## NOTICE

The quality of this microfiche is heavily dependent upon the quality of the original thesis submitted for microfilming. Every effort has been made to ensure the highest quality of reproduction possible.

If pages are missing, contact the university which granted the degree.

Some pages may have indistinct print especially if the original pages were typed with a poor typewriter ribbon or if the university sent us a poor photocopy.

Previously copyrighted materials (journal articles, published tests, etc.) are not filmed.

Reproduction in full or in part of this film is governed by the Canadian Copyright Act, R.S.C. 1970, c. C-30. Please read the authorization forms which accompany this thesis.

**THIS DISSERTATION

## AVIS

La qualité de cette microfiche dépend grandement de la qualité de la thèse soumise au microfilmage. Nous avons tout fait pour assurer une qualité supérieure de reproduction.

S'il manque des pages, veuillez communiquer avec l'université qui a conféré le grade.

La qualité d'impression de certaines pages peut laisser à désirer, surtout si les pages originales ont été dactylographiées à l'aide d'un ruban usé ou si l'université nous a fait parvenir une photocopie de mauvaise qualité.

Les documents qui font déjà l'objet d'un droit d'auteur (articles de revue, examens publiés, etc.) ne sont pas microfilmés.

La reproduction, même partielle, de ce microfilm est soumise à la Loi canadienne sur le droit d'auteur, SRC 1970, c. C-30. Veuillez prendre connaissance des formules d'autorisation qui accompagnent cette thèse.

#### ABSTRACT

This dissertation is a first structuralist grammar of Cowichan, which is spoken by native Indians in the southeastern part of Vancouver Island, and is based mainly on personal fieldwork with three speakers between May, 1975 and November, 1976. Cowichan is a dialect of Halkomelem, which is a Central Coast Salish language.

Although the noun/verb dichotomy is traditionally accepted for most of the world's languages, the predicator constitutes the basis for the description of Cowichan. The morphology section of the grammar provides support for this approach to the extent that the postulated predicators, whether they have apparent verbal interpretation or nominal (equational) meaning like /snas/ '(be) fat/grease', take common reduplicative and affixal morphemes. The syntax section also supports the predicator hypothesis in that a predicator may function as the head of a clause with adjuncts and particles.

The focus of the grammatical description is on the morphology and syntax of Cowichan since the phonology has already been exhaustively analyzed. The dichotomy between morphology and syntax is motivated here by the word structure of the language, which is characterized by extensive affixation. The morphology is divided into three main parts: inflection, derivation and deictic morphology. The syntax section has four major parts: main clause structure, adjuncts

and attribution to them, subordinate clauses and compound clauses.

Despite the formal justification for the division of the grammar into two sections, morphology and syntax, the two overlap. In the case of the deictics the morphological subclasses also constitute syntactic divisions. The overlap applies to certain inflectional suffixes, some of which mark what is referred to herein as transitivity, while others indicate person. These markers have morphological import insofar as three sets of forms--the person marker suffixes, which have patient interpretation like the English pronouns 'us' and 'them'--are only attached to predicators with a transitive suffix.

The transitivity suffixes and person marking paradigms enter into the syntactic analysis. They affect the syntactic structure of a clause insofar as the distribution as well as the interpretation of adjuncts depends upon the types of transitivity suffixes and person markers that appear. The person markers, moreover, that occur exclusively in subordinate clauses constitute one means by which the relationship between subordinate clauses and main ones is signalled. In attributive subordinate clauses, which translate as English relative constructions, the marker is attached to the predicate. In complementary subordinate clauses, the marker is affixed to the first element of the clause. This element may or may not be the predicate.

## ACKNOWLEDGEMENTS

My greatest indebtedness is towards Dr. Hukari whose research on Cowichan and experience with generative semantics and grammar have been important in the structuring of this dissertation.

I am grateful to Drs. O'Grady and Carlson for valuable suggestions and to the other members of my committee, Drs. Foster and Kirkire for their comments.

I also wish to thank my consultants, Mr. Abel Lee, Mr. Elwood Modeste, Mr. Stan James, Mrs. Ellen White and Mr. Russell Jones for their cooperation in field work.

Finally, I am grateful to the Canada Council for financial support from September, 1974 to November, 1976 and to my parents thereafter.

## SYMBOL CONVENTIONS

- / -/ underlying form
- phonemic form--the underlining, which may be either partial or total, is omitted in the citation of examples
- [        ] phonetic form
- (2) 'yaq<sup>w</sup> (T1: 139) example (2) in the dissertation, item T1:139--text 1 sentence 139--in my field notes
- AJ Abel Joe
- EM Elwood Modeste
- EW Ellen White
- SJ Stan James
- C consonant
- V vowel
- X portion of a stem that does not enter into a given analysis
- morpheme boundary
- (TEH) data elicited by Dr. Thomas E. Hukari
- (Kava) data elicited by Tiiu Kava
- (Jones) data elicited by Michael Jones
- (        ) (a) in a paradigm they indicate a marginal form  
(b) in glosses e.g. k<sup>w</sup>enem 'take (it)' the parentheses signify that the Cowichan word is morphologically intransitive but transitive in interpretation  
(c) in a Cowichan word they indicate an underlying form
- Capitalization e.g. 'Actual' is used to avoid confusion between technical linguistic usage and non-technical usage
- singular    plural if the morpheme is placed between columns, it means that the dichotomy does not apply to it. Thus /-s/ refers to either singular or plural entities
- s

0. INTRODUCTION

0.1. Orientation

In accordance with a traditional distinction made in linguistics the grammatical analysis of Cowichan presented herein is divided into two main sections: Morphology and Syntax. This arrangement is motivated by the word structure of the language, which is characterized by extensive affixation. Suffixation and, to a lesser extent, prefixation, occurs, as well as reduplication, infixation and stem mutation.

Although the noun/verb dichotomy is traditionally accepted for most of the world's languages, I view the predicate as being fundamental to Cowichan grammar with respect to both morphological and syntactic analysis, and the noun as representing a syntactic subclass of predicator.<sup>1</sup> The predicator is a morphological unit to the extent that words with apparent verbal interpretation and elements that translate as nouns take common affixes and reduplicative morphemes. It is also a syntactic unit in that it may occur as the head element of a clause containing an adjunct such as t<sup>θ</sup>ə nəšx<sup>w</sup>?áq<sup>w</sup>a? 'my brother', or an enclitic, like cən 'I'. The head element may be a form such as š<sup>w</sup>čénəm 'run' in the sentences š<sup>w</sup>čénəm cən 'I (am about to) run' and š<sup>w</sup>čénəm t<sup>θ</sup>ə nəšx<sup>w</sup>?áq<sup>w</sup>a? 'My brother (is about to) run' or it may be an element such as swəyqe? '(be) a man' in the sentences swəyqe? cən 'I am a man' and swəyqe? t<sup>θ</sup>ə nəšx<sup>w</sup>?áq<sup>w</sup>a? 'My brother is a man'.

Despite the formal justification for the organization of the grammar into two sections, morphology and syntax, certain pronominal syntactic elements, the subject enclitics, have been introduced into the morphology section as a convenient means of describing the semantic status of predicators, which may be uninflected or inflected with a transitivity suffix. The distribution of the suffix-like enclitics is only partially revealed in the morphology section, the main purpose being to use them as a means of defining the semantic relationship of pronominal subject. When it is stated, for example, that a predicate like /yəq<sup>w</sup>/ 'burned' has a patient referent, what is meant is that a subject enclitic like /cən/ 'I' in yəq<sup>w</sup> cən, 'I am (going to be) burned' has patient interpretation.

## 0.2. Classification of Cowichan within the Salish Language Family

The Salish languages themselves are spoken in Washington and southern British Columbia from the coast inland to the Rocky Mountains and extend into Idaho, Montana and Oregon. There are two major groups: Coast Salish and Interior Salish. The first group is spoken to the west of the Cascades and the second, to the east of these mountains.

The most recent linguistic classification of the Salish languages is Thompson's (1973:986). In his scheme the dichotomy between Coast and Interior Salish is recognized. Coast Salish is viewed as consisting of two separate enclaves (Tillamook and Bella Coola), the Olympic Branch (upper Chehalis, Cowlitz, Quinault and lower Chehalis) in

southwestern Washington and a spread of languages which comprise the Central Coast Salishan branch as follows:<sup>2</sup>

Central Coast Salishan

- A. Comox, B. Sechelt, C. Pentlatch (extinct), D. Halkomelem: Cowichan, Nanaimo, Chemainus on Vancouver Island and on the mainland: Musqueam, Kwantlen, Katzie, Sumas, Chehalis, Chilliwack and Tait,
- E. Squamish, F. Nooksack, G. Straits: Clallam; Songish, Sooke, Saanich; Semiahmoo, Lummi, H. Puget Sound: Skagit, Snohomish, Duwamish, I. Twana.

The Interior Branch in Thompson's scheme may be summarily presented as follows:

Interior Salish

- A. Northern Branch: Lillooet, Shuswap and Thompson
- B. Eastern Branch: Okanagan-Colville, Kalispel and Coeur d'Alene
- C. Southern Branch: Columbian

This classification incorporates the findings of Elmendorf and Suttles (1960:3) on the Halkomelem (/həłqəmiñəm) dialects. In their view these dialects, which are considered to be mutually intelligible by native speakers, are spoken in the lower Fraser valley on the mainland and include Cowichan on southeastern Vancouver Island from Mill Bay north to Nanoose Bay and on some of the adjacent Gulf of Georgia islands.

0.3. Proposals Concerning Wider Affiliations

Tentative evidence has been offered for relating the Salish language family with other families. Most recently Larry Morgan at the

University of British Columbia in his M.A. thesis has attempted to establish a relationship between Salishan languages and Kutenai. Earlier Sapir (1915:1) hypothesized that the Chimakuan, Wakashan and Salish families were derived from a proto-language, Mosan, which he further related to Kutenai and Algonquian. The term 'Mosan' (based on the numeral for 'four') was originally proposed by Frachtenberg (1920:205) on the ground that the languages of these three groups had cognate forms for the numeral 'four'.

Swadesh supported the Mosan theory partly on the basis of structural similarities and partly on the basis of "300 sets of phonologically consistent presumable cognates, assembled while following procedures calculated to hold loan similarities down to a negligible percentage" (1953:42). The structural similarities (sixteen listed) were of the following type: extensive use of suffixes, minor role of prefixes, extensive use of stem reduplication, stem vowel changes, glottal stop insertion as a grammatical device, and the use of lexical suffixes.

Kuipers (1967:403) offers justifiable criticism to the effect that the sixteen structural similarities contain several items that are that the sixteen structural similarities contain several items that are as alternating within Mosan do not alternate within any member language. In the way of support for his view concerning the invalidity of the evidence offered for the Mosan hypothesis Kuipers offers parallels and comparisons between Indo-European and Salish on the ground that one might just as well claim a link between these two families.

#### 0.4. Cowichan Language Area

Originally, according to Barnett (1955:21) Cowichan speakers were located on Cowichan Bay and on the Cowichan River as far up as Duncan in a cluster of villages, which were situated at the bay head and around the rim of the Cowichan River. They are, in his notation, as follows: saməne, hwəlq!sələ, Leməlt, komieq!ən, xenəpsəm, q!mitcən, q!əlpələs and tsuheləm. The names which Barnett cites may be respectively designated in modern linguistic transcription as follows:

##### Cowichan Villages

s'aməne 'Somenos', χ'əlq'sələ 'Koksilah', ləmələc 'Clemclemutz Reserve', q'amiyiqən 'Comiaken', χ'inəpsəm 'Green Point, Kenupsum, Tzouhalem Mountain', k'aməcən 'Quamichan', χəlpələs 'Cowichan Bay' (χəp 'deep', -i- 'plural', -ələs 'eye, -ish' c.f. 'deepish') and čəwχiləm 'Tzouhalem'.

The representation of the last form as the name of a village conflicts with personal fieldwork in which čəwχiləm is elicited as the name of a warrior.

The Cowichan speech area is separated from that of the Nootka on the west coast of Vancouver Island by the insular mountains and from the other Halkomelem dialects spoken on the mainland by the Strait of Georgia. Hodge (1913:115) reported on the presence earlier of "Cowichan" people in the Fraser River valley as far east as Spuzzum. To the north and south Cowichan speakers have mingled with the members of other Salish Indian communities. They have done so sporadically in the Saanich speech area (south of Mill Bay), where Kava (1969) apparently found

speakers who knew Cowichan, Saanich, and English. Personal fieldwork with a putative speaker of Nanaimo reveals that this dialect differs from Cowichan only in certain vocabulary items. For example, Nanaimo has the word /<sup>3</sup>æce/ in addition to /sment/ for 'rock' and /sk<sup>w</sup>iš/ instead of /sne/ for 'name'.

#### 0.5. Speaker Population

The most recent source of information on speaker population is Chafe (1962). His figures on Amerindian languages were compiled by questioning individuals--not necessarily linguists--in contact with or belonging to a given language group via a questionnaire mailed to 500 people, half of whom responded. The number of speakers of a language was designated in terms of one of five general categories as follows: (a) 1-10 people, (b) 11-100, (c) 101-1000, (d) 1001-10,000 and (e) over 10,000. In order to assess the viability of a language, the ages of the speakers were indicated according to whether (a) a number were children, (b) most or all were over 20, or (c) most or all were over 50.

Chafe evaluated the questionnaires according to the nature and length of a respondent's contact with a given group giving greater weight, for example, to the opinion of a linguist working with it for three years than of an archaeologist working with it for three days. The following figures are given by him for Halkomelem (1962:165): "Halkomelem. 1 to 2 thousand. All ages. British Columbia. (Chehalis approx. 150, Chemainus approx. 300, Chilliwack approx. 150, Cowichan

approx. 500, Katzie approx. 50, Kwantlen approx. 15, Musqueam approx. 100, Nanaimo approx. 150, Sumas approx. 60, Tait approx. 250)." The results of personal inquiry suggest that most of the native Indian speakers in the Duncan and Nanaimo areas are over fifty, although one consultant, Abel Joe, who is over sixty years old, indicated that some younger Indians (over twenty years old) could converse to a degree in Cowichan, but could not deliver a speech in the dialect.

#### 0.6. Data Source, Consultants

The data in this dissertation, which were collected in the summer of 1970 and from May, 1975 to January, 1977, are derived from personal fieldnotes and other materials--Kava (1967-69) and, most recently, Hukari (1974-76). My most recent consultants are Abel Joe (Duncan), who provided most of the texts, Elwood Modeste (Duncan) and Stan James (Nanaimo). In 1970 my consultants were Ellen White (Nanaimo) and Russell Jones (Nanaimo).

All three of the 1975-77 consultants--Abel Joe, Elwood Modeste and Stan James--spoke Cowichan as their first language, having learned English later at school. Their parents and wives also spoke Cowichan. The three speakers, however, had different backgrounds. Abel Joe was born at Canoe Pass by the Fraser River near Ladner, where his father worked, but has lived in the Duncan area since he was three years old. The other two speakers were born on Vancouver Island. Elwood Modeste was born in the Duncan area. His father was also from Duncan, but his mother and grandmother on his mother's side came respectively from

Nanaimo and Sechelt. The third consultant, Stan James, who also speaks Saanich, was born in Nanaimo. His father was also born in Nanaimo, while his mother came from the Songhees Reserve in Esquimalt.

#### 0.7. Previous Scholarship

Early works on Cowichan, in which a non-standard transcription is used, consist of word lists by Tolmie and Dawson (1875) and Donckele (1882) and of a short list of reduplicated forms by Haeberlin (1918). More recent works, in which the standard linguistic transcription is used, include an article by Elmendorf and Suttles (1960) and theses by Kava (1969) and Jones (1976). The work by Elmendorf and Suttles offers a distinctive feature matrix for Cowichan articles albeit as a by-product of comparative research. The two theses, which have a descriptive orientation, have mainly to do with the phonology of Cowichan, although Jones (1976) provides morphological detail as a prelude to his morphophonemic analysis.

The most comprehensive contributions to the morphology and syntax of Cowichan are the articles written by Hukari (1976a, 1976b, 1977a, 1977b and 1978). These articles along with other Coast Salish grammars, namely, Snohomish (Hess 1967), Clallam (Thompson 1968), Sooke (Efrat 1969) and Squamish (Kuipers 1967), have provided a starting point for an analysis of Cowichan morphology and syntax. More recently, a grammar has been written on Chilliwack Halkomelem (Galloway 1977).

