffixes derive historically from phrases consisting of the preposition *l-*, used in this context as an object marker, and the pronominal suffix, e.g.

qaṭlále	'She kills him'
qaṭláli	'She kills me'
qṭúlle	'Kill (sing.) him!'
qṭúlule	'Kill (pl.) him!'

When the pronominal object is 3rd person, it may be expressed by the inflection of the past base: *qṭil-* (ms.), *qṭila-* (fs.), *qṭili-* (pl.), e.g.

qṭílle	'He killed him'
qṭilále	'He killed her'
qṭilíle	'He killed them'

In practice, the form *qṭílle* with the incorporated 3ms. object, tends to be avoided. Most examples in the text corpus of pronominal objects incorporated into the past base are 3fs. and 3pl. objects, e.g.

(1) *muttále xāṣ-súsa báθre dìye.*ˈ 'He put her on the back of the horse behind him.' (A29:37)
(2) *la-xəzyàli.*ˈ 'I did not see her.' (A26:11)
(3) *qímle šqilìle.*ˈ *muttìle*ˈ *rəš-d-ε-ʾèna.*ˈ 'He took them and put them on top of the spring.' (A15:1)
(4) *mŭdərìlux.*ˈ 'You have brought them back.' (A17:14)

When the pronominal object is 3ms, the functionally equivalent *qəm-qaṭəl* form with an object L-suffix tends to be used, e.g.

(5) *qəm-dawqàle.*ˈ 'She took hold of him.' (A22:19)
(6) *qəm-ṭarə́dle θéle zìlle*ˈ *be-ʾámte dìye.*ˈ 'He drove him away and he went back to his aunt's house.' (A23:33)

The *qṭille* form with an incorporated 3ms. object tends to be used in clauses that are closely connected to the preceding clause. In such contexts pronominal objects sometimes have zero realization in other verbal forms (see examples 8–17 below), so this may also be the case here. In (7), for example, the clause in question is an elaboration of the previous clause and does not advance the discourse:

(7) *nìxlən m-Čúxo,*¹ *drélən l-Žàwa.*¹ 'We have got rid of Čuxo. We've put him in the Zab.' (A7:19)

The *qəm-qaṭəl* form with an L-suffix is also used as an optional alternative to *qṭille* to express a 3fs. and 3pl. pronominal object and as an obligatory suppletive form of *qṭille* to express 1st or 2nd person pronominal objects.

Compound verbal forms consisting of a resultative participle or an infinitive express a pronominal object either by L-suffixes or by a pronominal suffix attached to the preposition *ʾəll-*. The latter is obligatory when the participle or infinitive does not have a copula enclitic, e.g.

hóle qṭíləlle
y-áwe qṭíləlle

If the there is a copula enclitic, the most common means of expressing the pronominal object is by L-suffixes. The use of the longer *ʾəll-* phrase produces a heavier morphological form with a greater number of syllables. When the copula enclitic is 3rd person, the *ʾəll-* phrase is generally placed before the copula, e.g.

Default form with L-suffix	Heavy form with *ʾəll-*
qṭiləlle (qṭilɛle-le)	*qṭiləllele (qṭila-əlle-ile)*
qṭilətle (qṭilət-le)	*qṭilət-əlle*
qṭilənne (qṭilən-le)	*qṭilən-əlle*

On some occasions a pronominal direct object is not marked on a transitive verb, but it is appropriate to supply them in an English translation. Such zero object anaphora tends to be used when the speaker presents the clause as denoting an action that is closely related to what precedes, belonging together with it as part of the same overall event, e.g.

(8) *ʾa-másta marèla.*' *mátti š-nùra-w*' *šáxna-w dɛ́rɛ marɛ̀θa.*' 'They congeal the yoghurt, they put it on the fire, it warms up and they add a congealing agent (rennet).' (B5:65)

(9) *ʾu-ʾáyya har-šaqláwa mən-d-àn šíše*' *mattàwa*' *ʾə́lla dìya.*' 'She (the daughter-in-law) was constantly taking the iron bars and putting them into her.' (A19:6)

(10) *yáwəxley xáčča kèke*' *madúqəx b-iðèy.*' 'We shall give them some cakes, making them hold them in their hands.' (A8:11)

(11) *ta-t-kút-yom xà-maṣla kə́sla díya,*' *madə̀mxa kə́sla*' 'in order that she could bring somebody to her every day and cause him to lie with her.' (A4:51)

(12) *y-áwəð xà-ṭena,*' *trè-ṭene qése,*' *y-áθe mzabə́nwa ṭla-d-àw-u yə́mme díye.*' 'He made one or two loads of wood, and would come back and sell them for himself and his mother.' (A14:10)

A pronominal direct object is often omitted on the verb 'to give' (*yawa*) when its referent is understood from the context, e.g.

(13) *bábi nábəlla gu-jàma*' *hàlleǃ*' 'Father, take them to the mosque and give them to him!' (A17:11)

(14) *mɔ́re xa-sùsa*' *ʾánna xamšà šə́nne*' *ʾáp-xa lɛ́le mə́ṣya mə́tya ʾə́lle dìye.*' ... *də-hálli ʾàna ṭ-ásqən.*' 'He said "There is a horse that for these five years nobody has been able to get near." ... He said "King, may you be in good health, give it to me, I shall go up (and ride it)."' (A12:62–63)

(15) *ʾána lɛ́-yawənne ʾàp-xa-fəlsa*' ... *xíšɛle l-bèθa*' *lɛ́le-hiwa ʾàtxa.*' '"I shall not give him a penny" ... He went to the house and did not give (any of the money) and that was that.' (A1:8–9)

(16) *qímtɛla báxta zílta ṭlìbtəlla.*' *hal-jálde jàlde mɔ́ra*' 'The wife went and requested it. "Give it quickly," she said.' (A5:8)

A pronominal object is generally omitted on the imperative of *šqala* 'to take' when the referent is perceptible in the speech situation, e.g.

(17) *ha-šqùḷ,*' *máttula tămàha.*' 'Here, take them, put them over there.' (A6:3)

15.13.2. *Direct Object Nominal*

When the object is a nominal, it is not usually combined with any object marker, but the verb frequently has a pronominal object that is co-referential with it. The occurrence of this pronominal object agreement is conditioned primarily by the status of the object nominal, the usual situation being that a definite object nominal has object agreement whereas an indefinite one lacks it. The distribution of the object agreement is also affected by the pragmatic relation of the nominal to the other elements in the clause and the status of the clause within the surrounding discourse.

15.13.2.1. *Definite Direct Object Nominals*

When the object nominal is definite, the verb normally has a pronominal object that agrees with it. This applies both to object nominals placed after the verb and those placed before the verb. Examples from the text corpus:

Present base verbs

    (1) *mattúla kàrte.*ˈ 'He lays down his load.' (A15:3)

    (2) *ʾína xazyála Lelìθa.*ˈ 'She sees Leliθa.' (A19:8)

    (3) *máre šaqlə́xle bronéy ta-t-taxríle ʾálaha xá-ga xèta.*ˈ 'He told us to take their son so that they remember God again.' (A15:17)

    (4) *ṭ-axlə́nne lə́xmi hál ʾo-yómət mèθən.*ˈ 'I shall eat my bread until the day Î die.' (A15:21)

    (5) *θéle xa-náša qəm-šaqə́lle ʾo-kàrmi.*ˈ 'A man came and took away my orchard.' (A17:30)

    (6) *bás ṭəppəryáθa qəm-xazyàla kálθa.*ˈ 'But the daughter-in-law saw her finger-nails.' (A19:2)

    (7) *ʾə́rbət xwáre pərmìwale-u*ˈ 'They used to slaughter the sheep.' (B5:7)

    (8) *ʾən-lá-ʾawðət b-xábra dìyi*ˈ *gánux šaqlə̀nna.*ˈ 'If you do not do as I tell you, I shall take away your life.' (A15:20)

Imperatives

    (9) *qu-šqúlla ʾáyya skìnta.*ˈ *si-prúmle ʾáwwa yála zòra*ˈ *ṭ-íle gu-dudìya.*ˈ 'Get up and take this knife. Go and slaughter this baby boy who is in the cradle.' (A15:8)

(10) *wúr gu-d-áwwa bὲθa.*ˈ *čúmle tắra bàrux.*ˈ 'Go into this room. Close the door behind you.' (A22:26)

(11) *mpálǝṭla zùzi.*ˈ 'Bring out my money!' (A15:3)

Past base forms

(12) *ʾàwwa*ˈ *munšíle zúze díye.*ˈ 'He forgot his money.' (A15:1)

(13) *mpulṭíla táwra-w xmàra.*ˈ 'She got out the ox and the ass.' (A21:23)

(14) *ṭḷá-bnone xilìli.*ˈ *báxta xilàli*ˈ 'I have eaten the three sons. I have eaten the wife.' (A20:12)

(15) *ʾáp-ay ʾáqla primàli*ˈ 'I cut off also that leg.' (A22:9)

Compound verbal forms

(16) *šqílǝlla ṭása b-lèle.*ˈ 'They took the bowl in the night.' (A15:12)

(17) *mxŭláltǝlla ʾay-dùkθa.*ˈ 'She cleaned that place.' (A17:27)

(18) *ʾína bróna lèla xíltǝlle.*ˈ 'But she did not eat the boy.' (A19:7)

(19) *šuréla manšóyǝlle ʾalàha.*ˈ 'They began to forget God.' (A15:17)

(20) *súse díye mtaslómǝlle ṭla-xolàma.*ˈ 'He handed over his horse to the servant.' (A12:8)

The pronominal agreement with a definite nominal object does not occur in certain situations, which may be classified as follows.

(i) *Inalienable Possession*
The agreement on the verb is occasionally omitted when the referent of the object nominal lacks distinctness from the subject referent due to its being an inalienable appurtenance or possession of the subject, usually a body part or the reflexive expression *gan-* 'self', e.g.

(21) *šámǝṭ qðále dìye.*ˈ 'Let him break his neck.' (A15:13)

(22) *si-mxi-ʾáqlux gu-xáse díye.* 'Go and kick his back.' (A15:13)

(23) *mṭáši gànux!*ˈ 'Hide yourself!' (A22:29)

(24) *ʾána majbúr-iwǝn ṭ-ázǝn qáṭlǝn gáni pálxǝn w-áy dmíxta maxlǝnna?*ˈ 'Was I obliged to kill myself working to feed her while she slept?' (A21:38)

This, however, is only a tendency and on several occasions the agreement pronoun occurs on the verb with such objects, e.g.

(25) *qəm-păréla ʾɛ̀ne.*ˈ 'He burst his eye' (A16:2)

(26) *ʾo-rábbən múttəlla ʾáqle díye rš-ắqəl bàxta.*ˈ 'The monk put his leg onto the leg of the woman.' (A16:11)

(27) *ʾu-ʾáti də-ráqðət šɛšátla gànəx.*ˈ 'You should dance and shake yourself.' (A27:11)

(ii) *Objects Lacking Distinctness from the Activity*

In some cases the explanation for the lack of agreement with a definite object nominal is that the nominal does not play a prominent role in the discourse but rather is presented as an incidental component of the activity. This applies to constructions such as those in (28)–(30) which have the word *bɛθa* 'the house' as the object complement of the verb:

(28) *ʾána mtugbártən bɛ̀θa.*ˈ 'I have looked after the house (I have done housekeeping).' (A21:13)

(29) *ʾána mquzqáztən bɛ̀θa.*ˈ 'I have arranged the house (I have done housework).' (A21:15)

(30) *qìmtɛla,*ˈ *mxulálta ʾamàne*ˈ *ʾu-kníšta bɛ̀θa*ˈ *ʾu-mtugbàrta.*ˈ 'She got up and washed the dishes, swept the house (did house-sweeping) and tidied it.' (A21:20)

(iii) *Clauses with Reduced Discourse Prominence*

The omission of the agreement pronoun is conditioned in some cases by the reduced prominence of the clause as a whole due to its occurrrence in a section of the discourse supplying background material rather than in the prominent foreground. This applies to (31) and (32), which are extracts from narratives. In (31) the clauses referring to the cutting of Zāl's hair without the object agreement are in a section that gives the preliminary background to the following foreground narrative section, in which the clause that recounts one specific event of the cutting of his hair has object agreement. In (32) the clause without object agreement 'They did not know God' supplies general information about the nature of idol worshippers, which supplies the background for the following foreground events. The foreground contains a key clause in direct speech with object agreement 'I shall kill my son':

(31) *bábe dìye,*ˈ *Ẓàl,*ˈ *ʾíθwale xà-naša*ˈ **maqráṭwa káwse dìye**ˈ [background] *y-amríle ḥallàqa.*ˈ... *mattúwa semálta gu-xáṣe díye ʾu-y-asə̀qwa*ˈ *gu-réšə semàlta*ˈ **maqráṭwa káwsət Zàlo.**ˈ [background] **qəm-qa-yə́ṣle káwse dìye**ˈ [foreground] *xírre gu-réšət Ẓàlo*ˈ *ʾíθwa šaqyàθa*ˈ

*brinàne,*ˈ *gò̰re ṛába.*ˈ 'His father Zāl had a person who used to cut his hair, called a barber.... He would place a ladder on his back and climb up the ladder and cut the hair of Zāl. He cut his hair and looked at the head of Zāl. (He saw) that there were scars of enormous wounds.' (A29:2–3)

(32) *màlka*ˈ *saġðánət sănằme-wewa.*ˈ *málkət ʾÌrən-wewa.*ˈ *ʾáni saġðíwa sănằme.*ˈ **lḛ̀ yằðíwa ʾálaha**. ˈ [background] *lé yằðíwa diyánət krəstyáne mòdile.*ˈ *fa-saġðíwa sănằme.*ˈ *béna qímle bábe màlka*ˈ *mə́re* **qaṭlə́nne bròni**.ˈ [foreground] *bróne díye rìqle.*ˈ 'The king was a worshipper of idols. He was king of Iran. They used to worship idols. They did not know God. They did not know what the religion of Christians was. They used to worship idols. (29) His father the king said "I shall kill my son". His son fled.' (B6:28–29)

In some cases of the omission of the object agreement the clause in question is of reduced discourse prominence due to the fact that it repeats information that has been given previously rather than advancing the discourse, e.g.

(33) *qayə́mwa bábət xə̀tna,*ˈ *dawə́qwala ʾíðə bábə kʾàlo.*ˈ *yaʿni* **dwáqa dawə́qwa ʾíðə-dìye**ˈ *qá-t ʾó-məndi wèle.*ˈ 'The father of the groom would rise and shake the hand of the father of the bride. He would shake his hand (to confirm) that this has taken place.' (B5:10)

(34) *qamáye y-azə́xwa l-ʾéðət qàša.*ˈ **barxə́xwa ʾéðe dìye**. ˈ *xárθa y-azə́xwa l-béθət mùxtər,*ˈ *ʾáp-ʾaw barxə́xwale ʾéðe dìye.*ˈ 'First we would go and offer a festival blessing to the priest. We would offer him a festival blessing. Then we would go to the house of the village head and would offer also him a festival blessing.' (B6:14)

(35) *dɛráxwale kìsa,*ˈ *kísa gò̰ṛa,*ˈ *xɛṭáxwa xằ̰ṣ qa-dàwwe.*ˈ **dɛráxwa dàwwe,**ˈ *xánč̰i šoqáxwale gu-margə̀lta.*ˈ 'We would put it (the *dawwe*) in a bag, a large bag, which we sewed specially for *dawwe*. We put in the *dawwe* and left a little in the pan.' (B10:10)

(36) *ṭɛšáxle qurṭánət xmára də̀mma.*ˈ *ṭ̰-àmrəx*ˈ *Kằrīm zìlle bar-xmáre díye*ˈ **ṭla-mɛθéwa xmáre dìye,**ˈ *ʾə̀θyela déwe gu-ða-lawùrta*ˈ *xíləlle ʾàw-u xmáre díye.*ˈ 'We shall daub the donkey blanket with blood and say "Karim went after his donkey, in order to fetch his donkey, and wolves came into a valley and ate him and his donkey."' (A14:17)

In a stretch of foregrounded discourse the end of the section is sometimes given greater prominence than the body of the section to mark a clear boundary. This may be reflected in the distribution of object agreement. In (37), for example, the execution of two brothers is presented in a discourse section that may be interpreted as expressing a single overall event. The princess Parizada gives a command for the execution of each of the brothers. The command for the second execution, which closes the section, has the agreement but the first command lacks it:

(37) *síqεle xóna ʾo-gòṛa,*ˈ *…mára* **prúmu rèše!**ˈ *ʾáwwa prìm réše.*ˈ *qímεle ʾo-trè.*ˈ *qímεle ʾo-trè,*ˈ *sìqεle*ˈ *…mára* **prùmle réše díye!**ˈ *ʾáp-aw réše díye prìma.*ˈ 'The oldest brother came up…she said "Cut off his head!" His head was cut off. The second one got up. The second one got up and came up…she said "Cut off his head!" Also his head was cut off.' (A24:31)

(iv) *Pragmatic Relation of the Object to the Rest of the Clause*
Another factor relevant to object agreement is the pragmatic relation that the object has to the other components of the clause. Agreement with a definite direct object is generally omitted on the verb if the object constitutes a narrow focus which does not include the verb. The focus may be a new information focus, in which case the verb is in the presupposition of the clause, or the focus may be one of prominence, in which case the verb may be new information but is of reduced prominence. In (38), for example, the clauses marked in bold that have the proper names Zine and Mămo as direct objects, have the presupposition 'We shall take X to Y', the object slot X, therefore, is a narrow information focus whereas the verb is in the presupposition:

(38) *šuréla mjawóde m-ġðàðe*ˈ *ʾéni nábləx kəs-d-èni.*ˈ **Zìne nábləx kəs-Mămo**ˈ **lo-Mămo nábləx kəs-Zìne.**ˈ *mára là,*ˈ *bàxta*ˈ *be-băxət-ìla.*ˈ *maqəṭlàle gáwṛa*ˈ **nabléxi Zìne kəs-Mămo**.ˈ 'They started arguing with one another regarding whom to take to whom. "Should we take Zine to Mămo or Mămo to Zine?" They said "No, a woman is treacherous. She will have her husband killed. Let us take Zine to Mămo."' (A26:2)

As we have seen in §15.4.1.4.1. and §15.4.2.6.1., when the verb is a compound form with a copula clitic, the copula element is often moved leftwards onto the item in narrow focus. When the clitic is attached by

this process to a definite nominal object, there is no pronominal agreement on the verb, e.g.

(39) A: *módit xázya gu-bèθa?*ˈ B: *kθàwux-in xázya gu-béθa.*ˈ ʾA: "What have you seen in the house?" B: "I have seen *your book* in the house."ʾ

(40) *Qára Téždin ʾíle xȯtne díye.*ˈ *yáʿni xáθət Mir-Zàndin-ile šqíla Qára Tèždin.*ˈ 'Qara Teždin is his brother-in-law, that is Qara Teždin has married the sister of Mir-Zandin.' (A26:55)

(41) *ʾàyyən ʾána wíða bíya díya.*ˈ 'I did this with her.' (A21:40)

When a narrow focus is put on some element of the clause other than the direct object, the agreement pronoun is used with a definite object, e.g.

(42) *ʾàtit múθyəlle ṭéri?*ˈ *máre hè*ˈ *ʾànən múθyəlle ṭérəx.*ˈ ʾ"Did *you* bring my bird?" He said "Yes, *I* brought your bird."ʾ (A24:32)

(43) *ʾàtit qtíləlle xúwwe?*ˈ 'Did *you* kill the snake?' (A24:45)

If, on the other hand, the object nominal is set up as a topic referent at the front of the clause rather than as a narrow focus, there is an increased tendency for object agreement to occur. This can be seen when this construction occurs in the contexts which have been identified above as reducing the tendency for the occurrence of object agreement. The passage in (44), for example, constitutes a preliminary background section to the narrative, which explains why the object agreement has been omitted in the clauses *masqíwa ʾərwèy*ˈ ('They would bring up their sheep') and *mεθε-ʾərwèy*ˈ ('They bring their sheep'). By contrast, in the clause *ʾərwéy masqíla l-gárət ʾùmra*ˈ ('They would take their sheep onto the roof of the church'), in which the object is placed at the front as a topic, there is object agreement, despite the fact that this is in the same background section of the discourse.

(44) *ʾu-ʾímə ṭ-áwe qèṭa,*ˈ *bεhèr,*ˈ **masqíwa ʾərwèy**ˈ *maṣàyəf*ˈ *gu-ṭuràne,*ˈ *y-amríla zawzàne.*ˈ *béna y-àθi*ˈ *góta góta d-ὲ-maθa,*ˈ *ʾi-péši ʾárxe d-ὲ-maθa.*ˈ **ʾərwéy masqíla** *l-gárət ʾùmra.*ˈ *sab-gárət ʾúmra l-báθre díye mṭíθεla l-ṭùra,*ˈ *hátxa ramànε ṭúra.*ˈ *ʾu-gárət ʾúmra hàtxεle.*ˈ *y-áθi ṣàli,*ˈ—*yáʿni máṣe náša ṭ-ásəq l-gáre b-sănày*ˈ **mεθε-ʾərwèy**ˈ *masqìla l-gáre.*ˈ 'When it was Summer and Spring, they would bring their sheep up to the summer pastures in the mountains, which are called *zawzane*. So, they would come alongside that village and become guests of the village. They would take their sheep onto the roof of the church.

This was because the roof of the church at its back extended to the mountain, so high was the mountain. The roof of the church was like that. They would come and go down (the mountain),—a person could easily go onto the roof—bring their sheep and take them onto the roof.' (B18:1–2)

15.13.2.2. *Indefinite Direct Object Nominals*

As a general rule there is no pronominal agreement on the verb when the direct object is indefinite, e.g.

(1) *mә́re là¹ ta-ṭ-óðәn qápәx ʾàp ṭla-réšәx.¹* 'No, not until I make a lid also for your head.' (A20:3)
(2) *ya-ʾalàha,¹ yawә́tlәn xa-bròna.¹* 'Oh God, give us a son.' (A15:17)
(3) *xáðrәx xázexi xa-nàša¹ ṭ-íle palàxa¹ ʾu-t-yáxla ʾә́lle dìye.¹* 'Let's look for a man who is a hard worker and give her to him.' (A21:3)
(4) *mšádrәn mɛxòlta ʾә́lle díye.¹* 'I shall send food to him.' (A17:11)
(5) *ʾána m-ɛ́ka mɛθә́nnux qèse?¹ m-ɛ́ka mɛθә́nnux bәzmàre?¹* 'From where should I bring you wood? From where should I bring you nails?' (A17:3)
(6) *xәzyéla nèra.¹* 'They saw a river.' (A17:3)
(7) *qímtɛla šqíltɛla xa-bròna.¹* 'She got up and took a son (of hers).' (A19:3)
(8) *wúð ða-spayúθa mә̀nni!¹* 'Do me a favour!' (A7:17)

In certain circumstances, however, there is pronominal agreement with indefinite direct objects. In general this is found where the object has some kind of topical prominence in that it plays a central role in the immediately ensuing discourse, in which it is referred to pronominally. This is attested both where the indefinite object has a specific referent and also where it has a non-specific referent. Objects with non-specific referents are typically found with verbs expressing habitual activities. These typically do not have the same referent on each occurrence of the activity. What is important, however, is that within one particular sequence of events involving one occasion of this activity, one specific referent is durable across all events:

(9) **xazéla xá parizàda**,¹ *xá šapìrta,¹ brátәt málka t-Màgrәb,¹ hóle šqílәlla Déwa Ƶàr,¹ hóle múθyәlla gu-d-ɛ̀ gәppíθa.¹* 'He finds a princess, a beautiful woman, the daughter of the king of Morocco, whom Dewa Zar had taken and brought to the cave.' (A28:17)

(10) *b-lɛ̀lela*,' *plíṭṭela zìltɛla* **xzíθəlle xa-nàša**.' 'At night she went out
and found a man (this referent plays a central role in what follows).'
(A22:36)

(11) *qáša* **šaqólle xa-qésa rìxa**.' *b-ʾíðe díye dawùqle*' *ʾi-rášəm hátxa gu-réšət*
nàše' *maxéle gu-réšət nàše*,' *ʾax burkàθa*.' 'The priest would take a long
stick. He would take it in his hand and make a sign like this on the
heads of the people, he would tap it on the heads of the people,
as blessings.' (B6:3)

(12) **ṃaléla xa-ṣiníye gòrṭa**.' *maṣléla maṭṭúla xà-dukθa*.' '(Each) fills
a large tray and brings it down and places it in a certain place.'
(B6:23)

(13) *xìrre*' **xəzyále ðà xúrta**.' *xúrta ʾíla ʾilána rìxta*.' *dalíθa xðíta-ʾəlla síqta*
ṃlíθa ʾənwe.' *ða-xúrta ramàntɛla*.' 'He looked and saw a poplar tree.
A poplar is a tall tree. A vine full of grapes had grown up around
it. It was a high poplar.' (A43:1–2)

Such indefinite nominals with topically prominent referents are sometimes
placed before the verb, e.g.

(14) **xə́lya marəxθìle**' *ʾu-šoqíle pḗša dˇáraj ḥărára díye taqríban ʾàrbi*.' *dɛ́ri*
marɛ̀θa bíya.' 'They boil milk and let its heat become about forty
degrees. They put rennet in it.' (B6:37)

(15) **sáre xašlə́xwala** *b-xašùlta*.' *ʾu-mpartənə̀xwala*' *ʾu-qašrə̀xwala*.' 'We
would crush barley in a mortar. We winnowed it and removed the
peel.' (B10:12)

The very process of fronting the indefinite nominal before the verb to
present it as the topic of the clause endows it with topical prominence
and this alone can condition verb agreement, even if the referent does
not play a central role in the immediately following discourse. This applies
to the referents of the nominals qualified with the universal quantifier in
(16) and (17), e.g.

(16) *kút-xa qəm-xašə́lle ða-gòta*.' 'He threw each one down to one side.'
(A29:56)

(17) *ʾu-kúl-xa tɛ́ra mṭalìwala*.' 'They played every type (of game).'
(B7:6)

When a fronted object nominal is a narrow focus, however, the verb does
not have an agreement pronoun, e.g.

(18) A: *xónux hóle xíla xabùša*ˈ B: *là,*ˈ *xàwxɛle xíla xóni.*ˈ *lɛ́le xabùša xíla.*ˈ 'A: "Your brother has eaten an apple." B: "No, my brother has eaten *a peach*. He has not eaten *an apple*.'"

(19) *ʾu-suráye lɛ̀la jráṭa*ˈ *sab-zargùlela lwíše.*ˈ 'The Christians were not slipping since they were wearing sheepskin shoes.' (B19:7)

15.13.3. *Independent Pronouns*

Independent personal or demonstrative pronouns are occasionally used in the direct object position. In such cases there is generally agreement on the verb in the form of a coreferential pronominal element, except in the aforementioned circumstances where agreement tends to be omitted, e.g.

(1) *dáx pɛrmə́nne ʾàwwa?*ˈ 'How can I slaughter him?' (A15:9)
(2) *ʾáwwa xá-ga xéta dɛrɛ́le gu-mìya.*ˈ 'They put it again in water.' (B6:44)
(3) *lát-θìθa ʾána mpalóṭǝlli m-gu-sɛ̀jǝn.*ˈ 'You did not come to take me out of jail.' (A26:82)

In (4)–(6) the independent object pronoun is in narrow focus and the agreement is omitted:

(4) *ʾána ʾàti bắyǝn.*ˈ 'I want *you*.' (A25:31)
(5) *ʾàyya bắyǝn.*ˈ 'I want *her*.' (A8:91)
(6) *mɛ́θǝx ʾày kǝsle-díye.*ˈ 'Let's take *her* to him.' (A4:3)

It should be noted, however, that there is a greater tendency for the agreement element to be omitted when the object is a 3pl. demonstrative pronoun than there is with other types of independent pronominal object, e.g.

(7) *pálšǝx ʾáni.* 'Let's fight them.' (A14:52)
(8) *bár d-ày,*ˈ *xá-tre yomàθa,*ˈ *y-aθɛ̀wa*ˈ *maḷɛ́wa ʾáni mìya.*ˈ 'One or two days after that they would come and fill them with water.' (B5:77)
(9) *qímɛle šqìla-ani.*ˈ 'He took them.' (A17:13)

15.13.4. *General Remarks Concerning Object Agreement*

Taking into account all the various factors discussed above, it appears that the basic motivation for object agreement is the existence of some kind of prominence of the verbal predicate. The tendency for the agreement to occur with definite direct objects rather than indefinite ones can be correlated with a high degree of transitivity according to Hopper and Thompson's scale of transitivity (1980), in which 'individuation' of the object is a factor bringing about high transitivity. This would also apply to the exceptions to this rule with regard to definite objects that are inalienable possessions of the subject and indefinite objects that play a prominent discourse role, which may be interpreted as having a reduced or enhanced degree of individuation respectively. This high transitivity can be said to give the verbal predicate a higher degree of prominence. The reduced likelihood of object agreement in verbal predicates that occur in background clauses is due to the reduced prominence of the clause as a whole due to its status in the discourse rather than the properties of its components. Similarly, the lack of agreement with objects that constitute a narrow focus arises from the consequential reduction in the prominence of the verb relative to that of the object due to the pragmatic relation between the object and the clause rather than the pragmatic property, i.e. definiteness, of the object. The explanation for the increased tendency for agreement to occur when the object is topicalized at the front of the clause is likely to be that constructions with fronted topical constituents are typically used as a strategy for disjoining in some way the clause from what precedes in order to mark a boundary in the discourse (§17.7.2.3., §17.7.5.2.). The function of boundary marker gives the clause, including the verb, a enhanced degree of prominence.

15.13.5. *The Distribution of Compound Verbal Forms with 'Heavy' Pronominal Objects*

As remarked above (§15.13.1.), compound verbal forms express the pronominal object by L-suffixes or by pronominal suffixes attached to the longer preposition *ʾəll-*. This is obligatory when the form does not have a copula enclitic but optional when there is a copula enclitic. When an *ʾəll-* phrase is used with a form that has a copula enclitic, the form is longer than one with an L-suffix. Most examples of such *ʾəll-* phrases combined with copula enclitics that are attested in the text corpus occur with 3rd person copula elements and their position is before the copula.

The *ʾəll-* + enclitic copula construction does not appear to be used totally randomly. An examination of the contexts in which it occurs shows that there is a clear tendency for it to be used at the end of a chain of clauses. It marks the boundary of a closely knit series of actions that are presented as a single overall event. This use of the construction to mark an end boundary in a span of discourse probably arises from the fact that it has a heavier morphological weight than the corresponding construction consisting of the enclitic copula + L-suffix.

The following examples are from narrative texts:

(1) *màxyəllux,* [Cop.—L-suffix]ˈ *màxyəllux,* [Cop.—L-suffix]ˈ *màxyəllux* [Cop.—L-suffix]ˈ *há-ṯ-ila múbyəlle* [Cop.—L-suffix] *gə̀ldux.*ˈ *ʾu-mŭdə̀rəl-luxila.*ˈ [*ʾəll*-phrase—Cop.] 'They beat you, they beat you, they beat you, until they made your skin swell, then they returned you.' (A2:10)

(2) *də́bba zìltɛla.*ˈ *də́bba zìltɛla,*ˈ *zílta zìlta,*ˈ *xzíθɛla xa-ʾə̀rba-w*ˈ *ʾu-muθɛ̀θəllɛla.*ˈ [*ʾəll*-phrase—Cop.] 'The bear went off. The bear went, went, went, saw a sheep and brought it back'. (A27:9)

(3) *hóla màra*ˈ *xzíθəlle* [Cop.—L-suffix] *xa-bronət-xà-malka,*ˈ *láx-ða'a ʾɛ̀ka,*ˈ *ʾu-bìθəllela.*ˈ [*ʾəll*-phrase—Cop.] 'She says that she saw the son of a king—we do not know where—and fell in love with him.' (A4:12)

(4) *qìmtɛla,*ˈ *šqílta xa-nerìya,*ˈ *neríya gòra*ˈ *ʾu-prìmtəllela.*ˈ [*ʾəll*-phrase—Cop.] 'She got up, took a male goat, a large goat, and slaughtered it.' (A28:26)

(5) *máre mo-ṯ-òðəx.ʔ*ˈ *pɛrmáxle ʾo-zòra*ˈ *ṯ-axlə̀xle,*ˈ *hal-ʾɛ́-gət ṯ-áza də́bba m-tàma.*ˈ *qímela ʾo-zóra prìməllela*ˈ [*ʾəll*-phrase—Cop.] *ʾu-xìləllela.*ˈ [*ʾəll*-phrase—Cop.] 'He said "What shall we do? Let's slaughter the young one and eat him, (and wait) until the bear goes away from there."' They got up and slaughtered the young one and ate it.' (A20:7–8)

(6) *ʾámər ʾána ʿAbda-Raḥmằn-iwən,*ˈ *pθúx tắra!*ˈ *pθìxəllele* [*ʾəll*-phrase—Cop.] *tắra.*ˈ 'He said "I am ʿAbda-Raḥmān, open the door!" and he opened the door.' (A23:26)

In (7) below, the *ʾəll*-phrase—Cop. construction *pθìxtəllela tắra* 'She opened the door' is in close sequence to the preceding clause *máxɛ l-tằra* 'They knock on the door'. There then follows a chain of clauses beginning with a Cop.—L-suffix construction repeating a reference to the opening of the door: *pθíxtəlle tằra*. The objective meaning of the two references to the opening of the door is clearly the same. The use of the different constructions arises from the choice of the speaker as to how to present

the relationship between events. The first sequence ends with the opening of the door. The second sequence begins with the opening of the door.

(7) *ʾáy hóla wáða kùbbe.*ˈ *hóla ʾiθáθa gu-lɛ̀ša,*ˈ *lyáša kùbbe,*ˈ *ʾu-ʾə̀θyɛle*ˈ *bába dìya*ˈ *ʾu-wằzīr,*ˈ *ʾə́θyela tərwə̀θna,*ˈ *màxɛ l-tằra.*ˈ *máxɛ l-tằra,*ˈ *ʾiθáθa qàmxɛle,*ˈ *pθìxtəllela* [*ʾll*-phrase—Cop.] *tằra.*ˈ *pθíxtəlle* [Cop.—L-suffix] *tằra,*ˈ *xzíθəlle bába dìya*ˈ *ʾu-ʾup-wằzīr mə̀nne.*ˈ 'She was making meat-balls. Her hands were in dough, while kneading the meat-balls. Her father and the vizier came, the two of them came and knocked on the door. They knocked on the door and, while her hands were (covered in) flour, she opened the door. She opened the door and saw her father and also the vizier who was with him.' (A21:26)

Forms with an *ʾll-* phrase placed after a 1st or 2nd person copula clitic are less frequently attested in the text corpus. They are generally used with the same function as 'heavy' boundary markers. In (8) the form occurs at the end of each of the series of discrete events that are described by the speaker. In (9) the form, likewise, is used at the end of a series of clauses that the speaker presents as closely-knit aspects of one overall event:

(8) *ʾíθwa xa-ṭúrət skinyàθa.*ˈ *muttɛ́θətwa qámi xa-ṭúrət skinyàθa.*ˈ **ʾáw pìðən-əlle.**ˈ *xa-ṭúra xéna t-mə̀lxa,*ˈ **ʾáw pìðən-əlle.**ˈ *tə́rte xamáθa ʾaxwáθəx ʾə̀θyela,*ˈ **prìmən-əlle réša**.ˈ *ʾíθwa nàra,*ˈ **ʾáp-ʾaw múklən-əlle** *šwìrən.*ˈ 'There was a mountain of knives. You had placed before me a mountain of knives. I crossed it. There was another mountain of salt and I crossed that. Two young women like you came and I cut off their head. There was a river, I stopped it and jumped over.' (A24:33)

(9) *θéle báre dìye*ˈ *θéle muꜤàlləm.*ˈ *máre ʾána b-zawnə́nne ʾən-háwe b-tə́rte ʾaqlàθa.*ˈ *qímən ða-xéta* **prìmən-əlla**.ˈ 'After him a teacher came. He said "I shall buy it if it has two legs." I cut off another one.' (A22:9)

15.13.6. *Object Marker on the Direct Object Nominal*

On some sporadic occasions the direct object nominal has prefixed to it the preposition *qa-*, *ṭla-* or *l-*, which are normally used before nouns to express a dative relation. In the available examples, the preposition *qa-* is used before definite objects without an agreement pronoun on the verb, e.g.

(1) ṣlíθɛla bàxta˺ xzíθa qa-màlla.˺ 'The woman went down and saw the mullah.' (A22:11)

(2) Tătár-i Slemán-i Sə́ndi qṭílɛle qa-Ẓ̌àl.˺ 'Tătar-i Sleman-i Səndi killed Zāl.' (A28:1)

(3) ʾána qa-Sìttìye bắyən.˺ 'I love Səttiye.' (A25:22)

(4) băyéwa qa-ʾalàha.˺ 'He loved God.' (A16:10)

(5) dwíqele qa-ʾàrya˺ ʾu-mùθyəlle.˺ 'He caught the lion and brought it back.' (A27:3)

(6) maláxa mŭ̆ŕášle qa-ràbbən.˺ 'The angel woke the monk.' (A15:11)

(7) dáx bárya b-sèrwən˺ qa-xálwa xwàra?˺ 'How could it happen that I reject the white milk (of my mother)?'

(8) mắxəb qa-bábux ʾu-yə̀mmux!˺ 'Love your father and mother!'

The preposition ṭla-/ta- is attested before definite direct objects and is in some cases accompanied by an agreement pronoun on the verb, e.g.

(9) taxránne ṭla-xlúlət xóni Šə̀mmo.˺ 'I remember the wedding of Šəmmo my brother.' (B8:21)

(10) ʾən-ʾána hawə̀nwa qṭílə̄lla ʾă̆yáha ʾaqə̀rwa,˺ ʾáwwa xúwwe ṭ-awéwa qṭíla ṭla-bròni.˺ 'If I had killed that scorpion, that snake would have killed my son.' (A9:6)

(11) ʾáwwa qṭílle ṭla-ʾárya. 'He killed the lion.' (A11:1)

(12) zìptəllela˺ ṭla-Mằmo.˺ 'She pushed Mămo.' (A26:3)

(13) díya ʾáwwa bắye ta-d-áyya bráta zùrta.˺ 'Now he loves this young girl.' (A14:83)

(14) zarqə́xwa ṭla-mə́zze max-ṣoṣìθa.˺ 'We used to weave the hairs like a plait.'

The preposition l- is rarely used as a direct object marker on a nominal. An isolated example in the text corpus is (15):

(15) ḥátta l-ʾumràne-ži̇gən˺ tlìxəlla.˺ 'He destroyed even the churches.' (B2:2)

15.13.7. *Double Objects*

The verbs ʾwð 'to do, to make', mly 'to fill', dwq 'to fill, pack' and certain causative verbs may take two direct objects, e.g.

(1)   *y-oðíwale pùwuš.*ˈ *jămíwale y-oðíwale qàpla.*ˈ 'They made it into hay. They gathered it and made it into an armful.' (B5:84)

(2)   *y-oðále zeðàye.*ˈ… *y-oðále guttáθa qamàye.*ˈ 'She makes it into pitta breads.… First she makes into balls.' (B5:101)

(3)   *y-oðə́xwale qəṭṭáṭe qəṭṭàṭe.*ˈ 'We made it into pieces.' (B5:139)

(4)   *ʾu-ṃáḷəxxa čántux zùze.*ˈ 'We shall fill your bag with money.' (A39:14)

(5)   *čánte díye dwíqla zwàðe.*ˈ 'She packed his bag with provisions.' (A21:22)

(6)   *malwəšíwale jull-dìye*ˈ 'They would dress him in his clothes.' (B5:26)

(7)   *maxəðríla ʾa-kʸàlo.*ˈ 'They caused the bride to go around (the village).' (B5:38)

(8)   *madoqíla xə́tna-w kʸálo gota-ġðàðe.*ˈ 'They make the groom and bride hold each other's side.' (B5:50)

(9)   *ʾə́dyo maštə́nnɛxu štéθa dìyən*ˈ *ṭ-in-wíðəlla ʾàna.*ˈ 'Today I shall give you our drink to drink, which I have made.' (B15:57)

(10) *hátxa măləpə́tli ḥaqqúθa ʾu-na-ḥaqqùθa.*ˈ 'You should teach me what is lawful and what is unlawful.' (A15:10)

15.14. Indirect Objects

A nominal that has the function of the indirect object of an action, i.e. one that refers to a participant who is a recipient or beneficiary in the action, is expressed by attaching the preposition *ṭla-/ta-* or *qa-*. Unlike direct object nominals, indirect object nominals normally do not have any agreement element in the form of a pronominal copy on the verb, even when the noun is definite, e.g.

(1)   *ta-šwáwux t-yáwəl tə̀rte tawriyáθa.*ˈ 'He will give to your neighbour two cows.' (A3:4)

(2)   *tə́mməl ṭ-ámrən ta-bàbi.*ˈ 'Tomorrow I shall tell my father.' (A18:7)

(3)   *mə́rtɛla ṭla-d-áw-naša sáwa puš-b-šèna!*ˈ 'She said to that old man "Remain in peace!"' (A8:69)

On some rare occasions an agreement L-suffix is attested on the verb, e.g.

(4)   *ʾána ṭ-àzən*ˈ *tanyánne ða-tuníθa ṭla-màlka.*ˈ 'I shall go and tell a story to the king.' (A36:2)

As already described in §8.19.5., a pronominal indirect object of a verb may be expressed by an L-suffix or by an independent prepositional phrase consisting of the prepositions ʾəll-, ṭla- or qa- and a pronominal suffix. With past base verbs the pronominal indirect object may also be expressed by the inflection of the past base, e.g. mirále 'He said to her'. Here we shall examine in greater detail the distribution of these alternative devices in the text corpus.

When there is no direct object, the pronominal indirect object may usually be expressed either by an L-suffix or by an independent prepositional phrase. In such cases the 'heavier' prepositional phrase tends to be used at the end of an intonation group (7–9) and avoided in the middle of an intonation group following the verb (5–6). Included here are verbs of saying followed by direct or indirect speech:

(5) ʾálaha yállux b-àyya dúnye¹ ʾu-b-ɛ-xèta.¹ 'May God grant you (bounty) in this world and the next.' (A21:44)

(6) xáli lá ʾamráti̯ qə̀ṣṣət d-áwwa qáṣra mòdila?¹ 'Uncle, will you not tell me what the story of this palace is?' (A25:67)

(7) ʾámər ʾə́lle dìye.¹ 'He says to him.' (A21:2)

(8) ṭ-ámreti ṭlàli.¹ 'Tell me.' (A21:43)

(9) ʾána marən-ə̀llux.¹ 'I say to you.' (A17:34)

A compound verbal form consisting of a resultative participle or an infinitive without a clitic copula never takes L-suffixes. It usually takes a cliticized ʾəll-phrase, e.g. hon híwəlle 'I have given to him', hon yawəlle 'I am giving to him'. At the end of an intonation group this may be replaced by an independent prepositional phrase with its own stress, e.g.

(10) hóle mára ṭlàli.¹ 'He says to me.' (A17:10)

(11) ʾáyya ʾíla yíwta qa-dìyi.¹ 'She has been given to me.' (A25:39)

When the verb has both a pronominal direct object and a pronominal indirect object, the direct object is normally the primary object affix on the verb and the indirect object is expressed by a prepositional adjunct phrase, which in most cases follows the direct object affix, e.g.

(12) xáðrəx xázexi xa-nàša¹ ṭ-íle palàxa¹ ʾu-t-yáxla ʾə́lle dìye.¹ 'Let's look for a man who is a hard worker and give her to him.' (A21:3)

(13) ʾána t-yànna-llux.¹ 'I shall give them to you.' (A12:2)

(14) *m̩lóla sámma-w hallùle-lle.*' 'Fill it with poison and give it to him.'
(A26:86)

(15) *b-zabn̩ə́tle ʾə́lli ʾən-háwe b-ðà-ʾaqla?*' 'Will you sell it to me if it has one
leg?' (A22:5)

(16) *xúwwe mà ṭ-áwəð b-an-álpa dáwe,* ṭ-*ázən hawə́nna ʾəlle-dìye?!*' 'What will
the snake do with the thousand gold coins that I should go and
give them to him?!' (A1:8)

(17) *xàθi,*' *Ẑìne,*' *hiwála ʾə́lli.*' 'My sister, Zine gave it to me.' (A26:38)

(18) *ʾána ṭ-amrə̀nna-llux.*' 'I shall tell it to you.' (A21:35)

When the verb has a definite direct object nominal, this generally takes
an agreement in the form of a direct object pronominal affix and a pro-
nominal indirect object must be expressed by an independent prepositional
phrase, which generally follows, e.g.

(19) *bas-yátla Náze ʾə̀lli.*' 'But you must give Naze to me.' (A25:23)

(20) *qá-mo le-yátla xáθux ʾə̀lle?*' 'Why won't you give your sister to him?'
(A26:72)

(21) *ʾána sámi t-yánne ṭlalèxu.*' 'I shall give my portion to you.' (A21:29)

(22) *tắra la-paθxə́tle ʾə́lle dìye.*' 'Do not open the door to him.' (A23:25)

(23) *ʾáwwa yála yíwəlle ʾálaha ʾə́lla díya ʾə̀štà yárxe.*' 'God gave them this
child six months ago.' (A15:9)

In (24) there is a deviation from this usual rule, in that the indirect pro-
nominal object is expressed by an L-suffix on the verb before the L-suffix
that agrees with the direct object nominal:

(24) *hállila masrəqθònti*' 'Give me my little comb' (A34:3)

Occasionally a textually prominent indefinite direct object nominal takes
an agreement pronoun, e.g.

(25) *ʾáp-ʾawwa šaqə́lla ðá-kəsta qa-d-ày,*' *yawə́lla qa-d-ày.*' 'He also takes a
purse for her and gives it to her.' (A4:22)

When a direct object nominal has no object agreement on the verb, the
pronominal indirect object is the primary affix on the verb, which is an
L-suffix in verb forms that take L-suffixes. The main circumstances in which
the direct object agreement element is omitted include the following:

(i) An indefinite direct object nominal

(26) *ya-ʾalàha,*ˈ *yawə́tlən xa-bròna.*ˈ 'Oh God, give us a son.' (A15:17)

(27) *hállule xa-sùsa.*ˈ 'Give him a horse.' (A12:59)

(28) *mattúli xá-šəmma xèna.*ˈ 'Give me another name.' (A7:2)

(29) *qə́mən šaqlə́nni xákma mándi mánni b-ʾìðì.*ˈ 'I shall get up and take for myself a few things, with me in my hand.' (A23:5)

(30) *băyánni ʾə́mma bnàθa.*ˈ 'I want for myself a hundred girls.' (A25:74)

(ii) A definite direct object that is an inalienable possession or closely associated appurtenance of the referent of the indirect object

(31) *híwəlla jùlla.*ˈ 'He gave her clothes to her.' (A14:84)

(32) *hot-yàwəlle rásqe díye*ˈ *hóle xàla.*ˈ *ʾáp-ʾana ṣálən dámxən bὲθa.*ˈ *ʾáti májbur t-yàtli rásqi.*ˈ 'You are giving to it its sustenance and it is eating it. I also shall go down and sleep at home. You will be obliged to give me my sustenance.' (A10:3)

(iii) A definite nominal that is a narrow focus
Agreement with a definite direct object is omitted on the verb if the object constitutes a narrow focus which does not include the verb. The focus may be a new information focus, in which case the verb is in the presupposition of the clause, or the focus may be one of prominence, in which case the verb may be new information but is of reduced prominence, e.g.

(33) *har-t-yàtli ða-bráta,*ˈ *là?*ˈ *mə́re hὲ.*ˈ *mə́re yátli Səttìye.*ˈ *mə́re ma-yxàləf,*ˈ *t-yán-nux Səttìye.*ˈ ' "You will still give me a daughter, is that not so?" " He said "Yes." He said "You should give me *Səttiye* (rather than one of the others)." He said "Fine. I'll give you *Səttiye.*" ' (A25:25)

(34) *ʾaláha hóle yíwəlli ʾáyya ʾùrxa.*ˈ 'God has given me *this way*.' (A21:42)

Even when there is no direct object agreement suffix on the verb, the indirect object can be expressed by an independent prepositional phrase. This is found at the close of an intonation group to act as end-weighting, e.g.

(35) *hátta mɛxólta b-kàwe dárəx ʾəlle-díye.*ˈ 'We even give food to it through the window.' (A12:62)

It is also found where the speaker fronts the phrase to give the indirect object prominence in order to set it in contrastive opposition to an indirect object in an adjacent clause, e.g.

(36) *ʾən-ṭlálux yáwəl xà xmára˺ ta-šwáwux t-yáwəl trè xmáre.˺* 'If he gives to you one ass, he will give to your neighbour two asses.' (A3:4)

(37) *ʾu-ṭlálux lan-šwíqa čù-məndi.˺* 'I have left nothing for you (whereas I have taken everything for myself).' (A2:11)

At the end of a discourse unit the long alternative type of suffix construction for the expression of an indirect object is occasionally used on compound verbal forms, whereby the copula element is placed after the pronominal suffix. For the use of this construction with direct object suffixes for end-weighting see §15.13.5.:

(38) *ʾən-mjuwə̀bla,˺ xo-ʾànən ʾə́θya kə̀sləx.˺ ʾən-là mjuwə́bla,˺ ʾàtit θíθa kə̀sli.˺ qríθela qála b-Šáləm ʾu-Sùrma,˺ ču-jwába la-yìwəllɛla.˺* [< *yiwa + əlla* (3fs. indirect object) + *ila* (3pl. copula)] ' "If they answer you, then indeed it is me who has come to you. If they do not answer you, you have come to me." She called Šalem and Surma, but they did not give her any reply.' (A26:4–5)

If a past base verb is used in the clause, an indirect pronominal object tends to be expressed by an independent prepositional phrase in all circumstances, e.g.

(39) *yíwla xa-qɛ́sa xéna ʾə́lle dìye.˺* 'She gave another stick to him.' (A22:29)

(40) *ʾímət ʾaláha yíwle ʾəlléy bròna˺* 'When God gave them a son...' (A15:17)

(41) *mə̀re ʾə́lle díye˺* 'He said to him' (A17:4)

(42) *mə́re ṭlàli˺* 'He said to me' (A22:8)

(43) *hàtxa mjuwə́ble ʾə́lli málka.˺* 'The king replied to me thus.' (A17:34)

(44) *wídla fṭárta ʾə̀lli.˺* 'She made breakfast for me.' (A21:35)

THE SYNTAX OF PREPOSITIONS

The morphology and basic uses of the prepositions have been described in §13.3. In this chapter we shall take a closer look at the syntax and semantic range of the main prepositions, particularly those that have multiple functions.

16.1. *b-*

The preposition *b-* has a variety of uses. When it takes pronominal suffixes, these are attached to a longer base with the form *biy-*.

16.1.1. *Spatial and Temporal Location*

It may express location in a perceptible space in contexts such as the following:

(1) *šqílεle qέsa b-ʾíðe dìye.*ˈ 'He took the stick in his hand.' (A22:30)
(2) *ʾo-yála zóra hóla múttəlle be-pàlga.*ˈ 'They put the small child in the middle.' (A4:58)
(3) *w-ána b-ánna dašdàše-w*ˈ *b-ánna čaḳàlle-w*ˈ 'while I am in these plain clothes and slippers' (A6:7)
(4) *šwíqəlla xáye bìyəx.*ˈ 'He has left his life (which remained to him) in you.' (A4:42)

The preposition *gu-* is far more commonly used to express location within an enclosed physical space, e.g. *gu-xa-gəppìθa*ˈ 'in a cave' (A15:1), *gu-jὲbe*ˈ 'in his pocket' (A15:2), *gu-Kàrkuk*ˈ 'in Kirkuk' (A16:1), *gu-ða-màθa*ˈ 'in a village' (A48:1), *gu-dudìya* 'in the cradle' (A15:8). When the preposition *b-* is used to refer to location in a physical space, this is generally less physically enclosed, as in (1)–(4). It is more frequently used for location in an abstract space, e.g. *b-šέna b-ṭawàθa*ˈ '(You have come) in peace and blessings' (A15:8), *b-xálmi*ˈ 'in my dream' (A1:2), *b-šópət brònən*ˈ 'in the place of our son' (A4:39). The preposition *b-* expresses location within a state

or activity in progressive constructions with infinitives, e.g. *hóle b-θáya* 'He is coming' (A13:14), and occasionally other nouns.

It is used when a lesser degree of enclosure than in (1)–(4) is involved, such that there is only surface contact, e.g. *b-ʾùrxa*ˈ 'on the road' (A15:1), *b-rèšux*ˈ 'on your head' (A23:8), *b-miya šaxine* 'by warm waters' (C2:54), *b-qðàli*ˈ 'on my neck' (A21:27).

In some cases it is used in an ingressive (5–8) or occasionally egressive (9) sense:

(5)   *míya ṣə́lyela b-rešèy.*ˈ 'The water came down onto their heads.' (A16:11)

(6)   *síqela b-xa-ṭùra.*ˈ 'They went up onto a mountain.' (A17:4)

(7)   *dríθa xə̀ppo b-réša.*ˈ 'She had put a veil on her head.' (A19:2)

(8)   *npíltɛla b-xùbba.*ˈ 'She has fallen in love.' (A4:14)

(9)   *mə́šxət qálya plíṭle b-jebàne díye.*ˈ 'The oil of the roast meat came out of his pockets.' (A23:9)

The preposition *gu-* is likewise used in an ingressive or egressive sense, e.g.

(10)   *wìrela gu-bɛ́θa.*ˈ 'They entered the house.' (A15:7)

(11)   *zílela gu-ða-máθa xèta.*ˈ 'They went into another village.' (A15:10)

(12)   *síqela gu-xa-ṭùra.*ˈ 'They went up into a mountain.' (A15:13)

(13)   *zə́dyəlla gu-ða-dèrta.*ˈ 'They threw it into a house enclosure.' (A15:12)

(14)   *šárṭən gu-ʾiθáθə d-áwwa nàša.*ˈ 'so that I escape from the hands of this man.' (A31:3)

(15)   *ʾáti páltət gu-d-ànna.*ˈ 'You should depart from these people.' (A12:5)

Various nouns are used with *b-* in some contexts and with *gu-* in others, as can be seen in the examples cited above. This should not necessarily be interpreted as complete functional overlap, but rather is likely to reflect different conceptualizations of the degree of enclosure involved, e.g.

*b-xa-ṭùra*ˈ 'onto a mountain' (A17:4)
*gu-xa-ṭùra*ˈ 'into a mountain' (A15:13)
*gu-jèbe*ˈ 'in his pocket (hidden)' (A15:2)
*b-jebàne díye*ˈ '(from) in his pockets (revealed)' (A23:9)

    *b-ʾíðe dìye*ˈ 'in his hand' (A22:30)
    gu-ʾiθáθə '(from) in his hands (trapped)' (A31:3).

The place through which one passes is also marked by *b-*, e.g.

(16) *b-tằra wìrtɛla.*ˈ 'It (the cat) entered by the door.' (A23:19)
(17) *táwre morə́tla b-kàwe.*ˈ 'You should bring the oxen in through the window.' (A30:22)

The preposition *b-*, rather than *gu-*, is used to express location in a time period, e.g. *b-áyya dána* 'at this time' (A15:7), *b-lèle* 'at night' (A15:8), *b-lèle b-yòma*ˈ 'night and day' (A21:2), *b-ʾaṣ̀rta*ˈ 'in the evening' (A22:31), *b-qɛ́ṭa* 'in the summer' (B5:19), *b-xarɛ̀θa*ˈ 'at last' (A22:5).

16.1.2. *Instrument*

It is often used in relation to the instrument or means by which an action is performed. The complement is usually an inanimate object or a part of the body, e.g.

(1) *b-o nằra*ˈ *ʾan-táwre dìye*ˈ *mqudə̀qdɛlelɛy.*ˈ 'He chopped the oxen up with the axe.' (A30:23)
(2) *xzáyətəlla b-dùrbin.*ˈ 'You see it with binoculars.' (A25:52)
(3) *bərzóma yáʿni ta-t-ṣáli gu-gòma,*ˈ *b-semàlta*ˈ 'a hatch for them to go down into the basement stable, by a ladder' (A23:28)
(4) *zríyənwale b-iθàθi.*ˈ 'I had cultivated it with my hands.' (A17:32)
(5) *ʾáyya kúlla qəm-maxərwàla*ˈ *b-aqláθa dìya.*ˈ 'This (cat) has spoilt everything with its feet.' (A23:19)

Occasionally the complement is an animate referent, e.g.

(6) *súq mɛ́θi qɛ̀sa biyéy.*ˈ 'Go up and fetch wood with them (the asses).' (A23:34)

The expression *waða b-xabra* 'to do by, according to the word (of so-and-so)' belongs here, e.g.

(7) *ʾu-ə́dyo ʾáti lat-wáða b-xàbri.*ˈ 'Today you are not doing as I say.' (A21:43)

Under this head can be included phrases with the base *b-gan-* 'by oneself', e.g.

(8) *ma-lat-ðáya b-gánəx qàrθɛla.*ˀ⎮ 'Don't you know yourself that it is cold?' (A20:1)

(9) *wídla ˀixála ˀáy b-gàna.*⎮ 'She made the food by herself.' (A21:40)

(10) *yắðət b-gànux.*⎮ 'You know by yourself.' (A1:11)

Here also belong multiplicative expresses such as:

(11) *ˀáxni t-yawə́xla xa-b-ṭḷàθa ˀə́lle díye.*⎮ 'We shall give him threefold (if it is lost).' (A7:10)

16.1.3. *'with'*

On a number of occasions it is appropriate to translate the preposition by English 'with'. The relation may be comitative, e.g.

(1) *ˀáθi b-dáwla-w zórna-w tópe-w* 'Let them come with the drum and pipe and with guns.' (A4:33)

(2) *xázəx ṣə́lyɛle b-xà ṭena ˀə́xre*⎮ *ˀu-θéle b-ṭḷáθa ṭène.*⎮ 'We see that he went down with one saddle bag of excrement and he has come back with three saddle bags.' (A7:12)

(3) *ˀánna ma-ṭ-íla xmíle b-g̊ðàðe!*ⁿ⎮ 'How happy they were with each other (= together)!' (A4:50)

(4) *ˀáyya bráta la-péša bìyux.*⎮ 'This girl will not remain with you.' (A29:33)

(5) *ˀi-xoṭíla b-mə̀šxa.*⎮ 'They mix them with oil.' (B6:51)

(6) *ˀan-tre-maláxe t-wɛ́wa ˀə́θye bìya*⎮ 'those two angels who had come with her (= had brought her)' (A4:44)

It is also used to express various other types of association or linkage, e.g.

(7) *lìtlən šúla bíye.*⎮ 'We have no business with it (= It is not our business).' (A48:6)

(8) *ˀaláha hole-mìra*⎮ *t-yawə̀llux*⎮ *b-šàrṭ*⎮ *kú-mdit yawə̀llux*⎮ *ta-šwáwux t-yáwəl trè.*⎮ 'God has said that he will give to you with the condition that everything he gives to you he will give to your neighbour twofold.' (A3:4)

(9) *ʾána xa-náša gòṛɛwən,¹ wíra b-šə̀nne.¹* 'I am an old man, advanced in age.' (A8:43)

(10) *moləxmáli…ʾáyya zmárta bíye dìye.¹* 'I composed this song about him.' (C4:2)

(11) *naša goṛa b-šə̀nne* 'a man big with regard to years (= an elderly man)'

16.1.4. *Attributive*

The preposition sometimes has the function of linking a referent to a nominal that is presented as an attribute, in that it constitutes a component or property of it. e.g.

(1) *mən-d-ànna¹ pazesór b-ʾəlyàθa,¹ hátxa b-qanàne¹* 'Some of those big sheep with fat tails and horns (big) like this' (A7:22)

(2) *ʾána làn b-xá-reša¹ b-šàwwa rešăwáθən.¹* 'I do not have just one head, I have seven heads.' (A24:41)

(3) *ʾána b-zawnə́nne ʾən-háwe b-tə́rte ʾaqlàθa.¹* 'I shall buy it if it has two legs.' (A22:9)

(4) *w-aṣə́rta mɛθə̀tli¹ xá-qapla qèse¹ t-lá-hawa b-qàlpe.¹* 'In the evening bring me a bundle of pieces of wood that are without bark.' (A30:6)

(5) *wéləx hawnànta,¹ b-ʾiqárət ṣáwθa basìmta,¹ ʾu-màqul.¹* 'You have been clever, with the honour of sweet and fine words.' (A40:16)

(6) *b-ràxme!¹* '(May you be) with mercy! (= Bless you!)' (A4:60)

(7) *ṭlá-mma xatáne b-xa xerìya.¹* 'Three hundred ladies with one veil.' (D1:9)

(8) *barða b-qanane* 'hail with horns (= heavy hail)'

We should classify here attributive expressions such as the following: *b-xamme* 'sad', *b-xaye* 'alive', *b-ṭali* 'ill', *b-palxana* 'busy' (§11.7.).

16.1.5. *Material*

It is occasionally used to denote the material out of which something is made, e.g.

(1) *ṭ-oðə́tli gə́šra b-qèsa.¹* 'Make me a bridge of wood.' (A17:18)

16.1.6. *Price*

It denotes the price at which an item is fixed either in an amount of
money or a bartered object, e.g.

(1) *xá-kilo ʾə́xre b-ṭḷáθa dàwɛle.*ˈ 'One kilo of dung sells for three gold
    pieces.' (A7:14)
(2) *ʾána zonə́nna b-ʾə̀ṣra.*ˈ 'I shall buy it for ten (dinars).' (B5:42)
(3) *xálət xátna qəm-zawə́nna ʾilána b-xamšĩ dináre.*ˈ 'The maternal uncle of
    the groom has bought it (the tree) for a hundred dinars.' (B15:68)
(4) *l-Yawsəp zwinta b-neriya.* 'It has been bought by Yawsəp for a male
    goat.' (B8:28)

Conversely it is used before the item sold in expressions such as (5):

(5) *y-aθéwa zonàna,*ˈ *y-amə̀rwa*ˈ *ʾə̀yya*ˈ *ʾàtxa b-yawə́nnux bíya díya.*ˈ 'A purchaser
    would come and say "I shall give you such-and-such (an amount
    of money) for them (the apples)." ' (B15:52)

16.1.7. *Manner*

It may express the manner in which an action is performed. In such cases
it is generally combined with an abstract nominal, e.g.

(1) *maṣlélən b-iqàra.*ˈ 'They bring us down with honour.' (A4:30)
(2) *bắyən lá-ʾaθi b-xàšša.*ˈ 'I do not want them to come in sadness.'
    (A4:33)
(3) *ʾáni b-xɛ́la bắyi mbarxíla ʾə́lli.*ˈ 'They want to marry her to me by
    force.' (A7:18)
(4) *bás ʾamrə̀tli*ˈ *b-duzùθa*ˈ *dàx ʾáyya bráta wiðálux brátət bɛ́θa.*ˈ 'Just tell me,
    in truth, how have you made this girl a housewife.' (A21:34)

16.1.8. *Causal Background*

Occasionally it expresses the cause or purpose of an action, e.g.

(1) *ʾámər b-àyyət mšúdrəlli?*ˈ 'Was it for this (reason) you sent for me?'
    (A21:32)
(2) *zílle b-ríxət kằbàbe,*ˈ *xzéle mdaxóye xmàre.*ˈ 'He went after the smell of
    kebabs, but he found the branding of asses.' (D2:30)

(3) *lɛ́wət ʾàti*¹ *ʾɛ-bráta ṯ-in-ʾána wíðəlla gáni ḵóra b-rèšəx,*¹ *máxyəlla ʾurə̀dxa*¹ *gu-ʾɛ̀ni?*¹ 'Are you not the girl on account of whom I made myself blind, by puttinng the needle into my eye?' (A16:7)

16.1.9. *Oath*

The preposition is used in oaths or adjurations before the item by which the speaker is swearing, e.g.

(1) *mɘ́ra b-rèšux.*¹ *ʾáti múttət-əlle tàma.*¹ 'She said "(I swear) by your head. You put him there."' (A22:39)

The preposition is most frequently used with this function before the noun *ʾalaha* 'God' in the phrase *b-álaha*, which is usually stressed on the first syllable and often pronounced [b-aːla]. This expression is used in a variety of contexts. In general it strengthens an assertion, by committing the speaker fully to the truth of the statement, e.g.

(2) *b-álaha ʾáwwa xoš-yàlɛle.*¹ 'By God, he is a good lad.' (A21:5)
(3) *b-álaha dũ̀s-it.*¹ 'By God, you are right.' (A17:19)

It is often used to introduce the response to a question, e.g.

(4) *ʾo-tèla*¹ *mɘ́re há lɛ̀kət zála,*¹ *ya-gáni də̀bba?*¹ *b-álaha xðárən bá θər rə̀sqi.*¹ 'The fox said "Hey, where are you going, my dear bear?" "By God, I'm looking for my sustenance."' (A20:1)
(5) *há bròni,*¹ *m-ɛ̀kət θáya?*¹ *b-álaha m-bɛ̀θən θáya,*¹ *ʾàmti.*¹ '"Hey, my son, where are you coming from?" "By God, I'm coming from home, aunt."' (A23:2)
(6) *mɘ́ra mòdila qɘ́ṣṣət díya?*¹ *mɘ́re b-álaha qɘ́ṣṣət díya hàtxɛla.*¹ 'She said "What is her story?" He said "By God, her story is like this."' (A4:14)

It is used to strengthen a remonstration expressed by a negative question, e.g.

(7) *b-álaha látwa mìrta*¹ *la-hɛ́wən ʾu-lá bəṛ-náša ʾáwər gu-ʾòtəx?*¹ 'By God, did you not say that no animal and no person should enter the room?' (A23:22)

16.1.10. *Complements of Verbs and Expressions*

The preposition *b-* is used as the complement of some verbs, e.g. *dbaša b-* 'to stick to', *dqara b-* 'to touch', *mbaxole b-* 'to envy', *mhaymone b-* 'to believe in', *mparoje b-* 'to look at', *ṭfaqa b-* 'to meet', *ṭpaya b-* 'to catch onto (fire)', *parpore b-* 'to plead to', *qyaθa b-* 'to hit', *ṭpara b-* 'to threaten', *xδaya b-* 'to rejoice in', *xkaka/gxaka b-* 'to laugh at', *xqara b-* 'to honour', *xyara b-* 'to look at'. It is also used as the obligatory complement of some attributive expressions, e.g. *bista b-* 'familiar with', *bliga b-* 'busy with', *xəδya b-* 'pleased with'.

Several verbs may take a direct object complement or a complement introduced by the preposition *b-*. In general the construction with the prepositional complement is used to express a situation in which the action affects the referent to a lesser extent than when a direct complement is used, or a situation in which the action is less directly associated with the referent. Some pairs are given below by way of illustration:

δaya + object 'to know, understand (sth., so. by direct knowledge)', *δaya b-* 'to know about (sth. so. indirectly)', e.g.

(1) *yəδə́nne ʾáθṛət bàbi.*¹ 'I know the land of my father.' (A14:90)
(2) *hé b-àlaha,*¹ *qídle béθət duglàna-w*¹ *ʾáxni là-δiye bíye.*¹ 'Oh, by God, the house of the liar has burnt down, without us knowing about it.' (A48:7)

mxaya + object 'to strike', *mxaya b-* 'to play (a musical instrument)', e.g.

(3) *lá maxə̀nnəx.*¹ 'I shall not strike you.' (A51:19)
(4) *ʾAšebaṭàlo*¹ *ʾáwwa máxe b-zòrna.*¹ 'Ašebaṭalo played the pipe' (A25:26)

mšaxlope + object 'to change', *mšaxlope b-* 'to exchange', e.g.

(5) *ta-mšaxə́lpi šə́mmət Čùxo*¹ 'in order for them to change the name Čuxo' (A7:3)
(6) *mšuxlə́pla b-isəqyàθa.*¹ 'They exchanged rings.' (A4:5)

zmara + object 'to sing (a song)', *zmara b-* 'to sing to (so.)', e.g.

(7) *ʾi-zamríwa ràwe.*¹ 'They used to sing *rawe*.' (B15:75)
(8) *zmírre b-Žìne.*¹ 'He sang to Zine.' (A25:22)

xala + object 'to eat (completely)', *xala b-* 'to eat (parts of sth.)', e.g.

(9)   *xílela xa-ràmša.*ˈ 'They ate dinner.' (A16:9)

(10) *ʾu-rípeləlle kùlla,*ˈ *nyása-w xàla ʾə́bbe-diye.*ˈ 'They (the animals) all attacked him, biting and eating bits of him (= gnawing him).' (A35:21)

Some verbs can take a direct object or another preposition but use *b-* before a referent that is disadvantaged in some way by the action, e.g.

(11) *ṭla-mò wídlux hátxa bíyi?*ˈ 'Why have you done this to me?' (A15:14)

(12) *xzi-málka bṭ-áwəð bìyi.*ˈ 'See, the king will do (something) to me.' (A21:33)

(13) *ʾáp-ʾana šqiláli šəndùxta*ˈ *dəryáli bìya.*ˈ 'I picked up a small stone and threw it at it.' (A23:22)

(14) *ʾáp-xa lɛle-mṣáya bíya dìya.*ˈ 'Nobody could (do anything) against her (= nobody could defeat her).' (A25:68)

(15) *šuréla ṣráxa bíye dìye.*ˈ 'She started shouting at him.' (A25:82)

(16) *bálki ṭ-íle xa-mə́ndi θíθa bìya.*ˈ 'Perhaps something has happened to her.' (A21:25)

The preposition with the sense of 'disadvantage' is found after the existential particle in expressions such as:

(17) *ʾána bsìmli*ˈ *čú-mdi liθ-bìyi.*ˈ 'I am cured. Nothing is the matter with me.' (A4:20)

With some verbs the preposition *b-* may be exchanged for other prepositions to express a different relationship to the complement. In (18), for example, the verb *xyara* 'to look' takes a complement with *b-* ('look at'), but in the second clause the complement has *gu-* to express 'looking into' the enclosed interior of the cave:

(18) *qamáye xírta b-áqlət súsa dìya,*ˈ *la-xírra gu-gə̀ppa.*ˈ 'At first she looked at the legs of her horse, she did not look into the cave.' (A8:72)

16.1.11. bəd-, bud-

The expression *bəd-* and its variant *bud-* is in origin a combination of the preposition *b-* and the subordinating particle *D*. It is not, however, used with exactly the same distribution as the basic preposition *b-*. It generally has the sense of 'about, concerning', which is not a meaning that is generally expressed by *b-* alone, e.g.

(1) *ʾən-xá-naša mɛ́θelaxu xàbra*ˈ *bəd-bròni,*ˈ *kut-mɛθéli xábra bəd-bròni,*ˈ *ʾən-míθa ʾən-ṣàxi,*ˈ *pálgət dáwi de-t-yánne ʾòlle dìye.*ˈ 'If somebody brings you word about my son—whoever brings me word about my son, whether he is dead or alive, I'll give him half of my gold.' (A14:92)
(2) *ʾánna šə́mye-wawa bəd-Mắmo mən-Z̞ìne.*ˈ 'They had heard about Mămo from Zine.' (A26:25)
(3) *šmìla bud-díye.*ˈ 'They heard about him.' (A21:5)
(4) *lá taxmə́nnən ʾána bəd-zəndàna.*ˈ 'I shall not think about prison (= I don't care about prison).' (A26:44)
(5) *náše spáy t-yắði bud-màrra*ˈ 'fine people who know about the illness' (A8:32)
(6) *qímən molə́xmənna ʾánna šére bud-dìye.*ˈ 'I composed these verses about him.' (C4:3)
(7) *bəd-ʾáwwa náša tàlxəx.*ˈ 'Let's destroy with regard to this man (= let's get rid of this man).' (A30:41)

Elsewhere the phrase is occasionally used to denote relations that are expressed by the basic *b-* preposition, including causal ('because of, on account of'), instrumental ('through the means of') and comitative ('with'), e.g.

(8) *bud-àyya muθɛ́lux ʾánna zúze.*ˈ 'Because of this you have brought these coins.' (A1:27)
(9) *rába ʾítley xayúθa basímta bəd-àyya,*ˈ *yáʿni zrátət xabùše.*ˈ 'They had a very good life on account of this, that is the cultivation of apples.' (B5:106)
(10) *y-axlíwa láxma bə̀d-an qése.*ˈ 'They would eat bread through the means of (the sale of) this wood.' (A14:10)
(11) *ʾáwwa rèšì*ˈ *ṭ-áθe xá-yoma pràma*ˈ *bəd-ʾiθáθa dìyux.*ˈ 'This head of mine will one day be cut off by your hands.' (A14:35)
(12) *qímla kθúla xa-kθàwa,*ˈ *mšudə́rra bəd-qàzəd.*ˈ 'She wrote a letter and sent it by a messenger.' (A11:17)

(13) *lešále bàxta,ˈ bəd-míya mònne.ˈ* 'A woman kneads it, together with water.' (B5:100)

In addition it is found in a few fixed expressions, e.g.

(14) *qímɛle híwəlla bnáθe dìyeˈ ṭla-d-an-nàše,ˈ bəd-xáṭər d-ó-xona zòra.ˈ* 'He gave his daughters to those people on account of that young brother.' (A12:22)

(15) *har-dmíxtɛla bəd-lóbba gu-béθət bába dìyɛla.ˈ* 'She continued sleeping, thinking that she was in her father's house.' (A21:18)

16.1.12. *Combined with Other Prepositions*

The preposition *b-* is often combined with the locative preposition *reš-* 'upon', e.g.

(1) *hóle dárya jùlla b-réša.ˈ* 'He put a cloth over them.' (A25:48)

(2) *qímɛle zíla mútta ʾán-julla díya gu-d-o-sandùqa,ˈ múttəlla gu-ʾasàsət béθa,ˈ ʾu-bónyɛle gùda b-réše.ˈ* 'He put her clothes in a box and placed it in the foundations of the house, then built a wall over it.' (A14:99)

16.2. *L-*

This preposition has a wide variety of functions. One reason for this is that it is derived from two different prepositions in earlier Aramaic, namely **l-*'to, for' and **ʿal* 'upon'. Generally the usage of *l-* in the dialect makes it clear from which of these two earlier prepositions it is derived in any one particular case. In some cases, however, the derivation is not completely certain. For this reason all the usages of *l-* are here treated together. It is important, furthermore, to make a distinction between the adnominal uses of *l-* and the adpronominal forms. Various possibilities exist for pronominalizing a phrase consisting of *l* + nominal. These include the L-suffixes and independent phrases consisting of *ʾəll-* + pronominal suffixes. Each of these pronominal forms has a restricted usage and is not found in all contexts that *l* + nominal phrases are used.

16.2.1. *Adnominal Uses*

16.2.1.1. *Destination*
The preposition *l-* is frequently used in the complement of a verb of movement to express the destination, e.g.

(1) *ʾáwwa qíma zíla l-bèθe díye.*¹ 'He went to his house.' (A17:6)
(2) *ʾóθyɛle l-bèθa.*¹ 'He came home.' (A17:20)
(3) *si-dúṛ l-šòpux.*¹ 'Go back to your place.' (A15:20)
(4) *ha-t-ʾáθe ʾo-náša qamàya*¹ *máṭe l-ʾɛna*¹ *ʾáθe xa-náša sàwa.*¹ 'Before the first man reached the spring, an old man came.' (A15:3)
(5) *dɔ́qne díye mṭáya l-ằra.*¹ 'His beard reached the ground.' (A15:13)
(6) *ṭ-ásqǝx l-áwwa ṭùra?*¹ 'Shall we go up to this mountain?' (A17:4)
(7) *masqánne l-bèθa.*¹ 'I shall take it up to the house.' (A22:19)
(8) *θéla ṣlèla*¹ *l-ʾárxǝt be-Xàmmo.*¹ 'She came down to the water-mill of the family of Xammo.' (A19:1)
(9) *Čúxo híwle bále l-bèθa.*¹ 'Čuxo set off for home.' (A7:12)

In some cases the movement has a purposive sense, e.g.

(10) *lá-ʾazǝt l-qése b-xáwlǝt xàwrux.*¹ 'Do not go to (collect) wood with the rope of your friend.' (D2:71)

16.2.1.2. *Direction*
It may be used to express, broadly, the direction or objective of an action without any clear movement towards the complement of the preposition being invovled. It should be noted, however, that the relation of recipient or beneficiary is normally expressed by the prepositions *ta/ṭla-* or *qa-* when the complement is a nominal:

(1) *ràbbǝn*¹ *ʾáwwa ṭ-i-sàxǝð l-ʾálaha.*¹ 'A monk is somebody who worships God.' (A15:4)
(2) *dráya búxtǝn l-xá l-d-o-xèna*¹ 'slandering this one and that one' (A48:5)
(3) *dréla šláma l-fằqih.*¹ 'She greeted the jurist.' (A22:16)
(4) *ʾálaha šuxa-l-šɔ́mme* 'God—praise be to his name' (A6:10)
(5) *ʾána ṭlíbtǝnwa l-brónǝt màmi.*¹ 'I was engaged to my cousin.' (A13:14)

16.2.1.3. *'Upon, On'*

In numerous cases *l-* has the sense of 'upon' or 'on', denoting a spatial location above or, at least, on the surface of the referent that it governs. The preposition in such cases is clearly derived from **ʿal*:

(1) *hóle tíwa l-kèpa.¹* 'He is sitting on a stone.' (A15:13)
(2) *brōn-málka tíwɛle l-d-a-tàxta.¹* 'The son of the king sat on the throne.' (A14:43)
(3) *ṭayə́nwale l-xàṣe.¹* 'He would carry him on his back.' (A17:18)
(4) *párxa ʾátwa l-gàre.¹* 'She flew up and sat on the roof.' (A14:101)
(5) *klíθa l-márzə d-a-jǎzìra.¹* 'It came to rest on the shore of the island.' (A14:39)
(6) *máxewa darmàna¹ l-ṣàwle.¹* 'He used to put polish on shoes.' (A16:1)
(7) *míla l-hàlux!¹* 'Blue on your condition! (= Confound you!)' (A23:10)

In certain contexts, where the verb involves movement, the preposition has a sense of 'onto',

(8) *sìqɛle¹ l-gàre.¹* 'He went up onto the roof.' (A25:52)
(9) *ta-dɛ́rela l-xáṣət xmàre¹* 'in order that he puts them onto the back of his donkey' (A23:13)
(10) *mattíwala l-ʾàra.¹* 'They would put it onto the ground.' (A12:3)

In constructions with the verb *mxy* used with the sense of 'applying' a substance to something, the adnominal preposition *l-* may be used with the item upon which the substance is applied (11) or a transposition may take place as in (12), in which the preposition is placed on the nominal expressing the substance:

(11) *máxewa darmàna¹ l-ṣàwle.¹* 'He used to put polish on shoes.' (A16:1)
(12) *ʾu-máxyəxəlla máθən kúlla l-míla-w l-kóma m-báθre dìye.¹* 'and we have covered all our village with blue and black after him (= after his departure).' (A4:32)

In some cases where the preposition *l-* corresponds to **ʿal* in earlier Aramaic it has the sense of 'concerning, about', e.g.

(13) *mbaqóre l-d-ò-naša:¹ ʾìtle bróna?¹* 'He was inquiring concerning the man: Has he a son?' (A8:5)

16.2.1.4. *General Spatial Location*

In some cases it denotes a static spatial location without any implication
of being 'above' in a higher position, e.g.

(1) *hóle ʾàrya¹ l-àyya góta¹ ʾu-ʾəzza¹ hóla l-àyya góta.¹* 'There is a lion on this
     side and a she-goat on the other side.' (A24:15)
(2) *ʾu-xmáre l-gòte-diye¹* 'with his ass at his side' (A7:6)
(3) *l-a-páθa xétət nèra¹ ʾíθ xa-máθət huðàye.¹* 'On the other side of the river
     there is a village of Jews.' (A14:50)
(4) *ʾu-xátna l-bèθa pèšena.¹* 'and I shall become a son-in-law in the house.'
     (A17:35)
(5) *šqúl ʾáwwa qésa l-ʾìðux.¹* 'Take this stick in your hand.' (A22:26)
(6) *ʾaw-l-ḥàmmam sáxe.¹* 'He washes in the bathroom.' (A21:17)
(7) *hóla spára l-kàwe.¹* 'They are waiting at the window.' (A4:59)
(8) *ʾu-qáre l-tàra.¹* 'and he calls at the door.' (A6:5)
(9) *ʾu-šawqíwale l-šəmša.¹* 'and they would leave it in the sun.' (B7:20)

We could include here the adverbial *laxxa* 'here', which has been formed
from *l-* + *ʾaxxa* and may be used to denote static location. The *l-* that
is often used with the particle of isolation *xoð-* (§14.6.) also falls in this
category, e.g.

(10) *pìšela¹ har-ʾàni-tre l-xoðéy.¹* 'Only those two remained by themselves.'
      (A20:9)

16.2.1.5. *Expression of the Agent*

An adnominal *l-* is sporadically used to express the agent in constructions
with resultative participles (cf. §15.9.2.–3.), e.g.

(1) *šáwwaθna hóla xíle l-dèwa.¹* 'The seven of them have been eaten by
     wolves.' (A23:15)
(2) *ʾən-réšət bábe díye ʾax-tùra,¹ ʾu-hóle qtíla l-Tătár-i Slemán-i Sə̀ndi,¹ lèka
     bṭ-ázəl?¹* 'If the head of his father is like a mountain and he has been
     killed by Tătar-i Sleman-i Səndi, where will he go?' (A28:8)
(3) *xáθux Nasímo jlíwtɛla l-ʾarabàye.¹* 'Your sister Nasimo has been kid-
     napped by Arabs.' (A37:5)
(4) *ʾu-Dùre¹ píštɛla muqyàmta¹ muxràwta¹ šawwà gáye¹ l-xànpe¹ qaṭòle¹
     t-mušəlmàne.¹* 'Dure was evacuated and destroyed seven times by
     pagan murderers of Muslims.' (B2:2)

(5) *ʾu-síqɛle gu-d-ó sàrgaˈ mtúrṣa l-an-jaqsìyeˈ t-mðìta.*ˈ 'He went up onto the saddle, which was made by the town craftsmen.' (A8:52)

16.2.1.6. *Manner*

The use of the preposition *l-* in adverbials of manner is restricted to numerical expressions such as (1):

(1) *píšela mnáyəlla l-xà-xa.*ˈ 'They began counting them one by one.' (A6:3)

16.2.1.7. *Complement of Verbs and Expressions*

The preposition *l-* occurs as a complement to various verbs and expressions, e.g. *dmaya l-* 'to resemble', *masloye l-* 'to despise', *maṣyoθe l-* 'to listen to', *mhaymone l-* 'to believe in', *mqahore l-* 'to grieve for', *qrawa l-*, *mqarobe l-* 'to approach', *mraxome l-* 'to pity', *mṣawore l-* 'to curse', *mxaya l-* 'to hit, knock', *nṭara l-* 'to watch', *ṭ̌aya l-* 'to search for'.

16.2.1.8. *Combined with other Prepositions*

The preposition *l-* may be combined with other prepositions. After verbs of movement, for example, it may be combined with *kəs-*, e.g.

(1) *ʾo-gáya q̌ằmɛθa θélux l-kə́sli*ˈ 'the first time you came to me' (A1:22)

16.2.2. *Adpronominal Uses*

16.2.2.1. *L-suffixes*

The L-suffixes exhibit only a very restricted degree of functional overlap with the adnominal uses of *l-*. The most common uses of the L-suffixes include the expression of the subject of verb forms derived from the past base (*qṭille*, *qṭilwale*) and the expression of the direct and indirect object of transitive verbs.

The use of the L-suffixes to express the subject in forms such as *qṭille* originated historically as a marking of the agent in a passive construction (< *qṭil* 'He was killed' + *le* 'by him'). We have seen above that adnominal *l-* is still used to mark the agent of a passive. The L-suffixes have, however, been extended to the marking of the subject of past base intransitive verbs, where they clearly do not mark an agent. This can be explained as a result of the suffixes being reinterpreted as markers of the grammatical subject of the verb rather than markers of the agent.

The direct object function of the L-suffixes has no parallel in the use of the adnominal *l-*.

The use of the L-suffixes to express the indirect object is restricted for the most part to the marking of a human recipient or beneficiary. There is no clear parallel to this in the functional range of adnominal *l-*, the relation of recipient or beneficiary being normally expressed by the prepositions *ta/ṭla-* or *qa-* when the complement is a nominal.

Another use of L-suffixes, which is related to its indirect object function, is to express the possessor in possessive constructions formed with the existential particle *ʾiθ*, e.g. *ʾiṯli kθawa* 'I have a book'. There are no adnominal parallels to this function. When the possessor is a nominal, this is normally placed in extraposition and is resumed by an L-suffix, e.g. *xáwri ʾíṯle kθáwa* 'My friend has a book' (§17.8.1.2.).

In general, therefore, the functional correspondence between L-suffixes and adnominal uses of *l-* is considerably limited in the present state of the language.

16.2.2.2. *ʾəll-*

Pronominal prepositional phrases consisting of the particle *ʾəll-* correspond to a wide range of the adnominal uses of *l-*. As with adnominal *l-*, the particle *ʾəll-* represents the merging together of what were originally two separate prepositions, i.e. **l-* and **ʿal-*. The functional range of *ʾəll-* overlaps with those of L-suffixes and adnominal *l-*, but it is not completely parallel with either of these. It may be classified into the following categories:

(i) *Destination*

   (1) *ʾə́θyela máṭye ʾə́lle.*ˈ 'They came up to him.' (A7:19)
   (2) *muθéla yə́mme díye xa-rámša ʾə́lle dìye.*ˈ 'His mother brought dinner to him.' (A21:12)
   (3) *zílɛle nùbləlla*ˈ *ʾə́lle dìye.*ˈ 'He went and took them to him.' (A17:12)
   (4) *mamṭátla ʾə́lla dìya.*ˈ 'Deliver them to her.' (A4:16)
   (5) *mšádrən mɛxòlta ʾə́lle díye.*ˈ 'I shall send food to him.' (A17:11)

This usage is paralleled by adnominal *l-* with verbs of movement (e.g. 'to go', 'to come', 'to arrive'), but only marginally with verbs of conveyance (e.g. 'to send', 'to take', 'to bring'), which normally express the destination with *ta-/ṭla* or *qa-* when the complement is a nominal. Verbs of movement do not usually express destination by L-suffixes, but L-suffixes are used after verbs of conveyance.

(ii) *Direction*

   (1) *ʾámər ʾə́lla dìya.*ˈ 'He says to her.' (A16:7)
   (2) *hàtxa mjuwə́ble ʾə́lli málka.*ˈ 'The king replied to me in this way.' (A17:34)
   (3) *qəm-yawə́lla yaləx̂θa ʾə́lli.*ˈ 'He has given me her scarf.' (A4:24)
   (4) *wídla fṭárta ʾə́lli.*ˈ 'She made me breakfast.' (A21:38)
   (5) *dríθela šláma ʾə́lle dìye.*ˈ 'She offered a greeting to him.' (A22:12)
   (6) *m-ɛ́ka píšlux baláya ʾə́lli?*ˈ 'From where (have you come) and become trouble for me?' (A17:4)
   (7) *módi mqúma ʾə́llux?*ˈ 'What has befallen you?' (A17:31)
   (8) *t-lá-hoya qàrθ-əlləx*ˈ 'so that you are not cold' (A20:2)

Nominal complements of verbs of speech (1)–(2) and recipients or benefi-
ciaries (3)–(4) are normally expressed by phrases containing the prepositions
ta-/ṭla- or *qa-* rather than *l-*. The adnominal equivalents of constructions
such as those in (5)–(8), however, generally have *l-*.

(iii) *'Upon, over, against'*
Location over a physical object is not normally expressed with a pronomi-
nal *ʾəll-* phrase, although *l-* as an adnominal preposition is often used with
this sense. The normal means of expressing this relation with pronominal
complements is by phrases consisting of the preposition *reš-* 'upon', e.g. *réša*
'on it (f.)' (A27:17), *réše dìye* 'on him' (A31:10), *b-réša* 'over them' (A25:48),
b-rèša 'on it' (A12:47).