0.8. Phonology

Since treatises have already been written about the phonology of Cowichan (Kava 1969, Jones 1976 and Hukari 1977b), this work offers only a brief treatment. Recent evidence (Jones 1976 and Hukari 1977b) provides the basis for setting up the following system of contrastive segments for Cowichan:

Contrastive Segments in CowichanCONSONANTS<sup>3</sup>

Stops:	p	t <sup>h</sup>	t	c	č	k	k <sup>w</sup>	q	q <sup>w</sup>
	p̣	ṭ <sup>h</sup>	ṭ	c̣	č̣	ḳ	ḳ <sup>w</sup>	q̣	q̣ <sup>w</sup>
Fricatives:	θ	s	š	ʃ	x <sup>w</sup>	χ	χ <sup>w</sup>		
Sonorants:	m	n	y	l	w			h	
	ṃ	ṇ	ỵ	ḷ	ẉ			?	

VOWELS<sup>4</sup>

i	u
e	ə
a	

In this system glottalized resonants as opposed to glottalized stops are posited not on phonetic, but on morphophonemic grounds. In plural reduplication Jones (1976:7) has found that forms which are otherwise apparently irregular are not in fact irregular if analyzed as having glottalized resonants. One manifestation of plural inflection is CəC- reduplication e.g. smənt 'rock' ~ smənmənt 'rocks' and cələš 'hand' ~ cəlcələš 'hands'. The form which means 'grandparent' follows this pattern when inflected for plurality only if it is analyzed as

having an underlying glottalized resonant l̥ as opposed to a sequence of ʔl̥:

*sɪʔl̥ə 'grandparent'	*səlʔsɪʔl̥ə 'grandparents'
sɪl̥ə 'grandparent'	səlsɪl̥ə 'grandparents'

The phonetic realization of glottalized resonants is predictable. They appear preglottalized when they occur intervocalically after a primary stressed vowel, and post-glottalized elsewhere (Jones 1976:85):

<u>Glottalized Resonants</u>	<u>Realization</u>	<u>Gloss</u>
šqil̥él̥ə (6125c)	[šqil̥ʔél̥ə]	'place for preserved fish'
sqil̥əʔ (6125a)	[sqil̥ʔl̥əʔ]	'preserved fish'
št̥ <sup>o</sup> am̥wɪc (3859)	[št̥ <sup>o</sup> am̥ʔəwɪc]	'salmon backbone'
št̥ <sup>o</sup> əm̥x <sup>w</sup> nəc (4344)	[št̥ <sup>o</sup> əm̥ʔx <sup>w</sup> nəc]	'hip'
št̥ <sup>o</sup> am̥aq <sup>w</sup> (4345)	[št̥ <sup>o</sup> aʔmaq <sup>w</sup> ]	'skull'

Jones' system differs from Kava's not only in postulating glottalized resonants but also in grouping h and ʔ with the resonants. Chomsky and Halle (1968:302) provide a precedent for such a grouping on phonetic grounds, namely, articulatory configurations within the oral cavity. The analysis of Actual aspect (1.1.3.1.) provides morphophonemic grounds to the effect that forms which appear to contain separate allomorphs of the Actual morpheme do in fact in their underlying forms constitute examples of the productive reduplicative allomorph. For example, stems with an initial resonant, m, n, ɣ, l or w, that apparently take a hə- allomorph of the Actual morpheme represent regular Cə- reduplication except that the initial resonant is reduced to h. Thus the Actual form həŋq<sup>w</sup> 'falling asleep' of nəq<sup>w</sup> 'fall asleep'

is analyzed as having the underlying shape /nəŋ<sup>h</sup>w/, which represents  
Co- reduplication with resonant glottalization.

## /FOOTNOTES: INTRODUCTION

<sup>1</sup>There is a motivation for establishing a morphological distinction between nouns and verbs in Cowichan. A noun may be defined as an element which takes a possessive affix like /nə-/ 'my'. In this way a noun such as /léləm/ 'house', which may occur in the construction nəléləm 'my house', is differentiated from verbs like /x<sup>w</sup>čénəm/ 'run' and /k<sup>w</sup>ənət/ 'take it', which cannot take /nə-/ without a nominalizing prefix. On the other hand /léləm/ and /x<sup>w</sup>čénəm/ as uninflected predicators may also be grouped together in contrast with /k<sup>w</sup>ənət/, which has /-t/ 'transitive'.

<sup>2</sup>This classification represents a development of an earlier scheme devised by Swadesh (1950:163).

<sup>3</sup>The phonemes t<sup>θ</sup> and k are marginal. t<sup>θ</sup> appears only in deictics (1.3.) while k is limited to loanwords like /kəpú/ 'coat' and to kə (/k<sup>w</sup>ə/) in Mr. Stan James' speech.

<sup>4</sup>The phoneme sequences ii, ee, uu and aa, which may occur in Cowichan, are realized phonetically as [i:], [e:], [u:] and [a:] respectively.

## 1. MORPHOLOGY

The analysis of Cowichan word structure is presented in three parts. Inflection is treated in 1.1., derivation in 1.2., and in 1.3. deictic morphology is examined. The distinction between derivational affixes and inflectional ones is a standard one. In Cowichan as in other languages the inflectional affixes encompass the derivational ones--if any--and the stem in a word and in some cases exhibit suppletion. The deictic affixes are limited in their distribution to deictic elements and occur with neither derivational nor inflectional morphemes, which appear in non-deictic words. The syntactic affixes, which represent a fourth type of bound form, are conditioned by the syntactic structure of the clause they mark and are accordingly discussed in the syntax section. These syntactic affixes may inflect any element except an enclitic or a deictic.

Four types of elements are recognized in the morphology of Cowichan: bases, themes, stems and affixes. The last of these needs no further definition. A base is defined as the ultimate constituent of a morphological construction to which derivational and inflectional affixes are added. A theme is an element, simple or complex, which may occur as a free form. The term, stem, is used to refer to a base or a base plus affix combination.

### 1.1. Inflectional Affixes

There are three types of inflectional affixes in Cowichan:

the transitive suffixes (1.1.1.), the non-enclitic person marker endings (1.1.2.) and the aspectual morphemes (1.1.3.). The aspectual forms differ from the other two types of affixes in that they precede the stem to which they are bound, whether as prefixal reduplicative morphemes (1.1.3.1. to 1.1.3.5.) or as prefixes (1.1.3.6.). The transitivity and person marking morphemes, which are both suffixal in nature, belong to two different distribution classes. A transitivity suffix is attached directly to a stem, whereas a person marker ending may only inflect a theme containing a transitivity suffix of the transitive (1.1.1.2.) category.

#### 1.1.1. Transitivity Suffixes

-In Cowichan transitivity is determined by two types of elements: transitive suffixes and intransitive suffixes. This dichotomy is morphologically significant in that there are two person categories, subject and goal. Intransitive predicates--elements that are either uninflected or inflected with an intransitive suffix--take subject markers only whereas transitive predicates permit both types of markers. The goal markers are inflectional suffixes (1.1.2.) and are presented in the morphology section. The subject markers on the other hand are enclitics appearing in second position in a clause and will accordingly be analyzed in detail along with phrasal adjuncts in the syntax section (2.1.1.1.).

#### 1.1.1.1. Intransitive Suffixes

There are five intransitive suffixes: /-m/ 'intransitive', /-éls/ 'activity', /-təl/ 'reciprocal', /-θət/ 'reflexive' and /-námət/ 'attainment', the last of which may consist historically of two underlying morphemes, /-nəx<sup>w</sup>/ 'responsible' (1.1.1.2. Transitive Suffixes) and /-mət/ 'reflexive'. These suffixes are morphologically unified insofar as they do not take person-marking inflectional endings. They are also semantically unified insofar as a predicate inflected with one has a single referent, a subject, which may be either a control or noncontrol entity. By contrast, as will be observed later (1.1.1.2.), a transitive predicate has two referents--a control subject and a noncontrol object (c.f. Thompson, 1971: 280).

On the basis of coreference relations uninflected predicates and elements with /-m/ 'intransitive' form a single grouping. The semantic interpretation of predicates with /-m/ 'intransitive' does not consistently differ from that of predicates that are uninflected. Some uninflected elements and /-m/ inflected predicates take patient subjects (examples 1-2) whereas others take agent subjects (examples 3-4).

(1) hīləm cən (519) 'I fell down'

(2) yəq<sup>w</sup> cən (64) 'I was burned'

In sentence (1), which exemplifies an /-m/ inflected predicate and in sentence (2), which illustrates an uninflected form, the referent of the predicate indicated by the subject enclitic /cən/ 'I' is patient. In sentence (3), which illustrates an /-m/ inflected form, and in

sentence (4), which exemplifies an uninflected predicate, the referent of the predicate indicated by /cən/ 'I' is agent.

(3) kʷənəm cən (2636) 'I am taking it'

(4) ?əitən cən (79) 'I am eating it'

A possible means of semantically differentiating /-m/ 'intransitive' predicates from uninflected ones would be to consider lexical items that may occur either uninflected or /-m/ inflected. In lexical items like examples (5)-(6), a semantic distinction is evident.

(5a) təwt' e?əm (6015b) 'undress oneself'

(5b) təwt' e (6015a) 'undressed'

(6a) qpasəm (4208) 'assemble'

(6b) qpas (5626) 'gathered together'

The /-m/ predicates (5a, 6a) and the uninflected forms (5b, 6b) differ in that the former, but not the latter, denote an action performed at an entity's volition on him/herself.

The same type of semantic distinction found in examples (5)-(6) above, however, does not occur in all other lexical items. In (7)-(8) the referent of both the inflected and the uninflected forms is interpreted in the role of patient.

(7a) yeqəm (TEH) 'fall off'

(7b) yeq (5806a) 'fall down, topple'

(8a) yak'əm (5564) 'break down'

(8b) yak' (5852b) 'broken'

In still other lexical items the semantic distinction between the two types of elements is elusive:

(9a) q̄ewətəm (T5:50) 'tap' (for example, a drum)

(9b) q̄ewət (5815d) 'a drum'

(10a) ?itətəm (6001a) 'sleepy'

(10b) ?itət (6256b) 'sleep'

When asked to elaborate upon the meanings of (9a) and (10a) as compared with (9b) and (10b) respectively, native speakers of Cowichan did not recognize any correlation between them. Their response suggests that although (9a) and (9b) and (10a) and (10b) contain shared morphemes, they constitute four different lexical items, a view that is consistent with Aronoff's (1976:21) word-based approach to morphology.

The intransitive suffix /-éls/ 'activity' is built on to many bases that may also be inflected with /-t/ 'transitive' (1.1.1:2.) and is highly productive. In Kava's data (1969) it even inflects one English loanword pint 'paint' to form the element pintéls 'paint it', in which the stem vowel i is retained. Semantically, /-éls/ may denote an activity performed by an entity in order to fulfill a given purpose:

(11a) ɬq̄éls (6117b) 'donate it, put money down'

(11b) ɬeq̄ət (6190a) 'put it down'

(12a) pəx<sup>w</sup>əls (4867) 'spouting' (Actual)

(12b) pəx<sup>w</sup> (4866) 'spout, blow'

The referent of a predicate thus inflected with /-éls/ is interpreted as the controller behind the activity. For example, the enclitic /cən/ 'I' has the semantic status of an agent in a sentence of the type ni? cən ɬq̄éls ?ə k<sup>w</sup>ə tēlə (6190b) 'I put some money down'.

/-éls/ 'activity' has two variants, which indicate aspect. This topic will be discussed at length in section 1.1.3. Predicate Aspect.

At this juncture it would be appropriate to state that one variant -əls denotes Actual aspect and corresponds semantically to English '-ing' forms like 'singing', whereas the other variant -éls is used when such aspect is not involved. When éls appears, the stem vowel, if tense, is reduced to ə as in the following:

<u>Actual</u>	<u>Non-actual</u>
(13) Ǿáʔq <sup>w</sup> əls 'digging' (5805)	Ǿəyəq <sup>w</sup> éls 'dig'
(14) ʔémt <sup>θ</sup> əls 'picking berries' (5854)	ʔəmt <sup>θ</sup> éls 'pick berries'
(15) ʔék <sup>w</sup> xəls 'frying it' (5822)	ʔék <sup>w</sup> xéls 'fry it'

The intransitive morpheme /-təl/ 'reciprocal' indicates that two entities are interacting with each other by performing the same activity--in some contexts--on each other. As the following examples show, /-təl/ may inflect either a theme (16-17) or a stem that is inflectible with /-t/ 'transitive' (18):<sup>1</sup>

- (16a) ǔáʔ<sup>w</sup>təl (4527) 'meet each other'  
 (16b) ǔáʔ (5641a) 'together'  
 (17a) ʔíçətəl (5404a) 'creep up on each other'  
 (17b) ʔíç (TEH) 'creep, be short'  
 (18a) Ǿq<sup>w</sup>ástəl (3640) 'meet each other'  
 (18b) Ǿq<sup>w</sup>ást (5628) 'meet him'

The intransitive suffix /-Ǿət/ 'reflexive' expresses an action performed by an entity on him/her/itself. In addition to this basic meaning /-Ǿət/ has certain lexically governed connotations. When this morpheme is suffixed to predicators like /mǽq/, /yǽx<sup>w</sup>/ and /ʔǽnǽx<sup>w</sup>/ in examples (19)-(21), they express a deliberate action performed by an animate being:

- (19a) mǎqə<sup>o</sup>ət (4863) 'fill oneself with food'  
 (19b) mǎq (1523) 'full, satiated'  
 (20a) yǎx<sup>wə</sup>ət (4218) 'untie oneself'  
 (20b) yǎx<sup>w</sup> (5635b) 'untied'  
 (21a) ?ənəx<sup>w</sup>ət (5159) 'stop oneself (on purpose)'  
 (21b) ?ənəx<sup>w</sup> (4212) 'stop'

When /-əət/ 'reflexive' is attached to other lexical items an inchoative action performed by either an animate (22-23) or an inanimate (24-25) subject is expressed:

- (22a) x<sup>w</sup>əx<sup>w</sup>nítəm<sup>ə</sup>ət (5637) 'try to be a White man'  
 (22b) x<sup>w</sup>nítəm (2995) 'White man'  
 (23a) nás<sup>ə</sup>ət (6151a) 'gain weight'  
 (23b) nás (5751b) 'be fat'.  
 (24a) ɬéc<sup>ə</sup>ət (2254) 'become dark'  
 (24b) ɬec (2844) 'dark'  
 (25a) t<sup>ə</sup>q<sup>w</sup>əm<sup>ə</sup>ət (5919b) 'turn rotten'  
 (25b) t<sup>ə</sup>q<sup>w</sup>əm (5792) 'rot'

In two lexical items (26-27), which are uniquely inflectible with /-əət/ 'reflexive', this suffix may be regarded diachronically as having become frozen on to an erstwhile base:

- (26) ?á?ən<sup>ə</sup>ət (4673) 'groan'  
 (27) xǎsən<sup>ə</sup>ət (4735d) 'rain hard'

The two morphemes /-təl/ 'reciprocal' and /-əət/ 'reflexive' on the basis of a phonological rule may be viewed as constituting a subclass of intransitive suffixes. This rule is that if a lexical item contains e in the last syllable it is realized as a before /-təl/ and /-əət/ in some lexical items:

(28a) ləmləməʔtəl (5249c) 'kicking each other'

(28b) ləmēt (5249a) 'kick it'

(29a) yəwānəət (1242) 'move out in front'

(29b) yəwēn (4158) 'ahead, in the lead'

The intransitive suffix /-nāmət/ 'attainment', which is translatable by such phrases as 'get a chance to' and 'finally succeed' is characteristically attached only to uninflected themes (examples 30-33). This suffix, thus attached, has a uniform semantic interpretation.

(30a) fəwnāmət (T1:194) 'escape' (manage to run away)

(30b) fəw (T1:186) 'run away'

(31a) nəq<sup>w</sup>nāmət (4640) 'fall asleep'

(31b) nəq<sup>w</sup> (6256e) 'asleep'

(32a) yəq<sup>w</sup>nāmət (5441) 'finally get a fire going'

(32b) yəq<sup>w</sup> (3602) 'burned'

(33a) q<sup>w</sup>əlnāmət (5221) 'finally speak up'

(33b) q<sup>w</sup>al (5613a) 'speak'

In two forms that may be analyzed as being frozen (34-35), by contrast, the above-stated interpretation of /-nāmət/ is not apparent:

(34) təqnāmət (5008) 'hear from other people'

(35) θināmət (T5:78) 'rally, recover' (for example, after falling)

Although in the above analysis -nāmət is presented as a single morpheme, it is amenable to an alternative analysis into two morphemes: /-nəx<sup>w</sup>/ 'responsible' (1.1.1.2.) and /-mət/ 'reflexive', a putative frozen morpheme. There is a semantic motivation for it. The affix /-nāmət/ 'attainment' has the semantic signification of both /-nəx<sup>w</sup>/

'responsible' and /-θət/ 'reflexive' insofar as it denotes an activity not completely under the speaker's control that is performed on himself (example 31 above). However, no formal evidence has been found in support of this hypothesis.

#### 1.1.1.2. Transitive Suffixes

There are four transitive suffixes in Cowichan, namely, /-t/ 'transitive', /-stəx<sup>w</sup>/ 'causative', /-nəx<sup>w</sup>/ 'responsible' and /-nəs/ 'directional' and two transitive constituents, /-tɕ-t/ 'benefactive, transitive' and /-mɛʔ-t/ 'affective, transitive'. Since the status of the last three forms as transitive affixal constructions is problematical and demonstrable only in terms of their distribution before person-marking suffixes, they are discussed in section 1.1.2.

#### Person Marker Inflection.

The transitive suffix /-t/ 'transitive'<sup>2</sup> has two allomorphs: -t and -š, a nonproductive suppletive form. The distribution of these variants is partly morphologically conditioned and partly lexically determined. It is morphologically conditioned to the extent that some Cowichan speakers reject -š in favour of -t when the predicate is inflected for object. Otherwise the occurrence of these forms depends upon the individual lexical item. Most /-t/ inflected items take just one variant. However, two items (36-37) exhibit both variants:

(36a) h<sup>i</sup>qəš (5439) 'put it under' (for example, a table)

(36b) h<sup>i</sup>qət (5886a) 'put it under'

(37a) ?iwəš (4328) 'point at it' (/Riwəsš/)

(37b) ?iwəst (6014a) 'point at it'

For both variants /-t/ 'transitive' exhibits no special morphological properties in its occurrence with stems. The stems may be themes (examples 38-40) or bound forms (41-43):

(38a) ?ét<sup>θ</sup>ət (939) 'wipe it'

(38b) ?et<sup>θ</sup> (5660b) 'wiped'

(39a) hək<sup>w</sup>əš (5424b) 'use it'

(39b) hək<sup>w</sup> (5678d) 'used'

(40a) hək<sup>w</sup>ət (2229) 'remember it'

(40b) hək<sup>w</sup> (4818) 'remember (it)'

(41a) né?ət (5663) 'name it'

(41b) sne (4580) 'a name' (/s-/ 'absolute')

(42a) pək<sup>w</sup>ət (455) 'touch it'

(42b) pək<sup>w</sup>nək<sup>w</sup> (5105) 'feel it'

(43a) me?š (1972) 'take it off'

(43b) meš<sup>w</sup> (6466c) 'manage to take it off' (/mé?-nək<sup>w</sup>/)

The presence of /-t/ has not only morphological implications, but is also significant syntactically (2.1.1. Predication and Person Marking) and semantically. Whereas the subject of an uninflected theme may be either a patient (examples 38b-39b) or an agent (40b), the subject of a /-t/ inflected predicator is always an agent or experiencer (38a-40a).

Some stems in Cowichan are inflectible not only with a transitive suffix like /-t/ 'transitive' but also with an intransitive suffix. One such suffix is /-m/ 'intransitive' discussed in section 1.1.1.1. Intransitive Suffixes. A lexical item inflected with /-m/ does not have special semantic status, the subject referent being

either a patient (examples 44a-45a) or an agent (46a-47a):

(44a) yákw<sup>h</sup>ám (5832a) 'break (down)' (for example, a car)

(44b) yákw<sup>h</sup>ət (5045) 'break it'

(44c) yákw<sup>h</sup> (5832b) 'broken'

(45a) hílám (3585) 'fall off'

(45b) hilt (5111a) 'throw it off'

(46a) d<sup>w</sup>əlám (6031a) 'cook (it)'

(46b) d<sup>w</sup>ələt (6031d) 'cook it'

(46c) d<sup>w</sup>əl (6031c) 'cooked'

(47a) k<sup>w</sup>ənám (4765) 'take, have (it)'

(47b) k<sup>w</sup>ənət (4166) 'take, have it'

Certain lexical items are inflectible with both /-t/ 'transitive' and one of the intransitive suffixes, /-təl/ 'reciprocal' or /-ət/ 'reflexive' (examples 48-50). A lexical item of this type that is inflected with /-ət/ or /-təl/ takes a subject that is in the role of both agent and patient (48-49):

(48a) ɬíčəət (5147b) 'cut oneself (on purpose)'

(48b) ɬíčət (2362) 'cut it'

(48c) ɬíč (5147a) 'be cut'

(49a) číčəwátəl (5213c) 'helping each other'<sup>3</sup>

(49b) čəwət (5213a) 'help him'

The transitive suffix /-stəx<sup>w</sup>/ 'causative' has a wider privilege of occurrence than /-t/ 'transitive' since it may be suffixed to a theme containing an intransitive suffix (1.1.1.1.) as in (50)-(53) unlike /-t/ albeit with marginal acceptability:

(50a) k<sup>w</sup>íntəlstəx<sup>w</sup> (5591) 'fight against it' (e.g. a current)

(50b) k<sup>w</sup>íntəl (5568a) 'fight'

- (51a) ʔəyəmstəx<sup>w</sup> (5229) 'have someone make it'  
 (51b) ʔəyəm (T1:120) 'make (it)'  
 (52a) ʔək<sup>w</sup>ʔəls-stəx<sup>w</sup> (5822) 'make someone fry it'  
 (52b) ʔək<sup>w</sup>ʔəls (5822a) 'fry (it)'  
 (53a) ləx<sup>w</sup>əθətstəx<sup>w</sup> (5236b) 'cover someone with a blanket'  
 (53b) ləx<sup>w</sup>əθət (4788a) 'cover oneself'

The underlined morphemes in (50)-(53) are respectively the intransitive suffixes, /-təl/ 'reciprocal', /-m/ 'intransitive', /-əls/ 'activity' and /-əθət/ 'reflexive'.

The meaning of /-stəx<sup>w</sup>/ 'causative' varies with the lexical item. In some lexical items the causation consists of telling or persuading a patient entity to perform a given action (54-57):

- (54a) ʔiməšstəx<sup>w</sup> (5761a) 'take him for a walk, make him walk'  
 (54b) ʔiməš (4142a) 'walk'  
 (55a) ʔəšəlstəx<sup>w</sup> (5444c) 'have him paddle'  
 (55b) ʔəšəl (5544) 'to paddle'  
 (56a) təwəinəmstəx<sup>w</sup> (5944b) 'give the money to someone to buy groceries, buy groceries for somebody'  
 (56b) təwəinəm (5944a) 'buy groceries'  
 (57a) nəčəʔstəx<sup>w</sup> (5985a) 'tell someone to move or take just one'  
 (57b) nəčəʔ (147) 'one'

In other lexical items (58-60) /-stəx<sup>w</sup>/ 'causative' simply expresses the controller relationship which /-t/ 'transitive' denotes. In examples (58) and (60) the meaning of the lexical item is not a compositional function of its component morphemes. q<sup>w</sup>əlstəx<sup>w</sup> does not mean 'cause him to speak' and hiwələmstəx<sup>w</sup> does not mean 'cause him to play'. /-stəx<sup>w</sup>/ in these cases denotes a third person patient entity.

- (58a) ʔəwəstəx<sup>w</sup> (5668b) 'bring it'  
 (58b) ʔəwə (4124:1) 'come'  
 (59a) q<sup>w</sup>alstəx<sup>w</sup> (5590b) 'speak to him'  
 (59b) q<sup>w</sup>al (5613a) 'speak'  
 (60a) hiwáləməstəx<sup>w</sup> (4257) 'tease someone'  
 (60b) hiwáləmə (4821) 'to play'

Although /-stəx<sup>w</sup>/ 'causative' occurs most productively with uninflected themes, a few lexical items inflected with /-stəx<sup>w</sup>/ exist in which the stem is a bound form:

- (61a) cəstəx<sup>w</sup> (5030) 'do what/something to someone'  
 (61b) x<sup>w</sup>ce1 (TĤH) 'go where' (/x<sup>w</sup>-/ 'locative')  
 (62) ʔəx<sup>w</sup>lāʔəstəx<sup>w</sup> (3635b) 'do not care whether'

On the basis of the aforementioned data it might be concluded that lexical items that are inflectible with /-t/ 'transitive' may not be inflected with /-stəx<sup>w</sup>/ 'causative' and vice versa. There are two putative counterexamples to this observation:

- (63a) ~~mélə~~ méləstəx<sup>w</sup> (6003b) 'obtain a bait'  
 (63b) mélə (6003c) 'a bait'  
 (63c) mélət (6003c) 'put a bait on a hook'  
 (64a) ʔpíləstəx<sup>w</sup> (6331b) 'sink it'  
 (64b) ʔpíl (6338b) 'go underwater'  
 (64c) ʔpíl<sub>̄</sub> (6331a) 'sink it'

The generalization concerning /-stəx<sup>w</sup>/ and /-t/, however, may be maintained if examples (63) and (64) are viewed as consisting of two lexical items each although sharing a common morpheme in accordance with Aronoff's (1976) word-based theory. Examples (63a-b) and (64a-b) would each represent a single lexical item /mélə/ or /ʔpíl/ that is

inflectible with /-stəx<sup>w</sup>/. Examples (63c) and (64c) would in both cases represent another lexical item, one that is obligatorily inflected with /-t/ 'transitive'.

The morpheme /-stəx<sup>w</sup>/ 'causative' is realized in more than one alternant. Two of its allomorphs, -stəx<sup>w</sup> and -st- are morphologically conditioned. -stəx<sup>w</sup> appears word finally (example 66b) and before a syntactic suffix such as /-əs/ 'third transitive agent' (65a), which is discussed in the syntax section. The medial allomorph -st- appears before the person-marking inflectional suffixes (1.1.2.) as in examples (65b), (66a), (67a) and (68a):

(65a) həñəmətstəx<sup>w</sup>əs (T1:82) 'he brought it home'

(65b) həñəmətstəm (5139) 'it is brought home'

(65c) həñəmət (4643) 'he is back home'

(66a) həystéləm (4085) 'I am fired'

(66b) həystəx<sup>w</sup> (1136) 'fire him'

(66c) hay (2155) 'give up, quit'

(67a) q<sup>w</sup>əlstəwət (4698) 'he is spoken to'

(67b) q<sup>w</sup>əlstəx<sup>w</sup> (1059) 'speak to him'

(67c) q<sup>w</sup>al (5613a) 'speak'

(68a) calàʔstámšəs (4720b) 'he lends it to me'

(68b) caláʔ (4720c) 'lend'

In addition to the above-mentioned allomorphs /-stəx<sup>w</sup>/ has a phonologically conditioned one, -stéx<sup>w</sup>. This allomorph appears in free variation with -stəx<sup>w</sup> after CəC bases. In the following two examples the -stéx<sup>w</sup> variant is cited:

(69a) ʔəx<sup>w</sup>stéx<sup>w</sup> (KAVA) 'strengthen it'

(69b) ʔəx<sup>w</sup> (5826c) 'hard'

(70a) ǰəɪstəx<sup>w</sup> (T5:55) 'pity him'

(70b) ǰəɪ (6033b) 'hurt'

If the base has the phonological shape CVC, the vowel (V) being tense, the vowel is reduced to ə before /-stəx<sup>w</sup>/:

(71a) ləmstəx<sup>w</sup> (4729) 'show it'

(71b) ləmət (688) 'see it'

The transitive suffix /-nəx<sup>w</sup>/ 'responsible' resembles /-stəx<sup>w</sup>/ 'causative' in phonological shape and in terms of allomorphy, but differs from it in meaning. /-nəx<sup>w</sup>/ 'responsible' designates an entity that is responsible for an action, but does not have complete control over it. In some lexical items inflected with /-nəx<sup>w</sup>/ it is implied that the action is difficult to execute, for example, in həlɪnx<sup>w</sup> 'save someone's life' versus həlɪt 'rescue him' and həlɪ 'alive'. In most lexical items, however, for example, in ʔət<sup>ə</sup>nəx<sup>w</sup> 'wipe it (accidentally)' versus ʔət<sup>ə</sup>t 'wipe it', /-nəx<sup>w</sup>/ simply expresses an unintentional or accidental outcome.

The distribution of /-nəx<sup>w</sup>/ 'responsible' overlaps with that of /-t/ 'transitive' and /-stəx<sup>w</sup>/ 'causative'. Some lexical items are inflectible with /-nəx<sup>w</sup>/ 'responsible' and /-t/ 'transitive':

(72a) yək<sup>w</sup>nəx<sup>w</sup> (5097) 'break it' (accidentally)

(72b) yək<sup>w</sup>t (5045) 'break it'

(72c) yək<sup>w</sup>əm (5832a) 'break down'

(72d) yək<sup>w</sup> (5832b) 'broken'

(73a) ʔəmənəx<sup>w</sup> (3840) 'tread on it' (accidentally)

(73b) ʔimət (2674) 'step on it'

Other lexical items are inflectible with /-nəx<sup>w</sup>/ and /-stəx<sup>w</sup>/ but not with /-t/ (except for example 76):

- (74a) qólnəx<sup>w</sup> (TEH) 'become mad at him'  
 (74b) qólstəx<sup>w</sup> (112) 'hate him'  
 (74c) qəl (5833) 'bad'  
 (75a) ʔónəx<sup>w</sup>nəx<sup>w</sup> (5110a) 'stop it' (accidentally)  
 (75b) ʔónəx<sup>w</sup>stəx<sup>w</sup> (5924a) 'stop it' (on purpose)  
 (75c) ʔónəx<sup>w</sup> (4212) 'stop'  
 (76a) ləmnəx<sup>w</sup> (23) 'see it'  
 (76b) ləmstəx<sup>w</sup> (4729) 'show it'  
 (76c) ləmət (688) 'look at it'

Although /-nəx<sup>w</sup>/ 'responsible' occurs most productively in lexical items that are also inflectible with /-t/ 'transitive' or /-stəx<sup>w</sup>/ 'causative', there are a few words containing bound stems that are apparently uniquely inflectible with /-nəx<sup>w</sup>/ as follows:

- (77) x<sup>w</sup>iʔínx<sup>w</sup> (5183) 'bring it in'  
 (78) ʔópəx<sup>w</sup>nəx<sup>w</sup> (6296) 'blink'  
 (79) cəpnəx<sup>w</sup> (4353) 'close eyes tight'  
 (80) pətnəx<sup>w</sup> (5995a) 'recognize him'

Like the transitive suffix /-stəx<sup>w</sup>/ 'causative', /-nəx<sup>w</sup>/ 'responsible' exhibits both phonologically conditioned and morphologically conditioned allomorphy. One variant, the medial form -n-, is morphologically conditioned. It appears before person marking inflectional suffixes (1.1.2.) such as /-m/ 'third general passive':

- (81a) ʔəw<sup>2</sup>k<sup>w</sup>nəm (5122) 'it is consumed'  
 (81b) ʔəw<sup>2</sup>k<sup>w</sup> (5708) 'consumed'

Otherwise, if /-nəx<sup>w</sup>/ appears word finally or before a syntactic suffix such as /-əs/ 'third transitive agent', which is discussed in the syntax section, it is realized as -nəx<sup>w</sup>:

- (82a) ?i<sup>h</sup>nəx<sup>w</sup>əs (5715a) 'he scratched it'  
 (82b) ?i<sup>h</sup> (5522) 'scratched'

/-nəx<sup>w</sup>/ 'responsible' has one phonologically conditioned allomorph -néx<sup>w</sup>, which appears in free variation with -nəx<sup>w</sup> after CəC bases. In the following examples the -néx<sup>w</sup> variant is cited:

- (83a) sə<sup>h</sup>q<sup>h</sup>nəx<sup>w</sup> (5135) 'split it'  
 (83b) sə<sup>h</sup>q (4989) 'split'  
 (84a) k<sup>w</sup>ə<sup>h</sup>nəx<sup>w</sup> (6185) 'spill it'  
 (84b) k<sup>w</sup>ə<sup>h</sup> (4523) 'spill over'  
 (85a) təs<sup>h</sup>nəx<sup>w</sup> (5263) 'get close to it'  
 (85b) təs (1217) 'near'

If the base of a lexical item has the phonological shape CVC(C), the vowel being tense, the vowel may be reduced to ə before /-nəx<sup>w</sup>/:

- (86a) sə<sup>h</sup>l<sup>h</sup>q<sup>h</sup>nəx<sup>w</sup> (5112) 'brandish'  
 (86b) sə<sup>h</sup>l<sup>h</sup>q<sup>h</sup>t (4064) 'brandish'  
 (87a) p<sup>h</sup>ə<sup>h</sup>nəx<sup>w</sup> (5105) 'feel it'  
 (87b) p<sup>h</sup>ə<sup>h</sup>ət (455) 'feel it'  
 (88a) ?ə<sup>h</sup>k<sup>w</sup>nəx<sup>w</sup> (3631) 'lose it'  
 (88b) ?ə<sup>h</sup>k<sup>w</sup>ət (4171) 'throw it away'

### 1.1.2. Person Marker Inflection

Transitive predicates are not only marked by transitive endings like /-t/ 'transitive', /-stəx<sup>w</sup>/ 'causative' and /-nəx<sup>w</sup>/ 'responsible', but are further inflectible with two types of person markers called goal suffixes and passive suffixes. Although, as will

be seen later in the syntax section (2.1.1. Predication and Person Marking), the two types of forms are distinct in their syntactic interaction with other elements in a clause, they exhibit common semantic and morphological properties. They both have patient interpretation and, if the predicate is inflected with /-t/ 'transitive', they are both introduced by the -θ- allomorph of /-t/ in the non-third person singular.