   In a few contexts a pronominal *ʾəll-* phrase is, nevertheless, the historical
reflex of a phrase with the preposition **ʿal-*. These tend to be restricted
to relations of an abstract or non-physical nature, such as (1)–(7), or
constructions such as (8)–(12), which express location on the surface but
not necessarily above the item in question, often in relation to liquids
(11)–(12):

   (1) *šákən ʾə́llux.*ˈ 'I'll make a complaint about you.' (A22:46)
   (2) *hótu pšàma ʾə́lla díya.*ˈ 'You are sad over it.' (A5:10)
   (3) *kúlla ʾə́lli.*ˈ 'It is all on me (= I shall pay for everything).' (A8:38)
   (4) *lɛle-ʾɛ́ba ʾə́llì?*ˈ 'Would not that be a shame on me?' (A8:55)
   (5) *kúlla qəm-malušíla ʾə́lla dìya.*ˈ 'They put all of them (her clothes) on her.' (A4:20)
   (6) *lá-qɛmət ʾə́llèy.*ˈ 'You will not rise against them.' (A8:95)
   (7) *zríqɛle yóma ʾə́lle dìye.*ˈ 'The sun shone on him.' (A26:22)

(8) *ʾu-ʾanna baxtáθa yằði,*¹ *mattí ʾíða ʾə̀lle*¹ *r̥ḗ̌ši qá-t ʾáwwa mə̀ndi*¹ *hóle xmỉʾa.*¹
     'The women know (about this), they place a hand on it and feel
     that it is…it is leavened.' (B5:100)

(9) *šqíləlla xa-skínta xéta ʾə́lle dìye.*¹ 'He took another knife on him (i.e.
     with him).' (A14:66)

(10) *ʾáxči gu-Már-Gwərgəs Dúre ʾíθwa xa-kèpa*¹ *ʾáwwa kθíwta taš˓íθa ʾə́lle dìye.*¹
     'In Mar Gwirgis of Dure there was only a stone, on which its
     history was written.' (B1:7)

(11) *bár baθqìwale,*¹ *hammáše míya gằrəg háwa ʾə́lle dìye.*¹ 'After they scattered
     it, water had to be on it constantly.' (B5:78)

(12) *qímle murə́sle hátxa míya ʾə̀llè.*¹ 'He sprinkled water on them like this.'
     (B6:11)

We could include here a construction such as (13), which expresses an
external quality:

(13) *šúprə dúnye hóle ʾə́lla-dìya.*¹ 'She had the beauty of the world.' (A13:11)

(iv) *Direct Object*

Compound verbal forms consisting of a resultative particle or an infinitive
express a pronominal object either by L-suffixes or by a pronominal suffix
attached to the preposition *ʾəll-*. The use of the *ʾəll-* phrase is obligatory
when the participle or infinitive does not have a copula enclitic, e.g. *hóle
qtíləlle* 'He has killed him', but is optional if the construction has a copula
enclitic. Details of the use of *ʾəll-* with the compound verbal forms are
given in §8.19.4. On rare occasions it is used to mark the pronominal
direct object of a *qtílle* form (§8.19.2.). It should be noted that this usage of
the prepositional phrase differs from others in that the phrase is generally
bound to the verbal form prosodically and does not stand independently
with its own stress, e.g. *múttətəlle* 'You put him' (A22:39), *prìmənəlla* 'I cut it
(f.)' (A22:9), *bìθəllela* (*bìθa-ə̀lle-ila*) 'She loved him' (A4:12). This is a prop-
erty it shares with L-suffixes, which likewise cannot be used with prosodic
independence from the verb. Furthermore, the adnominal preposition
l- does not function as a direct object marker.

(v) *Complement of verbs*

Verbs that take *l-* as their complement before nouns have an *ʾəll-* phrase
when the noun is pronominalized. This phrase has prosodic indepen-
dence. Given what has been said in the previous section, this prosodic

feature should be regarded a reflection of the fact that they are not direct objects, e.g.

(1) *náše là hămŏníwa ʾə́lle díye.*ᴵ 'People did not believe him.' (A48:1)
(2) *ham-mṣawòre ʾə́lle díye.*ᴵ 'He curses him again.' (A17:3)

16.3. ṬLA, ṬA-

16.3.1. *Direction*

The most frequent usage of this preposition is to express the direction, objective or beneficiary of an action or situation without necessarily any movement being involved, e.g.

(1) *híwəlla quṣárta ta-màlla.*ᴵ 'They gave the pot to the mullah.' (A5:8)
(2) *hálla júllux ṭlàli.*ᴵ 'Give your clothes to me.' (A7:18)
(3) *maláxa mə́re ṭla-ràbbən.*ᴵ 'The angel said to the monk.' (A15:7)
(4) *ʾu-θélux mdagóle ṭlàli.*ᴵ 'and you came lying to me.' (A1:23)
(5) *wídla ʾixàla*ᴵ *ṭla-yàla.*ᴵ 'She made food for the young man.' (A21:22)
(6) *ʾu-ṭlálux lan-šwíqa čù-məndi.*ᴵ 'and for you I have left nothing.' (A2:11)
(7) *bắyən msóqən xákma məndiyàne*ᴵ *ṭla-bèθa.*ᴵ 'I want to buy a few things for the house.' (A22:12)
(8) *ʾítlən xá-məndi bắyəx ṭ-oðə́xxe ṭlàləx.*ᴵ 'There is something that we want to do for you.' (A4:48)
(9) *ʾáyya šwíθa ṭláli ʾu-ṭlàlux-ila.*ᴵ 'This bed is for me and you.' (A22:32)
(10) *lá pẹ̀šəx ṭla-xădàya.*ᴵ 'We shall not stay for lunch.' (A21:30)
(11) *málla píšla quṣárta ta-màlla.*ᴵ 'The cooking pot became the mullah's.' (A5:10)
(12) *ṭla-mò wídlux hátxa bíyi?*ᴵ 'Why (literally: for what) have you done this to me?' (A15:14)

16.3.2. *Destination*

It is occasionally used after verbs or movement or conveyance expressing destination, e.g.

(1) *də́rra ta-ʾaθrὲy.*ˈ 'They returned to their land.' (A4:27)
(2) *ʾən-bắyət ʾázət dɛ́rət ṭla-bέθət bὰbəx*ˈ 'If you want to go and return to the house of your father' (A4:42)
(3) *ʾu-nábəlla ṭla-be-šwὰwən.*ˈ 'Take it to our neighbours' house.' (A5:3)

16.3.3. *Temporal Objective*

The preposition may be used to express a temporal objective in constructions such as (1)–(3):

(1) *ʾáni zílla ta-ṭlὰ-yomane.*ˈ 'They went for three days.' (A14:84)
(2) *ʾawwa ʾaskaríya dìye*ˈ *ṭlὰ-kəma dánɛla?*ˈ 'For how long is this army of his?' (A17:22)
(3) *píšla yóma ṭla-yòma,*ˈ *yóma ṭla-yòma.*ˈ 'She went on (like this) from day to day, day to day.' (A21:1)

16.3.4. *Object Marker*

It is occasionally used to mark the direct object (§15.13.6.). This is attested only before definite nominals, the majority of which have animate referents, e.g.

(1) *ʾáwwa qṭìlle ṭla-ʾárya.*ˈ 'He killed the lion.' (A11:1)
(2) *díya ʾáwwa bắye ta-d-áyya bráta zùrta.*ˈ 'Now, he loves this young girl.' (A14:83)
(3) *taxránne ṭla-xlúlət xóni Šə̀mmo.*ˈ 'I remember the wedding of my brother Šəmmo.' (B8:21)
(4) *zìptəllela*ˈ *ṭla-Mằmo.*ˈ 'She pushed Mămo.' (A26:3)
(5) *xá-xuwwe plíṭa táma bắye nayásle ṭla-brón d-ó fallằḥ.*ˈ 'A snake had come out of there wanting to bite the son of that peasant.' (A9:6)

16.4. *QA-*

The preposition *qa-* has distribution that is broadly parallel with that of *ta-/ṭla-*.

16.4.1. *Direction*

In most cases it is used to express the direction, objective or beneficiary of an action or situation, e.g.

(1) *mə́re qa-yə́mme dìye* ' 'He said to his mother' (A21:10)

(2) *ʾu-là-mṣalɛwa qa-ʾálaha.* ' 'They did not pray to God.' (A15:17)

(3) *ʾáp-ʾawwa šaqə́lla ðá-kista qa-d-ày,* ' *yawə́lla qa-d-ày.* ' 'He takes a purse for her and gives it to her.' (A4:22)

(4) *xa-čára xazèna* ' *qa-t-ʾáyya bràti.* ' 'I should find a solution for this daughter of mine.' (A21:2)

(5) *ʾu-hóle míra ʾáyya bráti qa-brònux.* ' 'This daughter of mine is for your son.' (A21:8)

(6) *háwət basíma ràba* ' *qa-d-áwwa ʾixála ṭ-it-yíwəlle qa-dìyi.* ' 'Thank you very much for this food that you have given me.' (A22:31)

(7) *náše jắmi qa-šèra.* ' 'People gather for the festival.' (B5:69)

(8) *masqíle ʾítle dúka mruzágta qa-sə̀twa.* ' 'They take it up to a place that has been prepared for it for the winter.' (B5:98)

(9) *qá-mo là?* ' 'Why not?' (A23:2)

16.4.2. *Destination*

It is occasionally used after verbs of conveyance to express the destination of movement, e.g.

(1) *núbləlla qa-bráte dìye.* ' 'He took them to his daughter.' (A17:13)

16.4.3. *Temporal Objective*

In sporadic instances it expresses a temporal objective, indicating how long a situation lasts, e.g.

(1) *qa-ṭḷà-yarxe* ' 'for three months' (A17:22)

16.4.4. *Object Marker*

It is occasionally used to mark a noun as the direct object of a verb (§15.13.6.). This is attested only before nouns with definite animate referents. Note that the verb does not have a pronominal object agreement suffix, which is elsewhere the norm before direct object nominals, e.g.

(1) *băyéwa qa-ʾalàha.* ' 'He loved God.' (A16:10)

(2) *maláxa mŭṛə̀šle* ' *qa-ràbbən.* ' 'The angel woke the monk.' (A15:8)

(3) *ṣlíθɛla bàxta* ' *xzíθa qa-màlla.* ' 'The woman went down (to the town) and saw the mullah.' (A22:11)

(4) *dwíqɛle qa-ʾàrya.*ˈ 'He seized the lion.' (A27:3)

(5) *taʾla čídle ʾárxa qa-làqləq.*ˈ 'The fox invited the stork as a guest.' (A45:1)

(6) *Tătár-i Slemán-i Sə́ndi qṭílɛle qa-Ẑàl.*ˈ 'Tătar-i Sleman-i Səndi killed Zāl.' (A28:1)

16.5. *MƏN, M-*

This preposition represents the merging together of two prepositions that were distinct in earlier Aramaic, viz. **men* 'from' and **ʿam* 'with' (§13.3.14.). The relations it expresses may be classified as follows.

16.5.1. *Separation or Removal*

(1) *šqíləlla mən-d-ɛ-dèrta.*ˈ 'They took it from that enclosure.' (A15:12)

(2) *qu-plúṭ m-àxxa!*ˈ 'Get out of here!' (A16:11)

(3) *hal-ʾɛ́-gət ṯ-áza də́bba m-tàma.*ˈ 'until the bear goes away from there.' (A20:7)

(4) *bɛ́θe díye xáčča rə̀ḥqa-wewa mən-máθa.*ˈ 'His house was quite far from the village.' (A48:1)

(5) *nìxlən m-Čúxo.*ˈ 'We are relieved of Čuxo.' (A7:19)

16.5.2. *Source or Origin*

(1) *ʾən-kʸálo m-gu-màθa,*ˈ *čerxìwala máθa*ˈ *xàṣ̌ə dawère.*ˈ 'If the bride was from the village, they would take her round the village on the back of mules.' (B10:34)

(2) *ʾu-lɛ́la šə́tye míya mən-d-ɛ-ṭàsa.*ˈ 'They did not drink the water from that bowl.' (A15:11)

(3) *mùdit har-blíga ṭlába m-alàha*ˈ *ta-t-yawə̀llux?*ˈ 'Why are you always busy asking God to give (things) to you?' (A3:3)

(4) *yə́mmi lípta m-yə́mma dìya.*ˈ 'My mother learnt from her mother.' (B10:22)

(5) *ʾay-m-rə́ḥqa hóla wáðəlla ʾa-yaláxθa hàtxa qam-ʾɛ́na díya.*ˈ 'She shakes the handkerchief before her eyes from a distance like this.' (A4:17)

When the clause contains a verb of movement, this sense overlaps to some extent with the previous category.

(6) ʾíθwa xa-Lelíθa θíθa mǝn-Č̂ā̀l.ˈ 'There was a Leliθa who came from Č̂āl.' (A19:1)

(7) ʾána hadíya m-kə̀slen θáya.ˈ 'I am now coming back from him.' (A4:24)

(8) síqla najjàreˈ mǝn-ʾAmedìya.ˈ 'Carpenters have come up from Amedia.' (B10:80)

(9) ʾána m-ɛ́ka mɛθə́nnux qèse?ˈ 'From where should I bring you wood?' (A17:3)

The complement of the preposition may be a temporal expression, e.g.

(10) ʾu-hóla mšuyðánta mǝn-d-ó-yoma ṭ-íla xzíθəlle ʾàw.ˈ 'She has been mad from the day that she saw him.' (A4:12)

(11) ʾána m-díya m-bà̀θərˈ brátux bắyə̀nna.ˈ 'I from now on love your daughter.' (A17:35)

(12) xə́ṭṭe m-sǝnnò̀rta,ˈ yála m-qapə̀lta.ˈ 'Wheat (is seen to be good) from when it is a shoot. A child (is seen to be good) from the time of (his mother's) embrace.' (D2:36)

It indicates the beginning in a range of items (mǝn…ʾu-hal 'from…to'), e.g.

(13) kùllǝn,ˈ mǝn-yále zóre ʾu-hal-gò̀ṛeˈ 'all of us, from young children to old people' (B16:4)

16.5.3. *Partitive*

On numerous occasions the preposition expresses a partitive relationship, i.e. a part of a larger group or class, e.g.

(1) šqíltɛla mǝn-dàwe.ˈ 'She took some of the gold coins.' (A10:7)

(2) ʾə́θyɛle xa-mǝn-zaràye.ˈ 'One of the farmers came.' (A4:31)

(3) kút-xa mánna šqílə̀lle xa-skínta rìxta.ˈ 'Each of them took a long knife.' (A23:29)

(4) síqɛle xákma mǝn-d-ò-šə̀mra.ˈ 'Some of the soot went up.' (A4:60)

(5) lá-mɛθət m-an-t-qanàne.ˈ mɛ́θət m-an-kò̀če.ˈ 'Don't bring ones with horns. Bring ones that are hornless.' (A7:24)

(6) ʾo-bəzmára xíla mǝn-dàwa,ˈ šqíla mǝn-dàwa.ˈ 'The nail ate the gold, took some of the gold.' (A17:28)

(7) *ʾána b-gáni là-taxrən m-áy.*' 'I myself do not remember any of this.' (B10:82)

(8) *ṗyášən m-d-áwwa bèθa.*' 'I am becoming part of this family.' (B5:41)

16.5.4. *Comparison*

(1) *ʾína mástət ʾə́rwe rába biš-basimtέla biš-príštεla mən-d-a-t-tàwre.*' 'But the yoghurt of sheep is much better and more choice than that of cattle.' (B5:173)

(2) *ʾíθwa lìθwa*' *biš-m-álaha góṛa čú-mdi lìθwa.*' 'There was, there was not, there was nothing greater than God.' (A30:1)

(3) *ʾáy biš-xámθεla m-kùlla.*' 'She is more beautiful than all (= the most beautiful of all).' (A25:26)

For further details concerning the formation of comparative constructions see §14.8.

16.5.5. *Cause*

(1) *mítli m-kə̀pna.*' 'I have (almost) died of hunger.' (A27:31)

(2) *ʾána-ži m-kέrbi ʾə́θyən ʾá-kθεθa múttənna rəš-núra ʾu-xìlənna.*' 'I, out of my anger, came and put the chicken on the fire and ate it.' (A2:11)

(3) *ʾánna ríqela síqela rəš-d-ay-ʾilána m-zdùθa.*' 'They ran and climbed the tree out of fear.' (A13:11)

(4) *šə́nyεle žáre mən-xaðùθe díye.*' 'He fainted, poor man, on account of his joy.' (A14:95)

(5) *ʾáyya m-hàtxεwa mára,*' *bnóli ʾótəx rəš-qórət gàwṛi.*' 'It was for this reason that she said "Build me a room over the grave of my husband."' (A4:51)

(6) *ʾáwwa ʾə̀rbi*' *m-gáne díye θéle ríqle l-ṭùra.*' 'This sheep of mine has come and run to the mountain of its own accord.' (A10:3)

16.5.6. *Material*

The preposition may express the material from which something is made, e.g.

(1) *məlxáwa ʾíwa mtúrṣa m-qèsa.*' 'The winnowing fork was made from wood.' (B5:87)

(2) *dúxwa ʾíle mtúrṣa mən-dàwwe-u*ˈ *sàṛe-u*ˈ '*Duxwa* is made from diluted yoghurt and barely.' (B5:27)

(3) *ṭéni kúlla ʾíwa mən-dàwa.*ˈ 'My load all consisted of gold.' (A7:11)

(4) *ʾipyáθa mən-miròṭela.*ˈ 'The yoke straps are made of gut.'

16.5.7. *Specification*

In some cases the preposition is used to specify a preceding expression, as in (1):

(1) *háwət basíma ràba*ˈ *qa-d-áwwa ʾixála ṭ-it-yíwəlle qa-dìyi*ˈ *mən-kθayàθa,*ˈ *mən-bə̀sra,*ˈ *mən-šékər-u čáy-u ṣàbun.*ˈ 'Thank you very much for this food that you have given me, chicken, meat, sugar, tea, soap.' (A22:31)

16.5.8. *Spatial Location*

On some occasions it is used to express a static location. This tends to be restricted to adverbial expressions containing locations that typically stand in contrastive opposition, especially sides, e.g.

(1) *ʾasṛíwala b-qḗsa ʾu-m-áy-gota qè̄sa*ˈ *ʾu-m-áy-gota qè̄sa.*ˈ 'They would bind them to a stick, with a stick this side and a stick that side.' (B7:16)

(2) *Čixàlo,*ˈ *m-yaha-góta xèta,*ˈ *qəm-xazéla ʾína xzéle ṣádra dìya.*ˈ 'Čixalo, on the other side, saw them and saw her breast.' (A25:29–30)

(3) *ʾína ʾáw tắra lá tắra mə́nne-mənnət tắrət nàše,*ˈ *m-àwwa bára.*ˈ 'The door for this, however, was not together with the door for people on this side.' (B10:53)

(4) *txúme díye ʾìla*ˈ *mən-madə̀nxa*ˈ *Ẑàwa,*ˈ *ʾu-mən-màrwa*ˈ *ʾìla*ˈ *Xawòra.*ˈ 'Its borders are on the East the Zab and on the West the Khabur.' (B1:4)

We should include here the expression *m-gḗb* 'instead of, in place of', which is literally 'on the side of', e.g.

(5) *ʾáyya béna hár-kulla ṭlàlux ʾən-bằyət,*ˈ *m-gḗb-d-àni.*ˈ 'This time everything is for you, if you want, in place of those (other coins).' (A1:13)

(6) *ʾap-ʾàti*ˈ *m-gḗb ṭ-aθə́twa méθətwali zùze,*ˈ *šqíllux xa-šəndòxa.*ˈ 'So you, instead of coming and bringing me money, took a rock.' (A1:25)

(7) *ʾálaha mxožə́bnəlla m-gēb-xà-dawa.*ˈ 'God has reckoned this bag as corresponding to one gold coin.' (A6:10)

16.5.9. *Temporal Location*

The preposition may denote a fixed temporal location. It is most commonly used in this function before *baθər/bar* 'after', e.g.

(1) *m-báθər xámša daqìqe*ˈ 'after five minutes' (A22:23)
(2) *ʾu-ʾáxni-ži láx muqíme m-báθre díye màlka.*ˈ 'We have not installed (another) king after him.' (A4:32)
(3) *m-báθər ʾána zílli šùla*ˈ 'after I went to work' (A21:38)
(4) *m-bar-t-gwìrra*ˈ 'after they married' (A4:57)

It is occasionally used in this way elsewhere, e.g.

(5) *ʾo-t-páyəš b-híwit nàše*ˈ *míθɛle mən-bərmàše.*ˈ 'He who pins his hope on other people is dead by the evening.' (D2:28)

16.5.10. *'With'*

When it is appropriate to translate the preposition with English 'with', the relation is generally comitative, e.g.

(1) *mən-xuráne díye píšele gu-ṭúra xá-yoma yóme trè.*ˈ 'With his friends he remained in the mountains one or two days.' (A4:2)
(2) *núbla xulamwàθa mə́nne.*ˈ 'He took servants with him.' (A4:10)
(3) *ṣléla mə́nne gu-gòma.*ˈ 'She went down with him into the basement stable.' (A21:23)
(4) *qɛ́mən šaqlə́nni xákma mə́ndi mə́nni b-ʾìði.*ˈ 'I'll take something for myself with me in my hand.' (A23:5)
(5) *ʾítli šúla mə̀nnux.*ˈ 'I have business with you.' (A21:33)
(6) *háyyo puš-mə̀nni.*ˈ 'Come, stay with me.' (A21:43)

In (7) and (8) the preposition expresses the beneficiary of the action:

(7) *wúð ða-spayúθa mə̀nni.*ˈ 'Do me a favour.' (A7:17)
(8) *ʾáyya ṯ-oðàtla mə́nni?*ˈ 'Will you do this for me?' (A8:62)

16.5.11. *Combined with Other Prepositions*

The preposition *mən* is sometimes used before other prepositions. In such cases it expresses separation or source, e.g.

(1) *ʾu-ṭríðəlle m-gu-bèθa.*' 'He drove him from the house.' (A16:11)
(2) *ʾína plíṭele max-tàla*' *m-gu-kàrma.*' 'but he came out as a fox from the orchard.' (A17:35)
(3) *pàlṭən m-gáwe.*' 'I shall get out of it.' (A20:3)
(4) *xa-qála ʾáθe m-qam-tắrət bèθa*' 'A voice came from before the house.' (A22:29)
(5) *ʾázən šáqlən zùzi*' *m-rəš-ʾèna.*' 'I shall go to take my money from on top of the spring.' (A15:2)
(6) *dawqíwa tə́rte bnàθa*' *xá m-rèše*' *ʾu-xa-bráta mən-xóθe dìye.*' 'Two girls held it, one from above it and one from below it.' (B7:24)

It is used after the preposition *qam-* when the latter has a temporal sense, e.g.

(7) *ʾáw qam-mə̀nnux hóle ʾə́θya láxxa.*' 'He has come back here before you.' (A22:39)

16.5.12. *Complements of Verbs and Expressions*

The preposition *mən* is used as the complement of various verbs and expressions, e.g. *braya mən* 'to leave (so.), *bista mən* 'familiar with', *hrawa mən* 'to speak (angrily) with', *mbaqore mən* 'to ask (so.)', *mdagole mən* 'to lie about', *mjagore mən* 'to contend with', *mḷaya mən* 'to fill with', *mṣawoθe mən* 'to speak with', *mštawhore mən* 'to be proud of', *praqa mən* 'to finish with', *qwala mən* 'to complain about', *ṭlaba mən* 'to ask (so.)', *zdaʾa mən* 'to be afraid of', *wădər mən* 'outside of'. It is used after some verbs to express an advantage or benefit, e.g. *waða mən* 'to do a good service to', *mqawole mən* 'to give a promise to', *maṣyoxe mən* 'to visit (the sick)'.

16.6. Repetition of Prepositions

In certain circumstances prepositions are repeated. In some cases the purpose of this is to express movement. It is commonly found with the preposition *reš-* 'upon', which, when repeated, has the sense of 'across' or 'over', e.g.

(1) *lá ʾawðə́xle ʾáwwa gə̀šra*ˈ *šáwrəx réša réša d-ánna mìya?*ˈ 'Should we not
     make a bridge for it so that we can go across this water?' (A17:3)

(2) *m-ɛ́ka mɛθə́nne bəzmàre*ˈ *ʾu-nasàrta,*ˈ *ta-ṭ-oðə́nne gə̀šra*ˈ *šàwər réše réše.*ˈ
     'From where should I bring you nails and a saw to make him a
     bridge over which he could cross?' (A17:9)

(3) *har-ʾə́θyɛle mən-ṭúra réša-reša d-o-gàre.*ˈ 'He came straight from the
     mountain across that roof.' (A23:14)

(4) *plíṭɛle xa-dídwa mən-naxìrət málka,*ˈ *reša-réša d-a-dudə̀kθa,*ˈ *t-wawa*
     *rəš-d-à-masta,*ˈ *zílle wírre gu-xá-borət kèpe.*ˈ 'A fly came out of the nose
     of the king, (went) across the pipe that was over the yoghurt, and
     entered a pile of stones.' (A11:5)

(5) *b-xólmi zála reša-réša ða-yáma rába gòrta,*ˈ *yáma xwàrta.*ˈ 'In my dream
     I went across a great sea, a white sea.' (A11:7)

Note that in these constructions the preposition has a full nominal inflec-
tion in the form *reša* or has a pronominal suffix. This contrasts with its
normal contracted form *rəš* before a noun.

Other prepositions are occasionally repeated to express movement. This
is attested for the prepositions *gu-* 'in', *xo-* 'under', *qam-* 'before' and *baθər-/*
bar- 'after', which in this construction are used with nominal inflection in
the forms *gawa, xoθa, qama* and *baθra/bara*, e.g.

(6) *síqle gáwa-gawət ḥadìqa.*ˈ 'He went up through the garden.'
     (A17:24)

(7) *náša jawújwa gawe-gawe-dìye*ˈ *palóṭwa m-d-ɛ́-paθa xèta.*ˈ 'A person could
     walk through it (the river) and come out the other side.' (B3:9)

(8) *ʾu-gríšle míya m-ṭùra*ˈ *muθéle xóθa-xoθət ʾùpra,*ˈ *muwə́rre gu-Dəmdə̀ma.*ˈ 'and
     he drew water from the mountain, bringing it under the ground
     and directing it into Dəmdəma.' (A11:14)

(9) *ʾə́θyela tré malàxe,*ˈ *pyáða qama-qámət čádra d-ò-malka.*ˈ 'Two angels
     came, passing in front of the tent of the king.' (A4:2)

(10) *ʾáw npílɛle báθra báθra tèla.*ˈ 'He followed after the fox.' (A35:13)

(11) *zílla báre báre dìye.*ˈ 'She went after him.' (A20:5)

The prepositions *b-* and *mən-*, which have multiple meanings, are some-
times repeated when they have a comitative sense. In the construction
with *b-* the preposition is, in some cases, expressed three times (*biye bə-b*
'together with'), e.g.

(12) *ṣə́lyɛle bìye b-došákka¹ gu-d-ó tanùra.*¹ 'He went down together with the mattress into the oven.' (A34:15)

(13) *qəm-maxéle bə-b-qə̀tta.*¹ 'He struck it (the sword) together with the sheath.' (A52:18)

(14) *ʾáwwa bíye bə-b-sùse¹ ʾáwər gu-d-o-gə̀ppa.*¹ 'He together with his horse entered a cave.' (A28:3)

(15) *škíra šə̀mmux,¹ márya ʾàlaha,¹ ʾéni qəm-mɛθéli láxxa bíye bə-b-sùsi.*¹ 'May your name be praised, Lord God, who have brought me here together with my horse.' (A26:22)

(16) *pɛ́šət mə́nni mə̀nni¹ ʾu-t-yánnux ʾúpra kəmət bắyət.*¹ 'Stay with me and I shall give you as much land as you want.' (A21:41)

(17) *kút-yoma gắrəg háwən mənnéy mənnè̀y.*¹ 'I must be with them everyday.' (A8:18).

(18) *hálbət míya mə́nne mə́nne lɛšì̀wale.*¹ 'Of course they kneaded it together with water.' (B5:16)

(19) *ʾína ʾáw tắra lá tắra mə́nne-mənnət tắrət nàše,¹ m-àwwa bára.*¹ 'The door for this, however, was not together with the door for people on this side.' (B10:53)

In (20) the preposition *mən* is used with the sense of spatial location and the repetition conveys the sense of extension that can be captured by the translation 'along by' or 'alongside':

(20) *ʾƐ̄n-Núne npíltɛla l-ṭúra l-ṭùra¹ mənná-mənnət nèra*¹ 'ʿƐn-Nune lies between one mountain and another alongside a river.' (B5:148)

16.7. GENITIVE PARTICLE WITH PREPOSITIONS

When a preposition has a pronominal suffix, it may optionally be extended with the independent genitive particle bearing the same pronominal suffix, e.g. *ʾəlle ~ ʾəlle diye, biye ~ biye diye, mənne ~ mənne diye, gawe ~ gawe diye*. The final syllable of the preposition with the suffix is occasionally contracted, with the result that the suffix is expressed only on the genitive particle, e.g. *bi-díye* (B5:126), *mən-díye* (B5:158). These extended types of construction should be contrasted with prepositions that cannot take pronominal suffixes directly and regularly use the genitive particle to carry them, e.g. *qa-diye* 'to him'.

Prepositions with pronominal suffixes that are extended by the genitive particle are attested predominantly with third person suffixes. It is occasionally found with other suffixes, e.g. ʾəlli-díyi 'to me' (A7:7).

Since the preposition in these constructions itself carries a pronominal suffix, the use of the genitive particle is redundant. Such 'heavy' coding is often used as a type of end weighting in order to mark some kind of closure. This is reflected by the fact that the constructions are predominantly used at the end of intonation groups, e.g.

(1)   ʾo-nášay-azə́lwa ʾə́lla dìyey.˥ 'The man would go to them.' (B5:21)
(2)   šúprə dúnye hóle ʾəlla-dìya.˥ 'She had the beauty of the world.' (A13:11)
(3)   qá-t ʾan-márre la-ʾáθi ʾə́lla dìya.˥ 'so that diseases do not afflict it.' (B5:106)
(4)   ṣə́lyɛle tfiqa bíye dìye.˥ 'He went down and met him.' (A13:3)
(5)   mò-ʾoðəx bíye díye.ˀ˥ 'What shall we do with him?' (A14:8)
(6)   ʾo-yála zóra žàre,˥ šqíla ʾaw-nằre mə́nne díye.˥ 'The young boy, poor thing, took the axe with him.' (A14:12)
(7)   ʾína brónət málka θèle˥ ʾu-ðà mə́nne díye.˥ 'Behold the son of the king has come and a girl is with him.' (A14:93)
(8)   báhər ṭ-áθi xákma náše sáxi gáwa dìya.˥ 'In Spring some people come and swim in it.' (A14:78)
(9)   ʾu-dérɛ xmìra gáwe díye.˥ 'and they put leaven in it.' (B5:100)
(10) mùtta˥ bəsra-w gèrme qáme díye.˥ 'He put meat and bones before him.' (A25:50)
(11) gằrəg xaprə́tla čə̀nnəḳə́ra dìya.˥ 'Each year you must dig around it.' (B5:105)

Equivalent constructions that lack the genitive particle and so are morphologically lighter often occur within an intonation group, e.g.

(12) xárθa tfíqe bíye xə́zyəlle ʾína šə̀nya,˥ npìla.˥ 'Then they came across him and found that he had fainted and fallen.' (A14:88)
(13) ʾu-bar dɛrɛ́wa gáwe y-asṛìwala.˥ 'After they put it in it, they tied it up.' (B5:166)
(14) ʾína mútta qáme nále-w bəzmàre.˥ 'But he put before him horseshoes and nails.' (A25:50)

When the genitive particle is omitted at the end of an intonation group, the clause is generally closely associated with what follows, in that it coheres

together with it in a closely knit series of clauses. In some of the examples below the closure of the series of clauses is signalled on a subsequent clause by a 'heavy' prepositional phrase containing a genitive partice:

(15) *malə́kθa mə̀ra*ˈ *kút-xa ṯ-íle rqáða mə̀nna*ˈ *dàmǝx mə́nna díya.*ˈ 'The queen said that whoever danced with her would sleep with her.' (A13:2)

(16) *yála zòra*ˈ *xzi-mə̀ndi*ˈ *ʾíθwa skìnta mónne*ˈ *ʾo-nằra mónne díye.*ˈ '(He was) a young boy, you see, and he had a knife with him, or an axe with him.' (A14:25)

(17) *ʾu-ʾanna baxtáθa yằ̌ði,*ˈ *mattí ʾíða ʾə̀lle*ˈ *ṛə́ší qá-t ʾáwwa mǝndì*ˈ *hóle xmìʾa.*ˈ 'The women know (about this), they place a hand on it and feel that it is…it is leavened.' (B5:100)

(18) *ʾu-ʾítwala ʾánna júllət prìxla bíya,*ˈ *qǝm-ṭẹnáli xáṣa dìya.*ˈ 'She had these clothes with which she flew and carried me on her back.' (A14:96)

(19) *šaqə́lɩwa čánta mə̀nne-u*ˈ *máttu ló̇xma gàwa,*ˈ *y-azə́lɩwa čyàda,*ˈ *bɛ́θa bɛ̀θa.*ˈ 'He would take a bag with him, in which he put bread, and would go from house to house making invitations.' (B5:20)

The genitive particle is regularly omitted on *ʾǝll-* phrases that mark pronominal objects on compound verbal forms. It was noted above (§16.2.2.2. iv) that in this context the *ʾǝll-* phrases resemble L-suffixes prosodically in that they are always bound to the verb in the same stress group. The lack of a genitive particle is compatible with this tendency for prosodic lightening of the suffix.

THE CLAUSE

17.1. The Copula Clause

Many aspects of the function of the various copulas and the clauses in which they occur have already been dealt with at length in §8.7. The use of copulas in the predicate of compound verbal constructions has been presented in §8.8. Here we shall be concerned with some features of the word order of copula clauses. The clauses are divided into three groups according to the type of copula they contain: (i) enclitic copula (including present and past copula), (ii) independent copula (including present and past copula) and (iii) deictic copula.

17.1.1. *Enclitic Copula*

17.1.1.1. *Basic Predicate*
When the enclitic copula occurs in a clause consisting of a predicate without any independently standing subject constituent, it is suffixed to the predicate, e.g.

(1) *xòðiwən.*ˈ 'I am by myself.' (A22:32)
(2) *xàwrən-ile.*ˈ 'He is our friend.' (A14:61)
(3) *zòrɛle.*ˈ 'He is young.' (A25:87)
(4) *senàyile.*ˈ 'It is easy.' (B5:106)
(5) *ʾɛ-gòrtɛla.*ˈ 'She is the elder one.' (A25:19)
(6) *xa-ʾilànɛle.*ˈ 'It is a tree.' (B5:152)
(7) *qùwyɛwa.*ˈ 'It was strong.' (B5:145)
(8) *zàxme-wawa.*ˈ 'It was huge.' (C7:2)

When the predicate is a 1st or 2nd person pronoun, the copula agrees with the predicate, e.g. *ʾànɛwən*ˈ 'It is me', *ʾàti-wət*ˈ 'It is you'.

17.1.1.2. *Clauses Containing a Subject Constituent*
When the clause contains a subject constituent in the form of an independent pronoun or a nominal, the subject is normally placed before the

predicate and the copula is suffixed to the predicate with the nuclear stress occurring on the predicate, e.g.

(1) *ʾána màlkən.*¹ 'I am a king.' (A4:30)
(2) *ʾáwwa nišànqɛle.*¹ 'It is a symbol.' (B5:41)
(3) *bráta zamàrtɛla.*¹ 'The girl is a singer.' (A25:68)
(4) *xáli zàngin-ile.*¹ 'My uncle is rich.' (A23:3)
(5) *w-áw xamìmɛwa.*¹ 'It was warm.' (B5:154)
(6) *xóne díye fãqìra-wewa.*¹ 'His brother was poor.' (A25:1)

When the predicate is a 1st or 2nd person pronoun, the copula agrees with the predicate, e.g.

(7) *ʾáni xášwi ʾáti ʾànən.*¹ 'They will think you are me.' (A7:18)

The subject constituent may occur in a separate intonation group. Constructions such as these often occur at some kind of boundary in the discourse. The clause in (8), for example, opens a section of discourse concerning the village saint's festival. The clause in (9) marks the onset of a concluding comment on the preceding foreground section of the discourse concerning the cultivation of apples. The clause in (10) occurs at the onset of a turn of speech:

(8) *šèra*¹ *xa-təxrùnyɛle.*¹ 'The festival is a memorial.' (B5:69)
(9) *ʾu-xayuθèy*¹ *b-àyyɛwa.*¹ 'Their livelihood was in this (profession).' (B5:106)
(10) *ʾána-w ʾàti*¹ *xonăwàθɛwəx.*¹ 'You and I are brothers.' (A26:49)

The copula is occasionally placed on the subject constituent. The motivation for such a construction is to express the prominence of the subject. This may be focal prominence or topical prominence (§15.4.1.4.1. i–ii). When it has focal prominence it functions as an information focus. This is signalled on the prosodic level by the placement of the nuclear stress on the subject constituent, e.g.

(11) *ʾáwwa lèle kálba,*¹ *ʾàtit kálba.*¹ 'He is not a dog, *you* are a dog.' (A11:20)
(12) *dəbbɛla táma*¹ '*The bear* is there.' (A20:7)

In (11) and (12) the predicate belongs to the presuppositional background of the clause. In (11), for example, the presupposition is '*x* is a dog' and the subject constituent supplies the new information that *x* is to be identified with 'you'. The clauses are used in a context in which the speaker assumes that the hearer is entertaining another referent for the role in question and the purpose of the construction is to reverse this expectation.

In (13) the construction is used to express an exclusive focus after the particle *har*:

(13) *lə́mu har-àtit ʾárya.*ᴵ 'Is it only *you* who are a lion? (literally: Only *you* are a lion?)' (A46:3)

When the subject constituent with the enclitic copula is topically promi-nent, the nuclear stress remains on the predicate. The topical prominence of the referent arises from the fact that it has been evoked in the imme-diately preceding discourse. This construction is not regularly used with all subject constituents that have been previously evoked. The purpose of the 'heavy coding' of the initial topical subject is to mark a boundary in the discourse, endowing the clause with a distinctness from what pre-cedes. This may mark a new discourse section, as in (14) and (15), where the clauses are concluding comments on a preceding foreground section. The construction is also used to give a clause distinctness for the sake of making it more prominent, as is the case in (16):

(14) *ʾáwwa mə́šxa y-amrə́xle ĉ̣ita.*ᴵ *ʾáwwa ʾi-mapəlxìle*ᴵ *ʾə́n y-axlíle b-lə̀xma,*ᴵ *ʾə́n ʾi-dɛríle b-rə̀zza,*ᴵ...*ʾáyyɛla ĉ̣ìta.*ᴵ 'We call this butter *ĉ̣ita*. They use it—either they eat it on bread or they put it in rice or, when they cook rice...This is butter.' (B6:40–41)

(15) *ʾo-yálət băyàwale*ᴵ *hóle ʾə̀θya-w*ᴵ *qəm-yawə́lla yalə̀xθa ʾə́lli.*ᴵ *ʾu-ʾáyyɛla kùlla.*ᴵ 'The young man whom she loved has come and has given me her scarf. That is all.' (A4:24)

(16) *xúwwele qṭìla.*ᴵ 'The snake is killed.' (A24:42)

The topical prominence marked by the copula may also be forward pointing, i.e. the item is marked as having relevance in the subsequent discourse. This is found in constructions with the deictic form *hatxa* or *hadə́x* 'thus', when it has a forward pointing correlative function in that it relates to what is specified in the following clause, e.g.

(17) *hátxɛla qaḍìya*⸜ *málka hóle múθyəlla bráte dìye*⸜ *ʾu-hóle míra ʾáyya bráti qa-brònux.*⸜ 'This is the situation: the king has brought his daughter and said "This daughter of mine is for your son, that is she will become your wife."' (A21:8)

The enclitic copula, therefore, expresses a general prominence, which is unmarked with regard to its pragmatic nature. The nucleus of the intonation group, on the other hand, expresses a new information focus. The two devices usually coincide, in that the enclitic copula is generally placed on the element that is the new information focus of the clause. They may, however, operate independently, as in (14)–(17).

On some occasions the subject constituent is placed after the predicate. In such cases the enclitic copula and the nuclear stress are generally on the predicate, e.g.

(18) *ʾàwwɛle geyása.*⸜ 'The *geyasa* ceremony is this.' (B6:4)

(19) *ʾànnɛla ʾeðǎwáθə diyéni.*⸜ 'Our festivals are these.' (B6:16)

(20) *y-ásqəx méθəx míya mən-d-ăwàha ṭúra.*⸜ *rába ròḥqɛle ʾo-ṭúra.*⸜ 'We shall go up and fetch water from that mountain over there. That mountain is very far away.' (A39:9)

(21) *mšadóre ʾə́lla dìya*⸜ *ʾu-náše θèla*⸜ *qəm-banéle béθe dìye,*⸜ *gu-ʾə́šta šáwwa yomàne,*⸜ *ʾašírət ràbθa-wawa Ǧazíre Bóta.*⸜ 'She sent them to her and people came and rebuilt his house, in six or seven days. Jazire Bota was a large community (consisting of many people).' (A26:59)

(22) *xzéle b-xə́lme dìye*⸜ *ʾíθ xa-náša gu-d-áy mðìta*⸜ *biš-fãqíra m-kúlla nàša.*⸜ *rába fãqìra-wewa ʾawwa-náša.*⸜ 'He saw in his dream that there was a man in the town who was poorer than anybody else. The man was very poor.' (A8:3)

Constructions with postposed subjects such as (18)–(22) are typically used to express an elaborative comment on something that has been talked about in the immediately preceding discourse. They are intended to be cohesive with what precedes more than with what follows. The subject is a topical referent and not part of the information focus of the clause.

This construction is used also in clauses that repeat information that has been given in what immediately precedes without advancing the discourse. This is the case in (23), where the postposed subject is placed in a separate intonation group:

(23) *mə́ra gắrəg mέθət sisisàmbər.*ˈ *sáwən Tóma smèle, píšle k̬òra.*ˈ *sisisàmbər*ˈ *ʾὲkɛla.*ˈ *kəs-Lelìθa.*ˈ *ʾáp-xa lá-maṣe máṭe ʾə́lla dìya.*ˈ *kəs-Lelìθɛla*ˈ *sisisàmbər.*ˈ 'They said "You must bring the sisisambər plant. Grandfather Toma has become blind." "Where is the sisisambər?" "With Leliθa. Nobody can reach it. The sisisambər is with Leliθa." ' (A50:1)

When the referent of the subject constituent has been mentioned in the immediately preceding discourse, the copula is occasionally placed on the postposed subject rather than on the predicate. The copula in such cases signals the topical prominence of the subject constituent, e.g.

(24) *mə́re kʸὲle qáṣre díye?*ˈ … *mə́re ʾăwàʾha qáṣre díyele.*ˈ 'He said "Where is his residence?" … He said "His residence is that (over there)." ' (A37:10)

The motivation for a construction with a postposed subject such as (24) is again to signal cohesiveness with what precedes, in this case supplying the answer to a preceding question. When, conversely, a topical subject constituent occurs at the front of a clause, this typically expresses a less cohesive connection with what precedes. As we have seen, the discourse boundary marking function may be enhanced by increasing the coding of the subject topic by means of the enclitic copula (14–16).

17.1.1.3. *Split Predicate*

When the predicate is a composite phrase consisting of several constituents, the copula is sometimes placed on the head of the predicate before the dependent elements.

This is frequently the case when the head of the predicate is modified by a dependent prepositional phrase, e.g.

(1) *ʾáyya qéṭela ṭla-ḥaywàne.*ˈ 'This is (the activity of) the summer for the animals.' (B5:112)
(2) *ʾĒn-Núne npíltela l-ṭúra l-ṭùra.*ˈ 'ɛn-Nune lies between one mountain and another.' (B5:148)
(3) *har-blíɣət b-kàsux.*ˈ 'You are always concerned about your stomach.' (A23:10)
(4) *ʾan-markáne mtúrṣela m-ʾùpra.*ˈ 'The jars are made from clay.' (B5:168)
(5) *ʾaw-zeðáya mtúrṣɛwa m-xə̀ṭṭe.*ˈ 'The flat-bread was made out of wheat.' (B5:15)

(6) *ʾína ramánɛwa biš-mən-qáṣrət kùl-naše.*ˈ 'But it was higher than the villa of anybody (else).' (B10:51)

If the speaker wishes to give particular focal prominence to the dependent prepositional phrase, this may be fronted before the head of the predicate with the nuclear stress and copula placed on it, e.g.

(7) *ṣáwθa gu-púmmət màrɛla šəklánta.*ˈ 'A word is beautiful (only) in the mouth of its master (= It is easier said than done).' (A26:40)

The split of the predicate is regularly found when the head of the predicate is a noun with a subordinate clause as its dependent, e.g.

(8) *dánɛla qá-t dɛréla mɛrɛ̀θa.*ˈ 'It is time to add the rennet.' (B5:164)

It is occasionally found in nominal annexation constructions, whereby the copula is placed on the head noun, e.g.

(9) *ʾána málkən d-ày-bažə̀r.*ˈ 'I am the king of that town.' (A32:9)
(10) *ʾáwwa xa-nišànqɛleˈ t-ʾáθṛa d-ɛ̀-ga.*ˈ 'This was a symbolic act of our country at that time.' (B5:153)

In (9) the annexation particle is attached to a dependent phrase that begins with a demonstrative and in (10) the particle is attached to a dependent noun that is separated from its head by an intonation group boundary. In both cases, therefore, the connection between the head and dependent elements of the annexation are looser than in a construction in which the annexation particle is suffixed to the head noun (*kθawət qaša* 'the book of the priest'). The copula does not split the head and dependent elements in the latter type of tight annexation, e.g.

(11) *ʾap-ʾána brónət màlkɛwən.*ˈ 'I also am the son of a king.' (A24:45)
(12) *čálθət qáša Hɛ̀dot?*ˈ 'Are you the daughter-in-law of the priest Hɛdo?' (B9:10)

A copula normally intervenes between a head noun and an adjective only when the adjective is in a separate intonation group. In such constructions the adjective can be regarded as a reduced form of a separate predication (see §14.7., examples 47–50), e.g.

(13) *xa-kàrmɛle¹ rába gòṛa.¹* 'It is an orchard (which is) very large.'
(A12:9)

When the adjective occurs in the same intonation group as the head noun,
the copula is placed at the end of the phrase, e.g.

(14) *ʾána xa-náša gòṛɛwən.¹* 'I am an old man.' (A8:43)
(15) *ʾáy qəṣṣátta rìxtɛla.¹* 'It is a long story.' (A25:52)
(16) *xa-qə́ṣṣət rába mapšəmàntɛla.¹* 'It is a very sad story.' (A4:31)

On some sporadic occasions the copula is placed on a quantifier or intensi-
fier particle that stands before the head of the predicate, e.g.

(17) *rábɛwa náše xə̀ḍye.¹* 'The people were very happy.' (B15:12)
(18) *rábəxwa xə́ḍye pṣìxe.¹* 'We were very happy and cheerful.' (B16:6)
(19) *tə́rət ʾùmra¹ rábɛwa kòpa.¹* 'The door of the church was very low.'
(B15:2)
(20) *kúlla qumašə́t ʾɛ́-ga bíš-wɛwa rešàye.¹* 'All the material at that time was
of the very best quality.' (B10:45)

This retraction of the copula can be regarded as a device for express-
ing the prominence of the intensifier particle. The predicate as a whole
expresses new information, so the particle is not being singled out as the
only information focus in the clause. This is reflected also in the prosody,
in that the nuclear stress is placed at the end of the predicate, which is
intended to mark the whole phrase as new information. Rather, within
the new information of the predicate, the intensifier is being given an
enhanced prominence. This can be compared to a construction with a
compound verbal form such as (21), in which the copula is moved back
onto the quantifier *raba* to give it an enhanced prominence within the
new information of the predicate:

(21) *zríyənwale b-iθàθi¹ ʾu-rábənwa kčixa bíye dìye.¹* 'I had cultivated it with
my hands and greatly toiled in it.' (A17:32)

When the subject constituent is postposed, in some isolated cases it is placed
after the head noun of the predicate but before a dependent modifier.
This applies to (22), in which the independent subject pronoun intervenes
between a noun and its adjective. As with other cases of postposed subjects,
the clause has a status of a comment on what precedes it:

(22) *káze xoš-ṣlìgən*ˈ *yalúnka ʾáti zòrɛwət.*ˈ 'He tried (to persuade him to go) "Go down, you are a young child."' (A29:28)

17.1.2. *Independent Copula*

17.1.2.1. *Basic Predicate*
An independent standing copula without a subject constituent is attested in the text corpus in two contexts.

(i) *Present Copula before the Predicate*
These tend to occur as answers to rhetorical questions such as (1) and (2):

(1) *ʾɛ-màsta*ˈ *ʾi-dɛríla gu-gùða.*ˈ *gúða mòdile?*ˈ *ʾíle gə́ldət xa-hèwən.*ˈ 'They put the yoghurt in a churn. What is a churn? It is an animal skin.' (B6:38)

(2) *xɛ́la díya mòdile*ˈ *t-mazvə̀rra?*ˈ *ʾíla mìya.*ˈ 'What is its power, which turns it? It is water.' (B6:53)

This type of question and answer structure has a similar function to clauses with an independent copula after the subject such as *guða ʾile gəldət heywən, xɛla diya ʾila miya* (§17.1.2.2.), which typically supply an explanatory or elaboratory comment on what precedes.

(ii) *Past Copula after the Predicate*
These constructions do not appear to be significantly different in function from corresponding ones with an enclitic copula. The 'heavier' coding brought about by the prosodic separation may have been exploited by the speaker to give the clause added prominence, e.g.

(1) *gu-bɛ̀θa wéwa.*ˈ 'He was in the house.' (A6:1)

(2) *rába tàza ʾiyéwa.*ˈ 'It was very good.' (B5:55)

17.1.2.2. *Clauses Containing a Subject Constituent*
Clauses containing an independent standing copula generally have a subject constituent in the form of an independent pronoun or a nominal. The constructions discussed in §17.1.2.1. which lack a subject constituent are far more rarely attested in the text corpus. The subject constituent is regularly placed at the front of the clause before the predicate. The copula is placed either before the predicate, immediately after the subject (1–6),

or is placed after the predicate (7–10). This applies both to the present and the past copula.

(1) *ʾána ʾíwən Rustā̆mo brōn-t-Ẑàlo.*¹ 'I am Rustam son of Zāl.' (A29:63)

(2) *ʾáxni ʾíwəx màlke.*¹ 'We are kings.' (A18:8)

(3) *ʾáxxa ʾíθena dàwla.*¹ *dáwla ʾíle xa-sandùqa*¹ *réše pθíxɛle dérɛ xə̀ṭṭe gáwe.*¹ 'Here there is a drum. The drum is a box, with an open top, in which they put wheat.' (B6:54)

(4) *béθət Qára Téždin qìdle.*¹ *Qára Téždin ʾíle xə̀tne díye.*¹ 'The house of Qara Teždin has burnt down. Qara Teždin is his brother-in-law.' (A26:55)

(5) *məlxáwa ʾíwa mtúrṣa m-qèsa.*¹ 'The winnowing fork was made from wood.' (B5:87)

(6) *w-áw ʾiwéwa malàxa.*¹ 'He was an angel.' (A8:25)

(7) *ʾána Qára Tèždin ʾíwən.*¹ 'I am Qara Teždin.' (A26:68)

(8) *ʾána brònux ʾíwən.*¹ 'I am your son.' (A18:7)

(9) *sab-qyámta b-lèle ʾiyáwa.*¹ 'because Easter was at night.' (B5:53)

(10) *tròṣa*¹ *ʾáni milàne ʾiyɛ́wa*¹ 'In fact, they were green.' (B5:218)

The placement of the copula immediately after the subject in clauses such as (1)–(6) expresses the topical prominence of the subject. This reinforced coding of the topic in initial position functions as a discourse boundary marker. The construction is used either in statements that supply explanatory information concerning what precedes or in statements that open a section of discourse. When acting as explanatory comments on what precedes, they differ from constructions with postposed subjects such as (§17.1.1.2., examples 18–24) in their degree of independence and prominence. The postposed subject constructions are incidental comments that are tagged onto what precedes. The constructions with the initial subject and following copula are presented as important pieces of information, which typically have relevance for what follows as well as being explanatory of what precedes.

As remarked, the position of the copula after the subject expresses the topical prominence of the subject. The prosodic detachment of the copula as an independent word can be interpreted as a 'heavy' grammatical coding device intended to give the clause as a whole prominence and distinctness. Construction such as (7)–(10) which have have a prosodically independent copula after the predicate exhibit this latter device. They can, therefore, be regarded as expressing some degree of prominence. Indeed, they can all be interpreted as being intended as important statements in the contexts

in which they occur. They lack the additional device of reinforcing the topical prominence of the subject as a means of marking their distinctness. It should be noted, however, that in the attested examples of this construction a pronominal subject is always expressed by an independent pronoun (cf. 7, 8, 10) rather than zero anaphora. This in itself is a 'heavy' coding device designed to mark a boundary (see §17.7.4.).

The subject constituent in clauses with an independent copula is not postposed after the predicate. This can be explained by the fact that, as seen in §17.1.1.2, the postposition of a topic subject constituent, is typically used as a device to bind cohesively the clause with what precedes as a form of incidental tag. This is incompatible with the function of the independent copula as a marker of distinctness and independence from what precedes. An apparent exception to this is (11):

(11) *rəš-kúlla d-áni ʾíla Səttìye.*ˈ 'Above all of these is Səttiye.' (A25:22)

Here the inflection of the copula agrees with the noun Səttiye and in this respect the latter would normally be construed as the grammatical subject. In terms of information structure, however, the initial prepositional phrase containing the anaphoric pronoun is clearly more topical than the noun Səttiye, which is the asserted focus of new information.

The initial subject constituent is sometimes separated from the rest of the clause by an intonation group boundary. This is a further prosodic device to reinforce the prominence of the initial topic in order to give the clause as a whole distinctness in the discourse and disjoin it from what precedes, e.g.

(12) *ʾu-zeðàya*ˈ *ʾíla biš-xlìmta.*ˈ 'A flat-bread is thicker.' (B6:49)

(13) *Nìnwe*ˈ *ʾiwáwa pétəxt ʾaθoràye.*ˈ 'Nineveh was the capital of the Assyrians.' (B6:17)

(14) *Mămo*ˈ *ʾiwewa gu-ʾAlằn*ˈ *ʾu-Z̃ìne*ˈ *ʾiwáwa gu-Ɉazíre Bòta.*ˈ 'Mămo was in ʾAlān and Zine was in Jazire Bota.' (A26:1)

17.1.3. *Deictic Copula*

17.1.3.1. *Basic Predicate*

When the deictic copula occurs in a clause without a subject constituent, it is normally placed before the predicate (1–3).

(1) *hóla làxxa.*ˈ 'They are here.' (A14:100)
(2) *hóle gu-Kàrkuk.*ˈ 'He is in Kirkuk.' (A16:1)
(3) *hóla gwìrta.*ˈ 'She is married.' (A26:31)

On sporadic occasions deviations from this structure are found. In (4)–(6), for example, it is placed after the predicate. In (7) it is used in combination with an enclitic copula:

(4) *bas-ṭlìya hóle.*ˈ 'But he is asleep.' (A31:6)
(5) *ʾárye dìye*ˈ *kəs-báxte dìye hóla.*ˈ 'His lions are with his wife.' (A18:19)
(6) *šxàna hóli!*ˈ 'I am getting hot!' (A32:23)
(7) *hóle qúrbət nùrɛle.*ˈ 'He is near the fire.' (A23:9)

17.1.3.2. *Clauses Containing a Subject Constituent*
When the clause contains a subject constituent, the deictic copula is normally placed before the predicate. There is variation, however, regarding the position of the subject, in that it may be placed before or after the copula.

(i) *Subject—Copula*
When the subject is placed before the copula, the clause in principle marks some kind of discourse boundary. This construction often occurs at the beginning of a section of text that concerns the referent of the subject, e.g.

(1) **xa-bráta hóla tàma**ˈ *ʾána mə́ri ʾə̀llux,*ˈ *bráta zamàrtɛla.*ˈ *ʾáp-xa lɛle-mṣáya bíya dìya.*ˈ 'A girl is there. The girl is a singer—as I said to you. Nobody can prevail over her.' (A25:68)

(2) **baxtáθən hóla yaqúre tərwə̀θna.**ˈ *ʾn-báxtux muθéla bràta*ˈ *ʾu-báxti muθéla bròna,*ˈ *brátux qa-bròni.*ˈ *ʾn-báxti muθéla bràta*ˈ *ʾu-báxtux muθéla bròna,*ˈ *ʾa-bráti qa-brònux.*ˈ 'Our wives are both pregnant. If your wife gives birth to a girl and my wife gives birth to boy, your daughter (will be married) to my son. If my wife gives birth to a daughter and your wife gives birth to a son, my daughter (will be married) to your son.' (A25:2–3)

(3) *ʾƐ̄n-Nùne*ˈ *hóla npílta gu-ʾáθṛət Bə̀rwər.*ˈ 'ʾƐn-Nune lies in the land of Barwar.' (B4:1)

The construction is sometimes used to introduce a discourse section that is inserted within a larger section. This applies, for example, to (4), which

is an extract from a description of the activities of the bride in a wed-
ding. The construction in question with the deictic copula marks a shift
to a section concerned with the activities of the groom. The discourse
subsequent shifts attention back to the bride:

(4) *y-amríla zawə́rtət kʸàlo.¹ ʾày¹ ta-t-toràla¹ kʸálo xaráye ṭ-óra gu-bèθa.¹ maxyàle
ʾo-mə́šxa.¹* **xə́tna hóle zína l-gàre.**¹ *mən-gáre maxé-ʾaqle rəš-swána
hàtxa,¹ ṣále xánči ʾúpra gu-réšət kʸàlo.¹ xaráye ṭ-àwra.¹* 'They call it "the
bride's pot." It was for the bride to break in order that she could
finally enter the house. She would apply the oil, while the groom
was standing on the roof. From the roof he strikes his foot on the
eves like this and a little earth falls onto the head of the bride.
Finally she enters.' (B8:33–34)

The inserted section may consist of only a clause, as in (5), in which the
speaker uses the construction to turn attention to the activity of the doves.
The effect is to present this as an activity with a degree of independence
from the activity of the youth described in what precedes, which is con-
comitant with it rather than being a component of it:

(5) *xa-yála rába šapìra¹ hóle ʾəθya,¹ súse mrúpyəlle gu-màrgax.¹ hóle də́ryəlla gáne
gu-bə́rke dìyax.¹ hóle sxàya,¹* **yonáθa hóla reše-reše-dìye.**¹ *mút ʾáti tíwta
làxxa?¹ qu-xzà!¹* 'A very handsome youth has come and released his
horse in your meadow. He has immersed himself in your pool and
is swimming. Doves are (flying) over him. Why are you sitting here?
Get up and see!' (A25:58)

The initial subject constituent is occasionally placed in a separate into-
nation group. This is the case in (6), in which the two clauses with the
deictic pronouns distinguish between the situation of his aunt and uncle
by presenting them in a contrastive opposition. The prosodic separation
of the subject topic constituent enhances the distinctness of the two poles
of the opposition:

(6) *qìmɛle,¹ šə́mmət máθa díye wéwa Barwòre.¹ ʾámte dìye¹ hóla gu-Sàrzar¹ ʾu-xále
dìye¹ hóle gu-Daštàne.¹* 'The name of his village was Barwore. His aunt
was in Sarzar and his uncle was in Daštane.' (A23:1)

(ii) *Copula—Subject*

When the subject constituent is placed after the copula, the clause is
presented with a greater cohesion with what precedes. In (1) and (2) the

construction gives descriptive detail concerning the preceding event. In
(3) it describes a situation that is an immediate consequence of the pre-
ceding event. In (4) the clause introduces the instrument of the following
activity of the cutting of the bread and in this sense is cohesive with what
follows. The placement of the subject after the copula, however, has the
effect of binding the whole section describing the cutting of the bread to
what precedes and presenting it as a direct consequence of it.

(1) *wírɛle gu-xà-ʾotəx xéta*ˈ *gòṛta*ˈ **hóla xákma kursǎwàθa**ˈ **m-ày-gota**ˈ
xákma m-ày-gota.ˈ 'He went into another room, a large one.
Some chairs are on one side and some on the other.' (A14:29)

(2) *ʾáy hóla wáða kùbbe*.ˈ **hóla ʾiθáθa gu-lɛ̀ša**,ˈ *lyáša kùbbe*.ˈ 'She is making
meat-balls. Her hands are in dough, while kneading the meat-balls.'
(A21:26)

(3) *múθyəlla làxxa*ˈ *ʾáw-u wǎzīr*ˈ *ʾu-***hóla wajjúwe díya làxxa**.ˈ 'He and
his vizier brought her here, and her effects are here.' (A21:9)

(4) *zeðàye*ˈ *t-la-qṣàya*ˈ *de-màṭo hóya?*ˈ **hóla skínta mə̀nne**.ˈ *xaráṭla zeðàye*ˈ
b-pálga dìya.ˈ '(He says) "Pitta bread without breaking it, how could
that be?" He has a knife with him. He scores the pittas in their
middle.' (A30:21)

17.1.4. *Copula Clauses with an Interrogative Constituent*

The predicate of a copula clause may be an interrogative constituent, e.g.
*mòdile?*ˈ 'What is it?' (A4:48), *ʾɛ̀nile?*ˈ 'Who is it' (A22:32), *ʾɛ̀kɛle?*ˈ 'Where
is he?' (A4:19).

When the clause contains a subject constituent, the copula is always
placed on the predicate. The subject is placed either before or after the
predicate. The basic principle determining the position of the subject is
the same as in indicative clauses. The placement of the subject in initial
position before the predicate typically marks some kind of boundary in
the discourse, whereas the subject is postposed after the predicate when
the speaker wishes to present that clause as having greater cohesion with
what precedes.

The construction with the subject before the predicate is frequently
attested in the text corpus at the beginning of a section of discourse that
supplies an explanatory comment on what precedes, e.g.

(1) *hóle ʾíθən làxxa*ˈ *stə̀rra*.ˈ *stə́rra mòdile?*ˈ *xə̀ṭṭele*ˈ *ʾu-šìšmele*ˈ *ʾu-pràge*ˈ *ʾu-sàṛe,*ˈ
kúlla də́rye gu-mzìðe.ˈ 'There was a food store. What is a food store?

It is wheat, sesame, millet, barley, everything put in leather bags.'
(A23:17)

(2) ʾíθwalən mandòrta.¹ mandórta mòdila?¹ ʾáwwa kèpεle,¹ mən-gòte,¹ m-ay-góta
m-ay-gòta¹ xríṭa xa-bòya.¹ 'We had a roller. What is a roller? It is a
stone, bored with a hole in its side, on one side and the other side.'
(B5:145)

(3) ʾéða gòṛa¹ yómət trùšeba¹ y-áwe duxràna.¹ y-áwe duxràna.¹ ʾo-duxrána mòdile?¹
ʾan-nàšе¹ kùlla báte¹ kut-béθa mbášəl xa-mǝndi.¹ 'During the "big festival,"
Monday was a (time of) memorial, it was a (time of) memorial.
What is this memorial? The people, all the families, each family
cooks something.' (B5:64)

The referent of the subject has not always been mentioned in the preceding
discourse. In (4), for example, the subject 'his job' has not been mentioned.
The crucial factor is that the narrator presents the interrogative clause as
a boundary, introducing a section of discourse in which he describes the
activities of his daily work:

(4) ʾíθwale xa-tàwra¹ ʾu-xa-xmàra.¹ kút-yum šúle díye mòdi-wewa?¹ šaqǝlwale
táwre díye¹ ʾu-šaqǝlwa xmáre díye¹ qèdamta¹ y-azílwa zǎrèwa¹ ʾu-y-aθéwa
l-bèθa,¹ y-axólwa mándi ʾi-damòxwa.¹ 'He had an ox and an ass. Every-
day what was his job? He would take his ox and take his ass early
in the morning and go to cultivate (his field). He would then come
back home, eat something and go to sleep.' (A21:3–4)

The construction with the subject before the predicate is sometimes used
at the beginning of a speech turn, e.g.

(5) ʾámər ʾáw ʾènile?¹ 'He says "Who is he?"' (A22:29)
(6) ʾámər ʾáti ʾèniwət?¹ 'He says "Who are you?"' (A28:34)

When the subject is placed after the predicate, the nuclear stress is either
placed on the predicate or on the subject. As remarked above, the sub-
ject is postposed in various contexts where the clause is presented by the
speaker as cohesive with what precedes. In (7) and (8) the construction is
used in the second of a series of two questions, the purpose of which is
to elicit the same basic information and are presented as a unit:

(7) yába ʾèkεle¹ Dáwəð kòra?¹ ʾékεle maḥálle dìye?¹ 'Where is blind David?
Where is his place?' (A16:3)

(8) *máre ṭla-Ẕàlo:*' *Ẕàlo*' *ʾánna mòdila gu-réšux,*' *ʾánna šaqyàθa?*' *módila ʾánna brinàne?*' 'He said to Zāl "Zāl, what these on your head, these scars? What are these wounds?"' (A29:4)

In (9) the question 'What was her name?' is presented as cohering closely with the preceding clauses which introduce the referent of a woman into the discourse:

(9) *ʾíθwa xa-baxtà*' *rába xàmθɛwawa.*' *módi-wewa šə́mma dìya?*' *Bəlbə́l Hazàr.*' 'There was a woman. She was very beautiful. What was her name? Bəlbəl Hazar.' (A8:21)

In (10) the subject is postposed in a question at the beginning of a speech turn. The effect of this is to present it as a tag to what precedes, eliciting a supplementary detail, rather than setting it up as the onset of a new section of discourse concerning 'your house':

(10) *b-óma xéna ʾáθeti ṭla-kawùθra,*' *čìdət kəslèni.*' *máre ʾɛ̀kɛle bɛθéxu?*' *mára fə́llən dùkθa.*' '(She said) "The day after tomorrow come to lunch, you are invited to our home." He said "Where is your house?" She said "In such-and-such a place."' (A22:14)

If the interrogative constituent is the subject of the clause, this is normally placed at the front of the clause with the copula cliticized to it, e.g.

(11) *ʾɛ́nile gu-bɛ̀θa?*' 'Who is in the house?'
(12) *ʾɛ́nile zaqàra?*' 'Who is a weaver?'
(13) *módile rəš-mèz?*' 'What is on the table?'

The nuclear stress is in principle put on the predicate. The placement of the copula on the subject can be explained as a reflection of the topical prominence of this constituent. It is not topically prominent in the sense that it is referentially bound to the preceding discourse, but rather due to the fact that it is the central concern of the clause which is typically expected to be talked about in the following discourse. This may be termed 'forward pointing' topical prominence (see §15.4.1.4.1. iiia).

The nuclear stress is generally placed on the interrogative subject constituent when the predicate is a component of the presuppositional background the clause. The prosodic pattern *ʾɛ̀nile gu-bə́θa*', for example, would typically be used when the speaker assumes that the hearer is entertaining the presupposition that somebody is in the house.

When an adverbial interrogative expression meaning 'why' is placed at the front of a copula clause, the copula is, likewise, attached to this item rather than to the predicate, e.g.

(14) *ta-módila ʾáyya mðíta hàtxa?ˈ* 'Why is this town like this?' (A4:31)

17.1.5. *Existential Usage*

In a few cases the enclitic copula is used simply to predicate the existence of a referent rather than ascribe some property to it or identify it with another item. This is most commonly found in meteorological expressions, e.g.

(1) *xapùθɛla.ˈ* 'It is foggy (literally: There is fog).'
(2) *màṭrɛla.ˈ* 'It is rainy (literally: There is rain).'
(3) *xə̀mmɛle ʾə́lli.ˈ* 'I am hot (literally: There is heat is to me).'
(4) *qàrθɛla ʾə́lli.ˈ* 'I am cold (literally: There is cold is to me).'

Other examples:

(5) *gu-xa-gə́ppa hambišàye-wawa.ˈ* 'There were giants in a cave.' (A12:18)
(6) *há ríxət náša naxràyɛleˈˈ* 'Ha, there is the smell of a foreign man!' (A24:47)
(7) *ʾiθáθa qàmxɛle,ˈ pθìxtəllela tắra.ˈ* 'While there was flour on her hands, she opened the door.' (A21:26)

In principle the nuclear stress is placed on the existential subject in such constructions, which reflects its status as a new information focus. In (8) the copula is placed on a preceding quantifier. In such constructions the whole clause is a new information focus, including the existential subjects, which is reflected by the position of the nuclear stress on the subject at the end of the intonation group. The placement of the copula on the quantifier, therefore, does not express a narrow new information focus on the quantifier, but rather expresses a prominence or intensification of the quantifier within the broad information focus of the clause:

(8) *ʾĨ́šwuṭ rába krèt-iwa gu-ʾáθṛa.ˈ rábɛwa tàlgaˈ rábɛwa mə́ṭra ʾu-məndiyàne.ˈ* '(The month of) February was very bad in our country. There was a lot of snow. There was a lot of rain and so on.' (B5:152)

Sporadically the enclitic copula is found with an existential function with referentially definite subjects in other contexts, e.g.

(9) *har-Wɛ́rda-w Nɛ̀rgis-ila.*ˈ *làtla,*ˈ *lá bnòne,*ˈ *lá čù-məndi.*ˈ 'Only Wɛrda and Nɛrgis were there. They had no children, nothing.' (A24:51)

The independent copula is attested with existential meaning in clauses contaning indefinite subjects, e.g.

(10) *gu-d-ó qoṭíya ʾíla xa-sə̀pra.*ˈ 'In that box there is a sparrow.' (A12:40)

The deictic copula is used existentially with definite or indefinite subject constituents. It is placed either before or after the subject, e.g.

(11) *hóla ʾisə́qθa dìya.*ˈ 'Here is her ring.' (A25:69)
(12) *hóʾla mìya.*ˈ 'Here is some water.' (A28:18)
(13) *xa-bɛ́θa hòle.*ˈ 'There is a house over there.' (A33:5)

17.2. CLAUSES CONTAINING A NEGATIVE COPULA

The negative copula is in principle placed before the predicate. The most basic construction consists of a simple nexus of copula and predicate, e.g.

(1) *lɛ́le dàwa.*ˈ 'It is not gold.' (A14:26)
(2) *lɛ́le pčìla.*ˈ 'It is not crooked.' (A17:20)
(3) *lɛ́le gnàyi.*ˈ 'Its not my fault.' (A23:23)
(4) *lɛ́wət d-áwwa ʾàθra.*ˈ 'You are not from this country.' (A25:82)
(5) *lɛ́wa rába gòṛa.*ˈ 'It was not very big.' (B5:140)

When the clause contains a subject constituent, this is generally placed before the predicate, e.g.

(6) *ʾáwwa lɛ̀le qáša.*ˈ 'He is not a priest.' (B17:7)
(7) *ʾáw lɛ́le ʾùpri.*ˈ 'It is not my land.' (A25:52)
(8) *Yuwánəs lɛ̀le táma.*ˈ 'Yuwanəs is not there.' (A52:6)
(9) *dárdi lɛ́la d-àyya.*ˈ 'My suffering is not from this.' (A26:66)
(10) *yómmi lɛ́wa qrìθa.*ˈ 'My mother was not educated.' (B8:15)

The nuclear stress is placed either at the end of the predicate phrase or on the copula. It is typically placed on the copula when the predicate consists of an item that has been introduced in the preceding discourse, e.g.

(11) *mə́re má-ləx bráta ṱ-it-hátxa bxàya*ˈ *qam-d-ánna ʾə̀rwe.*ˈ| *mə́ra ʾánna lɛ̀wa ʾə́rwe,*ˈ *xonắwàθi wɛ́wa.*ˈ 'He said "What is the matter with you girl that you are weeping so much in front of these sheep?" She said "These used not to be sheep, they used to be my brothers."' (A34:20–21)

(12) *mə́re mùt kálba mubréθa ʾáti?*ˈ| . . . *mə́ra ʾáwwa lɛ̀le kálba,*ˈ *ʾàtit kálba.*ˈ 'He said "What dog have you given birth to?" . . . She said "He is not a dog. *You* are a dog."' (A11:20)

(13) *ʾáw y-amrìle*ˈ *lìtle náše.*ˈ *ʾáwwa mìθɛle.*ˈ *ʾáwwa mádam ʾìθwale*ˈ *bàxta,*ˈ *ʾìθwale bnòne,*ˈ *ʾìθwale nàše,*ˈ *ʾáwwa lɛ̀le míθa.*ˈ 'They say that he has no relatives. He is dead (in this case). So long as he had a wife, he had sons, he had relatives, he is not dead.' (A17:17)

The subject constituent is sporadically placed after the predicate. As with positive copula clauses with postposed subjects, this construction is used to express close cohesion to what precedes. It is found in contexts such as (14), in which the clause is a comment that is presented as a tag to the preceding remark and not the onset of a new discourse section. Note that the subject is in a separate intonation group:

(14) *hot-qṱìləlle ʾažvána!*ˈ| *mə̀re*ˈ *lɛ̀le ʾažvána*ˈ *ʾàwwa.*ˈ (She said) "You have killed the caretaker."'. He said "He is not the caretaker."' (A22:46)

The negative copula is placed after the predicate in idiomatic interrogative constructions such as (15) and (16). In these an interrogative clause with a negative copula echoes a preceding interogative clause with a positive copula, maintaining the same word order:

(15) *dréla šláma l-fằqih*ˈ *dàx-it?*ˈ| *dax-lɛ̀wət?*ˈ| 'She greeted the jurist "How are you? How are you not?" (A22:16)

(16) *ʾən-íle xwarzàyi,*ˈ *ṱ-áθe t-yắðéla ʾánna mòdila*ˈ *ʾu-módi lɛ̀la.*ˈ 'If he is my nephew, he will come and will know what these are and what they are not.' (A25:49)

This echoing of the word order of a preceding constituent question with a positive copula is also found in the answer to such questions, as in (17), in which the negative copula in the answer is placed after the predicate:

(17) *ʾàmər,¹ Fárxo ṭla-xále díye ʾàmər¹ xáli mòdila?¹ xázəx ʾaskaràye.¹ kúlla ʾAmedía píšla ʾaskaràye.¹ mə́re xá-məndi lèla.¹* 'He said, Farxo said to his maternal uncle "What is the matter uncle? We can see soldiers. The whole of Amedia has become soldiers." He said "It is nothing."' (A25:79)

The 3fs. form of the negative copula *lɛla* is tagged onto the end of clauses in various contexts to refer to some general propositional content, e.g.

(18) *bắzəxwa tannə̀kka.¹ tannə́kka t-nùṭa léla?¹* 'We would make a hole in the can, an oil can, is that not so?' (B10:86)

(19) *kə́ma gàye¹ gu-xáṣa díya mútte tópe čŭ̀ruk,¹ lèla.¹* 'Several times the guns were pointed at her back, bang, but it does not happen (i.e. the gun does not shoot).' (B9:18)

The negative particle *la* is occasionally used in a clause containing a positive copula in order to express asseveration rather than negation. In such cases the negative particle never bears the nuclear stress, e.g.

(20) *la-hóle mìθa.¹* 'He is indeed dead.' (A17:2)

(21) *la-ʾaw-dὖs-wewa.¹* 'He was indeed right.' (A17:8)

(22) *la-málka màmi¹ hóle yə́mya b-rèši.¹* 'Indeed the king my uncle has sworn on my head (to execute me).' (A25:36)

(23) *la-ʾàxxa-wewa.¹* 'He was indeed here.'

Such constructions have no doubt developed from the use of the negator as an interjection to contradict some statement or request of the interlocutor, as is seen in contexts such as (24):

(24) *mə́re ṣli-qàmθa¹ mə́re la-ʾàti ṣli-qámθa.¹* 'He said "Go down and meet her." He (the other) said "No, you go down to meet her."' (A26:40)

17.3. The Existential Particles

The existential particles (*ʾiθ, ʾiθwa, liθ, liθwa* and their variants) are placed either before or after the nominal with which they are combined.

17.3.1. *Particle—Nominal*

In most constructions with the positive existential particle that are attested in the text corpus the nominal is placed after the particle. The function of such constructions is to introduce into the discourse new referents, which have not been mentioned previously. The nominal in most cases is indefinite with a specific referent, e.g.

(1)   *ʾiθən xa-ṭùra.*ˈ 'There is a mountain.' (A24:11)
(2)   *ʾiθwa xa-màlka.*ˈ 'There was a king.' (A1:2)
(3)   *ʾiθ xa-párša b-réše dìye.*ˈ 'There is a flat stone on him.' (A39:13)
(4)   *ʾiθən táma ðàʾa.*ˈ 'There is a woman there.' (A25:53)

In some cases the nominal denotes a generic class or is a proper name. Both of these types of nominal are definite in status, since their referent is identifiable from their description independently of context. The crucial feature, however, is not identifiability but rather the fact that they have not been mentioned previously and are being introduced into the discourse, e.g.

(5)   *ʾiθwa ʾằraq.*ˈ 'There was arak.' (B5:11)
(6)   *ʾέ-ga qam-lámpa ʾiθwa šràʾa.*ˈ 'At that time instead of an (electric) lamp there was an (oil) lamp.' (A33:1)
(7)   *ʾέ-ga ʾiθən Čixàlo*ˈ *ʾu-ʾAšebaṭàlo.*ˈ 'At that time there were Čixalo and Ašebaṭalo.' (A25:23)

When the particle is negative, the nominal is placed after the particle on several occasions, e.g.

(8)   *líθ čù-məndi.*ˈ 'There is nothing.' (A21:5)
(9)   *líθ ʾáp-xa gu-bὲθa?*ˈ 'Is there nobody in the house?' (A22:32)
(10)   *líθən dăràje,*ˈ *ta-ṣáli gu-gòma.*ˈ 'There are no steps for them to go down into the basement stable.' (A22:10)
(11)   *líθwa ʾánna qằnằfe-u məndiyáne.*ˈ 'There were no armchairs and things (like that).' (B5:200)

The nuclear stress is normally placed on the phrase that follows the particle. It is placed on the particle to express a narrow focus in contexts where the speaker asserts the existence of something when it may be presupposed that it does not exist, e.g.

(12) *mabyóne ʾiθ-xa-məndi gu-qə́ṣṣət.*¹ 'It seems there really is something in the story.' (A4:18)

17.3.2. *Nominal—Particle*

Constructions with the positive existential particle that have the nominal before the particle are only sporadically attested. They are used when the nominal is modified by an interrogative particle, e.g.

(1) *kəmà ʿAbda-Raḥmā́n ʾiθ?*¹ 'How many ʿAbda-Raḥmāns are there?' (A23:27)

The nominal is placed before the particle in contexts where the referent of the nominal has already been introduced in the immediately preceding context, e.g.

(2) *ṭalítuwa ṭawalyàθa?*¹ *ṭawalyáθa ʾíθwa ràba*¹ *ʾàxči*¹ *lá-raba ʾi-taxrə̀nna.*¹ ' "Did you play games?" "There were many games, but I do not remember them much." ' (B15:30)

The preposed nominal may not have been explicitly mentioned, but is nevertheless bound to previously mentioned items in a set relation. This is the case in (3), in which the universal set term 'everything' includes the items 'fine grapes' and 'houris':

(3) *ʾiθ-táma ʾə́nwa ṭèpi*¹ *ʾu-ḥuriyã̀t*¹ *ʾu-kúlla-məndi ʾìθgena*¹ 'There are there fine grapes and houris. There is everything.' (A2:8)

Constructions with the negative existential particle that have the nominal before the particle are frequently attested in the text corpus. On some occasions the referent of the nominal has been mentioned in the preceding discourse. The construction in such cases does not deny the existence of the referent but rather denies its presence on the scene, e.g.

(4) *ʾáza xázya jùlla,*¹ *júlla lìθ.*¹ 'She goes to find her clothes, but her clothes are not there.' (A14:99)

(5) *ʾo-xóna zóra lìθ.*ˈ 'The young brother is not there.' (A12:24)

(6) *Parizáda r̀ìšla,*ˈ *ṭéra lìθ.*ˈ 'Parizada woke up, but the bird is not there.'
     (A24:30)

(7) *r̀íšela ʾánna maymùne,*ˈ *ʾína ʾáni lìθ.*ˈ 'The monkeys woke up, but they
     (the men) were not there.' (A14:57)

In some cases the referent of the nominal is linked to what precedes by
associative anaphora, such as a set relationship, e.g.

(8) *xílle xáčca mən-d-o-dùša.*ˈ *ṣéle mìya,*ˈ *xa-ṭəppíθa míya lìθ.*ˈ 'He ate some
     of the honey. He became thirsty for water, but there was not a
     drop of water.' (A14:24)

In many cases, however, the preposed nominal has no clear anaphoric
relationship with what precedes. The placement of the nominal in such
cases is likely to be conditioned by its lack of referentiality. It would appear
that referential nominals that introduce a referent into the discourse
have a greater tendency to be placed after the nominal than negated,
non‑referential ones. In the attested examples the nuclear stress is placed
either on the particle (9–11) or on the nominal (12–13). The placement
of the nuclear stress on the nominal takes place where the negation of
the nominal is reinforced by the negative particle *ču-* or, in the case of
the indefinite pronoun *xa*, the particle *ʾap*. The nucelar stress gives added
force to these particles. These negative reinforcement particles may also
be used where the nuclear stress is on the existential particle (10–11):

(9) *qímela xìlela.*ˈ *qímela šqílela xa-ʾamána xànči zóra.*ˈ *múttəlla kəs-réša dìya.*ˈ
     *ṣáwθa lìθən.*ˈ 'They ate. Then they took a small container and put
     it at her head. There was no speech (with this).' (A21:17–18)

(10) *xzéle xa-qáṣra ràba góra.*ˈ *zílɛle máxya t̀àra.*ˈ *čú-naša lìθ.*ˈ 'He saw a
     very large palace. He went and knocked on the door. There was
     nobody.' (A14:28)

(11) *qəm-šaqlàla kanóšta,*ˈ *daryála gu-nùra.*ˈ *čú-məndi lìθ.*ˈ 'She took the broom
     and put it in the fire, but there was nothing (= nothing happened).'
     (A12:39)

(12) *čù-qala líθ.*ˈ 'There is no sound.' (A18:15)

(13) *ʾàp-xa líθ.*ˈ 'There is nobody.' (A33:3)

When two or more negated existential clauses are conjoined, the negative
particle *la* may be placed before each nominal. In such constructions the

nominals are presented as being linked in a set relationship. The existential particle may have either its positive or negative form, e.g.

(14) *la-bèθa ʾíθən,*¹ *ʾu-la-nàša ʾíθən.*¹ 'There is not a house and there is nobody there.' (A39:2)

(15) *líθ là-xmara mónne díye*¹ *la-čù-məndi.*¹ 'There is no ass with him, (there is) nothing.' (A22:25)

The negative particle *la* can be used before the positive existential particle with an asseverative function, e.g.

(16) *la-ʾíθwa manày.*¹ 'Indeed there was a meaning (to this).' (B8:33)

17.3.3. *Particle Alone*

In certain contexts the negative particle is used by itself, without any other clause constituents.

It may refer anaphorically to a referent in the previous discourse denoting the absence of this referent from the scene, e.g.

(1) *Ḥásan ʾÁġa spárεle ta-t-dèṛa*¹ *ʾu-spárεle ta-t-dèṛa,*¹ *lìθ.*¹ 'Ḥasan Aġa waits for her to return, waits for her to return, but she is not there.' (A27:26)

Speakers sometimes use the particle as an interrogative tag to receive confirmation from the interlocutor. This is generally used in contexts where the speaker is sure about what he is saying, but seeks confirmation as a device for drawing attention to a particular point. The sense can often be rendered in English by 'you see':

(2) *ʾo-šúla ʾáwwa y-amróxwale qə̀rta líθən.*ʔ¹ 'We called this job trimming, you see.' (B5:141)

(3) *máglət gilándi xá-mdi gòṛele líθən.*ʔ¹ 'The scythe is something big, you see.' (B5:144)

(4) *ʾítwa náše šuléy ʾàwwεle líθən.*ʔ¹ 'There were people whose job was this, you see.' (B5:135)

(5) *ʾíθwale qə́šta-w géra d-ὲ-ga,*¹ *lìθ.*ʔ¹ 'He had a bow and arrow (typical) of that time, you see.' (A12:32)

In narrative it is occasionally used as a device to draw attention to an unexpected event, e.g.

(6) *ʾásqa t-paθxàle tắra¹ ʾína gáwṛa díya mpălóye gu-d-an-dàwe,¹ lìθ?¹* 'She went up to open the door and saw her husband sorting the gold coins!' (A10:13)

17.4. POSSESSIVE CONSTRUCTIONS

The existential particles are commonly used together with L-suffixes to express possession.

17.4.1. *Particle—Possessed Item*

The item possessed is normally placed after the particle. It is typically indefinite and bears the nuclear stress, e.g.

(1) *ʾítli ðá bratət-màma.¹* 'I have a cousin.' (A7:17)
(2) *ʾítli xákma xabráne ṭ-amrə̀nnəx.¹* 'I have a few words to say to you.' (A4:40)
(3) *sab-ʾíθli rába mə́ndi ṭemàna gáwe díye.¹* 'because I have something very valuable in it.' (A7:9)
(4) *ʾíθwalən xa-màlka.¹* 'We had a king.' (A4:31)
(5) *líθwale quṣàrta.¹* 'He did not have a cooking-pot.' (A5:1)
(6) *líθwala bnòne.¹* 'They did not have children.' (A15:9)

17.4.2. *Possessed Item—Particle*

The possessed item is occasionally fronted before the existential particle. The examples of this construction in the text corpus may be classified as follows.

(i) When the speaker wishes to draw particular attention to a newly introduced referent in the 'item possessed' slot. In such cases the fronted item bears the nuclear stress. In (2) the nominal is combined with the particle *bas*, which expresses exclusivity:

(1) *saṭàne ʾítlən¹ gu-d-áẉẉa bèθa.¹* 'We have demons in this house.' (A22:26)
(2) *bas-yə̀mma ʾíθwale.¹* 'He had only a mother.' (A21:3)

(ii) In constructions with the positive existential particle, the possessed item is fronted without bearing the nuclear stress when it is definite and given in the previous discourse, e.g.

(1) *t-yánnux ʾúpra kəmà-t bắyət¹ ʾu-plóx gáwe díye ʾu-mápləx nàše.¹…ʾúpra ʾìtlì¹ ṃalyànɛle.¹* '"I shall give you as much land as you want. Work on it and employ people." …"I have land, (which) is sufficient."' (A21:41–42)

(iii) In constructions with the negative existential particle, the nominal is sometimes fronted without the nuclear stress where it is not anaphorically linked to the preceding discourse, e.g.

(1) *ʾána zúza lìtli,¹ fằqìrtɛn.¹* 'I do not have money. I am poor.' (A22:19)

17.4.3. *Possessor Expressed by a Nominal*

If the possessor is expressed by a nominal or independent pronominal form, it is not made the complement of the preposition *l-* but rather is extraposed at the front of the clause and resumed by an L-suffix. This reflects the fact that the L-suffix is acquiring the properties of verbal inflection as is the case in the *qṭille* form of the verb. Examples:

(1) *ʾaw-málka ʾíθwale xa-bròna.¹* 'That king had a son.' (A4:1)
(2) *kul-máθa ʾíθwala qənyàne.¹* 'Every village had domestic animals.' (B15:43)
(3) *sab-kúlla lìθwale táwre.¹* 'because everybody did not have oxen.' (B5:73)

On some sporadic occasions the possessor is extraposed at the end of the clause, e.g.

(4) *hóle ʾíθən bóya zòra.¹ ʾu-ʾáp báxta díye hóla tàma,¹ ʾu-ʾítle ʾayàle¹ ʾo-tèla.¹* 'There was a small hole (in it). His wife was there also, and the fox had children.' (A20:5)

Constructions such as (4) with final extraposition are typically used when the clause is presented as an elaborative tag that is cohesively connected with what precedes. Constructions with initial extraposition such as (1)–(3), on the other hand, express a greater disjunction from what precedes and present the clause with more distinctness and independence.

17.5. PREDICATIONS WITH THE VERB *HWY*

In various contexts, which have been fully described in §15.3.9., the copula and existential particle are replaced by a form of the verb *hwy*. Here we shall restrict ourselves to some remarks concerning the word order of predications with this verb.

When the verb in the predicate of a main clause expresses a generic or habitual sense, it is often placed after the other constituents, e.g.