#### 1.1.2.1. Goal Suffixes

The goal suffixes occur as follows:

##### Goal Suffixes

	<u>singular</u>	<u>plural</u>
1 <sup>st</sup>	-ámš 'me'	-álx <sup>w</sup> 'us'
2 <sup>nd</sup>	-ámə 'you'	-ále 'you'

Only first and second person pronominal goal forms are marked overtly. Further segmentation is possible into the following morphemes: -ám- 'goal singular' and -ál- 'goal plural' and three morphemes which denote person, namely, -š 'me', -x<sup>w</sup> 'us' and -ə 'you'. However, this increase in the number of morphemes recognized does not lead to any significant linguistic generalization about Cowichan goal suffixes.

The distribution of the goal forms after the three most productive transitive suffixes, /-t/ 'transitive', /-nəx<sup>w</sup>/ 'responsible' and /-stəx<sup>w</sup>/ 'causative', may be illustrated by means of the stem /lən-/ 'see', which happens to be inflectible with all three transitive morphemes as shown by the forms, lənət 'look at it', lənnəx<sup>w</sup> 'see it'

and ləmstəx<sup>w</sup> 'show it'.

/-t/ 'transitive'

ləməθamš 'look at me'                      ləmətálx<sup>w</sup> 'look at us'  
 ləməθamə 'look at you(sg)'                      ləmətálə 'look at you(pl)'  
 ləmət 'look at her, him, it, them'

/-nəx<sup>w</sup>/ 'responsible'

ləmnámš 'see me!'                      ləmnálx<sup>w</sup> 'see us'  
 ləmnámə 'see you(sg)''                      ləmnálə 'see you(pl)'  
 ləmnəx<sup>w</sup> 'see him, her, it, them'

/-stəx<sup>w</sup>/ 'causative'

ləmstámš 'show me!'                      ləmstálx<sup>w</sup> 'show us'  
 ləmstámə 'show you(sg)''                      ləmstálə 'show you(pl)'  
 ləmstəx<sup>w</sup> 'show it, her, him, them'

What appears to be on the surface the θ allomorph of /-t/ 'transitive' may in fact be analyzed into two morphemes. Following Hukari's (1976b:17) approach θ may be construed as /-t/ 'transitive' and /-s/, which may represent an old first person singular object which has lost its status. This view is supported by the fact that -θ may occur as a word final suffix with patient interpretation:

(89a) həlíθ (T5:73) 'save me!'

(89b) həlít (4146) 'save him!'

(89c) həlí (4605) 'alive'

-θ may also appear optionally as a second person form, when the subject is first person:

(90a) čewəθ cən (TEH) 'I'll help you!'

(90b) čewət (5213a) 'help him'

Apparently this second person interpretation applies only if the subject enclitic (/cən/ 'I' in 90a) follows the inflected predicate.

As well as inflecting predicators containing /-t/ 'transitive', /-nəx<sup>w</sup>/ 'responsible' and /-stəx<sup>w</sup>/ 'causative', the goal suffixes may also inflect lexical items containing one of the constitutes, /-ɬc-t/ 'benefactive, transitive' and /-mé<sup>?</sup>-t/ 'affective, transitive'. These constitutes have a distinctive distribution. /-mé<sup>?</sup>-t/, which has two allomorphs -mé<sup>?</sup>t and -mət in free variation, may be suffixed either to stems that are inflectible with /-stəx<sup>w</sup>/ 'causative' (91-92) or to an otherwise uninflectible base (93):

- (91a) sɪ<sup>?</sup>si<sup>?</sup>mé<sup>?</sup>t (4761) 'afraid of it'  
 (91b) sɪ<sup>?</sup>si<sup>?</sup>stəx<sup>w</sup> (6022c) 'frighten him'  
 (91c) sɪ<sup>?</sup>si<sup>?</sup> (5074) 'afraid'  
 (92a) q<sup>w</sup>əlmət (5824b) 'bawl him out'  
 (92b) q<sup>w</sup>əlstəx<sup>w</sup> (5590b) 'speak to him'  
 (92c) q<sup>w</sup>al (5613a) 'speak'  
 (93a) qəlmé<sup>?</sup>t (5971c) 'believe it'  
 (93b) qel (5816a) 'believe, be sure'

/-ɬc-t/ may be attached to stems that are inflectible with /-t/ 'transitive':

- (94a) θəy<sup>?</sup>ɬct (5981b) 'fix it for him'  
 (94b) θəy<sup>?</sup>t (4121:6) 'fix it'  
 (95a) xələɬcət (6148b) 'write it for somebody'  
 (95b) xələt (5178) 'write it'

Putatively in examples (91)-(95) above /-ɬc-t/ and /-mé<sup>?</sup>-t/ are analyzable as single morphemes. The goal suffix environment, however, provides counterevidence against this hypothesis. Whereas /-ɬc-t/ and /-mé<sup>?</sup>-t/ are realized as -ɬc-t and -mé<sup>?</sup>-t word finally, they are realized as -ɬc-θ- and -mé<sup>?</sup>-θ- before the goal suffixes:

- (96a) x̣wílasməǝámṣ̌ (6066c) 'watch over me'  
 (96b) x̣wílás (6066a) 'watch for something'  
 (97a) ǝəlməǝámə cən (5908b) 'I believe you'  
 (97b) ǝəlméʔt (5971c) 'believe him'  
 (98a) čəḳẉx̣əɪcǝámṣ̌ (6407b) 'fry it for me'  
 (98b) sčəḳẉx̣ (6407a) 'fried'

This type of allomorphy is the same as that exhibited by /-t/ 'transitive' (1.1.1.2.).

On the basis of allomorphy the constitutes may be analyzed into three morphemes, namely, /-t/ 'transitive', /-méʔ-/ 'affective, sentient', which has an unstressed variant -mə-, and /-ɪc-/ 'benefactive', the latter two affixes modifying the former one. Meanings may be ascribed to /-ɪc-/ 'benefactive' and /-méʔ-/ 'affective, sentient'. /-méʔ-/ denotes transitivity which relates to the goal entity through the speaker's feelings or perceptions but which does not physically affect the goal entity. /-ɪc-/ indicates that a given action is performed on behalf of someone and alters the semantic configuration of a sentence. Characteristically, a goal suffix like /-ámṣ̌/ 'me' is a patient, but in example (99) containing /-ɪc-/ it has benefactive interpretation, whereas the patient role is assumed by the adjunct introduced by /ʔə/ 'oblique' (elements 7-9).

(99) niʔ ləḳẉx̣əɪcǝámṣ̌əs ʔə ṭə sčəšt (6019b)

1 2 3 4 5 6 7 8 9

'He broke the stick for me'

1 nonproximal	4 /-t/ 'transitive'	7 oblique
2 'break'	5 'me'	8 article
3 benefactive	6 third agent	9 'stick'

### 1.1.2.2. Passive Suffixes

The passive markers express the same semantic relationship--that of patient--as the goal person markers regardless of the interpretation of the base. There are two sets of passive suffixes--the general passive and the subordinate passive. As will be seen in the syntax section, the two paradigms are syntactically distinct, since a suffix of the first set may occur in both a main clause and a subordinate one, while an element of the latter paradigm appears only in subordinate clauses.

The general and subordinate passive suffixes are formally and semantically alike insofar as they enter into a semantic structure of the type 'we are being chased'. Although some uninflected themes may have this type of interpretation, they are still semantically distinct from elements with passive endings. An element thus inflected such as  $yəq^w\theta\acute{e}l\acute{a}m$  'I am burned (by someone)' usually implies human agency unlike the uninflected form  $/yəq^w/$  'burned (by it)'.<sup>4</sup>

The passive paradigms, in both of which the first and second plural forms are homophonous with each other, are as follows:

#### General Passive

	<u>singular</u>	<u>plural</u>
1 <sup>st</sup>	$-\acute{e}l\acute{a}m$ 'I'	$-\acute{a}l\acute{a}m$ 'we'
2 <sup>nd</sup>	$-\acute{a}m^5$ 'you'	$-\acute{a}l\acute{a}m$ 'you'
3 <sup>rd</sup>	$-m$ 'she, he, it, they'	

Subordinate Passive

<u>singular</u>	<u>plural</u>
1 <sup>st</sup> -élt 'I'	-ált 'we'
2 <sup>nd</sup> -ámət 'you'	-ált 'you'
3 <sup>rd</sup>	-éwət 'he, she, it, they'

As in the case of the goal suffixes (1.1.2.1.) the distribution of the passive forms after /-t/ 'transitive', /-nəx<sup>w</sup>/ 'responsible' and /-stəx<sup>w</sup>/ 'causative' may be illustrated by means of the base /lém-/ 'see'. As before /s/ appears in the singular forms and combines with /-t/ to form @ (Hukari 1976b:17).

/-t/ 'transitive'

lém@éləm 'I am seen'	lémətáləm 'we are seen'
lém@ám 'you(sg) are seen'	lémətáləm 'you(pl) are seen'
	lémətəm 'he, she, it, they are seen'
lém@élt 'I am seen'	lémətált 'we are seen'
lém@ámət 'you(sg) are seen'	lémətált 'you(pl) are seen'
	lémétéwət 'she, it, he, they are seen'

/-nəx<sup>w</sup>/ 'responsible'

ləmnéləm 'I am seen'	ləmnáləm 'we are seen'
ləmnám 'you(sg) are seen'	ləmnáləm 'you(pl) are seen'
	ləmnəm 'she, he, it, they are seen'
ləmnélt 'I am seen'	ləmnált 'we are seen'
ləmnámət 'you(sg) are seen'	ləmnált 'you(pl) are seen'
	ləmnéwət 'he, she, it, they are seen'

/-stəx<sup>w</sup>/ 'causative'

ləmstéləm 'I am shown'	ləmstáləm 'we are shown'
ləmstám 'you(sg) are shown'	ləmstáləm 'you(pl) are shown'
	ləmstəm 'it, he, she, they are shown'

lǝmstélt 'I am shown'	lǝmstált 'we are shown'
lǝmstámət 'you(sg) are shown'	lǝmstáləm 'you(pl) are shown'
lǝmstéwət 'he, she, it, they are shown'	

The passive suffixes, as well as inflecting predicators with /-t/ 'transitive', /-nəx<sup>w</sup>/ 'responsible' and /-stəx<sup>w</sup>/ 'causative', may also be suffixed to two lexical items, /nəm/ 'go' and /ʔéwə/ 'come', inflected with the non-productive suffix /-nəs/ 'directional', which denotes an intentional movement by the speaker. The morphological status of this morpheme is not immediately apparent in its word-final distribution:

- (100a) ʔéwənəs (5894) 'come toward'
- (100b) ʔéwə (285) 'come'
- (101a) nǝmnəs (6096d) 'go toward'
- (101b) nǝm (67) 'go'

Before a person marking suffix the morphological status of /-nəs/ 'directional' is more clearly revealed. In such an environment /-nəs/ exhibits what Bloomfield (1933:265) calls class cleavage. This morpheme may either occur directly before a person marking suffix or it may be followed by an intervening /-t/ (-t- allomorph). In the former case it corresponds formally to a transitive suffix. This distribution of /-nəs/ is illustrated in example (102), in which this form directly precedes a passive suffix /-éləm/ 'I':<sup>6</sup>

- (102) ʔéwənəséləm (6096a) 'they came over to me'

Where /-nəs/ is followed by /-t/ 'transitive' as in example (103), in which a goal suffix /-ámš/ 'me' and a passive ending /-ám/ 'you(sg)' is shown, its distribution corresponds to that of the morphemes /-méʔ-/ 'affective, sentient' and /-íc-/ 'benefactive':

(103a) ?əwənasθámš (6096b) 'come after me'

(103b) nəmənəsθámš (6096c) 'someone is coming after you'

It was indicated above that there are two types of passive markers: general markers and subordinate ones. An alternative approach is also possible in which the passive endings are analyzed into a single set of person markers as follows:

		<u>Passive</u>	
		<u>singular</u>	<u>plural</u>
1 <sup>st</sup>	-él-	'I'	-ál- 'we'
2 <sup>nd</sup>	-ám-	'you'	-ál- 'you'

In this approach elements of the above paradigm would form constituents like /-éləm/ 'I' (general passive) and /-élt/ 'I' (subordinate passive) modifying the suffixes /-m/ 'general passive' and /-t/ 'subordinate passive'. An apparent counterexample to this type of analysis, the form -ám 'you(sg)' (general passive), might be explained as deriving from an underlying form /-áməm/ with loss on the surface of intervocalic m, which is preserved in the subordinate passive.

Whether or not the above-indicated analysis is adopted, /-éwət/ 'third subordinate passive' is morphologically idiosyncratic. It has both a non-actual variant (1.1.3.1.) -éwət and an Actual variant -éwət corresponding in interpretation to the underlined elements in a semantic structure of the type 'I am standing'.

Two possible analyses for /-éwət/ 'subordinate passive' may be provided. Putatively, /-éwət/ is not a third person form but a

subordinate passive marker which is realized as -t in non-third person constitutes and as -éwət in the third person. Alternatively, /-éwət/ may be analyzed into two morphemes, namely, /-éw-/ , a passive connective that occurs only in third person forms, and /-t/. It is possible that this latter form is in fact identical to the non-productive morpheme /-t/ 'stative', which appears in lexical items inflected with the prefix /s-/ 'static' (1.1.3.6.) and the resultative morpheme CV?- as follows:

(104a) swíwəlt (TEH) 'appeared' ([swí?wəlt])

(104b) wil (6209a) 'appear'

(105a) sk<sup>w</sup>é?k<sup>w</sup>əl<sup>t</sup> (5988a) 'hidden'

(105b) sk<sup>w</sup>é?k<sup>w</sup>əl (5988b) 'in hiding'

(105c) k<sup>w</sup>e1 (4460) 'hide'

In the above analysis it was assumed that a passive suffix is an I.C. partner to a theme inflected with a transitive suffix and that a morphological construction is terminated by a passive suffix. There is, however, a bound form /-stənáhət/ 'pretend' with two allomorphs -stənáhət and -stənmət in free variation, which may follow a passive suffix as in example (106), where /-stənáhət/ follows the first person general passive suffix /-élom/ 'I'.

(106) t<sup>0</sup>iq<sup>w</sup>osé<sup>0</sup>é<sup>0</sup>lomstənáhət (5898c)

1    2 34    5

'He pretended to hit me in the face'

1 'punch'

4 'I' (general passive)

2 'face'

5 'pretend'

3 /-t/ 'transitive'

/-stənáhət/ 'pretend' is not limited in its distribution to

occurring after a passive suffix but follows and modifies any predicate whether uninflected (examples 107-108) or inflected (example 109 containing /s-/ 'static' and the resultative morpheme and examples 110 and 111):

(107a) sməyəθstənáhət (5954) 'pretend to be a deer'

(107b) sməyəθ (3564) 'deer'

(108a) ?ítətstənáhət (6001b) 'pretend to be asleep'

(108b) ?ítət (6001a) 'asleep'

(109a) sǎǎqístənáhət (4568) 'pretend to be dead'

(109b) sǎǎqi (4138) 'dead'

(110a) pásəstənáhət (5448) 'pretend to hit him'

(110b) pásət (709) 'hit him'

(110c) pas (5705) 'hit (by a thrown object)'

(111a) mē?šstənáhət (6004a) 'pretend to take it off'

(111b) me?š (6004b) 'take it off'

On the basis of phonemic shape /-stənáhət/ 'pretend' might be analyzed into two morphemes, /-stəx<sup>w</sup>/ 'causative' and /-náhət/ 'attainment' (1.1.1.1. Intransitive Suffixes). However, although these two morphemes may occur historically, the synchronic distribution of the putatively identified suffix /-stəx<sup>w</sup>/ in examples (110)-(111) after another transitive suffix /-t/ 'transitive' would be idiosyncratic.