(1) *kálba gu-tắrət màre*⌐ *ləbbàna y-áwe.*⌐ 'A dog at the door of his owner is brave.' (D2:64)

(2) *lə́xma prìša y-áwe.*⌐ 'Bread is different.' (B5:99)

(3) *ʾotáxe gòṛe hawéwa.*⌐ 'Rooms were large.' (B10:51)

(4) *ʾáw qəqwána gu-ṭùra y-áwe.*⌐ 'The partridge is in the mountains.' (B5:147)

(5) *ʾítlɛni halùke,*⌐ *ʾap-ʾáni har-gu-ʾaqàra y-áwa.*⌐ *ʾap-ʾáni rába basìme y-áwa.*⌐ 'We have plums. These are only in the farmland. These are also very tasty.' (B5:222)

(6) *xlìmta hóya.*⌐ 'It is thick.' (B6:49)

(7) *har-dmáxta dìyən*⌐ *biz-zóda gu-bɛθwàθa hóya.*⌐ 'Our sleeping is mainly in the houses.' (B15:27)

The verb is also placed before the predicate constituents when it has this generic or habitual sense, e.g.

(8) *ʾína ʾáyyət xúmṣa har-xúmṣa háwe xwarnàya.*⌐ 'But the dish consisting only of *xumṣa* is whitish.' (B10:16)

(9) *qedámta hál bar-kawùθra*⌐ *šə́mša y-óya bàθər ṭúra,*⌐ *fa-ṭə̀lla háwe*⌐ *qam-ṭùra.*⌐ 'In the morning, until after lunch, the sun is behind the mountain and there is shade at the front of the mountain.' (B3:2)

The frequent posposition of the verb *hwy* to the end of the predicate in generic/habitual main clauses is no doubt by analogy with the position of the copula in main clauses. This has come about due to the semantic proximity between this generic/habitual function of the verb and the function of the copula.

When used in contexts other than these generic/habitual main clauses, the verb *hwy* is regularly placed before the predicate constituents, e.g.

(1) *háwət hóšyər ʾítlən jə̀nne.*¹ 'Be careful, we have jinn.' (A22:26)
(2) *ʾána bằyən ʾaláha t-yawə́lli kùl-məndi bi-záwda,*¹ *ta-t-xayúθi hóya spày.*¹ 'I want God to give me more of everything, so that my life will be good.' (A3:3)
(3) *hézuke mòdila?*¹ *táli xàwla*¹ *b-xa-ʾilána ṯ-óya górta rába ramànta.*¹ 'What is swinging? They hang a rope on a tree that is large and very high.' (B6:7)
(4) *ʾáw máṣli xá-dukθa ṯ-óya šaxínta y-amróxwa gòma.*¹ 'They bring them down to a place that is warm, which we called a "basement stable."' (B5:211)

A predicate constituent is put before the verb only in a few sporadic cases, in which the speaker wishes to draw particular attention to the constituent, e.g.

(5) *kút-dukθa ʾáza ʾàwra*¹ *ʾáp ʾayya-xéta bàra lázəm háwya.*¹ 'Every place that she goes to and enters, the other has to be (i.e. to follow) after her.' (B12:2)

17.6. Verb 'to be' Omitted

In some cases the verb 'to be', in the form of a copula, existential particle or the verb *hwy*, is omitted from a clause. The majority of the attested examples can be classified into the following categories.

17.6.1. *Clauses Expressing Supplementary Information*

The verb 'to be' is sometimes omitted when the situation expressed by the clause is presented by the speaker as information that is supplementary to what is expressed in the adjacent clauses, e.g.

(1) *xa-náša díye ṯ-ámərwa ʾána zonə́nna b-ʾə̀ṣra,*¹ *šaqlíwa ʾə́ṣra dinàre.*¹ *ʾu-xéna ṯ-ámərwa zonə́nna b-xamšàssər,*¹ *šaqlíwa xamšàssər.*¹ *qa-xumlàna ʾáwwa mə́ndi.*¹ 'One relative of his would say "I shall buy it for ten" and they would receive ten dinars. Another would say "I shall buy it for fifteen" and they would receive fifteen. This was for fun.' (B5:42)
(2) *ʾáy y-amríla xădáyət xə̀tna.*¹ *yáʿni xa-xəllèta ṭla-xə́tna ʾap-áyya.*¹ 'This is called "the lunch of the groom." This also was a gift for the groom.' (B5:48)

(3) *y-azíwa mpalṭíwa kʷàlo,*ˈ *mεθέwa be-xɘ̀tna.*ˈ *xlúla t-ṭlaθà yomáθa,*ˈ *xá-šabθa xlùla.*ˈ 'They would go and bring out the bride and bring her to the house of the groom. A wedding is for three days or a wedding is for a week.' (B8:22)

(4) *ʾíθwa xáṣɘt gómɘt ʾɘ̀rwε,*ˈ *ʾu-t-xáṣɘt tàwre*ˈ *ʾu-t-pàṛe*ˈ *xòðεy.*ˈ *ʾɘ́rwε b-xoðὲy,*ˈ *ʾína tawráθa ʾu-táwre ʾáni kút-xa b-xòðεy.*ˈ 'There were special stables for sheep, special ones for oxen and for lambs, by themselves. Sheep were by themselves, cows and oxen, they were all by themselves.' (B10:55)

(5) *sɘ́twa tàlga*ˈ *màrkɘn*ˈ *ʾáwwa t-dùša,*ˈ *ʾáwwa t-mɘ̀šxa,*ˈ *ʾáwwa t-jàjɘk,*ˈ *ʾáwwa t-gùpta.*ˈ 'In the winter (we had containers known as a) *markɘn*, one was for honey, one was for oil, one was for *jajɘk*, one was for cheese.' (B8:11)

In (6) the speaker has omitted the copula in the first clause since it is presented as the background to the following statement concerning the main protagonist of the narrative. This can be captured in English by translating it with a subordinate construction such as one introduced by 'whereas' or 'while':

(6) *ʾína kúlla ʾan-xéne bnáθɘt guràne,*ˈ *ʾáyya Šóše brátɘt faqìre-wawa.*ˈ 'Whereas all the others were daughters of gentlemen, this Šoše was the daughter of poor people.' (A38:3)

The expression of the verb 'to be' is sometimes omitted in clauses describing a state that is circumstantial to an action expressed in an adjacent clause. Such clauses are sometimes introduced by the connective particle *w*, e.g.

(7) *bróni hóle xíla ʾɘdlὲle,*ˈ *gu-dargúšta dmìxa.*ˈ 'My son was eaten tonight while asleep in his cradle.' (A18:2)

(8) *m-léle qìmεle,*ˈ *ʾo-xuláme dìye.*ˈ *táwre mpúlṭɘlla-w nùblɘlla*ˈ *ʾu-tullókθa mɘnne-dìye,*ˈ *ʾu-bzára mɘnne-dìye,*ˈ *ʾu-màsta-w*ˈ *zeðàye*ˈ *zílεle ta-t-zắre.*ˈ 'That servant of his got up early in the morning. He brought out the oxen, took them (with him) and went to plough, a hound (being) with him, a plough (being) with him, and also yoghurt and pitta breads.' (A30:7)

(9) *ðiyìle*ˈ *ʾo-párča b-rešὲy.*ˈ 'He knew them (while) the cloth (was) on them.' (A25:50)

If the subject of the circumstantial clause is pronominal, this is regularly expressed by an independent pronoun when there is a change in subject from the preceding clause, e.g.

(10) *napṣə́nna kúlla b-réše dìye,¹ ṣáli tàma,¹ ʾáwwa dmíxa gu-d-áw ʾòtəx.¹* 'I'll shake them all over him and they will go down there (in the house), while he is sleeping in that room.' (A10:10)

(11) *xazéla ʾánna júllux hàtxa,¹ káša-w ʾáyya xmàrtux¹ ʾu-sèrga-w¹ w-ána b-ánna dašdàše-w¹ b-ánna čak̭àlle-w¹ ʾu-šə̀xtàna-w¹ šárṭ qázi t-yawə́lla ṭlàlux.¹* 'They will see these clothes of yours like this, the smart suit and this donkey of yours, with the saddle, while I am in these plain clothes and slippers, all dirty, and the judge will make a sentence in your favour.' (A6:7)

When the subject of the circumstantial clause is the same as in the preceding clause, it is sometimes expressed by an independent pronoun, e.g.

(12) *y-azíwa zrà̀ʾa,¹ y-azíwa xzàda,¹ y-azíwa mɛθóye mə́ndi ta-bèθa¹ ʾáni ṣ̀ìme.¹* 'They would go to cultivate (the fields), go to harvest, go and bring things for the house, while they were fasting.' (B16:17)

In some cases, however, there is no morphological expression of the subject, e.g.

(13) *ʾu-là-mṣalɛwa qa-ʾálaha,¹ har-dbíše b-bronèy.¹* 'They did not pray to God, being constantly attached to their son.' (A15:17)

Of a similar nature are imperative expressions such as *qu-qima!* 'Stand up!' (literally: 'Stand while being standing'), *tu-tiwa!* 'Sit down!' (literally: 'Sit while being seated'), *p̭áqðu tìwe!¹* 'Please sit down' (A15:8) (§15.7. examples 42–44).

The close connection of the reduced circumstantial clause to the main clause is sometimes expressed prosodically by combining the two in the same intonation group, e.g.

(14) *ʾána majbúr-iwən ṭ-ázən qáṭlən gáni p̭álxən w-áy dmíxta maxlə̀nna?¹* 'Was I obliged to kill myself working to feed her while she was asleep?' (A21:38)

(15) *kú-mdit láyəp náša yála zòra¹ ʾáyya p̭yàša gu-réšət náša.¹* 'Everything that a person learns (while he is) a young child, this remains in the mind of person.' (B8:20)

The copula is sometimes omitted in questions. This is found in questions that are used as a device to introduce information that is supplementary to what precedes, e.g.

(16) *ʾay-ʾilána ʾèka?*ˈ *masqíwala gàre.*ˈ 'Where is the tree? They take it up to the roof.' (B5:39)

(17) *ʾo-Dáwið mòdi šúle díye?*ˈ *máxewa darmàna*ˈ *l-ṣàwle*ˈ *xáyəṯwa ṣàwle.*ˈ 'What is the profession of that David? He used to polish shoes and sew shoes.' (A16:1)

In (19) the copula is omitted in a clause expressing a supplementary piece of information that the speaker has previously forgotten:

(18) *bína ʾána ʾáxxa nšéli xa-mòndi.*ˈ *kʸàlo*ˈ *ʾíman ṯ-aθyàwa*ˈ *páθa díya mkusèθa.*ˈ *kʸàlo*ˈ *páθa díya mkusèθa.*ˈ 'But I have forgotten something here. The bride, when she came, her face was covered. The bride's face was covered.' (B5:35)

17.6.2. *Gapping in a Series of Clauses*

The expression of the verb 'to be' is sometimes omitted also in a series of clauses of equivalent status in the discourse. In a series of closely related clauses, 'gapping' of the expression of the verb 'to be' may take place in the clauses that follow the first of the series. This is found, for example, in (1) and (2), in which clauses of parallel structure are linked together.

(1) *Səttíye ʾɛ-gòrta-wawa*ˈ *ʾu-Nàze*ˈ *gawèθa*ˈ *ʾu-Zíne ʾɛ-zòrtət kúlla.*ˈ 'Səttiye was the oldest one, Naze the middle one and Zine the youngest.' (A26:20)

(2) *bejíye hóla xa-gòta*ˈ *ʾə́rwa xa-gòta.*ˈ 'The young lambs were one side and the sheep the other.' (A25:31)

Such gapping of the verb 'to be' is more commonly found in clauses containing compound verbal forms that consist of the verb 'to be' and the resultative participle or the infinitive. This occurs in narrative in clauses expressing an event that is presented as directly sequential to a preceding event (§15.4.1.3.):

(3) *ʾə́θyɛle wìra.*ˈ 'He came and entered.' (A26:47)

(4) *ʾu-sìqɛle*ˈ *súse kə́lya tàma.*ˈ 'He went up and his horse stopped there.' (A26:28)

(5) *ʾánna plàṭẹla,¹ kúlla zála ṣèda.¹* 'They go out and all go hunting.' (A13:7)

(6) *súse dìye mtaslómǝlle ṭla-xolàma.¹ wára gu-čàdre dìye,¹ dmáxa hal-mbàdla.¹* 'He handed over his horse to the servant. He entered his tent and slept until morning.' (A12:8)

17.6.3. *Presentative Constructions with the Particle* ʾina

The presentative particle *ʾina* is used in various contexts to introduce a referent or a proposition in place of the verb 'to be' (§18.1.5.1.), e.g.

(1) *qrúla qrúla kǝ́sle dìye¹ ʾína xa-bèθa,¹ xa-qáṣra rába šapìra.¹* 'They came near to it and behold a house, a very beautiful palace.' (A14:42)

(2) *ʾína xa-senìye¹ dáwa xaṣe-dìye xá-xuwwe zòra,¹ rḗšǝt nàša¹ ʾu-gánǝt xùwwe,¹ gu-d-à senìye.¹* 'Behold a gold tray on which there was a small snake with the head of a man and the body of a snake.' (A14:31)

(3) *qímela zíle xǝ́zye ʾína dǜs¹ xa-képa hàtxa¹ ʾu-ða-yàdde gáwe dìye,¹ t-prɔ̀zla.¹* 'They went and saw that it was true, there was a stone like this, with a handle of iron in it.' (A14:13)

(4) *yǝ́mme dìye¹ ʾu-báxte díye táma xǝ́zyǝlle sùsa,¹ ʾína sapìqa.¹* 'His mother and his wife there saw that the horse was without a rider (literally: saw the horse behold empty).' (A28:29)

17.6.4. *Presentative Constructions with Demonstratives*

In clauses with the speaker deixis demonstrative as subject which have the function of presenting an item to the hearer, the copula is usually omitted, e.g.

(1) *ʾáwwa qðìla.¹* 'This is the key (= Here is the key).' (A12:63)

(2) *ʾáwwa ʾixàla¹ ṭlàlux.¹* 'This is food for you (= Here is some food for you).' (A17:12)

Of a similar nature is the phrase *ʾáyya xá-šeta* (literally: This is a year = Look it is a year) in (3):

(3) *ʾáyya xá-šeta hóla támma láxxa lέla mbaqorɔ̀llux.¹* 'It has been a year that they have been here but have not asked for you.' (A26:78)

17.6.5. *Exclamatory Clauses*

When the clause expresses an exclamation, the verb 'to be' is often omitted, e.g.

(1) *ʾáti bìš-zlíma mə́nni!ˈ* 'You are more oppressed than me!' (A13:5)
(2) *ʾáwwa hambìšàya!ˈ* 'It is a giant!' (A31:2)
(3) *nə́mu ʾánna là-biš ṭáwe m-áwwa Gozáli xóni!ˈ* 'Surely they are not better than Gozali, my brother!' (A8:72)

In various constructions expressing wishes, a deontic form of the verb *hwy* is omitted, e.g.

(4) *basíma ràba.ˈ* 'Thank you very much.' (literally: 'May you be very healthy'; cf. *háwət basíma ràbaˈ* A22:31)
(5) *qə́ṭma b-rèšux!ˈ* 'May ash be on your head!' (A23:8)
(6) *ʾálaha šuxa-l-šə́mme* 'God—praise be to his name' (A6:10)
(7) *bríxta dudíya ṭ-iwət ʾáti qíma gàwa!ˈ* 'Blessed be the cradle in which you grew up!' (A21:41)
(8) *y-azíwa mšamšíwa bɛθ-qòra,ˈ rə́ḥqa mən-an-dukàne!ˈ* 'They would go and hold a ceremony in the cemetery—(may death be) far from these places!' (B10:3)

The exclamation may be expressed in the form of a question, e.g.

(9) *mú-t qála dìyi?ˈ* 'What is my voice (in comparison with his)?' (A25:44)

17.6.6. *Proverbs*

Expressions of the verb 'to be' are often omitted in proverbial contexts, e.g.

(1) *lóxma šaxína darmánət náša kpìna.ˈ* 'Hot bread is the medicine of a hungry man.' (D2:69)
(2) *lišáne rìxaˈ ʾu-xáṣe ṭwìxa.ˈ* 'His tongue is long, but his back is broken.' (D2:67)
(3) *dárta l-yòma,ˈ ʾə́rwe gu-gòma.ˈ dárta l-sèra,ˈ ʾə́rwe l-ṭèra.ˈ* 'If the sun has a halo, the sheep will be in the basement stable. If the moon has a halo, the sheep will be in the noon sun.' (D2:15)

17.6.7. *Meteorological Expressions*

In some meteorological expressions that have the general term *dunye* 'world, weather' as subject or leave the subject unspecified, the copula tends to be omitted, e.g. *ʾə́dyo šaxìnta*ˈ 'Today it is hot'. In a similar manner the copula is omitted in meteorological expressions with an infinitive such as *dúnye ràya*ˈ 'It is raining' or *ráya tàlga*ˈ 'It is snowing.'

17.7. Verbal Clauses

17.7.1. *Basic Verbal Clauses*

A verbal clause may consist of a verbal form alone, with the participants of the activity expressed by affixes but without any other independently standing components, e.g.

(1) *ʾàzəl*ˈ 'He goes.' (A28:33)
(2) *ʾàθena.*ˈ 'I shall come back.' (A26:30)
(3) *damxàwa.*ˈ 'She would go to sleep.' (A18:1)
(4) *raqðìwa.*ˈ 'They would dance.' (B7:4)
(5) *tìwle.*ˈ 'He sat down.' (A15:1)
(6) *kpìnna.*ˈ 'They became hungry.' (A20:9)
(7) *t̰-axlə̀nne.*ˈ 'I shall eat it.' (A23:5)

17.7.2. *Clauses with a Subject Constituent*

When the clause contains a subject constituent, this is placed either before or after the verb.

17.7.2.1. *Subject—Verb*
Most subjects that are placed before the verb are definite, e.g.

(1) *téla rìqle.*ˈ 'The fox ran.' (A20:5)
(2) *málka rwèle.*ˈ 'The king became drunk.' (A17:26)
(3) *kúlle béθe qìdle.*ˈ 'All of his house burnt.' (A48:7)
(4) *gáwr̰i θèle.*ˈ 'My husband has come back.' (A22:32)
(5) *də́bba zíltɛla tàma.*ˈ 'The bear went there.' (A20:6)

In descriptive discourse, indefinite subject constituents introducing new referents are sometimes placed before the verb in foreground sections concerning a habitual activity or generic situation, e.g.

(6)   *xa-náša y-azə̀lwa*ˈ … *y-azə́lwa čyàda,*ˈ *béθa bè̀θa.*ˈ 'A man would go … he would go from house to house making invitations.' (B5:20)

(7)   *báxta y-àza*ˈ *mattála qaṣxàne*ˈ *rēš-bə́rka dìya.*ˈ 'A woman would go and place a pail on her knees.' (B5:175)

In narrative, indefinite subjects that introduce a specific referent tend to be placed before the verb in background rather than foreground sections of the discourse. The background may be presented as a perfective event or an imperfective situation. In (8) the clause expresses a punctual event that opens a background section of narrative that explains how the protagonist lost his hand. The clauses in (9)–(11) express a background resultative state and the construction in (12) denotes a background ongoing activity. The lack of the indefinite particle *xa* in (8) and (12) reflects the diminished tendency to use this particle in backgrounded sections of discourse (§14.1.2.2.).

(8)   *ʾárya θéle ṭálbe dìye.*ˈ 'A lion attacked him.' (A11:1)

(9)   *ʾə̀dlɛle*ˈ *xa-bráta θíθɛwa dmíxta kə̀sli.*ˈ 'Last night, a girl had come and slept with me.' (A26:10–11)

(10) *xa-nàša*ˈ *sìqɛwa*ˈ *l-ṭùra.*ˈ 'A man had gone up into the mountains.' (A31:1)

(11) *xa-náša hóle mìθa.*ˈ 'A man had died.' (A17:7)

(12) *xà-yoma*ˈ *də́bba xə́ára-wawa gu-ṭuràne.*ˈ 'One day a bear was wandering around the mountains.' (A20:1)

If, however, an indefinite subject constituent is a narrow information focus, it is fronted before the verb in all contexts, including where the verb expresses a punctual foreground action. The nuclear stress is placed on the subject in these circumstances. This construction is found in contrastive contexts where the speaker corrects a misapprehension of his interlocutor, e.g.

(13) A: *qəm-qaṭə́lle ʾàrya.*ˈ B: *là,*ˈ *də̀bba qəm-qaṭlále.*ˈ 'A: "A lion killed him." "No, *a bear* killed him." '

In such constructions, the verb is in the presupposition of the clause, which in this case is 'x killed him'. The subject, therefore, is a narrow new information focus, which asserts the identity of *x*.

In (14) the indefinite noun in focus does not have a specific referent:

(14) *díga lè-yaðəl.*⌐ *kθèθa yádla.*⌐ 'A cock does not lay eggs. *A hen* lays eggs.' (D1:3)

Of a similar structure is (15), in which an indefinite subject with the nuclear stress on the subject occurs in initial position and the verb is repeated from the preceding discourse. The subject is not, however, intended to replace that of the preceding clause but rather it is a component of a separate, albeit related, event, e.g.

(15) *θéle màlla.*⌐ *… muˁàlləm θéle.*⌐ 'A mullah came…(then subsequently) a teacher came' (A22:3–5)

This again is a kind of new information focus on the subject. The verb is presented as a presupposition. It is not completely old information recoverable from the preceding clause, but rather is linked to it in a set relationship, i.e. the set of the acts of coming.

A subject that is a non-referential negated constituent is treated like definite constituents as far as order is concerned and freely occurs in foreground narrative sections in all contexts, e.g.

(16) *ʾáp-xa la-šqìlle.*⌐ 'Nobody bought it.' (A22:6)
(17) *ʾáp-xa lá-ṣbirre ʾasə̀qle.*⌐ 'Nobody dared to undertake it.' (A33:4)

A subject that is placed before the verb is sometimes presented in a separate intonation group, e.g.

(18) *náša diyènì*⌐ *ʾi-ṣémi ṭḷá yomàne.*⌐ 'Our people fast for three days.' (B6:21)
(19) *bábət bràta*⌐ *xazéwa yə́mmət bràta.*⌐ 'The father of the girl would see the mother of the girl.' (B5:2)
(20) *mìya*⌐ *mazəvríle xa-parwàna.*⌐ 'The water drives round a propellor.' (B6:53)
(21) *ʾó t-là páləx*⌐ *lè y-áxəl.*⌐ 'Whoever does not work does not eat.' (A21:13)

17.7.2.2. *Verb—Subject*

In clauses expressing a foreground punctual event the subject constituent is generally postposed after the verb if it introduces a new referent that has a prominent role in the discourse. In narrative this construction is typically used when a new protagonist character comes onto the scene, e.g.

(1) *θéle màlla.*ˈ 'A mullah came.' (A22:3)
(2) *θíθɛla xa-bràta.*ˈ 'A girl came.' (A16:2)
(3) *ʾína ʾə́θyɛle xa-yàla,*ˈ *xa-ʾaṣòṭa.*ˈ 'But a tiresome youth came.' (A17:7)

The referent is not necessarily always indefinite. This construction is used also where the subject is definite, but newly introduced into the discourse. This is seen in (4), which is the report of an event uttered by the speaker in isolation without any preceding or immediate following context. The subject constituent 'my house' is definite in status, but newly introduced and prominent in the mind of the speaker:

(4) *ṣríxɛle yàba*ˈ *qídle bèθi.*ˈˈ 'He shouted "Oh, my house has burnt down!" ' (A48:4)

On many occasions, however, the postposition of the subject after the verb does not have this presentative function that is independent of a preceding context. Rather, the subject is familiar to the hearer from the previous context or is, at least, related in some way to the previous context. In such cases the motivation for the construction is to express the existence of a close semantic relationship of the clause with the preceding discourse. When it is used in narrative, the close relationship with what precedes may be one of close temporal sequence and spatial continuity. The effect is to present the series of clauses as components of the same overall event. The subject may be the same as that of the preceding main event clause (5–6) or it may be different (7–8):

(5) *mə́ra gáwṛa ma-yxàləf.*ˈ *ʾána b-ṣalyàna.*ˈ **ṣlíθɛla bàxta**.ˈ 'She said "Husband, it's all right. I shall go down (to the town)." The woman went down.' (A22:11)
(6) *mə́re bráti lá là.*ˈ *ʾáti ʾàxlət.*ˈ *ʾáxni ṭ-àzexi.*ˈ *lá pɛšəx ṭla-xădàya.*ˈ *ʾu-***qímɛle màlka**.ˈ 'He said "My daughter, no, no. You eat. We shall go. We shall not stay for lunch" and the king got up (to leave).' (A21:30)
(7) *zìlɛle,*ˈ *qedámta ***qímtɛla bràta**-w*ˈ *mxŭláltəlla ʾay-dùkθa.*ˈ 'He went away and in the morning the girl got up and cleaned the place.' (A17:27)

(8)   *xθìməlle.*ˈ *kúlle zqìrəlle-w*ˈ **pìštɛla hádəx də́bba gàwe.**ˈ 'He finished
it. He wove it all and the bear remained inside it.' (A20:4)

As can be seen in the preceding examples, the nuclear stress is normally
placed on the subject constituent. It is occasionally retracted onto the verb,
especially where the speaker wishes to give prominence to a climactic or
important event. In (9), for example, the fall of the fox is a climax:

(9)   *mə́re díya mò ṭ-óðexi?*ˈ *qú npila-xìla.*ˈ *qú npila-xìla.*ˈ *ṭrípela l-ġ̇ðàðe*ˈ **npìlle
tếla.ˈ 'He said "Now what shall we do? Come on (let's fight and)
whoever falls (first) will be eaten." They attacked each other and
the fox fell.' (A20:10)

The verb—subject construction is used in descriptive discourse in a similar
manner to express the close temporal sequence of habitual events. This
is seen in (10)–(12). In (11) and (12) the temporal anteriority of the first
clause is explicitly marked by the conjunction *bar* 'after':

(10) *qə́mi mpálṭi kʸálo marqðìla.*ˈ *bína* **y-áθi náše** *qamθèy,*ˈ *šaqlíla maṣlèla*ˈ
*qam-tărət-bɛ́θa gòṛta y-óya.*ˈ *maduqíla xə́tna-w kʸálo gotə-ġ̇ðàðe,*ˈ *ʾu-béna
náše ràqðì.*ˈ 'They bring the bride out and make her dance. Then
people come up to them and take them down to a large space
outside. They put the groom and bride together side by side and
then people dance.' (B5:50)

(11) *bár hàdəx,*ˈ *bár ṭ-ila-báxta pyáša rásmi tàma*ˈ *yáʿni wára gu-l-bèθa,*ˈ **θáyɛle
qàšaˈ *ʾu-sáṛa gnùnɛle.*ˈ 'Afterwards, after the woman has become
official there, that is she enters the house, the priest comes and
ties the band.' (B5:44)

(12) *bár mbarxìwa,*ˈ *ʾu-razgìwa*ˈ *béna* **y-atwíwa kʸálo-w xə̀tna-w**ˈ 'After-
wards, after they performed the blessing and were finished, the
bride and the groom would sit down.' (B5:30)

The postposition of the subject may express cohesiveness with what
precedes in contexts where there is no temporal sequentiality. In (13) the
construction follows the existential clauses that introduce the characters of
the narrative. It coheres with these in that it continues to give background
information that forms the setting for the main narrative. The verbs in
this background setting express habitual rather than punctual actions. The
same applies to the (14), which also occurs in a background section. In
(15) the clause with the postposed subject coheres closely with what

precedes in a causal relationship. In (16) the construction supplies supplementary detail to the statement made in the preceding clause:

(13) *ʾíθwa xa-gáwṛa-w bàxta.¹ ʾíθwala bnòne.¹ kùt-yum¹* **ṣaléwa gàwṛa**¹ *l-šùqa¹ msawòqe¹ ʾu-čú-məndi lé mɛθèwa.¹* 'There was a man and a wife. They had children. Every day the man would go down to the market to do shopping, but would bring nothing back.' (A22:1)

(14) *ʾítwala xa-qaráwət gòrta.¹* **mɛθíwala xadamyáθa** *díya ʾixàla,¹ y-axlàwa-w¹ damxàwa.¹* 'She had a big bed. Her servants would bring her food, she would eat then go to sleep.' (A21:1)

(15) *xáze mòdila qə́ṣṣət¹ míya lèla θáya.¹* **hóle ṣólya ʾo-náša** *gu-mìya.¹* 'He saw what the problem was. The water was not flowing (because) that man had come down into the water.' (A22:43)

(16) *šə́mša mxíθa l-ṭuràne,¹* **heš-léla kmìlta šə́mša**.¹ 'The sunshine has struck the mountains, but the sunshine has not yet completely (spread).' (A26:37)

The coherence may be one of total overlap, in that the clause is no more than a reiteration of what precedes, e.g.

(17) *wírɛle tàma¹ ʾu-də́bba zíltɛla tàma.¹* **zíltɛla dòbba**¹ *ʾu-dráyəlla ʾíða díya ʾólle dìye.¹* 'The fox entered there and the bear went there. The bear went there and put her paw into it.' (A20:6)

It is worth noting that this coherence principle can also be identified in the tendency for verb—subject order to be used in syntactically subordinate clauses, whose close semantic connection with what precedes is signalled by a subordinating particle. This applies, for example, to purpose clauses such as (18):

(18) *máttət qésa gáwe dìye,¹ t-lóxi ʾánna qèse.¹* 'You put wood in it and the wood blazes up.' (B15:23)

17.7.2.3. *Further Remarks on the Function of Subject Position*

In general, it can be said that the verb—subject construction is 'event-orientated'. When, by contrast, the subject constituent is placed before the verb, the construction can be said to be 'topic-orientated'. The shift of attention from the event-line to a topic referent at the front of a topic-orientated clause causes it to be interpreted has having a lesser degree of cohesion with what precedes. In foreground narrative the placement of the

subject before the verb may be used to express the onset of a new section. The effect is that the clause is in principle forward looking, cohering with what follows, rather than cohering with what precedes. In (1) the clause 'The king became drunk' with an initial subject follows sequentially the preceding speech. It is not, however, presented as a tag to this speech but rather as the onset of an episodic section in which the woman disposed of his inebriated body. Similarly in (2) the clause 'The king was perplexed regarding her (i.e. his daughter)' is presented as the onset of a section of discourse that describes his worries about her.

(1) *mə́ra də-yàlla,ˈ jàlde,ˈ ští ta-t-dàmxəx.ˈ* **málka rwèle.**ˈ *rwèleˈ qəm-doqále p-àqle,ˈ xrrr garšále nablále gu-čàčma,ˈ w-ačmále tǎ̀ra bàre.ˈ ʾay-θéla dmíxla gu-ʾótəx dìya.ˈ xlíqla tǎ̀ra,ˈ dmìxla.*ˈ 'She said "Come, quickly, drink so that we can go to sleep."' The king became drunk. He became drunk and she grasped him by his legs, dragged him along and took him to the bathroom, then closed the door behind him. She came back and went to sleep in her room. She closed the door and went to sleep.' (A17:26)

(2) *ṭrìsla rába.*ˈ **málka hírre** *b-gáne díye bíya dìya.*ˈ *ʾáp-xa lɛ́le gwàrəlla.*ˈ *mə́re ʾána mò-ʾoðən.ʾ*ˈ *xa-čára xazèna.*ˈ 'She became very fat. The king was perplexed regarding her. Nobody would marry her. He said "What should I do? I should find a solution for this daughter of mine."' (A21:1–2)

A shift in subject from that of the immediately preceding discourse is not always the crucial factor that conditions the placement of the subject in initial position. This is shown by the fact the speaker in many cases opts for a verb—subject continuity construction where there is a change of subject (e.g. §17.7.2.2. examples 7–8). The crucial factor is rather that the speaker decides to present the clause as disjoined from what precedes in some way.

The disjoining expressed by the subject—verb construction sometimes reflects a lack of temporal sequentiality between the events expressed in clauses. This is clearly seen in (3) where subject initial clauses are used to present a listing of events that occurred in parallel. In (4) the subject—verb clauses expresses an action undertaken by Zine and her servants that overlaps temporally with that of the preceding clause. The important point is that in both cases the actions expressed by the subject—verb constructions are presented as distinct events rather than cohering together in a single overall event:

(3) *mə́ra ʾána báxtət ʾáġət Č̣ä̀l-iwən.¹ ʾáyya xmáθa díya homə̀nna.¹ xəmyána* *homə̀nne.¹ bróna homə̀nne.¹ kúlla homə̀nna.¹ kálθa là homə́nna.¹* 'She said "I am the wife of the aġa of Č̣āl." Her mother-in-law believed it. Her father-in-law believed it. The son believed it. Everybody believed it. The daughter-in-law, however, did not believe it."' (A19:2)

(4) *qíməle ʾə́θya síqa l-gàre.¹ síqɛle l-gàre¹ maxzóyəlle Jazíra Bòta.¹ Zìne¹ ʾu-ʾán-xaddamyáθa díya ṣléla rəš-ʾèna.¹* 'Now, he came and he went up onto the roof. He went up onto the roof to show him Jazira Bota. Zine and her maid-servants went down to the spring.' (A26:40)

In (5) the verb—subject clauses are temporally sequential with what precedes. The clause 'The three hundred horsemen returned', on the other hand, has a subject—verb structure. This reflects the fact that it is not directly sequential to what precedes but rather presents a final synopsis of the overall series of preceding events.

(5) *mə́re sò¹ kut-qónəx yòma¹ dɛ́ri ʾə́mma mənnèxu.¹* [VS] *ʾamrítu ʾáxni là-mṭelən Jazíra Bóta.¹ léðəx ʾèkɛla.¹ zílela ṭḷa-ʾə́mma swarìye.¹* [VS] *kut-yòma¹ dɛríwa ʾə́mma.¹* [VS] *kut-yóma dɛríwa ʾə́mma.¹* [VS] *ṭḷa-ʾə́mma swaríye dìṛṛa¹* [SV] *mə́ra ʾàxni¹ la-xəzyálən Jazíra Bóta ʾèkɛla.¹* 'He said "Go and at every day's stage (of the journey) a hundred of you will return. You will say: We have not reached Jazira Bota. We do not know where it is." Three hundred horsemen went off. Every day a hundred returned. Everyday a hundred returned. The three hundred horsemen returned and said 'We have not found where Jazira Bota is."' (A26:14–15)

On some occasions a subject-initial clause is used to introduce a new referent into a narrative. In such cases the referent generally does not play a prominent role in the discourse as a whole, although it may have topical continuity over a series of several clauses. Here the boundary marking function of the subject—verb construction overrides the presentative function of the verb—new subject construction, since the latter is used only to introduce referents of textual importance. This applies to (6)–(8), in all of which the referents of the subject constituents play only an incidental role in the discourse:

(6) *ʾə́θyɛle,¹ qam-tä́rət béθa tíwɛle hàdəx.¹ bábe díye θèle.¹ mə́re ha-bròni,¹ Mä̀mo¹ mà-lux¹ tíwət xaššàna?¹* 'He came and sat down in front of the door of the house. His father came. He said "Ah, my son, Mămo, why are you sitting (looking so) sad?"' (A26:10)

(7) *jə̀nne¹ t-šmàyya¹ qímla wídla tàgbir.¹* 'The jinn of heaven made a plan.' (A26:1)

(8) *ʾárya θéle ṭálbe dìye.¹* 'A lion attacked him.' (A11:1)

In descriptive discourse expressing habitual or generic events, the subject is in principle placed before the verb in all contexts where the speaker wishes to present the clause as disjoined in some way from what precedes. In (9), for example, the subject initial clause 'The priest would take a long stick' opens the section of discourse that describes the *geyasa* ceremony. The verb initial clause 'The people would go and take communion', on the other hand, continues the introductory background section. In (10) the two subject initial clauses express two distinct events that occur in a parallel opposition:

(9) *ʾo-yómət trè t-ʾéða¹ y-amríle geyàsa.¹ geyàsa¹ yómət trè¹ t-ʾéða gòṛa.¹ y-ázi náše l-ʾùmra¹* [VS] *y-óði qurbàna.¹ qáša šaqálle* [SV] *xa-qésa rìxa.¹ b-ʾìðe díye dawùqle¹ ʾi-rášəm hátxa gu-réšət nàše¹ maxéle gu-réšət nàše,¹ ʾáx burkàθa.¹* 'The second day of the festival was called *geyasa* ('the [good] thief'). The *geyasa* was the second day of the festival. The people would go and take communion. The priest would take a long stick. He would take it in his hand and make a sign like this on the heads of the people, he would tap it on the heads of the people, as blessings.' (B6:3)

(10) *ʾan-ṭ-ìla qam-tằra ṭ-áθi gawàye,¹ ʾan-gawáye páḷṭi qam-tằra.¹* 'The ones that are outside come inside and the ones inside go outside.' (B11:9)

Generic and proverbial statements, which by their nature stand independently of a context, in principle have the subject in initial position, e.g.

(11) *miθéni dèṛi.¹* 'Our dead return.' (A22:37)

(12) *neríya b-gáᵃže lè-mayəθ.* 'A male goat does not die (at the sight of a raised) hand.' (D2:12)

(13) *qála mən-qáwra lè-y-aθe.* 'A voice does not come from the grave.' (D2:13)

(14) *ʾó t-là páləx¹ lè y-áxəl.¹* 'Whoever does not work, does not eat.' (A21:13)

(15) *xátna lè-xaze kʸálo.¹* 'The groom does not see the bride.' (B5:35)

17.7.3. *Subject Verb Agreement*

In principle, the inflection of the verb agrees in number, gender and person with the subject nominal. In a few cases, however, there is a discrepancy of agreement. The attested examples may be classified as follows.

In clauses with the verbs *hwy* and *pyš* that are used existentially with the subject placed after them, the verb sometimes remains in the 3ms even when the subject is 3fs. or 3pl., e.g.

   (1) *píšεle tə̀rte.*ꞌ 'Two remained.' (A22:9)
   (2) *píšεle gè̀rme.*ꞌ '(Only) bones remained.' (A2:5)
   (3) *qə̀m-hawéla xáθa yaḳ̀ànta.*ꞌ 'An only sister was born to them.' (A18:1)

In a few cases these verbs have 3fs. inflection when the following subject is plural, e.g.

   (4) *rába gáye wítεla ʾánna məndiyàne.*ꞌ 'Many times such things happened.' (B5:163)
   (5) *ʾu-píštεla ʾan-dəbbòre*ꞌ *har-zála-w θàya.*ꞌ 'The hornets remained, flying back and forth.' (A20:8)

As discussed in §14.2.3., the feminine singular is used in some temporal adverbial expressions to refer to the general temporal situation in a narrative. This can result in some constructions in which 3fs. verb forms appear to take a following plural noun as their grammatical subject, e.g.

   (6) *zílta láxxa tre-ṭḷà-yarxe,*ꞌ *ʾarbà-yarxe,*ꞌ *máre xa-béna xéta mjarbə̀nna.*ꞌ 'Two or three months, four months passed. He said "I'll test them again."' (A48:4)
   (7) *y-oráwa kə́ma yàrxe.*ꞌ 'Several months would pass.' (B5:18)

In such cases, however, the 3fs. inflection should be interpreted as referring to the general temporal situation: '(Time) went by (for) two or three months, four months', etc.

In a few cases the verbal agreement is based on the sense rather than the form of the subject noun. In (8) and (9) the collective nouns *ʾaskar* 'army' and *bəṛ-našuθa* 'mankind' are construed as plural.

   (8) *ʾu-kúlla ʾáskar qlíbela píše náše xa-ga-xèta.*ꞌ 'All the army returned and became men again.' (A8:83)
   (9) *bəṛ-našù̀θa*ꞌ *zlìməlli.*ꞌ 'Mankind has wronged me.' (A14:34)

A subject constituent consisting of a combination of a 1s. and a 2s. pro-
noun takes 1pl. agreement on the verb, e.g.

(10) *ʾána w-áti xonăwàθəx.*¹ 'You and I are brothers.' (A15:7)
(11) *ʾána ʾu-ʾáti qṭélən l-d-áwwa šùla.*¹ 'You and I decided on this matter.'

When the conjoining of the subject referent with another referent expresses
a concomitative relationship, the verb sometimes agrees only with the first
referent. This is found when two conjoined pronouns are placed after the
verb, e.g.

(12) *kə́lyεle gu-tắrət bέθa ʾáw ʾu-ʾày.*¹ 'He stood at the door of the house
together with her.' (A4:55)

17.7.4. *Independent Subject Pronouns*

A pronominal reference to the subject of the clause is contained within
the inflection of a verb and so the additional occurrence of an indepen-
dent subject pronoun is redundant with regard to the identification of
the subject. The use of an independent pronoun does, nevertheless, have
discourse functions. These functions are performed both by independent
pronouns in verbal clauses and also by those that occur in copula clauses.
The following discussion, therefore, will include examples from both verbal
and copula clauses. The subject pronoun may be placed either before or
after the verb/copula.

17.7.4.1. *Preposed Subject Pronouns*
When an independent subject is placed before the verb or copula, its
function depends on the prosody. If it does not bear the nuclear stress,
the motivation for the use of the pronoun is generally to mark some kind
of semantic discontinuity in the discourse. The discourse function of such
clauses, therefore, is similar to that of clauses with subject nominals in
initial position. The various types of semantic discontinuities include the
following.

(i) *Shift in Subject Referent*
An independent subject pronoun is used when there is a change in sub-
ject, e.g.

(1) ʾárya θéle ṭálbe dìye,ˈ ʾáwwa qṭìlle ṭla-ʾárya.ˈ 'A lion once attacked him. He killed the lion.' (A11:1)

(2) téla rìqle,ˈ ʾáy hédi-hedi qìmla.ˈ 'The fox ran. She (the bear) slowly got up.' (A20:5)

(3) zìlelaˈ ʾay-qímtɛla wíðtɛla kùbbe-wˈ ʾu-qlíθəlla gu-mə̀šxa.ˈ 'They went off and she made meat-balls and fried them in oil.' (A21:30)

(4) ʾu-muttéθɛla ṭḷáθi lə̀xmeˈ gu-čànta.ˈ mə́ra bábi nábəlla gu-jàmaˈ hàlle!ˈ ʾáwwa zílɛle b-ʾùrxa.ˈ 'She put thirty loaves of bread in a basket. She said "Father, take them to the mosque and give them to him." He went off on the road.' (A17:11–12)

(5) maymúne kúlla dmìxela.ˈ ʾu-xa-béna ʾáni qìmela,ˈ gníwəlla gàna,ˈ wíre gu-d-a-wádi-t šə̀kwàne.ˈ 'All the monkeys slept. Then they (the men) got up and stole away and went into the valley of the ants.' (A14:56)

(6) bắyət ʾàxlət,ˈ xùl.ˈ kpìnət.ˈ míya štì.ˈ ʾána la-qéθən b-čù məndí.ˈ 'If you want to eat, eat! You are hungry. Drink some water. I shall not touch anything.' (A14:59)

(7) ʾu-Mắmo mítle qèdamta-wˈ ʾána méθən ʾaṣ̀rta.ˈ 'Mămo died in the morning and I shall die in the evening.' (A26:83)

An independent pronoun is often used at the beginning of a turn in conversation, e.g.

(8) mə́re ʾána ṭ-áθən mə̀nnəx.ˈ 'He said "I shall come with you."' (A24:39)

(9) mə́re ʾána bắyən Səttìye.ˈ 'He said "I love Səttiye."' (A25:20)

(10) mə́re ʾáti yắðət ʾɛ̀kele?ˈ 'He said "Do you know where he is?"' (A25:74)

(11) mə́re ʾáxtu ʾasqítu ə̀dyo.ˈ 'He said "You go up today."' (A25:85)

(12) mə́re ʾay-mòdila?ˈ 'He said "What is that?"' (A21:8)

(13) mə́re ʾáxni ṭ-àzəx. lá xazə́xle brònən.ˈ 'He said "We should go. We shall not see our son."' (A25:11)

(ii) *Non-Sequential Actions*

On some occasions where an independent subject pronoun is used, there is no change in the subject referent. In such cases the use of the pronoun reflects a discontinuity on another level of the discourse. One such discontinuity is the lack of temporal sequence between the action of the

clause and that of the adjacent discourse. The action of the clause may overlap temporally with it, e.g.

(1) *zíltɛla bár ṯ-ile-béθa prìqa,*ˈ *ʾáza xázya jùlla,*ˈ *júlla lìθ.*ˈ *ʾáyya šaqlàwale ríxət júlle.*ˈ 'After the house was finished, she went to find her clothes, but her clothes were not there. She could smell the scent of the clothes.' (A14:99–100)

(2) *ʾána bíθənnux θíθən bàθrux.*ˈ *w-ana-léðən ṯ-awə́twa ʾáti xàyən palṭə́twa mónni.*ˈ 'I loved you and followed you, but I did not know that you would turn out to be treacherous to me.' (A14:101)

Two clauses with different initial pronouns that are juxtaposed often express an opposition between two temporally overlapping events, e.g.

(3) *ʾáti ʾàxlət.*ˈ *ʾáxni ṯ-àzexi.*ˈ *lá pɛšəx ṭla-xădàya.*ˈ 'You eat. We shall go. We shall not stay for lunch.' (A21:30)

(4) *qímɛle Qára Téždin*ˈ *ʾaw-ṣə́lyɛle mðìta.*ˈ *ʾay-qìmtɛla,*ˈ *wíðta qàwa.*ˈ 'Qara Teždin set off. He went down to the town. She got up and made coffee.' (A26:31)

In (5) and (6) the independent pronoun is used in a clause that disrupts the temporal sequence by moving back on the time line to reiterate an event that occurred earlier:

(5) *xá mən-xúwwe gòṛe*ˈ *zílɛle šqíla senìye*ˈ *mùθyəlla.*ˈ *síqa sìqa*ˈ *múttəlla kəs-d-ó Kărim-addìn.*ˈ *ʾáwwa zíla híwəlla tíwa tàma.*ˈ 'One of the large snakes went and took the tray and brought it. He came up and put it next to Karimaddin. He went and delivered it and sat down again.' (A14:31)

(6) *ʾáwwa máre b-àlaha*ˈ *har-xá-məndi ʾìθ b-áyya dúkθa ṯ-íle wìra.*ˈ *ʾáw xzèle ʾo-dídwa ʾéka wìrre.*ˈ 'He said (to himself) "By God, there must be something in this place where it entered." He saw where the fly had entered.' (A11:9)

(iii) *Other Discourse Shifts*

The discontinuity can sometimes be identified with the onset of a new section of discourse. This is seen in the following extracts from narrative, in which the construction signals the onset of an event that is distinct from what is recounted in the preceding clauses. In (1) the construction

marks the spatio-temporal shift in the event line in which the protagonists enters a different world. In (2) the clause marks a spatio-temporal boundary between the event of the woman's disposing of the king and the event of her returning to her room. In (3) the construction distinguishes between the event of the protagonist's laying the trap and the event of his setting himself in a hiding place.

(1) *ʾu-xzéle ʾína tằra·¹ b-qèsa·¹ xa-kilòn·¹ sèma-w·¹ qðíla séma b-rèše·¹. léle dàwa.¹ pθìxəlle.¹* **ʾáwwa plíṭɛle** *gu-ða-dúnye xèta,¹ šəmša milànta,¹ ʾằra milànta.¹* 'He saw that the door was of wood and had a lock of silver with a silver key on it. It was not gold. He opened it. He came out into another world, with a blue sun and a blue land.' (A14:26)

(2) *málka rwèle.¹ rwèle¹ qəm-doqále p-àqle,¹ xrrr garšále nablále gu-čằčma,¹ w-ačmále tằra bàre.¹* **ʾay-θéla** *dmíxla gu-ʾótəx dìya.¹ xlíqla tằra,¹ dmìxla.¹* 'The king became drunk. He became drunk and she grasped him by his legs, dragged him along and took him to the bathroom, then closed the door behind him. She came back and went to sleep in her room. She closed the door and went to sleep.' (A17:26)

(3) *ʾáwwa-ži zàlɛle,¹ nabòləlla¹ xámra mə́nna dìya,¹ l-d-à-dukθa.¹ xzàyəlla ʾéna.¹ mdabòqəlla¹ mattóye qìra,¹ ṭaṭíya-w qìra.¹ míya ktàpɛla.¹ dráyɛle biš-hódəx mə́nna díya xáčča xàmra.¹* **ʾáw mattóyəlla gáne dìye.¹** *hóle xpírəlla xa-dùkθa¹ mṭašòyəlla.¹ mṭùšyəlla.¹* 'He went and took them, together with wine to that place. He saw the spring. He pressed it down, put down tar, the woolen mat and tar. The water stopped flowing. He put some wine further up from them. He positioned himself. He dug a place to hide. He hid.' (A12:49)

In some cases the main motivation to use an independent pronoun is to express the independence of the clause for the sake of giving it prominence. This appears to apply to the folowing:

(4) *làn-gwìrta.¹ ʾána spárən ə̀llux.¹ ʾána lè-gorən.¹* 'I have not married. I am waiting for you. I shall not marry.' (A25:83)

(5) *málka ṭ-áwət basìma¹ ʾáti díya píšlux málka dìyən.¹* 'King, may you be well, you have now become our king.' (A14:45)

Occasionally a 2nd person independent pronoun is used with an imperative form. The motivation for this is likewise to mark off the construction clearly from what precedes in order to enhance its prominence. In (6) the speaker also uses the particle of immediacy *də-* to increase the force of the imperative:

(6) *də-ʾáti xùš!ˈ* 'You go!' (A39:1)

When the independent pronoun bears the nuclear stress, the function of
the construction is generally different. The motivation for the use of the
pronoun in such cases is normally to express an information focus on the
pronominal referent, the remainder of the clause being presuppositional.
The construction may be used to express contrastive assertion, e.g.

(7) *ʾáti là pálxət.ˈ ʾáti tù.ˈ ʾàna pálxən.ˈ* 'Don't you work. You sit down. *I*
     shall work.' (A21:23)
(8) *ʾàti parmótle réši.ˈ* '*You* will cut off my head.' (A14:35)

In some cases there is no clear contrastive opposition, e.g.

(9) *xáðrəx xázexi xa-nàšaˈ ṱ-íle palàxaˈ ʾu-t-yáxla ʾólle dìye.ˈ ʾàw mtagbə́rra.ˈ*
     'Let's look for a man who is a hard worker and give her to him.
     He will look after her'. (A21:3)

In clauses containing a copula, the copula is placed on the focused pro-
noun, e.g.

(10) *ʾáwwa lèle kálba,ˈ ʾàtit kálba.ˈ* 'He is not a dog. *You* are a dog'
     (A11:20)
(11) *ʾànən xózyəlle,ˈ dìyile.ˈ* '*I* (and nobody else) have found it. It is mine.'
     (A14:15)

In (12) a nuclear stress occurs also on the predicate of the clause, which
can be regarded as being the result of the bonding together of two into-
nation groups by sandhi:[1]

(12) *ʾàtit θíθa kèsli.ˈ lán ʾàna-ʾəθya kèsləx.ˈ* 'You came to me. I did not come
     to you.' (A4:4)

The information focus may be exclusive or inclusive. The intonation
group in such cases may contain two nuclei, which can be interpreted as
intonation group sandhi, e.g.

---

[1] For the notion of intonation group sandhi see Cruttenden (1986: 43).

(13) *har-ʾàtit plíxa.*ˈ 'Only you have worked.' (A21:15)

(14) *kúlla hóla qṭìle.*ˈ *bas-ànən šrìṭa.*ˈ 'They have all been killed. Only I have escaped.' (B19:8)

(15) *har-ʾàxni bt̬-áxləx.*ˈ 'Only we shall eat.' (A21:15)

(16) *ʾap-ʾàna mjarbə̀nna.*ˈ 'Also I will try it.' (A1:4)

(17) *ʾap-ʾàna hówən zála t̬ắya báθər ḥaqqúθa ʾu-na-ḥaqqùθa.*ˈ 'I also am going to search for what is lawful and what is unlawful.' (A15:6)

17.7.4.2. *Postposed Subject Pronouns*

Independent subject pronouns are on some occasions postposed after the verb or copula predicate. This construction expresses greater continuity and cohesion with the preceding discourse than the construction where the pronoun stands before the verb.

In many cases the motivation for this additional coding appears to be to give prominence to the clause as a whole, due to its importance or unexpectedness. Sometimes the prominent clause is the final one of a series, e.g.

(1) *ʾána spayùθən wáða,*ˈ *ʾu-ʾə́dyo mṭéli ʾána làxxa.*ˈ 'I was doing good and today I have come here.' (A14:34)

(2) *ʾày*ˈ *ʾu-xolamwàθa*ˈ *kúlla rqáða ġðáðe zmàra,*ˈ *mára xa-ʿăbî́d kòma*ˈ *dmáxɛla mə́nne díye ʾày.*ˈ 'She and her servants all danced and sang together. She slept with a black slave.' (A13:8)

(3) *ʾíθ xa-yàla,*ˈ *ʾána mquwáltən mə̀nne*ˈ *gắrəg gawrànne,*ˈ *gắrəg déɽən ʾána l-tàma.*ˈ 'There is a young man. I gave him a promise and I must marry him, I must return there.' (A14:86)

(4) *hey-nàša*ˈ *la-ʾàzət*ˈ *ʾáθe mtaláxlux ʾàw.*ˈ 'Don't go, man. He will come and destroy you.' (A14:65)

(5) *m-ɛ̀ka qəm-yắðə́tli ʾáti t̬-íwən Gozáli?*ˈ 'How did you know that I was Gozali?' (A8:41)

(6) *xóni dàwəqlux*ˈ *darélux gu-zəndàna,*ˈ *gu-hàbsa.*ˈ *mə́re lá taxmə́nnən ʾána bəd-zəndàna.*ˈ '"My brother will seize you and put you in prison, in jail." He said "I don't care about prison."' (A26:43–44)

A postposed second person subject pronoun is used with imperatives to give added force to the command, e.g.

(7) *qu-plúṭ ʾàti*ˈ *xzi-mò-d-ila qə́ṣṣət.*ˈ 'Go out and see what is happening.' (A26:54)

(8) *túgən ʾàti gàwe*ˈ 'Sit in it!' (A20:3)

(9) *háyyo ṣlí Kărî́m ʾáti gu-d-áwwa balù̀ʿa.*ˈ 'Come Karim, go down into this conduit.' (A14:16)

In some cases the pronoun is used to give prominence to the subject referent for contrastive purposes. This is not a narrow new information focus on the subject, since the predicate is not presuppositional. Rather it should be regarded as a form of topical prominence. The construction is used to give the subject added distinctness where the activity of the subject is set up in a contrastive opposition to that of another referent. In (10), for example, there are two characters on the scene, a man and a woman. The man goes to sleep whereas the woman remains awake. The construction *dmìxɛle ʾáw*ˈ with the postposed pronoun expresses cohesive temporal sequence to what precedes, but underscores the fact that the activity was undertaken by him and not her. In (11) the clause with the postposed pronoun is, likewise, cohesive with what precedes, but the activity of the subject (a lioness) is set up in opposition to the activity of her young, which is described in the following clause:

(10) *kut-dánət ʾáθe xùʁʁe*ˈ *mărəšàtli.*ˈ *mə́ra spày.*ˈ *mára xa-bèna,*ˈ *dmìxɛle ʾáw.*ˈ *dmìxɛle,*ˈ *wítɛla b-lèle*ˈ *xúʁʁe θèle.*ˈ *ʾáy bxèla.*ˈ '(He said) "When the snake comes, wake me." She said "Fine" and he went to sleep. He went to sleep and during night the snake came. She wept.' (A24:39–40)

(11) *ṣlìθɛla ʾaríθa,*ˈ *ṣráxɛla, ṣràxa.*ˈ *ṣlíθa šmìyəlla.*ˈ *klìθɛla-ʾay.*ˈ *bnóna díya ṣə́lye šə́tye mìyɛla.*ˈ 'The lionness came down, yelling. She came down and he heard her. She stood and her young went down and drank the water.' (A33:10)

It could be argued that the opposition between the two activities in cases such as (10) and (11) is made distinct by increasing the prominence of the proposition expressed by the clause as a whole and so the function of the postposed pronoun is basically the same as in examples (1)–(9). It is worth noting that in (11) the copula of the compound verbal construction is postposed to the end of the clause, which is a device used to give prominence to the predicate as a whole (see §15.4.1.4.2.).

When the independent 1pl. subject pronoun is postposed, the intention is often to express a contrastive prominence that gives the pronoun an exclusive sense. This is typically used in clauses in which the pronoun refers to the community of the speaker, which is distinct from the community of the hearer. This may be compared to the use of the 'heavy coding' of the long 1pl. pronominal suffix *-ɛni* to express the exclusive 1pl. In (12) and (13) the clauses with postposed 1pl. pronouns are cohesive with what precedes:

(12) ʾelíθa mən-ʾərbə xwára,' pàṛa,' ʾərbe,' la-ʾəzze,' lá ʾan-kòme' y-amráxla ʾàxni.'
'Tail fat is from white small cattle (sheep), a lamb, sheep, not goats,
not black (small cattle), as we call them.' (B10:5)

(13) y-oðíwa pə́ške hátxa zòre,' ʾo-t băyéwa qăràne.' pə́ške y-oðəxwa ʾáxni,' ta-
xàla.' 'They would make pieces of meat small like this or, if people
wanted, thick. We would make meat pieces for eating.' (B10:7)

In the constructions considered so far, the nuclear stress is often not placed
on the pronoun, even when the pronoun occurs at the end of an intona-
tion group. If, however, the postposed pronoun is a narrow focus of new
information, it always bears the nuclear stress, e.g.

(14) mə́ra ṭla-xaθwàθa,' xáθi ʾàna pálṭən.' plíṭṭela ʾày.' 'She said to her sisters
"My sister, *I* shall go out." *She* (not any of the others) went out.'
(A12:67)

(15) ʾə́dyo pə́ša ʾày maxóle ṭla-náše.' 'Today *she* (not other people) has begun
to feed people.' (A21:32)

In many examples in the text corpus the narrow focus is inclusive, expressed
by the particle ʾap, e.g.

(16) t-yálli xa-šúla pálxən ʾàp-ana.' 'He will give me a job so that also I
can work.' (A23:3)

(17) xuš-pə́šən képa ʾap-ʾàna.' 'Let me also turn into stone.' (A8:55)

(18) bróni qaṭlátli ʾap-àti?' 'My son, would also you kill me?' (A28:34)

(19) xonăwáθi mvắdo mvằdo' t-la-ʾazítu b-míya ʾap-àxtu.' 'Brothers, move out
of the way! Move out of the way, so that you also do not go with
the water.' (A39:12)

Pronouns are postposed in constructions such as the following where they
are conjoined with other items:

(20) ṭ-átwəx šátəx ʾána w-àti.' 'so that we can sit and drink, you and me.'
(A17:25)

(21) plíxɛt ʾàti,' ʾu-xmára-w tàwra.' 'You, the ass and the ox have worked.'
(A21:13)

(22) ʾu-qíme ʾáw ʾu-brōn-díye ʾu-tre-wăzíre plíṭe ṣèda.' 'He, his son and two
ministers went out hunting.' (A14:36)

17.7.5. *Clauses with a Direct Object Constituent*

17.7.5.1. *Verb—Direct Object*
The default position for the placement of a direct object nominal is after
the verb, e.g.

(1) *šáqli lèša.*ˈ 'They take the dough.' (B6:46)
(2) *mέθən ʾixàla.*ˈ 'I shall bring food.' (A26:30)
(3) *šaryáwa bănúda dìya.*ˈ 'She would untie her bands.' (A18:1)
(4) *bašlíwa rə̀zza.*ˈ 'They would cook rice.' (B7:3)
(5) *qəm-pắréla ʾέne.*ˈ 'He burst his eye.' (A16:2)
(6) *mxŭláltəlla ʾay-dùkθa.*ˈ 'She cleaned that place.' (A17:27)

In most cases the nuclear stress is put on the object, as in the examples
above. When the object is definite in status, the speaker occasionally puts
the nucleus on the verb. The purpose of this is usually to give promi-
nence to the event expressed by the clause for some reason. In (7), for
example, the event is a remarkable act of strength performed by one of
the characters in the narrative. The clause in (8) has importance in the
discourse structure, in that it marks the onset of the climactic section of
the narrative in which the Leliθa monster is destroyed:

(7) *naễlle ʾo-šəryóxa.*ˈ 'He pulls the tether apart.' (A28:20)
(8) *qəm-ʾač̀màle tắra.*ˈ 'She closed the door.' (A19:4)

17.7.5.2. *Object—Verb*
The object is sometimes placed before the verb. A distinction should be
made between constructions where the fronted object is an information
focus marked by the nuclear stress and those in which it is not an infor-
mation focus and does not bear the nuclear stress.

The latter type of construction without the nuclear stress on the fronted
object is used to perform two main functions, which may be designated
as 'event-orientated' and 'topic-orientated' respectively. When it has an
event-orientated function, it expresses an event or situation that has a close
cohesion with what precedes. The object in such cases has some referen-
tial link with the preceding discourse, either by explicit previous mention
or by some kind of associative anaphora. In narrative the construction
presents an event as occurring in close spatio-temporal sequence to the
preceding event, e.g.

(1) ʾu-šwíqle zúze díye táma zìlle.' θéle xa-xèna,' **ʾan-zúze šqilíle** ʾu-zìlle.'
'He left his money there and went off. Another man came, took
the money and went off.' (A15:15)

(2) yála θéle mǝn-zrùta,' **táwre mǔríle gu-gòma.**' ʾu-síqle ta-ṭ-áxǝl mǝndi.'
'The young man came back from his cultivating, put the oxen in
the basement stable and went up to eat something.' (A21:8)

(3) ja-jálde qìmele' ʾu-zíla šqílǝlle ʾo-qésa rìxa' ʾu-wírele gu-d-o-bὲθa' rǝš-d-
ò-dapa' **ʾu-tǎra čǝ̀mtǝlle báre.**' 'He quickly got up, took the long
stick and entered the room, by the board. She closed the door
behind him.' (A22:27)

(4) mɑ́re mo-ṭ-òðǝx?' pɛrmáxle ʾo-zòra' ṭ-axlǝ̀xle,' hal-ʾέ-gǝt ṭ-áza dɑ́bba m-tàma.'
qímela **ʾo-zóra prìmǝllela**' ʾu-xìlǝllela.' 'He said "What shall we do?
Let's slaughter the young one and eat him, (and wait) until the bear
goes away from there." They slaughtered the young one and ate
it.' (A20:7–8)

The construction is also used to express close spatio-temporal cohesion
of habitual events in descriptive discourse, e.g.

(5) marǝxθìla,' ʾu-ʾi-šoqíla tǎmàha,' míya ʾi-ṭέpi b-rèša.' **míyǝt ṭέpi b-réša
bɛzìla.**' 'They boil it and put it aside. The water comes to the top.
They pour off the water that comes to the top.' (B6:42)

The cohesion may be one of total overlap, in that the clause is a reitera-
tion of what precedes. Although in such cases the clause is strictly not
sequential to the preceding narrative, it often acts as a link between what
precedes and a subsequent series of sequential clauses, e.g.

(6) ʾu-dwíqtǝlle ʾixála gu-čánte dìye,' jarrèta y-amrɑ́xla.' **jarréta dwìqtǝlla**'
ʾu-másta gu-bùrra-w' dríθǝlle gu-čánte dìye.' 'She packed food in his
bag—we call it a *jarreta* ('lunchbag'). She packed the lunchbag, (put)
yoghurt in a pot and placed it in his bag.' (A21:11)

The construction is sometimes used in clauses that are logically cohesive
with what precedes in that they express the cause or the evidence for it,
e.g.

(7) ʾáp-xa lìθ láxxa gu-bέθa.' **ʾayále díye hóle mšùdrǝlla xa-dúkθa
xéta.**' 'There is nobody here in the house. He has sent his children
to another place.' (A22:28)

(8)   *mә́re qaṭlә̀nnux.¹ mә́re qṭùl.¹¹ lìtli.¹ **zú̀ze làn-xәzya**.¹* 'He said "I'll kill
      you." He said "Kill (me). I have not got it. I have not found the
      money." (A15:4)'

The preposed object in such event-orientated constructions may be a
non-referential negative expression that has no anaphoric connection with
what precedes, e.g.

(9)   *kùt-yum¹ ṣalḗwa gàwṛa¹ l-šùqa¹ msawòqe¹ ʾu-**čú̀-mәndi lɛ́ mɛθḕwa**.¹*
      'Every day the man would go down to the market to do shopping,
      but would bring nothing back.' (A22:1)

(10) *kúl-xa náša ṣàyәm.¹ ṣàyәm,¹ **híč-mәndi lá-ʾaxәl ṭḷà yománe**.¹* 'Every-
      body should fast. (Everybody) should fast and should not eat any-
      thing for three days.' (B6:19)

When the construction is topic-orientated, the initial object is set up as
a topic that is the main centre of concern in the clause. This strategy is
used at the beginning of a section of discourse, in which the referent of
the preposed object often retains its central topicality in what follows. The
fronted referent is often a newly introduced referent, e.g.

(11) ***xә́lya marәxθìle**¹ ʾu-šoqíle pḗša dǎ́raj ḫǎrára díye taqríban ʾàrbi.¹ dḗri
      marèθa bíya.¹* 'They boil milk and let its heat become about forty
      degrees. They put rennet in it.' (B6:37)

(12) ***sáṛe xašlóxwala** b-xašòlta.¹ ʾu-mpartәǹxwala¹ ʾu-qašṛ̀xwala.¹* 'We
      would crush barley in a mortar. We winnowed it and removed the
      peel.' (B10:12)

(13) *xá-mәndi ṭ-amrànnɛxu.¹ xṭíθì b-quðalɛ̀xu¹ **bnóni qam-ʾɛ́ni là qaṭlí-
      tula**.¹ báθәr qaṭlìtuli,¹ xéna ʾap-bnòni qaṭlítula,¹ b-gòti qaṭlítula.¹* 'I say to
      you one thing. I implore you, do not kill my children before my
      eyes. After you kill me, then kill also my children, kill them by my
      side.' (B9:13)

(14) *ʾíðux lá-darәt gu-nùra¹ t-là-ʾaqða.¹* 'Do not put your hand in the fire,
      lest it burn'. (D2:8)

In some cases the newly introduced referent is not explicity referred to
in the following clauses, but nevertheless it has some kind of relevance
in what follows. In (14), for example, the lamp is needed to see the girl
asleep. In (15) the living room is required to accommodate the guests on
their return. The object *ʾurxa* 'way' in (16) is closely linked semantically

with the following clause, which should be analysed as its complement ('the way she learnt'):

(15) *xa-lámpa mɛ́θət b-ʾìðux,¹ ʾu-háyyo láxxa kɜ̀sli.¹ xzìgən¹ ʾáyya bráta šapɩ̀rtə ṭ-íla dmíxta kɜ̀sli.¹* 'Bring a lamp in your hand and come here to me. Look at this beautiful girl who has fallen asleep with me.' (A26:5–6)

(16) *mur-ṭla-Žìne¹ ḵúčke mtagəbràla,¹ ʾáxni dìṛṛən¹ la-mṣélən síqlən ṣɜ̀da.¹* 'Tell Zine to prepare the living room. We have returned, we could not go out hunting.' (A26:46)

(17) *dáx ʾúrxa muxzélux ʾɜ́lla lípla ʾàwwa šúla?¹* 'How did you show her the way to learn this work?' (A21:34)

The initial object that is set up as the topic of the clause may be a generic relative phrase, e.g.

(18) *kú-məndi bɜ̆́yət šqùl.¹* 'Take whatever you want.' (A22:17)

(19) *kú-məndi-t ʾamrə́nnux gɜ̆́rəg ʾòðət.¹* 'Everything I say you must do.' (A14:66)

The construction is used in direct speech where the referent has topicality due to its presence in the speech situation, e.g.

(20) *ʾáyya bràta¹ hox-múθyəlla ṭlàləx¹ ṭla-brònux.¹* 'We have brought this girl for you, for your son.' (A21:6)

(21) *t-yánnux ʾəṣrà dináre.¹ bàs¹ ʾáwwa náša nablátle ṭamrɜ̀tle.¹* 'I shall give you ten dinars. Only, take away this man and bury him.' (A22:37)

When two or more such topic-orientated constructions are juxtaposed, they are presented as two parallel situations without being connected sequentially, e.g.

(22) *ʾap-šúlət banjáne har-hàdəx ʾawðíwale.¹ ʾap-šúlət xiyáre hàdəx ʾawðíwale.¹* 'They carried out the cultivation of aubergines in the same way. They carried out the cultivation of cucumbers in the same way.' (B7:13)

(23) *ṭlá-bnone xilìli.¹ báxta xilàli.¹* 'I have eaten three sons. I have eaten the wife.' (A20:12)

(24) *ʾíθwali xa-kàrma.¹ zrìyənwale¹ mútta-wewa dalyáθa ʾu-xabúše ʾu-kúl xa-mə̀ndi.¹ mútta-wewa ʾixàla.¹ θéle xa-náša qəm-šaqɜ́lle ʾo-kàrmi.¹* **lá-karmi**

lɛle-mădòr̭e᾿ **᾿u-la-ḥáqqət kàrmi lɛle-yáwa.**᾿ 'I had an orchard. I had cultivated it. It was laid out with vines, apple-trees, every-thing. It was laid out with food. A man came and took away my orchard. He does not return my orchard nor does he pay the price.' (A17:30)

The topic-orientated construction with a fronted object may be juxtaposed with a clause with an initial subject, which has the same effect of express-ing parallel situations rather than sequentiality, e.g.

(25) *mə́šxa páyəš xò δe,*᾿ *᾿u-dáwwe dɛréla gu-xa-quṣxáne gòr̭ta.*᾿ 'The butter remains by itself and they put the yoghurt water in a large pot.' (B6:40)

The constructions discussed above should be distinguished from construc-tions with a fronted object that is an information focus marked by the nuclear stress, e.g.

(26) A: *xzéli bàbux*᾿ B: *là,*᾿ *màmi xzélux.*᾿ 'A: "I saw your father." B: "No, you saw *my uncle*."'
(27) A: *xónux hóle xíla xabùša*᾿ B: *là,*᾿ *xàwxɛle xíla xóni.*᾿ *léle xabùša xíla.*᾿ 'A: "Your brother has eaten an apple." B: "No, my brother has eaten *a peach*. He has not eaten *an apple*."'

In such cases the remainder of the clause belongs to the presuppositional background, i.e. it is assumed to be known to the hearer. What is unknown is the identity of the argument in question. In (25) the presuppositional background of the clause with the fronted object is 'You saw *x*' and in (26) it is 'My brother has eaten *x*'. What the speaker is asserting, i.e. the new information that he is conveying, is the identity of *x* in each case. Note that in clauses with compound verbal forms, the copula is attached to the fronted object. Examples from the text corpus (see §15.4.1.4.1 i):

(28) *lɛ́wən θíθa b-xabrə dìye.*᾿ *᾿áyya xáθe dìyela.*᾿ *b-xábrət xáθə dìyən θíθa.*᾿ 'I did not come at his word. She is his sister. I came at the word of his sister.' (A8:85)
(29) *᾿ànən múθyəlle.*᾿ '*I* (and not my brother) have brought it back.' (A24:31)

The fronted object in focus may be introduced by an inclusive or restrictive particle ('also, only'), e.g.

(30) *ʾap-màlxa pið́ale.*ˈ 'He passed by also *the salt*.' (A24:19)

(31) *mə́ri qa-yə̀mmi*ˈ *bas-mìya máttət qam-réša díya.*ˈ 'I said to my mother "Place only *water* by her head."' (A21:37)

The inclusive particle *ʾap* is also used with initial object constructions that have the nuclear stress on the verb and so do not express narrow focus on the object but rather a broader focus on the proposition as a whole, e.g.

(32) *hot-ṣṭìməlle bέθət xálux.*ˈ *ʾap-bέθi bắyət ṣaṭmə̀tle?*ˈ 'You have ruined the house of your uncle. Do you want to ruin also my house?' (A23:39)

(33) *ʾúp Mar-Sáwa qəm-talə̀xle.*ˈ 'He also destroyed (the church of) Saint Sawa.' (B6:33)

(34) *béna ʾàw*ˈ *ma-ṭ-íwa hal-hàdəx,*ˈ *bằyéẇa qa-ʾalàha*ˈ *ʾu-ʾaláha bằyèwale,*ˈ *ʾap-míya muklèle gu-d-ɛ-sálla.*ˈ 'He was so (holy), he loved God and God loved him, that he could even hold water in the basket.' (A16:10)

17.7.6. *Double Objects*

In constructions that take two direct object nominal constituents these are normally both placed after the verb, e.g.

(1) *ʾáxni šaqlə́xxe ʾu-ṃáḷəxxa čántux zùze.*ˈ 'We shall take it and fill your bag with money.' (A39:14)

(2) *madoqíla xə́tna-w kʸálo gotə-ġðàðe*ˈ 'They make the groom and bride hold each other's side.' (B5:50)

The first object constituent may be fronted before the verb in contexts where single object constituents are fronted. In (3), for example, the fronting of the object 'his bag' occurs in a clause that is intended to be cohesive with what precedes in a close temporal sequence. In (4) the object is fronted in a topic-orientated construction that is presented as parallel with what precedes:

(3) *wídla ʾixàla*ˈ *ṭla-yàla.*ˈ *xìlle.*ˈ **čánte díye dwíqla zwàðe**.ˈ 'She made food for the youth. He ate. She packed his bag with provisions.' (A21:22)

(4) *ṭ-óðǝn ʾixàla,*ˈ *xáʾa mǝn-d-ánna kúbbe gòṛe.*ˈ *xáʾa ṭla-xmàθila*ˈ *ʾu-xá ṭla-gàwṛi.*ˈ
ʾa-ṭ-ìla ṭláliˈ **ʾawðánna trè-qǝsme,**ˈ *t-yánna xa-ṭlàlux*ˈ *ʾu-xá ṭla-*
*wǎ̀zīr.*ˈ 'I'll make food, one of these big meat-balls. One is for my
mother-in-law, one is for my husband. The one that is for me I'll
make into two parts and give one to you and one to the vizier.'
(A21:28)

17.7.7. *Subject—Object—Verb*

Occasionally the object is fronted before the verb when the clause has an
initial subject constituent. Most attested cases of such constructions have
independent pronouns as subject, e.g.

(1) *mɛ́re yába b-zabnə́tle ʾə́lli ʾǝn-háwe b-ðà-ʾaqla?*ˈ *mɛ́re zílla θèla*ˈ *ða-ʾàqla!*ˈ **ʾáti**
ʾáqla šqùllaˈ 'He said "Will you sell it to me if it has one leg?"
He said "All this fuss (literally: they have gone, they have come),
now one leg! Take the leg."' (A22:5)

(2) *ṭ-óðǝn ʾixàla,*ˈ *xáʾa mǝn-d-ánna kúbbe gòṛe.*ˈ *xáʾa ṭla-xmàθila*ˈ *ʾu-xá ṭla-gàwṛi.*ˈ
*ʾa-ṭ-ìla ṭláli*ˈ *ʾawðánna trè-qǝsme,*ˈ *t-yánna xa-ṭlàlux*ˈ *ʾu-xá ṭla-wǎ̀zīr.*ˈ…**ʾána**
sámi t-yánne ṭlalèxuˈ *ʾána lè-y-axlǝn.*ˈ 'I'll make food, one of these
big meat-balls. One is for my mother-in-law, one is for my husband.
The one that is for me I'll divide into two parts and give one to
you and one to the vizier…. I shall give my share to you. I shall
not eat.' (A21:28–29)

(3) *sógǝn mɛ́θo xárj-u bárjǝt botanàye*ˈ **ʾu-ʾána xáθi t-yánna ṭla-Mǎ̀mo.**ˈ
'Go and collect the taxes of the people of Botan and I shall give
my sister to Mǎmo.' (A26:73)

In all cases the object is anaphorically bound to the preceding context
and the clause is semantically cohesive with what precedes. As we have
seen, clause initial subject pronouns are in principle used to signal some
kind of disjoining from what precedes, so there appears to be some ten-
sion here. The main motivation to use the subject pronouns seems to be
to give prominence to the clause as a whole.

17.7.8. *Independent Object Pronouns*

Occasionally an independent pronoun or anaphoric demonstrative pro-
noun is used to express a pronominal direct object. It is placed either before
or after the verb. This construction is found in the following contexts.

When placed before the verb, on some occasions the pronoun is topical in status and the clause coheres closely with what precedes, e.g.

(1) *ʾaw-y-oðə̀xwa.*ˈ 'We would do that.' (B10:49)
(2) *ʾáti xúwwe là ʾaxə́lləx.*ˈ 'The snake will not eat you.' (A24:39)

The motivation to use the independent pronoun is in some cases to place the topical referent in contrastive opposition, e.g.

(3) *mə́ra lá-dri xɛ́lət gànux.*ˈ *ʾána θíθən mpalṭánnux m-gu-sə̀jən.*ˈ *mə́re lát-θíθa* **ʾána mpalóṭəlli** *m-gu-sə̀jən.*ˈ *θíθət šqála ʾáyya róxi mən-gu-gàni.*ˈ *mə́ra là'a!*ˈ *ʾána θíθən mpalṭànnux*ˈ *ʾáxxa l-tàmma,*ˈ *lá-dri xèla!*ˈ 'She said "Do not struggle. I have come to bring you out of the prison." He said "You have not come to bring me out of the prison. You have come to take my spirit from me."' (A26:82)

When an independent pronoun with topical status is placed after the verb in addition to or in place of an L-suffix, the motivation appears to be to give the construction morphological weighting to mark some kind of discourse boundary. In (4) and (5) the pronouns occur at an end boundary, whereas their occurrence in (6) and (7) coincide with an onset. The event in (6) marks the return to the narrative after direct speech. In (7) the clause marks the onset of a deontic section that is the main point of the speech, after an initial background section:

(4) *kúlla hon-xìləlla.*ˈ …*xíllux táma mubsə̀mlux.*ˈ *ʾána qəm-ṭarðìli.*ˈ *ə́θyən m-kérbi hon-xíləlla* **ʾày.**ˈ 'I have eaten all of it…You ate there and enjoyed yourself. They drove me out and, out of my anger, I have come and eaten it.' (A2:11)

(5) *xzíθəlle xa-bronət-xà-malka,*ˈ *láx-ðaʾa ʾèka,*ˈ *ʾu-bìθəllela-w*ˈ *ʾu-hóla mšuyðánta mən-d-ó-yoma ṭ-íla* **xzíθəlle ʾàw.**ˈ 'She saw the son of a king, we do not know where, and fell in love with him, and she has been mad from the day that she saw him.' (A4:12)

(6) *là bằyə́nna.*ˈ *šqúl sì!*ˈ *qíməle* **šqìla-ʾani**ˈ *ʾu-mŭdə̀rəlla.*ˈ *núbləlla qa-bráte dìye.*ˈ '"I don't want them. Take (them), go!" He took them and returned them. He took them to his daughter."' (A17:13)

(7) *mə̀re*ˈ *ʾána bằyən ʾánna déwe maxə̀nna.*ˈ *mə́re dàxi?*ˈ *mə́re ʾána xzáyən ʾan-maymúne*…*hóla xáləlla qṭàləlla.*ˈ **pálšəx ʾáni** *w-ána šaqlə̀nna ʾáθra mənnéy.*ˈ 'He said "I want to attack these wolves." He said "How?" He said "I see that they are eating and killing the monkeys. Let us fight them and I shall take the land from them."' (A14:52)

The pronoun may have a narrow information focus, in which case it takes the nuclear stress and is often fronted before the verb,

(8) *ʾána ʾàti bắyən*ˈ 'I love *you*' (A25:31)

The narrow focus may be inclusive, e.g.

(9) *qa-t-nablánne ʾap-ʾàw.*ˈ 'so that I take also *him*.' (A8:80)

An independent pronoun is used when its referent is conjoined with other items in the direct object phrase, e.g.

(10) *ʾə́θyela déwe gu-ða-lawùrta*ˈ *xíləlle ʾàw-u xmáre díye.*ˈ 'Wolves came into a valley and ate him and his donkey.' (A14:17)
(11) *ʾána mšúdrən Gúzali ʾu-ʾàti.*ˈ 'I sent you and Gozali.' (A8:91)

17.7.9. *Verb—Prepositional Phrase*

A prepositional phrase expressing an indirect object or some other complement of the verb is normally placed after the verb, e.g.

(1) *ʾámər ʾə́lle dìye.*ˈ 'He says to him.' (A21:2)
(2) *máṭe l-čádrət bábe dìye.*ˈ 'He arrives at the tent of his father.' (A28:33)
(3) *qéθa b-ɛ̀-ʾaqla.*ˈ 'It strikes the leg.' (B7:24)
(4) *ṣléle rəš-xa-ʾɛ̀na.*ˈ 'He alighted at a spring.' (A15:1)
(5) *wúr gu-d-áwwa bɛ̀θa.*ˈ 'Enter this room.' (A22:26)

The nuclear stress is generally placed on the prepositional phrase, unless this is pronominal, in which case the nucleus exhibits a greater tendency to be placed on the verb, e.g.

(6) *pàlṭən m-gáwe.*ˈ 'Let me come out of it.' (A20:3)
(7) *ʾu-də̀ryəlle gáwa díya.*ˈ 'He put him in it.' (A22:38)

17.7.10. *Verb—Object—Prepositional Phrase*

When the clause also contains a direct object nominal, this is normally placed before the prepositional phrase complement, e.g.

(1) *ʾu-máxa xa-mə́šxa gu-be-ʾéne dìye.*ˈ 'They put some oil on his forehead.'
(B6:36)

(2) *mattíwa bála b-áqlə susèy.*ˈ 'They directed their attention to the leg of
their horse.' (A8:30)

(3) *y-awðíwa sàdde gáwa.*ˈ 'They would put partitions in them.' (B7:10)

(4) *maθyáwa ða-kə́rtə qə́sa l-xáṣa dìya.*ˈ 'He would bring a bundle of wood
on her back.' (A10:6)

A related construction is where an item is named by the expression 'to
say to it *x*'. The constituent expressing the name in principle takes the
nuclear stress and is an information focus. It may be placed either after
(5–6) or before (7–8) the verb, e.g.

(5) *mattíwala xa-dúkθa šaxìnta*ˈ *ṭ-amrə́xxa gòma.*ˈ 'They would place them
in a warm place, which we call a *goma* (basement).' (B5:12)

(6) *y-amríwala qàzbe.*ˈ 'They called them *qazbe* (dates).' (B5:12)

(7) *ʾən-bắy̌ət*ˈ *zaqrə̀nnəx*ˈ *xa-qurṭàla,*ˈ *sàla y-amrə́xle.*ˈ 'I'll weave you a large
basket, we call it a *sala* (basket).' (A20:2)

(8) *ʾu-dwíqtəlle ʾixála gu-čànte dìye,*ˈ *jarrèta y-amrə́xla.*ˈ 'She packed food in
his bag—we call it a *jarreta* (lunchbox).' (A21:11)

17.7.11. *Prepositional Phrase—Verb*

A prepositional phrase is fronted before the verb in similar contexts to
those in which a direct object constituent is fronted. A distinction should
be made between constructions where the fronted phrase bears the nuclear
stress and those in which it does not. The latter type of construction
without the nuclear stress on the initial phrase may be 'event-orientated'
or 'topic-orientated'. Event-orientated constructions are closely cohesive
with what precedes, e.g.

(1) *ʾi-mattíle š-kèpe,*ˈ *xóθe díye y-óði nùra.*ˈ 'They put it on stones and make
a fire under it.' (B6:45)

(2) *ʾáw mattíle š-g̈ðàðe,*ˈ *y-amríle huðàla.*ˈ *mattíle š-g̈ðàðe*ˈ *y-amríle huðàla.*ˈ *qa-
ʾìma?*ˈ *qa-sə̀twa,*ˈ *qa-haywáne diyèy.*ˈ *š-d-ó huðàla*ˈ *ʾi-mátti pùwuš,*ˈ *sab-púwuš
la-ṣála míya bi-dìye.*ˈ 'They stack it up. This is called a *huðala* (fod-
der stack). They stack it up, it is called a fodder stack. For when
(is this prepared)? For the winter, for their animals. On top of this
fodder stack they put hay, since water does not seep through hay.'
(B5:113)

In (3) the clause has both a fronted direct object and a fronted preposi-
tional phrase:

(3) *ʾámər là-bắyənna lá zùzəx*˥ *ʾu-la-čù-məndi.*˥ *ʾu-ya-ʾàlaha,*˥ *zíləle rìqəle.*˥
     ʾan-zúze ṭla-d-àw,˥ **ṭla-d-o-ḥammàla**˥ **là-yiwla.**˥ 'He said "I
     don't want your money or anything" and he was off, he fled. She
     did not give the money to him, to that porter.' (A22:46)

Topic-orientated types of the construction are attested in contexts where
two events are presented as occurring in parallel, e.g.

(4) *muθέθela tré glàse.*˥ *ṭla-d-áy dráyɛla xàčča*˥ *ṭla-d-áw ràba.*˥ 'She brought
     two glasses. For herself she pours out a little and for him a lot.'
     (A17:25).

When the fronted prepositional phrase bears the nuclear stress, it expresses
an information focus, the rest of the clause being presuppositional, or at
least less prominent, e.g.

(5) *ʾána b-àrbe lánwa zwánəlle*˥ *zawnə́nne b-ṭə̀ḷḷəθ?*˥ 'I would not buy it with
     four legs, would I buy it with *three*?' (A22:8)
(6) *ʾaw-t-lá-šaxən b-zráqtət šə̀mša*˥ *b-gnèθa la-šáxən.*˥ 'He who does not get
     warm with the rising of the sun, does not get warm at its setting.'
     (D2:21)
(7) *ʾána qa-Səttìye bắyən.*˥ 'I love *Səttiyə* (not anybody else).' (A25:22)
(8) *dáx lítləx xáṭər bàxta,*˥ *ʾu-bṭ-àθən*˥ *gu-d-ànna ʾéni bṭ-áθən.*˥ 'Of course,
     you are welcome, my lady. I shall come. *By these eyes* (of mine) I
     shall come.' (A22:20)

In such cases the short prepositions *b-* and *l-* are occasionally omitted on
the focused item, e.g.

(9) *har-gubbànəx (< b-gubbanəx) wíðəlle.*˥ 'We made it exactly according
     to a spirit-level.' (A17:20)
(10) *kut-ʾə́rba ʾaqlət-gàne (< b-ʾaqlət-gàne) páyəš tə́lya.*˥ 'Every sheep is hung
     up by his own legs.' (D2:55)
(11) *ʾáyya yaləxta*˥ *bàbila (< l-bàbila) zqírta*˥ *ʾu-xáθi Nasìmola (< l-Nasimola)
     mnuqášta.*˥ 'This handkerchief was woven by my father and embroi-
     dered by my sister Nasimo.' (A37:12)

17.7.12. *Placement of Adverbials*

The placement of adverbials in relation to other components in the clause is conditioned by a number of factors. We shall consider here both verbal and copula clauses, since the conditioning factors are the same. The majority of adverbials that occur in the text corpus are temporal or spatial expressions. The various positions can be classified as follows.

17.7.12.1. *In Clause Initial Position*
Temporal or spatial adverbials that stand at the front of a clause in principle mark a shift in the discourse and set the temporal or spatial frame for what follows. This frame often incorporates a series of clauses. Examples:

(1) *xá-yoma ṣlèle,*ˈ *ʾína šmíle xzéle ʾína ṭə̀ḷḷəθ-yawne tíwla táma.*ˈ 'One day he went down and heard (something) and saw that three doves had alighted there.' (A14:81)

(2) *xá-yoma ṣléla gu-gòma.*ˈ *ríxət júlla díya θèle.*ˈ *mə́ra hóla làxxa.*ˈ 'One day she went down into the basement. The scent of her clothes came to her. She said "They are there."' (A14:100)

(3) *šúryεle zráya hàl-ʾaṣərta.*ˈ *ʾaṣə́rta ʾáθe l-bèθa.*ˈ 'He began cultivating (and continued) until evening. In the evening he came home.' (A21:12)

The temporal frame may be set by a distributive adverbial expression, e.g.