In addition to occurring productively with inflected or with uninflected lexical items, /-stənáhət/ 'pretend' (-stémət variant) apparently appears in two lexical items with a reflexive interpretation (examples 112-13), in which the meaning 'pretend' is not evident.

(112a) qəlstómət (5997) 'refuse, don't want to'

(112b) qəl (5833) 'bad'

(113a) xəstómət (5500b) 'feel sorry for oneself'

(113b) xəɬ (2653) 'hurt, sore'

It is also possible that (112a) and (113a) are different lexical items from (112b) and (113b) and that -stómət represents a different morpheme from /-stónámət/ 'pretend'.

### 1.1.3. Predicator Aspect

In addition to being inflected with the transitivity and person-marking endings, which are suffixal, Cowichan predicators may be inflected with the aspectual morphemes, which, with the exception of -é- 'stative', are essentially prefixal in nature. These morphemes may be divided into two main categories: reduplicative forms and prefixes. The prefixes are morphologically simple to the extent that they are each realized in only one alternant. They will be analyzed later in 1.1.3.6. Aspectual Prefixes. The morphemes that are called reduplicative, by contrast, are in general morphologically complex. They each have more than one alternant, at least one of which is reduplicative in nature. There are two basic types of prefixal reduplication in Cowichan. One is of the CV- type; the other is of the CVC- type.<sup>7</sup>

Six reduplicative morphemes have been identified in Cowichan. They are as follows: Actual, plural, diminutive, resultative, Potential and Augmentative. The Actual morpheme is realized in two types of allomorphs, one type involving prefixal reduplication, the other involving stem vowel alternation. The plural morpheme is expressed by

reduplication in some lexical items and by an -i- infix in other items. The diminutive and resultative morphemes are expressed by reduplication, but are also realized in an i or e allomorph. The purely reduplicative Potential and Augmentative morphemes, since they are apparently not very productive, are included in section 1.1.3.1. Actual Aspect, in which their morphological shape is compared to that of the Actual morpheme. The discussion of the exceptional morpheme -é- 'stative' follows that of the Actual morpheme, which it resembles in semantic interpretation and in respect to one variant.

#### 1.1.3.1. Actual

Actual aspect may be appropriately given Thompson and Thompson's definition (1971:273), which they apply to Clallam: "...a situation or activity viewed as in progress at a particular time or as incomplete; the simplest translation device is to use the English -ing form wherever possible." Since the Actual aspect has already been extensively analyzed (Jones 1976 and Hukari 1978), the aim of this section is essentially to provide a summary reformulation of it.

Actual (imperfective) aspect may be signalled by CV-reduplication, stress shift, vowel tensing and resyllabification, the formal expression of it being partly phonologically conditioned by the shape of the stem and partly lexically governed. Uninflected bases with the surface shape CəC, as exemplified by səq (5606b) 'be split' apparently undergo CV-reduplication, in which stress falls on the stem, while the reduplicative element has unstressed ə:

(114a) səsə́q̣ (5606a) 'splitting' (Actual)

(114b) sə́q̣ (5606b) 'split'

(115a) tətə́q̣ʷ (TEH) 'breaking' (Actual)

(115b) tə́q̣ʷ (6327) 'break'

However, the identification of bases thus inflected is problematical, since the reduplicative allomorph of the Actual morpheme presented here has the same canonical shape as the Potential morpheme (examples 116-17) and the resultative morpheme (1.1.3.5. Resultative)--in fact (114a) above is homophonous with (116a) below.

#### Potential

(116a) səsə́q̣ (6511b) 'easy to tear' (Potential)

(116b) sə́q̣ (5606b) 'torn'

(117a) tətə́q̣ʷ (6508c) 'liable to break' (Potential)

(117b) tətə́q̣ʷət (6508d) 'breaking it' (Actual)

(117c) tətə́q̣ʷət (6508e) 'break it'

When the CəC base is inflected with a transitivity suffix, it appears in the shape CCV. The realization of the vowel (V) is lexically governed. Some bases, which may be called type 1 bases, occur with a lax vowel ə after the second consonant as in the following:<sup>8</sup>

#### Type 1 Bases

(118a) pət̚ (2069) 'sober'

(118b) pət̚ət̚ (4000) 'sober up'

(119a) ət̚ət̚ (6243a) 'push it'

(119b) ət̚ət̚ (5573) 'pushed'

(120) tət̚ət̚ (6468b) 'wet it'

Other bases, which may be labelled type 2 forms, take a tense vowel (e or a depending upon the individual lexical item) as in the following:

Type 2 Bases

- (121a) s<sup>o</sup>qet (589) 'split it'  
 (121b) s<sup>o</sup>q<sup>o</sup> (5606b) 'split'  
 (122) t<sup>o</sup>x<sup>w</sup>at (5737b) 'wash it'

The CCV base when inflected with the Actual morpheme does not reduplicate, but resyllabifies, that is, the CCV shape becomes CVC, the vowel being stressed. The quality of the vowel (Jones 1976) is predictable. a occurs if the second consonant is rounded:

Type 1

- (123) t<sup>o</sup>aq<sup>w</sup>t (6468c) 'wetting it'      t<sup>o</sup>q<sup>w</sup>et (6468b) 'wet it'  
 (124) t<sup>o</sup>aq<sup>w</sup>t (6480a) 'wrapping it'      t<sup>o</sup>q<sup>w</sup>et (5987b) 'wrap it'

Type 2

- (125) t<sup>o</sup>ak<sup>w</sup>t (6582a) 'caulking it'      t<sup>o</sup>k<sup>w</sup>at (6582b) 'caulk it'  
 (126) t<sup>o</sup>a<sup>x</sup>w<sup>t</sup> (5597) 'washing it'      t<sup>o</sup>x<sup>w</sup>at (5737b) 'wash it'  
 (127) t<sup>o</sup>aq<sup>w</sup>t (6248a) 'severing it'      t<sup>o</sup>q<sup>w</sup>at (6248b) 'sever it'

e appears elsewhere as the following examples show:

Type 1

- (128) t<sup>o</sup>eq<sup>o</sup>m (6240a) 'dripping'      t<sup>o</sup>q<sup>o</sup>m (6240b) 'drip'  
 (129) 0e<sup>x</sup>t (6243b) 'pushing it'      0<sup>x</sup>t (6243a) 'push it'  
 (130) q<sup>o</sup>q<sup>o</sup>t (6238a) 'gathering it'      q<sup>o</sup>q<sup>o</sup>t (5634c) 'gather it'  
 (131) 0e<sup>x</sup>m (5583b) 'jumping'      0<sup>x</sup>m (5583a) 'jump'

Type 2

- (132) k<sup>w</sup>et (6111b) 'pouring it out'      k<sup>w</sup>et (6111a) 'pour it out'  
 (133) sc<sup>o</sup>t (2038) 'splitting it'      s<sup>o</sup>qet (589) 'split it'

Although the type 2 forms (examples 125-27 and 132-33 above) seem to

exhibit metathesis, the Actual vowel still follows the aforementioned distribution pattern, which holds even in type 1 forms, where the vowel of the non-actual stem is ə.

The type 1 and 2 lexical-items exhibit an Augmentative reduplicative morpheme consisting of CV?C- reduplication and i after the base. This morpheme indicates that an entity is performing an action thoroughly or intensively:

Augmentative

- (134a)  $\check{x}\acute{e}?\check{x}c\acute{i}t$  (6483) 'scrutinizing' (Augmentative)  
 (134b)  $\check{x}ect$  (6483) 'figuring it out'  
 (134c)  $\check{x}c\acute{o}t$  (6483) 'figure it out'  
 (135)  $\check{x}e?\check{x}\acute{o}i\acute{i}t\acute{a}l$  (5999b) 'competing really hard to outdo someone'

CVCC bases like type 1 CCV bases show an alternation between ə in the aspectually unmarked form and either e or a in the Actual. The tense vowel is not predictable. In some cases the vowel is a, when the third consonant is a rounded back velar (examples 136-37), and e elsewhere (138-41):

CVCC Bases

<u>Actual</u>	<u>Non-actual</u>
(136) $\Theta\acute{a}yq^w t$ (TEI)	$\Theta\acute{a}yq^w t$ (5423) 'dig it' <sup>9</sup>
(137) $\acute{c}at\acute{q}^w t$ (6196a) <sup>10</sup>	$\acute{c}at\acute{q}^w t$ (6196b) 'pulverize it'
(138) $q^w\acute{o}y\check{x}t$ (5167)	$q^w\acute{o}y\check{x}t$ (2729) 'move it'
(139) $\acute{c}e\acute{y}x^w t$ (815)	$\acute{c}e\acute{y}x^w t$ (637) 'dry it'
(140) $y\acute{e}h\acute{a}m$ (6152b)	$y\acute{e}n\acute{a}m$ (6152a) 'laugh'
(141) $t\acute{e}y\acute{a}l$ (6251b)	$t\acute{e}y\acute{a}l$ (6251a) 'go upriver'

However, as example (142) shows, other forms do not conform to this rule:<sup>11</sup>

(142) sɛwq̄wət (6215b)                      sɛwq̄wət (6215a) 'look for it'

CVC bases exhibit CV- reduplication in the Actual. Generally the reduplicative element is stressed and the stem vowel is reduced:

CVC Bases

(143) ɬiɬəcət (5179)	ɬiɬət (2362) 'cut it'
(144) kʷikʷəntəl (5568c)	kʷintəl (5568a) 'fight'
(145) ɬiɬəmət (5798b)	ɬimət (5798a) 'lick it'
(146) yéyəq̄ (5806b)	yəq̄ (5806a) 'topple down'
(147) wéwəŋš (5724b)	wəŋš (5724a) 'throw it'

Bases with an initial syllable containing a tense vowel and ?, the initial consonant not being a voiced sonorant, maintain stress on the base. The reduplicative element has unstressed ə:<sup>12</sup>

Non-sonorant, Tense Vowel, Glottal Stop

(148) səséʔt (5730c)	seʔt (5738a) 'lift it'
(149) kʷəkʷiʔ (5749c)	kʷiʔ (5749a) 'climb'
(150) čəčéʔt (6253b)	čéʔt (6253a) 'place it upon'
(151) tətéʔt (Jones)	téʔt (6254b) 'try it'
(152) t̚ət̚éʔt (Jones)	t̚éʔt (6255a) 'chew it'

Where the CVC base contains a sonorant (whether it is voiced or voiceless ? or h), there is further morphological complexity. A reduplicated voiced sonorant is devoiced to h<sup>13</sup> and stress falls on the reduplicative syllable when the base in addition to the sonorant

contains either a tense vowel followed by ʔ (examples 153-55) or ə followed by a consonant (examples 156-60):

Voiced Sonorant, Tense Vowel, Glottal Stop

- |   |                                |
|---|--------------------------------|
| (153) h <sup>h</sup> ɛl <sup>h</sup> əš (6467b) | leʔš (3949) 'store it'         |
| (154) h <sup>h</sup> ɛm <sup>h</sup> əš (6466b) | meʔš (1972) 'take it off'      |
| (155) h <sup>h</sup> ɛn <sup>h</sup> əm (974)   | neɪm (4595) 'go' <sup>14</sup> |

Voiced Sonorant, Shwa, Consonant

- |  |  |
|--|--|
| (156) h <sup>h</sup> ɛnq <sup>h</sup> əm (6236e) | nəqəm (3577a) 'dive'                     |
| (157) h <sup>h</sup> ɛnq <sup>w</sup> (6256f)    | nəq <sup>w</sup> (6256e) 'fall asleep'   |
| (158) h <sup>h</sup> ɛl <sup>h</sup> ɛt (184)    | lɛč <sup>h</sup> ət (6113c) 'fill it in' |
| (159) h <sup>h</sup> ɛyq <sup>w</sup> (3671)     | yəq <sup>w</sup> (6205) 'burn'           |
| (160) h <sup>h</sup> ɛwq <sup>w</sup> (4573)     | wəq <sup>w</sup> (4808) 'go downriver'   |

CəCX bases in which the first consonant is ʔ or h show CV-reduplication, the stem h being reduced to ʔ, and an alternation between ə in the aspectually unmarked form and a tense vowel (i or a) in the Actual. These types of bases are illustrated in (161)-(65) as follows:

CəCX Bases

- |  |  |
|--|--|
| (161) ʔ <sup>h</sup> əʔm <sup>h</sup> ət (6187b)               | ʔ <sup>h</sup> əmət (6187a) 'sit (up)'           |
| (162) ʔ <sup>h</sup> əʔn <sup>h</sup> nəx <sup>w</sup> (6188b) | ʔ <sup>h</sup> ənnəx <sup>w</sup> (6188a) 'stop' |
| (163) ʔ <sup>h</sup> ɛʔšəl (4394)                              | ʔ <sup>h</sup> əšəl (5544a) 'to paddle'          |
| (164) ʔ <sup>h</sup> ɛʔtən (3522)                              | ʔ <sup>h</sup> ətən (5459) 'eat'                 |
| (165) hiʔw <sup>h</sup> ələm (5689b)                           | həw <sup>h</sup> ələm (4821) 'play'              |

Except for i in the Actual forms of some bases containing an obstruent as a second consonant (examples 163-64) the tense vowel is not predictable.

Not all lexical items follow the above-stated rules of allomorphy. The Actual forms exhibited in examples (166)-(68) are formed irregularly--if in fact they are Actual forms:

- |                         |                        |
|-------------------------|------------------------|
| (166) ʃʷaŋčənəm (322)   | ʃʷčənəm (166) 'run'    |
| (167) hɛʔkʷələš (5982b) | kʷələš (5982a) 'shoot' |
| (168) šɪʔiškʷam (3533)  | škʷam (5823a) 'swim'   |

#### 1.1.3.2. Stative

/-é-/ 'stative' occurs with a limited number of lexical items. It appears after the base but before a transitivity suffix such as /-t/ 'transitive' (1.1.1.2.) or /-m/ 'intransitive' (1.1.1.1.). The stative morpheme is mostly realized in -é- (examples 169-70), although in one lexical item it is realized in resonant glottalization (example 171):

- (169a) kʷə́nɛ́m (5549) 'holding'  
 (169b) kʷənəm (4765) 'take'
- (170a) čə́mɛ́t (5968c) 'be (in the state of) carrying it'  
 (170b) čəmɛt (5968b) 'carry it on one's back'
- (171a) ʃʷíleš (6202b) 'standing' (result of ʃʷíleš)  
 (171b) ʃʷíleš (Kava) 'standing up' (Actual)  
 (171c) ʃʷíleš (6202a) 'stand up'

Like /s-/ 'static' (1.1.3.6. Aspectual Prefixes) /-é-/ 'stative' indicates that a state of affairs has arisen, but unlike /s-/ it suggests that an entity is directly involved in an action, but not acted upon.

1.1.3.3. Plural

The plural morpheme expresses marked plurality, either many participants or an act carried out repeatedly, and is formed by CəC-reduplication, Cə- reduplication or i- infixation.<sup>15</sup> The latter variant is very productive, a fact which is indicated by the plural forms of English loanwords such as the ones illustrated in examples (172)-(73):

- (172a) meləčəs (TEH) 'matches'  
 (172b) mečəs (TEH) 'match'  
 (173a) puləs (TEH) 'cats'  
 (173b) pus (1035) 'cat'

The i- allomorph of the plural morpheme occurs most productively in the first syllable (consonant cluster and vowel) of a base. In some lexical items (174-75) it follows the initial consonant of a base, while in others it follows the first vowel of it. (176-78):

After a Consonant

- (174a) stalem (3592) 'belongings'  
 (174b) stem (69) 'thing, what'  
 (175a) scaləq<sup>w</sup>əŋə (6127) 'earrings'  
 (175b) scaq<sup>w</sup>əŋə (6127) 'earring'

After a Vowel

- (176a) qeləŋi (T1:235) 'girls'  
 (176b) qeŋi (2463) 'girl, teenager'  
 (177a) šx<sup>w</sup>q<sup>a</sup>ləq<sup>w</sup>a? (4794) 'siblings'  
 (177b) šx<sup>w</sup>q<sup>a</sup>q<sup>w</sup>a? (101) 'sibling'  
 (178a) yalək<sup>w</sup>əm (6154b) 'break into pieces'<sup>16</sup>  
 (178b) yak<sup>w</sup>əm (5832a) 'break down'

There are no restrictions on the phonological shape of stems which undergo CəC- reduplication. Stress falls on the stem vowel, if the stem has a vowel as its second segment (examples 179-81) and not a consonant (examples 182-83).

(179a) ʔəmʔiməθ (2350.5) 'grandchildren'

(179b) ʔiməθ (2350) 'grandchild'

(180a) sɛnɛni (6028d) 'women'

(180b) sɛni (4821b) 'woman'

(181a) tɛltɛlɛm (TEH) 'they sing'

(181b) tɛlɛm (6141a) 'sing'

When a stem is inflected with both the plural morpheme and a transitivity suffix, the plural form does not reflect CəC- reduplication of the CCV stem as the following forms show:

(182a) pəqʷpəqʷ(ə)t (TEH) 'break them'

(182b) pəqʷat (6220b) 'break it'

(183a) ɔpəɔpət (TEH) 'gather them'

(183b) ɔpət (5634c) 'gather it'

Both examples show CəC- reduplication of the type which might be expected if the input to the rule were the uninflected CəC stem. In Hukari's (1978:177) approach the input is still the CCV stem (examples 182b and 183b) given rules specifying that resyllabification with loss of the stem vowel to CəC takes place.

A small group of bases with the shape C(ə)C appears to undergo Cə- reduplication with i replacing ə in the second syllable:

(184a) θəθiɔt (T6:84) 'trees'

(184b) θɔt (591) 'tree'

(185a) k<sup>w</sup>ək<sup>w</sup>imləx<sup>w</sup> (TEH) 'roots'

(185b) k<sup>w</sup>əmləx<sup>w</sup> (700) 'root'

These bases also show the sonorant-to-h alternation (see 1.1.3.1.

Actual Aspect) if the initial sequence RəR (where R is a voiced sonorant) would otherwise result, although one exception (example 188) has been identified:

(186a) həyínəs (6155b) 'teeth'

(186b) yónəs (6155a) 'tooth'

(187a) həñiqəm (TEH) 'they dive'

(187b) nóqəm (3577a) 'dive'

(188a) snónə (T6:84) 'names'

(188b) sne (6011b) 'name'

Other forms, if they are to be related, suggest that the pattern is Cə- with vowel change in the stem. Two plurals show e instead of i as the vowel the postvelar consonant being the conditioning factor:

(189a) qəqéləm (TEH) 'eyes'

(189b) qələm (5833b) 'eye'

(190a) sǎǎxéhə (5949) 'legs'

(190b) sǎéhə (805) 'leg'

Further, one stem shows Cə- reduplication despite the fact that the first syllable of the singular has a tense vowel, although another stem with a tense vowel (example 192) takes stress on the reduplicative syllable:

(191a) stotíwən (4847) 'nieces/nephews'

(191b) stíwən (2353) 'niece/nephew'

(192a) θíθə (4491) 'big' (plural)

(192b) θi (60) 'big'

In addition, two long-vowel forms have Co- plurals (Hukari 1978:180):

- (193a) stotúup (TEH) 'stoves'
- (193b) stuup (TEH) 'stove'
- (194a) spəpáal (TEH) 'ravens'
- (194b) spaal (2596) 'raven'

The plural morpheme may combine with the Actual aspect, in which case the Actual stem generally functions as the base for pluralization (Hukari 1978:187). Where the non-actual stem has the shape CCV or CVCC, the Actual and non-actual forms alike are pluralized by means of CVC- reduplication:

#### CCV Stems

- (195a) ʔəxʔəʔət (TEH) 'push it' (plural)
- (195b) ʔxət (6243a) 'push it'
- (195c) ʔəxʔəʔət (TEH) 'pushing it' (plural, Actual)
- (195d) ʔəxət (6243b) 'pushing it'
- (195e) ʔəx (5573b) 'pushed'
- (196a) pəqʷpəqʷət (TEH) 'break them' (plural)
- (196b) pəqʷət (6220b) 'break it'
- (196c) pəqʷpəqʷət (TEH) 'breaking them' (plural, Actual)
- (196d) pəqʷət (6220c) 'breaking it'
- (196e) pəqʷ (5176) 'broken'

#### CVCC Stems

- (197a) təyʔəyʔət (TEH) 'eat' (plural)
- (197b) təyʔət (45) 'eat'
- (197c) təyʔəyʔət (TEH) 'eating them' (plural, Actual)
- (197d) təyʔət (TEH) 'eating it'
- (198a) təpʔəpʔət (TEH) 'suck them into the mouth' (plural)
- (198b) təpʔət (TEH) 'suck it into the mouth'
- (198c) təpʔəpʔət (TEH) 'sucking them into the mouth' (plural, Actual)
- (198d) təpʔət (TEH) 'sucking it into the mouth'

In the case of the Actual forms (195d, 196d, 197d and 198d) and of the non-actual CVCC forms (197b and 198b) CVC- reduplication operates directly on the stem, whereas with the non-actual CCV forms (195b and 196b) the input for reduplication is the CoC stem (examples 195e and 196e).

The Actual forms of stems which undergo CV- reduplication in the Actual cannot be pluralized except where the consonant (C) is a resonant,<sup>17</sup> in which case the initial consonant is reduced to h and reduplication is not apparent (Hukari 1978:187):

- (199a) məqməqət (TEH) 'swallow' (plural)
- (199b) məqət (4355) 'swallow'
- (199c) həhəmqət (TEH) 'swallowing' (plural, Actual)
- (199d) həmqət (TEH) 'swallowing'
- (200a) lək<sup>w</sup>lök<sup>w</sup>ət (6005e) 'breaking them' (plural)
- (200b) lək<sup>w</sup>ət (6041a) 'break it'
- (200c) həlölök<sup>w</sup>ət (TEH) 'breaking them' (plural, Actual)
- (200d) hölök<sup>w</sup>ət (6041c) 'breaking it'

As in the case of the CCV and CVCC stems the Actual (199d and 200d) like the non-actual forms (199b and 200b) are pluralized by CVC- reduplication. Although CVC- reduplication is not immediately apparent, the Actual plural combinations (199c and 200c) are analyzable in this way if one views həhəmqət 'swallowing' (plural) and həlölök<sup>w</sup>ət 'breaking them' as the h elided surface forms of /həhəmqət/ and /həlölök<sup>w</sup>ət/ respectively.

#### 1.1.3.4. Diminutive

The diminutive morpheme denotes smallness, endearment, or

deprecation and is signalled solely by reduplication. The two basic diminutive reduplicative patterns are CV?- and Ci?-,<sup>18</sup> the distribution of the two being phonologically predictable. Ci?- occurs if the base has either the shape CC (example 201) or Cə (example 202) and CV?- occurs elsewhere as in (203) and (204), in which ? elides before a following consonant and resonant:

Ci?-

- (201a) sk<sup>w</sup>i?k<sup>w</sup>əc? (6109d) 'little island'  
 (201b) sk<sup>w</sup>əc? (6063) 'island'  
 (202a) sni<sup>w</sup>nx<sup>w</sup>əʔ (3880) 'little canoe' (/sni<sup>w</sup>nx<sup>w</sup>əʔ/)  
 (202b) snəx<sup>w</sup>əʔ (2829) 'canoe, vehicle'

CV?-

- (203a) še?šə (5382b) 'trail'  
 (203b) šeʔ (3512) 'road, door'  
 (204a) sʔəni (6028c) 'little girl'  
 (204b) sʔəni (2464) 'woman'

The productivity of the diminutive morpheme is shown by the fact that two lexical items that take it (examples 205-206) are loanwords, the first derived from the French word vache perhaps and the second from the French form cochon 'pig'.

- (205a) m<sup>w</sup>əsməs (6121b) 'calf' (/m<sup>w</sup>əsməs/)  
 (205b) m<sup>w</sup>sməs (4221) 'cow'  
 (206a) k<sup>w</sup>i?k<sup>w</sup>əšu (2931) 'small pig'  
 (206b) k<sup>w</sup>əšu (1109) 'pig'

The diminutive morpheme may combine with other aspectual categories. Significantly, predicators denoting actions or processes

do not seem to occur as simple diminutives. Such predicators may be inflected with just the diminutive and Actual morphemes (examples 207-208) or with the plural morpheme in addition (examples 209-210). The selection of the plural allomorph in this case is determined by the morphological context--the fact that the stem is diminutive--not by the properties of the base.

- (207a) éiʔéééʔt (TII) 'putting it on' (diminutive, Actual)  
 (207b) éééʔt (6253b) 'putting it on' (Actual)  
 (207c) ééʔt (6253a) 'put it on'
- (208a) hìʔhólét (FII) 'filling it' (diminutive, Actual)  
 (208b) hólét (184) 'filling it' (Actual)  
 (208c) lóéét (6113c) 'fill it'
- (209a) qʷóléqʷást (6237) 'dunking them' (diminutive, Actual, plural)  
 (209b) qʷást (6237e) 'dunking him' (Actual)  
 (209c) qʷsét (6237b) 'dunk him'
- (210a) qóléqépt (6238) 'gathering them' (diminutive, Actual, pl.)  
 (210b) qépt (6238a) 'gathering it' (Actual)  
 (210c) qpot (5634c) 'gather it up'

These examples show the order in which the aspectual categories are expressed. The diminutive Actual stem (examples 207a and 208a) is formed from the Actual stem (examples 207b and 208b) and takes the -1- plural infix (examples 209a and 210a) just like a simple diminutive.

Stems which undergo CV- reduplication in the Actual (with a tense vowel) are subject to further morphological complexity (Hukari 1978:196). First, the diminutive category is signalled not only by diminutive reduplication but also by an infix ʔ, which precedes the base (example 211c). In addition, diminutive reduplication may

occur not just once, as in example (211c), but may occur twice, as in (211b), with an optional plural infix (example 211a). The realization of the additional reduplicative element *ás Ci?*- is conditioned by the initial *Cə* shape of the stem just as in simple diminutives.

(211a) *ʔəliʔəʔáʔəkʷ* (TEH) 'flying' (double dimin., Actual, pl.)

(211b) *ʔiʔəʔáʔəkʷ* (TEH) 'flying' (double diminutive, Actual)

(211c) *ʔəʔáʔəkʷ* (TEH) 'flying' (diminutive, Actual)

(211d) *ʔáʔəkʷ* (4292) 'flying'

(211e) *ʔəkʷ* (4060) 'fly'

(211d) *ʔáʔəkʷ* (4292) 'flying'

(211e) *ʔəkʷ* (4060) 'fly'

to English as nouns may occur

either as simple diminutives or as plural diminutives. The plural diminutive in such predicators is formed either by the *-i-* infix (examples 212d and 213d) just as in predicators denoting actions or processes or, more rarely, by *Cə-* reduplication (Hakari 1978:192).

(212a) *sqʷəlqʷələš* (TEH) 'birds' (plural)

(212b) *sqʷələš* (419) 'bird'

(212c) *sqʷiḷqʷələš* (6134b) 'little bird' (diminutive)

(212d) *sqʷəlḷiḷqʷələš* (6134c) 'little birds' (diminutive, plural)

(212e) *sqʷəqʷələš* (TEH) 'little birds' (diminutive, plural)

(213a) *sqʷəmḷəqʷəmḷəy* (5948c) 'dogs' (plural)

(213b) *sqʷəmḷəy* (178) 'dog'

(213c) *sqʷiḷqʷmiʔ* (TEH) 'puppy' (diminutive)

(213d) *sqʷəlḷiḷqʷmiʔ* (5948a) 'puppies' (diminutive, plural)

(213e) *sqʷəqʷḷəmiʔ* (TEH) 'puppies' (diminutive, plural)

### 1.1.3.5. Resultative

The resultative morpheme expresses a state of affairs that results from the action of the predicator and frequently occurs with

/s-/ 'static' (1.1.3.6. Aspectual Prefixes). Like the Actual morpheme it is formed by CV- reduplication and by stem modification--or, to use Hukari's (1978:184) phrase, non-segmental morphology--and also undergoes resonant glottalization in non-initial position. Depending upon the individual lexical item, the reduplicative segment may be either stressed (214-15) or unstressed (216-17):

Stressed Reduplication

- (214a) ʔiʔə́c (4802b) 'cut' (resultative)
- (214b) ʔíc (5147a) 'cut'
- (214c) ʔiʔə́cət (6269b) 'cutting it up' (Actual)
- (215a) sʔépət<sup>19</sup> (5836a) 'sewn' (resultative)
- (215b) pət<sup>19</sup>ət (5836b) 'sew it'
- (215c) pépət<sup>19</sup>ət (5836c) 'sewing it on' (Actual)

Unstressed Reduplication

- (216a) ʔqpas (4208) 'gathered together' (resultative)
- (216b) ʔpas (4208) 'gathered together'
- (217a) ʔəʔiic (THI) 'short' (resultative)
- (217b) ʔiicət (5917b) 'creep up on him'
- (217c) ʔiicə́cət (THI) 'creeping up on him' (Actual).

Although the resultative morpheme resembles the Actual one in shape, it is different in its distribution. The Actual morpheme may be built on to lexical items inflected with /-t/ 'transitive', while the resultative occurs with intransitive stems that have patient interpretation.

The resultative morpheme differs not only distributionally from the Actual morpheme, but also in the case of CəC stems in phonological shape. If the stem has the shape CəC and does not contain

a suffix, the resultative like the diminutive (1.1.3.4) is formed by reduplication and by infixation of a tense vowel, which replaces the stem ə. Depending upon the lexical item the vowel is either i (218-20) or e (221-22):

(218a) pəpiq<sup>w</sup> (4520) 'broken' (resultative)

(218b) pəq<sup>w</sup> (5176) 'broken (brittle object)'

(219a) səlin̄ (6049) 'woven'

(219b) səlen̄ot (5212) 'weave it'

(220a) sən̄iw̄ (5884b) 'inside'

(220b) nəw̄oš (5183) 'put it inside'

(221a) spəleȳ (5187) 'stuck on'

(221b) pəleytəl (5019) 'glue together'

(222a) sən̄qəm̄ (T1:239) 'underwater (after diving)'

(222b) nəqəm̄ (3577a) 'dive'

In (220) and (222) above, the inflected words correspond respectively to the underlying forms /s-nən̄iw̄/ and /s-n̄əqəm̄/, which through the devoicing of the initial resonant n become s-hən̄iw̄ and s-hən̄qəm̄. The surface forms of examples (220) and (222) are realized through the deletion of h after s.

If the resultative morpheme inflects a lexical item containing a suffix which receives primary stress, the i or e stem vowel does not appear (examples 223-24). Example (224) illustrates the contrast between a lexical item (224a) which takes a stressed suffix /-nəp/ 'ground, floor' (resultative) and an item (224b) which takes an unstressed suffix /-nəp/ 'ground, soil' and retains the stem vowel i:

(223a) səlk<sup>w</sup>əlex̄ən̄ (793) 'broken arm'

(223b) lək<sup>w</sup> (5564b) 'broken'

- (224a) səliqənəp (6131a) 'even ground' (resultative)  
 (224b) səliqənəp (5386) 'even ground' (resultative)  
 (224c) ləq̄ (TII) 'even'

Although in most lexical items CV-reduplication is involved, in two items (225-26) the resultative morpheme is not marked by reduplication but by the tense vowel alone (in these examples a):

- (225a) stiyəm (T5:84) 'attached, worn' (resultative)  
 (225b) tətəyəm (TII) 'sticking' (Actual)  
 (225c) təyəm (T2:21) 'attach, wear'  
 (226a) səcatq̄ (6509b) 'mashed' (resultative)  
 (226b) catq̄t (6509a) 'mashing it' (Actual)  
 (226c) catq̄t (6196b) 'mash it'

The resultative morpheme combines with the plural and diminutive categories functioning as the base for them (Hukari 1978:187). The resultative diminutives, like the Actual diminutive forms (1.1.3.1.), show double reduplications:

- (227a) səi?əcəc? (TII) ən (resultative, diminutive)  
 (227b) səcəc? (TII) ən (resultative)  
 (227c) ce?t (6253a) 'put it on'  
 (228a) səi?əpəx (TII) 'sprinkled' (resultative, diminutive)  
 (228b) səpəx (5893) 'sprinkled' (resultative)  
 (228c) əpəxt (6303) 'sprinkle it'

Such forms may be pluralized, in which case the plural allomorph is the infix -i- as in səli?əcəc? (TII) 'on' (diminutive, plural).