(4) *kút yomət-šábθa míya là-hawe gu-néra.*ˈ 'Every Saturday there is no water in the river.' (A14:50)

(5) *ʾu-kut-šéta xa-gáya y-oðə́xwa mən-d-o-ʾùpra.*ˈ 'Once every year, we would collect this mud.' (B10:68)

(6) *kut-yárxa t-yánnux xámši dinàre.*ˈ 'Every month I shall give you fifty dinars.' (A24:5)

In descriptive discourse, some kind of shift is often marked by a reidentification of the temporal frame by an anaphoric adverbial such as *ʾε-ga* 'at that time' or *tama* 'there'. In (7), for example, these adverbials are used in a clause that occurs at the beginning of a section of discourse concerning the churn. The reidentification is also used to mark a shift from the foreground discourse to a background comment (8):

(7) ʾɛ́-ga táma gu-maθwáθa kəslɛ̀ni˥ ʾíθwalən gùða.˥ 'At that time, there in our community in the villages, we had a churn.' (B7:20)

(8) maxíwa ʾilàna.˥ ʾɛ́-ga lìθwa kéka.˥ y-asqíwa l-gàre,˥ ʾɛ-dánə mɛθíwala kʸàlo,˥ napṣ̀ìwala.˥ 'They would set up the tree. At that time there was no cake. They would go up onto the roof, at the time when they brought the bride and shook it.' (B10:27)

In narrative the initial adverbial may express the point at which an event takes place, e.g.

(9) bár ṭlaθa-yóme dìṛṛe.˥ 'After three days he returned.' (A3:6)

(10) ṣ̀əlyela.˥ yomət-ṭláθa mə̀ṭyela˥ l-Amedìa.˥ 'They went down. On the third day they reached Amedia.' (A25:77)

On some occasions the initial adverbial is placed in a separate intonation group. The effect of this is to disjoin more forcefully the clause from what precedes. Some of the examples of such adverbials in the text corpus are numerical expressions such as those in (13)–(15), which denote members of a limited set of points or periods in time. The added disjunctive effect of placing the adverbial in a separate intonation group marks these off distinctly in contrastive opposition:

(11) xa-yòma˥ qímla zílla mə̀ra˥ ṭ-ázəx l-ʾə̀rwe.˥ 'One day they set off and said "Let's go to the sheep."' (A25:23)

(12) ʾo-lêle˥ y-azə́xwa be-kʸàlo.˥ 'That night we would go to the house of the bride's family.' (B5:28)

(13) bénə ṭə̀ḷḷəθ˥ nàpla˥ bàxta.˥ 'The third time the wife fell.' (A20:11)

(14) yómət trè˥ ʾay-là xílla.˥ 'On the second day she did not eat.' (A21:14)

(15) yómət xàmša,˥ qímla ʾáy m-bắdal xmáθa dìya.˥ 'On the fifth day, she got up instead of her mother-in-law.' (A21:22)

An initial adverbial that is not placed in a separate intonation group on some occasions takes the nuclear stress. This is used to put a narrow information focus on the adverbial. In clauses containing a copula, the copula is placed on the adverbial, e.g.

(16) kúlla lɛ̀lela l-bálux?˥ 'Has it been on your mind *all night*?' (A25:67)

When narrow focus is placed on anaphoric adverbial expressions, its function is to strengthen the anaphoric bond with what precedes. In (17) and (18) the adverbial 'at that time' binds the clause with what precedes rather than setting the temporal frame for what follows:

(17) *muttέθəlle púmma gu-pùmmət¹ Fàrxo,¹ šuréla myàṣa¹ ʾὲ-danɛla kálye.¹* 'She put her mouth on the mouth of Farxo and began sucking. *At that time* they stopped (crying).' (A25:5)

(18) *taxránne ṭla-xlúlət xóni Šə̀mmo¹ ʾέ-gə t-wέwa ríqe nàše¹ ṣ̌lye Badɛrə̀ške,¹ ʾáskar t-léwi síqta gu-ʾƐ̄n-Nùne,¹ ʾὲ-ga-wewa gwíra xóni Šə̀mmo.¹* 'I remember the wedding of my brother Šəmmo, when people had fled and come down to Badɛrəške. The Levy army went up to ʾƐn-Nune. *At that time* Šəmmo married.' (B8:21)

By contrast, in (19) the initial adverbial is not marked by the nucleus and it sets the temporal frame for what follows. The copula on the adverbial here signals topical rather than focal prominence (§15.4.1.4.1. ii):

(19) *ʾέ-gɛla ḥŭdúde mùrme,¹ gu-Tùrki músqe.¹* 'At that time the borders were moved, they were moved up to Turkey.' (B9:21)

When the anaphoric adverbial *hatxa* has narrow focus, it likewise links the clause to what precedes, e.g.

(20) *ʾína semàlta¹ ʾáyya t-qὲse,¹ max-d-ánna ṯ-ásqi ʾăbu-bὲrqa.¹ ʾáxni hàtxɛwa semáltən ʾap-ʾáxni.¹* 'A ladder is made of wood, like the ones that the electricity workers climb up, our ladder was like *that*.' (B10:60)

(21) *hàtxa mjuwáble ʾálli málka.¹* 'The king repled to me *thus*.' (A17:34)

(22) *hàtxa ʾoðéti b-náše.¹* 'You should treat people *like this*.' (A22:47)

In (23), on the other hand, where it is does not have the nucleus, it is forward pointing:

(23) *bróni hátxɛla qaḍìya¹ málka hóle mú θyəlla bráte dìye.¹* 'My son, the situation is like this. The king has brought his daughter.' (A21:8)

A backwarding linking function is performed also by the focused spatial adverbials *ʾaxxa* 'here' and *tama* 'there' in (24)–(27). In (26) and (27) these occur after a subject constituent, but their function is the same:

(24) *dámxɔx š-gɔ̀šra,*' *biš-salàmɔt-ile.*' *ʾáxxa xuwwáwe ma-xuwwáwe lɛ̀-y-aθɛ l-d-áwwa gɔ́šra.*' *ʾàxxa damxéxi.*' 'Let's sleep on the bridge. It is safer. Here—snakes and the like will not come onto this bridge. Let's sleep *here*.' (A30:49)

(25) *ʾɛ́ka ṣàṭqa*' *tàma zăréti.*' 'Wherever she squats down, you should plough *there*.' (A30:4)

(26) *bábi muttúle táma bɛ̀θa.*' *zìllɛni,*' *tɔxrúθa dìyi*' *ʾu-t-xóni d-o-gòṛa.*' *ʾáwwa xóni tàmɛle bɔ́rya.*' 'My father set up home there. We went, as far as I remember, together with my older brother. This brother of mine was born *there*'. (B8:10)

(27) *ʾɛ-dúkθə ṭ-íxwa mŭmɔ̀ðe,*' *hálbat sawăwáθən t-qámθa kúlla tàmɛwa mŭmɔ́ðe.*' 'That place where we were baptized, of course all our ancestors were baptized *there*.' (B3:21)

17.7.12.2. *Adverbial in Clause Final Position*

When temporal or spatial adverbials are placed at the end of the clause, they, in principle, do not mark a shift in the discourse by setting the temporal or spatial frame for what follows. Rather the clauses in which they occur are cohesively bound to what precedes. This is seen in (1) and (2), in which the adverbials are anaphoric. The clause with the adverbial 'at that time' in (1) develops the description of 'mats', which have been introduced in the preceding clause. In (2), from a narrative, the clause with the adverbial 'on that day' does not introduce a new episode, but rather recapitulates on an event that has already been related:

(1) *ʾíθwa y-amrɔ́xwa xaṣìra.*' *xaṣíre mɛθɛ́wala m-mðinàθa ʾɛ́-ga.*' 'There was a mat, as we called it. They brought the mats from the towns at that time.' (B5:199)

(2) *xá-yoma ʾíθwa xá-qaša ʾu-xà-malla.*'... *šɔ́ryela gu-xa-ʾotèl.*'... *šɔ́ryela gu-d-ɛ́ ʾotél ʾo-yòma-w*' *píšela hàdəx.*' 'One day there was a priest and a mullah.... They put up in a hotel..... They put up in the hotel that day and remained there.' (A2:2)

17.7.13. *Clauses with an Interrogative Constituent*

Interrogative particles that function as a subject, object or adverbial in the clause are in principle placed before the verb. The nuclear stress is placed either on the fronted particle or at the end of the intonation group. If the verb is a compound form containing a copula, the copula is attached to the interrogative particle:

(1)   *módi wìdle?*ˈ 'What did he do?' (A20:5)
(2)   *mó ṭ-òðəx?*ˈ 'What shall we do?' (A14:47)
(3)   *mó bằỵət?*ˈ 'What do you want?' (A12:62)
(4)   *mòditu xə́zye?*ˈ 'What have you seen?' (A12:16)
(5)   *ṭla-mò wídlux hátxa bíyi?*ˈ 'Why did you do that to me?' (A15:14)
(6)   *ʾènile qṭíləlle?*ˈ 'Who has killed him?' (A15:16)
(7)   *ʾénile plìxa?*ˈ 'Who has worked?' (A21:13)
(8)   *ʾéka péšˈən ʾàrxa?*ˈ 'Where can I be a guest?' (A26:26)

When the clause contains a subject constituent, this is generally not placed between the interrogative particle and the verb, but rather is positioned either before the interrogative particle or after the verb. The decision to place the subject at the front or end of the clause is conditioned by the discourse factors that have been discussed above (§17.7.2.), e.g.

(9)   *Barzə́kko módi wìdle?*ˈ 'What did Barzəkko do?' (A12:7)
(10) *xəyálɛxu mù-qṭila?*ˈ 'What have you decided? (literally: What have your thoughts decided?)' (B5:2)
(11) *ʾána mò-ʾoðən?*ˈ 'What should I do?' (A21:2)
(12) *w-áti mò ṭ-amrə́tli?*ˈ 'What will you say to me?' (A17:33)
(13) *ʾáxni mò ṭ-áxləx?*ˈ 'What shall we eat?' (A10:5)
(14) *ʾáwwa mòdile wíða?*ˈ 'What did he do?' (A22:27)
(15) *mót mára ʾàti?*ˈ 'What do you say?' (A25:21)
(16) *mò ʾawðéna ʾána hadíya?*ˈ 'What should I do now?' (A26:13)
(17) *mùt kálba mubréθa ʾáti?*ˈ 'What dog have you given birth to?' (A11:20)

In a few sporadic cases the subject intervenes between the interrogative particle and the verb, e.g.

(18) *mút ʾáti tíwta làxxa?*ˈ 'Why are you sitting here?' (A25:58)

The interrogative particle *mo* is used to express exclamation in constructions such as (19), in which the verb is repeated:

(19) *qìmtaˈ mgašóqe hàtxa,ˈ mo-mgàšqa!*ˈ 'She got up and looked and what (a sight) she sees!' (A25:59)

This construction is used also with intransitive verbs, e.g.

> (20) *ʾánna ṣàli*¹ *ʾína mò ṣáli.*¹ 'They went and what (a surprise when) they went down! (A25:13)
>
> (21) *dmíxɛle xá-bena ṛàyəš*¹ *ʾína mò ṛáyəš.*¹ 'He went to sleep, then woke up, but what (a surprise when) he woke!' (A14:30)

The adverbial interrogative particle *dax* is used also in a longer form *daxi*. The occurrence of the longer form is prosodically conditioned, in that it occurs predominantly in pause at the end of an intonation group, as is the case with the long forms of verbal inflections (§15.12.), e.g.

> (22) *dàxi?*¹ 'How (could this be)?' (A25:69)
>
> (23) *báxta dìya dáxi?*¹ 'Wife, now how (can we solve the problem)?' (A20:9)

17.7.14. *Negated Verbal Clauses*

17.7.14.1. *Negative Particle before Verb*

When a verbal clause is negated, the negative particle *la* is normally placed immediately before the verb. Various stress patterns are attested in relation to this particle. In some cases it is stressed and in others it is unstressed (§6.4.). It takes the nuclear stress of the intonation group when the speaker wishes to give the negation particular prominence. This is found predominantly in the following circumstances.

(i) *Negated Deontic Expressions*

When the negated verb has a deontic modality, such as a prohibition addressed to the hearer or an expression of deontic intention by the speaker, the negator is often given prominence, e.g.

> (1) *là mtalpə́tle*¹ *là-daqrət bíye.*¹ 'Do not harm him! Do not touch him!' (A26:73)
>
> (2) *là maṣíθət!*¹ 'Do not listen!' (A26:11)
>
> (3) *là-mṣawθət!*¹ 'Do not speak!' (A26:89)
>
> (4) *bróni là qəṭlúle!*¹ 'Do not kill my son!' (A33:6)
>
> (5) *là maštóla míya!*¹ 'Do not give them water to drink!' (A25:9)
>
> (6) *ʾána là-ʾaθən mə́nnux!*¹ 'I shall not come with you!' (A6:6)
>
> (7) *là-ʾawrən gu-máθa!*¹ 'I shall not go into the village!' (A25:34)

(ii) *Adversative Contexts*

The negator is given prominence when the clause defeats an expectation that arises from what precedes, e.g.

(1) *spírra spìrra¹ bróna díya là θéle.¹* 'She waited and waited, but her son did not come.' (A14:21)

(2) *ták-tak mxáyəlla goyáθə sùsa¹ ta-t-dàyər súsa m-táma,¹ là-jwìjle súsa.¹* 'He struck the sides of the horse so that the horse would move away from there, (but) the horse did not move.' (A26:28)

(3) *mə́ra ṭ-ásqən ta-ṭ-axə́lli xùwwe.¹ mə́re ʾána ṭ-áθən mə̀nnəx.¹ ʾáti xúwwe là ʾaxə́lləx.¹* 'She said "I am going up in order for the snake to eat me." He said "I shall come with you. The snake will not eat you." ' (A24:39)

(iii) *Contrastive Oppositions*

When the negated clause is set up in a contrastive opposition with what precedes, the negator, which is the focus of contrast, has the nucleus, e.g.

(1) *mə́ra ʾána báxtət ʾáġət Čə̌̀āl-iwən.¹ ʾáyya xmáθa díya homə̀nna.¹ xəmyána homə̀nne.¹ bróna homə̀nne.¹ kúlla homə̀nna.¹ kálθa là homə́nna.¹* 'She said "I am the wife of the aġa of Čāl." Her mother-in-law believed it. Her father-in-law believed it. The son believed it. Everybody believed it. The daughter-in-law, however, did *not* believe it." ' (A19:2)

(2) *réši parmə̀nne¹ ʾu-réšəx là parmə́nne.¹* 'I shall cut off my head. I shall *not* cut off your head' (A14:35)

(iv) *Verb* mṣy *'to be able'*

(1) *ʾána là-mṣən ṭ-áθən mə́nnux hátxa.¹* 'I cannot come with you in that case.' (A26:18)

(2) *ʾána là-mṣən maθyánne.¹* 'I cannot bring him back.' (A25:75)

(3) *ṭḷá gáye súse dìye¹ θéle ta-t-šàwər¹ là mṣéle.¹* 'Three times his horse came up to jump but could not do so.' (A25:55)

(4) *zmìrra,¹ là-mṣela bíyi.¹* 'She sang and could not beat me.' (A25:69)

(v) *Negator Combined with Intensifier*

In some cases a negator with the nuclear stress is combined with the intensifying particle *xo-/xu-*, e.g.

(1) *xo-là péšən šăvána-llux.*ˈ 'I shall not become a shepherd for you.'
(A25:32)

(2) *ʾáxni băyə́xwa ṭ-aθə̀xwa.*ˈ *xu-là-mṣaya ṭ-aθə́xwa ṭ-amrə́xwaləx.*ˈ 'We wanted to come back, but we could not come back to tell you.' (A14:21)

(3) *yába ʾan-ʾə́mma dàwe,*ˈ *xu-là mbaqrə̀təlli.*ˈ 'Well, do not ask me about those hundred gold coins.' (A14:65)

17.7.14.2. *Negative Particle before Other Constituents*

The negative particle is sometimes placed before another component of the clause that intervenes before the verb. This is found in the following circumstances:

(i) *Verb Not in Scope of Negation*

One context where this is found is where the scope of the negator includes this item but not the verb. In order for it to be within the scope of the negation, it must be in the focus component of the clause. There is, therefore, a narrow focus on the negated item, with the verb being in the presupposition. The nuclear stress is sometimes, though not regularly, placed on the negator before the item in narrow focus, as in (1)–(4):

(1) *xzèla*ˈ *ʾína núra ṭə́pya b-bɛ́θe dìye,*ˈ *ʾína là-bɛθa qíða,*ˈ *xáčča qése rə́ḥqa mən-bè̀θe.*ˈ 'They saw that fire had been kindled in his house, but his house had not burnt down, only a few sticks far from his house (had burnt).' (A48:3)

(2) *ʾə́θyela hìwəlla*ˈ *ʾáy mə́ra lɛ̀kət nabóləlli?*ˈ *mə́re ʾána làn ṭláli nabóləlləx.*ˈ *nabóləlləx ṭla-d-áwwa dewə̀rrəš.*ˈ 'She said "Where are you taking me?" He said "I am not taking you for myself. I am taking you for this vagabond."' (A12:35)

(3) *là-kulley yapáwa.*ˈ 'Not all of them used to bake.' (B5:17)

(4) *ʾáxčī là gu-ʾɛ́nə Núne qəm-ʾoðə́nne ʾéða,*ˈ *qəm-ʾoðə́nwale gu-Dòhok.*ˈ 'But I did not spend the festival in ʾɛn-Nune, I spent it in Dohok.' (B15:9)

(5) *lá kulla-náše yắði ṭ-oðìla.*ˈ 'Not all people know how to make it.' (B10:22)

(6) *ʾáxni lá raba-ʾi-mapəlxə̀xwala.*ˈ 'We do not use it much.' (B10:18)

(7) *ʾilanɛni t-xabušta. m-reša-w šətta mnoqašta. l-Yawsəp zwinta b-dabašta. nə́mu ʾáxni xlúlət Gwə́rgəs la-xálti zwínna kéke dìye*ˈ *mə́ra ða-dabà̀šta?*ˈ '"Our tree is an apple tree. It is decorated above and below. It has been bought by Yawsəp for a beehive." [wedding song] At the wedding of Gwərgəs was it not my aunt who bought his cake and say "(I buy it) for a beehive?"' (B8:29–30)

(8) *xo-lán har-ʾána gàwṛa.*ˈ 'I am not the only man.' (A26:79)

Constructions such as (9) and (10), in which the verb has been gapped, can be included here:

(9)   *ʾáni maṣláxwa ʾə̀rxe,ˈ ṭaxnə̀xwala.ˈ là kúlla náše.ˈ bas-ʾàxni.ˈ* 'We brought them down to the water-mill and ground them. Not everybody, but we did (this).' (B10:88)

(10) *mattátla xa-kawázət míya kəs-réša-w bàs,ˈ la-ʾixàla,ˈ la-lə̀xma.ˈ* 'You should put out for her a jar of water by her head and that's all, not food, nor bread.' (A21:10)

In (11) the item in the scope of negation is placed after the verb, with the negative particle used both before this item and the verb:

(11) *lá dɛréle là rəš-sélaˈ ʾi-maxíle gu-tanùra.ˈ* 'They do not place it *on a griddle*, they place it *in the oven*.' (B6:49)

(ii) *Constituents Coordinated in a Set Relation*

The negative particle is placed before a subject constituent when the latter is placed at the front of a clause in order to establish it in a set relationship with an item in a coordinated adjacent clause and the scope of negation includes the subject, e.g.

(1)   *la-kʷàsa mǎráwaˈ ʾu-la-xàṣa mǎréwa,ˈ la-ḍáġaṭ y-awèwale.ˈ* '(One's) stomach did not ache, (one's) back did not ache and one did not have (high blood) pressure.' (B5:31)

(2)   *ʾána lὲ-gorən,ˈ la-ʾàti gáwrət.ˈ* 'I shall not marry, so long as you do not marry.' (A25:83)

(3)   *la-ʾáxnix xàlaˈ ʾu-lá susǎwàθən xála.ˈ* 'Neither are we eating nor are our horses eating.' (A26:16)

If the items that are coordinated in a set relationship across a series of two or more clauses are not subject constituents, a second negator is often placed before the item in question, in addition to a negator in the normal position in the clause, e.g.

(4)   *lá-karmi lɛle-mǎdòṛeˈ ʾu-la-ḥáqqət kàrmi lɛle-yáwa.ˈ* 'He does not return my orchard nor does he pay the price.' (A17:30)

Constituents that are coordinated in this way include the resultative participle and infinitive of compound verbal constructions, e.g.

(5)   *ʾo-déwa léle lá plìxa¹ ʾu-lá zə̀rya¹ ʾu-lá xzìda.¹* 'That wolf has neither
      worked, nor cultivated, nor harvested.' (A10:3)

We see from (5) that the items are not necessarily placed at the front of
the clause but may remain in their normal position.

The verb may be gapped after the first clause of the coordinated series,
e.g.

(6)   *ʾána lànwa wíða¹ là xərbayúθa¹ là spayúθa ṭla-čú-naša.¹* 'I have not done
      evil or good to anybody.' (A14:23)
(7)   *ʾána làn dmíxa,¹ là-b-lɛle,¹ là-b-yoma.¹* 'I have not slept, neither at night
      nor during the day.' (A24:24)
(8)   *lá-bằyəx la-mìya¹ ʾu-la-čù-məndi.¹* 'We do not want water or anything
      else.' (A39:12)

A series of negated verbal predicates may be coordinated with this type
of construction, e.g.

(9)   *šuréle mtaxmòne.¹ gu-d-áy taxmànta¹ ṭ̣lá yomàne¹ léle la-xíla-w la-šə̀tya¹ ʾu-
      la-dmìxa.¹* 'He began to think. He was (immersed) in this musing
      for three days without eating or drinking or sleeping.' (A26:19)

In (10) the Arabic particle *walla* 'and not' is used by the speaker in this
type of construction:

(10) *le-šóqən lá xolamwàθa¹ wálla ʾàtì¹ wálla yə̀mmi¹ wálla ču-nàša.¹* 'I shall not
      let servants, you, mother or anybody (look after them).' (A8:18)

Similar constructions are attested with existential particles, in which the
negator is either repeated (11) or is placed only before the item in focus
(12):

(11) *líθ là-xmara mə́nne díye¹ la-čù-məndi.¹* 'There was not an ass with him,
      nor anything (else).' (A22:25)
(12) *la-bàba ʾítle,¹ la-yə̀mma ʾítle.¹* 'He does not have a father and he does
      not have a mother.' (A14:16)

The unusual construction in (13) with the sequence *la ʾitle* rather than
litle may perhaps be understood in this light. The noun *nxəpθa* 'shame' is
established in a set relationship with what precedes in order to explain
the meaning of the latter:

(13) *xzí hátxa be-nxə̀pθɛle.*¹ *lá ʾítle nxə̀pθa*¹ 'Look, he is so shameless. He has no shame.' (A6:11)

In certain circumstances a negative particle is placed before an infinitive that is the complement of a main verb if only the infinitive is in the scope of the negation, e.g.

(14) *ʾu-kút-xa mšuréle là-dwaqa míya.*¹ 'Everybody began (to agree) not to gather water.' (A24:43)

(iii) *Asseveration*

The negative particle may be used to express asseveration rather than negation, especially to dispell possible doubt after questions. In such cases the particle never bears the nuclear stress, e.g.

(1) A: *štélux čàyux?*¹ B: *la-štèli!*¹ 'A: "Have you drunk your tea?" B: "Indeed I have drunk it!" '

If the clause contains a compound verbal form with a copula, the copula is not replaced by the negative copula, e.g.

(2) A: *ṭ-àθeti?*¹ B: *la-hóli θàya!*¹ 'A: "Will you come?" B: "But I am coming!" '

The negative particle is used to express asseveration also before a negated clause, as seen in (3):

(3) *lá lɛ-zădə́nwa ču-bèna.*¹ 'Indeed, I was never afraid.' (B5:130)

17.7.14.3. *Negation of the Verb 'to know'*

The present form of the verb to know exhibits some irregularities. When combined with the negator *la*, the first syllable of the verb is often contracted, e.g. *lɛðən* < *la-yắðən* 'I do not know', *lɛðəx* < *la-yắðəx* 'We do not know'. An alternative negative form is formed by replacing the first syllable of the verb by *mi-*, e.g. *miðən* 'I do not know', *miðe* 'He does not know'. This derives historically from a phrase containing the interrogative particle (< *mo yắðən* 'What do I know?', *mo yắðe* 'What does he know?'). It has now, however, lost its interrogative sense and functions as a negator, as shown by phrases such as *míðən mòdi*¹ (A1:23) 'I don't know what'. Further examples from the text corpus:

(1) *míðən ʾo-béθa ʾèkɛle.*ˡ 'I don't know where that house is.' (A12:63)

(2) *kút-yum ʾáθya xàjətta daryáwa bíye díye*ˡ *ʾáti xélux ʾèkɛle.*ˀˡ *róxux ʾèkɛla-w.*ˀˡ *ʾu-dáx-it xyð̣a.*ˀˡ *mìðən mó.*ˡ 'Every day she came with a pretext (to ask him) "Where is your strength? Where is your spirit? How do you live?," I don't know what (else she asked).' (A12:38)

(3) *míðət ʾáyya módila mṣòθe.*ˡ 'You do not know what she is saying.' (A38:10)

17.8. Extrapositional Constructions

In many cases a referential participant in a clause is extraposed in initial position in syntactic isolation. This is normally resumed in the body of the clause by a coreferential pronominal element that indicates its syntactic function. In what follows we shall first examine the structural details of this type of construction and then discuss its function. This section will consider not only clauses with verbal predicates, but also those with a copula or existential particle.

17.8.1. *Structure*

17.8.1.1. *Extraposed Element*

The extraposed element may be a nominal or an independent pronoun, e.g.

(1) *ʾó-ʾeða y-amráxle šèra.*ˡ 'That festival—we call it a *šera*.' (B6:22)

(2) *ʾo-Dáwið mòdi šúle díye.*ˀˡ 'That David—what is his profession?' (A16:1)

(3) *ʾá mɛxólta nášət kʸàlo y-oðíwala.*ˡ 'The food—the family of the bride would make it.' (B5:7)

(4) *ʾána šə́mmi Čùxole*ˡ 'I—my name is Čuxo.' (A7:18)

(5) *ʾáti xélux ʾèkɛle.*ˀˡ 'You—where is your strength?' (A12:38)

(6) *ʾáw múttəlle šə́mme díye Mar-Sàwa.*ˡ 'That—they made its name Saint Sawa.' (B6:30)

The extraposed nominal is sometimes uttered in a separate intonation group, e.g.

(7) *tàwra*ˈ *primále ðá ʾíðe dìye.*ˈ 'The ox—he cut off one of its feet.'
   (A22:3)

(8)   *Dáwið k̭òra*ˈ *dbíšla bábe-w yə́mme bìye.*ˈ 'Blind David—his father and
   mother urged him.' (A16:5)

An extraposed nominal is in principle definite with an identifiable referent.
In some cases the nominal has not been explicity mentioned, but its refer-
ent is referentially anchored in some way to a nominal in the preceding
context, as in (9), where the nominal 'one room' is a member of the set
of 'two rooms' mentioned earlier. The referent of the nominal may be a
class that is identifiable by its descriptive content alone (10)—(11):

(9) *ʾítla trè ʾotáxe.*ˈ *ða-ʾòtəx*ˈ *ʾáni dámxi gàwa.*ˈ *ʾɛ-xèta*ˈ *heywànela.*ˈ 'They had
   two rooms. In one room they slept. The other one was (for) the
   animals.' (A22:10)

(10) *ʾína semàlta*ˈ *ʾáyya t-qèse.*ˈ 'But a ladder—it is made of wood.'
   (B10:60)

(11) *kut-mɛθéli xábra bəd-bròni,*ˈ *ʾən-míθa ʾən-ṣàxi,*ˈ *pálgət dáwi de-t-yánne ʾə́lle
   dìye.*ˈ 'Whoever brings me word about my son, whether he is dead
   or alive, I'll give him half of my gold.' (A14:92)

When the referent of the fronted nominal has the role of direct object
in the clause, marked by a direct object pronominal suffix on the verb, as
in (12)–(15), its syntactic status is ambiguous. This is because there is a
general tendency for there to be a pronominal suffix on the verb agreeing
with a definite direct object constituent irrespective of whether the object
is placed before or after the verb (§15.13.2.1.).

(12) *ʾa-štέθa šatέwala t-lá mìya.*ˈ 'They drink that drink without water.'
   (B5:14)

(13) *ʾáy ʾilána mṣaqlìwala.*ˈ 'They decorate that tree.' (B5:39)

(14) *ʾa-štὲθa*ˈ *har-tàma mpalṭə́xwala.*ˈ 'We produced that drink there.'
   (B5:11)

(15) *ʾo-qàmxa*ˈ *mɛθέwale bὲθa.*ˈ 'They would bring the flour back to the
   house.' (B5:16)

Although there is ambiguity on the level of syntactic structure, certain
object initial clauses possess the functional properties of extrapositional
constructions. This applies to the type of construction that has been

referred to in §17.7.5.2. as 'topic-orientated' object initial clauses, in which the object sets the topical frame for the clause. As we shall see, this is a basic functional property of extraposition. It should also be noted that the prosodic isolation of the initial object in a separate intonation group, as in (14) and (15), is a feature common to 'topic-orientated' object initial clauses and extrapositional clauses, but is rarely found in 'event-orientated' object initial clauses. 'Topic-orientated' object initial constructions with a resumptive pronoun will be included together with extrapositional constructions in what follows.

17.8.1.2. *Resumptive Element*

The extraposed constituent is generally resumed in the clause by a pronominal suffix. The suffix may be on the verb (1), a noun (2) or a preposition (3):

(1) *ʾáw y-amríle xə̀ppo.*ˈ 'That—they call it a *xə̀ppo*.' (B5:35)
(2) *ʾána xɛ́li hóle gu-xa-qɛ́sa xèna.*ˈ 'I—my strength is in another piece of wood.' (A12:39)
(3) *ʾàxni*ˈ *kə̀slən*ˈ *šàbθa*ˈ *ʾila šawwà-yome.*ˈ 'In our commuity a week is seven days.' (A17:13)

In some cases the resumptive element is an independent pronoun. In most of the attested cases this is the subject of the clause, e.g.

(4) *jawə́tta ʾáyya t-prə̀zlɛla.*ˈ 'The chopper—it is (made) of iron.' (B5:140)
(5) *ʾína semàlta*ˈ *ʾáyya t-qɛ̀se*ˈ 'But a ladder—it is (made) of wood.' (B10:60)
(6) *bas-ʾɛ́ni t-xzéla ʾày xoš-ʾáza gu-jahànnam.*ˈ 'Only my eye, which saw it—let that go to Hell.' (A16:2)
(7) *ʾo-ṭ-íle plíxa ʾàw bṭ-áxəl.*ˈ 'Whoever has worked—he will eat.' (A21:15)

Occasionally the independent resumptive pronoun is the object of the verb, e.g.

(8) *táma ʾáti kut-bằyət górət ʾàw.*ˈ 'There anybody you like—you can marry him (= You can marry anybody you like).' (A8:80)
(9) *ʾiθ pálṭa zùrta.*ˈ *ʾɛ-zúrta ʾáy zadìwala.*ˈ 'There was (some of the tobacco) that came out (as) small (pieces). This small stuff—they threw that away.' (B7:17)

The resumptive element may even be a full nominal, e.g.

> (10) *málla píšla quṣárta ta-màlla.*ˈ 'As for the mullah, the cooking pot became the mullah's.' (A5:10)

In (11) where the extraposed element is a generic relative phrase, the resumptive noun has an anaphoric demonstrative pronoun:

> (11) *kú nə̀šma*ˈ *t-màṭya*ˈ *rəš-gə́šrət Dalàle*ˈ *ʾɛ-nə́šma bəd-pɛ̀ša*ˈ *prìmta,*ˈ *qṭìlta.*ˈ 'Any soul that comes onto the bridge of Dalale—that soul will be slaughtered, killed.' (C8:5)

In (12) an extraposed plural noun does not have any direct resumption, but is linked to a singular noun in the clause in a set relationship:

> (12) *bàte*ˈ *ʾáxni qáṣra díyən mubnélən šétət xámši-w ṭḷàθa,*ˈ *ʾu-xámši-w ʾàrpa.*ˈ 'As for houses, we had our villa built in the year fifty-three and fifty-four.' (B1:20)

An extraposed item may be left without any explicit resumption in the clause. In such cases the extraposed element sets the orientation of the clause, similarly to a clause initial adverbial, without playing a syntactic role in it.

> (13) *ṭalòbe,*ˈ *béna y-oðíwa mɛxòlta.*ˈ 'As for the betrothal—they would make food.' (B5:7)
> (14) *mɛxólta y-áwa mbúšle qawúrma-w rə̀zza,*ˈ *ʾu-kəfiàne.*ˈ 'As for the food, they would have cooked *qawurma*, rice, meat-balls.' (B5:15)
> (15) *paláṭṭət ʾằraq,*ˈ *ṭ-amrèxi,*ˈ *y-aθɛ́wa mɛθɛ́wa lìne ʾíθwa,*ˈ *dɛrɛ́wa lìne,*ˈ *ʾu-dɛrɛ́wa mìya gáwa.*ˈ 'As for the production of arak, as we would say, they used to bring pots, they would put down the pots and put water into them.' (B5:12)
> (16) *sab-xlúla rába náše čedɛ̀wa.*ˈ 'Because the wedding—they invited many people.' (B5:23)

A speaker sometimes extraposes the 1pl. independent pronoun in this way when referring to activities in his own home or community.

> (17) *ʾáxni b-sə́twa mšɛ́ra dúnye ràya*ˈ *mən-yárxət ʾə̀ṣra-w*ˈ *xadə́ssər hòdəx.*ˈ 'We (= in our community)—in winter it starts raining from October and November onwards.' (B5:145)

(18) ʾàxniˈ ʾḖn-Núne npílta bel-ṭúra l-ṭùra.ˈ We—ʾƐn-Nune is situated be-tween mountains.' (B5:148)

(19) ʾáxni béθət be-bábi ʾatìqa-wewa.ˈ ʾína ramánɛwa biš-mən-qáṣrət kùl-naše.ˈ 'We—the house of the family of my father was old, but it was higher than the villas of everybody (in our community).' (B10:51)

In (20) and (21) the resumptive independent pronoun itself stands extra-posed from the clause:

(20) xá-naša l-xóðe lítle la-bába la-yə́mma la-ʾàp-xa,ˈ ʾáw y-amrìleˈ lìtle náše.ˈ 'A man by himself, who does not have a father, a mother or any-body—he—they say concerning him that he has no relatives.' (A17:17)

(21) xzi-ʾánna ṭla-nàšeˈ ṯ-íla prímə̀lle tàwra,ˈ ṭḷáθna hon-yíwtə̀lla mò̀ʕəd.ˈ 'Take note that the three people who slaughtered the ox—the three of them—I have given them an appointment.' (A22:21)

17.8.2. *Function*

17.8.2.1. *Discourse Boundary Marking*

The function of the extraposition of an item at the front of a clause is in most cases to express some kind of boundary and reorientation in the discourse. The initial nominal expresses the topic referent of the clause, which often has topical status also in the following clauses. When the initial topic is given added prominence by being prosodically separated from the rest of the clause in a different intonation group, the degree of disjunction from what precedes is in principle enhanced. As we have seen, subject initial clauses and 'topic-orientated' object initial clauses also have a disjoining function. In these constructions also the degree of disjoining is enhanced by the prosodic separation of the initial topical constituent. The subject constituent may be separated from the rest of the clause by an intonation group boundary, e.g.

(1) šèraˈ xa-təxrùnyɛle.ˈ 'The festival is a memorial.' (B5:69)

(2) náša diyɛ̀niˈ ʾi-ṣémi ṭḷá yomàne.ˈ 'Our people fast for three days.' (B6:21)

In copula clauses another type of prosodic separation of the initial sub-ject topic constituent is its detachment from the copula, resulting in a

construction such as (3). Example (4) has the same structure, with the copula after the subject, without the prosodic separation:

(3) *gə́rðo ʾíla mən-màsta.*ˈ 'Gərðo is (made) of yoghurt.' (B5:64)

(4) *xúwwele qṭìla.*ˈ 'The snake is killed.' (A24:42)

It is worth noting that in some other NENA dialects, constructions that correspond to (3) are extrapositional with an independent resumptive pronoun attached to the copula, e.g. C. Qaraqosh:

(5) *ʾójar ʾáhu-lə xa-mə́ndi d-gárəšlə xmàra.*ˈ 'The plough is something that an ass pulls.' (Khan 2002: 412)

The types of boundary that are expressed by extrapositional clauses in the text corpus can be classified as follows:

(i) *Beginning of Speech*
A speaker often opens a speech turn with a topic referent that is accessible to the hearer. If this is not the subject of the clause, it stands in extraposition, e.g.

(1) *mə́re yə̀mmi*ˈ *ʾədyo*ˈ *ṭḷàθna*ˈ *xonăwáθət Qára Tèždin*ˈ *mopíšəlle ləbbèy.*ˈ 'He said "Mother, today the three brothers of Qara Teždin—their hearts became (angry)."' (A26:71)

(2) *mə́ra ʾáwwa náša fãqìra*ˈ *ṭ-awéle xá bronà.*ˈ 'They said "This poor man—to him will be a son (= he will have a son)."' (A8:3)

(3) *mə́re xàli*ˈ *xmàre,*ˈ *šáwwaθna hóla xíle l-dèwe.*ˈ 'He said "Uncle, the asses—the seven of them have been eaten by wolves."' (A23:15)

(4) *ṣlélux xá-bena xèna?*ˈ *gúrzə šə́rmux xo-ʾána ṭ-azə́nwa bìya?*ˈ '"Have you come down again?" "Your stupid club (literally: the club of your behind)—would I have been finished off by it?"' (A52:17)

If the subject of the clause is a possession or attribute of the speaker or hearer, the speech turn often begins with an extraposed 1st or 2nd person independent pronoun respectively, e.g.

(5) *ʾána šə́mmi Čùxole.*ˈ 'I—my name is Čuxo.' (A7:18)

(6) *ʾána xέli hóle gu-xa-qέsa xèna.*ˈ 'I—my strength is in another piece of wood.' (A12:39)

(7) *ʾána ʾúrxi rába rìxtɛla.*¹ 'I—my way is very long (= I have a long way
     to go).' (A8:42)

(8) *ʾáxni ʾáti xàθən-iwət.*¹ 'We—you are our sister.' (A34:16)

(9) *ʾáti xɛ́lux ʾɛ̀kɛle.*ʾ¹ 'You—where is your strength?' (A12:38)

The choice of extraposed pronoun to open the speech turn depends on
the topicality of the referent in the ensuing discourse. This is seen in (10),
in which the first clause opens with the 2s. pronoun although the gram-
matical subject is 1fs., since the following clauses are 'hearer-orientated',
containing various deontic expressions addressed to the hearer:

(10) *ʾáti ràba băyánnux.*¹ *bas-msàʿədli xáčča.*¹ *hálli xákma mə̀ndi*¹ *masqánne l-bɛ̀θa*¹
     *ʾu-ʾaṣárta b-lɛ́le ʾáθeti kə̀sli.*¹ 'I love you a lot. Only, help me a little.
     Give me something to take up to the house and tonight come to
     me.' (A22:19)

(ii) *New Section of Discourse*

On some occasions a construction with an initial extraposed topic referent
occurs at the onset of a section of discourse that is disjoined in some way
from what precedes. Various types of disjunction can be identified.

In (1) the extrapositional clause coincides with a shift in topic referent:

(1) *xíllux táma mubsə̀mlux.*¹ *ʾána qəm-ṭarðìli.*¹ *ʾə́θyən m-kɛ́rbi hon-xíləlla ʾày.*¹
     'You ate there and enjoyed yourself. I—they drove me out and,
     out of my anger, I have come and eaten it.' (A2:11)

The construction is used when there is continuity of a topic referent from
the preceding discourse but disjunction on some other level. In narrative it
is used to signal the onset of an event section that is presented as separate
from the previous one:

(2) *ʾímət pìdle ṭúra,*¹ *ṣàle*¹ *ʾə̀ltəx.*¹ *réša xtáya kúlle mɔ̀lxɛle.*¹ *sùsux*¹ *ʾaqláθe mdur-
     bə̀nnela.*¹ *mɔ́lxa maxéla ʾaqláθe dìye,*¹ *ṭ-áwe súsa mṣarṣɔ̀re.*¹ 'When he has
     crossed over the mountain, he will go down. Down hill it is all
     salt. Your horse—(when) its legs have become wounded, salt will
     strike his legs and he will screech.' (A24:12)

In narrative the construction is used at the onset of a section that sup-
plies some kind of elaboration on what precedes rather than carrying the
narrative forward. In (3) it presents an event that is circumstantial to the

previously mentioned event. The extrapositional clause in (4) provides an evaluative comment on what precedes rather than an event that is presented as sequential to what precedes. In (5) the narrator opens a section that shifts to a point earlier in the time-line and recounts the events that led to the protagonist becoming blind.

(3) *qíme dwíqe xá b-aw-rùše* ˈ *xá b-aw-rùše.* ˈ *nùbləlle.* ˈ *ˀáw lá snidíle ˀáqle dìye* ˈ *qəm-nablìle.* ˈ 'They held him, one this shoulder and one the other, and took him away. His legs did not support him. They took him away.' (B9:24)

(4) *qímla zráˀa xabùše.* ˈ *xabúše muntéwala bíya dìya.* ˈ 'They began to cultivate apples. They were successful with apples.' (B5:75)

(5) *qám d-áyya qə̀ṣṣət* ˈ *t-miràli* ˈ *Dáwið k̭òra* ˈ *dbíšla bábe-w yə́mme bìye* ˈ *mára ˀɔ́llahi magurə̀xlux.* ˈ 'Before this story that I have told you (so far), the blind David—his father and mother pressed him and said "By God, we must marry you."' (A16:5)

In (6)–(8), from descriptive discourse, the extrapositional construction constitutes an explanatory supplement to what precedes:

(6) *béna gu-d-á-dana mɛθéɛ́wa štè̀θa.* ˈ *ˀa-štè̀θa* ˈ *har-tàma mpalṭə́xwala.* ˈ 'At that time they brought drink. That drink—we produced it there.' (B5:11)

(7) *béna y-oðíwa mɛxòlta.* ˈ *ˀá mɛxólta nášət k̭ˀàlo y-oðíwala.* ˈ 'They would make food. The food—the family of the bride would make it.' (B5:7)

(8) *ˀíθwa jawə̀tta.* ˈ *jawə́tta ˀáyya t-prə̀zlɛla.* ˈ 'There was a chopper. The chopper—it is (made) of iron.' (B5:140)

In (9) the construction is used in a clause that repeats the content of the preceding clause as a strategy to introduce elaborative material:

(9) *y-ázəxwa ˀáxni zóre mṭalə́xwa k̭olàne.* ˈ *k̭oláne mṭalə̀xwa gáwa.* ˈ *mattə́xwala béˀe gu-ṣawə̀lta.* ˈ 'We would paint eggs. We young people would go and play in the streets. The streets—we would play in them and would put eggs in a shoe.' (B16:5)

In (10) the construction coincides with a shift from a general description of a habitual situation to the description of a specific event, which is offered as an illustration:

(10) *yawíwala xà-mdi.*⎸ *ʾána xmáθi xá-dawa zǎra muttéθəlli gu-ʾíðət xóni ʾÌshəq.*⎸
'They would give her (the bride) something. I—my mother-in-law
put a yellow gold coin for me in the hand of my brother Ishəq.'
(B8:35)

An extrapositional construction is used after a presentative clause with
existential particles in (11) and (12). This is likely to be a strategy to mark
off the presentative clause with enhanced distinctness in order to give the
item presented added prominence:

(11) *ʾíθən xa-ṭùra.*⎸ *ṭúra ṭ̱-ásqət bíye dìye,*⎸ *kúlle skinyàθεle.*⎸ 'There is a moun-
tain. The mountain—you should go up it, it is all (covered in)
knives.' (A24:11)

(12) *ʾítlən ʾέnət ʾùmra.*⎸ *ʾay-čú-ga lá-qéʿta-w lá-sətwa bárzi míya dìya.*⎸ *trè ʾənáθa*
ʾítlən.⎸ 'We have the spring of the church. It—its water never dries
up, in summer or winter.' (B10:61)

Generic or proverbial statements, which have an inherent independence
and distinctness from the preceding context, may open with an initial
topic standing in extraposition, e.g.

(13) *ʾó-t šawə́rra šáwwa sə̀kke,*⎸ *ða-qéθa gu-be-tə̀kke*⎸ 'He who jumps seven
stakes—(one stake) will hit him in his waist.' (D2:1)

(14) *xá-naša l-xóðe lítle la-bába la-yə́mma la-ʾə̀p-xa,*⎸ *ʾáw y-amrìle*⎸ *lìtle náše.*⎸
'A man by himself, who does not have a father, a mother or
anybody—he, they say concerning him that he has no relatives.'
(A17:17)

In clauses denoting an iterative action containing a constituent with a
universal quantifier, the quantified phrase is often made the topic of the
clause and placed in extraposition, e.g.

(15) *kut-mə̀sta*⎸ *xa-zága dáryət bìya.*⎸ 'Put a bell on every hair.' (A27:8)

(16) *kú-rešət xúwwe θèle,*⎸ *qəm-maxèle.*⎸ 'He struck each head of the snake
that came (his way).' (A24:40)

(iii) *Opposition between Topics*

In some cases the motivation for the extrapositional construction is to set
up an opposition or parallelism between two topic referents. Each topic

referent is placed at the front of the clause and stands in extraposition if it is not the subject referent, e.g.

(1) ʾàxni˙ kə̀slən˙ šàbθa˙ ʾíla šawwà-yome˙ ʾu-yàrxa˙ ʾíle ṭḷaθì-yome.˙ ʾáxtu šabθέxu ʾə̀štà-yomela?˙ 'We—a week for us is seven days and a month is thirty days. You—is your week six weeks?' (A17:13)

(2) ʾítla trè ʾotáxe.˙ ða-ʾòtəx˙ ʾáni dámxi gàwa.˙ ʾɛ-xèta˙ heywànela.˙ 'They had two rooms. One room—they slept in it. The other one—it was (for) the animals.' (A22:10)

(3) zeðàye˙ ʾáxlət mə́nna t-là-qṣaya.˙ ʾu-màsta˙ ʾáxlət mə́nna qrúšta díya t-la-xàrwa.˙ 'The pittas—you should eat them without breaking them. The yoghurt—you should eat it without the crust being spoilt.' (A30:5)

(4) ʾína júllux hálla ṭlàlì.˙ ʾu-xmártux ṭ-átwən ʾàna l-xáṣa.˙ 'Your clothes—give them to me. Your donkey—I shall sit on its back.' (A6:8)

In (5) and (6) the extraposition of the topical subject constituent by means of an independent pronoun is used to mark it off distinctly from a topic of an adjacent clause:

(5) dăráje t-kèpɛla,˙ ʾína semàlta˙ ʾáyya t-qèse.˙ 'Steps are made of stone, but a ladder—it is made of wood.' (B10:60)

(6) ʾánna qurðáye barzanàye˙ ʾáni hóla jràṭa.˙ ʾu-suráye lèla jráṭa.˙ 'The Barzan Kurds were slipping, but the Christians were not slipping.' (B19:7)

(iv) *Prominence of Clause*

In some cases the main motivation for an extrapositional construction with a clause initial topic is to mark it off distinctly from what precedes in order to give it prominence, e.g.

(1) θéle xa-hambišàya.˙ hambišàya˙ ʾὲ-ga˙ xírɛle bìye,˙ ʾáwwa náša lə́bbe pqìle!˙ 'A giant came. The giant looked at him. That man's heart burst (with fear).' (A31:2)

(2) lá-băyəx la-mìya˙ ʾu-la-čù-məndi.˙ ʾáxni har-xònən-it!˙ 'We do not want water or anything else. You are indeed our brother.' (A39:12)

In (3) the extrapositional clause marks the climactic point of the discourse section, the origin of the name of the church being the main point of the narrative:

(3) *gu-d-ò-ʾumra¹ ṭùmrəlle¹ ʾu-bə́nyela ʾúmra b-réše dìye.¹ ʾáw múttəlle šə́mme díye Mar-Sàwa.¹* 'They buried him in (the site of) that church and built the church over him. They gave it the name of Saint Sawa.' (B6:30)

17.8.2.2. *Topic Referents Obligatorily Resumed by L-Suffixes*

In certain clauses, an initial topic referent regularly stands in extraposition and is resumed on the verb by an L-suffix. These include the following:

(i) *'Naming' Constructions with the Verb* ʾmr

  (1) *ʾó-ʾeða y-amrə́xle šèra.¹* 'That festival—we call it a *šera*.' (B6:22)
  (2) *ʾáyya y-amrə́xla mămàðta.¹* 'This—we call it baptism.' (B6:8)
  (3) *ʾáni xaṭoryàθa y-amríla.¹* 'They are called "washing-boards."' (B19:9)

(ii) *Possessive Constructions with the Existential Particle*

  (4) *ṣlíθela bàxta¹ xzíθa qa-màlla.¹ málla ʾítle dəkkánət ʾaparùθa.¹* 'The woman went down (to the town) and saw the mullah. The mullah had a shop of household goods.' (A22:11)
  (5) *ʾáw ʾítle ða-ʾótəx ʾax-d-àyya.¹* 'He has a room like this one.' (A21:5)
  (6) *ʾàxni¹ gu-ʾƐ̀n-Nùne¹ ʾítlən šèra.¹* 'We in 'Ɛn-Nune have a saint's festival.' (B5:72)

(iii) *Clauses Containing Verbs with Impersonal Subjects*

  (7) *ʾăwáha ṭ-ile xóðe díye băyéle bàxta.¹* 'The man who is alone needs a wife.' (A27:7)

17.8.2.3. *Narrow focus*

In some cases the nuclear stress is placed on an independent pronoun that resumes an extraposed nominal phrase. This puts narrow focus on the referent. The construction is typically used when the nominal is a long phrase, e.g.

  (1) *kùt la-páləx¹ gu-d-áwwa bèθa¹ ʾixála lè y-áxəl.¹ ʾo-t-pàləx¹ ʾàw ṭ-áxəl.¹* 'Whoever does not work in this house will not eat food. Whoever works—*he* (and not anybody else) will eat.' (A21:13)
  (2) *qa-mó gắrəg ʾázəl kúlla páxri gu-nùra,¹ gu-jahànnam?¹ bas-ʾέni t-xzéla ʾày xoš-ʾáza gu-jahànnam.¹* 'Why should all my body go to the fire, to Hell? Only my eye that saw it—let *it* go to Hell.' (A16:2)

17.9. Miscellaneous Clausal Particles

17.9.1. nəmu/ləmu

This particle gives an expostulatory or hortatory sense to questions. When used to introduce negative questions, which is its most frequent usage, the question is equivalent in function to an asseveration, e.g.

(1) *nə́mu la-mə́ri-llux dàyəṛ,¹ míθa dàyəṛ.ʔ¹* 'Did I not tell you that he would return (= indeed I told you…), that the dead would return?' (A22:39)

(2) *nə́mu ʾáxni xlúlət Gwə́rgəs la-xálti zwínna kéke dìye¹ mə́ra ða-dabàšta.ʔ¹* 'At the wedding of Gwərgəs did not my aunt buy his cake and say "(I buy it) for a beehive? (= indeed my aunt bought his cake…)"' (B8:29–30)

(3) *nə́mu la-ʾawðə́xle ʾáwwa ṭùra¹ dărajyàθa,¹ dăràje,¹ ṯ-ásqəx l-áwwa ṭùra.ʔ¹* 'Should we not make for this mountain steps (= indeed let us make…), so that we can go up the mountain?' (A17:4)

(4) *lə́mu lá-ʾasqən ʾàna.ʔ¹* 'Should I not go? (= indeed I should go)' (A39:10)

(5) *lə́mu lax-xnìqəllux.ʔ¹* 'Have we not drowned you? (= surely we have drowned you)' (A7:22)

Occasionally the most appropriate translation of the particle is 'why?', e.g.

(6) *lat-nxàpa!?¹ xá ʾaxwáθi mìra¹ dráya šlámi ʾə́llux¹ ʾu-ʾáti tíwa l-ṭìzux!ʲ¹ lə́mu la-qìmlux.ʔ¹* 'Are you not ashamed!? A prince like me greets you and you sit on your bum. Why did you not get up?' (A26:48)

The particle is occasionally used in positive questions, where it has a remonstrating force, e.g.

(7) *nə́mu ʾáyya bə́rke d-ènila¹ ṯ-it-ʾáti sxáya gàwa.ʔ¹* 'Whose is this pool in which you are swimming? (= surely it is mine not yours)' (A25:61)

17.9.2. xo-/xu-

This particle, which is related etymologically to Syriac *kḫar*, is used most frequently in negated clauses. When used in non-interrogative clauses, it intensifies the negation, often with a remonstrating force, e.g.

(1) *xo-la-mɛ́θən làxxa.*¹ 'I shall not die here.' (A20:11)

(2) *xo-là pɛ́šən šãvána-llux.*¹ 'I shall not remain a shepherd for you.' (A25:32)

(3) *xu-là-mṣaya ṭ-aθə́xwa ṭ-amrə́xwaləx.*¹ 'We could not come to tell you.' (A14:21)

(4) *xu-lanwa-mírəllux maxzə́tli xăzìna.*¹ 'I had not told you to show me a treasure.' (A14:23)

(5) *ʾu-ʾə́mma dáwe d-έ-ga xu-lὲla xáčča.*¹ 'A hundred gold coins of that time indeed are not a little.' (A14:63)

(6) *yába ʾan-ʾə́mma dàwe,*¹ *xu-là mbaqrə̀təlli.*¹ 'Well, do not ask me about those hundred gold coins.' (A14:65)

(7) *ʾàna ṭ-ásqən,*¹ *xu-là ʾaxə́lli,*¹ *xu-lὲle ʾárya.*¹ 'I shall go up (and ride the horse), surely it will not eat me, surely it is not a lion.' (A12:63)

(8) *xo-lán har-ʾána gàwṛa.*¹ 'I am not the only man (literally: Not only I am a man).' (A26:79)

It is also frequently used in negative questions, again often generally with remonstrating force, e.g.

(9) *xu-lɛ́wa ṭaxxána brōn-ṭaxxanὲθa?*¹ 'Was he really a miller, son of a miller woman?' (A32:28)

(10) *xzέli xa-xə́lma dìya,*¹ *xu-lɛ́wa xə̀lma?*¹ *xə́zwa škằra wéwa.*¹ 'I have just now had a dream. Was it (really) a dream? It was a clear vision.' (A2:6)

(11) *xo-lat-mírta xà-məndi?*¹ 'Did you not say something? (= surely you said something?)' (A26:34)

(12) *bábi tə́mməl ʾáyya mðíta xu-kùmta-wawa?*¹ 'Father, was this town not black yesterday? (= surely this town was black yesterday)' (A4:36)

(13) *xu-lɛwət l-xoðux rxima?* 'Are you alone not loved? (= surely you alone are loved)' (C2:62)

It is attested in positive non-interrogative clauses that express deontic intention (14) or that are apodosis clauses in conditional constructions (15–16):

(14) *maníxən ʾə́dlɛle làxxa.*¹ *xu-mbádla qə́mən ṣàlən.*¹ 'I shall rest tonight here. In the morning I shall (surely) get up and go down.' (A31:2)

(15) *ʾən-šằrəṭ díyi qəm-yăðə̀tla,*¹ *xo-b-gawrànnux.*¹ 'If you know (the answer to) my test, I shall indeed marry you.' (A25:62)

(16) *ʾən-mjuwə̀bla,*ˈ *xo-ʾànən ʾə́θya kə̀sləx.*ˈ 'If they answer you, then indeed
it is me who has come to you.' (A26:4)

It is occasionally used in a positive interrogative clause that is remonstrat-
ing or expostulatory in tone.

(17) *mə́ra mòt ʾə́θya xo-bábi?*ˈ *mə́re ʾámti ʾə́θyən masqə̀nnəx.*ˈ 'She said "Why
have you come, my dear?" He said "Aunt, I have come to take
you up (to your home)." ' (A52:9)

(18) *gúrzə šə̀rmux xo-ʾána ṭ-azə́nwa bìya?*ˈ '(Why) should I have been fin-
ished off by your stupid club (literally: the club of your behind)?!'
(A52:17)

CLAUSE SEQUENCES

18.1. Connective Particles

18.1.1. w

When functioning as a clausal conjunction, the particle *w* may be attached as a clitic either to the initial or final word of a clause. It is realized as *ʾu-* (< *ʾuw) when in contact with a consonant at the beginning of a word, e.g.

(1) *ʾáti tú-tiwa làxxa.¹ ʾu-súsi páyəš làxxa¹ ʾu-ʾána bráta masqə́nna be-bába dìya.¹* 'You stay here and my horse will stay here and I shall take the girl up to the house of her father.' (A29:41)

(2) *ʾo-yáIət băyàwale¹ hóle ʾθya-w¹ qəm-yawálla yalə̀xθa ʾə́lli.¹* 'The young man whom she loved has come and has given me her scarf.' (A4:24)

Occasionally, the speaker attaches a particle as a suffix to the end of one clause and then repeats it as a prefix to the following clause, e.g.

(3) *mattíla gu-quṣárta mbašlìla-w¹ ʾu-yátwi ʾàxli.¹* 'They put them in a pan and cook them, then sit down to eat them.' (A1:3)

(4) *mxúlləlla páθe dìye-w¹ ʾu-zílεle šúle dìye.¹* 'He washed his face and went to his work.' (A21:16)

The particle is used to express various types of semantic connection between clauses. In most cases such semantic connections may also be expressed by juxtaposing clauses asyndetically without the explicit linguistic expression of the connection in the form of the connective particle.

In narrative the particle is used to join clauses that express sequential events. The majority of sequential clauses in narrative are joined asyndetically. The usual strategy is to use the particle before the final clause of a chain of events. In this respect, therefore, it is a device for marking sections of discourse that are presented as expressing closely cohering events, e.g.

(5)   ṣléle gu-d-o-balùʿa.ˈ ʾawwa dúša t-wéwa pyàšaˈ kúlla qəm-daréle gu-d-an-
       gudanyàθaˈ **ʾu**-grìšla.ˈ 'He went down into the conduit. He put all
       the honey that was left into the skins and they pulled them up.'
       (A14:19)

(6)   ʾə́θye xakma-dèwε,ˈ mə̀xyəlleˈ ʾáw ʾu-xmáre dìyeˈ **ʾu**-xìləlle.ˈ 'Wolves came
       and attacked him and his donkey and ate him.' (A14:22)

The chain of sequential clauses may express habitual actions, future actions
or commanded actions, e.g.

(7)   y-asqíwa malwəšíwale jull-dìyeˈ **ʾu**-y-atwìwa.ˈ 'They would come up
       (from the river), dress him in his clothes and sit down.' (B6:26)

(8)   ʾaw-ṣále táma mrapə́xle xáwla b-réše dìyeˈ **ʾu**-ʾáyya qăpáxta mattə́xxa
       rəš-d-o-tắrət gə̀ppa.ˈ 'He will go down there, we shall throw the rope
       onto his head and shall put this cover onto the opening of the
       cave.' (A14:16)

(9)   qù.ˈ šqúlla ʾáyya ṭàsaˈ **ʾu**-háyyo mə̀nni.ˈ 'Get up, take this bowl and
       come with me.' (A15:11)

The chain of clauses that occurs before the connective particle is used
can be of a considerable length. In (10), for example, the particle occurs
for the first time on the verb ʾu-zìlle, which comes at the end of a long
sequence of clauses. This passage occurs at the beginning of the story and
the speaker presents the whole sequence has a coherent section, expressing
a single overall situation that sets the scene for what follows.

(10) θéle xa-náša swarìya,ˈ rakáwa.ˈ ṣléle rəš-xa-ʾèna.ˈ tìwle,ˈ xílle mə̀ndi,ˈ štéle
       mìya.ˈ ʾíθwale xákma zùze.ˈ qímle šqilìle.ˈ muttìleˈ rəš-d-ε-ʾèna.ˈ ʾàwwaˈ
       munšìle zúze díye.ˈ zìlle.ˈ ʾawwa zílle b-ʾùrxa.ˈ θéle xá rakáwa xèna,ˈ swarìya.ˈ
       zílle rəš-ʾèna.ˈ qəm-xazèlaˈ ə̀mma dináre.ˈ šqilíle jal-jàldeˈ muttíle gu-jèbeˈ
       ʾu-zìlle.ˈ ʾo-qamàyaˈ ʾámər ə̀h.ˈ zúzi munšìli.ˈ qémən dè̀rənˈ ʾázən šáqlən
       zùziˈ m-rəš-ʾèna.ˈ 'A horseman, a rider came. He alighted at a spring.
       He sat down, ate something and drank some water. He had some
       money. He took it and put it on top of the spring. He forgot his
       money. He went off. He went off on the road. Another rider came,
       a horseman. He went to the spring. He saw the hundred dinars.
       He quickly took them, put them in his pocket and went off. The
       first (rider) said "Oh, I have forgotten my money. I'll return and
       go to take my money from on top of the spring."' (A15:1–2)

A chain of events that is marked off as a unit by the connective particle may be embedded as a component in a superordinate chain. Consider (11):

(11) *ʾaw-ṣále táma mrapə́xle xáwla b-réše dìye¹ **ʾu**-ʾáyya qăpáxta mattə́xxa rəš-d-o-tắrət gə̀ppa.¹ **ʾu**-mṣáləx ṭla-yə́mme díye ʾáwwa qurṭánət xmàra.¹* 'He will go down there, we shall throw the rope onto his head and we shall put this cover onto the opening of the cave. Then we shall take down to his mother this donkey blanket'.' (A14:16)

Here the first connective marks the end of a series of events that are planned to take place in a cave. They are presented as a unit, as it were a single overall activity. This activity at the cave is followed by another event in which the participants shift to another location. This subsequent event is joined by a connective particle, which can be regarded as linking the preceding chain as a whole rather than simply the immediately preceding clause. The particle, therefore, would mark the closure of the whole composite series of events, which can be represented thus [[A-B-*ʾu*-C] *ʾu*-D].

In some cases the connective is placed earlier than the final clause of a sequential chain. This may reflect a strategy of presenting the final clause as a supplementary tag to what precedes. This applies to the final clauses in (12) and (13), which contain the verb 'to go' and have the function of taking the participants off the scene. The connective is attached to the preceding clause, which is presented as the climax of the main chain of events:

(12) *θéle xa-náša swarìya,¹ θéle zílle rəš-ʾèna.¹ xílle mòndi¹ **ʾu**-šwíqle zúze díye táma zìlle.¹* 'A horseman came, he came to a spring. He ate something and he left his money there. He went off.' (A15:15)

(13) *mə́ra yába ʾáxni băyə́xwa ṭ-aθə̀xwa.¹ xu-làn-mṣaya ṭ-aθə́xwa ṭ-amrə́xwaləx.¹ brònəx,¹ ʾáwwa xmáre díye zílle gu-ðà lawúrta,¹ ʾu-brónəx zílle ṭla-mɛθèwale.¹ ʾə́θye xakma-dèwe,¹ mə̀xyəlle¹ ʾáw ʾu-xmáre dìye¹ ʾu-xìləlle.¹ ʾàxč̄i xə́zyəx ʾáwwa mə́ndi nišánqe díye.¹ ʾáyya məškə́nta píštɛla mxàya¹ dráya qáṭma gu-réša dìya.¹ bróna díya zìlle.¹⁄ **ʾu**-ʾan-zúze plìla b-ġðáðe.¹ zìlla.¹* 'They said "Well, we wanted to come back, but we could not come back to tell you. Your son's donkey went into a valley and your son went to fetch it. Wolves came and attacked him and his donkey and ate him. We only found this sign of him." The poor woman began to beat (herself) and put ash on her head. Her son had gone! They divided the money among them. They went on their way.' (A14:21–22)

In (14) and (15) the final clause, without the connective, is a supplementary recapitulation of the preceding clause, which is marked as the endpoint of the sequential chain by the connective:

(14) *Kắrīm zìlle bar-xmáre díye*ˈ *ṭla-mɛθêwa xmáre dìye,*ˈ *ʾóθyela déwe gu-ða-lawùrta*ˈ *xíləlle ʾàw-u xmáre díye.*ˈ ***ʾu**-làx-xəzye čú-məndi šuq-mən-d-ánna.*ˈ *ʾánna júlle dìye xə́zye bás.*ˈ 'Karim went after his donkey, to fetch his donkey, wolves came into a valley, ate him and his donkey, and we did not find anything except these. We found only these clothes of his.' (A14:17)

(15) *qímɛle šqìla-ani*ˈ *ʾu-mŭdə̀rəlla.*ˈ *núbləlla qa-bráte dìye.*ˈ 'He took them and returned them. He took them to his daughter.' (A17:13)

Similarly in (16) the clause 'Let him break his neck', which does not have a connective, is appended to the preceding chain of sequential clauses as an elaborative comment and is not intended to be a component of this sequence:

(16) *si-mxi-ʾáqlux gu-xáṣe díye l-àyya kérta*ˈ ***ʾu**-hálle ṣàle.*ˈ *šáməṭ qðále dìye.*ˈ 'Go and kick his back on the load (he is carrying) and let him go down (the mountain). Let him break his neck.' (A15:13)

The connective particle is used to mark the closure of a chain of turns of direct speech introduced by the verb 'to say'. These turns interlace their way through a story and are often separated by sections of narrative. The connective in the phrase *ʾu-mə̀re* in (17) introduces a climactic speech at the end of the story in which one of the protagonists reveals himself as an angel. This is preceded by thirty-five occurrences of the direct speech formula 'x said' without the connective. There is clearly a consciousness on the part of the speaker that the turns in speech cohere together in a thread. The final speech of the story is not introduced by the connective (*ʾamə̀r*). This can be regarded as an elaborative tag to what precedes, functioning as an final epilogue rather than a section in the main chain of speeches.

(17) *mə́re hé qəm-yăðə̀nna.*ˈ ***ʾu-mə̀re** si-dúṛ l-šôpux,*ˈ *ʾax-ʾarbí-šənne ṭ-it-ʾáti plíxa qa-alàha,*ˈ *ʾu-pàlxeti.*ˈ *ʾána malàxən.*ˈ *ʾən-lá-ʾawðət b-xábra dìyì*ˈ *gánux šaqlə̀nna.*ˈ *ʾámər xáṭər ʾalàha,*ˈ *ʾu-xáṭər mšîxa,*ˈ *bas-lá dáqrət bìyi.*ˈ *ṭ-ázən šôpi.*ˈ *ṭ-axlə́nne lə́xmi hál ʾo-yómət mɛ̀θən*ˈ *har-ʾúrxət ʾálaha dóqən b-ə̀ði.*ˈ 'He (the monk) said "Yes, I have understood them." He (the angel) said "Go back to your place and continue to serve God as you

have served him for forty years. I am an angel. If you do not do
as I tell you, I shall take away your life." He says "For the sake of
God and the Messiah, do not touch me. I shall go to my place.
I'll eat my bread (there) and until the day I die I shall always keep
to God's way."' (A15:20–21).

In some cases the placement of the connective on a clause that is not
final in a sequential chain reflects the fact that the action of the clause
with the connective is felt to cohere closely with that of the following
clause to the extent that the two express a single seamless event. This
composite event, therefore, is the final event of the chain. It is relevant
to note that such composite events generally occur in the same intonation
group, which is a prosodic signal of coherence (§18.3.). They are often
introduced by verbs of movement, such 'to come', 'to go', 'to take away', as
in the following:

(18) *b-léle qímla šárya bănúda dìya,¹ ṭ-àza,¹ pθíxla tắra qðìla.¹ zílla xílla xà-yala
     xéna¹ 'u-θéla dmìxla.¹* 'At night she got up, untied her bands, then
     went and opened the door with a key, went, ate another child and
     came back and went to sleep.' (A18:3)

(19) *ṣàləx,¹ zawnáxlən kθayàθa-w¹ ṭ-áθəx bašláxla b-gànən.¹* 'Let's go down,
     buy for ourselves some chickens and come back and cook them
     ourselves.' (A2:2)

(20) *ja-jálde qìmɛle¹ 'u-zíla šqíləlle 'o-qésa rìxa.¹* 'He quickly got up and went
     and took the long stick.' (A22:27)

(21) *šqíləlla ṭása b-lèle¹ 'u-núbləlla zə́dyəlla gu-ða-dèrta.¹* 'They took the bowl
     in the night and carried it away and threw it into a house enclo-
     sure.' (A15:11)

In general it may be said that the use of the connective particle constitutes
heavy morphological coding of the semantic connection, in contrast to the
light coding of asyndesis. This heavy coding is used at the end of sequences
as end weighting to mark closure. Related to this function of halting a
sequence, is its function of marking a lack of sequence between clauses.
In (22) and (23), for example, events that take place simultaneously with
the one preceding it are linked in each case by the connective particle:

(22) *'áti tú-tiwa làxxa.¹ 'u-súsi páyəš làxxa¹ 'u-'ána bráta masqə́nna be-bába
     dìya.¹* 'You stay here and my horse will stay here and I shall take
     the girl up to the house of her father.' (A29:41)

(23) *dmíxɛle Dáwið ḳóra làxxa¹ ʾu-báxta dmíxtɛla làxxa¹ ʾu-ʾo-rábbən dmíxɛle làxxa.¹* 'Blind David slept here, the woman slept here and the monk slept here.' (A16:9)

One may say that these passages express a slowing of the temporal line and so are more static than dynamic temporal sequences. Sometimes a series of clauses that express temporally sequential events are linked together by a repeated use of the connective particle. This is typically found in passages that do not belong to the main foreground of the narrative and do not crucially advance the narrative line. It can be regarded, therefore, as a strategy to express the slowing down of the progress of the narrative, e.g.

(24) *xílela xa-ràmša¹ ʾu-prìqela,¹ ʾu-dɟryəlle šwìθa.¹* 'They ate dinner and finished (the meal), then they (each) laid out a bed.' (A16:9)

(25) *qɟmi ṣáli zoníla tərté-kθaye ʾu-mɛθɛla-w¹ mattíla gu-quṣárta mbašlìla-w¹ ʾu-yátwi ʾàxlì.¹* 'They go down and buy two chickens and bring them back. They put them in a pan and cook them, then sit down to eat them.' (A2:3)

(26) *tíwela tàma.¹ ʾu-xílela ʾixàla¹ ʾu-píše dmìxe.¹* 'They sat there and they ate food and they stayed to sleep.' (A15:7–8)

The narrator sometimes slows down the action expressed by verbs of movement by repeating the verb. The connective particle is often used to assist in this strategy, spinning out the action as it were. In (27), for example, the repeated series of the verb *siqla* 'she went up' has the effect of expressing gradual movement:

(27) *ʾu-sìqla-w¹ ʾu-sìqla-w¹ʾu-sìqla-w¹ ʾu-sìqla-w¹ ʾɟ-ga ṭ-ìla-qriwta ʾɟlla¹…* 'She (gradually) came up and up and up and up. When she was near to her…' (A4:17)

Similar constructions are used to express long journeys, which take a long time to complete, e.g.

(28) *θéla b-ʾùrxa-w¹ θéla-w θéla-w θéla-w θèla.¹ tre-ṭḷá yománe wéla b-ʾúrxa t-là-xala,¹ ʾu-t-là-štaya.¹* 'He came on the road. He came and came and came and came. He was on the road for two or three days, without food and without drink.' (A26:16)

(29) *zílla b-šaqíθa, zílla-w zílla-w zìlla.¹* 'They went along in the stream, they went and went and went.' (A8:12)

(30) *xíšla-w xíšla-w xìšla,*ˈ *ṭə̀ryela gu-yáma.*ˈ 'They travelled and travelled and travelled, they sailed on the sea.' (A14:38)

In passages describing a habitual situation speakers often join clauses or groups of clauses together with the connective particle when they do not intend these as sequential activities but rather as various aspects of the situation that come to mind, e.g.

(31) *mádre dɛrɛ́wa ʾắraq ṭla-xlùla,*ˈ *sab-xlúla rába náše čɛdìwa.*ˈ *ʾu-mɛθɛ́wa ʾə̀rwe pɛrmíwa y-oðíwa qàlya.*ˈ *ʾu-mɛθɛ́wa rɨ́zza ʾu-mɨndyàne*ˈ *béna hál-yoməṭ xlùla.*ˈ 'They would put aside arak for the wedding, since many people were invited. They would bring sheep, slaughter them and make *qalya*. They would bring rice and other things (and continue thus) until the day of the wedding.' (B5:23)

(32) *y-oðə́xwa lèbe-u,*ˈ *gaxkə̀xwa-w*ˈ *zamrə̀xwa-w*ˈ *xamláxwa bìya.*ˈ *ʾu-y-amrə̀xwa:*ˈ *də-xùlena-w*ˈ *y-ámər lɛn-kpìna-w*ˈ *xə̀ðya-w*ˈ *m-án mɨndiyàne.*ˈ 'We would make tricks, laughed, sang and enjoyed the occasion. We would say "Eat!" and he would say "I am not hungry", in fun, things like that.' (B5:33)

Repetition of a clause given ballast by the particle may be used to present its content with added prominence, e.g.

(33) *lɛ́š-ʾaθəx hayorə̀xlux*ˈ *ʾu-bɛ́θux xoš-ʾàqəð*ˈ *ʾu-xoš-ʾàqəð.*ˈ 'We shall not come to help you any more. Let your house burn! Let it burn!' (A48:6)

Likewise the motivation to use the connective before the negated clauses in (34) appears to be to enhance the force of the denial:

(34) *ʾána skínta mattánna l-qðàlì*ˈ *ʾu-lá mattánna l-qðàləx.*ˈ *rɛ́ši parmɨ̀nne*ˈ *ʾu-rɛ́šəx là parmánne.*ˈ 'I shall put the knife to my neck, I shall not put it to your neck! I shall cut off my head, I shall not cut off your head!' (A14:35)

The heavy coding of the connective particle is sometimes used to mark the onset of the main narrative section of a story after the preliminary background section, e.g.

(35) *ʾíθwa xa-málka t-Ya̋man.*ˈ *ʾítwale xa-bròna*ˈ *yằḳàna-wewa.*ˈ *ʾu-qíme ʾáw ʾu-brōn-díye ʾu-tre-wằzíre plíṭe ṣ̀èda.*ˈ 'There was a king of Yemen. He had a son who was an only child. He and his son together with two ministers went out hunting.' (A14:36)

The connective particle is used to link a clause expressing an event and one that expresses a temporally overlapping state or ongoing activity.

(36) *qídle bɛ́θət duglàna-w*ˈ *ʾáxni là-ðiye bíye.*ˈ 'The house of the liar has burnt down, while we did not know about it.' (A48:7)

(37) *nə́mo ʾíθ xa-náša máṣe táwər réšət Ẓálo ʾu-Rustắmo sàxi.ˀ*ˈ 'Is there somebody who can break the head of Zāl while Rustam is alive?' (A29:11)

(38) *w-ána qəm-maxèli*ˈ *w-áti xyára bìyi.*ˈ 'But they beat me while you were looking at me.' (A2:10)

(39) *ʾaw-ráqa ʾu-ʾaw-xéna šaqə́lla xa-kílo dàwe mə́nne díye,*ˈ *máxe gu-réše dìye.*ˈ 'While he was running, the other took a kilo of gold in his hands and hit him (with it) on his head.' (A14:94)

Note that in such stative or progressive clauses the copula is often omitted. This reflects a degree of dependency on the event clause (§17.6.1.) in that they have a function of an adverbial modifier.

In (40–43) the temporally overlapping state clause has an adversative or concessive sense, in that it is not the state that is expected to exist in combination with the event in question:

(40) *díya ṭ-àmər*ˈ *ʾáp ʾanna-júlle ṭ-ilà-llux*ˈ *ʾu-ʾáyya xmárta dìyila.*ˈ *w-áti xə́zyətli ʾána tíwa l-xàṣa.*ˈ 'He will say now that also these clothes that are on you and this ass are mine, but you have seen that I was sitting on its back.' (A6:12)

(42) *málka krìble*ˈ *ʾu-b-gáne málka mírɛwa ʾən-hawéli bràta*ˈ *t-yánna qa-bronèxu.*ˈ 'The king became angry, although the king himself had said "If I have a daughter I shall give her to your son."' (A25:8)

(43) *píšla dəžmə̀nne,*ˈ *ʾu-ʾáni là-xəzye ġðáðe,*ˈ *ʾu-là-mṣuθe hátxa mə́ndi.*ˈ 'So, they became enemies, although they had not met each other and had not said (to each other) any such a thing.' (B19:2)

The same applies to (44), in which the question 'but what have I done?' is functionally equivalent to 'but I have done nothing (to deserve it)':

(44) *qəm-darə́tli gu-d-áwwa qùnya.*ˈ *ʾu-ʾána mùn wíða.ˀ*ˈ 'You have put me in this hole, but what have I done?' (A14:23)

Two co-ordinated copula clauses may be linked with the connective, e.g.

(45) *ʾàxni*ˈ *kə̀slən*ˈ *šàbθa*ˈ *ʾíla šawwà-yome*ˈ *ʾu-yàrxa*ˈ *ʾíle ṭḷaθì-yome.*ˈ 'A week for us is seven days and a month is thirty days.' (A17:13)

(46) *rába hawnànɛle,ˈ ʾu-ʾup-báxte dìyeˈ ṯ-íle gwìrəllaˈ rába hawnàntɛla.ˈ* 'He is very clever and also his wife, whom he married, is very clever.' (A17:21)

(47) *ʾáw brōn-málka rába šapìrɛleˈ ʾu-hawnànɛle.ˈ* 'That son of a king is very good-looking and is clever.' (A4:3)

A copula clause that expresses a comment on a preceding statement may be introduced by the connective as in (48). This may be regarded as the use of heavy coding to express closure:

(48) *ʾo-yálət băyàwaleˈ hóle ʾə̀θya-wˈ qəm-yawə́lla yalə̀xθa ʾə́lli.ˈ ʾu-ʾáyyɛla kùlla.ˈ* 'The young man whom she loved has come and has given me her scarf, and that is all.' (A4:24)

In a few cases the connective particle *w* expresses logical sequence, e.g.

(49) *hadíya ʾáti màlkən-itˈ ʾu-hál ʾámra ṯ-óðəx xaðùθa.ˈ* 'Now you are our king, so give us an order for us to celebrate.' (A14:46)

(50) *b-šɛ́na θélux!ˈ ʾə́dyo ʾàrxiwətˈ ʾu-là-zădət.ˈ* 'Welcome! Today you are my guest, so you should not be afraid.' (A14:32)

18.1.2. fa-

A few informants use the Arabic connective particle *fa-*. This, however, is by no means an established feature of the dialect. It is entirely absent in the speech of some informants. In the texts that contain this particle it is used in the following ways.

18.1.2.1. *Logical Sequence*

In expository texts it is sometimes used to express a logical consequence of a situation described in what precedes, e.g.

(1) *b-šəryăwáθa šaxìnta y-óya dúnye.ˈ **fa**-y-átwi náše ṭòlla,ˈ ṭə́llət ʾilanàne,ˈ tuθàne,ˈ gawzàne.ˈ* 'During the saint day festivals it is always hot, so people sit in the shade, the shade of trees, mulberry trees, walnut trees.' (B6:25)

(2) *qále díye y-áθe čakčàkta,ˈ mánne díye čák čák čák čàk.ˈ **fa**-ʾáwwa qésa mút-təlle šə́mme díye čakčàka.ˈ* 'It makes a sound like čak čak čak čak. So they gave this stick the name čakčaka.' (B6:57)

(3) *ma-t-wɛ́wa ʾə́θye nàšeˈ čə̀nnəḳɛ́rət Mšîxa,ˈ ma-t-wɛ́wa ràbeˈ Mar-Yuḥánna lá-mṣele kút-xa dréle qáwwət míya b-rèše.ˈ qímle mŭrísle hátxa míya ʾə̀llèyˈ*

yàˤni¹ kùlley¹ ta-t-máṭa míya ʾəllèy.¹ **fa**-*l-d-áw ṭùxsa,¹ ʾáxni ʾó-yoma y-óθexi ʾáp-ʾaxni musàrde.¹* 'So many people came around Christ, so many, that Saint John could not put a scoop of water over everybody. He scattered water over them like this, so that the water would reach all of them. So, in this way we perform (the festival of) *musarde* on that day.' (B6:10–11)

In a narrative context, the consequence may also have an element of temporal sequentiality to what precedes, e.g.

(4) *náše mšuréla xnàqa,¹ xàkma náše,¹ ʾu-xákma mxulṣàla gána.¹ ʾu-xákma síqla garăwáθət bàte.¹ ʾu-xákma síqla dukáne ramáne qa-t-la-máṭi míya ʾəlla.¹* **fa**-*màlka,¹ málka híwle ʾàmra¹ mə́re kúl-xa náša ṣàyəm.¹ ṣàyəm,¹ híč-məndi lá-ʾaxəl ṭḷà yománe.¹* 'People began to drown—some people, some saved themselves. Some went up onto the roofs of houses. Some went up onto high places so that the water would not reach them. So, the king gave an order saying "Everybody should fast. (Everybody) should fast and should not eat anything for three days."' (B6:18–19)

18.1.2.2. *Division into Discourse Sections*

The particle is sometimes used to mark off sections of discourse, which are not necessarily logically or temporally sequential to one another. In (1), for example, the first *fa-* introduces a section that indicates the season of the cultivation of the rice. This does not follow what precedes sequentially but rather has the status of a parenthetical insertion. The second *fa-* signals the shift back to the description of the cultivation process, with a recapitulatory reference to irrigation:

(1) *zrétət rə̀zza,¹ zrútət rə̀zza,¹ ʾắra y-áwa sapìqta.¹ qam-dàna,¹ tré-yomaθa ṭḷàθa,¹ maštèwala¹ qá-t xáčča péšawa rakìxta.¹* **fa**-*ʾáyya ʾi-zăríwala šuráye b-yárxət ṭḷàθa,¹ ʾàrba,¹ xámša hatxàne,¹ sab-ʾáwwa b-qèṭa y-áwe rə́zza.¹* **fa**-*dɛréwa mìya gáwa díya¹ ʾu-mɛθéwa tàwre¹ ʾu-zărìwala.¹* 'As for the sowing of rice, the cultivation of rice—the ground was (left) empty. Three or four days beforehand, they would irrigate it so that it would become quite soft. They cultivated this beginning in March, April or May, in such (months) as these, since by summer it would be rice. They would put water onto it. They would bring oxen and cultivate it.' (B5:76)

In (2) the *fa-* is placed at the beginning of a new section that recapitulates the statement 'My brother has gone' and so is not directly sequential to what precedes:

(2) *málka ṭ-áwət basìma.*ˈ *xóni mšudə̀rrux.*ˈ *xóni zílle ʾu-lá θèle.*ˈ *ʾu-díya ʾána hon-xšáwa leš-ʾàθe.*ˈ *sab-ʾáy ʾúrxa hon-šmíta rába náše zílela bìya*ˈ *w-áp-xa lέle díṛa-w ʾə̀θya.*ˈ ***fa**-xóni zìlle,*ˈ *ʾu-ʾána gắrəg ʾázən bar-xòni.*ˈ 'Oh King, may you be well. You have sent my brother. My brother has gone and not come back. Now I am thinking that he will not come back any more, since I have heard that many people have gone that way but nobody has returned and come back. My brother has gone and I must go after my brother.' (A8:60–61)

In (3) the particle introduces a section that does not convey any new information but repeats the content of what precedes for the sake of underscoring an important point:

(3) *dərέwale-u šatέwale t-là míya.*ˈ ***fa**-ʾa-štέθa šatέwala t-lá mìya.*ˈ 'They would serve it and drink it without water. They would drink that drink without water.' (B5:14)

18.1.3. ʾap/ʾup

The particle ʾap, which occasionally has the form *ʾup*, is normally combined with a following nominal or independent pronoun. Its function depends on the informational status of the item following it, namely whether it is topical or focal in status.

18.1.3.1. *Topical Function*

The combination of *ʾap* with a topical item is found in narratives. It typically occurs at the beginning of the clause followed by an independent subject pronoun with a referent that is accessible from the immediately preceding discourse and constitutes the topical pivot for the new information of the clause. This construction generally signals that the clause is linked sequentially to what precedes but constitutes a boundary in the discourse. It should be recalled that the use of an independent subject pronoun rather than zero anaphora is a strategy of 'heavy coding' to mark a boundary (§17.7.4.1.). The particle *ʾap* is an explicit marker of connection, which is combined with this boundary marking strategy. The particle cannot stand independently and must attach itself to a participant in the clause.

This construction often occurs at the beginning of a narrative section that follows direct speech, e.g.

(1) *máre ʾámrət ṭla-màlka¹ xzélux b-xə̀lmux¹ dúnye ráya tèle.¹ ʾap-aw-zìlɛle¹ xíša mə́ṭya kəs-màlka.¹* 'It said "Say to the king: You saw in your dream that that it was raining foxes" So, he went and he entered into the presence of the king.' (A1:6–7)

(2) *máre ṭla-bábe díye bắyən pálṭən sèda,¹ ʾána ʾu-xuràne,¹ gu-ṭùra,¹ ṭ-áwe ʾə́rwət wàla¹ m-ánna məndiyàne,¹ qəqwàne,¹ ṭère,¹ leðən-mòdi.¹ ʾáp-awwa sìqɛle gu-ṭúra¹ mən-xuráne díye píšele gu-ṭúra xá-yoma yóme trè.¹* 'He said to his father "I want to go out hunting, I together with friends, in the mountains, where there were wild sheep, such things, partridges, birds, I don't know what." So, he went up into the mountains with his friends and remained in the mountains one or two days.' (A4:1–2)

(3) *zìltɛla ṭóṭo¹ mára màlka,¹ màlka,¹ mbusmáli bràtux.¹ ʾáp-awwa šaqə́lla ðá-kista qa-d-ày,¹ yawə́lla qa-d-ày.¹* 'The old woman went and said "Oh King, oh king, I have cured your daughter." Then, he takes a purse for her and gives it to her.' (A4:22)

(4) *ʾáwwa bắye ta-d-áyya bráta zùrta.¹ mqáwlət goràtle,¹ t-yálla jùlla.¹ ʾən-là,¹ har-t-yálla júlləx b-kèfəx.¹ ʾáp-aw zíla múθya jùlle¹ híwəlla jùlla.¹* '"He loves this young girl. If you promise to marry him, he will give back the clothes. If not, he will still give you the clothes, if you want them." So, he went and brought the clothes and gave her clothes to her.' (A14:83–84)

In (5) the topical pronoun at the front of the clause is a direct object:

(5) *máre nə́mu lét-mira ṭ-óðən b-xàbrux?¹ ʾàyyɛla.¹ bắyət bằyət.¹ la-bắyət si-prúmle yàla.¹ bába-w yə́mmət yàla¹ xamši-šə́nne ʾíθwala ʾùmra¹ líθwala bnòne.¹ ʾáwwa yála yíwəlle ʾálaha ʾə́lla díya ʾəštà yárxe.¹ ʾu-ʾáp-awwa qəm-parmìle.¹ ʾu-zìlla.¹* 'He said "Did you not say: I shall do as you say. That is that. Whether you want to do so or not, go and slaughter the baby. The father and mother of the baby did not have children for fifty years. God gave this baby to them six months ago." So, they slaughtered him and went on their way.' (A15:9–10)

In (6) the boundary is marked also by the narrative device *mara* (§15.4.2.3. examples 19–22):

(6) *máre mɛxólta hóla tămàha.¹ bắyət ʾàxlət,¹ xùl.¹ kpìnət.¹ míya štì.¹ ʾána la-qéθən b-čŭ məndí.¹ sab-huðáye yomə-šábθa lɛ̀ palxí.¹ mára ʾáp-aw kpìnɛwa məskéna.¹ də́ryɛle mɛxólta xìlɛle.¹* 'He said "The food is over there. If you want to eat, eat! You are hungry. Drink some water. I shall not touch

anything." This is because Jews on Saturday do not work. Now he was hungry, the poor man. He put out some food and ate.' (A14:59–60)

In (7) and (8) the clause with initial *'ap* opens a foreground narrative section after a section giving explanatory background information:

(7) *'u-'áwwa jăket d-o-Kărīm-addìn,*ˈ *píštɛwa wằdər,*ˈ *'áp-ay ṭɛšíla dəmma*ˈ *'u-məndiyàne,*ˈ *'u-ṣléla ṭla-yámme dìye,*ˈ *ṣléla xaššàne l-béθa.*ˈ 'The jacket of Karimaddin had remained outside. They daubed it in blood and the like, then went down to his mother, went down, sad, to her house.' (A14:20)

(8) *'ó-yomət mŕi ṭlálux hádəx záwna lebàna-wewa.*ˈ *'úp-ati xìšlux*ˈ *mŕux šqíllux zúze wélux lebána 'àx-zawna.*ˈ 'The day I said that to you, the time was tricky. So you went off, said (this to the king), took the money and became tricky like the time.' (A1:22)

The construction is occasionally used to give independence and hence prominence to a clause or clause group that expresses a climactic event at the end of a sequence, e.g.