Resultative plurals without diminutive aspect may be realized in the -i- infix, in CVC-reduplication or in stress shift. The infix occurs in resultative constructions based on CCV bases (Hukari 1978:188):

- (229a) spə<sub>l</sub>əp<sub>i</sub>q<sup>w</sup> (TEH) 'broken' (resultative, plural)  
 (229b) spəp<sub>i</sub>q<sup>w</sup> (TEH) 'broken' (resultative).  
 (229c) p<sub>q</sub><sup>w</sup>at (6220b) 'break it'  
 (230a) (s)sə<sub>l</sub>ə<sub>s</sub>i<sub>q</sub> (TEH) 'torn' (resultative, plural)  
 (230b) (s)sə<sub>s</sub>i<sub>q</sub> (6511a) 'torn' (resultative)  
 (230c) s<sub>q</sub>et (589) 'tear it'

The resultative plural of CəC stems is realized in CVC-reduplication if the initial consonant (C) is a resonant, in which case as with the Actual plural it is reduced to h (Hukari 1978:187):

- (231a) s-(h)ə<sub>h</sub>i<sub>q</sub> (TEH) 'full' (resultative, plural)  
 (231b) s-(h)ə<sub>h</sub>i<sub>q</sub> (TEH) 'full' (resultative)<sup>19</sup>  
 (231c) mə<sub>q</sub>mə<sub>q</sub>et (TEH) 'swallow' (plural)  
 (231d) mə<sub>q</sub>et (4355) 'swallow'  
 (232a) s-(h)ə<sub>l</sub>i<sub>q</sub><sup>w</sup> (TEH) 'broken' (resultative, plural)  
 (232b) s-(h)ə<sub>l</sub>i<sub>q</sub><sup>w</sup> (TEH) 'broken' (resultative)  
 (232c) lək<sup>w</sup>lək<sup>w</sup>ət (6005e) 'break them' (plural)  
 (232d) lək<sup>w</sup>ət (6041a) 'break it'

The analysis of resultative plural combinations (231a and 232a) as CVC-reduplicated forms is rendered plausible if s-(h)ə<sub>h</sub>i<sub>q</sub> 'full' and s-(h)ə<sub>l</sub>i<sub>q</sub><sup>w</sup> 'broken' are viewed as the h and ə elided surface forms of /shə<sub>h</sub>ə<sub>h</sub>i<sub>q</sub>/ and /shə<sub>l</sub>ə<sub>l</sub>i<sub>q</sub><sup>w</sup>/ respectively.

Where a nonresonant is the initial consonant of a stem which undergoes CV-reduplication in the resultative, the plural resultative forms are only reduplicated once as the following two examples illustrate:

- (233a) s<sub>i</sub>ə<sub>q</sub>tə<sub>q</sub> (6117e) 'laid out' (resultative, plural)  
 (233b) s<sub>i</sub>ə<sub>q</sub>tə<sub>q</sub> (6117d) 'laid out' (resultative)

(233c)  $\text{ʔéqət}$  (6190a) 'lay it down'

(234a)  $\text{syák}^w\text{yək}^w$  (TEH) 'broken' (resultative, plural)

(234b)  $\text{syáyək}^w$  (TEH) 'broken' (resultative)

(234c)  $\text{yák}^w\text{ət}$  (6495a) 'break it'

### 1.1.3.6. Aspectual Prefixes

There are three productive aspectual prefixes in Cowichan: /yə-/ 'serial', /x<sup>w</sup>ə-/ 'developmental' and /s-/ 'static'. These morphemes may appear either individually or in one of the following combinations: yə-x<sup>w</sup>ə-, yə-s- or x<sup>w</sup>ə-s-.

(a) /yə-/ 'serial'

/yə-/ 'serial' indicates that a given activity involves motion through space or time or else that one or several entities extend through space or time. The semantic context of movement through space is illustrated in (235), while in (236)-(37) the use of /yə-/ implies that a series of objects extend in a line through space:

(235a)  $\text{yə}^?\text{íməš}$  (5550) 'taking a walk'

(235b)  $\text{?íməš}$  (4142a) 'walk'

(236a)  $\text{yə}^?\text{áləxət}$  (T1:99) 'gather them up'

(236b)  $\text{?áləxət}$  (4599) '(go and) get it'

(237a)  $\text{yə}^x\text{a}^?\text{áəən}$  (6271g) 'four (left)'

(237b)  $\text{x}^a^?\text{áəən}$  (847) 'four'

The temporal meaning of /yə-/ , that of movement through time, is illustrated as follows:

(238a)  $\text{yə}^k^w\text{ək}^w\text{əlās}$  (4414) 'starting of summer, springtime'

(238b)  $\text{k}^w\text{éləs}$  (4757) 'warm (weather)'

(239a) yəq<sup>w</sup>əq<sup>w</sup>am (4352) 'falling out (hair, feathers)'

(239b) q<sup>w</sup>am (3916) 'fall out (hair, feathers)'

(240a) yəswəy<sup>w</sup>qe (4443) 'bachelor' (remain a man)

(240b) swəy<sup>w</sup>qe (3515) 'man'

The marking of a lexical item with /yə-/ does not preclude further aspectual marking. As illustrated in (241), /yə-/ may occur with the stative morpheme /-é-/:

(241a) yək<sup>w</sup>əné<sup>m</sup> (3911) 'taking it'

(241b) k<sup>w</sup>ənəm (4765) 'take'

More productively, /yə-/ appears with the Actual morpheme in any of its allomorphs (examples 242-44):

(242a) yəčičəsəm (3747) 'growing up'

(242b) čičəsəm (6207b) 'growing'

(242c) čisəm (6207a) 'grow'

(243a) yəhīləm (4688) 'is falling'

(243b) hīləm (TEH) 'falling'

(243c) hīləm (519) 'fall (in)'

(244a) yəhənwəš (5539a) 'putting it inside'

(244b) nəwəš (5884a) 'put it inside'

(b) /x<sup>w</sup>ə-/ 'developmental'

/x<sup>w</sup>ə-/ 'developmental' indicates that one state of affairs supersedes another through a given action and is translatable by terms like 'become' and 'turn into'. This morpheme may appear with /yə-/ 'serial', which it follows as shown in example (245), or it may be the sole aspectual marker of a predicator (246-47):

(245a) (yə)x<sup>w</sup>əməʔəlqsənəm (5540) 'start cleaning one's nose'

(245b) məʔəlqsənəm (5540) 'clean one's nose'

(246a) x<sup>w</sup>əsk<sup>w</sup>əy<sup>w</sup>əθ (70) 'become a slave'

(246b) sk<sup>w</sup>əy<sup>w</sup>əθ (3986) 'slave'

(247a) x<sup>w</sup>ənás (3603) 'become fat'

(247b) has (5751b) 'fat'

Furthermore, it may inflect a base expressing Actual (248-49) or diminutive (250) aspect as follows:

(248a) x<sup>w</sup>əcékəm (5583b) 'start jumping' (Actual)

(248b) cəkəm (5583a) 'jump'

(249a) x<sup>w</sup>əx<sup>w</sup>əñčənəm (TEH) 'start running' (Actual)

(249b) x<sup>w</sup>čénəm (166) 'run'

(250a) x<sup>w</sup>əməmstíməx<sup>w</sup> (TEH) 'formed into a little person' (diminutive)

(250b) məstíməx<sup>w</sup> (586) 'person'

(c) /s-/ 'static'

/s-/ 'static' indicates that the activity denoted by the predicator is not transitory, but represents a permanent condition. This prefix may occur either with uninflected themes (251-52) or with stems which cannot stand as themes but which are alternatively inflectible with a transitivity suffix (examples 253-55).

(251a) sqəñəx<sup>w</sup> (5565a) 'glutton'

(251b) qəñəx<sup>w</sup> (5565c) 'overeat'

(252a) s<sup>w</sup>əy<sup>w</sup>q (5491) 'wrong'

(252b) əy<sup>w</sup>q (2120) 'make a mistake'

(253a) s<sup>w</sup>ək<sup>w</sup>əs (6299) 'hanging' (e.g. on a wall)

(253b) ək<sup>w</sup>əst (2003) 'hang it up'

(254a) sməlyi (TEH) 'married'

(254b) məlyitəl (1249) 'marry'

(255a) s<sup>w</sup>əx<sup>w</sup> (5399) 'beaten'

(255b) əx<sup>w</sup>ət (6231a) 'beat him'

/s-/ may also inflect a limited number of lexical items (256-57) that contain a transitivity suffix (1.1.1.):

- (256a) sk<sup>w</sup>i<sup>w</sup>i<sup>w</sup>əm (6279c) 'tired of it' (person, noise)  
 (256b) k<sup>w</sup>i<sup>w</sup>i<sup>w</sup>əm (6279a) 'disturbed'  
 (256c) k<sup>w</sup>ət (3863) 'upset'  
 (257a) s<sup>w</sup>əp<sup>w</sup>x<sup>w</sup>nəx<sup>w</sup> (6296) 'blinking'  
 (257b) əp<sup>w</sup>x<sup>w</sup>nəx<sup>w</sup> (6296) 'blink'

In addition to being marked by /s-/ 'static', a lexical item may be preceded by /yə-/ 'serial' (258-59) and/or /x<sup>w</sup>ə-/ 'developmental' (260-62) in this order:

/yə-/ and /s-/

- (258a) yəs<sup>w</sup>qəq<sup>w</sup>ip (5998c) 'grouped together'  
 (258b) s<sup>w</sup>qəq<sup>w</sup>ip (5634b) 'grouped together'  
 (258c) qəpət (5634c) 'group them together'  
 (259a) yəs<sup>w</sup>čəčə (5405b) 'he is on top' (sleeping on a log)  
 (259b) s<sup>w</sup>čəčə (TEH) 'on top of it'  
 (259c) čə<sup>w</sup>ət (6253a) 'put it on top'

/x<sup>w</sup>ə-/ and /s-/

- (260a) x<sup>w</sup>əs<sup>w</sup>ʔi<sup>w</sup>ik<sup>w</sup> (5368b) 'dead, passed on'  
 (260b) ʔik<sup>w</sup> (3621) 'lost'  
 (261a) x<sup>w</sup>əs<sup>w</sup>k<sup>w</sup>eyšən (4751a) 'become lame'  
 (261b) s<sup>w</sup>k<sup>w</sup>ey (4558) 'not permitting'  
 (261c) k<sup>w</sup>əyət (4223) 'prevent him'<sup>20</sup>

As well as co-occurring with another aspectual affix, /s-/ may appear along with the resultative morpheme in the same lexical item as /-stəx<sup>w</sup>/ 'causative' (1:1.1.2. Transitive Suffixes) inflecting bases that are transitivized by /-t/ 'transitive':

- (262a) stətɪnstəm (5324c) 'they are lined up'  
 (262b) stətɪn (5958c) 'lined up'  
 (262c) təhət (5324a) 'line them up'  
 (263a) st<sup>θ</sup>it<sup>θ</sup>əstəx<sup>w</sup> (5311b) 'nail it up' (/st<sup>θ</sup>it<sup>θ</sup>əstəx<sup>w</sup>/)  
 (263b) st<sup>θ</sup>it<sup>θ</sup>əs (5840) 'nailed up'  
 (263c) t<sup>θ</sup>isət (5311a) 'nail it'

## 1.2. Derivational Affixes

There are two types of derivational affixes in Cowichan: lexical affixes, which form stems that can be inflected with transitivity suffixes (1.1.1.), and non-inflectives, which form stems that cannot be so inflected. The latter include six prefixes and fifteen suffixes while the former with the exception of one prefix are suffixes. The numeral system (1.2.2.3.) is presented as a subsection of lexical suffixes on the ground that with one non-productive exception, /-áɪ/ 'canoe, buggy', all derivational affixes which numerals may take are lexical suffixes.

### 1.2.1. Non-inflective Forms

The non-inflectives are presented here in two sections, one on prefixes and one on suffixes. There is no other apparent basis for classifying these morphemes, some of which occur nonproductively with a limited number of lexical items. Although sometimes the stems of the lexical items are themes, they are more frequently bound forms.

### 1.2.1.1. Non-inflective Prefixes

The non-inflective prefixes are /s-/ 'absolute', /šx<sup>w</sup>-/ 'instrumental', /c-/ 'acquisitional', /c-/ 'colour classifier', /təm-/ 'season, time' and /tən-/ 'direction, wind'.

#### (a) /s-/ 'absolute'

/s-/ 'absolute' is attached to the stem of a predicator-- usually one denoting an action or process--to form a lexical item which, like an English noun, denotes the name of an object. The stem may be either a theme (264-65) or a bound base of a /-t/ 'transitive' inflected form (266-67).

#### Themes

- (264a) s<sup>?</sup>it<sup>9</sup>om (4561) 'clothing'  
 (264b) ʔit<sup>9</sup>om (1268) 'got dressed'  
 (265a) sēcētōn (4419) 'salmon'  
 (265b) cēcētōn (3803) 'to fish'

#### Bound Stems

- (266a) sne (4580) 'a name'  
 (266b) nēʔət (5663) 'name someone'  
 (267a) s<sup>?</sup>āp (6412a) 'soup'  
 (267b) ʔāpət (6412b) 'drink soup'  
 (268a) s<sup>?</sup>āx<sup>w</sup>o (4425) 'butter clam'  
 (268b) ʔāx<sup>w</sup>omən (4597) 'clam shell'

/s-/ 'absolute' functions not only as a derivational prefix as in the above examples, but also as a syntactic one (2.3.2. /s-/ 'absolute' Clauses). The latter distribution of /s-/ is apparent in the expression nospūs 'my being a cat' in the following example:

(269) ?i co þe? x<sup>w</sup>iǰóto k<sup>w</sup>e nospús (6330)

1 2 3 4 -5 6 7 8

'I am pretending (saying) that I am a cat'

1 proximal

5 article

2 /cən/ 'I'

6 'my'

3 certain

7 absolute

4 'say'

8 'cat'

That the morpheme /s-/ here is distinct from the /s-/ prefix in examples (264)-(68) is shown by the fact that there is no word \*/spus/ 'cat' in which /s-/ would constitute a derivational prefix, although there is a lexical item /pus/ 'cat'.

(b) /šx<sup>w</sup>-/ 'instrumental'

/šx<sup>w</sup>-/ 'instrumental' like /s-/ 'absolute' occurs both as a syntactic prefix in one type of subordinate clause (2.3.2.) and as a derivational one. This morpheme has two allomorphs, šx<sup>w</sup>- before a vowel and a glottal stop and š- before consonants, and two meanings depending upon the individual stem to which it is attached. In some lexical items (270-72) it denotes the location of an entity and with others it expresses instrumentality, the means by which an action is performed (273).

(270a) šl<sup>w</sup>oíñs (6112b) 'cupboard'

(270b) láʔəən (6112a) 'plate, dish'

(271a) šsilo (TEH) 'grandparent-in-law'

(271b) silo (4386) 'grandparent'

(272a) šx<sup>w</sup>?itot (6106b) 'bed'

(272b) ?itot (6001b) 'sleep'

(273a) šk<sup>w</sup>eyxocəm (6103a) 'tools, equipment'

(273b) k<sup>w</sup>eyxocəm (3872) 'weave (baskets)'

(274) šəimət (6308c) 'Quamichan Stream'

(e) /c-/ 'acquisitional'

/c-/ 'acquisitional', which is semantically equivalent to the English words 'obtain' and 'have', indicates that an individual is in possession of an object. /c-/ may be attached to a form denoting the name of an object to form an action-process predicator (examples 275-76) or it may be built on to a bound base that may take /-t/ 'transitive' (example 277).

(275a) ctələ (6184b) 'obtain money'

(275b) tələ (4432) 'money'

(276a) cpəyə (6242b) 'have beer'

(276b) pəyə (3714) 'beer'

(277a) ckʷən (6000b) 'obtain it'

(277b) kʷənət (4166) 'take it'

(d) /c-/ 'colour classifier'

/c-/ 'colour classifier' appears in a limited number of lexical items expressing the names of colours:

(278a) ekʷim (856) 'red'

(278b) kʷikʷəməl (5472) 'reddish'

(279a) cšʷikʷ (5475b) 'grey'

(279b) šʷikʷəkʷəl (5475d) 'greyish'

(e) /təm-/ 'season, time'

/təm-/ 'season, time' occurs in three lexical items that indicate a given period in the year:

(280a) təmʷələs (6318a) 'summer time'

(280b) kʷələs (4077) 'warm (weather)'

(281a) təmχoyk (6318b) 'winter time'

(281b) χoyk (5534a) 'cold'

(282a) təm<sup>k</sup>ʷálox (5534b) 'autumn'

(282b) k<sup>ʷ</sup>álox (5534a) 'dog salmon'

(f) /tən-/ 'direction, wind'

/tən-/ 'direction, wind' appears in four lexical items which express the concept of direction (283-86). The last three have to do specifically with the direction of the wind.