(9) *zílɛle maxéla-'aqle 'ólle dìye*ˈ *'ap-'áw ṣàle*ˈ *šáməṭle qðàle.*ˈ 'He went and kicked him, and he went down (the mountain) and broke his neck.' (A15:14)

The *'ap* particle is in a few cases used as a boundary marker to introduce a section that supplies background information to the preceding foreground narrative. This, therefore, has a semantic connection with what precedes but is not temporally sequential to it, e.g.

(10) *ríqɛle xà'a.*ˈ *'áp-'aw kằčằla.*ˈ 'One man ran away. He was bald.' (B19:8)

The particle *'ap* is sporadically used with a topical independent pronoun that does not occur at the beginning of the clause. Such clauses have greater continuity with what precedes on account of the position of the topical item. This applies, for example, to (11), where the interpretation of the phrase *'ap-ànna* as an inclusive focus ('also these') is not appropriate in the context. Rather the sense is rather topical ('so…these that we are talking about'):

(11) *huðáya l-gàre*⸠ *šwirɛ́le l-pàlga,*⸠ *yába ʾànən mšúdrəlla!*⸠ *ʾáy kálba ʾámər táma*
      l-gàre maṣyóθe,⸠ *bɑ̃́yət šaqlɑ̃́tla ʾap-ànna.*⸠ *mrázgət gànux.*⸠ *tə́mməl ṭ-asqəx*
      kəs-qàzi.⸠ 'The Jew on the roof jumped down into their midst "It
      was me who sent them!" "Oh (you) dog" he says "listening there
      on the roof. So you want to take these (coins). Prepare yourself.
      Tomorrow we shall go to the judge." (A6:4)

18.1.3.2. *Focal Function*

When combined with an item in focus, the particle *ʾap* has the inclusive
sense of 'also' or 'even' ('not even' when negated). The inclusive phrase
may occur anywhere in the clause, though it is found predominantly in
initial or final position. The item in focus often takes the nuclear stress,
which is a prosodic marker of prominence, e.g.

(1) *ʾap-àna mjaṛbə́nna*⸠ *ḥàð̣ð̣ díyi.*⸠ 'I also shall try my luck.' (A1:4)
(2) *ʾàp-təmməl ʾáxləx mánna.*⸠ 'We could eat them also tomorrow.' (A2:2)
(3) *ʾap-šlàma léla dáryəlle.*⸠ 'They did not offer him even a greeting.'
     (A15:13)
(4) *xuš-pɛ́šən képa ʾap-àna.*⸠ 'Let me also become a stone.' (A8:55)
(5) *sab-wítɛla b-réši ʾup-àyya.*⸠ 'Because this also happened to me.' (B15:85)
(6) *ʾána lɛ́-yawənne ʾàp-xa-fəlsa.*⸠ 'I shall not give him even a penny.'

On numerous occasions, however, the phrase with *ʾap* does not bear the
nuclear stress. In such cases the prosody signals a broad focus but the
particle signals the informational focus on the phrase, a focus within a
focus as it were, e.g.

(7)   *ʾap-xmárey šqìləlla.*⸠ 'They took also their asses.' (A7:15)
(8)   *ʾáp-aw táma mìtle.*⸠ 'Also he died there.' (A25:90)
(9)   *ʾɛ́-ga ʾáp-ana bɑ̃́yən àzən.*⸠ 'So I also want to go.' (A1:5)
(10) *ʾap-míya muklèle gu-d-ɛ-sálla.*⸠ 'He could hold even water in the basket.'
      (A16:10)
(11) *hádəx ʾáp-ati ə̀θyət.*⸠ 'Meanwhile you also came.' (A2:9)
(12) *ʾáp-ani drìθəlla.*⸠ 'She put also these onto it.' (A13:13)
(13) *mɛθéla ʾap-áni l-bə̀dra.*⸠ 'They bring also these to the threshing-floor.'
      (B5:96)
(14) *kú-mdit t-yáwəl ṭlàlux*⸠ *ʾáp ta-šwáwux t-yáwəl trè.*⸠ 'Everything that he
      gives to you, he will give also to your neighbour, twofold.' (A3:4)
(15) *ʾáp-ayya béna ðìlux.*⸠ 'Also this time you knew it.' (A1:19)

The phrase with ʾap may stand in a separate intonation group, e.g.

(16) *mqawòlɛwən,*ˈ *ʾap-an-zúze kúlla ṭ-in šqìləlla*ˈ *pălə́nna pàlge.*ˈ 'I promise, I'll divide into halves also all the money that I took.' (A1:17)

(17) *max-ṭ-íla brátux mšuyðànta,*ˈ *ʾap-àw,*ˈ *ʾən-lá-ʾazən mšày ðən.*ˈ 'Just as your daughter has gone mad, he also, if I do not go back, will go mad.' (A4:27)

On some occasions a nominal that is within the inclusive focus of the particle is extraposed at the front of the clause and the particle is combined with a resumptive pronoun, e.g.

(18) *qaríwa y-áwe mə́nne díye ʾap-àw*ˈ 'The best man also would be with him.' (B5:29)

(19) *láxma ʾíle ʾap-áw mən-xə̀ṭṭe,*ˈ 'Bread is also (made) from wheat.' (B5:98)

(20) *bə́ṭme ʾap-ʾáni ʾìθena.*ˈ 'There are also terebinth nuts.' (B5:221)

The phrase ʾap-xa is used in negated clauses in the sense of 'nobody', e.g.

(21) *ʾáp-xa lɛle-mṣáya mbasə̀mla.*ˈ 'Nobody can cure her.' (A4:12)

(22) *ʾáp-xa lá-biš-ile-mṣaya mqarów-əlla dìya.*ˈ 'Nobody was able to go near her at all.' (A4:6)

(23) *ʾàp-xa lə́la-xzaya.*ˈ 'She sees nobody.' (A4:38)

When combined with the preposition *mən* 'from', the phrase ʾap-xa has the sense of 'none' from a collective set or 'neither' from a set of two items, e.g.

(24) *ʾúp-xa mənnéxu là-mqabəlle šláme.*ˈ 'None of you should accept his greeting.' (A25:47)

(25) *ʾúp-xa mə́nna lá-wewa klàya.*ˈ 'Neither of them had stopped (beforehand), but were constantly crying.' (A25:5)

18.1.4. –ži

The suffixed particle *–ži*, which sometimes occurs in the augmented form *-žigən*, has a function that is similar to that of the particle ʾap. As with ʾap, the function of *–ži* depends on the informational status of the item it is attached to, namely whether it is topical or focal.

18.1.4.1. *Topical Function*

The particle is often attached to a clause initial nominal or independent pro-
noun that has topical status, in that it has been referred to in the preceding
discourse and is the pivot for the new information of the clause. The
particle can be interpreted as enhancing the topical prominence of the
initial item. This reinforces the boundary marking function of the clause
initial topic. In most cases the initial topical item is the grammatical sub-
ject. This often constitutes a shift in subject referent from the preceding
discourse, as in (1–4). The clause may be sequential to what precedes
(1–3) or overlapping temporally with it (4):

(1) *máre yába hàyyo,⌐ ʾaθìtu,⌐ c̃ìdetu⌐ ta-mšaxə́lpi šə́mmət Čùxo⌐ mattúle xá-šə̀mma
    xèna.⌐ ʾánna-ži ʾə̀θyela.⌐ xìlela-w⌐ šə̀tyela.⌐* 'He said "Come, come, you are
    invited" in order for them to change the name Čuxo and give him a
    another name. They came. They ate and drank.' (A7:3)

(2) *dmìxela.⌐ xá-bena xéta qìmela⌐ qèdamta.⌐ yála-žìgən qímɛle fṭìrɛle⌐ mxúlləlla
    páθe dìye-w⌐ ʾu-zílɛle šúle dìye.⌐* 'They went to sleep. Again they got up
    in the morning. The young man got up and had breakfast, washed
    his face and went to his work.' (A21:16)

(3) *qímela mšuxə́lpe b-jùlle.⌐ ʾawwá-ži zìlɛle.⌐ ʾɛ-kusíθa múṣləlla gu-ʾɛne díye t-Čùxo.⌐*
    'They exchanged clothes. He (the shepherd) went and lowered the
    hat of Čuxo over his eyes.' (A7:19)

(4) *mubsə̀mlux,⌐ ḥuriyyà̀t.⌐ w-ána qəm-maxèli⌐ w-áti xyára bìyi.⌐ ʾana-ži m-kɛ́rbi
    ʾə́θyən ʾá-kθɛθa múttənna rəš-núra ʾu-xìlənna.⌐* 'You enjoyed yourself (with)
    houris. But they beat me while you were looking at me. I, out of my
    anger, came and put the chicken on the fire and ate it.' (A2:10–11)

The particle occurs in constructions where two topics are set up in a
disjunctive opposition ('either *x* or *y*'), as in (5), where the nuclear stress
occurs on the subject constituent since the lexical content of the verb is
given information:

(5) *har-déwe ṭ-axlìli.⌐ har-ṭ-ázən gu-d-ànna hambišáye⌐ har-hambišàye-ži ṭ-axlíli.⌐*
    '(Either) the wolves are sure to eat me (or) I shall go to these giants
    and the giants are sure to eat me.' (A39:4)

In some cases the subject constituent continues that of the preceding
discourse, but the construction nevertheless marks a boundary on some
other level of the discourse. In (6), for example, the clause *ʾáwwa-ži qə́ryəlla*

('He called to them') marks the onset of a section where the protagonist engages directly with the inhabitants of the town, whereas in what precedes he surveys the scene:

(6) *xuláṣa ʾaláha mutə́pqəlle gu-d-a-mðíta ṭ-íla ʾɛ-bráta d-o-màlka.ˈ xə́zyəlla náše jə̀mye ́ qúrbət qáṣrət màlka,ˈ kút-xa mṣawóθe xà-məndi,ˈ kút-xa mára xà-məndi.ˈ ʾáwwa-ži qə́ryəlla mə́re mòdila qə́ṣṣət?ˈ* 'In the end God made him come across the town where the daughter of that king was. He saw the people gathered near the palace of the king, each one saying something, each one telling something. He called to them and said "What has happened?"' (A4:11)

If the clause with the initial topic is negated, it may stand in an adversative relationship to what precedes, e.g.

(7) *ʾó-yōm ṭ-ìle plíṭa ́ bróne díye mìθɛle.ˈ ʾu-ʾáxni-ži láx muqíme m-báθre díye màlka.ˈ* 'On the day he left, his son died. But we have not installed (another) king after him.' (A4:32)

18.1.4.2. *Focal Function*
When the particle is attached to a nominal constituent that is in focus it has the inclusive sense of 'also' or 'even'. The focused item, which may occur anywhere in the clause, generally takes the nuclear stress, e.g.

(1) *ʾána hadíya m-kə̀slən θáya.ˈ ʾu-bắye ʾáθe xazèlux ́ ʾu-qa-t xazéla bràta-ži.ˈ* 'I am now coming back from him and he wants to come to see you and to see also the girl.' (A4:24)
(2) *ʾu-b-léle t-yánne xa-bàxta-ži ́* 'And at night I shall give him also a woman.' (A14:63)
(3) *ʾítle tắra gu-ḥadìqa ́ ʾu-ʾítle dàrga-žigən.ˈ* 'There was a door in the garden and there was also a main gate.' (A17:23)
(4) *ʾən-háwe dàwa-ži ́ ʾáxni t-yawə́xla xa-b-ṭḷàθa ʾə́lle díye.ˈ* 'Even if it is gold, we shall give him threefold (if it is lost).' (A7:10)

On a few occasions the nuclear stress is placed elsewhere in the intonation group, e.g.

(5) *də́ryəlla š-qaràwət, ́ ʾánna wajjúwe díya-ži múttəlla tàma.ˈ* 'They put her on the bed and they also put her effects there.' (A21:7)

The particle is occasionally attached to a verb in order to express the climax of a sequence of events. This may be regarded as a focal inclusive function, marking explicitly that the verb is to be included in the sequence, e.g.

(6) *síqɛle šqílle xa-kèpa¹ múttəlla ʾàxxa¹ kaⱦəbθa,¹ qtìⱦəlla,¹ dəryəlla,¹ mquⱦəbzəlla-ži.¹* 'He went up and took a stone, put the dog here, killed it and (finally) turned it upside down.' (A30:20)

18.1.5. ʾina

The basic function of this particle is presentative, i.e. it draws attention to something. The item to which attention is directed may be a referent or a proposition. The contexts where it is most commonly used are as follows.

18.1.5.1. *In Association with Verbs of Perception*
It is used in narrative after a verb of perception, usually 'to see', to introduce what is perceived. In this context it introduces a proposition rather than a referent and so is equivalent to the English complementizer 'that'. The proposition typically denotes a state or an imperfective progressive activity rather than a perfective action. The clause that expresses the proposition generally lacks a copula element, e.g.

(1) *ʾə́θyela xə̀zye¹ ʾína ṭéna kúlle m̥ə́lya šə̀xta.¹* 'They came and saw that the saddle bag was completely full of filth.' (A7:11)
(2) *qímɛle plìṭa¹ xə́zya ʾína bé̇θət Qára Téždin qàða.¹* 'He went out and saw that the house of Qara Teždin was burning.' (A26:53)
(3) *xzéli b-xə̀lmi¹ ʾína¹ ʾána zíla l-pardèsa.¹* 'I saw in my dream that I went to Paradise.' (A2:7)
(4) *qímela zíle xə́zye ʾína dũ̀s.¹* 'They went and saw that it was true.' (A14:13)
(5) *xárθa ṭfìqe bíye xə́zyəlle ʾína šə̀nya,¹ npìla.¹* 'Then they came across him and found that he had fainted and fallen.' (A14:88)

In (6) a construction of this type is followed by a negated construction with the verb of perception and the presentative particle gapped after the negative particle *la*. The *ʾina* before the *la* in the negative construction here has an adversative function (see §18.1.5.3.):

(6) *xzèla¹ ʾína núra ṭə́pya b-bé̇θe dìye,¹ ʾína là bɛθa-qíða.¹* 'They saw that fire had been kindled in his house, but not that his house had burnt down.' (A48:3)

Occasionally the complement clause has a deicitic copula in addition to the presentative particle, e.g.

(7) *wíra xə́zya ʾína kúl-xa mɛxólta hóla mbušle wíðe hàzər.*¹ 'He went in and saw that all kinds of food were cooked and made ready.' (A14:29)

The particle is sometimes used before a verb of perception. This construction is used when the complement of the verb is an object referent rather than a proposition, e.g.

(8) *paθə̀xle tắra,*¹ *ʾína xazéle ʾo-ʾažvána tàma.*¹ 'He opened the door and saw the caretaker there.' (A22:43)
(9) *lə́xma pθìxle*¹ *ʾína xáze ʾə́sri ʾə́čča ləxme.*¹ 'He opened (the basket of) bread and saw that there were twenty-nine loaves of bread.' (A17:12)
(10) *ʾáθya gàšqa*¹ *ʾína xazyála Lelìθa.*¹ 'She comes and looks. She sees Leliθa.' (A19:8)
(11) *qédamta qímɛle xále dìye,*¹ *ʾína xə́zyəlla ʾán ʾaskaràye.*¹ 'The next morning his maternal uncle got up and saw those soldiers.' (A25:79)
(12) *Sə́ttíye xðìrtɛla*¹ *ʾína xzìθəlle.*¹ 'Sə́ttiye searched and found him.' (A25:37)

When the complement of the verb 'to see' is a proposition the subject of the proposition is sometimes raised into the position of direct object of the verb. In such case the presentative particle is placed either after the verb (13–14), which is characteristic of constructions with proposition complements, or before the verb, which is characteristic of those with referent complements (15):

(13) *xazéle ʾína bɛ́θe m̀əlya.*¹ 'He sees that his house is full.' (A21:8)
(14) *ʾímə ṭ-ìn práməlle,*¹ *xzáyən naθyàθe*¹ *ʾína t-hɛwàne.*¹ 'When I was slaughtering it, I saw that its ears were those of animals.' (A23:39)
(15) *ʾína qəm-xazə́nnəx ʾáti rába hawnànta.*¹ 'I have seen that you are very clever.' (A40:16)

On some occasions the particle is used to introduce something that is perceived without the explicit expression of a verb of perception. What is perceived may be a proposition or a referent. If it is a proposition, this usually denotes a state or progressive activity, e.g.

(16) *qímela mbádla nàše*¹ *ʾan-marăwáθa ʾína ʾərwéy kúlla npíle twíra qðalèy.*¹ 'In the morning the people, the owners (of the sheep), got up (and saw) that they had all fallen and broken their necks.' (B18:7)

(17) *wídle hàtxa,*⸗ *ʾína kúlla ṭrìθa.*⸗ 'He put (his hand here) like this (and felt it) was all wet.' (A18:30)

(18) *mátti bála gu-yàma,*⸗ *ʾìna*⸗ *ʾa-sústət yamàθa*⸗ *nabòləlla*⸗ *Čəlkằze.*⸗ 'They looked at the sea (and saw) the mare of the seas taking away Čəlkằze.' (A12:34)

(19) *ʾán-naše kúlla xìrra bíye díye*⸗ *ʾína qurṭánət xmáre tàma.*⸗ 'All the people looked at it (and saw) that asses' blankets were there.' (A23:15)

Note that a 3rd person pronominal subject has zero expression in (20) and (21):

(20) *ṛìšɛle*⸗ *màlka*⸗ *ʾína gu-čằčma.*⸗ 'The king woke up (and saw) that he was in the bathroom.' (A17:27)

(21) *báxte díye xá-bena knàša-wawa,*⸗ *xírta hátxa ṭúwət ʾisə̀qθa,*⸗ *ʾína bdìla!*⸗ 'While his wife was sweeping, she looked at the diamond of the ring and saw that it had changed colour!' (A18:25)

In (22) it is used before a clause containing a *qṭille* verb form denoting an event that took place at a point immediately preceding the act of perception:

(22) *mə́ra ʾṓx ya-ʾalàhi!*⸗ *b-xšáwən gáwṛi θèle.*⸗ *pθíxle tằra.*⸗ *ʾína θèle.*⸗ 'She said "Oh, my God! I think my husband has come back." She opened the door (and saw that) he had come back.' (A39:18)

The perceived item may be a referent, e.g.

(23) *ʾo-xabúša pθìxtəlle,*⸗ *ʾína ʾisə́qθa dìya.*⸗ 'She opened up the apple and (saw) her ring.' (A4:19)

(24) *qímɛla bàbi,*⸗ *šqíləlla xonăwáθe díye ʾò-parša*⸗ *d-o-maġàra,*⸗ *ʾína xa-marə́gla gòṛa*⸗ *mə́lya dàwe.*⸗ 'He set off, my dear, and his brothers took off the flat stone, of that cavern (and they found) a large pot full of gold coins.' (A39:15)

(25) *pθíxtəlla ʾína kúlla dàwe.*⸗ 'She opened them (the bags) and saw all the gold coins.' (A39:20)

When a nominal is followed by an non-restrictive attributive description the construction can sometimes be interpreted as a referent or a proposition. This is particularly the case when the noun is definite in status and so is suitable for functioning as a clause subject, e.g.

(26) *pθíxəlle tắra màlla,*' *ʾina huðáya lwíša kášxa-w júlle xàθe.*' 'The mullah opened the door (and saw) the Jew wearing / that the Jew was wearing a smart suit and new clothes.' (A6:6)

Observations of the non-existence of something are expressed either by the negator *la* or by the negative existential particle *liθ*, e.g.

(27) *ʾu-gášəq báre dìye*' *ʾìna*' *la-də̀bba,*' *la-čŭ məndí.*' 'He looked behind him (and saw) that there was no bear, nothing.' (A20:12)

(28) *qímela šábθa qedàmta,*' *ʾína lá Fàrxo,*' *lá ču-məndì.*' *liθ.*' 'On Saturday morning they set off (to find him) but there was no Farxo or anything (associated with him to be found).' (A25:90)

(29) *xa-béna hàdəx*' *ɍíšela ʾánna maymùne,*' *ʾína ʾáni lìθ.*' 'After a while the monkeys woke up (and saw that) they (the others) were not there.' (A14:57)

In some cases the presentative particle is combined with the deictic copula in constructions without explicit verbs of perception, e.g.

(30) *w-ánna báθər šmìṭəlla,*' *síqela gù-rəš-ṭura.*' *ʾína hóla xá-qayəmθa kθíwta tàma.*' 'After they had defeated them, they went up into the mountain. They found there an inscribed monument.' (A14:55)

(31) *zílən l-tắrət pardèsa*' *ʾína hóla Mšíxa ʾu-Muḥámmad kə́lye gu-tắrət pardèsa.*' 'I went to the door of Paradise and (saw) the Messiah and Muḥammad standing in the door of Paradise.' (A2:7)

(32) *zílεle máxyεle tắrə d-ò-gəppa.*' *ʾína hóla tìwe*' *šawwà hambišáye.*' 'He went and knocked on the door of the cave. (He saw) seven giants sitting there.' (A39:3–4)

18.1.5.2. *Introducing Preliminary Background Material*

In some cases the presentative particle *ʾina* is used to mark a situation that acts as the grounds for what follows. The effect of drawing particular attention to this is a device for setting it up as a boundary in the discourse, acting as the onset of what follows. In narrative, for example, it may mark an event that acts as the temporal background of a following foreground event. In such cases it is equivalent to an English 'when'–clause, e.g.

(1) *ʾu-ʾɛ-Lelíθa θèla.*' *ʾáy kúlla dònεla,*' *dòna,*' *mə̀šxa.*' *ʾína θéla l-tằra,*' *mattóyəlla ʾíða pθáxa tằra,*' *qəm-maxyála ʾáyya prə̀zla*' *l-ʾíða díya qəm-maqðàla.*' 'The

Leliθa came. She was all (made of) fat, fat, oil. Now, (when) she came to the door, as she put her hand to open the door, she (the daughter-in-law) struck the iron bar into her hand and burnt it.' (A19:4–5)

(2) *ṭláθna hon-yíwtəlla mòʿəd.*ˈ *ína ṭ-áθi làxxa,*ˈ *áti kúl fàtra*ˈ *mṭašə́tla gánux baràye.*ˈ 'I have made an assignation with the three of them. Now, (when) they come here, each time you hide yourself outside.' (A22:21–22)

The construction may be used to express the causal grounds for the following foreground event, e.g.

(3) *zìltɛla*ˈ *mára ʾɛ̀ni qáṭlən ya-ʾálaha bábi?*ˈ *ína kúlla ʾan-xéne bnáθət guṛàne,*ˈ *áyya Šóše brátət fãqìre-wawa.*ˈ *zílla qəm-qaṭlàla*ˈ *Šóšət Xère.*ˈ 'She went (home) and said "Whom should I kill, oh God?" Now, all the others were daughters of gentlemen, but this Šoše was the daughter of poor people. So, she went and killed Šošət Xere.' (A38:3)

It is used sometimes to introduce the causal grounds in a conditional type constructions and so can be rendered by an English 'if'–clause, e.g.

(4) *ína ʾánna xonăwàθi,*ˈ *ʾarbì xonăwáθi,*ˈ *kúššət magúrət xà,*ˈ *páyəš ʾúmri tmàni šə́nne.*ˈ 'If each year you marry off one of these forty brothers of mine, I'll be eighty years old (before I marry).' (A12:1)

In (5) the construction is used to offer the grounds supporting a following request:

(5) *ína kupáli píšla šmìṭṭa*ˈ *ʾu-piláwe píšla šmìṭe.*ˈ *júlli lítli t-lošèna.*ˈ *bằyən xázən xáθi Nasìmo*ˈ *xúš mɛθèna!*ˈ 'Look, my stick has broken and my shoes have broken, I have no shoes to wear. I just want to see my sister Nasimo, then let me die!' (A37:17)

We may include in this category a construction such as (6), in which the presentative particle marks a section that cites the words of a wedding song. This is the basis for the following explanatory description, which is the main point the speaker wishes to make:

(6) *ína lát-šmaya y-amríwa: ʾilanɛni mxuršənna. ʾu-ʾiðət qariwa twinna. ʾu-kʷɛle xale zawənna. qamáya xàle zawə̀nwale*ˈ *ʾu-xaráye dɛrɛ́wa măzàde*ˈ *ʾɛ́ni bằye t-zawə̀nna?*ˈ 'Don't you hear them saying: *Our tree has dried out. The hand of the best man is numb. Where is his uncle to buy it?* First his uncle would

buy it and then they would hold an auction "Who wants to buy it?"' (B8:36–38)

18.1.5.3. *Drawing Attention to Something Unexpected*

The presentative particle is used in a variety of contexts to introduce a clause that denotes a situation that is assumed to be unexpected following the preceding context or one that is contrastive with it. In such cases it is most idiomatically translated by the English adversative particle 'but', e.g.

(1) *ʾəθγela,ˈ plíṭe bárqul mðitèγ.ˈ ʾína mðitéγ kúlla mxíθa l-kòma.ˈ* 'They came out opposite their town. But, their town was all covered in black.' (A4:28)

(2) *zílela nášət màθa,ˈ ʾína ha-ṯ-íla zìle nášət máθa,ˈ ʾo-núra čə̀myɛle.ˈ* 'The people of the village went (to help), but as they were going, the fire was put out.' (A48:3)

(3) *rába ràhatənwa,ˈ ʾína ʾə̆θγɛle xa-yàla,ˈ xa-ʾaṣòṭa.ˈ mŭčə̆zəlla xəyàli.ˈ* 'I was very peaceful, but a tiresome youth came along and annoyed me.' (A17:7)

(4) *ʾána bǎ̆γənwa šaqlə́nwali xáčča mòšxaˈ ... ta-ṯ-áxlən b-ʾùrxaˈ xáčča mə́šxa-w lə̀xmaˈ ʾína ʾíði ṣéla gu-d-áwwa hə́nna lìnta.ˈ* 'I wanted to take a little oil to eat on the way, a little oil and bread, but my hand has got stuck in this thing, the pot.' (A23:8)

(5) *xzi-ʾána mṭuršàli gáni.ˈ ʾína lɛ́wa mə́dre gnàyux.ˈ* 'I hid myself. But again it was not your fault.' (A1:25)

(6) *ʾáxni t-yawáxla ʾína ṭlàlux.ˈ* 'We shall hand her over, but to you (not to your father).' (A29:64)

(7) *b-qéṭa lá-mṣəx doqə̀xleˈ ... ʾína b-sə̀twaˈ ma-t-yawéwa tàlgaˈ lá-mṣe jawə̀jwa.ˈ* 'In summer we could not catch it (the partridge) ... but in winter, when there was snow, it could not walk (and we used to catch it).' (B5:147)

It is used in exclamatory constructions expressing something surprising such as those in (8)–(11):

(8) *ʾánna ṣàliˈ ʾína mò ṣáli.ˈ* 'They went and what (a surprise when) they went down!' (A25:13)

(9) *dmíxɛle xá-bena ṛ̀àγəšˈ ʾína mò ṛ́áγəš!ˈ* 'He went to sleep, then woke up, but what (a surprise when) he woke!' (A14:30)

(10) *xá-bena plíṭṭɛla xa-bràta.ˈ ʾína mù-brata!ˈ* 'Then a girl came out, but what a girl!' (A13:11)

(11) *mṭèle l-o-qáṣra.*' *šúrə d-o-qàṣra*' *ʾína ʾamrə́nnux xamšî métrele,*' *xamšî-metre ramùθe.*' 'He reached the palace. Indeed, I tell you the wall of the palace was fifty metres, its height was fifty metres.' (A25:54)

We may perhaps include in this section constructions such as the following:

(12) *yátla qa-d-àni*' *ʾína gə̀ldəx šalxə́nne.*' 'Give it to them, (and all will be well) but (if not) I'll flay *your* skin.' (A27:8)

18.1.5.4. *Climactic Result*
Another identifiable usage of the presentative particle is to mark the climactic result of a chain of events. This is illustrated by (1) and (2), in both of which the narrative ends with injury:

(1) *ṣléla tàma*' *ʾína kúlla gérme díya šmìṭe.*' 'She went down there and all her bones were broken.' (A20:4)

(2) *qəm-páṭlá gʸ ān-dìya,*' … *qəm-maxyála ðà-p̣ena.*' *b-ðá-ʾaqla díya p̣éna qəm-maxyáli ʾàxxa*' *rèši,*' *qəm-ṭarp̣áli gu-məššàra.*' … *ʾu-ṣrìxən*' *ʾu-θíθɛla xàθi,*' *ʾína réši šmíṭa ʾaxxàne.*' 'It (the mule) turned itself round.…It kicked me. With one of its legs it kicked me here, on my head, and threw me in the paddy field.…I shouted and my sister came. My head was injured here.' (B5:131–132)

18.1.5.5. *Commands*
Occasionally the speaker uses the particle to give force to a command, e.g.

(1) *ʾína m-báθər maqðàli*' *ʾaw-qə̀ṭma*' *šaqlìtule*' *mxamìtule.*' 'Now, after she burns me, take the ashes and keep them.' (A26:85)

(2) *ʾína tu-ṭ-amrə̀nnux.*' 'Now, sit down and I'll tell you something.' (A1:21)

(3) *háwət hə́šyər ʾína ʾáyya sústa là marp̣ə́tla.*' 'Be careful not to let that horse go.' (A12:29)

18.1.6. ga-

The particle *ga-* is used as a clausal connective with the following functions.

18.1.6.1. *Temporal Sequence*
It sometimes signals the temporal sequentiality of an event in relation to what precedes, e.g.

(1) *răpili m-an-képe ṭ-íla tàma,*ˈ *ga-maxzə́nnux ʾúrxa ṣàlət.*ˈ 'Throw me the stones that are there, then I shall show you the way down.' (A14:70)

(2) *híwɛle xábra ṭla-d-àn maymúne*ˈ *ga-wírra xa-xaðùθa gáwa.*ˈ 'He gave word to the monkeys and then they became very happy.' (A14:47)

(3) *ga-mə́re mo-sùsɛle?*ˈ 'Then he said "What horse is it?"' (A12:62)

18.1.6.2. *Introducing Comment*

It may introduce a clause that presents a comment on what precedes. This may be adversative in sense (1):

(1) *lá-mǝre bă̆ye xàθux.*ˈ *mə́re bă̆ye Ẑîne.*ˈ *ga-ʾéni Ẑîne*ˈ *ʾáxni lɛ̀ðǝx.*ˈ 'He did not say "He loves your sister." He said "He loves Zine." Now, we do not know (by this statement) which Zine (was meant).' (A26:61)

(2) *mə́re ṭ-ázǝx qa-xàzǝx*ˈ *Ẑîne ʾkɛ̀la.*ˈ *ga-léðǝx ʾkɛ̀la,*ˈ *b-éni dùkθɛla,*ˈ *ʾénila ʾùrxa.*ˈ 'He said "We shall go to find where Zine is. But we do not know where she is, in what place she is, what the road is."' (A26:18)

18.1.6.3. *Introducing Direct Speech*

It is used at the beginning of direct speech, predominantly questions, e.g.

(1) *mə́ra ga-mo-xə̀ðye b-áwwa dúša?*ˈ 'They said "Why are we so happy about this honey?"' (A14:15)

(2) *mə́re ga-béna ʾánna kúlla ṭ-íla zála léla mṣáya b-an-ʾárbi bnàθa?*ˈ 'He said "Well, cannot all these people who are going (to fight) prevail against the forty girls?"' (A12:58)

(3) *mə́re ga-mù*ˈ *qwála ṭla-ʾalàha,*ˈ *ya-ʾàlaha*ˈ *mə́re ʾána bə̀ryǝn?*ˈ 'He said "Oh Lord God," he said complaining to God "Oh God, why was I born?"' (A14:23)

(4) *ʾámǝr ga-ḳòra*ˈ *ʾána mò yánnux?*ˈ 'He said "Now, blind man, what can I give you?" (A26:57)

(5) *ʾǝn-mboqə̀rra mə́nnux,*ˈ *ʾánna d-ɛ̀nila,*ˈ *múr ga-ʾánna t-ʾÁjdǝn tɛ̀lɛla.*ˈ 'If they ask you "Whose are these?", say "Well, these belong to Ajdǝn the fox."' (A32:17)

18.2. Negated Clauses

Here we shall examine two features of clause sequences containing negated clauses.

18.2.1. *Negated Interrogative Clauses Expressing Preliminary Background Material*

A negated clause that is pronounced with intonation patterns related to those of questions (§18.5.3.) is sometimes used to signal that the situation described in the clause should be taken as the grounds for what follows. The construction is a device to draw attention to the clause, in order to set it up as a boundary in the discourse, acting as the onset of a new section. It is most commonly used to express temporal background. This may express a situation that overlaps temporally with the following main event (1–2) or a preceding event that marks its onset (3–6):

(1) *ʾánna lɛ́la dmìxe,ˈ ʾo-rábbən múttəlla ʾáqle díye rš-ắqəl bàxta.ˈ* 'While they were asleep, the monk put his leg onto the leg of the woman.' (A16:11)

(2) *lá y-ṣaláxwa ḥátta ʾùmraˈ xṭìθɛwa ṣáləxwa sarkóle.ˈ* 'When we went down to church, it was a sin to go bare-headed.' (B10:44)

(3) *lá mằyáxwa gùða,ˈ palṭə́xwala čìta.ˈ* 'When we shook the churn, we would take out the curds.' (B10:9)

(4) *la-θéle rḕš-ṣàwma,ˈ b-šaqlə́xwa kúlla ʾamànən,ˈ kùlla b-šaqlə́xwalaˈ dérəxwa qáṭma mxallə̀xwala.ˈ* 'When the beginning of the (Lent) fast came, we would take all our vessels, we would take them all and put ash on them to clean them.' (B16:7)

(5) *lɛ́le múttəlla ʾáqle dìyeˈ—ṣáwlət màlkaˈ ʾiwɛ́wa dàwaˈ—múttəlla rš-d-àn bəz-máre,ˈ ʾo-bəzmára xíla mən-dàwa,ˈ šqíla mən-dàwa.ˈ* 'When he placed his foot—the shoes of the king were made of gold—he placed them on the nails, the nail ate the gold, took some of the gold.' (A14:28)

(6) *ʾáyya másta la-qəm-daríla gu-d-aw-gùða,ˈ...heš-t-là bráza,ˈ xánči t-la-bráza mɛθíwa xa-gálla y-amríle sèrmo.ˈ* 'When they have put the yoghurt in the churn...while it is not yet dry, shortly before it becomes dry, they would fetch a herb called *sərmo*.' (B14:1)

Occasionally the construction is used to express the causal grounds for the situation described in what follows, e.g.

(7) *dúkθə d-ó-gəldət tàwra,ˈ lɛle-wída gádda zòra,ˈ xzi-kəmá mǎsàḥa dwíqle.ˈ* 'Since he had made it into a fine thread, the place (enclosed by) the ox skin covered a great area.' (A11:13)

On sporadic occasions the negative construction expresses the background of a preceding rather than following clause, e.g.

(8) *maxíwale b-réšət nàše,*ˈ *kúlla ʾáni là mbarxíwalɛ qáša-w šamàša.*ˈ 'They tapped it on the head of people, while the priest and the deacon blessed them all.' (B16:24)

18.2.2. *Gapping of the Negator*

When a negated clause is followed by one or more clauses that are negated in sense and elaborate on the first clause, the negative particle *la* may be gapped. This applies to all verbal forms, including imperatives (3):

(1) *ʾən-háwɛ ʾəṣrà ṭiyáre xéne*ˈ *ʾaxwáθux hawnàne,*ˈ *la-maṭétuwa l-àwwa lə́xma,*ˈ *ʾu-ʾattítuwa láxxa pɛšítuwa hátxa snìqe.*ˈ 'If ten other men from Ṭiyare were as intelligent as you, you would not have reached this (miserable condition of begging for) bread and would not be sitting here, in such a needy state.' (B17:16)

(2) *tùna dɛróxwale gáwe*ˈ *qa-lá-ṣaliwa míya ʾə̀ltəx,*ˈ *qa-t-ṣáliwa míya hátxa b-rèšən.*ˈ 'We would put straw in it, so that water would not flow down, so that water would not flow down on our head.'

(3) *lá-wuð hàtxa*ˈ *qṭúl ʾanna-bnónə náše kùlla.*ˈ 'Don't do that, don't kill all the people.' (A29:17)

In (4) the construction with the gapped negator is separated from the first by an intervening imperative. The gapping explains why the *ʾi-qaṭəl* form *y-asqən* is used with future reference (< *la-y-asqən* 'I shall not go up'):

(4) *lə́mu lá-ʾasqən ʾàna?*ˈ *hálli ḥàwla.*ˈ *y-ásqən kúlla qése mjằmə̀nna*ˈ *ʾu-ʾúrxa paθxə̀nna*ˈ *qa-t-míya ṣála qam-tar-gə̀ppa?*ˈ 'Why should I not go (alone)? Give me a rope. (Why should I not) gather all the wood and open up the way so that the water will come down to the door of the cave.' (A39:10)

18.3. Intonation Group Boundaries

When presenting a series of connected main clauses, the speaker may utter each clause in a separate intonation group, e.g.

(1) *jánne ʾə̀θyela,*ˈ *šqìləlla Zíne*ˈ *nùbləlla Jazíra Bóta.*ˈ 'The jinn came and took Zine, took her away to Jazira Bota.' (A26:8)

(2) *ʾáwwa qímɛle qedàmta,*˻ *šqíləlle xa-mən-súsət xàle,*˻ *tíwa l-xáṣe dìye,*˻ *ʾu-ṣ̀əḻya.*˻
'He got up in the morning, took one of his father's horses, sat on its back and went down.' (A25:40)

(3) *ʾu-zìlɛle,*˻ *múttəlle réše dìye*˻ *dmìxɛle.*˻ 'He went, put down his head and slept.' (A25:43)

(4) *p̌éšən xa-nə̀šra*˻ *t-yátwən l-xàṣəx*˻ *mṭamrə̀nnəx gu-ʾúpra.*˻ 'I shall become an eagle and sit on your back and bury you in the ground.' (A25:63)

In some cases more than one main clause is placed in the same intonation group. This is found particularly with short verbal clauses, often consisting of no more than the verbal form without any nominal complements. If there are nominal complements, these tend to occur in the final clause.

In general, the effect of placing two or more clauses together in the same intonation group is to present the activities expressed by the clauses as being closely related in that they can be interpreted as forming components of a single overall event. The clauses of the series, moreover, usually have the same subject. There is no formal syntactic subordination in the form of subordinating particles and the verbs in the series are, in principle, in the same form (e.g. *qṭille, qṭilɛle* etc.). There are, however, some formal signals of dependence, which reflect their close cohesion. The initial verb, for example, is combined directly with the following verbal clause in an asyndetic paratactic construction rather than being linked with the connective particle *w*, e.g.

(5) *zílle qítle b-xa-ṭùra.*˻ 'It went and hit a mountain.' (A50:10)

(6) *táwra mítle npìlle táma.*˻ 'The ox died and collapsed there.' (A22:9)

In a series of compound verbal forms in narrative sequences a conspicuous reflection of dependence is the omission of the copula element after the first verb (§15.4.1.3., §15.4.2.3.), e.g.

(7) *ʾə́θyɛle tíwa b-dìwən.*˻ 'He came and sat down in the reception room.' (A26:63)

There is a particular tendency for the occurrence of prosodic bonding of clauses in a single intonation group after certain verbs (§18.3.1.– §18.3.8.) and in certain syntactic contexts (§18.3.9.– §18.3.11.).

18.3.1. qym

The basic meaning of this verb is 'to get up'. When the verb occurs in a separate intonation group, it frequently has this basic meaning, e.g.

(1) *ʾay-qìmtɛla,* ˈ *wíðta qàwa.* ˈ 'She got up and made coffee.' (A26:31)
(2) *Mir-Ž̌ándin qìmɛle* ˈ *bắye qaṭə̀lle.* ˈ 'Mir-Zandin got up and wanted to kill him.' (A26:67)

Also when combined with another verb in the same intonation group, the interpretation of the verb as having its basic meaning is appropriate in some contexts, e.g.

(3) *xa-màlka* ˈ *kút-yum ðà-brata gawə́rwa.* ˈ *mbádla qayə́mwa qaṭə̀lwala.* ˈ 'A king would marry a girl everyday. In the morning he would get up and kill her.' (A14:1)

In many cases, however, the verb is used with a less specific meaning and functions as a general marker of the onset of an activity or situation. In several cases the interpretation is ambiguous, since the onset of a series of actions in narrative often could be interpreted as coinciding with the act of 'getting up'. It is, indeed, this ambiguity that has led to the generalization of its meaning. In some contexts, nevertheless, the verb clearly does not admit being interpreted as denoting the physical act of 'getting up'. It is used, for example, before verbs denoting 'sitting down', e.g.

(4) *qímela tìwela,* ˈ *wíðela tàgbir.* ˈ 'They sat down and made a plan.' (A26:2)

It is attested before verbs denoting states, non-dynamic activities or passive constructions in which the grammatical subject has no dynamic role in the action, e.g.

(5) *qímɛle píšɛle màjbur* ˈ *Mắmo dìrɛle.* ˈ 'Mămo was forced to return.' (A26:38)
(6) *ʾu-qímɛle mpúlṭɛle muʿàlləm.* ˈ 'The teacher was then brought out.' (A22:41)

When the verb *qym* acts as an onset marker, it is used to signal some kind of boundary in the discourse, dividing the discourse into sections that cohere together. In (7), for example, the construction occurs at the onset of a section concerning the jinn. In (8) the act of replying to the letter

is presented as separate from that of capturing the dove and reading the letter. In (9) the arrival at the mountain is presented as a shift in scene and an episodic boundary. In (10) it occurs at the beginning of a narrative section after direct speech. Note that here it coincides with the use of the particle *–ži*, which is also a boundary marker (§18.1.4.1.):

(7) *jə̀nneˈ t-šmàyyaˈ qímla wídla tàgbɨr.ˈ* 'The jinn of heaven made a plan.' (A26:1)

(8) *Səttíye zɨ̀ltɛlaˈ dwíqtəlla yáwna hàtxa,ˈ šqɨ̀ltəlle.ˈ kθáwa qrìθəlle.ˈ ʾu-qímtɛla mjuwàbtəlleˈ ʾu-yíwtəlle qa-yàwna.ˈ* 'Səttiye went and grabbed the dove like this and took it. She read the letter. She answered it and gave it to the dove.' (A25:72)

(9) *qíma dart-yòma,ˈ mjŭ̀məlla maymùneˈ ʾu-xðìrɛle.ˈ qímela mɜ̀tyelaˈ xa-ṭùra.ˈ* 'The next day he gathered the monkeys together and toured around. They arrived at a mountain.' (A14:48)

(10) *mɜ́re ʾátɨ ṭ-ázət t-yátwət tămàha.ˈ ṣáli šalxíla julléy t-yáwne tàmma.ˈ ʾátɨ xázət ʾày-mənna bắyətˈ šaqlə́tla ʾánna jùlle,ˈ mɛθɜ̀tla-llɨˈ lítlux šùla.ˈ ʾáwwa-ži qímɛle ṣ̀əlyɛle.ˈ* 'He said "You go and sit over there. They will go down and take off their doves' clothes. See which one you like and take the clothes (belonging to her) and bring them to me, and all will be fine." He went down.' (A14:80–81)

Prosodic bonding of the verb *qym* occurs in imperative and other deontic constructions, e.g.

(11) *qu-plúṭ m-àxxa!ˈ* 'Get out of here!' (A16:11)

(12) *qu-p̌ɛ́gən kàde!ˈ* 'Get up and bake *kade* cakes!' (A30:41)

(13) *qu-šqúlla ʾáyya skìnta!ˈ* 'Take this knife!' (A15:8)

(14) *qu-qálbəx bɛ́θa biš-spày.ˈ* 'Let's return home—that's better.' (A30:55)

In (15) the resultative participle *qime* is combined with imperative forms:

(15) *qíme so-mɜ̀θole ʾəlli-díyi!ˈ* 'Go and bring him to me!' (A7:7)

18.3.2. *Verbs of Movement*

These include verbs such as *ʾzl* 'to go', *ʾθy* 'to come', *dyṛ* 'to return', *ṣly* 'to go down', *ʾsq* 'to go up', which are commonly bonded prosodically with a following verb, e.g.

(1) *Sǝttíye zílla qǝm-dawqàla.* 'Sǝttiye went and grabbed it.' (A25:72)

(2) *zílɛle máxya tằra.*ˈ 'He went and knocked at the door.' (A14:28)

(3) *ʾu-θéle náša qǝm-šaqɘlle mɘnnux.*ˈ 'A man came and took it from you.' (A17:35)

(4) *ɘdlɛleˈ xa-bráta θíθɛwa dmíxta kɘsli.*ˈ 'This night a girl came and slept with me.' (A26:11)

(5) *díṛṛe ʾo-qamáya qǝm-qaṭɘlle ʾo-sàwa.*ˈ 'The first man returned and killed the old man.'

(6) *ʾu-díṛele ṣɘlyɛle rɘš-d-è-ʾena.*ˈ 'He went back down to the spring.' (A26:32)

(7) *ʾáxni ṭla-mò ṣálǝx ʾáxni mpalṭɘxle?*ˈ 'Why should we go down and release him?' (A26:77)

(8) *síqle wírre kǝs-bràta.*ˈ 'He went up and entered the girl's home.' (A17:24)

Examples with imperatives:

(9) *sa-dùqla ʾayya-yáwna!*ˈ 'Go and grab that dove!' (A25:72)

(10) *dǝ-háyyo sxà!*ˈ 'Come and swim!' (A25:61)

(11) *ṣli-mur-ʾɘlle*ˈ 'Go down and say to him…' (A26:37)

When the verbs *ṣly* 'to go down' or *ʾsq* 'to go up' occur in a tight sequence to a preceding verb, the sequences can often be rendered idiomatically by English phrasal verbs containing the elements 'down' and 'up' respectively, e.g.

(12) *zadéle ṣàleˈ gu-xa-čále gòṛta.*ˈ 'He threw him down into a big pit.' (A22:40)

(13) *kút-yum xá-ʾǝrwǝn y-arɘqwa y-ásǝq qám d-o-dèwa.*ˈ 'Every day one of our sheep would run up to that wolf.' (A10:5)

18.3.3. mṣy/ʾmṣ *'to be able'*

When used in a past perfective form (*mṣele, mǝṣyɛle*), this verb is often combined asyndetically in a paratactic relation with the verb that is dependent on it, in that the second verb is put in a past perfective form (*qṭille, qǝm-qaṭǝl, qṭilɛle*), e.g. *mṣele θele* 'He was able to come'. The same applies to negated clauses, e.g. *la mṣele θele* 'He could not come', *la mṣele qǝm-ʾawǝdla* 'He could not do it'. The second verb in a negative construction is semantically irrealis, since the action did not take place. In principle, therefore,

an irrealis form would be expected. The use of the realis perfective form has apparently arisen by morphological attraction. This, no doubt, is the background also of the positive construction. The majority of examples from the text corpus are negated or occur in interrogative clauses:

(1) *là-mṣeli muθyáli.*ˈ 'I could not bring her.' (A8:55)
(2) *ʾáyya bàxta*ˈ *lá-mṣela mxumèla ʾórwe.*ˈ 'The woman could not keep the sheep.' (A10:6)
(3) *la-mṣélən sáqlən sèda.*ˈ 'We could not go up to hunt.' (A26:46)
(4) *lá-mṣeli zrìli.*ˈ 'I could not cultivate.' (A30:13)
(5) *lέla-məsye wîðe čù-məndi.*ˈ 'They could not do anything.' (A8:65)
(6) *dáx mṣéle ʾáyya bráta qəm-ʾawádla b-pəlxánət bèθa.*ˈ 'How could he have made this girl a hard-working housewife?' (A21:32)
(7) *ʾánna tre-yále mănile mə́sya dəryə́lla gu-šaqìθa.*ˈ 'Who could have put these two children in the stream?' (A8:15)

When the verb *mṣy/ʾmṣ* is in the *qaṭəl* form, expressing the present or future, the complement verb is in the irrealis form, sometimes introduced by the subordinating particle *D*, e.g.

(8) *máṣəx ṯ-àmrəx*ˈ 'We can say' (B4:3)

In (9) a perfective past verb is followed by another perfective verb but the latter is introduced by the subordinating particle *D*:

(9) *bráta làn-məsya ṯ-in-múθyəlla.*ˈ 'I could not bring back the girl.' (A29:8)

18.3.4. ṣbr *'to dare'*

A similar paratactic joining is found after perfective forms of *ṣbr* 'to dare', e.g. *ṣbirre θele* 'He dared to come', *la ṣbirre θele* 'He did not dare to come'. The examples attested in the text corpus are negated:

(1) *ʾáp-xa mónna lá-ṣbirre rhíwle gu-dìwən.*ˈ 'Nobody dared to speak in the reception room.' (A26:70)
(2) *lá ṣbírra mṣuwàtla.*ˈ 'She did not dare to speak.' (A24:40)

The irrealis form is also attested after the perfective past, e.g.

(3) *ʾáp-xa lá-ṣbirre ʾasə̀qle.*¹ 'Nobody dared to go up (and do) it.' (A33:4)

18.3.5. qbl *'to permit'*

The verb *qbl* 'to permit' may be used in a similar syntactic structure. In the following example from the text corpus it is negated:

(1) *ʾáw là-qbille θéli.*¹ 'He did not permit me to come.' (A46:3)

18.3.6. šry *II 'to begin'*

This verb is normally followed by an infinitive (§15.5.5.). When, however, it is in a perfective past form, it is sometimes followed by a perfective form of the verb linked to it paratactically in the same intonation group, e.g.

(1) *šuréle zmírre b-súsa smòqa.*¹ 'He started singing to a brown horse.' (A25:11)
(2) *šuréla xrìṭla.*¹ 'She started to gouge it out.' (A19:6)
(3) *šúryela xílela m-ġðàðe.*¹ 'They began to eat together.' (A21:21)

18.3.7. prq *'to finish'*

Similarly, the verb *prq* 'to finish' is sometimes combined together with a verb in the same intonation group, e.g.

(1) *bar-príqla kúlla náše šqílla ʾarzằq.*¹ 'After all the people had finished taking provisions…' (B17:12)

18.3.8. *pyš majbur* 'to become obliged'

This expression is used to express an obligation and is often prosodically bonded with the following verb, which expresses the lexical content of the action, e.g.

(1) *páyəš májbur béna xaráya šàte.*¹ 'In the end it will be forced to drink.' (A12:47)
(2) *píšele májbur sə̀lyele.*¹ 'He had to dismount.' (A28:33)

18.3.9. *Cirumstantial Clauses*

When a clause is dependent on another clause by virtue of the fact that it expresses the circumstances of the action of the other clause, this dependence is often expressed prosodically by combining the two clauses in the same intonation group, e.g.

(1) *kúlla ʾə́θye ʾitléy šăráṭe ṭ-amríla qa-màlka.*¹ 'They had all come while having cases to present to the king.' (A17:31)

(2) *hadíya bắye ṭ-áxəl mə́ndi kpìnɛle.*¹ 'Now he wanted to eat something, since he was hungry.' (A30:11)

(3) *ʾu-sulámməš doqíle lóši xa-jùlla.*¹ 'They would hold the hive whilst wearing a cloth.' (B5:178)

18.3.10. *Temporal Adverbial Clauses*

Similarly, prosodic bonding between main clauses is often used when one clauses supplies the temporal adverbial setting of the action of the following clause. In such cases the first clauses is idiomatically translated by supplying a temporal particle such as 'after' or 'when', e.g.

(1) *barzíwa xáčča mkalči̇wala.*¹ '(After) they (the logs) had dried a little, they would remove their bark.' (B5:187)

(2) *hadíya mkopə́šla ṣlèla.*¹ 'Now (after) they had gathered it, they went down (to the plain).' (A7:15)

(3) *băláwala yabíšta xərqá xərqá gu-qðála díya mabyə̀nwa.*¹ '(When) she swallowed a raisin, it could be seen, ring by ring in her neck.' (A8:63)

(4) *mṭéle moθέθəlle xáčča mìya.*¹ '(When) he came, she brought some water.' (A22:28)

(5) *hátta Gozáli b-gáne mšudrátle lɛ̀n θíθa.*¹ 'Even (when) you sent Gozali himself, I did not come.' (A8:94)

18.3.11. *Complement of a Clause Constituent*

Another context in which clauses occur in a single intonation group due to their semantic connection is where the second clause functions as a complement of a constituent in the first clause. In (1), for example, the second clause should be analysed as the complement of the noun *ʾurxa* 'way' ('the way she learnt'):

(1) *dáx ʾúrxa muxzélux ʾɔ́lla lípla ʾàwwa šúla?*ˈ 'How did you show her the way to learn this work?' (A21:34)

This applies also to clauses that are formally marked as subordinate by by the particle *D*. When these are direct complements of a verb, they are typically in the same intonation group as the verb, e.g.

(2) *ʾánna yắδi ṱ-íle duglàna.*ˈ 'They know that he is a liar.' (A48:3)
(3) *bắyən ṱ-àzən.*ˈ 'I want to go.' (A8:65)
(4) *máṣəx ṱ-àmrəx.*ˈ 'We can say.' (B4:3)

If, however, the subordinate clause is not integrated into the main clause as the complement of a constituent, but rather is a complement of the clause as a whole and so is external to it, this looser relationship is sometimes expressed by putting the subordinate clause in a separate intonation group, e.g.

(5) *ʾána paqδɔ̀nnɛxu*ˈ *ṱ-azítu b-ʾúrxa maṱítu ɔ́lla.*ˈ 'I shall instruct you, so that you go on the road and reach her.' (A8:27)

18.4. Repetition of Clauses to Mark a Discourse Boundary

Some types of repetition across clauses have been described already in relation to the connective particles (cf. §18.1.1., §18.1.2.). A further type of repetitive overlap across clauses is described in this section.

In narrative the narrator sometimes repeats the mention of an event that has already been narrated before recounting the event that is sequential to it. The informational status of the clause, therefore, may be compared to that of a topical referent. The purpose of 'heavy' coding of topical information at the front of a sentence is generally to mark some kind of boundary in the narrative. This is, indeed, the function of the construction under discussion since it is used to signal the onset of a section. It is a device used by the narrator to present an activity as a new event with a degree of independence from what precedes. This is usually a result of the subjective choice of the speaker as to how the narrative should be staged. The function of this construction is similar to that of subordinate 'when'–clauses (§19.3.3.) and, indeed, they are often idiomatically rendered by supplying 'when' in an English translation. Examples:

(1) *kúlla twìre qðaléy,*⟨ *mìθela.*⟨ *mìθela,*⟨ *ʾáwwa rìqele,*⟨ *ṣə́lyɛle mṭùšyəlla gáne.*⟨ 'They all broke their necks and died. (When) they died, he fled, went down and hid himself.' (B18:6)

(2) *xà-yoma*⟨ *sìqle*⟨ *l-ṣèda,*⟨ *ṭfìqle*⟨ *xa-ʾàrya bíye díye.*⟨ *ṭfìqle xa-ʾàrya bíye díye,*⟨ *zílle ṭáləb ʾàrya.*⟨ 'One day he went out hunting and a lion chanced to come his way. (When) a lion chanced to come his way, he went to attack the lion.' (A27:3)

(3) *qímle qəm-ṭarə̀dle.*⟨ *qəm-ṭarə́dle θéle zìlle*⟨ *be-ʾámte dìye.*⟨ 'He drove him away. (When) he drove him away, he went back to his aunt's house.' (A23:32–33)

(4) *zílla qəm-qaṭlàla*⟨ *Šóšət Xère,*⟨ *qəm-mṭamrála gu-ʾòrət susăwáθa ʾə́ltəx.*⟨ *qəm-mṭamrála gu-ʾórət susăwàθa,*⟨ *bróna díya θèle.*⟨ 'She went and killed Šošət Xere and buried her in the horses' manger below. (When) she buried her in the horses' manger, her son came back.' (A38:3–4)

The repeated material is in some cases uttered with a different distribution of stress either across the words of a stress group (5) or within a single word (6):

(5) *mapərxálux šawwà yamáθa,*⟨ *máṭət l-d-o-qàṣra.*⟨ *máṭət l-d-ò-qaṣra,*⟨ *háwət hášyər ʾína ʾáyya sústa là marpátla.*⟨ 'She will fly you over the seven seas and you will reach that palace. (When) you arrive at that palace, be careful not to let that horse go.' (A12:29)

(6) *ʾu-máṭyɛle qam-d-o-ṭùra.*⟨ *məṭyéle qam-d-o-ṭùra,*⟨ *xirèle,*⟨ *mùjbɛle.*⟨ 'He arrived in front of the mountain. He arrived in front of the mountain, he looked and was amazed.' (A8:53)

In cases where long morphological variants are available, the long form is used either in the first clause or in the repeated clause. This can be regarded as two alternative strategies whereby a heavy morphological form is used as a boundary marker to signal either closure or onset. In (7) the first clause has a long form of pronominal suffix on the resultative participle to mark closure (§15.13.5.), whereas the repeated clause has the shorter, default form. In (8), on the other hand, the long variant of the imperative is used in the repeated clause:

(7) *ʾiθáθa qàmxɛle,*⟨ *pθìxtəllela tắra.*⟨ *pθíxtəlle tằra,*⟨ *xzíθəlle bába dìya*⟨ *ʾu-ʾup-wắzīr mònne.*⟨ 'While there was flour on her hands, she opened the door. She opened the door and saw her father and also the vizier who was with him.' (A21:26)

(8)   *só l-bɛ́θət flàn-naša.*ˈ *sógun l-bɛ́θət flàn-naša,*ˈ *ʾu-šə́qlula ʾan-trè-yale,*ˈ *ʾu-mtàlquleγ.*ˈ 'Go to the house of such-and-such a man. Go to the house of such-and-such a man, and take away the two children. Get rid of them.' (A8:8)

In (9)–(11) the repeated clause has more lexical material than the first clause. This again can be viewed as a strategy of using linguistic ballast to mark a boundary, which should be interpreted as the onset of what follows. In (9) the repeated clause also exhibits the use of the long alternative form of the 3pl. suffix *-lεγ* (cf. §15.12.):

(9)   *ʾíθwa xá-năra tàma.*ˈ *kut-táwra mə́xyəlle xá gu-réše dìye,*ˈ *gu-be-ʾɛ́ne dìye.*ˈ *də́ryəlle l-ằra tàwra.*ˈ *mqudə́qdəlla kùlla.*ˈ *b-o nằra*ˈ *ʾan-táwre dìye*ˈ *mqudə̀qdɛlelεγ,*ˈ *kúlla də́ryəlla b-kàwe,*ˈ *də́ryəlla gu-gòma.*ˈ 'There was an axe there. He struck each ox a blow on its head, on its forehead and put it on the ground. He chopped them all up. He chopped the oxen up with the axe, put them all through the window and put them in the basement stable.' (A30:23)

(10) *šqíləlle xmàra*ˈ *ʾu-tàwra.*ˈ *ʾu-zìlεle.*ˈ *šúryεle zràya.*ˈ *šúryεle zráya hàl-ʾaṣərta.*ˈ *ʾaṣə́rta ʾáθe l-bὲθa.*ˈ 'He took his ass and ox and went on his way. He began cultivating. He began cultivating (and continued) until evening. In the evening he went back home.' (A21:12)

(11) *xéna políse mù ṭ-óði?*ˈ *šáqli ʾ̆ăwàmər.*ˈ *màlka*ˈ *mo-ṭ-ámərrey ṭ-óði hàdəx.*ˈ *zìlla.*ˈ *zílla políse b-lèle.*ˈ *qəm-šaqlíla ʾán-tre yàle*ˈ *mən-babéy ʾu-yəmmὲy.*ˈ 'Now, what should the police do? They take orders. Whatever the king tells them they should do. They went off. The police went off at night and took the two children from their father and mother.' (A8:9)

18.5. Intonation Patterns

The relationship between clauses is also signalled by the pitch contours associated with the nuclear stress in an intonation group. By means of intonation contours the speaker conveys to the hearer a wide range of signals, some of which belong to levels of expression that have no direct correlations in linguistic structure, such as numerous personal attitudes. For this reason it was decided not to mark the intonational pitch contours in the transcription of the texts. Here we shall restrict ourselves to a brief examination of some of the main intonational signals, with special attention to those that mark semantic continuity and discontinuity across

clauses. The semantic connection between clauses is an issue that has been discussed in numerous places in the foregoing discussion of syntactic structure.

We may distinguish two basic types of intonational contours that are relevant for the present discussion, namely a contour expressing disjunction and one expressing conjunction. Following the terminology that is customary in the field of intonation, we may refer to these as 'major juncture' and 'minor juncture' respectively.

18.5.1. *Major Juncture*

The intonation expressing major juncture is characterized by a low fall in pitch at the end of the intonation group. There is sometimes a slight rise in pitch on the nucleus. Any syllables occurring after the nucleus have decreasingly lower levels of pitch. This contour is represented by the symbol ↘. It expresses completeness and disjunction from what follows. As is the case with many syntactic expressions of disjunction, the decision as to where such a signal of disjunction should be placed is generally governed by the choice of the speaker as to how he wishes to present the discourse to the hearer. Examples:

(1) *ʾo-góṛa píšle tàma.* ↘¹ 'The eldest one remained there.' (A24:5)
(2) *xa-nă̆šíyət t-yánna ṭlàlux.* ↘¹ 'I'll give you some advice.' (A24:9)
(3) *lá-ʾawðət xá-mdi xéna t-la-b-dìyi.* ↘¹ 'Do not do anything else without me.' (A24:9)

Speakers separate clauses with major juncture to express lack of sequentiality in a variety of contexts.

In (4) the major juncture is used to separate two clauses that are not connected in temporal sequentiality, but rather are overlapping temporally. The second clause does not complete the first so much as stand in parallel with it, giving a supplementary description of the same event. Similarly in (5) the second clause does not follow temporally or logically from the first but rather elaborates on it:

(4) *ʾan-míya pɛ́šï trè-qəsme.* ↘¹ *kàli.* ↘¹ 'The water will become (divided into) two parts. It will stop.' (A24:14)
(5) *wûðuli xa-čằra.* ↘¹ *xzóli xa-darmána qa-ʾɛ̀ni.* ↘¹ 'Cure me. Find a remedy for my eyes.' (A24:2)

In (6) the disjunctive prosody separates a prohibition from a following instruction, which is supplementary to the prohibition rather than sequential to it:

(6) *là-šoqət t-kále.*↘ˈ *máxət ʾólle díye ta-t-ʾásəq payədle ʾo-ṭúra.*↘ˈ 'Do not let him (the horse) stop. Strike him so that he will go up and cross over that mountain.' (A24:11)

When the clauses express temporally sequential events, the purpose of the major disjuncture is to make a clear division between the two and to signal that they are not seamlessly connected. This may coincide with a spatio-temporal shift, as in (7) in which the arrival at the palace is separated from the event of crossing the water in both place and time:

(7) *ʾu-pɛðətla ʾan-míya.*↘ˈ *máṭət l-qáṣrət Parizàda.*↘ˈ 'You should cross the water. Then you will arrive at the palace of Parizada.' (A24:14)

18.5.2. *Minor Juncture*

The intonational contour that are typically associated with minor juncture consists of a rise in pitch on the nucleus. This is typically followed by a mid fall on the syllables coming after the nucleus. Such a contour is represented here by the symbol ↗↘. Minor juncture contour signals incompleteness. It is regularly used on a clausal constituent that is uttered in an intonation group that is separate from that of the rest of the clause. This applies to the clause initial subjects and extraposed items in (1)–(4):

(1) *báxta yaqùrta,*↗↘ˈ *ʾi-màbra.*↘ˈ 'A pregnant woman will give birth.' (A24:13)
(2) *ʾo-gòṛa*↗↘ˈ *mə́re ʾána pə́šən láxxa gu-d-áyya mðìta.*↘ˈ 'The eldest one said "I shall remain here in this town."' (A24:4)
(3) *ʾan-šŭrŭ̀ṭ*↗↘ˈ *lázəm yăðə́tla mòdila.*↘ˈ 'The conditions—you must know what they are.' (A24:10)
(4) *sùsux*↗↘ˈ *ʾaqláθe mdurbə̀nnela.*↘ˈ 'Your horse—his legs have become wounded.' (A24:12)

Likewise, if a constituent is placed at the end of the clause in a separate intonation group, the clause is connected to the postposed constituent by minor juncture. This applies to (5) and (6), which have a postposed subject and adverbial respectively:

(5) ʾîθwale↗ˑ⌐ ṭḷà bnóne. ↘⌐ 'He had three sons.' (A24:1)

(6) t-yáxlux xamšî dináre↗ˑ⌐ kut-yàrxa. ↘⌐ 'We'll give you fifty dinars every month.' (A24:7)

When the speech reported by the verb 'to say' is placed following it in a separate intonation group, the clause with this verb regularly has minor juncture, e.g.

(7) qímɛle mɔ́re qa-bnóne dìye:↗ˑ⌐ bnòni↗ˑ⌐ wúðuli xa-čàra. ↘⌐ 'He said to his sons "My sons, cure me!"' (A24:2)

Minor juncture is typically used in clauses that occur in non-final position in a sequence, the final clause in the sequence being marked by a major juncture intonational contour. The clauses connected in this way may be temporally sequential, as in (8). The effect is to present the two events as closely linked together. Minor juncture is commonly used in clauses containing the verb *qym* (9) or a verb of movement (10–11). As we have seen in §18.3.1. and §18.3.2., these types of verbs also exhibit a tendency to be closely bound prosodically with what follows by being combined with a following verb in the same intonation group.

(8) mɔ́lxa maxéla ʾaqláθe dìye, ↗ˑ⌐ ṭ-áwe súsa mṣarṣòre. ↘⌐ 'He will get salt on his legs and will screech.' (A24:12)

(9) qímela ṭḷáθna t-bnóne dìye↗ˑ⌐ ʾu-zìlela. ↘⌐ 'The three sons of his set off and went on their way.' (A24:3)

(10) zílela mɔ́ṭye gu-ðá mðìta. ↗ˑ⌐ ʾo-gòṛa↗ˑ⌐ mɔ́re ʾána péšn láxxa gu-d-áyya mðìta. ↘⌐ 'They travelled and arrived in a certain town. The eldest one said "I shall remain here in this town."' (A24:4)

(11) ʾo-zóra zílle b-ʾùrxa. ↗ˑ⌐ zílle, zílle, zìlle, ↗ˑ⌐ ʾɔ́šta šáwwa yomàne,↗ˑ⌐ mṭéle xa-náša sàwa. ↘⌐ 'The young one went on the road. He went along for six or seven days and came upon an old man.' (A24:7)

In constructions such as those described in §18.4., in which a boundary is expressed in the discourse by repeating the content of a clause, the first clause has major juncture and the repeated clause, which is presented as the onset of a new section, has minor juncture, e.g.

(12) qímela ʾan-tre-xéne zìle. ↘⌐ zílela ʾan-trè. ↗ˑ⌐ ʾap-o-gawàya↗ˑ⌐ mṭéle ða-mðìta. ↗ˑ⌐ 'The other two went off. The two went off. Also the middle one came to a town.' (A24:5–6)

(13) *t-yánnux xámši dináre kut-yàrxa.*↘¹ *kut-yárxa t-yánnux xámši dinàre,*↗↘¹ *ʾu-plúx mən-d-ànna paloxáye.*↘¹ 'I shall give you fifty dinars each month. Each month I shall give you fifty dinars, now work with these labourers.' (A24:5)

Clauses containing the existential particle that introduce a referent into the discourse frequently have minor juncture. This is because such clauses are closely connected with what follows in that they typically create the expectation that the ensuing clauses will elaborate further on the newly introduced referent, e.g.

(14) *ʾíθwa xa-màlka.* ↗↘¹ *ʾíθwale*↗↘¹ *ṭḷà bnóne.*↘¹ 'There was once a king. He had three sons.' (A24:1)

18.5.3. *Interrogative Clauses*

Interrogative clauses are uttered with a rise from a higher level of pitch than that of minor juncture (1–3). There is a short fall on syllables after the nucleus. The contour is represented here by the symbol ↗↘. Negative interrogative clauses that function as a device for drawing attention to preliminary background material (§18.2.1.) typically have a lower level of pitch than the normal interrogative contour (4). To distinguish these two levels of pitch the symbol of the lower level is qualified by the numeral 1 whereas the symbol for the regular interrogative contour has the numeral 2:

(1) *mò ṭ-óðət?*↗↘²¹ 'What will you do?' (A24:4)
(2) *kəmà t-yátli?*↗↘²¹ 'How much will you give me?' (A24:5)
(3) *mòdila?*↗↘²¹ 'What are they?' (A24:11)
(4) *ʾánna léla dmìxe,*↗↘¹¹ *ʾo-rábbən múttəlla ʾáqle díye rš-ắqəl bàxta.*↘¹ 'While they were asleep, the monk put his leg onto the leg of the woman.' (A16:11)

When a question is rhetorical and does not expect an answer, it may have a low fall intonation characteristic of major juncture, e.g.

(5) *máre qá-mo là?*↘¹ 'He said "Why not?"' (A24:7)

18.5.4. *Asseverative Clauses*

Clauses that are intended to make a forceful asseveration are uttered by speakers with a very high level of pitch, higher than the interrogative pitch contour. It includes a rise and fall. This will be represented as pitch level 3 by the symbol ´`³. This type of pitch is typically used, for example, in asseverations containing the negative particle *la* (cf. §17.2. and §17.7.14.2. iii):

(1) *la-hóle mìθa.*´`³¹ 'He is indeed dead.' (A17:2)
(2) A: *štélux čàyux?*´`²¹ B: *la-štèli!*´`³¹ 'A: "Have you drunk your tea?" B: "Indeed I have drunk it!"'

SYNTACTIC SUBORDINATION OF CLAUSES

19.1. Relative Clauses

Relative clauses may be attributive and modify a head nominal or they may stand independently of a head nominal and have themselves the status of a nominal. We shall refer to these types as attributive relative clauses and nominal relative clauses respectively.

19.1.1. *Attributive Relative Clauses*

Relative clauses that have attributive function are always placed after the nominal that they modify. They may be explicitly connected to the head nominal by the relative particle *D*, which is either prefixed to the first word of the clause or is suffixed to the end of the head nominal, e.g. *kut-yala ṱ-aθe laxxa ~ kut-yaltə ʾaθe laxxa* 'Every child that comes here'. When the particle is prefix to the first word of the clause, the final /a/ vowel of the head noun is sometimes centralized to /ə/ as is the case when the particle is suffixed to it, e.g. *ʾáyya bráta šapìrtə ṱ-íla dmíxta kə̀sli* 'this beautiful girl, who has fallen asleep with me' (A26:6). The final /ə/ is occasionally elided, e.g. *ʾέ-dān ṱ-áθya kʸàlo* 'at the time that the bride came' (B8:32). A *D* particle is sometimes elided, but the final vowel of the head nominal remains /ə/ rather than /a/ as if it were still present, e.g. *ʾɛ-dɛ́rtə zədyálux gáwa díya* 'the enclosure in which you threw it' (< *ʾɛ-dɛrtət* A15:18).

Constructions with the particle *D* may be termed syndetic relative clauses. Attributive relative clauses may also be placed after the head nominal asyndetically, without the particle. The distribution of syndetic and asyndetic attributive relative clauses is conditioned to a large extent by the definiteness of the head nominal. A distinction should also be made between restrictive relative clauses, which limit the reference of the head noun, and non-restrictive ones, which present supplementary information concerning a nominal without limiting its reference. This difference in function sometimes gives rise to distinct syntactic structures.

19.1.1.1. *Definite Head Nominal*

(i) *Restrictive Clauses*
When the head noun is definite, i.e. it has a specific identifiable refer-
ent or refers to an identifiable generic class, a restrictive relative clause
is syndetic. The clause has the function of an attributive modifier that
is embedded in the nominal phrase. It does not assert new information,
as is the case with an independent clause, but rather expresses informa-
tion that is presupposed to be known to the hearer. The clause supplies
a description that allows the hearer to identify the referent of the head
noun. The definite status of the head noun, therefore, is indissolubly
bound with the relative clause. In principle such a definite head noun is
introduced by an anaphoric demonstrative pronoun. This is usually the
default demonstrative pronoun, the basic function of which is to signal
that the referent of the noun is identifiable in the context to which it is
anaphorically linked. The restrictive relative clause, which is intended
to provide the means of identifying the referent, is sometimes the only
source of identification. The anaphoric link, therefore, is clearly internal
to the nominal phrase, e.g.

(1) *ʾan-suráye t-wáwa gu-Tùrkiya⌐ zílla l-ʾIrən.⌐* 'The Christians who were in
    Turkey went to Iran.' (B2:8)
(2) *šə̀dla,⌐ gu-d-a-ʾắra t-bằyət mattə̀tle.⌐* 'You put the sapling in the land that
    you like.' (B5:103)
(3) *ʾέ-baxta ṭ-àθya⌐ bằyən gawrə̀nna⌐ lázəm mtanyáli ða-qəṣṣə̀tta.⌐* 'The woman
    who comes and I shall marry must tell me a story.' (A36:1)

In these constructions it can be said that the demonstrative is a correlative
with the relative particle. The demonstrative binds the head noun tightly
with the relative clause. This is because the interpretation of the noun with
the demonstrative depends on the relative clause and it cannot be inter-
preted successfully without it.
    In some cases the referent of the head noun has been mentioned in
the preceding context. Even here, however, the restrictive relative clause,
with which the head noun is syntactically linked, can be regarded as the
primary anaphor of the demonstrative and here also it has a correlative
function, e.g.

(4) *ʾέ-bratət malušíwala jùlle⌐ ṭ-oðíwala ʾax-kàlo.⌐* 'They made the girl whom
    they dressed in clothes like a bride.' (B7:2)

(5) *ʾɛ-dɛ́rtə zədyálux gáwa díya kúlla genàwela.*ˈ '(As for) the enclosure in which you threw it, they are all robbers.' (A15:18)

The relative clauses in (4) and (5) can be interpreted as restrictive, in that the head noun requires further description to ensure that the correct referent is distinguished from other possible members of the set of items named by the noun that are associated in some way with the context and are, therefore, available as possible referents for the noun. The purpose of the relative clause, therefore, is not to supply further information but rather to assist in the identification of the referent. The anaphoric demonstrative, which invites the hearer to seek the identification of the referent of the noun in the surrounding context, would naturally be interpreted in the first instance as linked to the relative clause that is embedded in the nominal phrase.

Restrictive relative clauses are used also after head nouns that have an adverbial function, e.g.

(6) *ʾɛ́-šetət mɛ́θi qəm-yawə́lla xa-bróna zòra.*ˈ 'In the year they would die he gave them a small son.' (A4:57)

(7) *ʾáp-ana y-aθɛ́wa b-rèši hátxa*ˈ *ʾo-yómə ṭ-ínwa zòra.*ˈ 'They would come into also my head when (literally: in the day that) I was young.' (A26:12)

(8) *ʾɛ́-gət damə̀xwa,*ˈ *ṭḷaθà yomáθa*ˈ *ʾu-ṭḷaθà lɛlăwáθa háwe dmìxa.*ˈ 'When (literally: at the time that) he slept, he would be asleep for three days and three nights.' (A29:2)

(9) *ʾɛ́-dān ṭ-áθya kʸàlo,*ˈ *yawíwala mə̀šxa.*ˈ 'When (literally: at the time that) the bride came, they would give her oil.' (B8:32)

(10) *hál ʾo-yómət mɛ̀θən*ˈ *har-ʾúrxət ʾálaha dóqən b-ìði.*ˈ 'Until the day I die I shall always keep to God's way.' (A15:21)

In some cases the head noun of a restrictive relative clause has a speaker deixis demonstrative, e.g.

(11) *ʾána ʾap-dìya*ˈ *ʾáyya ʾúrxa ṭ-ín ʾána zála bíya dìya*ˈ *lè-y manšə́nna hál yomət-màwθa.*ˈ 'I shall not give up until the day I die the way I am following now.' (A21:35)

(12) *qímli zílli šqílli ʾáwwa júlla ṭ-íle gu-púmmət mzíðət pràge.*ˈ 'I went and took the cloth that is in the mouth of the bag of millet.' (A23:23)

(13) *xzi-ʾánna ṭḷa-nàše*ˈ *ṭ-íla príməlle tàwra,*ˈ *ṭḷáθna hon-yíwtəlla mòʿəd.*ˈ 'Take note that the three people who slaughtered the ox—I have made an assignation with the three of them.' (A22:21)

In cases such as (11)–(13) the speaker deixis demonstrative should be interpreted as having an anaphoric rather than an ostensive, i.e. 'pointing', function. As shown in §14.3.2., the speaker deixis demonstrative is often used with an anaphoric function where the speaker wishes to present the referent in question with close perspective. The relative clause is restrictive since it expresses presuppositional information that is intended to assist with the identification of the head noun.

The correlative function of demonstrative pronouns in restrictive relative clause constructions whereby they are linked by anticipatory anaphora to the following relative clause (14) is likely to have been modelled on nominal relative clauses (15):

(14) *ʾo-gáwṛa ṭ-île gu-bèθa*ˈ 'The man who is in the house'
(15) *ʾo-ṭ-île gu-bèθa*ˈ 'He who is in the house'

In nominal relative clauses such as (15), which are always restrictive, the demonstrative occurs as the obligatory head of the clause, which cannot stand independently. The construction (14) can be regarded as an internal expansion of (15), whereby the nominal head is an extension of the pronominal head.

(ii) *Non-restrictive clauses*

Non-restrictive relative clauses following definite head nouns are semantically closer to independent clauses than attributive modifiers. Their purpose is to supply an additional description of a referent that is assumed to be already identifiable. They are, therefore, assertive rather than presuppositional, though the syntactically subordinate structure has the effect of presenting the information as backgrounded. Examples:

(1) *máre ṭla-Žìne,*ˈ *t-băyéla Mằmo*ˈ 'He said to Zine, whom Mămo loved' (A26:64)
(2) *zìlɛle*ˈ *mùkləlla táwre t-wɛ́wa zráya.*ˈ 'He went and stopped the oxen, which were ploughing.' (A9:5)
(3) *qímle b-zdáya m-xálme díye t-wɛ́wa xə̀zyəlle.*ˈ 'He began to be afraid of his dream, which he had dreamt.' (A8:19)
(4) *ʾu-ʾup-báxte dìye*ˈ *ṭ-île gwìrəlla*ˈ *rába hawnàntɛla.*ˈ 'Also his wife, whom he had married, was very clever.' (A17:21)

It can be seen that in some cases the relative clause is separated from the head noun by an intonation group boundary. This feature, however, is not

exclusive to non-restrictive relative clauses, as can be seen in (13) in section (i) above, where it occurs in a construction with a restrictive clause.

In (5) it is separated from the head not only by an intonation group boundary but also by intervening components of the clause:

(5) *nə́mu ʾáyya bə́rke d-ènila¹ ṭ-it-ʾáti sxáya gàwa?ˀ¹* 'Whose is this pool in which you are swimming?' (A25:61)

The non-restrictive relative clauses in constructions such as (1)–(5) may express information that is familiar to the hearer, but, crucially, the speaker is presenting them as assertions, albeit in some cases recapitulatory, rather than as presuppositions. Sentences with an embedded non-restrictive relative clause, therefore, contain two assertions, the truth of which can be assessed independently of one another. In (1), for example, there are two assertions, viz. (i) 'He said to Zine' and (ii) 'Mămo loved Zine'. In a sentence with an embedded restrictive relative clause, on the other hand, there is only one assertion. Example (i 1), for instance, only asserts 'The Christians who were in Turkey went to Iran'. It does not entail the assertion 'The Christians were in Turkey'. If an unidentified head noun requires further delimitation in order for its referent to be identified, it is natural to link it with a description based on a familiar, presupposed proposition ('There were Christians in Turkey') rather than one based on an as yet unknown proposition. When the head noun is identifiable in that it occurs in a context where there is judged to be no possible confusion with other members of the set of items named by the noun, any further description must be assertive. As remarked, however, the syntactically subordinate status of this assertion in the non-restrictive relative clause presents it as background information. The informativeness of the clause may, indeed, be very low, as in (4), where the hearer would naturally assume that if a man has a wife, he would have married her! The construction can, however, be interpreted as the assertion of an event that is added as an afterthought, which would be equivalent to a sequence of clauses such as 'He married a woman. His wife was also very clever'.

The distinction between restrictive and non-restrictive relatives is based on the availability of other potential referents for the head noun in the particular context in which the construction occurs. In (6), for example, the clause can be interpreted as restrictive and presuppositional, since it occurs in a context where other girls are on the scene. In (7), on the other hand, there is only one basket on the scene, so the relative should be interpreted as non-restrictive and assertive.

(6) *ʾέ-bratət malušíwala jùlle*ˈ *ṭ-oðíwala ʾax-kàlo.*ˈ 'They made the girl whom
     they dressed in clothes like a bride.' (B7:2)

(7) *hat šmíṭle ʾɛ-sála t-wéwa zqìrəlla.*ˈ 'Until the basket which he had
     woven was shattered.' (A20:4)

In the context preceding (7), it has already been stated that the character
in question wove the basket. The assertion of the relative clause, there-
fore, must be expressing recapitulatory backgrounded information. An
assertion with such a low degree of informativeness appears, indeed, to
be closely related pragmatically to a presupposition. It is, no doubt, for
this reason that a relative construction is used to express both types of
clauses. Moreover the less informative the relative clause is, the more it
serves as a device to recapitulate and refresh the identification of the
noun, the closer it is in function to that of a restrictive relative clause.
The pragmatic relationship between a presupposition and an assertion
can be regarded as a continuum rather than a clear dichotomy, which
one can represent thus:

Presupposition > Recapitulatory backgrounded assertion > backgrounded
assertion > foregrounded assertion

It follows, therefore, that the relationship between restrictive and non-restric-
tive relative clauses is a continuum rather than a distinct dichotomy.
   A feature that is distinctive of many non-restrictive clauses is the absence
of a correlative demonstrative on the head noun that binds the head to the
relative clause. In examples (1)–(4) the head has no demonstrative. In some
cases the head noun has a demonstrative, but this cannot be interpreted
as having a correlative function. Consider the following cases:

(8) *xzìgən*ˈ *ʾáyya bráta šapìrtə ṭ-íla dmíxta kə̀sli.*ˈ 'Look at this beautiful girl,
     who has fallen asleep with me.' (A26:6)

(9) *ʾu-dɛréle rəš-d-ó-sela ṭ-íle núra xóθe xamìma.*ˈ 'They put it on the grid-
     dle, under which there is fire (and which is) hot.' (B6:47)

(10) *hat šmíṭle ʾɛ-sála t-wéwa zqìrəlla.*ˈ 'Until the basket which he had
     woven was shattered.' (A20:4)

In (8) the speaker deixis demonstrative is ostensive and points to the ref-
erent in the speech situation, the relative clause supplying an additional
description of the girl, which is not essential for identifying the referent
of the noun. In (9) and (10), already considered above, the head noun

has been mentioned previously and there are no competing referents in the context. The default demonstratives, therefore, can be interpreted as binding the noun anaphorically to the preceding context. Since, however, in both cases the relative clauses are low in informativeness and recapitulate information that has already been given, it can be said that they play a role of refreshing the identification of the head noun, especially since the head nouns have no other attributes that assist in identification. The demonstratives would, therefore, have some kind of anaphoric relationship also with the relative clause as well as with the mention of the noun in the preceding context.

In (11) the head noun has the demonstrative + indefinite article construction (ʾan-xa), which links the noun anaphorically with an earlier conversation in the memory of the interlocutor (§14.3.5.). The relative is non-restrictive, since the noun refers to the entire class and does not extract a sub-set of 'washing-boards' that is in contrast to another sub-set. As in (9) and (10), the content of the relative clause is recapitulatory in nature and is intended to assist refreshing the identification of the referent:

(11) qəm-qaṭlíle b-xaṭoryàθa,ˈ ʾan-xá xaṭoryáθa ṭ-ínwa màrəlluxˈ mási jùlle bíya.ˈ 'They killed him with washing-boards, the washing-boards which I was telling you they used to wash clothes with.' (B19:9)

The head of a non-restrictive relative may be an adverbial expression, as in constructions such as (12) and (13):

(12) ʾə́dyo ṭ-íla mìθta,ˈ hótu pšáma ʾə́lla díya.ˈ 'Today, when it has died, you are sad about it.' (A5:10)

(13) dìyaˈ t-xzéle málka dúnye ráya pàṛeˈ zawn-šlàmɛle.ˈ 'Now that the king has seen it raining lambs, it is the time of peace.' (A1:26)

A non-restrictive relative clause sometimes has the form of a nominal relative clause, with a pronominal head, placed in apposition to the antecedent noun, e.g.

(14) ʾína bráta d-o-Xáno Lapzèrin,ˈ d-o-t-wéwa bə́nya Dəmdə̀ma,ˈ bǎyáwa ta-brōn-màlka.ˈ 'But the daughter of that Xano the Golden Hand, who had built Dəmdəma, loved the son of the king.' (A11:17)

(15) ʾə́θyɛle ʾo-gàwṛa díya,ˈ ʾo-t-wéwa mùθyəlla.ˈ 'That husband of hers came back, the one who had brought her.' (A12:53)

(16) *máre ṭla-xuláme dìye*ˈ *ˀo-t-wéwa ˀə́θya mən-ṣèda*ˈ 'He said to his servant,
who had come from the hunt' (A25:54)

(17) *m-yə̀mmin šmítəlla ˀáyya,*ˈ *m-bnōn-mámi ˀan-t-wéwa gòṛe.*ˈ 'I heard this
from my mother, from my cousins, who were older.' (B8:5)

These types of construction typically occur where the referent of the
head noun is unambiguously identifiable due to the noun being a proper
noun (15) or a noun that is delimited by a pronominal suffix (16–17). The
head noun is, therefore, not dependent on the relative clause either for
primary identification (restrictive) or for a refreshment of identification
as in (9) and (10) described above. The relative clause, therefore, can be
said to be pragmatically more independent from the head nominal than
is the case with restrictive constructions and constructions such as (9) and
(10). This greater degree of pragmatic independence is reflected by a
greater degree of syntactic independence, in that the nominal relative is
potentially a free-standing item, which is in apposition to the preceding
noun. An attributive relative clause without this opening demonstrative,
on the other hand, is a dependent modifier and is linked indissolubly to
the antecedent noun.

Note that in (14) and (15) the antecedent noun has a demonstrative,
which refers anaphorically to the preceding context. In (14) the genitive
particle that is attached to the head noun (*d-o-Xáno Lapzèrin*) is repeated
on the appositive relative phrase (*d-o-t-wéwa bánya Dəmdə̀ma*). For this phe-
nomenon in other appositional constructions see §14.7.

In (18) an appositive type of non-restrictive relative clause follows a head
noun whose referent is a generic class and so is assumed to be identifiable:

(18) *béna ˀíθ linyàθa,*ˈ *lìne,*ˈ *linyáθa ˀan-ṭ-íla ˀàxðaṛ.*ˈ 'There were pots, pots,
pots, which are green.' (B10:75)

In some cases clauses expressing supplementary background information
which could be translated idiomatically into English by a non-restrictive
relative clauses are presented as an independent clause juxtaposed asyn-
detically after a definite noun, e.g.

(19) *ṣléla yómət trè*ˈ *ˀal-fằqih,*ˈ *ˀítle dəkkàna.*ˈ 'She went down the next day
to the jurist, who had a shop.' (A22:16)

(20) *módi bəd-manáyə d-áyya ṭàsa*ˈ *dàwa,*ˈ *šqilálən m-àxxa,*ˈ *nəblálən gu-d-yáha
dèrta.*[?]ˈ 'What about the meaning of that golden bowl, which we took
from here and took away to that house enclosure?' (A15:17)

19.1.1.2. *Indefinite Head Nominal*

When the head nominal is indefinite, an attributive relative clause may be syndetic or asyndetic.

(i) *Restrictive Clauses*

When the relative clause after an indefinite head noun is restrictive, the construction is usually syndetic. Only an indefinite noun with a non-specific referent can have a restrictive relative clause. The restrictive relative clause does not assist in identification of the referent, since indefinite nominal phrases in principle have an unidentified referent. Rather the clause narrows the extension of the set denoted by the noun. In many cases the indefinite noun has a universal quantifier (*kut, kull*). The verb in the relative clause is either in a realis form (1–3) or in an irrealis form (4–6):

(1) *kú-dukə ṭ-íla mɛθə̀tlali.*ˈ 'Bring her to me wherever she is.' (A4:8)

(2) *xáðrəx xázexi xa-nàša*ˈ *ṭ-íle palàxa*ˈ *ʾu-t-yáxla ʾə́lle dìye.*ˈ 'Let's look and find a man who is a hard worker and give her to him.' (A21:3)

(3) *kú-məndi ṭ-ítley t-yáwi ʾə̀llux.*ˈ 'They will give you everything that they have.' (B7:7)

(4) *ku-nášt ʾàwər,*ˈ *ku-xayúθət ʾáwər gu-d-ay-wàdi*ˈ *ʾánna šəkwáne ṭ-axlìla.*ˈ 'Any person who enters, every living thing that enters in this valley, the ants will eat it.' (A14:55)

(5) *hátxa xazə̀xwale*ˈ *ku-dùkθa ṭ-awéwa.*ˈ 'We would see him wherever he could be.' (B9:29)

(6) *kúl-naša ṭ-awéle xa-bròna,*ˈ*…ʾi-nablíle l-ʾùmra.*ˈ 'Anybody who has a son,…they take him to the church.' (B6:35)

The difference between the constructions with the realis form and those with the irrealis form relates to commitment of the speaker to the existence of the class denoted by the nominal phrase. As remarked, in all cases the nominal has a non-specific referent. When the realis is used, the speaker is committed to the existence of at least one referent in the class denoted by the phrase, although he is not referring to one particular member of this class. In (1) the speaker is committed to the existence 'a place where she is', i.e. that there is some place where she is to be found. In (2) the implication is that there is some man who is a hard worker, though the speaker is not referring to anyone particular in this class. In (3) the implication is that the people in question have some possessions that they can give. When, on the other hand, the irrealis is used, the speaker is not committed to the existence of any referent in the class. The existence

of such a referent is only hypothetical and the class may be empty.[1] In (4) the speaker is not committed to the existence of a person who enters the valley, but presents it as a hypothetical possibility. It is, therefore, equivalent to the hypothetical conditional construction 'If a person were to enter…'. In (5) the speakers are not committed to the existence of any place where the man in question is to be found, i.e. he has disappeared. In (6) the speaker presents the birth of a son to a person as a possibility (= If somebody has a son…) rather than a certainty (= When somebody has a son…). It is presented as a hypothetical case with regard to one representative individual of the set.

It should be noted that in some cases, particularly in subordinate clauses, the *qaṭəl* or *qaṭəlwa* forms are used in a habitual indicative sense and so are not formally distinguished from their irrealis usage (§15.1.1.3., §15.1.2.2.). The realis or the irrealis meaning of the verb in the relative clause must, therefore, be deduced from the context. In a construction such as (7), for example, where there is an explicit statement of the existence of referents of the class, the verb must be interpreted as realis:

(7) *ʾíθwa baxtáθa t-yắði t-yàpi.*[1] 'There were women who knew how to bake.' (B5:16)

The use of the realis copula in the relative clause modifier of the predicative noun in (8) commits the speaker to the fact that the person was a good man who brought the coins. What he is denying is that he became such a man of his own accord:

(8) *lɛt-ʾáti wíya xoš-náša ṭ-it-múθyəlla ʾánna zùze.*[1] *záwna wíyɛle t-šlàma*[1] *ʾáp-ati píšlux nášət šlàma.*[1] 'You have not become a good man who has brought those coins. Time became one of peace and so also you became a man of peace.' (A2:26)

A *ṭ-* prefix attached to an initial /ʾ/ verb that has a future sense could, in principle, be interpreted as the future verbal prefix or the relative particle, e.g.

(9) *ku-bɛ́θa ṭ-àzeti*[1] *ʾáni t-yawìlux.*[1] 'Every home that you go to will give you something.' (B7:7)

------

[1] This may be compared to the use of the subjunctive in relative clauses in Romance languages such as French (cf. Kleiber 1987: 69–75).

(10) *ṭ-áwðət b-xàbri,*ˈ *kú-məndi ṭ-amrə̀nnux?*ˈ 'Will you act on my word, everything that I tell you?' (A15:5)

Occasionally the relative particle is omitted before a restrictive relative clause that modifies an indefinite head noun, e.g.

(11) *kút-dukθa ʾáza ʾàwra*ˈ *ʾáp ya-xéta bàra lázəm háwya.*ˈ 'Every place that she goes to and enters, the other has to follow after her.' (B12:2)

(12) *kút-dana sanqìwa,*ˈ *ʾu-šaqlíwa mən-d-ɛ-tǔtun.*ˈ 'Whenever they needed it, they took some of that tobacco.' (B7:18)

(13) *xá-naša l-xóðe lítle la-bába la-yə́mma la-ʾàp-xa,*ˈ *ʾáw y-amrìle*ˈ *lìtle náše.*ˈ 'A man by himself, who does not have a father, a mother or anybody, they say that he has no relatives.' (A17:17)

(14) *ku-brónət bə́ṛ-naša ʾáθe l-d-áy jǎzíra qamàye,*ˈ *ʾáwwa ṭ-áwe málka diyèxu.*ˈ 'Whichever person comes to the island first, he will be your king.' (A14:46)

In some cases such an asyndetic clause occurs after a class term in predicative position, e.g.

(15) *mɛjíwale gu-míya šaxìne,*ˈ *p̂ɛšíwa dàwwe*ˈ *y-oðíwa bušàla bíya díya,*ˈ *ʾu-ḳótəl dàwke bíya díya.*ˈ 'They crushed it in hot water and it became yoghurt water, with which they would make stew and yoghurt pasties.' (B7:23)

(ii) *Non-Restrictive Clauses*

Unlike restrictive relative clauses, non-restrictive relative clauses may occur both after indefinite nouns with specific referents and also after those with non-specific referents.

In the text corpus there are numerous occurrences of indefinite nouns with a specific referent followed by a clause that can be rendered into English by a non-restrictive relative clause. In such constructions the non-restrictive clause is, in principle, juxtaposed asyndetically to the noun, e.g.

(1) *ʾìθwa*ˈ *xa-ràbbən,*ˈ *tíwɛwa gu-xa-gə́ppìθa.*ˈ 'There was once a monk who lived in a cave.' (A15:1)

(2) *ʾíθwa xa-nàša*ˈ *gu-ða-màθa,*ˈ *rába rába duglàna-wewa.*ˈ 'There was a man in a village who was a great liar.' (A48:1)

(3) *ʾíθwa xa-gə́ppa gáwe díye ʾàrbi hambišáye.*ˈ 'There was a cave in which there were forty giants.' (A24:54)

(4) *ʾíθwa xa-bustàna,ˈ ʾíθwa xabùše gáwa.ˈ* 'There was a garden, in which
     there were apples.' (A24:24)

(5) *ʾíθwa xa-ʾáǧa gu-Bɛ̀rwər,ˈ šə́mme Rašìd-bek.ˈ* 'There was an agha in
     Barwar whose name was Rašid Bek.' (B19:1)

(6) *qəm-xazéle xa-nàša̧ mìθa̧ nabóləlle mṭamòrəlle.ˈ* 'He saw a dead person,
     whom they were taking to bury.' (A17:1)

(7) *hon-də́ryəlle gu-xa-čále ʾamúqta lá-ʾaməs čù-ga čú-ga pàləṭ.ˈ* 'I put him in
     a deep hole from which he could never come out.' (A22:41)

(8) *ʾína hóla xá-qayəmθa kθíwta tàma,ˈ málka Šlémun kθìwəlla.ˈ* 'They found
     there an inscribed monument, which king Solomon had written.'
     (A14:55)

(9) *šqíltɛla xa-čánta hátxa mḷìθɛla.ˈ* 'She took a basket that was full like
     this.' (A22:13)

(10) *hón mquwálta m-xa-tèla̧ qəm-xalə́ṣli m-nə̀mra.ˈ* 'I have given a promise
     to a fox who has saved me from a tiger.' (A47:7)

In the light of this pattern of construction, the *ṭ-* particle on the verb in (11)
is best identified not as the relative particle but rather as a reduced form
of *bəd-* in a *bəd-qaṭəlwa* functioning as a sequential habitual (§15.1.6.3.):

(11) *ʾíθ xá ṭawálta xéta ṭ-amríwala ʾòrṭa.ˈ* 'There is another game, which
     is called *ʾorṭa.*' (B11:25)

If the non-restrictive relative clause is a copula clause, the copula is some-
times omitted, which is a reflection of the semantic dependence of the
clause on what precedes (§17.6.1.), e.g.

(12) *hóle θéle xa-nàša,ˈ rába qále basìma.ˈ* 'A man has come, whose voice is
     very beautiful.' (A25:46)

19.1.1.3. *Synopsis of Attributive Relative Structures*
The predominant trends in the distribution of the various attributive rela-
tive structures may be summarized as follows, where AN = Antecedent
Noun, S = relative clause, *D* = relative particle:

(i) AN—*D*—S

    Definite AN+ restrictive S
    Definite AN + non-restrictive S
    Indefinite AN + restrictive S

(ii) AN—ʾo-D—S

Definite AN + non-restrictive S

(iii) AN—S (asyndetic)

Indefinite AN + non-restrictive S
Indefinite AN + restrictive S
Definite AN + non-restrictive S

It can be seen that connection with D (i) and asyndetic connection (iii) are used for both definite and indefinite antecedent nouns. A connection with a demonstrative pronoun ʾo-D (ii) is available only for structures with a definite antecedent. The tendency to use a synthetic connection with D as opposed to an asyndetic connection depends on the definiteness of the antecedent and on the restrictiveness of the relative. There is a greater tendency to use the synthetic connection with the antecedent when it is definite than when it is indefinite and there is a greater tendency to do so when the relative is restrictive than when it is non-restrictive. These tendencies may be represented thus:

Definite   >   Indefinite
Restrictive>   Non-restrictive

The operation of these tendencies results in the fact that the synthetic connection may be used with an indefinite antecedent, but this is limited to restrictive relatives. With definite antecedents, on the other hand, the synthetic connection has a wider distribution and may be used also with non-restrictive relatives. The appositional type of connection with ʾo-D is available only for non-restrictive relatives with a definite antecedent. The distribution of the various connection strategies may be represented in the following table, in which the line running to the right of an item (——|) indicates the extent of the distribution of this item:

	Restrictive	>	Non-restrictive
Definite AN:	D———————————|ʾo-D	Ø	
Indefinite AN:	D—	Ø———————————	

From a comparative point of view, it is worth noting that the appositional type of relative clause with ʾo-D has a wider distribution in some NENA

dialects. In J. Arbel, for example, this type of structure is frequently used
to express restrictive as well as non-restrictive relatives, e.g.

 (1) *ḥéleq ʾo-t-la-yàlwa,*¹ *ʾìtwa našé xeṭíwa ta-ġér našé.*¹ 'Anyone who did not
   know (how to sew)—there were people who sewed for others.' (Khan
   1999: 387)
 (2) *kré ʾo-t-lošîlu*¹ 'The suits that they wear' (Khan 1999: 388)
 (3) *ʾiyyá məndixanòx ʾo-t-mírox baqí.*¹ 'Here are the things of yours that you
   asked me for.' (Khan 1999:388)

The situation in C. Barwar, in which the appositional construction is
restricted to non-restrictive relatives may be regarded as typologically
more archaic. As remarked above, the looser syntactic connection of the
appositive nominal relative corresponds iconically to the looser pragmatic
connection of the non-restrictive relative to the antecedent noun. In
J. Arbel the apposition construction has been generalized from non-
restrictive to restrictive clauses. This has come about, no doubt, due to
the aforementioned lack of clear pragmatic dichotomy between the two
types of relatives.

19.1.2. *Nominal relative clauses*

Relative clauses that do not modify a head nominal but are themselves
referential expressions with the status of a nominal can be classified as
follows.

19.1.2.1. *Demonstrative Pronoun as Head*

A nominal relative clause that contains the relative particle *D* in principle
must have some kind of pronominal head. The particle *D* itself, although
historically a pronoun in origin, no longer functions as a pronoun and
cannot act as the head of the relative clause. Nominal relative clauses
often take pronominal heads in the form of an anaphoric demonstrative
pronoun placed before the *D* particle. This is usually the default series of
demonstratives, though occasionally speaker deixis demonstratives are used
in this way. The anaphoric pronoun refers proleptically to the referent
described in the relative clause and is not dependent on mention in the
preceding context. All such constructions are restrictive relatives:

 (1) *ʾo-ṭ-íle plíxa ʾàw bt̞-áxəl.*¹ 'He who has worked will eat.' (A21:15)
 (2) *ʾó-t là páləx*¹ *lè y-áxəl.*¹ 'He who does not work will not eat.' (A21:13)

(3) ʾo-t-ṭáyən nàše,¹ ṭáyən mə̀ndi,¹ ʾáw y-amríle ḥammàla.¹ 'Somebody who carries people, carries something, he is called a porter.' (A22:36)

(4) ʾo-ṭ-ítle dawèra¹ máṣle dawère.¹ 'Whoever had a pack animal, would bring down his pack animal.' (B5:120)

(5) ʾa-ṭ-ìla ṭláli¹ ʾawðánna trè-qəsme.¹ 'The one that is for me I'll divide into two parts.' (A21:28)

(6) ʾan-ṭ-íla qam-tắra ṭ-áθi gawàye.¹ 'The ones that are outside come inside.' (B11:9)

(7) ràbbən¹ ʾáwwa ṭ-i-sàxəð l-ʾálaha¹ ʾu-ṭ-i-mṣàle-u¹ lé-y-ʾaxəl bə̀sra-w¹ 'A monk (is) somebody who worships God, who prays and does not eat meat.' (A15:4)

(8) ʾánna ṭ-íla gawàye¹ plíṭela qam-gùtta.¹ 'The ones who are inside went out after the ball.' (B11:11)

(9) ʾánna kúlla t-wiðíli qámux¹ ðìlux módila?¹ 'All these things that I have done in front of you—do you know what they are?' (A23:20)

In (10) the pronominal head is combined with a partitive expression:

(10) ʾo-mənnéxu t-dàqər¹ b-Mằmo,¹ m-áxxa hál qaṣrət-mìra¹ ṭ-oðə́xle də̀mma.¹ 'Whoever of you touches Mằmo, we shall scatter his blood from here until the palace of the prince.' (A26:68)

19.1.2.2. *Indefinite Pronoun as Head*

The cardinal particle *xa* may be used as an indefinite pronoun at the head of a relative clause. In such cases it generally refers to a human referent ('anybody', 'somebody'). As is the norm with indefinite antecedents, the construction is syndetic if the referent is non-specific (1) but asyndetic if it has a specific referent (2)–(3):

(1) lɛ́le šwíqa xá t-xayǝ́ple ʾímət màyəθ.¹ 'He has not left anybody who would wash him when he dies.' (D2:77)

(2) ʾíθwa xá Pǝ̀tto-wewa šə́mme.¹ 'There was somebody whose name was Pǝtto' (B19:5)

(3) ʾíθwa xa-honàna-wewa.¹ 'There was a person who was wise.' (A14:8)

In a similar manner, the quantifier *raba* can be used pronominally as an indefinite head, as in (4):

(4) ʾíθwa rába ʾi-zăríwala čèri.' 'There were many who sowed it in
      Autumn.' (B5:15)

19.1.2.3. *Quantifier* kut *as Head*

A nominal relative may be introduced by the quantifier *kut*, which has
generic reference ('whoever…'). This is derived historically from the phrase
*kul-xa-d < *kull-ḥaḏ-d 'each one that', which contains both the head of
the relative clause *ḥaḏ 'one' and also the relative particle:

(1) kùt la-pálax' gu-d-áwwa bèθa' ʾixála lè y-áxəl.' 'Whoever does not work
      in this house will not eat food.' (A21:13)
(2) kút ʾáθe gu-ʾúpra dìyi' lázəm ʾáwəð ʾaskarìya.' 'Whoever comes to my
      land, must serve in the army.' (A17:22)
(3) kút maṭéwa qamáya jàldəlle' mɛθèwale.' 'Whoever was the quickest and
      reached it first would bring it back.' (B5:154)
(4) kút šaqə̀lwale' ʾaw-qrìmwale.' 'Whoever picked it up would win.'
      (B15:33)
(5) kúṭ-ile ferə́ssa ʾáθe ʾàxxane.' 'Whoever is a warrior, let him come here.'
      (A29:59)
(6) kut-bằ̀yət' t-yánnəx ʾòlle dìye.' 'Whoever you love, I'll give you to him.'
      (A26:88)
(7) kut-mɛ́θela ʾána t-yánne zùze.' 'Whoever brings her back, I'll give
      money to him.' (A27:30)
(8) ʾalpá-dáwe bəd-yáwəl ṭla-kút ʾamə́rre mòdile xə́lme.' 'He will give a thou-
      sand gold pieces to whomsoever tells him what his dream is.' (A1:12)
(9) ʾu-sáprət kuṭ-áθe làxxa.' 'Wait for whoever comes here.' (A22:23)

In (10) a nominal relative is used independently in a street call:

(10) qréli hátxa kut-záwən tàwra.ʾ' 'I cried out like this "(Is there) anybody
       who will buy an ox?"' (A22:7)

19.1.2.4. *Interrogative Particle as Head*

A relative clause can be introduced by the interrogative particle *mo/modi*
'what'. When linked to a following relative clause, this produces a nomi-
nal phrase that refers to a class of entities. In a similar type of structure,
the head of the clause may be an adverbial interrogative, such as *ʾɛka*
'Where?,' which forms subordinate clauses with an adverbial function.
Relative clauses with interrogative particles as heads often have a generic
reference ('whoever, whatever, wherever, etc.'), especially when they are
placed at the beginning of the sentence.

(i) *mo/modi*

(1) *mo-bṭ-amrálux bṭ-àwðət.*¹ 'You must do what she says.' (A8:92)
(2) *mšaróyela kθàwa*¹ *bεθwáθət nàše*¹ *ʾu-mo-ṭ-itlèy.*¹ 'They start registering the houses of people and what they have' (B1:16)

When such relative phrases are in clause initial position, they are sometimes resumed by a correlative element. In (3) and (4) this is the anaphoric adverbial *hadəx*. In (5) the correlative has the form of another interrogative pronoun:

(3) *màlka*¹ *mo-ṭ-ámərrey ṭ-óði hàdəx.*¹ 'Whatever the king tells them they should do.' (A8:9)
(4) *mo-ṭ-ámrət wúð hàdəx.*¹ 'Do whatever you think best (literally: you say).' (A8:17)
(5) *módit snìqa*¹ *mo-ṭ-óðəxxa ṭlàlux.*¹ 'Whatever you want, (that is) what we shall do for you.' (A6:9)

In (1) and (5) the construction is asyndetic whereas in (2) it is syndetic. When the verb in the relative clause is an initial /ʾ/ verb used in a future sense, as in (3), (4) and the second phrase of (5), the status of the *ṭ-* is ambiguous, in that it may be interpreted either as the relative particle or the future particle.

Similar inclusive classes of entities can be expressed with relative phrases introduced by the word *məndi* 'thing', which is often combined with the universal quantifier *ku-* 'every'. These constructions are either synthetic or asyndetic, e.g.

(6) *ʾu-mándi-t pàyəš*¹ *ʾaṣə́rta xa-rámša xùlle.*¹ 'Whatever is left eat in the evening for dinner.' (A42:4)
(7) *kú-məndi-t bä́yət wùdli.*¹ 'Do to me whatever you want.' (A25:14)
(8) *ku-mándi bä́yi xoš-ʾòði.*¹ 'They may do whatever they want.' (A14:46)
(9) *mεθíwa ləxma*¹ *yán bə̀sra,*¹ *yán ku-mət-ʾìle.*¹ 'They would bring bread or meat, or whatever there was.' (B15:87)

(ii) *ʾεka*

The attested examples of this include both synthetic constructions with the *D* subordinator and also asyndetic ones without this particle, e.g.

(1) *gu-d-ε-dàna,*¹ *ʾέkεyεwa mùṭye*¹ *pə́lgət yòma*¹ *táma y-axlíwa kùlla.*¹ 'At that time, wherever they had got to, at midday they all ate.' (B5:62)

(2) *ʾɛ́ka ṣàṭqa*ˈ *tàma zăréti.*ˈ 'Wherever it (the dog) squats, there you should cultivate.' (A30:4)

(3) *y-azíwa nablìwale*ˈ *l-šaqìθa*ˈ *yán l-hàmmam,*ˈ *ʾɛ́kət ʾìle.*ˈ 'They went and took him to a channel or a wash house, wherever it was.' (B15:74)

A similar sense is expressed by relative clauses headed by the phrase *ku-dana* 'every time, any time':

(4) *ku-dána sànqət,*ˈ *maqðə̀tla,*ˈ *ʾána ṭ-áθyən làxxa.*ˈ 'Whenever you need (me), burn them and I shall come here' (A24:49)

19.1.2.5. *No Head*

Nominal relatives with no explicit syntactic expression of the head are mainly found either after existential particles or in naming constructions with the verb *ʾmr*. In all cases the zero head has the sense of an indefinite pronoun with a specific referent ('some', 'something') and the relative clause is non-restrictive. In most cases the relative clause is asyndetic and is not introduced by the particle:

(i) *Existential Constructions*

These mainly refer to plural groups:

(1) *ʾíθwa zamríwa diwàne.*ˈ 'There were some who would sing *diwane*.' (B5:11)

(2) *ʾíθwa băyɛ́wa dɛrɛ́wa gə̀lla gáwa.*ˈ 'There were some who liked to put herbs in it.' (B5:167)

(3) *ʾíθwa gu-ʾáθra har-šuléy ʾàwwɛwa.*ˈ 'There were some in the country whose job was (to do) this.' (B5:168)

In (4) and (5) the referent is singular:

(4) *ʾíθ pálṭa zùrta.*ˈ *ʾɛ-zúrta ʾáy zadìwala.*ˈ 'There was something (of the tobacco) that came out (as) small (pieces). This small stuff—they threw that away.' (B7:17)

(5) *ʾáw brōn-málka rába šapìrɛle*ˈ *ʾu-hawnànɛle,*ˈ *ʾína ʾíθ ʾax-díye ʾáp-ay šapírta-w hawnánta brátət málkət maʾàrwa ṭ-ámrəx.*ˈ 'That son of a king is very good-looking and clever, but there is someone who is good-looking and clever like him, the daughter of the king of the West, let's say (i.e. we shall give her this name for the sake of the story).' (A4:3)

In (6) the relative clause is syndetic, with the particle *D*:

(6) *ʾíθwa ṭ-iwέwa ṣə́lye ḥabbanìyya*ˈ…*múθye makàyən.*ˈ 'There were some who had gone down to Ḥabbaniyya…and brought back machines.' (B10: 45)

(ii) *Naming Constructions*
The name of the item in question takes the nuclear stress and is placed either in the default position after the verb or is fronted before the verb to give it added prominence:

(1) *dɛréwa ṭ-amráxxa guttàθa.*ˈ 'They put (on it) what we call "balls."' (B5:39)
(2) *béna náše y-áwa múθye táma halbát ṭ-amráxxe kàde.*ˈ 'People would have brought there what we call *kade.*' (B5:59)
(3) *ʾánna ʾíla prìsta y-amríwala ʾέ-ga.*ˈ 'These things are what were called at that time "a spread."' (B5:201)
(4) *ʾíθwa hambišàye y-amráxla.*ˈ 'There were what we call "giants."' (A24:54)

If the asyndetic relative phrase is the complement of a preposition, the preposition remains on the noun it relates to, even when this noun is not at the front of the phrase, e.g.

(5) *kút-xa y-áwe gu-bὲθe*ˈ *ʾu-heywáne y-áwa mánne dìye,*ˈ *har-gu-gòma y-amráxxe.*ˈ 'Everybody is in his home and his animals are with him, in what we call "the basement stable."' (B5:116)
(6) *ʾáw ʾo-ṭ-ítle qàmxa*ˈ *nabə́lle ṭ-ámrəx l-tanùra.*ˈ 'Somebody who has flour takes it to what we call the oven.' (B5:117)

When the item that is named has been mentioned previously and is definite, it takes a demonstrative pronoun as the head of the relative phrase, e.g.

(7) *qa-t-lá-ṣala míya gàwe*ˈ *d-ó ṭ-ámrəx huðàla.*ˈ 'so that the water does not go down into what we call a fodder stack.' (B5:114)

(iii) *Other Cases*
Asyndetic nominal relatives are sporadically found in other contexts, e.g.

(1) *gu-máθa θéla mṭéla l-be-ʾabònɛwa.*ˈ 'They came to the village and went to what was the house of the bishop.' (B1:17)

(2) *Bálbəl Hazàr*' *'ile múθyəlla lèle 'úrza.*' 'Bəlbəl Hazar—the one who
brought her who was not a man.' (A8:84)

19.1.3. *The Internal Structure of Relative Clauses*

In syndetic relative clauses, which open with the particle *D*, the enclitic
copula is regularly attached to the particle. Ample illustration of this can
be found among the examples that are cited above. The copula is always
in its enclitic form. The emphatic copula is avoided in this syntactic con-
text (§15.3.3.). The phenomenon whereby the copula is attached to the
relative particle can be linked to the practice of moving the copula onto
prominent items in main clauses (§15.4.1.4.1., §17.1.1.2.). The item may
be a prominent focus of new information or may be topically prominent,
in that it is the central concern of the speaker. In relative clauses it is the
latter type of prominence that is involved. The referent of the antecedent
noun, represented by the *D* particle in the embedded clause, is the main
topical concern of the clause.

On some occasions the copula bears the nuclear stress of the intona-
tion group, e.g.

(1) *'u-díṛɛle ṣ́lyɛle rəš-d-ɛ̀-'ɛna,*' *'ɛ-'ɛ́na ṭ-ìle 'ə́θya qamáye réša.*' 'He went back
down to the spring, the spring to which he had come previously.'
(A26:32)

(2) *'ó-yōm ṭ-ìle plíṭa*' *bróne díye mìθɛle.*' 'The day that he went out, his son
died.' (A4:32)

If the relative clause is asyndetic, on the other hand, the copula is not
placed in initial position. In the attested examples of these constructions,
the copula is normally either attached to the predicate, e.g. §19.1.1.2. ii (1,
2, 8, 9), §19.1.2.2. (2, 3), or is omitted, e.g. §19.1.1.2. ii (5). An exceptional
case is (3), in which the copula is placed at the front of the clause, as in
syndetic constructions:

(3) *hadíya mtánənnux ða-qəṣṣ̀tta*' *tunìθa*' *'ile šə́mma dìya*' *tála 'u-làqləq.*' 'Now
I shall tell a story, a story whose name is "The fox and the stork."'
(A45)

When a syndetic relative clause contains a verb, this is regularly placed
immediately after the relative particle *D*, with a subject or any other
constituent following it, e.g.

(4) ʾέ-dān ṭ-áθya kʸàlo,ˈ yawíwala màšxa.ˈ 'When (literally: at the time that) the bride came, they would give her oil.' (B8:32)

(5) ʾo-mənnéxu t-dàqər ˈ b-Mằmoˈ 'whoever of you touches Mămo…' (A26:68)

When the referent of a definite antecedent noun has the role of direct object in the relative clause it is resumed by a pronominal object pronoun, whether the clause is restrictive or non-restrictive, e.g.

(6) ʾέ-bratət malušíwala jùlleˈ ṭ-oðíwala ʾax-kàlo.ˈ 'They made the girl whom they dressed in clothes like a bride.' (B7:2)

(7) máre ṭla-Žîne,ˈ t-bằyéla Mằmoˈ 'He said to Zine, whom Mămo loved' (A26:64)

The resumptive pronoun may be in a clause embedded within the relative clause, e.g.

(8) ʾέ-baxta ṭ-àθyaˈ bằyən gawrờnnaˈ lázəm mtanyáli ða-qəṣṣ̀tta.ˈ 'The woman who comes and I shall marry must tell me a story.' (A36:1)

In the relative clause of (9) the clause embedded under the verb bằyət 'you want' that would have contained the resumptive pronoun has been elided:

(9) šˀədla,ˈ gu-d-a-ʾằra t-bằyət matt̀tle.ˈ 'The sapling—you put it in the land that you want (to put it in).' (B5:103)

When the antecedent noun is indefinite with a non-specific referent and the relative clause is restrictive, there is generally no resumptive pronominal direct object, e.g.

(10) hálli xá-məndi ṭ-àxlən.ˈ 'Give me something to eat (literally: that I may eat).' (A26:57)

(11) kú-mdit t-yáwəl ṭlàluxˈ ʾáp ta-šwáwux t-yáwəl trè.ˈ 'Everything that he gives to you, he will give also to your neighbour, twofold.' (A3:4)

(12) kú-məndit bằyət,ˈ módi mărằd lờbbuxˈ ṭ-oðànne!ˈ 'Whatever you want, whatever your heart's desire is, I shall do it!' (A33:11)

(13) ʾáwwa kú-mdit mṣawíθwa Čùxo,ˈ Čùxo,ˈ Čùxo.ˈ 'Everything that he spoke (= on every occasion that he spoke) (people would say) Čuxo, Čuxo, Čuxo.' (A7:1)

When the interrogative pronoun *mo* 'what' functions as an indefinite pronoun at the head of a restrictive relative, there is likewise no resumptive object pronoun, e.g.

(14) *mo-ṱ-ámrət wúð hàdəx.*ˈ 'Do whatever you say (= whatever you think best).' (A8:17)

When, on the other hand, an indefinite antecedent noun has a specific referent and the following clause is non-restrictive, a pronominal object suffix is used, e.g.

(15) *qəm-xazéle xa-nàša*ˈ *mìθa*ˈ *nabólɨlle mṭamòrɨlle.*ˈ 'He saw a dead person, whom they were taking to bury.' (A17:1)

(16) *ʾína hóla xá-qayɨmθa kθíwta tàma,*ˈ *málka Šlémun kθìwɨlla.*ˈ 'They found there an inscribed monument, which king Solomon had written.' (A14:55)

(17) *ʾítlən xá-məndi bắyəx ṱ-oðə́xxe ṱlàləx.*ˈ 'We have something (in mind) which we want to do for you.' (A4:48)

This distribution of resumptive pronominal suffixes can be interpreted as reflecting the different syntactic status of restrictive and non-restrictive relative clauses. In restrictive clauses the head nominal, or at least the relative particle *D*, is treated as the direct object of the verb in the clause. Since indefinite objects in principle do not take object agreement suffixes (§15.13.2.2.), there is no resumptive agreement suffix on the verb. The occurrence of the pronominal suffix in non-restrictive clauses reflects the fact that they have the status of independent clauses. Since, on the other hand, definite direct objects in principle regularly co-occur with pronominal agreement suffixes, this distinction in structure is not reflected in the suffixes and the pronominal suffix occurs in both restrictive and non-restrictive clauses.

If the referent of the head nominal is the complement of a noun in the relative clause, it is obligatorily represented by a resumptive pronoun, e.g.

(18) *ʾíθwa xa-ʾáġa gu-Bɛ̀rwər,*ˈ *šɨ́mme Rašīd-bek.*ˈ 'There was an agha in Barwar whose name was Rašid Bek.' (B19:1)

(19) *ʾáxtu kúllɛxu c̃ǝdetu*ˈ *l-bɛ́θət màlka*ˈ *ṱ-íla Gozáli ʾu-Nozáli gu-bēθ-dìye.*ˈ 'You are all invited to the house of the king, in whose house Gozali and Nozali are staying.' (A8:89)

When the antecedent noun has the syntactic relation of an adverbial in the relative clause that could be expressed without a preposition, there is generally no pronominal resumption when the clause is restrictive. This is the case with temporal adverbials (20–22) and the destination of verbs of movement (23) (§14.13.):

(20) *hál ʾo-yómət mɛ̀θən*' *har-ʾúrxət ʾálaha dóqən b-ìði.*' 'Until the day I die, I shall always keep to God's way.' (A15:21)

(21) *ʾɛ́-gət ʾan-yomáθa ṭ-awéwa ràba séra*'…*jămíwa kúlla ʾùrze,*' *jwànqe.*' 'On days when there was a lot of moonlight…all the men and youngsters gathered together.' (B11:3)

(22) *hót m-ó-yomə ṭ-íx ʾaxni-zíle ʾáti dóryəlle gu-zəndàna.*' 'From the day that we went away you have held him in prison.' (A26:76)

(23) *ku-béθa ṭ-àzeti*' *ʾáni t-yawìlux*' *là ṭarðílux.*' 'Every home that you go to will give you something.' (B7:7)

If the role of the head in the relative clause would be normally expressed by a locative preposition in an independent clause, the preposition is sometimes still omitted when the clause is restrictive. This is found where the locative role would be expected to be expressed by the preposition *gu-*, *b-* or *mən-*, e.g.

(24) *hátxa xaz̀ɔxwale*' *ku-dùkθa ṭ-awéwa.*' 'We would see him wherever he could be.' (B9:29)

(25) *xulása ʾaláha mutə́pqəlle gu-d-a-mðíta ṭ-íla ʾɛ-bráta d-o-màlka.*' 'In the end God made him come across the town where the daughter of that king was.' (A4:11)

(26) *də-púš làxxa*' *gu-d-ay-šwíθa t-wewa-dmíxa xònəx.*' 'Stay here, in the bed in which your brother slept.' (A8:68)

(27) *hon-dóryəlle gu-xa-čále ʾamúqta lá-ʾaməṣ čù-ga čú-ga p̣aləṭ.*' 'I put him in a deep pit from which he could never come out.' (A22:41)

In some cases, however, the preposition is used in a restrictive relative clause with a pronominal suffix resuming the head, e.g.

(28) *ʾɛ-dɛ́rtə zədyálux gáwa díya kúlla genàwela.*' '(As for) the enclosure in which you threw it, they are all robbers.' (A15:18)

(29) *mṭéle gu-tằrət ʾó-bɛθa ṭ-íla-wirta gàwe.*' 'He reached the door of the house in which she had entered.' (A34:11)

(30) ʾána ʾap-dìya¹ ʾáyya ʾúrxa ṱ-ín ʾána zála bíya dìya¹ lè-y manšə́nna hál
      yomət-màwθa.¹ 'I shall not give up until the day I die the way I am
      following now.' (A21:35)

If the clause is non-restrictive, a preposition with resumptive pronoun is
regularly used, e.g.

(31) ʾíθwa xa-gə́ppa gáwe díye ʾàrbi hambišáye.¹ 'There was a cave in which
      there were forty giants.' (A24:54)

A preposition is regularly used in all types of clauses if this is other than
the locative prepositions *gu-* or *b-*, e.g.

(32) də́ryɛle ʾan-bǎṱaníye xoθa-díya t-wewa-dmíxa Gozáli rèša.¹ 'He placed
      under her the blankets that Gozali had slept on.' (A8:69)

A resumptive pronoun may be in a clause embedded within the relative
clause, e.g.

(33) qəm-qaṱlíle b-xaṱoryàθa,¹ ʾan-xá xaṱoryáθa ṱ-ínwa màrəllux¹ mási jùlle bíya.¹
      'They killed him with washing-boards, the washing-boards which
      I was telling you they used to wash clothes with.' (B19:9)

When the head nominal has the function of locative adverbial in the rela-
tive clause, it is occasionally resumed by the adverb *tama*, e.g.

(34) t-lá marăwàθɛle ʾo-márga¹ ṱ-it-súsux də́ryəlle tàma?¹ 'Is the meadow in
      which you have put your horse without owners?' (A25:60)
(35) wíðɛle ʾa-dúkθa nišànqa,¹ ʾa-dúkθa t-wéwa ʾo-dídwa wíra tàma.¹ 'He made
      a sign in that place, the place where the fly had entered.' (A11:10)

When the head nominal of a relative clause is a predicate in a clause with a
1st or 2nd person subject and the referent of the head nominal is the sub-
ject of the relative clause, the verb of the relative clause is inflected in
the 1st or 2nd person, in agreement with the subject of the main clause,
e.g.

(36) ʾána ʾo-xà qáša¹ ṱ-ín ʾə́θya gu-Ṱiyàre.¹ 'I am that priest who came to
      the Ṱiyare.' (B17:15)
(37) lɛt-ʾáti wíya xoš-náša ṱ-it-múθyəlla ʾánna zùze.¹ 'You have not become
      a good man who has brought these coins.' (A1:26)

19.2. Indirect Questions

19.2.1. *Polar Question*

Indirect polar questions (i.e., yes—no questions) are asyndetic with no explicit syntactic marker, e.g.

(1) *xázəx máṣət ṯ-amrə́tli módin xə́zya b-xə̀lmi.*ˈ 'Let's see whether you can tell me what I saw in my dream.' (A1:7)

(2) *xàzən*ˈ *màṣən*ˈ *ṯ-óðən xa-čàra.*ˈ 'I shall see whether I can find a solution.' (A33:6)

In (3) the indirect question is negated:

(3) *xázəx lá-mṣət mamṭə́tla ʾiθáθux hátxa ġðàðe?*ˈ 'Let's see whether you can (literally: cannot) bring your hands together like this.' (A28:15)

If the indirect question consists of two alternatives, these may be presented asyndetically (4–5) or the second alternative may be introduced by the conditional particle *ʾən* (6), e.g.

(4) *ʾo-mə́ndi la-ðíle sùsa-wewa*ˈ *náša-wewa l-xàṣe.*ˈ 'He did not know whether that thing was a horse or whether there was a man on its back.' (A29:21)

(5) *ʾáwwa táwrət wála lán-ða'a módi ʾə́θya bìye,*ˈ *npíłɛle b-ʾisàra,*ˈ *ʾawwa xà-məndile qíθa bíye.*ˈ 'I don't know what has happened to that wild ox, whether it has fallen on a rock or whether a thing such as that has happened to him.' (A12:52)

(6) *lɛ́la ðá'a módi bràya,*ˈ *hadíya pɛ́ša kèpa*ˈ *ʾən la-pɛ́ša kèpa.*ˈ 'She did not know what was happening, whether she would now turn to stone or not turn to stone.' (A8:73)

In (7) the conditional particle introduces a second indirect question that is an expansion of the first rather than an alternative:

(7) *lɛ́ðən b-xằyən*ˈ *ʾən-b-dɛ́ṛən t-xazə̀nnəx.*ˈ 'I do not know whether I shall live, whether I shall return and see you.' (A8:56)

The alternative question may be reduced to the negative particle *la* (*la'a*). This is introduced by *lo* or *ʾən*, resulting in the forms *lo-la* and *ʾəlla* (< *ʾən-la*), e.g.

(8) *xázəx mhayríli lo-là'a.*ˈ 'Let's see whether they will help me or not.'
     (A48:2)

(9) *'áw lə́ðe čádrət bábe díyila 'əlla.*ˈ 'He does not know whether it is his
     father's tent or not.' (A28:33)

19.2.2. *Questions Introduced by an Interrogative Particle*

Various subordinate clauses that are introduced by interrogative particles
may be classified as indirect questions. These are embedded under verbs
such as 'to know', 'to see', 'to show', 'to say' and 'to write', e.g.

(1)   *yə̆́ðət 'ə́kən də̀ryəlle?*ˈ 'Do you know where I put him?' (A22:44)

(2)   *lá maxzátle 'ə́lli 'ə́ka pàlət?*ˈ 'Won't you show me where it comes out?'
      (A24:38)

(3)   *xáze mòdila qə́ṣṣət.*ˈ 'He sees what the problem is.' (A22:43)

(4)   *làn-ða'a mo-qaríwale.*ˈ 'I do not know what they called him.' (A12:20)

(5)   *ga-lə́ðəx…'ə́nila 'ùrxa.*ˈ 'But we do not know…which is the road.'
      (A26:18)

(6)   *'ína 'ána léyðən b-ə́ni dána ṯ-àθe xúwwe.*ˈ 'But I do not know at what
      time the snake will come.' (A24:39)

(7)   *síqɛle l-bɛθ-qòra,*ˈ *gu-qawràθa,*ˈ *xáze 'ə́nila qáwra xàθta.*ˈ 'He went down
      to the cemetery and among the graves he saw which (of them)
      was a new grave.' (A25:89)

(8)   *múr 'ɛ̀ni-mənnən*ˈ *biš-šapìrtɛla.*ˈ 'Say which of us is the most beautiful.'
      (A25:17)

(9)   *xzi-kəmà ṯ-ázəl 'áwwa táwra.*ˈ 'See how much this ox will go for.' (A22:1)

(10) *bắyən t-yə̆́ðən 'ána 'íman mə̀θena.*ˈ 'I want to know when I shall die.' (A16:1)

(11) *lə́la kθìwe*ˈ *'ímə ṯ-íle bə̀nya.*ˈ 'They have not written when it was built.'
      (B6:31)

If an indirect question clause that is introduced by an interrogative particle
contains a subject nominal or independent subject pronoun, this is often
placed before the particle, e.g.

(12) *'úp 'aláha la-yə̆́ðe 'áti 'íman mɛθéti.*ˈ 'Even God does not know when
      you will die.' (A16:11)

(13) *'áw xzèle 'o-dídwa 'ə́ka wìrre.*ˈ 'He saw where the fly entered.' (A11:9)

(14) *'u-šákrəx šə́mmət márya 'álaha xázəx 'úrxa 'ə̀kɛla.*ˈ 'We shall pray to the
      Lord God that we may find where the road is.' (A26:17)

(15) ʾən-lá galə̀tli˺ róxux gu-mòdila˺ ʾu-dáx-it xyə̀ʾa˺ ʾána xà-yoma kə́slux la-pə́šən.˺
'If you do not reveal to me in what your spirit lies and how you live, I shall not stay with you a single day longer.' (A12:40)

The subject may be raised and made the object of the main verb. This process is reflected by the pronominal object in (16) and (17) and the object agreement pronoun in (18):

(16) ʾan-šŭr̀ŭṭ˺ lázəm yăð́ətla mòdila.˺ 'You should know what these conditions are.' (A24:10)

(17) ʾéni ʾítləxu t-náše t-máṣi mšáwθi mə̀nna˺ xazéla màṭola?˺ 'What people do you have who can speak with her and find out how she is?' (A4:13)

(18) ṭ̣-áθe t-yăðéla ʾánna mòdila˺ ʾu-módi lèla˺ xo-d-áwwa jùlla.˺ 'He will come and will know what these are (Literally: what these are and are not) under this cloth.' (A25:49)

A constituent that does not have the role of subject is occasionally extraposed before the interrogative particle, e.g.

(19) γába ṭ̣-ázəx xàzəx˺ ʾɛ-braténi mà mánna.˺ 'Let's go and see what has become of that daughter of ours.' (A21:25)

In (20) the embedded interrogative clause is introduced by the complementiser qa-t:

(20) xzéwali qa-t-ʾó-fəlsa ʾéka npìlle.˺ 'I saw where the coin fell.' (B15:34)

Interrogative particles are also used to express embedded exclamations, e.g.

(21) xzi-kəméle lxìma!˺ 'Look how fit he is!' (A15:13)

(22) xzi-ʾánna yále kəmà šəṭránela!˺ 'Look how beautiful the children are!' (A8:16)

Some speakers have the practice of introducing new information that is regarded as worthy of particular attention by an interrogative word, to which the new information supplies the answer. This question and answer structure may sometimes be blended together and put in the same intonation group, with the result that the whole construction is most easily interpreted as an assertion, e.g.

(23) *ʾáy y-ámri má dánət p̣líṭla qyàmta.*' 'What do they call this?—the time when the resurrection has come (= 'They call this the time when the resurrection has come).' (B5:54)

We should mention here a few isolated cases in which the interrogative particle *ʾɛni* is idiomatically translated as an indefinite pronoun or a relative particle. These appear to have arisen by a blend between an interrogative and another construction, e.g.

(24) *ʾàna*' *kut-dax-ṭ-íla bràti,*' *bắyən ʾɛni mɛ́θela.*' 'Whatever has happened to my daughter, I want somebody to bring her back (I want—who will bring her back?).' (A27:18)

(25) *šḱíra šə̀mmux,*' *márya ʾàlaha,*' *ʾɛni qəm-mɛθéli láxxa bíyi bə-b-sùsi.*' 'May your name be praised, Lord God, who have brought me here together with my horse (who has brought me?).' (A26:22)

19.3. Subordinate Content Clauses

A variety of subordinate clauses that are embedded as components of a higher clause will be brought together in this section under the broad classification of 'content clauses'. These function either as direct object complements of a verb or are governed by clausal conjunctions consisting of prepositions, adverbials and quantifiers. In a large proportion of cases these subordinate clauses are introduced by the subordinating particle *D*, though this is omitted in some circumstances. As is the case with relative clauses, in this type of subordinate clause the enclitic copula is regularly attached to the subordinating particle *D* at the front of the clause.

19.3.1. *Direct Irrealis Complement*

When a clause that is the direct complement of a verb expresses an event that is unrealized, its verb is in the *qaṭəl* or *qaṭəlwa* form. The clause may be juxtaposed asyndetically to the main verb or it may be connected to it by the subordinating particle *D*. Some aspects of these constructions have been described in §15.1.1.8. and §15.1.2.5. Here we shall restrict ourselves to some remarks concerning the word order attested in irrealis complement clauses of the text corpus.

When the complement clause contains a subject nominal, this is placed before the verb and before the subordinating particle *D*, if this is used:

(1) *bä̆yən ʾálaha t-yawólli móndi zàwda.*ˈ 'I want God to give me something more.' (A3:1)

(2) *la-bä̆yən ʾáyya bráta ṭ-in-múθyəlla t-yä̆ða qá-t ṭlíba díya hóle mìθa.*ˈ 'I do not want this girl whom I have brought to know that her betrothed has died.' (A4:33)

A direct object nominal is placed in various positions. It is found after the verb of the complement clause, e.g.

(3) *bä̆yi ṭ-áxli xa-ràmša.*ˈ 'They want to eat dinner.' (A2:2)

(4) *bä̆yən ṭalbónna brátux ṭla-xòni.*ˈ 'I want to ask for the hand of your daughter for my brother.' (A32:11)

It is sometimes placed before the verb of the complement clause and the *D* particle but after the main verb. In such cases the object has topical status due to its connection with what precedes (5) or due to its being set up as a contrastive topic with another item in an adjacent clause (6):

(5) *ʾána bä̆yən ʾánna déwe maxènna.*ˈ 'I want to attack these wolves.' (A14:52)

(6) *bä̆yən mònnux*ˈ *hélma t-yáwət b-rèši*ˈ *ʾu-be-mä́na ṭízux yawótle l-gùda.*ˈ 'I want you to blow breath on me and—excuse me[2]—turn your bum to the wall.' (A25:12)

The object may also be fronted before the main verb. In the attested examples of this the object is the complement of the particle *ʾap* and has focal prominence, e.g.

(7) *ʾap-béθi bä̆yət ṣaṭmètle?*ˈ 'Do you want to destroy my house as well?' (A23:39)

(8) *ʾáp-xa la-qáblət ṭ-áwər gu-bèθa.*ˈ 'You should not allow anybody to come into the house.' (A23:25)

In (9) an irrealis clause stands in apposition to a demonstrative pronoun that refers to the propositional content of the clause. The whole construction is presented in a single intonation group:

---

[2] Literally: without meaning.

(9) *le-y-bárya ʾáyya ʾo-šúla ʾoðə̀xle.*ˈ 'This is not possible—we do such a thing (= it is not possible for us to do such a thing).' (A8:10)

19.3.2. *Direct Factive Complement*

Direct complement clauses may also be of factual content. These are typically found as complements of verbs such as 'to say', 'to know', 'to remember', 'to swear', 'to forget'. Various constructions are attested.

19.3.2.1. *Zero Marking*

The factive complement clause may be embedded under the verb without any marking of subordination. This is regularly the case after the verb 'to say' when the clause expresses reported speech and is frequently found also after other verbs, e.g.

(1) *hóla màra*ˈ *xzíθəlle xa-bronət-xà-malka.*ˈ 'She says that she saw the son of a king.' (A4:12)

(2) *ʾána hon-màra*ˈ *ʾáwwa rèši*ˈ *ṭ-áθe xá-yoma pràma*ˈ *bəd-ʾiθáθa dìyux.*ˈ 'I say that this head of mine will one day be cut off by your hands.' (A14:35)

(3) *lá-mərɛxu ʾáyya quṣárta hóla b-ʾùrxa?*ˈ 'Did you not say that this cooking pot is on the way (to giving birth)?' (A5:5)

(4) *ʾána lán-mirəllux be-băxət-iwət.*ˈ *ʾu-lán-mira qaṭòlɛwət.*ˈ *ʾu-lán-mira xòš-našɛwət.*ˈ *ʾu-lán-mira lebànɛwət.*ˈ 'I did not say that you are dishonest. I did not say that you are a murderer. I did not say that you are a good man. I did not say that you are a trickster.' (A1:21)

(5) *yăðána mbádla qaṭə́lli ʾaw-màlka.*ˈ 'I know that the king will kill me in the morning.' (A14:3)

(6) *ʾáw lèle ðíya málkɛle.*ˈ 'He did not know that he was the king.' (A4:31)

(7) *ʾáxč̌ă b-txárən hal-hadíya tre-ṭlá-gaye mamxə̀xwala gánən.*ˈ 'But I remember until now that we would have ourselves tapped (on the head) two or three times.' (B15:24)

(8) *ʾáni xášwi ʾáti ʾànən.*ˈ 'They will think that you are me.' (A7:18)

19.3.2.2. D

The clause may be introduced by the subordinator *D*, e.g.

(1) *ʾánna yắði ṭ-íle duglàna.*ˈ 'They know that he is a liar.' (A48:3)

(2) *ʾay-xá-yoma har-t-yắða*ˈ *ṭ-íle míθa brònən.*ˈ 'She will surely know one day that our son is dead.' (A4:39)

(3) *nə́šya-wewa qáša t-wéwa yómət-tre rùta.*ˈ 'The priest had forgotten that the next day would be Friday.' (A2:4)

(4) *ʾay-lɛ̀ða ṱ-íle gáwṛa dìya žáre.*ˈ 'The poor thing did not know that he was her husband.' (A12:67)

(5) *ʾáti m-ɛ̀ka-yăðət ṱ-íx xonăwàθa?*ˈ 'How do you know that we are brothers?' (A39:6)

(6) *pšámən ràba*ˈ *ṱ-in-màrəllɛxu*ˈ *quṣartɛ́xu mìθtɛla.*ˈ 'I am very sorry to tell you that your cooking pot is dead.' (A5:10)

19.3.2.3. *Raising of Subject*

In some cases the subject component of the embedded clause is raised into the main clause where it functions as the direct object of the verb. This is attested in (1)–(3), in which a pronominal copy of the subject of the subordinate clause is attached as an object suffix to the main verb:

(1) *ʾu-yăðánne xónəx hole-gòtəx.*ˈ 'I know that your brother is by your side.' (A8:79)

(2) *m-ɛ̀ka qəm-yăðə́tli ʾáti ṱ-íwən Gozáli?*ˈ 'How did you know that I am Gozali?' (A8:41)

(3) *bálki yăðálux ʾáti ṱ-it-Gozàli.*ˈ 'Perhaps she knows that you are Gozali.' (A8:49)

19.3.3. *ʾiman*

When the interrogative particle *ʾiman* 'when?' is used as the governor of a subordinate content clause, it has a temporal adverbial function. The combination of *ʾiman + D* is often reduced phonetically to *ʾimət*. The subordinate clause is normally placed before the main clause and, in most cases, is uttered in a separate intonation group from that of the main clause.

The main clause may express an action that is temporally sequential to the action in the subordinate clause or one that overlaps with it temporally.

19.3.3.1. *Temporally Sequential*

When the verb of the subordinate clause has a perfective aspect, expressing a complete event, the main clause denotes an event that is sequential to this, e.g.

(1) *ʾimə-t mṱéla ṱúnte dìye,*ˈ *θéle xa-nàša,*ˈ *qəm-šaqɔ̀lla ʾɛ-ṱúnte díye.*ˈ 'When its fruit became ripe, a man came and took its fruit.' (A17:33)

(2) *ʾiman ṱ-àθyət,*ˈ *ða-kista-xéta max-d-áy yawə̀nnəx.*ˈ 'When you come back, I'll give you another purse like that one.' (A4:16)

Similarly a sequential relation exists between clauses expressing a habitual series of events, e.g.

(3) *ʾíman-t y-aθɛ́wa dwáṛa qúrba l-màθa,*ˈ *y-asqíwa berìye.*ˈ 'When they came to the pasture land near the village, milkmaids would come up.' (B5:159)

In narratives a temporal clause opening with *ʾiman* is often used to repeat the mention of an event that has already been narrated before narrating an event that is sequential to it. The informational status of the clause, therefore, may be compared to that of a topical referent. The purpose of 'heavy' coding of topical information at the front of a sentence is generally to mark some kind of boundary in the narrative. This is, indeed, the function of the construction under discussion since it is used to signal the onset of a section. It is a device used by the narrator to present an activity as a new event with a degree of independence from what precedes. This may involve a temporal separation, as in (4), or may simply be a result of the staging of the narrative. Note that in (5) the verb in the main clause is combined with the auxiliary verb *qym*, which is also a device for expressing the onset of a new event:

(4) *qímela ʾap-o-t-tré prìməlle,*ˈ *xìləlle.*ˈ *ʾímət xílla ʾap-o-t-trè,*ˈ *píšla xà-šabθa,*ˈ *tré šabbàθa,*ˈ *kpìnna.*ˈ 'They slaughtered also the second one and ate him. After they had eaten the second one, a week, two weeks went by and they became hungry.' (A20:9)

(5) *mxéla l-ġðàðe*ˈ *ha-t-ṭlàθna mìtla.*ˈ *ʾímət mítla ṭlaθnèy,*ˈ *qímtɛla pθíxtɛla tằra*ˈ *ʾína léla šmáya qálət ʾùp-xa.*ˈ 'They beat one another until the three of them died. When the three of them died, she opened the door and did not hear the voice of anybody.' (A22:35)

(6) *ʾu-políse qəm-maklíla bába-w yə̀mma,*ˈ *ʾu-šaqlìla ʾan-tre-yále.*ˈ *ʾímət qəm-šaqlíla políse ʾan-tre-yàle,*ˈ *ʾan-políse wéla pyáša b-xammèy.*ˈ 'The police stopped the father and mother (screaming) and took the two children. When the policemen took the two children, the policemen began to become worried.' (A8:10)

In (7) the main clause expresses an imperfective state rather than a dynamic perfective event, so it cannot be considered to be sequential to the *ʾiman* clause. The purpose of the construction, however, is to denote that the discovery of this state is sequential to the arrival of the father-in-law on the scene. This is reflected by the use of the deictic copula *hole*:

(7) *qímɛle xəmyána dìye*ˈ *zílle kəs-màlka.*ˈ *ʾímə zílle kəs-màlka,*ˈ *dìwənt málka hóle ṃḷíθa náše ràbe.*ˈ 'His father-in-law went to the king. When he went to the king, the audience chamber of the king was full of many people.' (A17:31)

A new event in a narrative sequence may be presented in a subordinate *ʾiman* clause. The purpose of this strategy is to downgrade the prominence given to this event and, as a result, give greater prominence to the event in the following main clause. The subordinate clause is non-assertive and presents the event as something that is presupposed to be known or inferrable from the context. This applies to (8), in which the act of waking is presented as less important than the act of becoming disturbed and worried:

(8) *málka xzéle b-xə́lme dìye¹ mára ʾáwwa náša fãqìra¹ ṭ-awéle xá bronà¹ ʾáw páyəš málka šàwpət brònux.¹ lɛ́-y-awe brónux màlka.¹ ʾu-ʾímət ṛíšle mən-šə́nθa màlka¹ rába šxìšle-u¹ rába pšìmle-u.¹* 'The king saw in his dream that they said "This poor man will have a son and he will become king instead of your son. Your son will not become king." When the king woke from his sleep, he became very shaken and became very sad.' (A8:3–4)

19.3.3.2. *Temporally Overlapping*
When the action of the main clause overlaps temporally with that of the *ʾiman* clause, the verb of the *ʾiman* clause can generally be interpreted as having imperfective aspect without expressing any clear temporal boundaries, e.g.

(1) *ʾímə ṯ-íle zmàra,¹ bulbúle jmáʾela l-qàle.¹* 'When he sings, nightingales gather at his voice.' (A25:46)
(2) *ʾímə ṯ-ìn práməlle,¹ xzáyən naθyàθe¹ ʾína t-hɛwàne.¹* 'When I was slaughtering it, I saw that its ears were those of animals.' (A23:38–39)
(3) *fa-ʾíman-t y-awíwa bèθa,¹ y-azə́xwa mãṛòye.¹* 'When (the mules) were at home, we would go and graze them.' (B5:128)
(4) *ʾu-ʾíman garšíwa sùla,¹ dɛrɛ́wa xāṣ-dawèra.¹* 'When they transported manure, they would put them (the panier baskets) on the back of a mule.' (B5:136)

On some occasions, however, the verb is clearly perfective, as in the future verb in (5),

(5) *t-yánna ʾárbi bnàθi¹ ṭla-ʾárbi bnònux,¹ ʾína ʾiman ṯ-aθítu láxxa ṭalòbe,¹ lá damxítu lá gu-kàrma,¹ ʾu-lá gu-màrga¹ ʾu-lá gu-qàṣra.¹* 'I shall give my forty daughters to your forty sons, but when you come here to seek their hands in marriage, you must not sleep in an orchard, in a meadow or in a palace.' (A12:2)

Other cases of perfective verbs in the *ʾiman* clause are (6) and (7). In (6) the verb denotes a habitual event, but should be interpreted as expressing one perfective representative action of the habitual activity. In each case, the *ʾiman* clause denotes an event that has already been mentioned in the preceding discourse and the main clause gives supplementary details on this event rather than advancing the discourse. In (7) the elaborative main clause has a syntactic structure that is characteristic of clauses expressing supplementary information and temporally overlapping activity, in that it lacks the copula (§17.6.1.) and is introduced by the connective *w* (§18.1.1.):

(6) *ʾi-mbaqə́rwala nàše¹ lèketu zálaʔ¹…ʾímət ʾi-mbaqə̀rwa-ʾatxa,¹ y-amə́rwa la-sògun!¹ xṭiθèxula.¹* 'He would ask the people "Where are you going?"…When he asked them in this way, he would say "Don't go! It is a pity for you, for if you go" (A8:24–26)

(7) *ʾu-kúlla ʾáskar qlíbela píše náše xa-ga-xèta.¹ ʾiman ṭ-ila-píše nàše,¹ ʾu-kút-xa ṣráxa b-o-xèna.¹* 'All the army returned and became men once again. When they had become men, they were all shouting at one another.' (A8:83)

On some occasions the *ʾiman* clause is placed inside or after the main clause rather than before it. In constructions where it is placed inside the main clause, another topical constituent is placed at the front of the construction (8–10). If it is placed after the main clause without any topical item being placed in initial position, the construction has close pragmatic cohesion with what precedes (11–13):

(8) *ʾo-dewə̀rrəš¹ ʾímə ṭ-ile-máxyəlle táwrət wàla¹ ṛìšɛle¹ mgunə̀gzɛle.¹* 'The vagabond, when he (the other man) struck the wild ox, felt it and shivered.' (A12:52)

(9) *kʾàlo¹ ʾiman ṭ-aθyàwa¹ páθa díya mkusèθa.¹* 'The bride, when she came, her face was covered.' (B5:35)

(10) *fa-l-gàrte¹ ʾiman ṭ-aryáwa dùnye¹ ʾíθwalən mandòrta.¹* 'On the roof, when it rained, we had a roller.' (B5:145)

(11) *masyòθe-wewa¹ ʾímə t-wewa-mára ṭla-ʾÙmmo¹* 'He was listening when he said to Ummo…' (A23:25)

(12) *ṭ-óya maláəkθa b-šópi ʾímən-t-ʾána mèθən.¹* 'She will be queen in my place when I die.' (A4:39)

(13) *xaddámθa dìya¹ ṣléla ʾímət qəm-xazyàle.¹* 'Her maid-servant came down when she saw him.' (A25:56)

The subject of the *ʾiman* clause is sometimes extraposed before the subordinating particle. This applies to (14), in which the initial referent is clearly extracted from the subordinate clause and plays no role in the main clause. Note also that the extraposed subject and the subordinate clause are uttered together in the same intonation group:

(14) *sáb dúnye ʾiman-ṱ-àrya,ˈ b-sə̀twa,ˈ ʾáni lítla xàm.ˈ* 'Since, when it rains in winter, they have no concerns.' (B5:120)

A temporal sentence with an initial subordinate *ʾiman* clause may be in turn embedded under a subordinating conjuction. This is attested in purposive constructions with the subordinating conjuctions *qa-D* or *ta-D*. Note that these are repeated (sometimes abbreviated to *D-*) before the main clause of the temporal construction, e.g.

(15) *mandrì gáreˈ qa-t-qàweˈ qa-t-ʾíma ṱ-áθya ʾəryàna-wˈ ṱ-áθe tàlgaˈ qa-t-lá-ṣala dalòpe.ˈ* 'They roll the roof so that it becomes tough, so that when the rain comes and the snow comes, leaking water does seep down (into the house).' (B5:194)

(16) *ʾu-ʾíθwale tàngaˈ y-asṛìwale,ˈ ʾu-bár qamàyaˈ qá-t ʾíma ṱ-ásəqwa ṱùraˈ t-lá ʾo-qurṱána jawə̀jwaˈ ṣaléwa napə́lwa ṱèna.ˈ* 'and it had a strap, which they would tie, and (a belt known as) "the front end", so that when they went up into the mountains, the cloth would not move and the load fall off.' (B5:127)

(17) *maláxe holá-ʾəθye tíwe l-kàwe.ˈ hóla spára l-kàwe,ˈ tá-t ʾímət párqa dàna,ˈ tá-t mattíle ʾo-yàlaˈ tá-t šaqlíle nəšmèɣ.ˈ* 'The angels have come and have sat by the window. They are waiting by the window so that when the time finishes, they (the parents) would put down the child and they (the angels) would take away their soul.' (A4:59)

19.3.4. ʾax, max, dax

The comparative prepositions *ʾax* and *max* 'like, as' and the interrogative particle *dax* 'how?' are used as heads of comparative content clauses, e.g.

(1) *mέθən ʾax-ṱ-ila-ʾànna míθe.ˈ* 'I shall die like these people have died.' (A14:73)

(2) *banə́tli xa-bὲθa,ˈ xa-bùrj,ˈ ʾáx-t ʾàna bằyən.ˈ* 'Build me a house, a tower, as I like.' (A14:97)

(3) ʾáx-ṭ-it-ʾáti šə̀tya,ˈ ʾáp-ʾaw hàdəx.ˈ 'As you drank, he also (was treated) in the same way.' (A26:33)

(4) kut-mɛ́θela ʾána t-yánne zùzeˈ ʾax-ṭ-in-híwəlle xa-béna xèta.ˈ 'I'll give money to whoever brings her back, as I gave money before.' (A27:30)

(5) ʾína lɛ́wa ʾax-ṭ-íwa náše kθìwe.ˈ 'but it was not like those people wrote.' (B1:19)

(6) max-ṭ-íla brátux mšuyðànta,ˈ ʾap-àw,ˈ ʾən-lá-ʾazən mšàyðən.ˈ 'Just as your daughter has gone mad, he also, if I do not go back, will go mad.' (A4:27)

(7) ʾàna maθyánneˈ dáx ṭ-in-muθéθəlla ʾa-béna xèta,ˈ ʾay-béna ʾàna maθyánna.ˈ 'Just as I brought her before, so this time I shall bring her.' (A27:30)

(8) dax-ṭ-íwət ʾáti hátxa mṣuqàlta,ˈ ʾap-ʾáw daxwàθax-ile.ˈ 'Just as you are pretty, so he is like you.' (A8:67)

In (9) the subject of the clause is placed in front of the *D* subordinator:

(9) ʾax-ʾáxni zóre ṭ-ix-šmìyeˈ 'As we small children heard…' (B4:3)

The clause may be given generic scope by prefixing the universal quantifier *kut*, e.g.

(10) ʾànaˈ kut-dax-ṭ-íla bràti,ˈ bắyən ʾɛ̀ni mɛ́θela.ˈ 'Whatever has happened to my daughter, I want somebody to bring her back.' (A27:18)

The subordinating particle *D* is occasionally omitted, e.g.

(11) ʾax-ʾána paqðə́nnux ʾàyyɛla ʾúrxa.ˈ 'As I instruct you, so is the road (= I shall instruct you as to the road that you should take).' (A8:46)

(12) dax-qúmmət Everèst-ile,ˈ hátxa ramàna.ˈ 'Just as the summit of Everest is, so high (is it).' (A8:21)

When the clause denotes an unreal situation, the *qaṭəl/qaṭəlwa* form is used and the particle has the sense of 'as if', e.g.

(13) mattə́xwa məndiyáne kúlla dax-ṭ-óya kʸàlo.ˈ 'We would put on her all kinds of things, as if she were a bride.' (B16:2)

A subordinate content clause governed by the comparative preposition *ʾax* sometimes has the function of a temporal 'when'—clause. Such clauses

are typically placed before the main clause, which expresses a sequential rather than a temporally overlapping event, e.g.

(14) *ʾax-ṭ-íla plíṭṭa Səttìye,¹ xzìθəlle¹ xrìwɛle lə́bba díya.¹* 'When Sǝttiye came out, she saw him and her heart was broken.' (A26:30)

(15) *ʾax-ṭ-ìla mə́ṭye,¹ Sǝttíye mɛ̀θa.¹* 'When they arrived, Sǝttiye died.' (A25:86)

(16) *ʾax-ṭ-íle qìma,¹ ʾu-šúryela plə́ša m-ġðàðe,¹ ʾàwwa¹ maxèle¹ sɛ̀pe¹ l-qðála d-o-Déwa Z̀àr¹ ʾu-ṣále kəndàla.¹* 'When he got up and they started fighting with one another, he struck his sword into the neck of that Dewa Zar and he went down the slope.' (A28:19)

In narrative they are often used to recapitulate a previously mentioned event as a device for marking the boundary of a section of discourse, e.g.

(17) *maxéla skínta l-d-ó-gəldət wéwa xíṭəlle m-gàwe¹ ʾu-pàlət.¹ ʾax-ṭ-íle plíṭa ʾo-simárxa prìxɛle,¹ zìla.¹* 'He struck the knife into the skin that he had sewn from inside and came out. When he came out, the *simarxa* bird flew away.' (A14:69)

(18) *ʾó-yala zóra mə́re b-ràxme!¹ ʾax-ṭ-íle míra ʾo-zóra b-ràxme,¹ ʾámər b-ráxme l-bàbux¹ l-yə̀mmux.¹ kút-xa mə́nna xámšì šə́nne xéne xăyèla.¹* 'The little boy said "Bless you!" When the little one said "Bless you," he (the angel) said "Bless your father and mother. May each live another fifty years."' (A4:60)

Subordinate temporal clauses may also be introduced by the interrogative particle *dax*, e.g.

(19) *dax-ṭ-ìle xə́zyəlla θàya,¹ hádəx ṣràxa-w¹ xumθàne,¹ Čúxo rìqele,¹ plíṭɛle gu-màθa.¹* 'When he saw them coming, shouting and angry, Čuxo ran out into the village.' (A7:16)

(20) *ʾánna zìlela¹ xà-šeta.¹ ʾánna dax-ṭ-ìla zíle,¹ Mắmo də́ryəlle gu-zəndàna.¹* 'They went away for a year. When they had gone, he put Mămo into prison.' (A26:74)

(21) *xa-bèna¹ brátət màlka¹ plíṭṭela l-gàre.¹ dax-ṭ-íla plíṭṭa l-gàre,¹ ʾo-simárxa mxíθəlla gána ʾə́lla díya ʾu-muθɛ̀θəlla-w¹ kəs-Mə́rza Pắmət.¹* 'Then the daughter of the king went out onto the roof. When she went out onto the roof, the *simarxa* bird made towards her and brought her back to Mǝrza Pămǝt.' (A27:15)

The subordinating particle *D* may be omitted, e.g.

(22) *ʾáw dax-páləṭ gu-tằra¹ xáze ʾína béθət Qára Téždin qàða.¹* 'When he went out into the doorway, he saw that the house of Qara Teždin was burning.' (A26:54)

The comparative prepositions are also used before infinitives, e.g.

(23) *xa-béna xə́zya ʾə́θyɛle xa-xùwwe¹ ʾax-pràxa.¹* 'Then he saw a snake come, as if flying.' (A14:31)

(24) *máme díye t-wéwa max-qṭàlə̀lle¹* 'his paternal uncle who was as if killing him (= almost killed him)' (A25:70)

19.3.5. kəma, ma

When the quantifier particle *kəma* governors a subordinate content clause, it generally quantifies the proposition in the embedded clause and expresses the sense of 'as much as' or 'however much', e.g.

(1) *xúl kəma-t-bằyət.¹* 'Eat as much as you want.' (B15:56)

(2) *yawíwale kə́ma-t daqə̀r.¹* 'They would pay him however much it cost.' (B5:182)

(3) *kəmə̀t ṯ-árqena¹ tópe har-ṭapyàli.¹* 'However much I run, a gun will still reach me.' (B9:3)

In some constructions that contain a noun argument in the embedded clause, the quantification of the proposition is semantically equivalent to the quantification of the noun, e.g.

(4) *mqawólən kəmà-ṯ-in šqíla zúze¹ mɛθə́nna pằlə̀nna.¹* 'I promise however much I have taken money (= however much money I have taken), I shall bring it and divide it.' (A1:18)

(5) *kəmá ṯ-ilá-ʾə́θye nàše,¹ kəmá ṯ-ilá-ʾə́θye šazáde-u jwànqe,¹ lɛ́n θíθa ʾu-le-y-ʾàθyən.¹* 'However much people came (= however many people came), however much princes and young men came (= however many princes and young men came), I did not come, and I shall not come.' (A8:94).

The subordinating particle *D* is occasionally omitted, e.g.

(6) *kə́ma maṣìwa¹* 'as much as they can' (B5:3)

(7) *kə́ma ʾiθwále mṣèθa¹* 'as far has they have ability' (B5:8).

The particle can have an exclamatory sense, in which case it is usually abbreviated to *ma*, e.g.

(8) *ʾánna ma-ṭ-íla xmíle b-ġðàðe!* ⸗ 'How happy they were together!' (A4:50)

This is most frequently used as a correlative in constructions such as the following:

(9) *ma-t-wɛ́wa ʾóθye nàše* ⸗ *č̃ǝnnǝk̭ɛ́rǝt Mšìxa,* ⸗ *ma-t-wɛ́wa ràbe* ⸗ *Mar-Yuḥánna lá-mṣele kút-xa dréle qáwwǝt míya b-rèše.* ⸗ 'So many people came around Christ, so many, that Saint John could not put a scoop of water over everybody.' (B6:10)

(10) *b-lɛ́le rúmxe díye hóla mxáya kizɔ̀kke,* ⸗ *ma-ṭ-íle ʾo-náša rába xɛlàna.* ⸗ 'In the night his spear was giving off sparks, so powerful was that man.' (A12:9)

(11) *ʾu-ṭɒ̀lyela* ⸗ *ma-t-wáwa kc̃ìxe.* ⸗ 'They slept, so tired were they.' (A14:43)

(12) *qǝm-maqɔ̀dla mǎḥálle,* ⸗ *ma-t-wɛ́wa šumàna.* ⸗ 'He burnt his neighbourhood, so delinquent was he.' (A14:7)

(13) *ma-t-y-aθɛ́wa tàlga,* ⸗ *y-aθèwa,* ⸗ *lá-mṣiwa ʾàp-ʾaxxa palṭíwa.* ⸗ 'So heavily did the snow fall that, when it came, people could not go out even to here.' (B16:27)

(14) *hálli ma-t-kàlena?* ⸗ 'Give it to me, shall I wait so long? (= I cannot wait any longer).' (A38:13).

The particle is used before a subordinate copula clause as a device for switching attention to a different topical referent ('as for…'), e.g.

(15) *kǝmá ṭ-íle Rùstam,* ⸗ *ʾáw mbaqórǝlle Tătár-i Slemán-i Sɔ̀ndi.* ⸗ 'As for Rustam, he asked for Tătar-i Sleman-i Sǝndi.' (A28:24)

(16) *kǝmɔ́t-wawa yámme dìye,* ⸗ *mpuṛmèla.* ⸗ 'As for his mother, she understood.' (A28:29)

Occasionally the particle is used to introduce a temporal clause. It is attested in this function in both its full form and its abbreviated form *ma-*. The temporal clause may have generic ('whenever') or specific reference ('when'), e.g.

(17) *kǝmɔ́t ʾáwǝð náša xǝlmɒ̀tta,* ⸗ *hár béna xaràye* ⸗ *mxáyǝlle l-máre dìye.* ⸗ 'Whenever a man does a service, always in the end he strikes the man performing the service.' (A47:2)

(18) *ma-t-wéwa brōn-málka qə́ryəlle ʾo-kθàwa,*ˈ *mə́re spày!*ˈ 'When the son of the king had read the letter, he said "Good!"' (A11:18)

19.3.6. hatxa

The particle *hatxa*, which can function as a modifier of a nominal in the sense of 'such a' (§14.9.15.), occasionally governs a content clause, e.g.

(1) *šuréla mṣawòθe*ˈ *hátxa ṱ-ix-mṣawóθe ʾàxni.*ˈ 'She began to talk just as we are speaking.' (A19:2)

19.3.7. qam

Clauses that are complements of this particle contain the irrealis verb forms *qaṭəl* and *qaṭəlwa*, since they refer to an event that has not yet taken place from the perspective of the verb in the main clause. The subordinate clause may be placed either before or after the main clause. Examples:

(1) *qam-ṱ-àθi,*ˈ *mpáləṭle mən-hàbsa.*ˈ 'Before they return, release him from prison.' (A26:72)
(2) *qam-šeríwa bnàya,*ˈ *y-azíwa y-oðíwa ʾatùna.*ˈ 'Before they began buildings, they went and set up a furnace.' (B5:182)
(3) *ʾáy y-óya muttéθa gu-tắra qam-ṱ-óra kʷàlo.*ˈ 'This is placed at the door before the bride enters.' (B5:40)
(4) *gu-góma mpalṱə̀xwale*ˈ *qam-zăríwa náše rə̀zza.*ˈ 'We took it out of the stable basement, before people sowed the rice.' (B5:134)

In (5) *qam* is connected to the clause by *ma*:

(5) *ʾən-ʾítla mója zòra*ˈ *qám-ma xalwàla,*ˈ *mămiṣála xàčča-w*ˈ 'If it has a small calf, before she (the milkmaid) milks it, she allows it to give suck (to the calf) a little.' (B5:175)

19.3.8. baθər, (m-)bar

Subordinate content clauses introduced by the preposition *baθər* 'after' or its shorter variant *(m-)bar* are generally placed before the main clause, e.g.

(1) *m-bár t-y-óði núra gàwe,*ˈ *xáyəm ràba.*ˈ 'After they put fire in it, it heats up a lot.' (B6:48)

(2) *m-bar-t-y-àxlì,*ˈ *mɛ́θɛ dawèra.*ˈ 'After they eat, they bring a mule.' (B5:37)

(3) *qìmɛle*ˈ *báθər ṭ-íle príqa mən-ʾixàla,*ˈ *qìmɛle*ˈ *šqílɛle xa-ʾárba xamšà bêe.*ˈ 'When he had finished the food, he took four or five eggs.' (A23:6)

(4) *bár ṭ-ila-ðíta qa-t-ʾàyyɛla θíθa kəsle-dìye,*ˈ *muxábla ġðàðe.*ˈ 'After she realized that she had come to him, they fell in love with each other.' (A4:4)

(5) *hádəx m-bar-t-gwìrra,*ˈ *ʾaláha qəm-yawə́lla xa-bròna.*ˈ 'So after they married, God gave them a son.' (A4:57)

(6) *ʾu-bár ṭ-àzəl,*ˈ *dɛ́rəx l-bèθa.*ˈ 'After he goes away, we shall return to the house.' (A30:41)

The subordinating particle *D* is often omitted in verbal forms, e.g.

(7) *bar-píšla spày,*ˈ *zìlla.*ˈ 'After she had got better, she went on her way.' (A20:5)

(8) *ʾu-báθər priqálən qəṣṣə̀ttən*ˈ *réšux pɛrmə̀xle.*ˈ 'After we have finished our story, we shall cut off your head.' (A24:51)

(9) *yómə ṭḷàθa*ˈ *m-báθər ʾána zílli šùla*ˈ *qímla ṣléla knàša.*ˈ 'On the third day, after I went to work, she went down (to the basement) to sweep.' (A21:38)

(10) *ʾína m-báθər maqðàli*ˈ *ʾaw-qə̀ṭma*ˈ *šaqlìtule*ˈ *mxamìtule.*ˈ 'After she burns me, take the ashes and keep them.' (A26:85)

(11) *w-ánna báθər šmìṭəlla,*ˈ *síqela gù-rəš-ṭura.*ˈ 'After they had defeated them, they went up into the mountain.' (A14:55)

The subordinate clause is occasionally placed after the main clause, e.g.

(12) *zíltɛla bár ṭ-ile-bɛ́θa prìqa*ˈ *ʾáza xázya jùlla.*ˈ 'She went off after the house was finished, in order to go to find her clothes.' (A14:99)

In (13) the clause introduced by the preposition *bar* has a causal sense:

(13) *bár qəm-amrə́tla ʾanna-xabráne ʾə̀lli*ˈ *qəm-paqðə̀tli*ˈ *hátxa ṭ-óðən b-xàbrux* 'Since you have said these things to me and have given me instructions, I'll do as you say.' (A8:50)

19.3.9. hal, ha-

When these two particles govern subordinate content clauses, they have the same functions, but their syntax is different, in that *ha-* is regularly

combined with the subordinator *D*, but this is generally omitted after *hal*. Their functions can be classified as follows. The form *ha-* is most likely a shortened form of the Arabic particle *ḥattā* and *hal* has developed by combining *ha-* with the preposition *l-*.

19.3.9.1. *'until'*

In most cases subordinate clauses with these particles express an action that marks the endpoint of an action expressed in a preceding main clause and is to be translated by English 'until', e.g.

(1) *mxéla l-ġðàðe¹ ha-t-ṭláθna mìtla.¹* 'They beat one another until the three of them died.' (A22:35)

(2) *pə́šət kásli làxxa,¹ 'u-mxamə́nnux ha-ṭ̂-áθya tajərúθət bábux láxxa xá-ga xèta.¹* 'Stay with me here and I shall look after you until the merchants of your father come here again.' (A14:61)

(3) *kazíwa prámǝlla har-palṭìwa,¹ hál plíṭla hàtxa.¹* 'They tried to cut them down, but they kept growing up, until they grew like this.' (A38:15)

(4) *zílela hal-máṭyela l-qàṣra,¹ rǝš-qàṣra.¹* 'They went until they arrived at the palace, on top of the palace.' (A24:49)

If the preceding action is a perfective, punctual event, the 'until'–clause explicitly signals that its event is temporally posterior to what precedes, e.g.

(5) *'o-qamáya miràle,¹ 'o-t-tré miràle,¹ ha-t-mṭéle gárra 'ólle dìye.¹* 'The first one told him (his case), the second one told him, until his turn came.' (A17:31)

In some cases the preceding action does not necessarily end with the action of the 'until'–clause but only reaches a particular point in its progression, e.g.

(6)   *θéle tàlga,¹ θéle, θéle, θèle,¹ há-t kléle zàga¹ t-rǝš-čàdra.¹* 'More and more snow fell, until the bell that was over the tent stopped (ringing).' (A25:41)

Conversely, after a negated clause, the 'until'–clause marks the point at which the action that was negated finally takes place. Note that the *t̂-* prefix after *hal* in (8) should be interpreted as the future particle rather than the homophonous subordinating particle, e.g.

(7) *là hummə́nne.¹ ha-t-xazèla¹ bráta θàya.¹* 'He did not believe it, until he saw the girl coming.' (A26:79)

(8) *là-palṭət,¹ hal-ṭ-amrə́nnux plùtgena.¹* 'Do not come out, until I say to you "Come out!"'' (A14:67)

The particle *hal* is often combined with adverbial temporal expressions such as *ʾɛ-gət* 'the time that', *ʾɛ-danət* 'the time that', *ʾo-yomət* 'the day that', e.g.

(9) *ʾu-ʾáyya har-šaqláwa mən-d-àn šíše¹ mattàwa¹ ʾə́lla dìya¹ hál ʾɛ́-gət qəm-qaṭlàla.¹* 'She (the daughter-in-law) was constantly taking the iron bars and putting them into her, until she killed her.' (A19:6)

(10) *ya-ʾàlaha,¹ háwe ṣáxi hál-ʾɛ-gət ʾána mátyən ʾə́lle dìye.¹* 'Oh God, let him be well until I reach him.' (A26:80)

(11) *mən-d-ɛ́-danət brèla¹ hál d-ɛ-dánət mṭéla l-yàla,¹ wéla bxàya.¹* 'From the time she was born until the time that she came to the boy she wept.' (A25:4)

(12) *pálxət kə́sli hal-d-o-yómə qárya ṭòḳe.¹* 'Work with me until the day when the *ṭoḳe* bird sings.' (A30:3)

19.3.9.2. *'before'*

When the event in the main clause is perfective and is completed before the inception of the event in the subordinate clause, the appropriate translation of the particle is sometimes 'before' rather than 'until'. The crucial factor is the information status of the subordinate clause. If the subordinate clause is assertive the translation is 'until'. If, however, it is factive, i.e. it is presupposed that the hearer accepts it as a fact, it is more idiomatically translated by 'before'. In many cases such factive clauses are placed before the asserted main clause, e.g.

(1) *ha-t-ʾáθe ʾo-náša qamàya¹ máṭe l-ʾɛ̀na¹ ʾáθe xa-náša sàwa.¹* 'Before the first man reached the spring, an old man came.' (A15:3)

(2) *ha-ṭ-íle ʾə̀θya,¹ mpuláṭṭela fã̀qih.¹* 'Before he came back, she took out the jurist.' (A22:39)

(3) *zílela náš̌ət màθa,¹ ʾína ha-ṭ-íla zìle náš̌ət máθa,¹ ʾo-núra čə̀myɛle.¹* 'The people of the village went (to help), but before the people of the village arrived, the fire was put out.' (A48:3)

Occasionally the factive subordinate clause is placed after the main clause, e.g.

(4) *ʾən-θéla píšla xằṭar ʾə́llux qúrba,*⌐ *dríla ʾan-bóče l-ʾằra,*⌐ *qémi tre-xóre ṭ-ásqət rèša*⌐ *párqət xàyux,*⌐ *bálki ʾən-šálla hal-ʾɛ-gə-máṭa ʾàrye.*⌐ 'If danger comes near to you, put these two seeds in the ground and two poplar trees will grow up, which you can climb and perhaps save your life before the lions arrive.' (A18:14)

19.3.9.3. *'until when'*

Occasionally the clause introduced by the particle is presented as being connected in sense to a greater degree with what follows it. The effect of this is that it expresses an action that is the endpoint of what precedes but at the same time the starting point of what follows. In such contexts the appropriate English translation is often 'until when. . . .', e.g.

(1) *klèle*⌐ *hal-tímla ṭḷáθa yomàθa*⌐ *Rustằmo r̥ìšle.*⌐ 'He stood until when three days had passed, Rustam awoke.' (A29:22)

(2) *há-ṭ-ila prìqe*⌐ *ṣə́lyela gu-gallìya-w*⌐ *Pə́tto də́ryɛle tòpe.*⌐ 'Until when they had finished coming down the valley, Pətto fired his gun.' (B19:7)

(3) *kut-yáwna maxə̀tla.*⌐ *máxətla yàwna,*⌐ *ʾaw-yaṣíla xéna xaðr̥-ə́llux.*⌐ *mára há-t ʾánna šáwwa yawnáθa qaṭə̀tla,*⌐ *mára qáṣra kàle.*⌐ ' "Hit each dove. Hit a dove and another corner will turn round towards you." ' He said "Until when you have killed the seven doves, the palace will stop." ' (A12:25)

(4) *là-palṭət,*⌐ *hal-ṭ-amrə́nnux plùṭgena*⌐ *ʾɛ̀-ga pálṭət.*⌐ 'Do not come out, until when I say to you "Come out!", at that time you should come out.' (A14:67)

19.3.9.4. *Purpose*

The particle *ha-* is sporadically used with a purposive sense, as in (1), in which it is combined with the particle *qa-*:

(1) *ʾíθwale xa-kàrma.*⌐ *zríyənwale b-iθàθi*⌐ *ʾu-rábənwa kčíxa bíye dìye.*⌐ *ha-t-qa-mamṭə́nna ṭúnte dìye.*⌐ 'He had an orchard. (He said) "I had cultivated it with my hands and toiled greatly in it in order to make it produce its fruit." ' (A17:32)

19.3.10. *ṭla-, ta-*

19.3.10.1. *Purpose and Result*

Subordinate clauses introduced by this preposition generally have a deontic modality and express purpose, their action being presented as unrealized from the perspective of the main clause, e.g.

(1) *mšaxnánne ʾixàla*ˈ *ta-ṭ-áxləx ʾána-w ʾáti m-ġðàðe.*ˈ 'I shall heat the food so that you and I may eat together.' (A22:31)

(2) *dóryɛle xɛ̀la*ˈ *ta-t-šarə̀ṭla gáne.*ˈ 'He struggled in order to release himself.' (A26:81)

(3) *ʾáwwa ṭéni páyəš nṭìra*ˈ *ta-t-čú-mdi là-ʾaθe bíye dìye.*ˈ 'This saddle bag will be guarded so that nothing will happen to it.' (A7:9)

Occasionally the *D* subordinator is omitted. This is attested mostly where the preposition has its longer form *ṭla*, e.g.

(4) *Kắrīm zìlle bar-xmáre díye*ˈ *ṭla-mɛθéwa xmáre dìye.*ˈ 'Karim went after his donkey, in order to fetch his donkey.' (A14:17)

In (5), where the purposive particle is placed before a conditional sentence, the subordinator *D*, which belongs with the *ta-*, occurs both before the whole sentence and also before the main clause:

(5) *bnáya gúda ʾu-dráya rǎṣ̀ā̀ṣ,*ˈ *tá-t ʾáp-ən maxíle màdfaʕ*ˈ *t-là-taləxwa gúda.*ˈ 'He built the wall and put lead into it, so that, even if it was hit by artillery, it would not be destroyed.' (A11:13)

On some occasions a *ta*-clause denotes the final outcome or result of a preceding action, whereby the speaker presents the chain of events from the viewpoint of this outcome, e.g.

(6) *qa-mòt hátxa wáða bíyi,*ˈ *mɛθóye dwáqəlla ʾùrxi*ˈ *ta-t-lá-mṣən ṣálən be-xàli.*ˈ 'Why have you done this to me, bringing (snow) and blocking my road, so that I cannot go down to the house of my maternal uncle?' (A25:42)

(7) *ṣlàya,*ˈ *ṣálya šátya mìya,*ˈ *ta-t-qàlba xá-bena xéna.*ˈ 'She went down to drink water and then finally returned again.' (A33:8)

19.3.10.2. *'until'*

It is sometimes appropriate to translate *ṭla-/ta-* 'until', in which case the realis *ʾi-qaṭəl(wa)* form may be used in habitual contexts, e.g.

(1) *xallóxwa ʾamáne bíye ʾu-hə̀nna*ˈ *ta-t-y-awéwa ṣàwma.*ˈ 'We would wash vessels in it and so forth, until it was the fast.' (B16:8)

(2) *ʾu-mṭašóyəlla gána hàtxa*ˈ *tá-t brátət málka ṭ-ásqa rəš-gàre.*ˈ 'She hid herself until the daughter of the king went onto the roof.' (A27:13)

(3) *mɘ́ra dǝ-klìgǝn!ˈ pàlṭǝn m-gáwe.ˈ mɘ́re làˈ ta-ṭ-óðǝn qɑ̆́pǝx ʾàp ṭla-réšɘx,ˈ baˤdèn pàlṭǝt.ˈ* 'She said "Stop! I (want to) get out of it." He said "No, not until I make a lid also for your head, then you come out."' (A20:3)

19.3.10.3. *Direct Complement*

A content clause introduced by *ṭla-/ta-* sometimes functions as a factive object complement of verbs such as 'to say', 'to know', 'to inform'. This is related to its use as an object marker of object nominals (§16.3.4.).

(1) *ʾɘ́θyǝx ta-t-mɛðɘ̀xlɛxuˈ ta-t-m-díya ʾarpà-saʾateˈ gɑ̆́rǝg kúlla nášǝt máθa pàlṭi m-gu-máθa.ˈ* 'We have come to let you know that in four hours from now all the people of the village must leave the village.' (B1:13)

19.3.11. qa-

19.3.11.1. *Purpose and Result*

Clauses introduced by this particle generally are deontic in modality and express purpose, e.g.

(1) *xánči ṭ-amrɘ́nna qalùltaˈ qa-t-pàrqa.ˈ* 'I'll tell it to you quite quickly so that it will finish.' (A4:5)

(2) *ṣráxɛle qa-t-šɑ̆̀maˈ brátǝt màlka.ˈ* 'He is shouting so that the daughter of the king hears.' (A21:16)

(3) *bɘ́nyǝt-ǝlla ʾótǝx tàma,ˈ qá-t mabɘ́sma kút-yom xà.ˈ* 'You have built her a room there in order for her to entertain somebody everyday.' (A4:52)

Occasionally it expresses result without deontic modality, e.g.

(4) *ʾǝn-maxéwa xa-xèna,ˈ ʾáp-ʾaw xónǝt Lelìθɛwa,ˈ xaθɘ̀mwaˈ qa-ṭ-axɘ̀lwale.ˈ* 'If he had struck again—he was the brother of Leliθa—he would heal and (as a result) would eat him.' (A52:25)

(5) *qímle b-zdáya m-bróne dìyeˈ qa-t-là-ʾamǝr.ˈ* 'He was afraid of his son and (as a result) did not tell (= He was afraid to tell his son).' (A8:17)

In (6) the verb of such a result clause is in the realis *ʾi-qaṭǝl* form:

(6) *xzóli xa-darmána qa-ʾɛ̀ni,ˈ qa-t-y-ámṣǝn xázǝn bǝr-našúθa mɘ́ndi hàle.ˈ* 'Find a remedy for my eyes, so that (as a result) I can see people and the things around me.' (A24:2)

In (7) it is used as a complement of an expression of 'keeping vigil':

(7) *šahárta qa-t-qyàmta pálṭa.*ˈ '(They keep) vigil for/until the resurrection comes out.' (B5:54)

19.3.11.2. *Direct Complement*

A content clause introduced by *qa-* sometimes functions as a factive object complement. Note that in (1) the copula is placed on the initial pronoun on account of its focal prominence rather than on the subordinating particle *D*:

(1) *bár ṭ-ila-ðíta qa-t-ʾàyyɛla θíθa kɔsle-dìye,*ˈ *muxɔ́bla ġðàðe.*ˈ 'After she realized that she had come to him, they fell in love with each other.' (A4:4)

(2) *la-bắyən ʾáyya bráta ṭ-in-múθyəlla t-yắða qá-t ṭlíba díya hóle mìθa.*ˈ 'I do not want this girl whom I have brought to know that her betrothed has died.' (A4:33)

(3) *dwáqa dawɔ́qwa ʾíðə-dìye*ˈ *qá-t ʾó-məndi wèle.*ˈ 'He would shake his hand (to confirm) that this has taken place.' (B5:10)

Such a clause may be the complement of an existential particle in constructions such as (4):

(4) *líθwa qá-t mbaqríwa bràta.*ˈ 'It was not the practice to ask the girl.' (B5:2)

In (5) the main verb takes a 3fs. pronominal suffix, which can be regarded as a type of anticipatory raising, in that it refers to the propositional content of the embedded clause:

(5) *ʾáwwa maxzóyəlla qá-t ḥắwáli ʾálpa-w ʾarbà-mma*ˈ *šɔ̀nne*ˈ *ṭ-íle píša bɔ̀nya.*ˈ 'This shows that it was built about one thousand four hundred years ago.' (B1:7)

Such object complement clauses may also have deontic force, e.g.

(6) *múr ṭla-xònəx*ˈ *qa-t ʾɔ̀dyo*ˈ *ʾáwði tàgbir*ˈ *ʾásqi l-ṣèda.*ˈ 'Tell your brother that today they should make a plan to go out hunting.' (A26:43)

(7) *b-xáðexi qá-t mxaθəxθɔ́xxa xɔzmayùθa.*ˈ 'We would be very happy to renew the family relationship.' (B5:4)

The particle is also used to introduce a clause that is the direct complement of other expressions, e.g.

(8) *rába ʾɛbɛ̀le-lli qa-t kúlla ʾanna-jwánqe xéne šoqánna kèpa.*ˈ 'It would be a great shame for me to leave all these other young men stone.' (A8:81)

(9) *ʾɘn-ʾáti mwáfqɘt qa-t-goránne Gozàli,*ˈ *brónux b-tàrɘṣ.*ˈ 'If you agree for me to marry Gozali, your son will be cured.' (A8:95)

19.3.12. mən

On some rare occasions the preposition *mən* governs a content clause rather than a nominal. This is attested where the preposition has a causal sense (§16.5.4.). The embedded clause is not introduced by the subordinator *D*:

(1) *ʾáyya tɘ̀kθa … t-xaddámθa nñ̃lle*ˈ *mən-qəm-xazyále šapìra.*ˈ 'The waist cord of the maid-servant snapped, because she saw that he was handsome.' (A25:56)

19.3.13. xaṭər

Causal subordinate clauses are occasionally formed by the particle *xaṭər* followed by the subordinator *D*, e.g.

(1) *ṭḷá-bnone xilìli,*ˈ *báxta xilàli,*ˈ *xáṭər ṭ-ínwa m̂konɘ̀drəlla.*ˈ 'I have eaten the three children, I have eaten the wife, because I rolled her (down the hill).' (A20:12)

19.3.14. ka-

There are some marginal attestations in the text corpus of subordinate clauses introduced by the particle *ka-* 'while, when', which appears to be related to earlier Aramaic *kaḏ*. It is found at the head of reduced predications from which a copula element has been omitted. In some cases it is combined with the *D* subordinator, in the form *ka-t* (1–2), in other cases the *D* is not used (3):

(1) *dàx ʾáyya bráta wiðálux brátɘt béθa*ˈ *ʾu-palàxta-w*ˈ *mbašôle*ˈ *ʾu-xyàpa-w*ˈ *mšâya-w*ˈ *knàša-w*ˈ *mbašôle*ˈ *ʾu-kúl-xa mɘ́ndi wàða,*ˈ *ká-t gu-béθi qímta brìθɛla,*ˈ *lɛ́la plìxta-w*ˈ *ʾu-hàl ʾɘ́dyo yóma?*ˈ 'How have you made this girl a housewife, hard-working, cooking, washing, polishing, sweeping,

cooking and doing everything, while brought up my house (from the day) she was born without having worked until today?' (A21:34)

(2) *bắyən t-yằðən*،' *ʾáwwa bər-náša mòdile*,' *dáx mṣéle ʾáyya bráta qəm-ʾawə́dla b-pəlxánət bèθa*,' *ʾu-ká-t brátət màlka*,' *ʾu-lípta har-dmàxa-w xála.*' 'I want to know what (kind of person) this man is, how could he have made this girl a hard-working housewife, while (she is) the daughter of the king and is used to only sleeping and eating.' (A21:32)

(3) *mbúrxəllən l-ġðàðe*' *ka-xóna ʾu-xàθa*,' *lá ka-gáwṛa-w bàxta.*' 'They have wed us together while (we are) brother and sister, and not while (we are) husband and wife.' (A16:8)

19.3.15. *Adverbial Content Clauses with No Introductory Particle*

Subordinated content clauses with a temporal adverbial function are occasionally used without an introductory particle. This is attested in (1) in the second of two *ʾiman* ('when')–clauses, where the omission of the particle may be explained as having arisen by gapping:

(1) *mandrìle gáre*' *qa-t-qàwe*' *qa-t-ʾíma ṱ-áθya ʾəryàna-w*' *ṱ-áθe tàlga*' *qa-t-lá-ṣala dalòpe.*' 'They roll the roof so that it becomes tough, so that when the rain comes and the snow comes, leaking water does not seep down (into the house).' (B5:194)

In some cases, however, the omission of the *ʾiman* particle is not conditioned by gapping. This is attested both in clauses that provide temporal background either to what follows (2) or to what precedes (3):

(2) *ʾu-ṱ-aθéwa sòtwa*,' *zónəxwa ʾ̀rwe*,' *xámša réše ʾ̀rwe*,' *hànna.*' *ʾ́rwe zonə̀xwala*' *ʾu-pərmə̀xwa.*' 'When winter came, we bought sheep, five head of sheep or so. We would buy sheep and slaughter them.' (B16:27)

(3) *ʾən-wéla biš-pθìθa*,' *y-ámrəxxa dàrpa*,' *yáʿni ṣàlya*,' *ṱ-áθe sòtwa*' *ṱ-áθya tàlga mə́ndi.*' 'If it (the space between the beams) were to become wider, (the roof) would collapse, as we say, that is it would come down, when it was winter and the snow arrived.' (B5:189)

This lack of relational particles in temporal adverbial clauses can be compared to the frequent omission of prepositions before nominals in temporal adverbial phrases (§14.13.).

19.3.16. *Content Clauses Complements of Single Constituents*

In some cases a content clause introduced by the subordinator *D* is the complement of an operator phrase or pronominal element that stands alone and functions as a main clause predication. This applies to constructions such as the following:

(1) *jurə́bli ʾàna*ˈ *qa-t-ʾána xazə́nwa hàwnəx dáx-wewa*ˈ *là t-la-bǎyə́nwalǝx.*ˈ 'I tested you to see how clever you are. It was not that I did not love you.' (A40:16)

(2) *ʾo-t-là páləx*ˈ *na-múmkən ṱ-áxǝl gu-bɛ̀θi.*ˈ 'Whoever does not work, (it is) impossible for him to eat in my house.' (A21:40)

(3) *ʾáy ṱ-ix-ʾə́θye kčɛ̀xe*ˈ *hádəx qam-ʾɛ̀nəx mubyǎnna.*ˈ 'It is because we were tired that it appeared like that to your eyes'. (A4:36)

The initial constituent may be interpreted as a reduced predication: '(It is) not...', '(It is) impossible', '(It is) this...'

19.4. Cleft Constructions

A cleft construction involves the splitting of a simple clause into two components that are linked in a predicative relationship, with part of the contents embedded in a subordinate clause. In English this syntactic restructuring is often used to express narrow focus on one constituent, e.g. *I want food > What I want is food ~ It is food that I want*. In the C. Barwar dialect cleft constructions are generally not used to express focus on a constituent in this way. Rather narrow focus is usually conveyed by the movement of the nuclear stress and/or the copula without the embedding of the non-focal material in a subordinate clause (see §15.4.1.4.1. i), e.g.

(1) *brònux-ile xíla xabúša.*ˈ '*Your son* has eaten an apple (= It is your son who has eaten an apple).'

(2) *brònux xílle xabúša.*ˈ '*Your son* has (just) eaten an apple (= It is your son who has (just) eaten an apple).'

Sporadically, however, a fully cleft construction is used with the non-focal material embedded under the subordinator *D*, e.g.

(3) ṭ-áθya ṭ-óya ʾáxxa kə̀sləx¹ … ta-t-lá-palxət ʾàti¹ ʾày-ila t-pálxa.¹ 'She will come and be with you here … so that you will not work. It is *she* who will work' (A34:26)

A number of other cleft type constructions can be identified in the text corpus. The majority of these lack an explicit copula element that links the embedded clause to the other constituent or contain a copula but no explicit subordinating particle introducing the embedded clause. They are, therefore, better termed quasi-cleft constructions.

One form of quasi cleft structure is illustrated in (4) and (5)

(4) ʾíθwa skìnta mə́nne¹ ʾo-nằra mə́nne díye.¹ ʾa-skínta t-wéwa gráða dúša bìya,¹ xpírre, xpírre, xpìrre.¹ 'He had a knife with him, (and had also) the axe. He scraped the honey with the knife (literally: The knife [is that] which he scraped honey with), digging, digging and digging.' (A14:25)

(5) ʾáp-ʾaw qyàmɛle¹ táwa xáṣət súse dìye-w¹ ṣlàya.¹ ṣlàya,¹ ṣlàya¹ ʾax-ṭ-íle pqìðəlle.¹ ʾáwwa t-wéwa ṣláya l-márzət xa-yàma,¹ ʾax-ṭ-íle pqìðəlle.¹ 'He sat on his horse and went down. He went down a long way, as he had instructed him. He went down to the shore of the sea (literally: He [is the one] who was going down to the shore of the sea), as he had instructed him.' (A12:30)

In constructions such as these the cleaving of the clause does not have the function of putting narrow information focus on the initial constituent. Rather the initial constituent has topical status, in that it has been mentioned in the immediately preceding discourse, and the new information is expressed in the predicate. This may be compared to constructions in which a copula is attached to an initial element to express its topical prominence (§15.4.1.4.1. ii), as in the second clause in (6):

(6) ʾáti rába wíðət spayùθa¹ ʾu-ʾátit pqìðəllən.¹ 'You did a lot of good and you instructed us.' (A8:87)

The purpose of the shift in the copula onto topical prominent items in constructions such as (6) is to enhance their topical prominence as a strategy to signal a boundary in the discourse. The occurrence of a topical constituent in initial position by its nature typically marks a discourse boundary and the enhancement of this topical status marks the clause off more distinctly from what precedes. One motivation for this distinctness is to give prominence to the content of the clause. This is the case in (6)

and it appears also to be the motivation in the quasi cleft constructions (4) and (5), in that these are presented as pivotal or climactic events. In (4) the act of scraping with the knife leads to the escape of the protagonist from his imprisonment. The clause in (5) marks the endpoint of a long journey. The quasi-cleft construction (4) and (5) resemble the copula shifting constructions also structurally and prosodically. The only difference is the presence of the *D* particle in (4) and (5) and its absence in (6).

A further example of this type of quasi-cleft construction is (7). Here the clause following it has a topical subject with a copula attached to it (*ho-náṧela ʾəθye¹*). Both of the constructions mark off distinct sections of discourse. In this case the motivation appears to be to present the two activities as taking place in parallel rather than being linked in a sequence.[3]

(7) *ʾo-pəlxána ṭ-íle plìxəlle¹ ho-náṧela ʾəθye¹ kə́sle dìye¹ ʾu-qímela sìqe.¹* 'He did the work (literally: The work [is that] which he did). People came to him and went away.' (A16:5)

A quasi cleft construction with a topical subject can also be identified in (8), in which the subject is an asyndetic nominal relative. The fact that the phrase *t-wɛ́wa ràbe* 'those who were many' lacks a demostrative head indicates that it should be construed as predicative. The discourse boundary marking function of the construction here is used to signal the onset of elaborative, background material:

(8) *xɛ́ṭəxwa məstíke ʾàxni,¹ b-ìðən xeṭə́xwa.¹ b-maṧina xeṭə́xwa.¹ ʾítwala maṧina t-wɛ́wa ràbe.¹* 'We used to sew mosquito nets. We sewed them by hand. We sewed them by machine. (The ones who) had a machine (were those families) that were large.' (B10:59)

In (9) and (10) the quasi-cleft construction has the pronominal adverbials *hatxa* and *hadəx* in the initial topically prominent position. The main purpose of the construction in these cases is to give prominence to the clause as a whole:

---

[3] A further conditioning factor for the types of cleft constructions illustrated in (4), (5) and (7) may have been the use in Kurdish of quasi cleft constructions with the so-called 'deictic *izafe*' to express the present progressive and the perfect (MacKenzie 1961: 205, 210–211).

(9) *léka hátxa ṭ-it-mxùmla-w*ˈ 'Where (are you going) while so festively dressed? (literally: [It is] so much that you are festively dressed).'' (A35:5)

(10) *hádəx ṭ-ítwa mčoḳə̀bna tə́mməl.*ˈ 'You were so well decked out yesterday (literally: [It is] so much that you are decked out yesterday).' (A35:18)

Quasi-cleft constructions can be identified also in cases where a content clause introduced by the subordinator *D* is the complement of an operator phrase that stands alone and functions as a main clause predication. This applies to constructions such as follows:

(11) *dàx ṭ-ile-dű́s?*ˈ 'How is it that he is right?' (A17:8)

(12) *xázəx màṭo-ṭ-itwa wíra.*ˈ 'Let us see how it is that you entered.' (A47:4)

(13) *bálki ṭ-íla mìθta,*ˈ *bálki ṭ-íle xa-mándi θíθa bìya.*ˈ 'Perhaps she is dead (literally: Perhaps [it is] that she is dead). Perhaps something has happened to her.' (A21:25)

(14) *ʾána kəmà dána ṭ-in-mṣalóye ṭla-márya ʾálaha*ˈ *ta-t-yawə́lli ʾə̀mma dáwe.*ˈ 'I was praying to the Lord God so many times to give me a hundred gold coins (literally: [It is] so many times that...]).' (A6:10)

These can be analysed as quasi-cleft constructions in that the initial constituent could be regarded as having the status of a reduced predicate, without a copula element, with the content clause as a constituent.

A further example of a quasi-cleft with a reduced predicate taking a content clause as a constituent is (15), in which a temporal adverbial is in focus:

(15) *ʾáwwa maxzóyəlla qá-t ḥăwáli ʾálpa-w ʾarbà-mma*ˈ *šə̀nne*ˈ *ṭ-íle píša bə̀nya.*ˈ 'This shows that (it was) about one thousand four hundred years ago that it was built.' (B1:7)

In (16) an initial temporal adverbial is linked to the rest of the clause by a copula, though there is no explicit embedding of the subsequent material under a subordinate particle:

(16) *mən-yárxət ṭḷà*ˈ *ʾíle náše mšɛ̀ri*ˈ *pḷàxa.*ˈ 'From the third month it is that people begin to work.' (B5:107)

The function of the construction is not to put narrow focus on the adverbial, since the verbal predicate is equally informative. Rather the purpose is to enhance the topical prominence of the adverbial, giving it ballast to mark a boundary of a discourse section. A similar interpretation can be applied to (17), in which the initial relative phrase has a cleft structure without a subordinate particle:

(17) *ʾo-ṭ-íle y-axớlwala bnònəx*ˈ *hóle qṭìləlle.*ˈ 'The one who is [the one who] was eating your children—he has killed him.' (A24:47)

19.5. CONDITIONAL CONSTRUCTIONS

Conditional constructions consist of two components, the protasis clause, which presents the condition, and the apodosis clause, which expresses the consequent to the condition. The protasis is normally placed before the apodosis, though in some circumstances this is reversed and a condition of an event or situation is added after the latter has been expressed.

In most cases the protasis is introduced by the conditional particle *ʾən* ('if'). Occasionally it is introduced by other particles such as *madam* (§19.5.7.) or *ʾɛ-ga* (§19.5.8.). In what follows, we shall classify the conditional constructions with *ʾən* according to the verb form of the protasis and the apodosis.

19.5.1. *Protasis*

19.5.1.1. qaṭəl
The *qaṭəl* form is commonly used in a protasis referring to a future situation the occurrence of which the speaker believes is a real possibility. The form is perfective, since it presents actions delimited with a start and end point or at least with a start point., e.g.

(1) *ʾən-ʾamrə́nnux ʾáp-ʾati b-šànət.*ˈ 'If I tell you, you will faint.' (A11:2)
(2) *ʾən-ʾázəx ʾáθṛət bàbux,*ˈ *yằððtle?*ˈ 'If we go to the land of your father, will you recognize it?' (A14:90)
(3) *ʾən-pálšəx mən-d-áni qaṭlìlən.*ˈ 'If we fight with them, they will kill us.' (A14:44)
(4) *ʾən-ʾánna mtằməmə̀tla,*ˈ *ʾána t-yànna-llux.*ˈ 'If you fulfil these (conditions), I shall give them to you.' (A12:2)

(5) *ʾən-lá-ʾazən mšàyðən.*ˈ 'If I do not go, he will go mad.' (A4:27)

(6) *ʾən-lá-ʾoðət b-xábrət ʾalàha,*ˈ *b-talqèti.*ˈ 'If you do not do the word of God, you will be obliterated.' (A8:97)

In verbs denoting mental processes, which tend to avoid the compound progressive construction (§15.1.1.4.), the *qaṭəl* form is used imperfectively to express a possible situation in the present, e.g.

(7) *ʾən-bắy̆ət ʾázət dɛ́ṛət ṭla-bɛ́θət bàbəx,*ˈ *tə́mməl mădəṛə̀nnəx.*ˈ 'If you want to go and return to the house of your father, I shall send you back tomorrow.' (A4:42)

(8) *ʾə́n bắyə̀tli,*ˈ *ʾáθət báθri ʾap-ʾàti.*ˈ 'If you love me, you should follow me.' (A14:102)

19.5.1.2. qaṭəlwa

This form is used where the protasis refers to a possible habitual situation in the past, e.g.

(1) *ʾən-bắy̆əxwa tùma,*ˈ *ṭla-mbašə̀lta,*ˈ *kèfənile.*ˈ 'If we wanted (to use) garlic for cooking, it was up to us.' (B10:24)

(2) *bár hàdəx*ˈ *ʾə́n qằṭíwa xəyalèy*ˈ *y-amríwa ʾáxni ràziyəx.*ˈ 'Afterwards, if they had made a decision, they would say "We agree."' (B5:4)

Sometimes it is used to refer to a real situation in the past. In such cases it is often appropriate to translate the conditional particle 'when', since it denotes a situation that the speaker knows to be true. The motivation to use a conditional construction here does not arise out of the degree of certainty regarding the event. Rather the construction is used here as a device to introduce the situation described in the protasis as a topical frame for what follows, it being a more powerful presentative device than a factive temporal clause, e.g.

(3) *ʾən-parə́qwa ʾƗ̆šwuṭ,*ˈ *ʾáw ʾəsrí-tmanya yomáθa yan-ʾəsrí-ʾə̀č̌č̌a yomànele,*ˈ *y-azə́xwa ṭùra.*ˈ 'If February was finished—it is twenty-eight or twenty-nine days long—we would go to the mountains (= As for when February was finished…).' (B5:152)

(4) *fa-ʾən-maṭiníwale ʾíθwa xàwla.*ˈ 'If they loaded it, there was a rope (= As for when they loaded it…).' (B5:128)

The *qaṭəlwa* form may also be used in a protasis to express modal remoteness. It is used to refer to a counterfactual situation in the past, which the speaker knows did not take place in reality, or to a situation in the present or future that the speaker knows cannot or will not in reality take place. Such hypothetical conditions refer to a single event or an iterative event. The verb can be interpreted as expressing perfective aspect, presenting the action as an event delimited by a start and endpoint, or at least with a start point. In the case of iterative actions, the speaker uses the form that is appropriate to express each individual perfective occurrence of the iterated situation, e.g.

(5) *ʾən-maxéwala xa-xéna xaθmàwa¹ ṭ-axlàwale.¹* 'If he had hit another (blow), she would have healed and eaten him.' (A50:14)

(6) *ʾən-maṣéwa ṭ-axəlwala,¹ lèla xamúṣe.¹* 'If he could have eaten them, (he would not have said that) they were sour.' (A43:4)

(7) *ʾən-maṣə̀nwa,¹ ṭ-aθə̀nwa.¹* 'If I could, I would come.'

(8) *ʾən-mbaqrə̀twa,¹ t-yawə́nwalux zùẓe,¹ bás là mbuqə́rrux.¹* 'If you had asked, I would have given you money, but you did not ask.'

(9) *ʾən-yăδə́nwa manay-díye mòdile,¹ ṭ-amrə́nwalux dìya,¹ bas lèδən.¹* 'If I knew its meaning, I would tell you now, but I do not know.'

(10) *ʾən-maṣə̀nwa,¹ ṭ-aθə̀nwa,¹ bás lê-y-maṣən.¹* 'If I could, I would come, but I cannot.'

19.5.1.3. qṭille / qəm-qaṭəl

The past perfective forms *qṭille* and *qəm-qaṭəl* are commonly used in the protasis to denote a possible situation in the future, e.g.

(1) *ʾən-kpìnni,¹ ṭ-axlə̀nne.¹* 'If I get hungry, I shall eat it.' (A23:5)

(2) *ʾən-mpŭqèli¹ garšə́tli ṭla-gére mánne dìye.¹ ʾu-ʾən-là mpŭqéli,¹ ʾána pálxən b-réše bǎlằš.¹* 'If I split it, you will produce for me three arrows from it. If I do not split it, I shall work over it for free.' (A12:44)

(3) *ʾən-šằrəṭ díyi qəm-yăδə̀tla,¹ xo-b-gawrànnux.¹ ʾən-šằrəṭ díyi là qəm-yăδə́tla,¹ réšux mattánne gu-d-yàha káwe¹ ṭ-íla pyàša.¹* 'If you know (the answer to) my challenge (literally: condition), I shall indeed marry you. If you do not know (the answer to) my challenge, I shall put your head in that opening that remains.' (A25:62)

(4) *ʾən-báxtux muθéla bràta¹ ʾu-báxti muθéla bròna,¹ brátux qa-bròni.¹ ʾən-báxti muθéla bràta¹ ʾu-báxtux muθéla bròna,¹ ʾa-bráti qa-brònux.¹* 'If your wife gives birth to a girl and my wife gives birth to boy, your daughter (will be married) to my son. If my wife gives birth to a daughter

and your wife gives birth to a son, my daughter (will be married)
to your son.' (A25:2–3)

(5) ʾən-θèli̧ˈ xó bàxtiwət.ˈ ʾu-ʾən-là-θeli,ˈ kú-məndit ʾáwðət wùð.ˈ 'If I come
back, then you are my wife. If I do not come back, do anything
you want.' (A25:66)

(6) qrèla!ˈ ʾən-mjuwə̀bla,ˈ xo-ʾànən ʾóθya kə́sləx.ˈ ʾən-là mjuwábla,ˈ àtit θíθa kə́sli.ˈ
'Call them! If they answer you, then indeed it is me who has come
to you. If they do not answer you, you have come to me.' (A26:4)

(7) ʾən-θéle mbuqárre xa-nàša,ˈ máre d-ɛ̀ni?ˈ ʾámrət t-ʾÁjdən tèlɛla.ˈ 'If some-
body comes and asks saying "Whose are they?", say they belong
to Ajdən the fox.' (A32:20)

These past forms are also used in protases that refer to possible habitual
situations in the present. Several examples are found in the description
of games in text B11, e.g.

(8) ʾən-là-mxele ʾíðe-lle,ˈ w-áwwa θéle dwíqle ʾo-qésa t̠-íle dúkθət mt̠awàlta,ˈ
xàsri.ˈ 'If he does not strike him with his hand and he comes and
holds the stick which is the place of the game, they lose.' (B11:14)

(9) ʾən-là xsírreyˈ ʾánna-t qrìmlaˈ mšaxə̀lpi.ˈ 'If they do not lose, the ones
that have won change (place).' (B11:9)

(10) ʾən-kúlla qəm-maxíla bə̀rrèyˈ ʾáw qəm-dawqíle ʾo-qésa t̠-íle be-pàlga,ˈ θèlaˈ
xá mən-d-ánna t̠-íla qam-t̠àra,ˈ θéle qəm-dawə̀qle,ˈ xsìrra ʾan-gawáye.ˈ 'If
they break up all their group or seize the piece of wood that is in
the middle, if one of those who are outside comes and seizes it,
those inside lose.' (B11:9)

19.5.1.4. qt̠ilwale

This form is attested only rarely in the protasis. In (1) it refers to a habitual
situation in the past:

(1) ʾən-twírwala tə́rnaˈ t-xa mənnèyˈ y-awə́lwala qa-t-wáha šaqə̀lwa mə́nne.ˈ
'If both (sides) of one of the eggs broke, he would give it to the
other person to take it from him.' (B5:59)

19.5.1.5. *Present Copula*

The present copula is used in a protasis that denotes a possible situation
in the present. The enclitic form of the copula is used and this is attached
to the conditional particle ʾən rather than to the predicate of the clause.
The explanation for this is probably that the construction ʾən + copula

has developed historically from *ʾən + D* + copula (e.g. *ʾən-ile < ʾən-ṭ-ile*). As we have seen, the subordinating particle *D* regularly attracts the copula enclitic. The conditional construction *ʾən + D* + copula is, in fact, the norm in several other NENA dialects. Examples:

(1) *ʾən-íle mìθa,ˈ gắrəg mèθən.ˈ* 'If he is dead, I must die.' (A8:61)

(2) *ʾən-íle xwarzàyi,ˈ ṭ-áθe t-yăðéla ʾánna mòdila.ˈ* 'If he is my nephew, he will come and he will know what these are.' (A25:49)

(3) *ʾən-ʾíle ʾúrza gáwṛa xoš-qàyəm,ˈ mjarbὲnne.ˈ* 'If he is a brave man, let him get up and I shall test my mettle with him.' (A29:27)

(4) *ʾən-ít xonὲni,ˈ háyyo tu-ʾáxxa kəslὲni.ˈ* 'If you are our brother, come and sit here with us.' (A39:7)

(5) *ʾən-ít ṣìya,ˈ hóʾla mìya.ˈ ʾən-it-kpìna,ˈ hóʾle xùl.ˈ* 'If you are thirsty, here is water. If you are hungry, here eat.' (A28:18)

Occasionally the present copula is omitted from the protasis, e.g.

(6) *ʾən-réšət bábe díye ʾax-ṭùra,ˈ ʾu-hóle qṭíla l-Tătár-i Slemán-i Sὲndi,ˈ lὲka bṭ-ázəl?ˈ* 'If the head of his father is like a mountain and he has been killed by Tătar-i Sleman-i Səndi, where will he go?' (A28:8)

19.5.1.6. *Past copula*

The past copula is sporadically used in the protasis to express a habitual situation in the past, as is the case in (1). Since the situation is known by the speaker to have taken place, the primary function of the construction should be regarded as being to present a topical frame:

(1) *ʾən-wéwa šḗr-Dùre,ˈ kúlla náše ʾo-yóma y-azíwa šḗr-Dùre.ˈ* 'If there was a saint's day festival in Dure, everybody on that day would go to Dure.' (B5:228)

19.5.1.7. *Existential Particle*

The present existential particle is used to refer to possible situations in the present, either those that may actually exist or those that are habitual, e.g.

(1) *ʾən-ʾíθ pàwxa,ˈ ʾi-marmíle gu-hàwa.ˈ* 'If there is wind, they raise it in the air.' (B5:97)

(2) *ʾən-ʾítla mója zòraˈ qám-ma xalwàla,ˈ maməṣála xὰčča-wˈ* 'If it has a small calf, before she (the milkmaid) milks it, she allows it to give suck (to the calf) a little.' (B5:175)

(3) *ʾən-ʾítlux ferə́sse bˠ̆ʾyət pàlšət,*' *hadíya ʾána hon-ʾə̀θya*' *ṭlába bràtux,*' *bˠ̆ʾyət yawə̀tla,*'
    bˠ̆ʾyət pálšət kèfux.'' 'If you have warriors and you want to fight—now,
    I have come to ask for the hand of your daughter, whether you want
    to give her or whether you fight is up to you.' (A29:58)

The present existential particle, may have a past habitual function, as in
(4). Alternatively the past existential particle may be used, as in (5):

(4) *ʾən-ʾíθ-qaša táma mṣalɛ̀wa-w*' *kúlley y-axlìwa.*' 'If a priest was there, they
    would pray and everybody would eat.' (B5:68)

(5) *ʾən-ʾítwalən mànqal,*' *dɛrə́xwa gu-mànqal.*' 'If we had a griddle, we would
    put it on the griddle.' (B10:6)

19.5.1.8. *Compound Verbal Forms with the Present Copula*

Compound forms consisting of the present copula + resultative participle
or present copula + infinitive are occasionally used in a protasis to refer
to a situation that possibly holds in the present. In some of the attested
examples the copula element is attached to the conditional particle as
expected (1–2), but in some cases it remains cliticized to the end of the
verbal form (3–4):

(1) *ʾə́n-in ʾàna ʾə́θya gu-šwíθəx,*' *qrə́gən xaddàməx.*' 'If I have come to sleep in
    your bed, call your servants.' (A26:4)

(2) *ʾən-it ʾə́θya šúlət qaḥbùθa,*' *kəs-bábən Bˇăku.*' 'If you have come to forni-
    cate, then (lodge) with our father Bˇăku.' (A26:26)

(3) *ʾən-ʾáyya ʾisə́qθi xɛ̀rət,*' *ʾən-ṭúwət ʾisə́qθi bdìlɛle,*' *mšadrátla ʾárye ṭ-àθa,*' *ʾána
    gu-ʾawqànən.*' 'If you watch this ring, if the diamond of my ring
    changes (in colour), send the lions so that they come (to me), for I
    am in trouble.' (A18:13)

(4) *ʾən-mˇăxóbət pə́šət ʾàxxa,*' *ʾáti pə́šət malə́kθa šòpi.*' 'If you would like to stay
    here, you will become queen in my place in this land.' (A4:42)

In (5) the deictic copula is used with the resultative participle in a protasis
referring to a representative case of an habitual event. The situation is
certain to exist and the conditional particle could be appropriately trans-
lated 'when'. The protasis, therefore, has a topic presentative function.
This is reflected in the use of the deictic copula, which has a presentative,
attention drawing function:

(5) *ʾən-xá náša dìyux¹ yan-xá bráta díyux hot-híwəlla qa-ðà-maθa,¹ píše xə̀zme.¹*
'If/when you have given somebody of your family or a daughter of yours to a certain village (in marriage), (the two families) become relatives.' (B5:232)

19.5.1.9. hawe

The form *hawe* is used in place of the present copula to refer to a situation in the present that the speaker regards as being unlikely to be realized, e.g.

(1) *ʾən-háwɛ ʾəṣrà ṭiyáre xéne¹ ʾaxwáθux hawnàne,¹ la-maṭétuwa l-àwwa láxma.¹*
'If ten other men from Ṭiyare were as intelligent as you, you would not have reached this (miserable condition of begging for) bread.' (B17:16)

It may be used in a protasis that refers to a present habitual situation, e.g.

(2) *ʾə́n har-hóya talìlta¹ har-qítla ʾíðux bíya díya xàčča,¹ kə́ma ʾíðət nàša,¹ ʾi-ṣàwa y-amráxla.¹* 'If it is still wet, as soon as your hand touches it, the hand of the person (who touches it) becomes black, it is dyed, as we say.' (B5:216)

It is used to refer to a future situation that the speaker assesses to be a realistic possibility, e.g.

(3) *ʾən-hóya rázi šə́nna díya pălàla,¹ pálga ṭla-d-áy ʾu-pálga ṭla-d-àw,¹ maqimə̀xle.¹*
'If she will be happy to share her years, half for her and half for him, we shall resurrect him.' (A4:46)

(4) *ʾən-hawéli bràta¹ t-yánna qa-bronèxu.¹* 'If I were to have a daughter, I would give her to your son.' (A25:8)

(5) *ʾən-háwe t-tə̀rte ʾaqláθa,¹ ʾána b-zawnènne.¹* 'If it were two legged, I would buy it.' (A22:5)

(6) *ʾən-hàwa¹ ʾə́čči-u ʾə́čča maqəlbə̀nna.¹ ʾu-ʾən-hàwa¹ ʾə́mma-w-xà-ži,¹ la-băyə̀nna.¹*
'If they are ninety-nine, I shall return them. If they are even one hundred and one, I don't want them.' (A6:1)

19.5.1.10. hawewa

This form is used to express remote modality in a protasis. In (1) it has present time reference and denotes a situation that the speaker judges to be completely hypothetical and impossible to fulfil in the real world. In (2) it denotes a counterfactual situation in the past:

(1) *ʾən-hawə́twa gu-ʾáθra dìyi,*᾿ *kú-məndi băyə́twa t-yànwalux.*᾿ 'If you were in my country, I would give you whatever you wanted.' (A26:57)

(2) *ʾána b-gáni ʾən-hawə́nwa tàma*᾿ *ta-t-taqlə̀nwale*᾿ *là-mṣənwa taqlə́nwale.*᾿ 'If I myself were there (and tried) to lift it, I could not have lifted it.' (A51:20)

19.5.1.11. wela

In the protasis of (1) the *qṭille* form of *hwy* is used to describe a possible punctual event in the future:

(1) *sab-lá-hoya biš-pθìθa,*᾿ *ʾən-wéla biš-pθìθa,*᾿ *y-ámrəxxa dàrpa,*᾿ *yáʿni ṣàlya,*᾿ *ṯ-áθe sòtwa*᾿ *ṯ-áθya tàlga mə́ndi.*᾿ 'This was because (the space) must not be wider. If it were to become wider, (the roof) would collapse, as we say, that is it would come down, when it was winter and the snow arrived.' (B5:189)

19.5.1.12. hawewa qṭila

This compound verbal form is normally used in a protasis as a modally remote expression in order to denote a counterfactual perfective event in the past, e.g.

(1) *ʾən-ʾána hawə́nwa qṭíləlla ʾăyáha ʾaqə̀rwa,*᾿ *ʾáwwa xúwwe ṯ-awéwa qṭíla ṯla-bròni.*᾿ 'If I had killed that scorpion, that snake would have killed my son.' (A9:6)

(2) *ʾən-hawéwa kálba zíla qamàya,*᾿ *qaṭlíwa kàlba.*᾿ 'If the dog had gone first, they would have killed the dog.' (C8:5)

(3) *ʾən-hawétuwa də́ryəlli xáčča xéna biš-hódəx biš-ʾamə̀qta,*᾿ *táma mpulṭəlléxu mən-d-ànna*᾿ *pazesór b-ʾəlyàθa,*᾿ *hátxa b-qanàne.*᾿ 'If you had thrown me a little further along, (where it is) deeper, I would have brought out for you from there some of those big sheep with fat tails and horns (big) like this.' (A7:22)

(4) *ʾo-šəndóxa ʾən-hawewa qíθa bìyi*᾿ *ṯ-awə́twa qṭìlə̀lli.*᾿ 'If that rock had hit me, you would have killed me.' (A1:25)

(5) *ʾən-hawə́twa mìrəlli*᾿ *ṯ-awənwá-ʾəθya ṯ-amrə́nwala ʾan-šère*᾿ 'If you had told me, I would have come to recite these poems.' (B1:14)

(6) *ʾən-ʾána hawə́nwa wíða m-bàbi,*᾿ *ʾup-ʾáti ṯ-oðə̀twa mə́nni.*᾿ 'If I had done a good service to my father, you also would have done a good service to me.' (A41:6)

In is occasionally used to denote a state resulting from a habitual action in the past, e.g.

(7) *xéna ʾən-hawéwa bə̀sra,*ˈ *ʾən-háwəxwa príme ʾə̀rwe,*ˈ *dὲrəxwa bə́sra.*ˈ 'If there was meat, if we had slaughtered sheep, we would serve meat.' (B10:19)

19.5.1.13. *Compound Forms Containing* ṱ-awe

A few marginal cases are attested in which the protasis contains a compound verbal form consisting of an infinitive or verbal noun and the future form *ṱ-awe* (< *bəd-hawe*), e.g.

(1) *ʾən-ṱ-áwe jwà̀jta,*ˈ *b-šàxən.*ˈ 'If he moves (on one occasion), he warms up.' (B11:16)

(2) *mə́re bə́re xa-mə̀ndi*ˈ *qa-d-áwwa ʾáwəð xa-čὲra,*ˈ *ʾən-ṱ-áwe rà̀qa,*ˈ *qa-t-ʾáwəð xa-čὲra qa-gáne.*ˈ 'He said "(In case) something happens," so that he could find a way out (of trouble), so that, if he was fleeing, he could find for himself a way out (of trouble).' (A18:17)

19.5.2. *Apodosis*

Apodosis clauses contain various types of verbal form. These include a number of forms that contain the prefixed particle *bəd-*.

19.5.2.1. bəd-qaṭəl

This is the regular future form and is used as a future verb in apodoses that follow protases referring to the present or the future, e.g.

(1) *ʾən-íle xwarzà̀yi,*ˈ *ṱ-áθe t-yằðéla ʾánna mò̀dila.*ˈ 'If he is my nephew, he will come and he will know what these are.' (A25:49)

(2) *ʾən-kpìnni,*ˈ *ṱ-axlə̀nne.*ˈ 'If I am hungry, I shall eat it.' (A23:5)

(3) *ʾən-hawéli brà̀ta*ˈ *t-yánna qa-bronὲxu.*ˈ 'If I were to have a daughter, I would give her to your son.' (A25:8)

(4) *ʾən-lá-ʾðət b-xábrət ʾalàha,*ˈ *b-talqὲti.*ˈ 'If you do not do the word of God, you will be obliterated.' (A8:97)

19.5.2.2. bəd-qaṭəlwa

This form is used in the apodosis of conditional sentences that refer to a hypothetical condition in the past, which was not fulfilled (1), or to a hypothetical condition in the present or future, which the speaker assesses to be impossible to fulfil (2–3). It is perfective in aspect:

(1) *ʾən-mbaqrə̀twa,*ˈ *t-yawə́nwalux zù̀ze,*ˈ *bás là mbuqə́rrux.*ˈ 'If you had asked, I would have given you money, but you did not ask.'

(2) *ən-maṣə̀nwa,*¹ *ṯ-aθə̀nwa,*¹ *bás lè-y-maṣən*¹ 'If I could, I would come, but I cannot.'

(3) *ən-hawə́twa gu-ʾáθṛa dìyi,*¹ *kú-məndi bǎyə́twa t-yànwalux.*¹ 'If you were in my country, I would give you whatever you wanted.' (A26:57)

19.5.2.3. qaṭəl

This form is commonly used in apodoses after protases referring to possible events in the present or future, e.g.

(1) *ʾən-pálšəx mən-d-áni qaṭlìlən.*¹ 'If we fight with them they will kill us.' (A14:44)

(2) *ʾən-bǎ̀yət ʾázət déṛət ṯla-bé́θət bàbəx,*¹ *tə́mməl mǎdəṛə̀nnəx.*¹ 'If you want to go and return to the house of your father, I shall send you back tomorrow.' (A4:42)

(3) *ʾən-mp̆ŭqèli*¹ *garšə́tli ṯla-gére mónne dìye.*¹ 'If I split it, you will produce for me three arrows from it.' (A12:44)

(4) *ʾən bǎyə̀tli,*¹ *ʾáθət báθri ʾap-ʾàti.*¹ 'If you love me, you should follow me.' (A14:102)

19.5.2.4. ʾi-qaṭəl

This is attested in apodoses after protases that refer to a real habitual situation in the present, e.g.

(1) *ʾən-ʾíθ pàwxa,*¹ *ʾi-marmíle gu-hàwa.*¹ 'If there is wind, they raise it in the air.' (B5:97)

19.5.2.5. qaṭəlwa

This form is attested in two types of constructions. It is used in apodoses that denote past habitual situations, e.g.

(1) *ʾu-ʾən-íθən náše ʾźθye m-maθwáθa xène,*¹ *kút-xa šáqəlwa xákma xəzmān-dìye,*¹ *masə́qla kəsle-díye ṯla-fṭàrta.*¹ 'If there are people who have come from other villages, each person would take some of his relatives and take them up to his home for breakfast.' (B5:60)

It also occurs in apodoses expressing counterfactual situations in the past, e.g.

(2) *ʾən-háwɛ ʾəṣrà ṯiyáre xéne*¹ *ʾaxwáθux hawnàne,*¹ *la-maṭétuwa l-àwwa lóxma,*¹ *ʾu-ʾattítuwa láxxa pɛšítuwa hátxa snìqe.*¹ 'If ten other men from Ṭiyare

were as intelligent as you, you would not have reached this (miserable condition of begging for) bread, you would not be sitting here and have become so poor.' (B17:16)

19.5.2.6. ʾi-qaṭəlwa

This is found in apodoses after protases with a topic presentative function that refer to a real habitual situation in the past, e.g.

(1) *bár hàdəx*ˈ *ʾə́n qăṭíwa xəyalèy*ˈ *y-amríwa ʾáxni ràziyəx.*ˈ 'Afterwards, if they had made a decision, they would say "We agree."' (B5:4)

(2) *ʾən-parə́qwa ʾƗ̌šwuṯ,*ˈ *ʾáw ʾəsrí-tmanya yomáθa yan-ʾəsrí-ʾə̌čča yomànele,*ˈ *y-azə́xwa ṯùra.*ˈ 'If February was finished—it is twenty-eight or twenty-nine days long—we would go to the mountains (= As for when February was finished…).' (B5:152)

(3) *ʾən-wéwa šḗr-Dùre,*ˈ *kúlla náše ʾo-yóma y-azíwa šḗr-Dùre.*ˈ 'If there was a saint's day festival in Dure, everybody on that day would go to Dure.' (B5:228)

19.5.2.7. qṭille / qəm-qaṭəl

The past perfective *qṭille* form and its functionally equivalent alternant *qəm-qaṭəl* are rarely used in apodoses. It is attested in (1) and (2), which refer to a habitual situation in the present:

(1) *ʾən-ʾaxlə́nna kúlla,*ˈ *prìqla ṭawálta.*ˈ 'If I eliminate (literally: eat) them all, the game is finished.' (B11:22)

(2) *ʾən-kúlla qəm-maxíla bərrèy*ˈ *ʾáw qəm-dawqíle ʾo-qésa ṯ-íle be-pàlga,*ˈ *θèla*ˈ *xá mən-d-ánna ṯ-íla qam-tắra,*ˈ *θéle qəm-dawə̀qle,*ˈ *xsìrra ʾan-gawáye.*ˈ 'If they break up all their group or seize the piece of wood that is in the middle, if one of those who are outside comes and seizes it, those inside lose.' (B11:9)

19.5.2.8. *Copula*

A form of the copula is used in the apodosis in various circumstances, e.g.

(1) *ʾən-băyə́xwa tùma,*ˈ *ṭla-mbašàlta,*ˈ *kèfə́nile.*ˈ 'If we wanted (to use) garlic for cooking, it was up to us.' (B10:24)

(2) *ʾən-ít sìya,*ˈ *hóˀla mìya.*ˈ *ʾən-it-kpìna,*ˈ *hóˀle xùl.*ˈ 'If you are thirsty, here is water. If you are hungry, here eat.' (A28:18)

(3) *ʾən-lá ʾððət,*ˈ *kliθà-llux-ila.*ˈ 'If you do not do so, it is up to you.' (A8:44)

(4) *ʾən-lá zɛrə́nna Qừdus,*ˈ *lɛ̀la qbílta ḥajjiyúθi.*ˈ 'If I do not visit Jerusalem, my pilgrimage is not accepted.' (A2:1)

19.5.2.9. *Existential Particle*
The existential particle is attested in the apodosis in (1) after a protasis expressing a habitual situation in the past, which has a topic presentative function:

(1) *fa-ʾən-maṭiníwale ʾíθwa xàwla.*ˈ 'If they loaded it, there was a rope (= As for when they loaded it . . .).' (B5:128)

19.5.2.10. *Resultative participle + present copula*
The compound form *qṭilɛle* with the present copula is attested in the apodosis of (1), the protasis of which denotes the possible evidence for the situation in the apodosis:

(1) *qrɛ̀la!*ˈˈ *ʾən-mjuwə̀bla,*ˈ *xo-ʾànən ʾə́θya kə́sləx.*ˈ *ʾən-là mjuwə́bla,*ˈ *àtit θíθa kə́sli.*ˈ 'Call them! If they answer you, then indeed it is me who has come to you. If they do not answer you, you have come to me.' (A26:4)

19.5.2.11. *ṯ-awewa qṭila*
This form occurs in apodoses expressing the consequent of counterfactual events in the past, e.g.

(1) *ʾən-ʾána hawə́nwa qṭíləlla ʾằyáha ʾaqə̀rwa,*ˈ *ʾàwwa xúwwe ṯ-awéwa qṭíla ṭla-bròni.*ˈ 'If I had killed that scorpion, that snake would have killed my son'. (A9:6)
(2) *ʾən-hawə́twa mìrəlli*ˈ *ṯ-awənwá-ʾə́θya ṯ-amrə́nwala ʾan-šère.*ˈ 'If you had told me, I would have come to recite these poems.' (B1:14)

19.5.2.12. *Imperative*
On several occasions the apodosis contains an imperative form:

(1) *ʾən-ít xonèni,*ˈ *háyyo tu-ʾáxxa kəslèni.*ˈ 'If you are our brother, come and sit here with us.' (A39:7)
(2) *ʾu-ʾən-là-θeli,*ˈ *kú-məndit ʾáwðət wùð.*ˈ 'If I do not come back, do anything you want.' (A25:66)
(3) *ʾən-in ʾana ʾə́θya gu-šwíθəx,*ˈ *qrégən xaddàməx.*ˈ 'If I have come to sleep in you bed, call your servants.' (A26:4)

(4) ʾən-θéla píšla xằṭar ʾə́llux qúrba,' dríla ʾan-bóče l-ʾằra.' 'If danger comes near to you, put these two seeds in the ground.' (A18:14)

19.5.2.13. *Verb Omitted*

In some contexts the verb of the apodosis is omitted when it can be understood from the context, e.g.

(1) ʾən-báxtux muθéla bràta' ʾu-báxti muθéla bròna,' brátux qa-bròni.' 'If your wife gives birth to a girl and my wife gives birth to boy, your daughter (will be married) to my son.' (A25:2–3)

(2) mə́re ʾéka péšən ʾàrxa?' mə́ra ʾən-ít xoš-gàwṛa' kəs-Qára Tèždin.' 'He said "Where can I lodge as a guest?" They said "If you are a good man, (you can lodge with) with Qara Teždin."' (A26:26)

19.5.2.14. *Apodosis Introduced by Particle*

(i) *xo-/xu-*

On some occasions the apodosis is introduced by the intensifying particle *xo-/xu-* (§17.9.2.), e.g.

(1) ʾən-šə́rəṭ díyi qəm-yằðətla,' xo-b-gawrànnux.' 'If you know (the answer to) my test, I shall indeed marry you.' (A25:62)

(2) ʾən-θèli' xó bàxtiwət.' 'If I come back, then you are my wife.' (A25:66)

(3) qrèla!' ʾən-mjuwə̀bla,' xo-ʾànən ʾ́θya kə́sləx.' 'Call them! If they answer you, then indeed it is me who has come to you.' (A26:4)

(ii) *ʾap*

The connective particle *ʾap* is also used to introduce the apodosis when it opens with an independent topical subject pronoun. This can be identified with the discourse boundary marking function of *ʾap* (§18.1.3.1.), which is applied here to give added prominence to the apodosis, e.g.

(1) ʾən-ʾamránnux ʾáp-ʾati b-šànət.' 'If I tell you, you will faint.' (A11:2)

19.5.3. *Protasis after the Apodosis*

A condition expressed in a protasis is occasionally placed after its consequent. The protasis in such cases generally has the status of a tag that elaborates on what precedes, sometimes as an afterthought, e.g.

(1) *máṣət ṭ-óðət rába məndiyáne mə́nne dìye,¹ ʾən-ila zawdàne.¹* 'You can make make many (other) things from them, if they are left over.' (B5:219)

(2) *m-bár ṭaxnìle,¹ páyəš qàmxa,¹ masqíle bèθa,¹ ʾax-t-mə́ri mă̆θă̆lan ʾən-bă̆yi t-yápi láxma mənnéy zeðàye,¹ mtárṣi mənnéy ṭàlme.¹* 'After they grind it and it becomes flour, they take it up to the house, as I said, if they want, for example, to bake pitta breads from it or make thin breads.' (B5:99)

(3) *ʾána b-zawnə̀nne¹ ʾína ʾən-háwe ṭlà ʾaqláθa.¹* 'I shall buy it, but only if it has three legs.' (A22:3)

19.5.4. *Conditional after the Verb 'to wait'*

A conditional clause introduced by the particle *ʾən* may be used as the complement of the verb *spr* 'to wait', e.g.

(1) *sàpri¹ ʾən-háwe pàwxa.¹* 'They wait for there to be wind.' (B5:97)

19.5.5. *ʾən-la and ʾəlla*

The negation of a protasis that is placed before the apodosis is expressed by combining the conditional particle with the negator in the uncontracted phrase *ʾən-lá* with stress on the negator. This is typically used in contexts where the clause expresses a negative alternative to a situation described in the preceding context. As a result, the remaining content of the clause is given or at least inferrable from what precedes and the main information prominence is on the negator rather than the clause content, e.g.

(1) *ʾən-mpŭqèli¹ garšə́tli ṭla-gére mə́nne dìye.¹ ʾu-ʾən-là mpŭqéli,¹ ʾana pálxən b-réše bă̆lă̆š.¹* 'If I split it, you will produce for me three arrows from it. If I do not split it, I shall work over it for free.' (A12:44)

(2) *ʾən-θèli¹ xó bàxtìwət.¹ ʾu-ʾən-là-θeli,¹ kú-məndit ʾáwðət wùð.¹* 'If I come back, then you are my wife. If I do not come back, do anything you want.' (A25:66)

(3) *ʾá puqdánət ʾalàhɛle.¹ ʾən-lá-ʾoðət b-xábrət alàha,¹ b-talqèti.¹* 'This is God's command (which you must obey). If you do not do the word of God, you will be obliterated.' (A8:97)

The content of the protasis clause indeed is sometimes gapped completely, e.g.

(4) *rắpili m-an-képe ṭ-íla tàma,¹ ga-maxzə́nnux ʾúrxa ṣàlət.¹ ʾən-lá tàma ṭ-áwət.¹* 'Throw me the stones that are there, then I shall show you the way down. If not, you will remain there.' (A14:70)

(5) *ʾən-hóya rázi šə́nna díya pălàla*ˈ . . . *maqiməxle.*ˈ *xắyi m-ġðàðe*ˈ *ṭḷáθi šə̀nne-w*ˈ
     *méθi m-ġðàðe.*ˈ *ʾu-ʾən-làʾ,*ˈ *har-ʾàxxa ṭ-óya ʾə́šti šə́nne.*ˈ 'If she is happy to
     share her years, . . . we shall resurrect him. They will live together
     thirty years and die together. If not, she will stay here for sixty
     years.' (A4:46)

(6) *mqáwlət goràtle,*ˈ *t-yálla jùlla.*ˈ *ʾən-là,*ˈ *har-t-yálla júlləx b-kèfəx.*ˈ 'If you
     promise to marry him, he will give back the clothes. If not, he
     will still give you the clothes, if you want them.' (A14:83)

The particle *ʾə́lla*, which is a contraction of *ʾən-la* with the stress on the
conditional particle rather than the negator, is used in clauses that come
after a negated main clause. The content of the clause introduced by *ʾə́lla*
has higher information value than a clause introduce by *ʾən-lá*. An *ʾə́lla*
clause is typically not given in the prior discourse whereas the preceding
main clause is bound to the preceding context in some way, e.g.

(7) *b-ču-ʾúrxa ʾo-Dəmdə́ma lɛ́ šaqlìtule*ˈ *ʾə́lla qăṭítula míyət Dəmdə́ma.*ˈ 'By no
     means will you capture Dəmdəma unless you cut off the water of
     Dəmdəma.' (A11:17)

(8) *xə́tna lè-y-axəl*ˈ *ʾə́lla qablíle xà-məndi.*ˈ 'The groom would not eat unless
     they pledged something to him.' (B10:40)

(9) *ʾána mírtɛwən le-y-ʾáθyən b-xábrət ču-ʾurza,*ˈ *ʾə́lla ṭ-áθya báxta maθyàli.*ˈ
     'I said that I would not come by the word of any man, unless a
     woman came to fetch me.' (A8:94)

Occasionally a postposed protasis with *ʾən-lá* has a content that is not given
in the preceding context. In such cases, however, the clause generally still
does not have the same informational prominence as clauses introduced
by *ʾə́lla*. This is seen in (10) where the protasis clause expresses an action
that is circumstantial to the action of the main clause. The whole sentence
may be paraphrased 'We brought in sticks having broken them':

(10) *ʾáxni la-morə́xwa xa-səryóqa gu-béθa ʾən-lá torəxwale.*ˈ 'We would not
     bring a single twig into the house without breaking it (literally: if
     we did not break it).' (B10:70)

On some occasions the content of a clause introduced by *ʾə́lla* is given in
the preceding context, but the speaker uses the construction to give the
clause enhanced prominence. It is typically used when the speaker wishes
to insist forcefully that something be done, e.g.

(11) ʾən-lá galə́tli ʾánna šaqyáθa módi gu-rèšux,ˈ ʾánna brinánət mòdilaˈ…ʾən-là
galə́tli,ˈ ʾána lɛ̀-qεṣ̌ənne káwsux.ˈ…là qεṣ̌ə́nne káwsux,ˈ ʾə́lla ṯ-amrə́tli ʾánna
ma-brinànela gu-réšux.ˈ 'If you do not reveal what these scars on your
head are, what these wounds are from…if you do not reveal this
to me, I shall not cut your hair…I shall not cut your hair, unless
you tell me what these wounds are on your head.' (A29:5–6)

Clauses expressing insistence that open with ʾə́lla are sometimes used
independently of a preceding main clause, e.g.

(12) kízla bíye dìye,ˈ mə́ra ʾə́lla gáwrət.ˈ 'They tried (to persuade) him and
said "You must marry."' (A16:6)

(13) mə́re lá b-àlaha,ˈ ʾə́lla maṣlə́nnəx ʾàna.ˈ 'No, by God. I shall take you
down.' (A29:27)

(14) là̀ˈ ʾána har-bṭ̣-àzən.ˈ ʾə́lla xazyánne xòni.ˈ 'No. I shall still go. I must
see my brother.' (A8:66)

In (15) it is combinded with the expression of obligation gắrəg:

(15) ʾə́lla gắrəg ʾáyya bráta gorə́nna.ˈ 'I must marry this girl.' (A12:55)

The construction is sometimes used in the context of oaths, e.g.

(16) la-málka màmiˈ hóle yə́mya b-rèši.ˈ máttu jallàdeˈ ʾə́lla b-qaṭə̀lli.ˈ 'Indeed
the king my uncle has sworn on my head (to execute me). He will
appoint executioners and (has sworn) he will kill me.' (A25:36)

The particle ʾə́lla may be used to insist on the veracity of a factual statement, e.g.

(17) ʾu-ʾáwwa-ži huðáya l-gàreˈ ʾə́lla,ˈ ʾánna dáwe ʾànən hiwə́llux.ˈ 'But this Jew
on the roof (said) "I insist that it was me who gave you these gold
coins."' (A6:11)

Insistence on a prohibition may be expressed by using a construction
opening with ʾən-lá independently of a main clause, paralleling the use
of ʾə́lla to express insistence on a command, e.g.

(18) ʾá-ṣəpra ʾíla ròxi,ˈ ʾən-lá qaṭlíle ʾo-táwrət wàla,ˈ šaqlíle ʾo-ṣə̀pra.ˈ 'That
sparrow is my spirit. They must not kill that wild ox and take that
sparrow.' (A12:41)

The insistent function of *ʾə́lla* is sometimes used to express the sense of 'only if', e.g.

(19) *ʾána míθənwa l-márya ʾalàha¹ ʾə́lla ṱ-aθyáwa báxta bàθri,¹ ṱ-azànwa.¹* 'I had sworn to the Lord God that only if a woman came after me would I go.' (A8:94)

An alternative way of expressing 'only if' is to use the particle *ʾaxčī* combined with *ʾən*, e.g.

(20) *nablánnux l-ʾáθṛət bàbux,¹ ʾáxčī ʾən-yăðə́tla ʾàθṛa.¹* 'I shall take you to the land of your father, only if you know the land.' (A14:89)

The particle *ʾə́lla* may be used to express exclusivity also in other contexts, including before a nominal (22–23):

(21) *líθ băjàra¹ ʾə́lla bṱ-àzəx.¹* 'There is no alternative but that we go.' (A8:27)
(22) *w-ána hon-mə́rta ṱla-Nozàli¹ ʾána lɛ-gáwrən ʾə́lla xóna díya Gozàli.¹* 'I said to Nozali that I would only marry her brother Gozali.' (A8:95)
(23) *díya ʾə́lla xá-mdi dàwa băyi.¹* 'Now they want only something made of gold.' (B10:40)

It is used also as a clausal connective in the sense of 'but', 'but rather', e.g.

(24) *ʾu-čú bəṛ-náša la-máṭe-lla ʾə́lla b-rzáyət gána-diya ṱ-àθya.¹* 'Nobody can reach her, but rather she comes of her own will.' (A8:65)
(25) *ʾu-ʾùp-ati pɛ́šət mə́nnən,¹ ʾárpa xonăwàθəx.¹ ʾə́lla b-šaqlə̀nna¹ xáθət Mir-Zándin barxə̀nna-llux.¹* 'You also should become (one) of us and (make) four brothers. But I must (first) take the sister of Mir Zandin to marry her to you.' (A26:39)

19.5.6. *Non-Conditional Uses of the Particle ʾən*

The particle *ʾən* is sometimes used outside of conditional contexts. These include the following.

19.5.6.1. *Disjunctive Particle ('either … or')*
Several speakers use *ʾən* as a disjunctive between items. It is used either before each item *ʾən … ʾən* ('either…. or') or only before the final item. The items may be clauses (1–2) or constituents of clauses (3–5)

(1) *ʾən-qaṭlə́nnux ʾáyya bráta šaqlə̀nna*ˈ *ʾən-la-pálṭən m-àxxa.*ˈ 'Either I shall kill you and take this girl or I shall not go out from here.' (A29:28)

(2) *là-barya*ˈ *gànwi*ˈ *ʾən-sàlbi.*ˈ 'They cannot steal or plunder.' (A29:39)

(3) *ʾána hon-yə̀mya*ˈ *ʾáyya bráta hon-ʾə́θya nablə̀nna*ˈ *ʾən-b-našûθa,*ˈ *ʾən-b-xɛ̀la,*ˈ *nablə́nna ṭla-bàbi.*ˈ 'I have taken an oath. I have come to take this girl either humanely or by force to my father.' (A29:65)

(4) *xàrθa*ˈ *ʾáxni gu-maθwàθa*ˈ *kúllɛni jămə́xwa m-ǵðàðe,*ˈ *ʾən-qàša mə́nnən*ˈ *ʾən-múxtərət màθa,*ˈ *zavrə́xwa ʾeðăwàθa.*ˈ 'Afterwards, all of us in the villages gather together, either with a priest with us or a head of the village, and we go around (offering) festival blessings.' (B6:13)

(5) *xə́lya t-heywàne*ˈ *t-ʾə́rwe ʾən-tawràθa,*ˈ *xə́lya marəxθìle.*ˈ 'They boil the milk of animals, of sheep or cows.' (B6:37)

When the particle is used before a copula clause, the copula may be attached to it, as is the case when it has a conditional function (6), or the copula may remain in its normal position on the predicate (7–8):

(6) *ʾóx ʾáw gáwṛi m-jàlde hóle zíla*ˈ *lá-ʾəθya l-bɛ́θa žàre,*ˈ *ʾən-ile-qṭìla,*ˈ *ʾən-ile xìla.*ˈ 'Oh, that husband of mine has gone out early and has not returned home, poor man. He has either been killed or he has been eaten (by wild animals).' (A39:17)

(7) *y-azíwa be-kʸàlo.*ˈ *ʾən-d-à-maθɛle.*ˈ *ʾən-d-a-máθa xètɛle*ˈ *y-azíwa y-atwíwa táma be-kʸàlo.*ˈ 'They went to the house of the bride. Whether it was in the village or in another village, they would go and sit there in the house of the bride.' (B5:28)

(8) *šăvána modìle?*ˈ *kut-nášət ʾítle ə̀rwe,*ˈ *ʾən-ʾə́rwət xwàrela,*ˈ *ʾə́rwət kòmela,*ˈ *yáʿni ʾə̀zzela,*ˈ *ʾən-wànela.*ˈ 'What is a shepherd? Anybody who has small cattle, whether they are "white small cattle" or they are "black small cattle", that is whether they are goats or are sheep.' (B5:109)

19.5.6.2. *Interrogative Particle*
The particle *ʾən* is sporadically used at the front of direct polar (yes–no?) question, e.g.

(1) *ʾamrə́xlux ʾítlən xá zə̀qqa*ˈ *ràba ǵóṛtɛla.*ˈ *y-ásqəx mɛ́θəx míya mən-d-ăwàha ṭúra.*ˈ *rába rə̀ḥqɛle ʾo-ṭúra.*ˈ *rába rə́ḥqɛle.*ˈ *ʾən máṣət šaqlə̀tla?*ˈ 'We say to you that we have a water-skin that is very large. We shall go up and fetch water from that mountain over there. That mountain is very far away. It is very far away. Can you take it there?' (A39:9)

19.5.7. *Conditionals with* madam

On some occasions constructions that can be rendered into English as conditionals have the particle *madam* in the protasis rather than the usual conditional particle *ʾən*. The use of *madam* is restricted to clauses describing a situation that the speaker knows is true. For this reason the particle in the protasis clause can usually be appropriately translated also by an factive English subordinate clause such as 'since (it is the case that)…'. The particle *madam* is generally connected to the following clauses by the D subordinator, though this is omitted in some cases, e.g.

(1) *mádam hàtxɛlaˈ ṭ-ázən ṭă̌yən báθər ḥaqqùθaˈ ʾu-na-ḥaqqùθa.ˈ* 'If (the world) is like that, I shall go and search for what is lawful and what is unlawful.' (A15:5)

(2) *mádam ṭ-íwət hàtxaˈ háyyo láxxa ṭ-awðə́nnux wǎ̌zī̀r.ˈ* 'If you are like this, come here and I shall make you the vizier.' (A21:41)

(3) *mádam bráti wéla b-pəlxànaˈ ʾu-lípla pəlxànaˈ bǎ̌yən t-yǎ̌ðənˈ ʾáwwa bər-náša mòdile,ˈ dáx mṣéle ʾáyya bráta qəm-ʾawə́dla b-pəlxánət bèθa.ˈ* 'If my daughter has become hard-working and has learnt to work, I want to know what (kind of person) this man is, how could he have made this girl a hard-working housewife.' (A21:32)

(4) *ʾáwwa mádam ʾìθwaleˈ bàxta,ˈ ʾíθwale bnòne,ˈ ʾíθwale nàše,ˈ ʾáwwa lèle míθa.ˈ* 'If he had a wife, he had sons, he had relatives, he is not dead.' (A17:17)

(5) *madam-ṭ-íwət ʾáyya wìðəlla kúlla,ˈ si-mɛ́θili qəṣṣə́ttət Wɛ́rda-w Nèrgis.ˈ* 'If you have done all of this, go and bring me the story of Wɛrda and Nɛrgis.' (A24:35)

(6) *hàyyo,ˈ hàyyo!ˈ madam-ṭ-íwət ʾàti,ˈ hàyyo!ˈ là-ʾazət.ˈ* 'Come, come. If it is you. Come, don't go.' (A24:36)

19.5.8. *Conditionals with* ʾɛ-ga

Similarly a clause introduced by the adverbial *ʾɛ-ga* referring to a situation that the speaker knows is true may sometimes be rendered idiomatically by an English conditional, e.g.

(1) *ʾɛ́-gət mən-d-ánna hàwe,ˈ šúla bṭ-ázəl lă-qàma!ˈ* 'If there are these (gold pieces), the job will go ahead!' (A4:15)

19.5.9. *Asyndetic Conditional and Temporal Constructions*

On a number of occasions the semantic relation between a series of clauses is that of condition and consequent, but they are juxtaposed asyndetically without a conditional particle. It is often appropriate to translate such clauses by an English conditional sentence. They often contain verbal forms that are characteristic of ʾən conditional constructions., e.g.

(1) *ʾána támməl ʾàθena,*¹ *ʾáti mxazdə̀tli.*¹ 'If I come tomorrow, you will blame me.' (A21:43)

(2) *ʾàti*¹ *díya ʾáθət gu-bɛ́θi la-pàlxət,*¹ *lè-yannux ʾixála.*¹ 'If you come now, come to my house and do not work, I shall not give you food.' (A21:36)

(3) *xàzən*¹ *màṣən*¹ *ṭ-óðən xa-čàra.*¹ *là-amṣən,*¹ *maqə̀ṭlu bróni,*¹ *mó ṭ-oðèna.*ʔ¹ 'I shall see whether I can find a solution. If I cannot, have my son killed, what can I do?' (A33:6)

(4) *mqáwlət goràtle,*¹ *t-yálla jùlla.*¹ 'If you promise to marry him, he will give back the clothes.' (A14:83)

(5) *gúrza maxèle*¹ *ʾáy bážər kúlla ṭ-awə́dla mìya.*¹ 'If he struck with his club, he would make all of that town turn to water.' (A52:15)

(6) *lɛ́le jyàra,*¹ *šã̀yə́tle b-gùda.*¹ 'If he does not pass water, throw him against the wall.' (A30:40)

(7) *kút-dana ʾa-ṣə́pra mìtle,*¹ *ɛ́-ga ʾana-mɛ̀θən.*¹ 'If ever that sparrow dies, then I shall die.' (A12:41)

(8) *támməl yə́mmi mìtla,*¹ *pɛ́šəx ʾána-w bàxti.*¹ 'If my mother dies tomorrow, we shall remain, myself and my wife.' (A21:42)

(9) *muθyále Bə́lbəl Hazàr,*¹ *pɛ́ša kàlθi.*¹ 'If he brings Bəlbəl Hazar back, she will become my daughter-in-law.' (A8:34)

Such asyndetic conditional constructions are commonly found with the verb 'to want' in the protasis, e.g.

(10) *bằyət ʾàxlət,*¹ *xùl.*ʔ¹ 'If you want to eat, eat!' (A14:59)

(11) *ɔ́rwe hòla gu-ṭúra.*¹ *bằyət,*¹ *sɛ-mkàpəšla.*ʔ¹ 'The sheep are in the mountains. If you want, go and gather them up!' (A10:4)

(12) *bằya pɛ̀ša,*¹ *pɛ́ša ʾáy ʾàxxa,*¹ *b-šópət brònən*¹ *ṭ-óya malə́kθa b-šópi ʾíman-t-ʾána mɛ̀θən.*¹ *ʾu-bằya dɛ́ra l-bɛ́θət bába dìya,*¹ *mattə́nna xá-ga xèta,*¹ *ʾàna mădərə́nna.*¹ 'If she wants to stay, let her stay here in the place of our son and she will be queen in my place when I die. But, if she wants to return to her father's house, I shall put her again (on a camel) and return her.' (A4:39)

(13) *bắyət bằyət.*ˈ *là-bắyət,*ˈ *hóle Ṣaddắm si-škì.*ˈ 'If you want it, you want it (fine). If you do not want it, there is Saddam, go and complain (to him).' (B1:22)

Such asyndetic conditional constructions generally have a rising intonation contour in the intonation group of the first clause, which typically expresses conjunction with what follows, e.g.

(14) *súsux bắye t-kàle,*↗ˈ *là-šoqət t-kále.*↘ˈ 'If your horse wants to stop, do not let him stop.' (A24:11)

In (15) an asyndetic conditional is followed by a negative alternative condition that has the conditional particle, demonstrating the equivalence between the asyndetic and syndetic constructions:

(15) *mɛθə̀tta-lli,*ˈ *šoqə́nnux ṭ-àzət.*ˈ *ʾən-la,*ˈ *là-šoqən ṭ-azítu.*ˈ 'If you bring her here, I shall let you go. If not, I shall not let you go.' (A12:21)

In (16) the presentative particle *ʾina* is used to introduce a protasis that lacks the conditional particle:

(16) *ʾína ʾánna xonăwàθi,*ˈ *ʾarbì xonăwáθi,*ˈ *kúššət magúrət xà,*ˈ *páyəš ʾúmri tmàni šə́nne.*ˈ 'If each year you marry off one of these forty brothers of mine, I'll be eighty years old (before I marry).' (A12:1)

Conditional type constructions are sometimes expressed by imperative clauses, e.g.

(17) *la-xzì*ˈ *ʾu-la-xṭì.*ˈ 'If you do not see, you will not sin.' (D2:49)

(18) *wí mbaqràna,*ˈ *ṭ-áwət yaðùwa.*ˈ 'If you are inquisitive, you shall be knowledgeable.' (D2:11)

Expressions of a wish that appear unlikely to be fulfilled ('if only…!) use the *qaṭəlwa* verbal form, which is characteristic of protases denoting an improbable situation in the future, e.g.

(19) *xuš-mὲθən*ˈ *bas-xáθi Nozáli xazə̀nwala.*ˈ 'Let me die, but, if only I could see my sister Nozali.' (A8:57)

An asyndetic conditional may lack verbal forms, especially in proverbial contexts, e.g.

(20) *dárta l-yòma,ˈ ʾə́rwe gu-gòma.ˈ dárta l-sèra,ˈ ʾə́rwe l-ṭèra.ˈ* 'If the sun has a halo, the sheep will be in the basement stable. If the moon has a halo, the sheep will be in the noon sun.' (D2:15)

(21) *tắra dwìraˈ qắda wìra.ˈ* 'If the door is closed, trouble passes by.' (D2:47)

Asyndetic constructions are used also when a consequent follows a clause expressing a situation that is presupposed to be true and so has the function of a temporal 'when'–clause, e.g.

(22) *bábi màyəθ,ˈ ʾána bt̲-áwən málka šôpe.ˈ* 'When my father dies, I shall be king in his place.' (A14:88)

(23) *t̲-ámrəx háyyo ṣ́lí Kằrĭ́m ʾáti gu-d-áwwa balùˈaˈ…ʾaw-ṣále táma mrapóxle xáwla b-réše dìyeˈ ʾu-ʾáyya qắpáxta mattáxxa rəš-d-o-tắrət gə̀ppa.ˈ* 'We shall say "Come Karim, go down into this conduit."…When he goes down there, we shall throw the rope onto his head and shall put this cover onto the opening of the cave.' (A14:16)

(24) *ʾà-danaˈ ʾáyya nablàlux,ˈ mapərxálux šawwà yamáθa,ˈ máṭət l-d-o-qàṣra.ˈ máṭət l-d-ò qáṣra,ˈ háwət hə́šyər ʾína ʾáyya sústa là marpótla.ˈ* 'She will take you, she will fly you over the seven seas and you will reach that palace. When you arrive at that palace, be careful not to let that horse go.' (A12:29)

19.6. Concessive Constructions

The syntactic expression of concession is rarely found in the text corpus. Where this occurs, it tends to take the form of a protasis clause introduced by phrases denoting literally 'even if' (*ʾap-ʾən / ʾup-ʾən, ham-ʾən*), e.g.

(1) *ʾúp-ʾən-iwa xayúθa pšìṭṭa,ˈ ʾánna náše rábɛwa xə̀ðye.ˈ* 'Although the life was simple, people were very happy.' (B15:14)

(2) *hám-ʾən wídle hátxa ʾàp-aw,ˈ ʾáp ʾaxni-xìləxwale táwre díye.ˈ* 'Although he did such a thing, (we should take into account that that) we had eaten his ox.' (A7:20)

Note also the use of the Arabic conditional concessive *wă-law* in (3):

(3) *wắ-law ṭ-ín ʾanna-xámša šə́nne zíla b-dùnye,ˡ nə́mu lat-ðàʾəlli?ˡ* 'Although I have been away in the world for these five years, don't you know me any more?' (A12:65)

In these sentences, despite the conditional structure, the truth of the protasis is not in question. The concessive sense is that the situation described in the subordinate clauses might lead one to expect that the proposition of the main clause would be false but, in fact, this is not the case. A pure conditional 'even if' construction is related, in that it indicates that the situation of the main clause is not expected to follow from the condition but nevertheless will do so. The difference from a concessive construction is that the truth of the protasis is not certain. There are various ways of expressing pure conditional 'even if'–clauses, including clauses introduced by a conditional and one of the inclusive particles *ʾap/ʾup*, *ham* and *-ži*, e.g.

(4) *bnáya gúda ʾu-dráya răṣằṣ,ˡ tá-t ʾáp-ʾən maxíle màdfaˤˡ t-là-taləxwa gúda.ˡ* 'He built the wall and put lead into it, so that, even if it was hit by artillery, it would not be destroyed.' (A11:13)

(5) *hám-ʾən yawə́tli zùze,ˡ lè-y-aθən.ˡ* 'Even if you give me money, I shall not come.'

(6) *ʾən-háwe dàwa-ži ˡ ʾáxni t-yawáxla xa-b-ṭḷàθa ʾə́lle díye.ˡ* 'Even if it is gold, we shall give him threefold (if it is lost).' (A7:10)

In (7) it is expressed by a simple *ʾən* clause, but this is given prominence on a prosodic level by being uttered with a high pitch level:

(7) *là-b-alaha,ˡ lá qɛṣə́nne rèšux,ˡ ʾən-qaṭlə́tli.ˡ* 'No, by God. I shall not cut (the hair on) your head, even if you kill me.' (A29:6)

A concessive relationship sometimes exists between clauses that are linked paratactically. In such cases the grounds for the reversed expectation, equivalent to the subordinate 'although' clause, is usually conjoined after the other clause with the connective particle *w*, e.g.

(8) *málka krìbleˡ ʾu-b-gáne málka mírɛwa ʾən-hawéli bràtaˡ t-yánna qa-bronèxu.ˡ* 'The king became angry, although the king himself had said "if I have a daughter I shall give her to your son."' (A25:8)

(9) *píšla dəžmə̀nne,*¹ *ʾu-ʾáni là-xəzye ġðáðe,*¹ *ʾu-là-mṣuθe hátxa mə́ndi.*¹ 'So, they became enemies, although they had not met each other and had not said (to each other) any such a thing.' (B19:2)

Concession may be expressed by an asyndetic conditional type construction, e.g.

(10) *tú pc̣ı̃la,*¹ *mṣáwəθ dũ̀s.*¹ 'Sit crooked (= even though you sit crooked), tell the truth.' (D2:60)

REMARKS ON THE LEXICON

20.1. Historical Considerations

Many lexical items of Aramaic origin in the C. Barwar dialect have a meaning that corresponds directly to the meaning of their cognates in earlier forms of literary Aramaic. Several items, however, have undergone a semantic development from the meaning that was expressed by their literary cognates. It must be borne in mind, of course, that the NENA dialects are unlikely to be direct descendants of the classical Aramaic dialects and so some of the differences in meaning may have already existed in proto-NENA many centuries ago. It is, nevertheless, of interest to examine the types of semantic differences from the classical forms of the language that are exhibited by some of the lexical items in the dialect.

Lexical items in the dialect sometimes exhibit a meaning that is more specific than that of their cognates in Classical Syriac. In such cases, the basic meaning of the dialectal word is subsumed by the more general basic meaning of the Syriac word. This often arises since another lexical item is used in the dialect with a related meaning.

The word *ʾarxe* (pl. *ʾarxaθa*) in the C. Barwar dialect, for example, denotes specifically a 'water-mill', whereas the cognate in Classical Syriac *raḥyā* (pl. *rḥawāṯā*) refers to a 'mill' in general, including a hand-mill. The reason for the narrowing of the meaning range of *ʾarxe* in the dialect is likely to be the existence of another lexical item that denotes specifically a 'hand-mill', viz. *garosta* n.f. (pl. *garosyaθa*). The semantic range of the Syriac singular form *raḥyā*, moreover, includes also the sense of 'millstone,' which is a component of the mill, whereas the dialectal word *ʾarxe* refers only to the mill as a whole. A 'millstone' in the dialect is expressed by the word *pənxa*.

The noun *ʾəspa* n.m. (pl. *ʾəspe*) 'loan' is related to the Classical Syriac root *yzp* 'to borrow'. Whereas the Syriac root is used to refer to borrowing in general, the form *ʾəspa* is used only to denote borrowing in kind, in most cases consumable items of food, e.g. *šqílli xə́ṭṭe b-ʾəspa*ˈ 'I borrowed wheat'. The act of borrowing money must be expressed by a form of the root

dyn, e.g. *mudyónni zúze ṭla-Gwìrgis*¹ I became indebted in money to Gwirgis (= I borrowed money from Gwirgis).

The cognate of Syriac *saʿrā* 'hair' (in general) is *seṛa*, but the dialectal word is restricted in sense to 'goat's hair'. Other words are used to refer to hair in general, viz. *kawsa* (collective), *məzze* (sing. *məsta*).

According to the Syriac dictionaries the nouns *ʿarbālā* and *meḥḥalṯā* (variant *maḥḥoltā*) both mean 'sieve'. The reflexes of these words in the dialect have a more specific meaning, in that they denote sieves with different sizes of hole, viz. *ʾərbala* n.f. (pl. *ʾərbale*) sieve with medium sized holes and *mxilta* n.f. (pl. *mxilyaθa*) sieve with small holes (for flour).

The adjective *šammīnā* in Syriac has a range of meaning including the senses of 'physically fat' and 'fertile', e.g. *ʿānā šammīnāṯā* 'fat sheep', *ʾarʿā šammīnā* 'fertile land'. In the dialect the word *šamina* is restricted to the more abstract sense of 'fertile', e.g. *ʾăra šaminta* 'fertile land'. The narrowing of the semantic range of the adjective in the dialect has arisen due to the existence of another adjective *ṭrisa*, which is used to express the sense of physically fat, e.g. *ʾərwe ṭrise* 'fat sheep'.

The verb *xll* II 'to wash' is more restricted in usage than its Syriac cognate *ḥallel*. The dialectal verb *xll* II is used to express the washing of individual parts of the body (such as hands, feet etc.) and various objects but not clothes. The Syriac verb, by contrast, is used to express also the washing of clothes. In the dialect another verb is used to express specifically the washing of clothes, viz. *msy*. To wash oneself by covering the body in water, in a bath or a shower, is expressed in the dialect by the verb *xyp* I.

Several verbs in the dialect that are restricted in their usage to activities relating to animals had a more general application in Syriac. The Syriac verb *ḥsl*, for example, was used to express 'weaning' both of animals and of humans, whereas the cognate dialectal form *xsl* is used only to denote the weaning of animals. The weaning of humans is expressed by phrases such as *qṭʾ mən-mămoṣe* 'to cut off from sucking' or *qṭʾ mən xəlya* 'to cut off from milk'. The Syriac verb *yld* 'to give birth' was used in relation to all living creatures, humans and animals, including the laying of eggs. The dialectal reflex of this *yðl*, however, is used only in relation to the birth of animals and the laying of eggs. The birth of humans is expressed by forms of the verbal *bry*. The verb *dwṛ* in the dialect is used to denote specifically the dwelling of sheep in a rest area during the summer. This appears to be the reflex of the verb *dwr* in Syriac and other literary Aramaic dialects, which has the generic sense of 'to dwell'.

In other cases, by contrast, a dialect word has a meaning that is wider than that of the Classical Syriac cognate and subsumes it. This has often arisen as a result of additions or losses in related areas of the lexicon.

The semantic range of the verb *xzy* in the dialect, for example, includes both the sense of 'to see' and 'to find', whereas the cognate in Syriac *ḥzy* denotes only 'to see'. This has arisen, no doubt, due to the loss of the Syriac verb *ʾeškaḥ* 'to find' in the dialect. A modern reflex of *ʾeškaḥ* can be identified in the verb form *m-čx* III, which is occasionally used by some speakers, but this is likely to be a loan from the C. Urmi dialect, where it is regularly used.

The verb *dry* is used in the C. Barwar dialect as a general word for 'to put', whereas the cognate verb in Syriac has the sense of 'to sprinkle, scatter'. It appears that the expression of the transference of location that was a semantic component of the Syriac verb became the dominant feature and the verb came to be used more generally without being associated with a specific manner of action. The specific action of 'scattering' is now expressed by other verbs, such as *bðq* or *bzq*. The verb *sym*, the cognate of which in Syriac is a general verb 'to put', has come to be restricted in the dialect to the sense of 'to ordain (a priest)' in stem I and to the fixed collocation with the object *bala* with the sense of 'to pay attention' in stem III. The verb *m-ty*, the irregular stem III for of *ʾtw*, is largely restricted to the sense of placing a stable object on a horizontal surface.

In some cases the shift in meaning involves an extension of control by the subject of a verb, i.e. an increase in transitivity. The verb *dbq* in Syriac, for example, means 'to stick to, to adhere' whereas the dialectal derivative of this *dwq* denotes the activity of 'holding' or 'keeping', which typically involves greater control over the object referent. This is reflected by the fact that the dialectal verb *dwq* 'to hold, to keep' takes a direct object, whereas the Syriac verb *dbq* 'to adhere' is connected to its complement by a preposition *b-* or *l-*. The verb *ṭʿy* in Syriac has the sense of 'to wander, to go astray', whereas the dialectal reflex *ṭy* normally has the more purposive sense of 'to search for', in which the subject has greater control over the action.

A further type of semantic change is where the basic meaning of the dialectal word does not directly subsume nor is subsumed by the basic Syriac meaning but rather is associated with some aspect of the contextual usage of the Syriac cognate. This is a broad category that includes various types of development, some examples of which are the following.

In the C. Barwar dialect word *’umra* denotes 'a church'. This is the reflex of Syriac *ʿumrā*, which included the semantic range 'life, way of life, monastic life, monastery'. The sense of 'church', i.e. a place of worship, is clearly associated with 'monastic life' and 'monastery'. In the dialect, however, the word *’umra* is no longer used in the sense of 'monastery', which is expressed rather by the noun *dɛra*.

The word *sǝmmala* in the dialect denotes a 'small bundle of grass or produce'. It is the reflex of the Syriac word *semmālā* 'left, left hand'. The association of 'small bundle' with the 'left hand' was that during harvesting people typically held a tool such as a sickle (*magla*) in the right hand and collected the produce in the left. The sense of 'left hand' is now expressed in the dialect by the Kurdish loanword *čappe*.

The word *xǝgga* in the dialect refers to a type of dance that is associated with a festivity, whereas the Classical Syriac cognate *ḥaggā* denotes simply 'festivity or feast.'

The word *boya* 'hole' appears to be cognate with the C. Qaraqosh form *burga* of the same meaning, the **r* and **g* having been elided (*boya* < *bo’a* < *boga* < *burga*). In Syriac *burga* means 'tower, turret; pigeon-cote' (< Greek *purgos*). The association here seems to be that such structures contained holes through which pigeons entered. The word then came to denote a pigeon-hole, i.e. a part of the original whole, and subsequently 'hole' in general.

The noun *šǝxda* in the dialect has the sense of 'good news', whereas its Syriac cognate *šuḥdā* means 'bribe' or 'gift'. The semantic association is the transitional meaning of 'gift for the (good) news of arrival' which is attested in some NENA dialects (cf. Maclean 1901: 303).

The noun *xusɛra* 'dew' appears to be historically related to the Syriac root *ḥsr* 'to decrease, to diminish'. The semantic association evidently is that dew typically diminishes and evaporates. The Syriac root *ḥsr* has not survived as a verb in the dialect, which uses rather the verb *bsr* to express the sense of 'to diminish'.

The adjective *xlima* in the dialect means '(physically) thick', whereas Syriac *ḥlīmā* denoted 'sound, firm, strong' in both a physical and spiritual sense. The feature of 'thickness', which is typically associated with an object that is physically robust, has become the basic meaning of the word.

The Syriac verb *pṣḥ* has the basic meaning of 'to rejoice', whereas its reflex in the C. Barwar dialect *pṣx* is generally used to denote the act of 'smiling', which is associated with joy. The sense of 'to rejoice, to become happy' is generally expressed by the verb *xðy*.

The Syriac verb *dʿk* has the sense of 'to be extinguished' and is used to denote that a fire has been put completely out. The dialectal reflex *dyx*, however, denotes the 'dying down' of a fire, which is a preliminary phase typically associated with the process of being extinguished. The sense of 'to be extinguished' is expressed in the dialect by the verb *čmy*.

The Syriac verb *ṣly* has the meaning of 'to incline, to lean towards', whereas in the dialect the verb *ṣly* denotes 'to descend'. The Syriac meaning is associated with the dialectal meaning in that it constitutes a typical preliminary phase of the act of descending.

The verb *jwaja* 'to move' is cognate with the Syriac root *šwš*, which has the sense of 'disturbing'. Some kind of movement is typically associated with the act of disturbing. In the dialect *jwaja* is now used to denote 'moving' in general, irrespective of whether it involves disturbance or not.

In some cases the association between the dialectal word and its Syriac cognate is metaphorical. The word *maqora, meqora* in the dialect, for example, denotes a 'hole dug out of the middle of a dish of stew to hold syrop'. The earlier Syriac form *māqōrā* denoted a 'canal' or 'cistern' dug in the ground. The verb *qrx* in the dialect has the senses of 'to become white, to make white' and 'to knock off (twigs, buds, blossoms)'. Both of these have a metaphorical association with the cognate Syriac root *qrḥ* 'to become bald'.

The meaning of a word sometimes shifts to the extent that it denotes a completely distinct meaning from the one denoted by the Syriac cognate, though in the same semantic field. This generally arises due to the use of another lexical item to express the meaning of the Syriac cognate.

The word *xalwa*, for example, denotes the 'fatless curds of boiled yoghurt water' rather than 'milk', which is the sense of the Syriac cognate *ḥalḇā*. 'Milk' in the dialect is expressed by the word *xəlya* (< **ḥalyā* 'sweet'). The word *dəbbora* in the dialect means 'hornet', whereas its Syriac cognate *debburtā* normally has the sense of 'bee'. A 'bee' is referred to in the dialect by the term *dabaša* (literally: 'honey-maker').

The verb *xml* in the dialect has the meaning 'to make merry' whereas its Syriac cognate *ḥml* means 'to withhold, to restrain'. This remarkable difference in meaning appears to have arisen by the following semantic shifts. The activity of withholding first developed into senses such as enduring, waiting, standing, which are attested for this verb in some NENA dialects. This then came to mean withholding sleep and waiting up in the night. The diverting social interaction of chatting and merriment that was the typical activity associated with such waiting up at night then became the

basic meaning. A parallel semantic develop may explain the semantic relationship between Arabic *smr* 'to chat at night' and Hebrew *šmr* 'to keep, guard', which from their form appear to be cognate.

Some nouns are derivatives of nouns or verbs which do not exist in the current state of the dialect but have been replaced by forms from other roots. The noun *karaxa* 'irrigation manager', for example, appears to be derived from a noun **karxa* 'irrigation basin', which in turn is a development of Syriac *karxa* 'enclosure, enclosed area'. The word *karxa* in this sense is still used in some NENA dialects (e.g. C. Shiyuz), but not in C. Barwar, where irrigation basins are denoted by the term *məššara*. The noun *samxa* 'post supporting a vine' is in origin an active participle of a verbal root **smx*, cognate with Syriac *smk* 'to support'. In the current state of the dialect, however, the activity of physically supporting is expressed by the verb *snd*, which is a loan from Arabic.

An interesting semantic development is exhibited by the adjectival form *kosa* 'beardless'. This appears to be derived from the noun *kawsa* 'hair', but is used to denote the lack of hair rather than its presence. A similar development has occurred with the Kurdish word 'qoç' 'horn'. This has been borrowed in the C. Barwar dialect as an adjectival attribute (*koča*) denoting 'hornless', e.g. *ʾrwe koče* 'hornless sheep'. Note also the adjective *lənga* 'crippled in the leg (i.e. legless)' which in origin is the Kurdish noun 'ling' 'leg'.

With regard to verbal roots, certain phonetic developments reflect the emergence of two separate roots from an original single root. This is seen in distinct developments of the *bgdkpt* consonants. In principle one particular reflex of these consonants becomes a fixed radical throughout all inflections of a root (§1.4.1.), e.g. /θ/ in *kθw* 'to write': *kaθwa* 'she writes', *kθawa* 'book', *kaθawa* 'writer'. Cases where the reflex of a *bgdkpt* consonant differs across verbal inflections of an original root should be interpreted as indicating that such inflections have come to be treated as separate roots. This splitting of a root is conditioned by the development of a clear semantic gap between inflections, e.g. Syriac *gby* 'to collect' > C. Barwar *gwy* I 'to beg' and *gby* II 'to elect', Syriac *qby* 'to collect (liquid)' > C. Barwar *qwy* I 'to scoop' and *qby* II 'to swell', Syriac *brk* > C. Barwar *brk* I 'to kneel' and *brx* II 'to bless', Syriac *zbn* > C. Barwar *zwn* I 'to buy' and *zbn* II 'to sell'.

Phonetic developments in the dialect can lead to the homophony of two verbal roots or two lexical items, e.g. *prx* 'to crush' (< **prk*) and *prx* 'to fly' (< **prḥ*), *dəmma* 'blood' (< **dma*) and *dəmma* 'tear' (< **dəmʿa*). In some cases such a development of homophony appears to have been the motivation for replacing one of the pair. For example, the introduction of the verbal root *qrn* II to express 'to grow up' in place of **rwy* (cf. Syriac *rby*), which is found in some other NENA dialects, may have been conditioned by the fact that after the development of the fricative **b* to /*w*/ in **rby*, the root would be homophonous with *rwy* 'to get drunk'. Conversely, dialects that retain the root *rwy* in the sense of 'to grow up', express 'to get drunk' by a different verb, e.g. C. Qaraqosh *rwy* 'to grow up': *skr* 'to get drunk'.

As already shown by Krotkoff (1985: 124–126), a number of lexical items in the NENA dialects, especially those relating to agriculture, can be traced back beyond Classical Aramaic to Akkadian or even Sumerian. These include words in the C. Barwar dialect that are found also in other NENA dialects such as *səkθa* 'ploughshare' (Syriac *sekkəṯa*, Akkadian *sikkatu*), *maṛa* 'spade' (Syriac *marrā*, Akkadian *marru*, Sumerian *mar*) and *bədra* 'threshing floor' (<*be* + *ʾədra*: Syriac *ʾeddəra*, Akkadian *idru*). The C. Barwar dialect also contains at least one such word that cannot be traced in earlier literary Aramaic, namely *məššara* 'paddy field basin', which is cognate with Akkadian *mūšaru* 'flower, vegetable bed, garden plot'.[1]

20.2. Loanwords

The loanwords in the C. Barwar dialect can be divided broadly into two categories: (i) words borrowed from other NENA dialects and (ii) words borrowed from other languages, mainly Kurdish and Arabic. In the lists of semantic fields and in the glossaries the origin of the loans from other languages is indicated where this has been possible to identify. In some cases the origin of a word is uncertain and its background is left unmarked.

20.2.1. *Loans from Other NENA Dialects*

The loanwords from other NENA dialects originate mainly in the C. Urmi dialect and the dialects of Ṭiyare. The villagers of Barwar came

---

[1] Black et al. (1999: 220).

into contact with the C. Urmi dialect when they were refugees in Urmi during the troubles of the First World War. The C. Urmi dialect furthermore became the basis of the koine that was used by refugee Christians who settled in Baghdad and the northern Iraqi cities. The inhabitants of Barwar had close contact with these cities during the 20th century, especially during the Kurdish uprising in the North during the 1960s. The lexical loans from C. Urmi do not completely replace the corresponding C. Barwar forms, but rather are used alongside them. Some examples that are attested in the recorded text corpus are the following:

C. Barwar	C. Urmi	
fṭarta	*ṭamta*	'breakfast'
xyr I	*gšq* II	'to look'
mbadla	*qedamta*	'morning'
zilεle, zalεle	*xišεle. xašεle*	'he went, he is going'
čučəkθa	*ṣəpra*	'sparrow'
goṭa	*dəpna*	'side'
tʷara	*šmaṭa*	'to break'

There were connections between the Christians of Barwar and the Ṭiyare region over many centuries. This is reflected in the close relationship in the general structure of the dialect with the Ṭiyare dialects, particularly those of Lower Ṭiyare (see introduction). Some lexical items of Ṭiyare origin, however, are used alongside the more usual C. Barwar forms. These are mainly found in the popular songs that were sung in the Barwar communities but were composed originally in Ṭiyare, e.g.

C. Barwar	Ṭiyare		
xačča, xanči	*čəmma*	(C1:5)	'a small amount'

20.2.2. *Loans from Kurdish and Arabic*

The C. Barwar dialect contains numerous loanwords from Kurdish and Arabic, those from Kurdish clearly being in the majority. Such loans are attested in all grammatical categories, though most are nouns. They are found in all semantic fields. Their number is, however, very small in the core areas of the lexicon, such as parts of the body (§21.1), family relations (§21.2.), basic attributes and activities (§21.18., §21.20.1.), with a greater concentration being found in fields relating to cultural artefacts, especially clothes and fabrics (§21.10.).

As has been described in §10.11., many nouns borrowed from Kurdish are adapted to the nominal inflectional morphology of NENA. Loaned verbs are inflected according to the NENA verbal morphology. In general Kurdish loanwords are not used alongside NENA words with the same meaning. In some cases, however, a borrowed Kurdish word does not supplant an existing NENA word with the same meaning, but rather the meaning of the Kurdish word is adapted in some way to complement the NENA vocabulary. Kurdish poz 'nose', for example, is loaned into C. Barwar in the form *poza*. The latter, however, is not used in the sense of 'nose' in general, as in Kurdish, but denotes specifically the 'snout' of an animal. The dialect retains the NENA form *naxira* for 'nose'. Kurdish dest 'hand' comes into the dialect as *dasta*, which has the sense of 'bunch, handful', rather than 'hand', which is expressed by the NENA form *ʾiδa*. Kurdish r̄ezvan 'caretaker or guardian of an vineyard' appears in the dialect in the form *razwana*, which is used in the sense not of a human caretaker but of a 'machine to frighten away birds in a vineyard'. A guard or guardian of a field or property is expressed by NENA *naṭora*. Kurdish çeng 'palm, handful' comes into the dialect as *čanga* with the meaning 'leather gloves used in harvesting', the NENA word for 'palm' (*lappa*) being retained. The same applies to Kurdish 'qoç' 'horn' and 'ling' 'leg', which, as remarked above, in the dialect are used as adjectives in the senses of 'hornless' and 'crippled in the leg' rather than substituting the NENA words for 'horn' (*qana*) and 'leg' *ʾaqla*.

In some cases the original meaning of the loan is supplied by another loanword in the dialect. This is the case, for example, with Kurdish stewl 'stable', the meaning of which is expressed by the loanword *goma* 'general animal shelter' (Kurdish gom 'sty, pen'). The word stewl, nevertheless, comes into the dialect in the form *stavla/stawla* and takes on the meaning of 'a wooden frame for carrying loads on pack animal', which presumably has some kind of figurative association with the structure of a stable. Kurdish kewt 'army' comes into the dialect as *kawta* with the meaning 'flock (of sheep)', the meaning of 'army' being expressed by the Arabic loanword *ʾaskar*.

In a few cases a Kurdish noun that expresses an abstract activity is used in a concrete sense. Kurdish bêrî 'sheepmilking', for example, comes into the dialect as *beriya* in the sense of 'milkmaid'.

The C. Barwar dialect exhibits a number of calques of Kurdish. Some of these are expressions consisting of a fixed collocation of verb and noun. In such cases the noun is typically a loanword whereas the verb is the NENA equivalent of the verb in the corresponding Kurdish expression, e.g.

C. Barwar	Kurdish	
mxaya čappe	çeple dan	'to clap hands in applause'
dwaqa rəqqi	rik girtin	'to be stubborn'
dwaqa qadra	qedir girtin	'to respect, honour'

Another type of calque is where the semantic range of a NENA word is extended in imitation of a corresponding Kurdish word. This applies for example to the verb *mxy*, which, in addition to its original meaning of 'to strike', is also used in the sense of 'to play (a musical instrument)'. This is no doubt due to the fact that the Kurdish verb 'to hit' lêdan also has this range of meaning. The verb *šql* means not only 'to take', its original historical meaning, but also 'to obtain, to buy'. This is an imitation of the meaning range of the Kurdish verb standin.

Of particular interest are some cases of calques where a NENA expression imitates not only the meaning of a Kurdish expression but also its phonetic form. This applies, for example, to the idiom *draya xɛla* 'to attempt, exert oneself', which corresponds to Kurdish hewl dan. The two expressions have no etymological connection, but there is a clear phonetic similarity between the two. Another case is *gambəl-əxre* 'dung beetle' (literally: roller of dung) which has a certain phonetic similarity to the corresponding Kurdish name for the insect gûgilêrk.

In some cases it is not completely clear whether a word is a calque or a loan since it resembles a Kurdish form of the same meaning while also having a possible Aramaic etymology. One case of this is the word *goṛa* 'big', which resembles phonetically the Kurdish word guṟ (variants gur, gir) 'big, large' but could also be derived from the Aramaic root *gbr*. The latter is, in fact, more likely since there is a corresponding verb *gwaṛa* 'to become big' (< *gḇārā*). Another case is the adjective *glola*, which *prima facie* could be interpreted as the Kurdish form gilol 'round', which has an Iranian etymology (cf. Chyet 2003: 212–213). It could, however, also be a derivative of the Aramaic root *gll* (cf. Syriac *glīlā* 'round') with the adjectival pattern *CCoCa* (§11.2. no. 9). It can be said that in both of these cases the form of the lexical item has arisen by multiple causation.

The Kurdish loanword *gana* 'soul' is used with suffixes to express the reflexive pronoun (§7.6.), but in the Kurdish dialects of the region the reflexive pronoun has the form xô/xwa (MacKenzie 1961: 173). The use of *gana* in the Aramaic dialect appears to be a calque of the Aramaic word *roxa* 'soul, spirit', which is used in more conservative NENA dialects such as C. Qaraqosh to express the reflexive pronoun (Khan 2002: 84).

The feminine gender of a number of nouns of Aramaic stock that are masculine in Syriac has probably arisen by influence of the feminine gender of the corresponding nouns in Kurdish, e.g.

C. Barwar	Kurdish	
ʾərbala f.	mifsik (etc.) f.	'sieve'
ʾilana f.	dar f	'tree'
barða f .	teyrok f.	'hail'
məṭra f.	baran f.	'rain'
šəmša f.	r̄oj f.	'sun'

With regard to Arabic elements in the dialect, some unadapted Arabic words that occur in the speech of informants can be regarded as the result of code-switching and do not constitute loanwords in the lexicon of the dialect. This is shown by the fact that in many such cases an Aramaic equivalent is available and has not been supplanted by the Arabic word. Most informants have lived during some period of their life in Arabic speaking Iraqi cities and those who went to school in Iraq would have received an education in Arabic. They would, therefore, be accustomed to speaking Arabic and occasional code-switching is inevitable.

Arabic loans that are adapted to Aramaic inflectional morphology and also those that have entered the dialect through Kurdish tend to be absorbed to a greater extent into the lexicon and they have generally taken the place of Aramaic lexical items of the same meaning. In some cases the supplanting of the Aramaic equivalents is of relatively recent occurrence, since informants still remember the original Aramaic word being used in their lifetime in the speech of the older generation of the community. This applies, for example, to the adapted Arabic loanword *xădaya*, which is now the most common word for 'lunch' in the C. Barwar dialect. This has replaced the original Aramaic word for this meal *šaruθa*, which is still remembered by some informants.

In some cases adapted Arabic loanwords have shifted in meaning. The adjective *băxila*, for example, means not only 'miserly', as in Arabic, but also 'envious'. In Arabic *xabar* means 'news', 'message', but in the dialect the adapted loan *xabra* is used with the sense of 'word'. The word *mazaxa* denotes specifically the 'area below millstones in a water-mill onto which the flour falls'. This appears to be an adaptation of the Arabic *masāḥa*, which denotes 'area' in general. The verb *xjl* I means 'to become terrified', whereas the Arabic source *xajila* denotes 'to be shy, timid'.

Some Arabic words that entered the dialect through Kurdish had already undergone such semantic shifts in Kurdish. This is the case, for example, with the words *kulfət, kulpət* 'family, wife' (< Arabic *kulfa* 'trouble, inconvenience') and *šart*, which in addition to the original meaning of 'condition' also has the sense of 'agreement' and 'test, ordeal'. Both of these Arabic loanwords occur in Kurdish with the same range of meaning.

SEMANTIC FIELDS

In this chapter a selection of the lexical items of the C. Barwar dialect are arranged according to semantic fields. A full glossary of the lexical items of the dialect that I have gathered in the course of my fieldwork follows the chapter. This is divided into a glossary of verbs arranged according to verbal root and a general glossary, which contains all other items. The glossaries are followed by a series of sketches illustrating various artefacts and structures that were found in the Barwar villages.

21.1. The Human Body

paxra n.m. (pl. *paxre*) body
gəlda n.m. skin
reša n.m. (pl. *rešăwaθa*) head
qarqupθa n.f. (pl. *qarqupyaθa*) skull
kawsa n.m. hair
məsta n.f. (pl. *məzze*) a hair
pərč̭əmta n.f. (K.) forelock, front of hair
bəska n.m. (pl. *bəske*) (K.) lock of hair; tress of hair
ṣoṣiθa n.f. (pl. *ṣoṣiyaθa*) plait, lock of hair
jinika n.m. (pl. *jinike*) (K.) sideburn, side-whisker
mayuθa n.f. crown of the head
yalma n.m. (pl. *yalme*) face
paθa n.f. (pl. *paθwaθa*) face
qrəmṭa m. (pl. *qrəmṭe*) wrinkle
ʾɛna n.f. (pl. *ʾɛne*) eye
be-ʾɛna n.m. forehead
be-gwina n.m. (pl. *be-gwine*) eyebrow
garət ʾɛna eyelid
təlpa n.m. (pl. *təlpape*) eyelash
bibət ʾɛna n.m., *bibəltət ʾɛna* n.f. pupil of the eye
naxira n.m. (pl. *naxire*) nose; nostril
lota n.f. (pl. *lotaθa*) cheek

naθa n.f. (pl. *naθyaθa*) ear
pumma n.m. (pl. *pummăwaθa*) mouth
kaka n.m. (pl. *kake*) tooth
niwa m. (pl. *niwe*) canine tooth
garosta n.f. (pl. *garosyaθa*) molar tooth
səpθa n.f. (pl. *səppaθa*) lip
səmbele n.pl. moustache
šəmmaxta n.f. palate
dawranət kake n.pl. gums (of mouth)
lawusta n.f. jaw
lama n.m. lower jaw
dəqqənθa, dənnəqθa n.f. (pl. *dəqqənyaθa*) chin
qðala n.m. (pl. *qðale*) neck
ruša n.m. (pl. *rušane*) shoulder; upper arm; arm
drana n.m. (pl. *dranane*) lower arm
xo-ruša n.m. (pl. *xo-rušane*) shoulder-blade
čəčča n.m. (pl. *čəčče*) (K.) shoulder-blade
xo-šxawθa n.f. (pl. *xo-šxawyaθa*) armpit
qursəlta n.f. (pl. *qursəlyaθa*) elbow
bra-qðala n.m. (pl. *bra-qðale*) back of the neck
ʾiða n.f. (pl. *ʾiθaθa, ʾiðăwaθa*) hand
ṣabota n.f. (pl. *ṣaboyaθa*) finger
ṣabota goṛta n.f. thumb
ṣabota zurta n.f. little finger
ṣabota gawɛθa n.f. middle finger
măṣixət šərmət kθayaθa n.m. little finger (literally: the tester of the behind
    of chickens)
ṭəpra n.f. (pl. *ṭəpraθa, ṭəppəryaθa*) fingernail, toenail
gušma n.m. (pl. *gušme*) fist
gučča n.m. (pl. *gučče*) (K.) fist
gozăkət ʾiða wrist
lappa n.m. (pl. *lappape*) palm of hand, sole of foot
xərṭaṭət ʾiða lines of the hand
čəčča n.f. (pl. *čəččăwaθa*) breast
rešət čəčča n.m. nipple
xaṣa n.m. (pl. *xaṣe*) back
kătɛra n.m. middle of the back
kurtəxta n.f. (pl. *kurtəxyaθa*) lower back, pelvis
be-təkke n.f. waist
ṣadra n.m. chest

šarθa n.f. (pl. *šaryaθa*) navel
šərma n.f. (pl. *šərmaθa*) buttocks
ṭiza n.m. (pl. *ṭize*) bottom, fundament
buṭa n.m. (pl. *buṭe*) penis
šəkθa n.f. (pl. *šəkkaθa, škaθa, šəkke*) testicle
quṭa n.m. (pl. *quṭe*) virgina
səbba n.m. hair of crotch
ʾaqla n.f. (pl. *ʾaqlaθa*) leg, foot
xaṣət ʾaqla top of the foot
ʾărdət ʾaqla bottom of foot
gozăka n.m./f. (K.) ankle
kəppa n.m. (pl. *kəppe*) (K./A.) ankle, anklebone
kəpθa n.f., *kəppəkθa* n.f. arch of the foot
ʾəqba n.f. (pl. *ʾəqbaθa*) heel
šaqola n.m. (pl. *šaqole*) lower leg
šaqa n.m. (pl. *šaqe*) lower leg
bərka n.f. (pl. *bərkake*) knee
ṣabunət ʾaqla kneecap
nɛka n.m. (pl. *nɛke*) thigh
gɛrma n.m. (pl. *gɛrme*) bone
čəkka n.m (pl. *čəkke*) (K.) joint (of bones)
xabūš paθa cheek-bone (literally: apple of the face)
ʾujaje n.pl. pelvis bones
kămaxe n.pl. (K.) pelvis bones
wariða n.m. (pl. *wariðe*) vein/artery
dəmma n.m. blood
moxa n.m. brain
balota n.f. (pl. *baloyaθa*) throat
kərkəroka n.m. (K.) adam's apple, larynx
paqərta n.f. (pl. *paqəryaθa*) tonsil
čəččət balota n.m. tonsil
be-xənxe n.f. oesophagus
tăreθa n.f. oesophagus
raθa n.f. (pl. *raθa, raθe, raθyaθa*) lung
kasa n.f. (pl. *kasaθa*) stomach
ləbba n.m. (pl. *ləbbe*) heart
kawda n.f. (pl. *kawdaθa*) liver
taḥela n.m. spleen
kənθa n.f. (pl. *kənnane*) kidney
kliθa n.f. (pl. *kəlyaθa*) kidney

miyora n.m. (pl. *miyore*) small intestine
jiðoqa n.m. (pl. *jiðoqe*) large intestine
bla-jorta n.f. (pl. *bla-joryaθa*) bladder
mararta n.f. gall bladder

21.2. FAMILY RELATIONS

ʾurza n.m. (pl. *ʾurze*) man, male
gawṛa n.m. (pl. *guṛe*) (married) man, husband
baxta n.f. (pl. *baxtaθa*) woman, wife
baba n.m. (pl. *babăwaθa*) father
yəmma n.f. (pl. *yəmmaθa*) mother
ʾawahaθa, ʾawahe n.pl. parents
marăwaθa, marwaθa n.pl. parents
brona n.m. (pl. *bnone*) son
brata n.f. (pl. *bnaθa*) daughter
xona n.m. (pl. *xonăwaθa*) brother
xaθa n.f. (pl. *xaθwaθa*) sister
yala n.m. (pl. *yale*) child
bra-qaple n.m./f. (pl. *bra-qaqle*) baby; babe in arms
bəspora n.m. (pl. *bəsporə*) young child (under 10 years)
bəspurta n.f. (pl. *bəspuryaθa*) young girl (under 10 years)
yalunka n.m. (pl. *yalunke*) youth (6–14 years)
jwanqa n.m. (pl. *jwanqe*) youth
xamθa n.f. (pl. *xamaθa*) young woman
xəmyana n.m. father-in-law
xmaθa n.f. mother-in-law
nawaga n.m. (pl. *nawage*) grandson
nawagta n.f. (pl. *nawagyaθa*) granddaughter
nawəgga n.m. (pl. *nawəgge*) great-grandson
nawəgta n.f. (pl. *nawəgyaθa*) great-granddaughter
nawčərka, nawərčika n.m. (pl. *nawčərke, nawərčike*) great-great-grandson
nawərčəkta n.f. (pl. *nawərčəkyaθa*) great-great-granddaughter
jaməkka n.m. (pl. *jaməkke*) twin
mama n.m. (pl. *mamăwaθa*) paternal uncle
ʾamta n.f. (pl. *ʾamtaθa*) paternal aunt
xala n.m. (pl. *xalăwaθa*) maternal uncle
xalta n.f. (pl. *xaltaθa*) maternal aunt

bronət mama n.m. (pl. *bnonət mamăwaθa*) cousin (first degree)

bratət mama n.f. (pl. *bnaθət mamăwaθa*) cousin f. (first degree)

brət-ama n.m. (pl. *brət-amwaθa*) cousin (second degree and more distant)

bratət ama cousin f. (second degree and more distant)

xətna n.m. (pl. *xətnăwaθa*) son-in-law; father-in-law; any husband of a relative, e.g. husband of paternal or maternal aunt (= *gawṛət ʾamta, gawṛət xalta*)

kalθa n.f. (pl. *kalaθa*) daughter-in-law

ʾəðma n.m. (pl. *ʾəðmăwaθa*) brother of husband

ʾiðamta n.f. wife of brother of husband, sister of husband; pl. *ʾiðamyaθa* wives of brothers

xwarzaya, xwarza, xurzaya n.m. (pl. *xwarzaye*) nephew (son of sister) (NB nephew, son of brother = *bronət xona*)

xwarzɛθa, xurzɛθa n.f. (pl. *xwarzayaθa*) niece (daughter of sister)

barəxmaya n.m. (pl. *barəxmaye*) brother of wife

barəxmɛθa n.f. (pl. *barəxmayaθa*) sister of wife

yaʾisa n.m. (pl. *yaʾise*) husband of the sister of a wife

dada n.f. (Dure *deda*) sister or wife of a paternal uncle

zər-baba n.m. stepfather

baxtət baba, băxət baba n.f. stepmother

xurga n.m. (pl. *xurge*) stepson

xurəgθa n.f. (pl. *xurgaθa*) stepdaughter

kulfət, kulpət n.f. (pl. *kulfatte, kulpatte*) family, wife

ʾojəx n.m. (pl. *ʾojaxe*) extended family

ʾašɨrət n.f. (pl. *ʾašɨratte*) (A./K.) tribe, community

ʾarəmla n.m. (pl. *ʾarəmle*) widower

ʾarməlθa n.f. (pl. *ʾarməlyaθa*) widow

yatuma n.m. (pl. *yatume*) orphan

yăḵana, yeḵana n.m. only son

yăḵanta, yeḵanta n.f. only daughter

buxrət bɛθa firstborn in the family

baspora n.m. (pl. *baspore*) only child; baby

baspurta n.f. baby

boni n.m. my little son (familiar form of *broni*)

bati n.f. my little daughter (familiar form of *brati*)

ʾarθa n.f. (pl. *ʾaraθa*) rival wife (only used in oaths)

21.3. BUILDINGS AND STRUCTURES

21.3.1. *Houses and Their Appurtenances*

bɛθa n.m. (pl. *bɛθăwaθa, bate*) house

qaṣra n.m. (pl. *qaṣre*) large house consisting of two storeys

darta, dɛrta n.f. (pl. *daryaθa*) courtyard, residential enclosure

gare n.m. (pl. *garăwaθa*) roof

qariθa n.f. (pl. *qariyaθa*) beam

nira n.m. (pl. *nire*) and *qarša* n.m. (pl. *qarše*) small wooden strip made of
 juniper laid across beams in a roof

kežurta n.f. (K.) fine pieces of wood put on roof after *nire/qarše*

sərsərra n.m. layer of powdered white clay put on roof

swana n.m. (pl. *swanane*) overhanging eaves of roof

səppaθət swana the lips of the eaves (of a house)

sorəkke n.f. (pl. *sorəkyaθa*) (K.) gutter of roof

marziwa n.m. (pl. *marziwe*) (K.) gutter

mandorta n.m. (pl. *mandoryaθa*) roller for flattening roof

guda n.m. (pl. *gudane*) wall

paθət guda front of wall facing outwards

kepət paθa stones of the facing (small white stones used to cover outer wall
 of house)

băṭăna n.m. inside of wall facing into the house

gyatta n.f. edge of house with protruding stones

tăra n.m. (pl. *tăre, tărane*) door; leaf of door

tăreθa n.f. (pl. *tărayaθa*) small door

ʾiðət tăra n.f. handle of a door

darga n.m. (pl. *darge*) (K.) main door (with two leaves)

qəṭra n.m. (pl. *qəṭre*) door arch; stone door frame

squpθa n.f. (pl. *squpyaθa*) lintel

dawra n.m. (pl. *dawre*) wooden bolt

xṣipta n.f. (pl. *xṣipyaθa*) wooden door lock

qulqulta n.f. (pl. *qulqulyaθa*) rods in wooden door lock

hezara n.m. (pl. *hezare*) wooden beam used to lock a door

qðilta n.f. (pl. *qðilyaθa*) key

qəpla, qəfla n.m. (pl. *qəple, qəfle*) metal lock

kilon n.f. (pl. *kilone*) (K.) metal lock of a door

panjăra, panjăriya n.f. (pl. *panjăriyaθa*) (K.) window

kawe n.f. (pl. *kawaθa*) small window without glass

barbehn n.m. (pl. *barbehne*) window

parda n.m. (pl. *parde*) (K.) curtain; cloth blind

doše n.pl. balcony, low structure attached to outside of house for people to sit on

bawa n.m. (pl. *bawe*) open balcony of house

barbēn, barbena n.f. (pl. *barbene*) open space in front of house

ṭabəq, ṭabaq n.m. (pl. *ṭabăqe, ṭabaqe*) (A.) storey

ʾarda n.f. (pl. *ʾardaθa*) floor

ʾasās n.m. (pl. *ʾasase*) (A.) foundation

ləbna n.m. (pl. *ləbne*) mud brick

be-ḷaye n.f. (pl. *be-ḷăwaθa*) upper room, room on first floor of a house

be-xtaye n.f. (pl. *be-xtaye*) lower floor in a house, basement

bərzoma n.m. (pl. *bərzome*) cool room for storage in the basement of a house

boyət bərzoma n.m. hatch giving access to storage room

stərra n.m. (pl. *stərre*) storeroom for food

goma n.m. (pl. *gome, gomăwaθa*) basement stable

gomiθa n.f. (pl. *gomiyaθa*) small basement stable

mola n.m. (pl. *mole*) partitioned storage area in a *goma* (basement stable)

ʾotəx, ʾotaxa n.f./m. (pl. *ʾotaxe*) (K./T.) room

manzəl n.f. (pl. *manzale*) room

manzəl tawa sitting room

ḳučke n.f. living room; hearth

čačma n.f. (pl. *čačmaθa*) bathroom, toilet

ḥammam n.m./f. (pl. *ḥammame, ḥammamaθa*) bath, bathroom

semalta n.f. (pl. *semalyaθa*) ladder

dăraje n.f. (pl. *dărajyaθa, dărayəj*) flight of steps, staircase

mēs, mēz n.m. (pl. *mezăwaθa, mezăwāt*) table

došăka, došakka n.m. (pl. *došăke, došakke*) mattress

došəkθa n.f. (pl. *došəkyaθa*) cushion

kursa, kursiya n.m. (pl. *kursăwaθa, kursiye*) chair

qănăpa, qănăfa n.f. (pl. *qănăpe, qănăfe, qănăpāt*) armchair, sofa, couch

šwiθa n.f. (pl. *šəwyaθa, šwiyaθa*) bed; bedding

barəšta, berəšta n.f. (pl. *barəšyaθa, berəšyaθa*) pillow, cushion

qarawət n.f. (pl. *qarawətte*) metal bed

taxta n.f. (pl. *taxtaθa*) wooden bed

ʾərzala n.f. (pl. *ʾərzale*) portable bed

məstik n.m. (pl. *məstike*) mosquito net

ṣupa, ṣopa n.f. (pl. *ṣupăwaθa, ṣupe, ṣopaθa*) stove

bûxɛri, bûxɛriya n.m. (pl. *buxɛriye*) stove, smoke duct

gunga n.m. (pl. *gunge*) chimney pipe

qurṣəltət gunga n.f. bend in chimney pipe on the roof (to prevent rain and snow entering)

ṣopiθa n.f. (pl. *ṣopiyaθa*) outhouse, shed

saršoye n.f. place for washing oneself; large basin for washing dishes, usually in an outhouse (*ṣopiθa*)

gariθa n.f. (pl. *gariyaθa*) small roof over outhouse

tanura n.m. (pl. *tanure*) oven (for baking bread)

ʾɛntət tanura n.f. (pl. *ʾɛnyaθa*) airhole of oven

kanuna n.m. (pl. *kanune*) hearth consisting of stones used for cooking

məšṭaxa n.m. (pl. *məšṭaxe*) area where fruit and vegetables were spread out to dry

21.3.2. *Church and Its Appurtenances*

ʾumra n.m. (pl. *ʾumre, ʾumrane*) church

be-qanke n.f. chancel

madəbxa n.m. altar

šxinta n.f. sanctuary, altar

gorna n.f. (pl. *gornaθa*) baptismal font

kawət punde holes in the wall in which burning wicks (*punde*) were placed

qəṭra n.m. arch, dome

suline n.pl. interlocking sections of dome

naxira n.m. (pl. *naxire*) projecting structure with a small orifice on the tower of a church

kasa n.m. (pl. *kase*) chalice

pərma n.m. (pl. *pərme*) thurible

raza n.m. (pl. *raze*) mass

qurbana n.m. holy communion; host

kuraza n.m. sermon, preaching

bəšra n.m. Gospel

buxra n.m. blessing

bɛθ-qora n.m. (pl. *bɛθ-qore, bɛθ-qorăwaθa, bɛθ-qorayaθa*) cemetery

qawra n.f. (pl. *qawre, qawraθa, qorăwaθa*) grave

21.3.3. *Water-Mill*

ʾarxe, ʾərxe n.f. (pl. *ʾarxaθa, ʾərxaθa*) water-mill

pənxa ḷaya n.m. upper grindstone

pənxa xtaya n.m. lower grindstone

năreθa n.f. (pl. *năreyaθa*) piece in shape of an axe at the end of the rotating shaft that fits into the upper grindstone

qaṭota n.f. break in an irrigation channel to divert water into the water-mill

kotăla n.m. (pl. *kotăla*) raised tank attached to a water-mill which fills with water from a channel and releases water flow at a high pressure to drive the mill.

bəšwele n.f. lower section of water-mill containing driving wheel and shaft.

boṭa n.m (pl. *boṭe*) large wooden channel that carries water at high speed to drive water-mill

masrəqθa n.f. (pl. *masrəqyaθa*) comb for filtering the water passing along the *boṭa*

pozəkke n.f. (pl. *pozəkyaθa*) nozzle at end of *boṭa*

parwana n.m. propeller

parrane n.pl. blades of propeller

dulaba n.m. wooden wheel to which propellers are attached

šabuðət ʾərxe n.m. driving rod that is turned by the propellors

marmana, marimana n.m. lever for engaging *dulaba* with the grindstones

dawla n.m. open box over a water-mill containing wheat, with a hole in the bottom through which wheat comes out onto the grindstone.

čakčaka n.m. wooden wheel shaking and dispensing slowly grain to be ground by a water-mill

balotət pənxa, ʾɛnəkθət balota n.f. hole of a grindstone into which grain is introduced

sorəkθa n.f. lip in the ridge of the lower grindstone of a water-mill where sesame oil pours off

mazaxa n.m. area below the grindstones in a water-mill onto which the flour falls

qačamiθa n.f. waste grains from a water-mill which do not fall onto the *mazaxa*

napaxta n.f. a large hollow measure for corn in the form of an open oblong wooden box

mučəkθa n.f. (pl. *mučəkyaθa*) dry measure in the form of a small bowl (used by the owner of the water-mill to measure out his share of the flour for his fee)

21.3.4. *Churn*

guða n.m. (pl. *guðe*) skin bag used for churning

mayoya n.m. (pl. *mayoye*) long wooden rod running the length of the frame carrying the churn bag

lawlaba n.m. (pl. *lawlabe*) wooden stick at the two ends of the frame carrying the churn bag

šarafta n.f. (pl. *šaraftyaθa*) rope attached to the shafts (*mayoye*) of the frame

21.3.5. *Cradle*

dudiya n.f. (pl. *dudiyaθa*) cradle

bănude n.pl. swaddling bands

šabuqta n.f. (*šabuqytaθa*) metal bar on the side of a cradle (to which the swaddling bands are tied)

xmarət dudiya n.m. round top of cradle

quṣriya n.m. (pl. *quṣriye*) pot for collecting urine and excrement of baby

bəllorta n.f. (pl. *bəlloryaθa*) pipe for taking away urine of baby

21.3.6. *Other Structures*

ʾatuna n.m. (pl. *ʾatune*) furnace, kiln

ʾore n.f. (pl. *ʾorăwaθa*) manger

badəkka n.m. (pl. *badəkke*) hut

be-tune n.f. store for straw

duna n.m. (pl. *dune*) pen for sheltering sheep and goats in winter

hawše, ḥawše n.f. (pl. *hawšaθa*) (K.) sheep-fold, animal pen

koləkθa n.f. (pl. *koləkyaθa*) chicken coop

kosta n.f. (pl. *kosyaθa*) pen for young lambs in basement stable

koxa n.m. (pl. *koxe*) (K.) hut

kullixa n.m. (pl. *kullixe*) (K.) hut

ḳuprana n.f. (pl. *ḳupranane*) wooden trellis affording cover, standing separately in field or built over roof of outhouse (*gariθa*)

kura n.m. (pl. *kure*) furnace, kiln

məšwanəkke n.f. (pl. *məšwanəkke*) beehive (the cover of the cylindrical baskets known as *sălămaške* in which the bees are kept)

qare n.f. (pl. *qareyaθa*) chicken coop

sălămaške, sŭlamməš, sălamməš, sallamḗš n.f. (pl. *šălămaške*) beehive, cylindrical compartment of beehive (made of basket)

šwanəkke n.f. (pl. *šwanəkke*) small booth covering beehives

xəllepa n.m. (pl. *xəllepe*) beehive

zoma n.m. (pl. *zomăwaθa*) summer hut in the mountains

21.4. Containers

21.4.1. *Miscellaneous Vessels*

badiya n.m. (pl. *badiye*) brass vessel (for water and *dawwe*)

baṭila n.m. (pl. *baṭile*) horn container used to carry *č̭ita* (butter) as a lubricant for sharpening implements on a *məšna* (whetstone)

burra n.m. (pl. *burre*) pot for preserving yoghurt (submerged in water to keep cool) or for storing date syrup (*nepoxta*) and yeast (*xmira*)

č̭əlləkθa n.f. (pl. *č̭əlləkyaθa*) earthenware pot (for milk or yoghurt)

danθa n.f. (pl. *danyaθa*) water jar

darpoše n.f. (pl. *darpošyaθa*) (K.) pan for cooking

dərvana n.m. (pl. *dərvane*) (K.) frying-pan

jarra n.m. (pl. *jarre*) (K./A.) jar

jawda n.m. (pl. *jawde*) water skin

juwiθa n.f. (pl. *juwiyaθa*) (K.) pot that is buried in the ground to make jajək

jullək̭θa n.f. (pl. *jullək̭yaθa*) pail for milk or yoghurt

kawaza n.f. (pl. *kawaze*) earthenware pot for water

kwara, kwɛra n.m. (pl. *kware*) storage bin for corn

lagăna n.m. (pl. *lagăne*) brass container for food

lina n.m. (pl. *line*) large conical-shaped pot

linta n.f. (pl. *linyaθa*) small conical-shaped pot

majma n.m. (pl. *majme*) (A.) tray

majo n.f. (pl. *majowaθa*) wide bowl for kneading dried yoghurt cakes (*qaške*)

maqle n.f. (pl. *maqlăwaθa*) (K./A.) cooking pot

marǝgla n.m. (pl. *marǝgle*) brass pan for heating water

margəlta n.f. (pl. *margəlyaθa*) small pan

markən n.m. (pl. *markane*) storage pot

masina n.f. (pl. *masine*) earthenware pot with spout

muč̭ək̭θa n.f. (pl. *muč̭ək̭yaθa*) small dry measure in the form of a small bowl (used by the owner of water-mill to measure out his share of the flour for his fee)

pipa n.m. (pl. *pipe*) cage for partridge chicks made from a gourd

qadalta n.f. (pl. *qadalyaθa*) earthenware pot

qoqa n.m. (pl. *qoqe*) water pot

qoqta n.f. (pl. *qoqyaθa*) small water pot

quṣarta n.f. (pl. *quṣraθa, quṣariyaθa*) cooking pot

quṣriya n.m. (pl. *quṣriye*) pot for collecting urine and excrement of baby under a cradle

rapəkθa n.f. (pl. *rapəkyaθa*) cup measure for grain

rawiya n.m. (pl. *rawiye*) large leather water bottle

saṭla n.f. (pl. *ṣaṭlaθa*) brass bucket

saxara n.m. (pl. *saxare*) large brass dish used for *gərðo* stew

senike, senəkke n.f. (pl. *senike*) (K./A.) metal plate

seniya n.f. (pl. *seniye*) (K./A.) metal tray

səndana n.m. (pl. *səndane*) large pot for *jajək*

stavla, stawla n.m. (pl. *stavle*) wooden frame for carrying loads on pack animal

šarba (pl. *šarbe*) earthenware jug

šuša n.m. (pl. *šuše*) bottle

talma n.m. (pl. *talme, talmane*) water pot

taləmθa n.f. (pl. *taləmyaθa*) small water pot

tannəkka n.m. (pl. *tannəkke*) tin

ṭasa n.f. (pl. *ṭase*) small bowl

ṭašta, ṭašte n.f. (pl. *ṭaštaθa, ṭašyaθa*) (K.) brass bowl (for kneading dough)

xumṣa n.m. (pl. *xumṣe*) large box (for storing grains)

zawərta n.f. (pl. *zawriyaθa*) earthenware container for water for cooking in house or carrying on a journey

bambula n.m. (pl. *bambule*) spout (on a pot)

21.4.2. *Cups and Glasses*

glās n.m. (pl. *glase*) (K./E.) glass

kasa n.m. (pl. *kase*) chalice (in church)

kuba n.m. (pl. *kube*) (A.) cup

panjana n.m. (pl. *panjane*) (K./A.) glass; cup

stăkana n.m. (pl. *stăkane*) (K.) glass

tărare n.f. (pl. *tărare*) (K.) small aluminium cup

21.4.3. *Bags and Baskets*

ʾarəkθa n.f. (pl. *ʾarəkyaθa*) bag (of rice)

ʿəllaga n.f. bag

ʾəsra n.f. (pl. *ʾəsraθa*) large storage basket

boqča n.m. (pl. *boqče*) (K.) knapsack (made of finer fabric than *parzun*)

čanta n.f. (pl. *čanaθa*) (K.) shoulder bag

guða n.m. (pl. *guðe*) skin bag (for churning or carrying liquids)

guδanta n.f. (*guδanyaθa*) small skin bag

guniya n.f. (pl. *guniyaθa*) sack (made of flax)

jareta, jarreta n.f. (pl. *jarreyaθa*) food bag

juwala n.m./f. (pl. *juwale*) (K.) sack (made of animal hair)

juwəlta n.f. (pl. *juwəlyaθa*) small sack

juwiθa n.f. (pl. *juwiyaθa*) pot (buried in ground to make jajək, covered with fig leaf [*ṭarpət tena*] and a small piece of fabric [*čəngərta*])

kista n.f. (pl. *kisyaθa*) small bag

mziδa bag for storing grain (made of sheepskin)

paṛuna n.m. (pl. *paṛune*) sheepskin bag for clothes

parzūn, parzuna n.m. (pl. *parzune*) (K.) woolen knapsack worn by women

pista n.f. (pl. *pisyaθa*) leather bag (for carrying jajək and yoghurt)

qalta, qalθa n.f. (*qalaθa, qalyaθa*) basket (made of palm leaves made in towns)

qərṭala n.f. (pl. *qərṭale*) pannier bag on the back of an animal

qərṭalta n.f. (pl. *qərṭalyaθa*) small pannier bag

qəθθurta n.f. (pl. *qəθθuryaθa*) knapsack (= *boqča*)

qupa n.m. (pl. *qupe*) wicker basket used for storage

qupiθa n.f. (pl. *qupyaθa*) small basket

sala n.m. (pl. *sale*) storage basket used for dairy products

salla n.f. (pl. *sallaθa*) basket

salθa n.f. (pl. *sallaθa*) basket (for keeping bees or catching fish)

šalila n.m. (pl. *šalile*) large basket used for transporting straw from the threshing floor (*bədra*) to the storage bin (*zənja*)

xurja n.m. (pl. *xurje*) saddle-bag

zəqqa n.f. (pl. *zəqqe, zəqqaθa*) (A.) waterskin

21.5. Miscellaneous Instruments and Tools

badoda n.m. (pl. *badode*) long wooden poker for stirring up the fire of an oven

barxošta n.f. (pl. *barxošyaθa*) big stirring spoon, ladle

byaṭa n.m. (pl. *byaṭe*) pickaxe

čakala n.m. (pl. *čakale*) pruning hook; tool used for pulling down fruit and nuts from trees

čakalta n.f. (pl. *čakalyaθa*) small pruning hook

čakuč n.m./f. (pl. *čakuče*) (K.) hammer

čakučta n.f. (pl. *čakučyaθa*) (K.) small hammer

čamča n.f. (pl. *čamče*) (K.) spoon (made of wood); flat trowel

čangəl n.f. (pl. *čangale*) (K.) fork

garoma n.m. (pl. *garome*) large stone rolling pin

garomta n.f. (pl. *garomyaθa*) small stone rolling pin

garosta n.f. (pl. *garosyaθa*) handmill

garšo n.f. (pl. *garšowaθa*) tool used to stir up the mud in the water when planting rice in the paddy fields

garθa n.f. (pl. *garaθa*) large sledge for transporting sticks and fodder on snow

gazza n.m. tongs

gera n.m. (pl. *gere*) long thin rolling pin

gərəkθa n.f. (pl. *gərəkyaθa*) (K.) handmill used to remove husks from rice

gilandi, gilanda n.m. (pl. *gilandiye, gilande*) (K.) scythe

gubbān n.m. (A.) spirit-level

jawətta n.f. (pl. *jawəttaθa*) wood chopper

kanoša n.m. (pl. *kanoše*) broom

kanošta n.f. (pl. *kanošyaθa*) small broom, brush

karrəkka n.m. (pl. *karrəkke*) (K.) sheep shears

ḳawčo n.f. (pl. *ḳawče*) (K.) ladle

kəlbəttən n.m. (pl. *kəlbəttane*) (K./A.) pincers

kulənga n.m. (pl. *kulənge*) (K.) pickaxe

kuwəkka n.m. (pl. *kuwəkke*) (K.) funnel

kupala n.f. (pl. *kupale*) (K.) shepherd's stick; walking stick

magla n.m. (pl. *magle*) sickle

magəlta n.f. (pl. *magəlyaθa*) small sickle

magreta n.f. (pl. *magreyaθa*) shaving knife

maloka n.m. (pl. *maloke*) tool for hewing rock (smaller than a *murja*, which is used for the same purpose)

mandorta n.m. (pl. *mandoryaθa*) roller for flattening roof

maqara n.m. (pl. *maqare*) gouge, chisel

maqaṣta n.f. scissors, shears

maqərxana n.m. (pl. *maqərxane*) brush for whitewashing

maṛa, mɛra n.m. (pl. *maṛe, mɛre*) metal spade

maṛuθa n.f. (pl. *maṛuwaθa*) wooden spade for moving snow

marzaq n.m. (pl. *marzaqe*) wooden stick covered in wool used to stick bread to the oven

masəxθa n.f. (pl. *masəxyaθa*) metal poker for fire; branding iron;

massa n.m. (pl. *masse*) ox goad; pole

mawəlka n.m. (K.) type of small sledge hammer with fine head, smaller than a *murja*

maxətwa n.m. (pl. *maxətwe*) awl (with wooden handle)

məlxawa n.m. (pl. *məlxawe*) winnowing fork

məšna n.f. (pl. *məšnaθa, məšne*) whetstone for sharpening blades

mṣapyana n.m. (pl. *mṣapyane*) strainer

mtarəksana n.m. (pl. *mtarəksane*) wooden poker

murja n.m. (pl. *murje*) type of sledge hammer, larger than a *maloka* which is used for the same purpose

năra n.m. (pl. *năre*) axe

nasarta n.f. (pl. *nasaryaθa*) saw

qalwa n.m. (pl. *qalwe*) wooden mold in which fabric is pressed

qaṭita n.f. (pl. *qaṭiyaθa*) walking-stick

qaṭiya n.m. (pl. *qaṭiye*) stick, goad; whip

qursəlta n.f. (pl. *qursəlyaθa*) square (instrument used in carpentry)

randuš n.f. (pl. *randušyaθa, randuše*) plane (of carpenter)

razwana n.m. (pl. *razwane*) (K.) machine to frighten away birds in a vine-yard or orchard

sanoya n.m. (pl. *sanoye*) poker for a fire

sariqana n.m. (pl. *sariqane*) rake

šapra n.m. (pl. *šapre*) (A.) large knife

ṭarpana n.m. (pl. *ṭarpane*) scythe

xapro n.f. (pl. *xaprowaθa*) small metal trowel for digging up vegetables

xaṣina n.f. (pl. *xaṣine*) axe

xašola n.m. (pl. *xašole*) hand-held grinding stone for grinding rice or wheat

xašolta n.f. (pl. *xašolyaθa*) grinding base with hole in centre in which *xašola* is turned

xaṭorta n.m. (pl. *xaṭoryaθa*) washing board

xayoṭa n.m. (pl. *xayoṭe*) sewing machine

21.6. AGRICULTURE

21.6.1. *Cultivated Land*

ʾăra, ʾarra n.f. (pl. *ʾăraθa*) ground, land

ʾaqara n.m. (pl. *ʾaqare*) area of open farmland

ʾupra n.m. (pl. *ʾuprane*) soil, ground; land

bura n.m. (pl. *burane*) field cultivated without irrigation

čamma n.f. (pl. *čammane*) large field near river; plantation

gawana, gewana n.m. (pl. *gawanane, gewanane*) boundary; strip between fields with no cultivation marking boundary

gənθa n.f. (pl. *gənnane*) small garden
karma n.m. (pl. *karme, karmane*) vineyard; orchard
marga, mɛrga n.m. (pl. *marge, margane*) meadow
margəšta n.f. (pl. *margəšyaθa*) small meadow
praza n.f. (pl. *prazane*) stubble field
txuma n.m. (pl. *txume*) boundary
xaqla n.f. (pl. *xaqlaθa*) field (with irrigation)
zruta avi irrigated cultivation
zruta dēm unirrigated cultivation

21.6.2. *Paddy Fields*

barju n.f. (pl. *barjuwaθa*) (K.) channel connecting sections (*sadde*) of a paddy field
hɛrike n.pl. (K.) soft mud made in preparation for cultivation of rice
məššara n.f. (pl. *məššare*) section of a paddy field, paddy field basin
sadda n.m. (pl. *sadde*) (A.) dammed section of paddy field consisting of a row of basins (*məššare*)
garšo n.f. (pl. *garšowaθa*) tool used to stir up the mud in the water when planting rice

21.6.3. *Irrigation*

məxra n.m. (pl. *məxre, məxrare*) small water channel carrying water across field boundaries (*gewanane*)
qaṭota n.f. and *dărava* n.m. (pl. *dărave*) (K.) dam put in an irrigation channel (*šaqiθa*) to stop or redirect the flow of water
šaqiθa n.f. (pl. *šaqiyaθa, šaqyaθa*) irrigation channel
ʾɛnət xaqla n.f. (pl. *ʾɛnaθət xaqla*) aperture for irrigation water in a field boundary
naδorta n.f. (pl. *naδoryaθa*) pipe running out from an irrigation channel (*šaqiθa*)
karaxa, karraxa n.m. (pl. *karaxe*) irrigation adminstrator, who was concerned principally with regulating the flow of water in water channels (*šaqyaθa*).

21.6.4. *Harvest and Storage*

xzatta n.f. harvest
bədra n.f. (pl. *bədraθa*) threshing floor
darza n.m. (pl. *darze*) large tied bundle of grass or produce (usually wheat)

dwara (dwr) threshing of grains by animals on the threshing floor

garuwa, garruwa n.m. stack of twigs and leaves for animal fodder in winter

garuta, garruta n.f. (pl. *garruyaθa*) small stack of twigs or leaves for animal fodder in winter, built against a tree

gəddišta, gdišta n.f. (pl. *gəddišyaθa*) stook of corn, especially millet (*prage*), sorghum (*xroriye*) and sesame (*šišme*)

grawəzna n.m. (pl. *grawəzne*) load of harvested rice carried on the back in a piece of cloth

huðala n.m. (pl. *huðale*) stack of bundles of grass

dry II *m-dry* (*mdare, mdurele, mdaroye*) to thresh, to winnow

puwa n.m. hay from millet (*prage*)

puwuš n.m. hay from fibres of rice plant

qanaθe n.pl. metal finger covers worn by harvesters

čanga n.m. (pl. *čange*) (K.) leather gloves used to grasp thorny plants when harvesting

qapla n.m. (pl. *qaple*) armful, bundle of produce

sar-gera n.m. leading ox on the threshing floor

səmmala n.f. (pl. *səmmale*) small bundle of grass or produce

ṭarpa n.m. gathering of leaves for winter

ṭaxa n.m. (pl. *ṭaxe*) pile, untied bundle of grass and leaves

zənja n.m. (pl. *zənje*) storage bin for straw

21.6.5. *Plough and Ploughing*

bzara n.f. (pl. *bzare, bzaraθa*) plough

klama n.m. (pl. *klame*) wooden collar of ox

qaṭira n.m. wooden beam joining oxen together

bawsa n.m. (pl. *bawse*) piece of matting (*xaṣira*) connecting *qaṭira* to remainder of the plough

nira n.m. yoke (*klama* + *qaṭira* + *bawsa*)

'ipta n.f. (pl. *'ipyaθa*) strap made of gut connecting yoke of animals to the plough

šəryoxe n.pl. strands used to tie collar of oxen that are pulling the plough

mašana n.f. (pl. *mašane*) (K.) beam connecting yoke to the main body of the plough

xapa n.m. (pl. *xape*) wooden peg used to connect the main body of a plough to the beam (*mašana*)

sarmajanke, sarmažanke n.f. (pl. *sarmajanke, sarmažanke*) (K.) small hook of wood connecting *bawsa* to *mašana*

səkθa n.f. (pl. *səkke, səkkake*) ploughshare

kawša n.m. (pl. *kawše*) handle of plough

lata n.f. (pl. *lataθa*) furrow

lena n.m. (pl. *lenane*) furrow made by plough used as outline marks to guide the ploughing

zrˀ I (*zăre, zrile, zraˀa*) to plough

ˀqr I (*ˀaqər, qirre, qara*) to plough

tny I (*tane, tnele, tnaya*) to plough a second set of furrows, perpendicular to the first set

šapna n.f. (pl. *šapnaθa*) instrument made of oak twigs (*taqanət parma*) for smoothing ground after ploughing and sowing

21.6.6. *Sieves and Sieving*

mxilta n.f. (pl. *mxilyaθa*) sieve with small holes (for flour)

ˀərbala n.f. (pl. *ˀərbale*) sieve with medium sized holes

sarada n.m. (pl. *sarade*) (K./A.) sieve with large holes (for corn)

qəmmota n.f. dirt and stones remaining in sieve after sieving

parta, pərta n.f. husks remaining in sieve after sieving

nəxla n.m. sieved grain; flour that falls through a fine sieve (*mxilta*)

21.7. SEWING, WEAVING AND SPINNING

21.7.1. *Sewing*

xyṭ I (*xayəṭ, xiṭle, xyaṭa*) to sew

xayaṭa n.m. (pl. *xayaṭe*) tailor

xayoṭa n.m. (pl. *xayoṭe*) sewing machine

xmaṭa n.f. (*xmaṭaθa*) needle

ˀurədxa n.f. (pl. *ˀurədxe, ˀurədxaθa*) long needle

qaṭwa n.m (pl. *qaṭwe*) large wooden needle

sənjəq, sənjaqa (pl. *sənjaqe*) crotchet-hook

bra-ṣəppa n.f. (pl. *bra-ṣəppe*) thimble

gədda n.m. (pl. *gədde, gðaðe*) thread

šadda n.m. (pl. *šadde*) spool for thread made of cotton (*ktana*) or gut (*gədde*)

kundarəs, kundɛrəs n.f. chain stitch

ˀamədyana n.m. Amedia stitching, cross-stitch

šəkloka n.m. (pl. *šəkloke*) loose stitch used to join pieces of fabric together in a preliminary fashion before they are sewed with the final stitching

21.7.2. *Weaving*

zqr I (*zaqar, zqirre, zqara*) to weave, to knit
zaqara n.m. (pl. *zaqare*) weaver
zəqqora n.m. (pl. *zəqqore*) woven product
zəqra n.m. (pl. *zəqre*) weaving, woven product
šty III *m-šty* (*mašte, muštele, maštoye*) to arrange the warp (weaving)
šətya n.m. warp
xanuθa n.f. (pl. *xanuyaθa*) loom for weaving
makuk n.m. (pl. *makuke*) shuttle on loom
xewa n.m. (pl. *xewe*) hook used to adjust threads when weaving

21.7.3. *Spinning*

ʾzl I (*ʾazəl, zille, zala*) to spin (wool)
ʾəzla n.m. (pl. *ʾəzle*) yarn
xarnɛsa n.m. (pl. *xarnɛse*) hand-held distaff
kuša n.m. (pl. *kuše*) spindle (hanging from a distaff)
čarməkθa n.f. (pl. *čarməkyaθa*) leather strap along which the spindle (*kuša*) is
    run to start it spinning
gədda n.m. (pl. *gədde, gðaðe*) string; thread
masərqa n.m. (pl. *masərqe*) large comb for carding wool
msarbəs n.m. (pl. *msarbise*) wooden spool on which balls of wool are wound
gəgla n.m. (pl. *gəgle*) skein (of wool, thread) spun on a spool (*msarbəs*)
taqa n.m. (pl. *taqe, taqane*) strand (of wool)
kurənja n.m. (pl. *kurənje*) long stick used for carding flax or wool
bərgawa n.m. inferior quality wool
ləva n.f. (K.) lamb's wool
məlga n.m. wool plucked from sheepskin
kurənja n.m. (pl. *kurənje*) (K.) long stick used for carding flax or wool

21.8. HUNTING

qəšta n.f. (pl. *qəštaθa*) bow; sling
darjăma n.f. (pl. *darjăme*) (K.) screen behind which hunters (shooting birds)
    hide
suta n.f. (pl. *sutaθa*) trap for partridges (*qəqwane*), consisting of trap doors
    over walls made of stone
gərkawe n.f. (K.) hunting of partridges

qola n.m. (pl. *qole*) metal springed animal trap

qulta n.f. (pl. *qulyaθa*, *qultaθa*) metal springed animal trap

ṭắpə̆kke, *ṭắpə̆kθa* n.f. (pl. *ṭắpə̆kke*, *ṭắpə̆kyaθa*) (K.) trap for small birds (such as
    sparrows)

čə̆ldevana n.m. (K.), *qulčĭva* n.m. (K.) trigger in the trap known as *ṭắpə̆kke*,
    ṭắpə̆kθa

jalləkθa n.f. (pl. *jalləkyaθa*) rabbit trap

dabuqana n.m. birdlime

nə̆šwa n.m. bird trap consisting of loops (*xarbuqyaθa*) of horse hair suspended
    on pruning hooks (*čakalyaθa*)

21.9. FIRES

nura n.m. fire

ṭapoya n.m. kindling (for fire)

šišmanta n.f. sesame grass used as kindling for a fire

šə̆mmə̆šta n.f. bark from juniper (*daprana*) or vine (*daliθa*) used as tinder

manquš n.m. (pl. *manquše*) metal instrument for striking fire on flint

barziva n.m flint used to strike fire with metal instrument known as
    manquš

lata n.f. pl. (*lataθa*) flame

bə̆sliṣa n.m. (pl. *bə̆sliṣa*) small flame

čezə̆kka n.m. (pl. *čezə̆kke*) (K.) spark

tə̆nna n.m. smoke

palla n.m. (pl. *palle*) (K.) ember of burning wood

palləkθa n.f. (pl. *palləkyaθa*) (K.) small ember

šə̆mra n.m. soot

šə̆xra n.m. charcoal; soot

sanoya n.m. (pl. *sanoye*) poker for a fire

masə̆xθa n.f. (pl. *masə̆xyaθa*) metal poker for fire

badoda n.m. (pl. *badode*) long wooden poker for stirring up the fire of an
    oven

mtarə̆ksana n.m. (pl. *mtarə̆ksane*) small wooden poker

kanuna n.m. (pl. *kanune*) stones used for cooking; fireplace, hearth

də̆gdin n.m. (pl. *də̆gdine*) metal frame for cooking over a fire (with three legs);

lhy I (*lắye*, *lele*, *lhaya/lắya*) to burn, to be kindled, III *m-lhy* (*malhe/mắle*,
    mulhele/mŭlele, *malhoye/mắloye*) to kindle

ṭpy I (*ṭape*, *ṭpele*, *ṭpaya*) to kindle, II *m-ṭpy* (*mṭape*, *mṭupele*, *mṭapoye*) to kindle,
    III *m-ṭpy* (*maṭpe*, *muṭpele*, *maṭpoye*) to kindle

dry I (*dare, drele, draya*) *nura b-* to set fire to

qðx I (*qaðəx, qðixle, qðaxa*) to kindle, to spark by striking flints or knocking a stone with a fire steel (*manquš*)

lwx I (*lawəx, lwixle, lwaxa*) to catch fire, to blaze

prpr Q *m-prpr* (*mparpər, mpurpərre, mparpore*) to blaze up

ʾqð I (*ʾaqəð, qidle, qaða*) to burn (intr.), III *m-qð* (*maqəð, muqədle, maqoðe*) to burn (tr.)

qmy I (*qame, qmele, qmaya*) to scorch (clothes) (tr. and intr.)

xrx I (*xarəx, xrixle, xraxa*) to singe

šyr I (*šayər, širre, šyara*) to stoke (fire)

trks Q *m-trks* (*mtarkəs, mturkəsle, mtarkose*) to build up embers of a fire to keep it burning

bdd II *m-bdd* (*mbădəd, mbŭdədle, mbădode*) to stir a fire with a poker

dyx I (*dayəx, dixle, dyaxa*) to die down (fire), III *m-dyx* (*madyəx/mădix, mudyəxle/mŭdixle, madyoxe/mădoxe*) to dampen down (fire)

čmy I (*čame, čmele, čmaya*) to be extinguished, III *m-čmy* (*mačme, mučmele, mačmoye*) to extinguish (tr.).

21.10. Clothes and Fabrics

21.10.1. *General Clothes*

beðəlta n.f. (pl. *beðəlyaθa, beθaθa*) sleeve

bərvana n.m. (pl. *bərvane*) apron (for cooking)

bra-qðala n.m. (pl. *bra-qðale*) collar

brɛθaθa n.pl. (sing. *bra ʾiða* f.) gloves

gərwe n.pl. (sing. *gərwiθa, gruθa, gərwa* f.) socks

gubba n.m. (pl. *gubbe*) inner pocket

gugiya n.m. (pl. *gugiye*) (K.) tassel

jeba, jɛba n.m. (pl. *jebe, jebane*) pocket

jərziya n.m. (pl. *jərziye*) jersey; sweater

kenapka n.m. (pl. *kenapke*) (K.) press-stud (to fasten clothes)

pəškoža n.f. (pl. *pəškože*) (K.) tassel, decorative stud, bead

ṣudra n.f. (pl. *ṣudraθa*) shirt, blouse

šala, šāl n.m. (pl. *šale*) (A.) shawl, kerchief; sash wrapped around waist

šarpa n.m. wrap worn around the neck, extending over front of body, usually with tastles (*gugiye*)

šəbbaqa n.m. (pl. *šəbbaqe*) belt (leather or woven)

šəppola n.m. (pl. *šəppole*) edge of clothing

tarəqta n.f. (pl. *tarəqyaθa*) button
ṭoṭiθa f. (pl. *ṭoṭiyaθa*) button
xalqa n.m. (pl. *xalqe*) fastener, press-stud
xərxaṣa n.m. (pl. *xərxaṣe*) thick sash belt
ziqa n.m. neck of a shirt

21.10.2. *Men's Clothes*

ʾabaya, ʾabbaya n.m. (pl. *ʾabaye, ʾabbaye*) cloak
kăpăna n.m. (pl. *kăpăne*) (K.) thick woolen cloak of shepherd
bərmalta n.f. (pl. *bərmalyaθa*) long jacket worn over other clothes
šalla n.m. (K.) trousers made from wool
šərwala n.m. trousers made from cloth
təkθa n.f. (pl. *təkke, təkkake*) cord for trousers
qayiš, qayiša n.m./f. (pl. *qayiše*) (K.) leather belt
lawandiye n.pl. long sleeves
ṣudrət lawandiye n.f. shirt with long sleeves
ʾilakka n.m. (pl. *ʾilakke*) (T.) waistcoat
qutana n.f. (pl. *qutane*) shirt
qaba n.m. (pl. *qabe*) (K.) waistcoat (= *ʾilakka*)
šala n.m. (pl. *šale*) (K.) sash wrapped around waist
kosiθa n.f. (pl. *kosyaθa*) hat
šaqa n.m. (pl. *šaqe*) legging (covering lower leg)

21.10.3. *Women's Clothes and Jewelry*

gardăna n.m. (pl. *gardăne*) (K.) necklace
habriya n.m. (pl. *habriye*) (K.) festive headscarf
kămăra n.f. (*kămăre*) (K.) belt
ḵunnəkθa n.f. (pl. *ḵunnəkyaθa*) (K.) woman's headscarf
mreriya n.m. (pl. *mreriye*) bangle, decoration
pošiya n.f. (pl. *pošiyaθa*) (K.) festive headscarf
šala, šāl n.m. (pl. *šale*) (K.) shawl, kerchief
ḵappurta n.f. (pl. *ḵappuryaθa*) (K.) waistcoat (worn by women)
maxmore n.pl. jewels
šəbbərθa, šəbbərta n.f. (pl. *šəbbəryaθa*) bracelet
qulba n.m. (pl. *qulbe*) (A.) bracelet
xalaqta n.f. (pl. *xalaqyaθa*) earring
xəzzəmta n.f. (pl. *xəzzəmyaθa*) nose-ring
xəlxale n.pl. (sing. *xəlxalta*) (K./A.) anklets

tanura n.m. (pl. *tanure*) section of women's blouse (*ṣudra*) that covers the legs

tita n.f. (pl. *titiye, tite*) silver tastle decorating head of the woman; little chain hanging from belt or bracelet

wasta n.f. (pl. *wastiyaθa*) chest section of women's blouse

qutna n.m. (pl. *qutne*) woman's vest

xəppo n.f. (pl. *xəppowaθa*) bridal veil

yaləxta, yaləxθa n.f. (pl. *yaləxyaθa*) handkerchief; scarf (waved around in *xəgga* dance, usually with decorative tassles)

yubqa n.f. (pl. *yubqaθa*) skirt

21.10.4. *Shoes*

čaroxe, čeroxe n.pl. (sing. *čaroxta*) leather boots (worn in Spring)

čəḳḳalle n.pl. (sing. *čəḳḳalta* f.) (K.) slippers

kədde n.pl. (sing. *kədda*) snow shoes

kere n.pl. (sing. *kera*) (K.) wooden snow shoes

lastike (sing. *lastikta*) rubber shoes

pampule n.pl. (sing. *pampulta*) large shoes

pilawe n.pl. (sing. *pilawta*) (K.) plastic shoes

qundăre n.pl. (sing. *qundarta*) (K./T.) leather shoes with heals

ṣawle n.m. (sing. *ṣawəlta*) leather shoes

šəryoxa n.m. (pl. *šəryoxe*) shoe-lace

zargule n.pl. (sing. *zargulta*) sheep skin boots (worn in Winter)

21.10.5. *Fabrics*

băgəbăgi n.m. multicoloured embroidered fabric

băra n.m. (pl. *băre*) (K.) sheet

bărəkθa n.f. (K.) (small) sheet

barora n.m. (pl. *barore*) roll (of fabric)

baza n.m. type of fabric

beza n.f. muslin fabric

čəngərra n.m. (pl. *čəngərre*) (K.) piece of fabric

čəngərta n.f. (pl. *čəngəryaθa*) (K.) small piece of fabric (put on mouth of pot containing *jajək*)

čita n.m. (pl. *čite*) (K.) type of embroidered fabric

čuxa n.f. (K.) broadcloth, thick woolen fabric

grawa n.m. (K.) off-white cotton fabric

habresəm n.m. silk

hašya n.m. (pl. *hašye*) woven lace

jurjēt n.m. type of velvet fabric

ləhefa n.m. (pl. *ləhefè*) (K./A.) duvet

malapa n.m. (pl. *malape*) sheet

manṭo n.m. type of fabric

maydani n.m. type of red fabric

mxallana n.m. (pl. *mxallane*) cleaning cloth

naqša n.m. embroidery

parča n.m. (pl. *parče*) piece of cloth

prasa n.m. (pl. *prase*) cloth spread on floor on which food is laid

prista n.f. spread, covering for floor (such as rug or carpet)

ṭaṭiya n.f. (pl. *ṭaṭiyaθa*) mat made of compressed wool

xaliya n.f. (pl. *xaliye, xaliyaθa*) (K.) carpet

xaṣira n.f. (pl. *xaṣire*) (A.) mat

xiyoṭa n.m. (pl. *xiyoṭe*) sewn fabric

zargəf n.m. (K.) type of fabric

zəqqora n.m. (pl. *zəqqore*) woven fabric

zəqra n.m. (pl. *zəqre*) woven fabric

21.11. Ropes and Ties

xawla n.m. (pl. *xawle*) rope

xawəlta n.f. (pl. *xawəlyaθa*) short rope

qəčča n.m. (pl. *qəčče*) (K.) short rope tethering an animal to a stake, shorter than a *xawəlta*

qəččiθa n.f. (pl. *qəččiyaθa*) small piece of rope

ṣlawa n.m. tether to tie an animal to a post

ṣlawiθa n.f. small tether

qmaṭa n.m. (pl. *qmaṭe*) rope used for tightening, e.g. the two shafts of a stone roller (*mandorta*)

sarapsɛra, sarbsara n.m. (pl. *sarapsɛre*) (K.) rope for leading an animal

ʾafsara n.m. (K.) rope for leading an animal

gədda n.m. (pl. *gəddɛ, gðaðe*) string; thread

šəryoxa n.m. (pl. *šəryoxe*) shoe-lace, cord

tasma n.m. (pl. *tasme*) shoe-lace, tie

taniθa n.f. (pl. *tanyaθa*) line (for hanging things)

yasoṛa n.m (pl. *yasoṛe*) tether

qəθra n.m. (pl. *qəθre*) knot

xarbuqta n.f. (pl. *xarbuqyaθa*) knot (joining two pieces of rope)

21.12. Natural World

21.12.1. *Mountains and Hills*

ṭura n.m. (pl. *ṭure, ṭurane*) mountain
ʾəqrət ṭura the foot of the mountain
ṭalana n.m. side of mountains that remains in the shade at sunrise
ba-roža n.f./adv. (K.) side of the mountains on which the morning sun shines
ʾisara n.m. (pl. *ʾisare*) large rock; cliff
qaṭra n.m. (pl. *qaṭre*) rock, boulder
ṭapaya n.m. slope (of a mountain)
ṭapɛθa n.f. small slope (of a hill)
saka n.m (pl. *sake*) mountain ridge
gərgara n.m. (pl. *gərgare*) (K.) smooth steep slope
leta n.f. (pl. *letaθa*) ridge on a mountain side
rəzda n.m. scree, row of rock debris on the side of a mountain
stanga n.m. (pl. *stange*) (K.) narrow mountain path
dola n.m. (pl. *dole*) (K.) deep valley, canyon
ṣuwarta n.f. (pl. *ṣuwaryaθa*) wide mountain pass
tăreθa n.f. (pl. *tărayaθa*) small mountain pass
găliya, galliya, galli n.m. (pl. *galliye*) (K.) valley
lawora n.m. (pl. *lawore*) valley
lawurta n.f. (pl. *lawuryaθa*) small valley
rawola n.m. (pl. *rawole*) ravine
rawulta n.f. (pl. *rawulyaθa*) small ravine
wala n.m. wide valley between mountains
găra, gəra n.m. (pl. *gărare, gărɛre*) (K.) hill
gărəkθa, gərəkθa n.f. (pl. *gărəkyaθa*) hillock, small hill; mound
roma n.m. (pl. *rome*) hill
romta n.f. (pl. *romyaθa*) small hill
kanda n.m. (pl. *kande*) hillock
gəzra n.m. (pl. *gəzre*) mound, pile (of stones)
bər-gare n.f. (pl. *bər-garăwaθa*) plateau
ʾašiθa n.f. (pl. *ʾašiyaθa*) avalanche
tiya n.m. (pl. *tiyaye*) (K.) mountain peak; hilltop
čulla n.m. (pl. *čulle*) (K.) large broad mountain peak
čulḻənta n.m. (pl. *čulḻənyaθa*) (K.) small sharp mountain peak
zənnara n.m. (pl. *zənnare*) (K.) cliff, precipice
lata n.f. (pl. *lataθa*) mountain path

21.12.2. *Water*

ʾareta n.f. (pl. ʾarayaθa) algae and detritus floating on stagnant water

ʾena (pl. ʾenaθa, ʾenăwaθa) spring of water

bălo n.f. (pl. bălowaθa) whirlpool

garra n.m. (pl. garrε, garrεre) (K.) pool in river created by constructing a
    dam

nabuwwa n.m. (nabuwwe) large spring of water

nera n.m. (pl. nerăwaθa) river

sela n.m. stream, river

swire n.f. (pl. swiriyaθa) (K.) stream, small tributary of a river

šallala n.m. (pl. šallale) waterfall

šamšuma n.m. (pl. šamšume) large waterfall

šaršura n.m. (pl. šaršure) small waterfall

šəllela n.m. (pl. šəllele) waterfall

yama n.f. (pl. yamaθa) sea; lake

yamta n.f. (pl. yamtaθa) lake

zəmzama n.m. (pl. zəmzame) deep natural pool

zəmzŭma n.m. (pl. zəmzŭme) waterfall

21.12.3. *Celestial Bodies*

šəmša n.f. sun

kəxwa n.m., kxuθa n.f. (pl. kəxwe) star

sera n.m. moon

šəmšət sera moonlight

ʾεwa n.m. (pl. ʾεwe) cloud

dəgdin n.m. Orion

gebare, gabbare n.pl. the constellation Orion

kima n.f. the Pleiades

dəbba n.f. the Great Bear

21.12.4. *Weather*

xəmma n.m. heat

kəlkăla n.m. (K.) intense heat (of summer)

məṭra n.f. (pl. məṭraθa) rain

ʾəryana n.f. rainfall, rain storm

păra n.m. first rain in autumn

ṭawpana n.m. deluge

bərqa n.m., *bərqiya* n.m. lightning
gargome n.pl. thunder
xɛpuθa n.f. fog
talga n.m. snow
qurša n.m. frozen snow
makrəb čučane n.f. late snow falling at the beginning of March (literally: the one that angers the magpies)
mkase qərṭale n.f. late snow falling at the end of March (literally: the coverer of panniers)
pašxa rase n.f. late snow falling in April (literally: breaker of *rasa* grass)
pəšpəšyaθa n.pl. the first flakes of snow that fall in a snow storm
gərgəra n.m. light snow falling in small round grains
məžməža n.m. (K.) light snow
šrape n.pl. sleet
dərədya n.m. (pl. *dərədye*) pile of snow that has fallen from a roof
barða n.m. hail; *barða b-qanane* heavy hail
qarθa n.f. cold
ʾəṣər n.f. intense cold (of winter)
gðila n.m. ice
səllər n.f. frost
pawxa n.m. (pl. *pawxe*) wind
patlo n.f. (hot) whirlwind
bəlbəllizək n.f. (K.) whirlwind, hurricane
kerova n.m. (K.) snow storm
bahogər, buhugar n.f. blizzard (of snow)

21.13. Flora

21.13.1. *Wild Species of Flowers and Plants*

warda, wɛrda n.m. (pl. *warde, wɛrde*) flower
gəlla n.m. (pl. *gəllale*) plant; herb; grass
ʾədda n.m. weed; weeds
ʾenir n.m. aromatic lily
bajoniya n.m. (pl. *bajoniye*) red lycium barbarum berry
balazeze n.pl. (sing. *balazeza* f.) yellowy white Spring flowers
barmiya n.m. water weed (growing in rice paddy fields)
baṛ-xəlya n.m. fennel
baybuna n.m. (pl. *baybune*) yellow and white flower

bibla n.m. (pl. *bible*) camomile

bizər n.m. herb put jajək

bukina n.m. (pl. *bukine*) red anemone flower

dambus n.f. type of herb resembling tail of horse

harun n.m. type of herb

hašya n.m. herb put in *jajək* and cheese (like chive)

hemza n.m. edible herb with pungent root and white sap

kerapso n.f. edible herb pungent to the taste

kəskənna n.m. yellow flower

kətwa bloka n.m. type of herb

kiwara, kiwɛra n.m. thorny plant

kizikizo n.f. edible herb

kuspa dəbbe n.m. plant with large leaves used for wrapping the filling of
    dolma

kuza n.m. edible red herb

lagna n.m./f. (pl. *lagne*) thorny plant producing seeds known as *ṣəṣṣe*

ləxmət maθ-Maryam n.m. St. Mary's bread (name of herb)

luwwəš n.m. edible herb (used in *dolma* dish)

mamačučək n.m. edible herb sweet to the taste

marquṣta n.f., *marquza* n.f. (pl. *marqoṣe, marquṣyaθa, marquze*) yellow narcissus
    flower

nuta n.f. edible herb (small form of *nuwa*)

nuwa n.m. edible herb

paṭiroke n.f. edible herb

poθa n.f. madder

purəpxina n.m. purslane (put in *jajək*)

qaqna n.f. (pl. *qaqne*) thorny plant producing gum (*deθa*)

qărama n.f. edible herb fed to sheep to make them give more milk

quraṣina n.m. (pl. *quraṣine*) nettle

saθra n.m. herb put in yoghurt

šəbbət n.m. (K./A.) dill

ṣəmmaðra n.m. (pl. *ṣəmmaðre*) violet

sərke n.pl. herb put in *jajək* (similar to mint)

sərmo n.f. herb put in *jajək* and cheese (like chive)

šošanθa n.f. (pl. *šošanne*) lily

šwalta n.f. edible herb (producing glue)

tawuzra n.f. edible herb with wide leaves, which is boiled and mixed with
    sumac berries (*smoqe*)

warde žeri n.m. wild flowers

wardət dəbba n.m. large red flower

wardoniθa n.f. (pl. *wardonyaθa*) type of small flower consisting of four petals

xamiṣoke n.f. bitter herb

xanqa-xona n.m. (pl. *xanqa-xone*) small white flower

xarədla n.m. mustard

xəbloke n.f. a type of green herb that is eaten by partridges

yasmin, yasmina n.f. (pl. *yasmine*) jasmin (yellow or white)

yunja n.m. (pl. *yunje*) type of green herb that is fed to animals

21.13.2. *Cultivated Crops*

daxla n.m. (pl. *daxle*) (K./A.) corn plant

xəṭṭe n.pl. wheat (sing. *xəṭṭiθa* a wheat grain) | Four types of wheat: *xwaraθa, huwedi, mərwəš* and *ḳoč̣a* (without long hairs)

saṛe n.pl. barley

prage n.pl. pearl millet

kurize n.pl. a type of millet that ripens slowly

xroriye n.pl. sorghum

xəṭṭət romaye, xəṭṭə romaye, xəṭ-romaye n.pl. maize

xəṭṭət šemaye n.pl. maize

šišme n.pl. sesame

tŭtun, tuttun n.f. (K.) tobacco

21.13.3. *Fresh and Dried Grasses*

gərgəra n.m. type of grass that is fed to sheep

kəxra n.m. grass fodder for animals

puwa n.m. hay from millet (*prage*)

puwuš n.m. hay from fibres of rice plant

qanθa n.f. wild grass eaten by sheep

qăratiθa, qarratiθa n.f. (pl. *qăratyaθa*) pieces of *rasa* grass fed to young lambs in a pen (*kosta*)

rasa n.m. (pl. *rase, rasane*) tall thick grass used as animal fodder

šišmanta n.f. sesame grass

tuna n.m. straw from wheat (*xəṭṭe*)

21.13.4. *Fruits and Vegetables*

feka, peka n.m. (pl. *feke, peke*) (A.) fruit

mewa n.m. (K.) fruit

ʾənjaṣa n.m. (pl. ʾənjaṣe) wild plum

ʾənwa n.m. (pl. ʾənwe) grape | ʾənwe kome black grapes; ʾənwə baṣirana type of grapes that are slow to ripen; ʾənwe ṭefi/ṭepi type of long grapes; ʾənwe zarrək type of yellow grape

bajəlla, baqəlla n.m. (pl. bajəlle, baqəlle) broad bean

banjana koma n.m. (pl. banjane) aubergine

banjana smoqa n.m. (pl. banjane) tomato

baqla n.m. (pl. baqle) red bean

bašila n.m. (pl. bašile) long melon

bərtaqala n.m. (pl. bərtaqale) orange

bəṣla n.m. (pl. bəṣle) onion

faṣuli n.m. (pl. faṣuliye) (A.) white bean

gasosa n.m. (pl. gasose) wild green bean

gezara n.m. (pl. gezare) carrot

gəndore n.pl. (sing. gəndorta) melons

gəngəryasa n.f. (pl. gəngəryase) lime

gərsəkka n.m. (pl. gərsəkke) wild pear

gərsəkθa n.f. (pl. gərsəkke, gərsəkyaθa) small wild pear

gilasa n.m. (pl. gilase) cherry

haluka, halukka, halučakka, halurašša n.m. (pl. haluke, halukke, halučakke, halurašše) (K.) black plum

halwasna n.m. (pl. halwasne) raspberry

harmiya, hɛrmiya n.m. (pl. harmiye, hɛrmiye) pear

harmone n.pl. (sing. harmonta) pomegranates

kǎlǎma n.m. (pl. kǎlǎme) (K.) cabbage

lablabi n.m (A.) hyacynth bean

lubya n.m. (pl. lubye) bean growing in pods *(šənqe)*

maše n.pl. black beans

mata n.f. (pl. mayaθa, mataθa) grape

məšməšša n.m. (pl. məšməšše) (K./A.) apricot

pǎtate n.pl. potatoes

patorta n.f. (pl. patoryaθa) mushroom

qazba n.m. (pl. qazbe) (K.) date

rəzza n.m. (pl. rəzzane) rice

sparəgla n.m. (pl. sparəgle) quince

šalgəmme n.pl. (sing. šalgəmta f.) turnips, swedes

šəftiya n.m. (pl. šəftiye) (K.) watermelon

səlqa n.m. chard

ṣoṣine n.pl. (sing. ṣoṣinta) azerole berries

tena n.f. tenta/tənta n.f. (pl. tene) fig

ṭlawxe n.pl. lentils (red or green)

tuθta n.f. (pl. *tuθe, tuθyaθa*) mulberry fruit | Types of berry include: *tuθe xware* white mulberries and *tuθe kome* black mulberries (the latter type is also know as *tuθə šemaye* or *tuθə šemi* Syrian mulberries.

tuma n.m. garlic

xabuša n.m. (pl. *xabuše*) apple

xabušət ʾupra n.m. sweet potato

xarṭmane (sing. *xarṭamta, xarṭamiθa*) chickpea

xawxa n.m. (pl. *xawxe*) peach

xiyara n.m. (pl. *xiyare*) cucumber

yamiṣa n.m. (pl. *yamiṣe*) rubbarb

21.13.5. *Trees and Shrubs*

ʾilana n.f. (pl. *ʾilane, ʾilanane*) tree

ʾilanta n.f. (pl. *ʾilanyaθa*) tree, small tree

ṭarraša n.m., *ṭarrašta* n.f. (pl. *ṭarraše*) bush, shrub

dala n.m. (pl. *dale*) thicket, undergrowth

derubər n.m. (pl. *derubɛre*) wood, forest

tərða n.m. thick bush, vegetation

bənduqqa n.m. (pl. *bənduqqe*) chestnut, chestnut tree

bəṭma n.f. (pl. *bəṭmaθa*) terebinth tree

čiqa n.m. thick cane; bamboo

daliθa n.f. (pl. *dalyaθa*) vine

daprana n.m. (pl. *daprane*) juniper bush

dəlba n.m. (pl. *dəlbe*) plane tree

gawza, gawzana n.m. (pl. *gawzane*) walnut tree

gawzəlta n.f. (pl. *gawzəlyaθa*) small walnut tree

gəngəryasa n.f. (pl. *gəngəryase*) lime tree

jullajena n.m. type of thorny shrub

jwanna n.m. (pl. *jwanne*) thorn tree

kaža n.m./f. (K.) pine tree

korašina n.m. shrub with small green leaves

mɛša n.f. (pl. *mɛše*) type of oak tree

paṛma n.m. (pl. *paṛme*) type of oak

parẓena n.m. type of thorn tree

qərda n.m. tragacanth shrub

sunniθa n.f. (pl. *sunniyaθa*) thorny bush bearing raspberries (*halwasne*)

ṣalma n.m. (pl. *ṣalme*) small bush with small leaves and small sweet red berries

ṣamərma n.f. (pl. *ṣamərme*) thorn-bush with small edible berries

ṣoṣinta (pl. *ṣoṣine*) azerole tree

šakroke n.f. bush with thorny pods

šangabí n.m. (K.) weeping willow

tena n.f. (pl. *tene*) fig tree

ṭurḳa n.m. (pl. *ṭurḳe*) (K.) pollarded mulberry tree

tuθa n.m. mulberry tree | Types of tree include: *tuθa qazbi* large white berry, *tuθa turka* small yellow mulberry, *tuθa čуwa* smooth mulberry

xelapa n.m. (pl. *xelape*) willow tree

xura, xurta, xorta n.m. (pl. *xure, xuriyaθa, xoriyaθa*) white poplar

zala n.m. (pl. *zale*) thin cane, reed

zɛrăbi n.f. (K.) tall cane used to weave baskets

zədyana n.m. (pl. *zədyane*) a type of oak tree

21.13.6. *Components of Flora*

ʾaqra, ʾəqra n.m. (pl. *ʾaqrare, ʾəqrare*) trunk of a tree; stem of plant

baṛ-xoxa n.m. (pl. *baṛ-xoxe*) thorny pod

bola n.m. (pl. *bole*) seed head of millet (*prage*), sorghum (*xroriya*) or rice

bubra n.m. (pl. *bubre*) thorny pod

čələkka n.m. (pl. *čələkke*) small leaf stem; small twig

čərkənna n.m. (pl. *čərkənne*) kernel (of an onion)

dalya n.m. (pl. *dalye*) tendril of a vine

dasiya n.m. (pl. *dasiye*) (K.) awn, beard of head of corn

dəsqa n.m. (pl. *dəsqe*) (K.) stem of fruit

goja n.m. (pl. *goje*) (K.) stock of tree; large root of a tree

gojiθa n.f. (pl. *gojiyaθa*) (K.) small stock of tree

gujma n.m. (pl. *gujme*) bunch (of grapes, nuts)

kălama n.m./f. (pl. *kălame*) (K.) long thorn of *parzena* or *jwanna* tree

kata n.m. (pl. *kate*) leaf sprouting on felled tree or severed branch

kətwa n.m. (pl. *kətwe*) spike, thorn

kulliya n.m. (pl. *kulliye*) (K.) head of maize

parpiṭe n.pl. brushwood taken from bushes (*ṭarraše*)

pəqxa n.m. (pl. *pəqxe*) blossom

pəškoža n.f. (pl. *pəškože*) (K.) bud

qalpa n.m. bark; peal

qanṭopa n.m. (pl. *qanṭope*) bunch

qăsăla n.m. (pl. *qăsăle*) stem of corn plant

qɛsa n.m. (pl. *qɛse*) wood; piece of wood

qəllora n.m. (pl. *qəllore*) head of maize

qəθrət šeta annual growth ring of tree

qodəšta n.f. (pl. *qodəšyaθa*) small bunch of grapes, section of a *gujma* (large bunch)

sənnorta n.f. (pl. *sənnoryaθa*) shoot (of corn)

šaka n.m. (pl. *šake*) shoot of a vine growing from the tendrils (*dalye*)

šəbbəlta n.f. (pl. *šəblaθa, šəble*) head of wheat or barley

šəlloxta n.f. (pl. *šəlloxyaθa*) husk of grain

šənqa n.m. (pl. *šənqe*) pod containing seeds (*boče*)

šira n.m. (K.) sap (of tree), resin (of plants)

taqa n.m. (pl. *taqe, taqane*) branch

taqta n.f. (pl. *taqyaθa*) twig, sprig

ṭarəpθa n.f. (pl. *ṭarpe, ṭarpaθa, ṭarəpyaθa*) leaf

ṭarxa n.m. (pl. *ṭarxe*) new shoot in a plant or tree

ṭaya n.m. (pl. *ṭayane*) leaf (of a plant); leafy branch (of a tree)

tura n.m. (pl. *ture*) pliable twig

ṭurxa n.m. (pl. *ṭurxe*) branch

wariða n.m. (pl. *wariðe*) root