(283a) tənʔónce (6047) 'from where (did you come)'

(283b) ʔónce (101) 'where, somewhere'

(284a) təncówcoʷ (4081) 'wind from the water/sea'

(284b) cówcoʷ (3732) 'go out into the water'

(285) təncáloq (4080) 'wind from the woods, west wind'

(286) tənwáq (6320) 'south wind'

#### 1.2.1.2. Non-inflective Suffixes

There are fifteen non-inflective suffixes: /-álk/ 'animal offspring', /-əp/ 'tree, bush', /-mox<sup>ʷ</sup>/ 'people', /-tən/ 'instrument', /-wən/ 'resultant', /-áʔθ/ 'edge', /-at/ 'canoe, buggy', /-wət/ 'canoe', /-əp/ 'fire', /-cy/ 'bark, wood', /-qep/ 'pervasive through the air', /-wən/ 'mind, mental activity', /-ʒən/ 'liquid' and /-ləq<sup>ʷ</sup>/ 'waves'.

(a) /-álk/ 'animal offspring'

/-álk/ 'animal offspring' occurs most productively with stems of a certain lexical set, that of animal names, and denotes the young of a species.

- (287a) k<sup>w</sup>əʃuʔáɪɪ (2931) 'piglet'  
 (287b) \k<sup>w</sup>əʃú (6109a) 'pig'  
 (288a) mɪsməsáɪɪ (6034) 'calf'  
 (288b) mɪsməs (6121a) 'cow'  
 (289) ʔəyáɪɪ (2511) 'the young of an animal'
- (b) /-əɪp/ 'tree, bush'

The suffix /-əɪp/ 'tree, bush' occurs in lexical items expressing the names of trees and bushes:

- (290a) səáʔəɪp (4018) 'maple tree'  
 (290b) səáʔə (5869a) 'leaf'  
 (291) ʔx<sup>w</sup>əɪp (3998) 'oak tree'

In many of these items the meaning of the whole word is a compositional function of its morphemes. In some lexical items the stem denotes the product of a tree--its wood or its fruit:

- (292a) ʃpéyəɪp (2532) 'cedar tree'  
 (292b) ʃpéy (5038b) 'cedar'  
 (293a) ɪɪɪəɪp (1335) 'salmonberry bush'  
 (293b) ɪɪɪə (286) 'salmonberry'

In other items the stem denotes an alleged characteristic of the tree:

- (294a) ɛə<sup>w</sup>əɪp (4025) 'spruce tree'  
 (294b) ɛə<sup>w</sup> (4026a) 'pricked'  
 (295a) ɪəɪəɪp (4305) 'tall wild grape'  
 (295b) ɪəɪə (373) 'yellow'

- (c) /-məx<sup>w</sup>/ 'people'

/-məx<sup>w</sup>/ 'people', which occurs mostly with bound stems

(296-99) marks lexical items which denote the names of groups or tribes of people:

- (296) x<sup>w</sup>élmox<sup>w</sup> (1809) 'Indian'  
 (297) snanéymox<sup>w</sup> (4174) 'Nanaimo'  
 (298) məstímox<sup>w</sup> (3964) 'person, people'  
 (299a) néčəwmax<sup>w</sup> (Kava) 'different tribe, foreigner'  
 (299b) neč (Kava) 'different'

(d) /-ton/ 'instrument'

/-ton/ 'instrument' indicates that the lexical item which it is contained in is viewed as an instrument. This morpheme occurs most frequently in lexical items (300-301) that have stems which are inflectible with /-t/ 'transitive' (1.1.1.2.). In these items the meaning of the whole word is a compositional function of the individual morphemes. In examples (300)-(301) šəpton 'knife' is a cutting instrument and ləx<sup>w</sup>ton 'blanket' is a covering instrument.<sup>21</sup>

- (300a) ləx<sup>w</sup>ton (4788) 'blanket'  
 (300b) ləx<sup>w</sup>ot (6024a) 'cover it'  
 (300c) ləx<sup>w</sup> (5726b) 'covered'  
 (301a) šəpton (163) 'knife'  
 (301b) šípət (6487) 'cut it'

In one case the semantic reading of instrumentality is not apparent from the gloss 'track', although putatively a track is a means of identifying a foot:

- (302a) šəhəton (3982) 'a track'  
 (302b) šəhə (2626) 'foot, leg'

/-ton/ 'instrument' is not limited to occurring with bases. It also appears in many lexical items that take /šx<sup>w</sup>-/ 'instrument' (examples 303-304) and occurs productively with lexical suffixes

(example 305), which will be discussed in section 1.2.2.

(303) ʒnátəstən (5961a) 'hand spear'

(304a) ʒyəq<sup>w</sup>tən (98) 'flint'

(304b) yəq<sup>w</sup> (64) 'burned'

(305a) čəʔətən (5961a) 'doorstep' (-ʒə(n) 'foot')

(305b) čəʔt (6253a) 'put it on top'

(e) /-mín/ 'resultant'

The instrumental morpheme /-mín/ 'resultant' has two lexically conditioned allomorphs: a stressed one, -mín and an unstressed one, -mən, which appears after stressed stems. /-mín/ indicates that a given entity is the residue or product resulting from an activity of another entity. The meanings of some lexical items containing /-mín/ are amenable to a compositional analysis. In the following forms the stem denotes the activity, while /-mín/ denotes the result:

(306a) yəčmən (4850) 'shavings, sawdust' (residue of grinding)

(306b) yəčət (4848) 'file it down, grind it'

(307a) šəmín (5500) 'hard feelings' (product of being hurt)

(307b) šət (2898) 'hurt'

However, this assignment of semantic readings to individual morphemes is not feasible for all words containing /-mín/. In the following examples the stem does not express an activity:

(308a) k<sup>w</sup>ax<sup>w</sup>mən (4882) 'hoof'

(308b) k<sup>w</sup>ax<sup>w</sup> (3912) 'thump'

(309a) ʔax<sup>w</sup>mən (4597) 'clam shell'

(309b) sʔax<sup>w</sup> (4422) 'butter clam'

<sup>w</sup>(310) k<sup>w</sup>əmín (L1:72) 'stick with rattles'

(f) /-qən/ 'fur, wool'

/-qən/ 'fur, wool', which may be suffixed to themes but not to

bound stems, differs from the other non-inflectives in that it has as its I.C. partner a connector (1.2.2.2.) /-əl-/, which is characteristic of certain lexical suffixes:

(311a) sq<sup>w</sup>əməy<sup>ə</sup>əlqən (5547) 'dog's hair'

(311b) sq<sup>w</sup>əməy (3481a) 'dog'

(312a) ʔəx<sup>w</sup>əlqən (4694) 'buckskin'

(312b) ʔix (5522) 'scraped'

(313a) ʔəy<sup>w</sup>əlqən (4694) 'good pelt'

(313b) ʔəy (4559) 'good'

(g) /-áʔə/ 'edge'

/-áʔə/ 'edge' has been found to be attached to two free forms, /qəl/ 'bad' and ʔəy/ 'good' (examples 314-15) and to be present in two other lexical items (316-17) which contain /s<sup>w</sup>/ 'instrumental'. In (317) the underlying form of the stem may be /niʔ/ 'nonproximal'

(1:3.2.3. Class III Locatives), but in (316) the morphemic status of á is not apparent.

(314a) qəl<sup>w</sup>áʔə (617) 'dull (blade)'

(314b) qəl (5833) 'bad'

(315a) ʔəy<sup>w</sup>áʔə (226) 'sharp'

(315b) ʔəy (4559) 'good'

(316) s<sup>w</sup>áʔə (TEH) 'across (river, road)'

(317) s<sup>w</sup>niʔáʔə (3588) 'across (lake, bay)'

The remaining non-inflective suffixes, which are nonproductive, may be listed as follows:

/-cəp/ 'fire'

(318) s<sup>w</sup>əlcəp (825) 'match, firedrill'

(319a) yəq<sup>w</sup>əl<sup>c</sup>əp (901) 'make a fire' (-əl- connector)

(319b) yəq<sup>w</sup> (3602) 'burn'

/-aɪ/ 'canoe'

(320) siš<sup>a</sup>ɪ (3784d) 'canoe of a certain type'

(321a) yak<sup>w</sup>á<sup>a</sup>?aɪ (6495b) 'canoe broke up'

(321b) yak<sup>w</sup> (5832b) 'break'

/-wəɪ/ 'canoe'

(322a) θəy<sup>w</sup>wəɪ (5517) 'make a canoe'

(322b) θəy<sup>t</sup> (725) 'make it'

(323a) tɪw<sup>w</sup>wəɪ (813) 'canoe racing'

(323b) tɔy (529) 'canoe racing'

/-eɪ/ 'bark, wood'

(324) čseɪ (4007) 'fir'

(325) xpeɪ (355) 'red ochre'

(326a) pə<sup>w</sup>ay (TEH) 'rotten wood, punk'

(326b) pəq<sup>w</sup> (TEH) 'mold'

/-qəp/ 'pervasive through the air'

(327a) qələqəp (6493) 'bad smell (in the air)'

(327b) qəl (4405) 'bad'

(328a) ?əy<sup>a</sup>ləqəp (6493) 'fragrance, pleasant smell'

(328b) ?əy (4559) 'good'

(329) x<sup>w</sup>ələqəp (5474) 'hear a sound in the distance'

(330) təwtəw<sup>a</sup>ləqəp (5849) 'an echo'

/-wən/ 'mind, mental activity'

(331a) qələwən (2460) 'mean, bad-tempered'

(331b) qəl (4405) 'bad'

(332a) šq<sup>w</sup>ələwən (4798) 'mind'

(332b) q<sup>w</sup>al (5613a) 'speak'

(333a) x<sup>w</sup>θi<sup>w</sup>wan (T1:56) 'think' (/x<sup>w</sup>-/ 'locative')

(333b) θət (1208) 'say'

/-ləq<sup>w</sup>/ 'motion of a fluid, waves'

(334a) θiθé<sup>w</sup>ləq<sup>w</sup> (6039) 'big waves'

(334b) θi (60) 'big'

(335) háyéləq<sup>w</sup> (4429) 'high, rolling waters'

(336) tənca<sup>w</sup>ləq<sup>w</sup> (4080) 'west wind, wind from the woods'

/-šən/ 'liquid'<sup>22</sup>

(337) k<sup>w</sup>k<sup>w</sup>šən (5887a) 'rainbow'

(338) scé<sup>w</sup>šən (2441) 'rapids'

(339) xšənθət (4735a) 'rain hard'

### 1.2.2. Lexical Suffixes

The lexical suffixes are like the non-inflectives (1.2.1.) in that they are built on to bound or free stems to form uninflected themes. Unlike the non-inflectives they may in addition form stems that may be inflected with one or more of the transitivity suffixes, /-m/ 'intransitive', /-təl/ 'reciprocal', /-t/ 'transitive' and /-nəx<sup>w</sup>/ 'responsible'. Examples (340)-(44) illustrate the /-nəx<sup>w</sup>/ and /-təl/ inflections, which appear less frequently in the corpus than /-m/ or /-t/. The lexical suffixes, /-nəp/ 'ground, soil', /-cəs/ 'hand', /-á<sup>w</sup>q<sup>w</sup>/ 'head' (-i<sup>w</sup>q<sup>w</sup> and -a<sup>w</sup>q<sup>w</sup> variants) and /-ás/ 'face' are underlined:

\*/-nəx<sup>w</sup>/ 'responsible'

(340a) ššənəpnəx<sup>w</sup> (6280b) 'finally have it ploughed'

(340b) ššet (4562) 'plough it'

- (341a) ʔéyqəcəsənəx<sup>w</sup> (6315) 'accidentally catch his hand'  
 (341b) ʔéyqəq (3900) 'caught, jammed'  
 (342a) k<sup>w</sup>ʔi<sup>?</sup>q<sup>w</sup>nəx<sup>w</sup> (6393b) 'pour it on his head accidentally'  
 (342b) k<sup>w</sup>ʔet (6111a) 'pour it'

/-təl/ 'reciprocal'

- (343a) ʔi<sup>?</sup>ʔəqəʔq<sup>w</sup>təl (6446) 'xcratching each other on the head'  
 (343b) ʔi<sup>?</sup>qət (TH) 'scratch it'  
 (344a) ʔi<sup>?</sup>q<sup>w</sup>əstəl (6244) 'slapping each other's faces'  
 (344b) ʔəq<sup>w</sup>ət (708) 'slap him'

Some of the transitivity suffixes have special interpretations when they inflect stems containing lexical suffixes. /-m/ 'intransitive', when it inflects stems with body part suffixes, has the reflexive meaning of /-əət/ 'reflexive' in denoting an action performed by an entity on himself or herself. /-t/ 'transitive' expresses an action performed by an entity on someone else. Thus the form ʔəʔayə<sup>?</sup>əinəm, which contains the suffixes /-m/ 'intransitive' and /əin/ 'mouth', means 'shave oneself', while ʔəʔayə<sup>?</sup>əət, which takes /-t/ 'transitive' and /-əin/ 'mouth' (-əə- allomorph) means 'shave him'.

Although most of the lexical affixes are suffixes, one prefix, /x<sup>w</sup>-/ 'locative', may be included among these affixes on the basis of inflection. Like the non-inflective prefixes (1.2.1.1.) /x<sup>w</sup>-/ may occur in uninflected stems:

Uninflected Stems

- (345a) x<sup>w</sup>ʔewə (5894a) 'come towards someone'  
 (345b) ʔewə (514) 'come'

(346a) x<sup>w</sup>θi<sup>w</sup>ən (T1:119) 'think about it' (/ -wən/ 'mind')

(346b) θət (2440) 'say, promise'

(347a) x<sup>w</sup>cə<sup>w</sup>ə<sup>w</sup>əp (1692) 'Goldstream' (/ -əp/ 'tree, bush')

(347b) cə<sup>w</sup>ə<sup>w</sup> (4815) 'jumping'

(347c) cə<sup>w</sup>ə<sup>w</sup> (5583a) 'jump'

Unlike the non-inflective prefixes /x<sup>w</sup>-/ may be built on to either a base that is inflected with /-m/ 'intransitive' (examples 348-51) or a stem containing a lexical suffix (/ -nəc/ 'tail, bottom', for example), in which case the inflectional suffix may be either /-m/ 'intransitive' (example 352) or /-t/ 'transitive' (example 353).

#### With Uninflected Bases

(348a) x<sup>w</sup>k<sup>w</sup>səcə<sup>w</sup>m (6308b) 'Quamichan Lake'

(348b) k<sup>w</sup>səc (4827) 'trout'

(349a) x<sup>w</sup>k<sup>w</sup>ələx<sup>w</sup>ə<sup>w</sup>m (5838a) 'Qualicum'

(349b) k<sup>w</sup>ələx<sup>w</sup> (5534a) 'dog salmon'

(350a) x<sup>w</sup>təmətə<sup>w</sup>m (4704) 'Genoa Bay'

(350b) tənət (T4:12) 'red ochre'

(351a) x<sup>w</sup>ə<sup>w</sup>ətə<sup>w</sup>m (6312c) 'bushy (place)'

(351b) ə<sup>w</sup>ət (4632) 'tree'

#### With Lexical Suffix Stems

(352a) x<sup>w</sup>čə<sup>w</sup>nəcə<sup>w</sup>m (4835) 'sit on a chair'

(352b) čə<sup>w</sup>t (6253a) 'put it on top'

(353a) x<sup>w</sup>k<sup>w</sup>ənələnəc (4004) 'grab it by the tail'

(353b) k<sup>w</sup>ənət (4166) 'take, have it'

#### 1.2.2.1. Transitivity Subclasses

The lexical suffixes on the basis of their inflection with the

transitivity suffixes may be divided into three classes, A, B and C. Stems containing class A suffixes may be inflected only with /-m/ 'intransitive' while those with class B suffixes may take /-t/ 'transitive', /-nəx<sup>w</sup>/ 'responsible' or /-təl/ 'reciprocal'. Stems with class C suffixes may take any of the four transitivity suffixes.

(a) Class A Suffixes

There are four class A suffixes as follows: /<sup>2</sup>éwtx<sup>w</sup>/ 'house, building', /-álwət/ 'clothing', /-il/ 'move, become' and /-cən/ 'wrist, ankle joint, narrow area'. The first two suffixes have unstressed variants, -<sup>2</sup>əwtx<sup>w</sup> and -əlwət, before /-m/ 'intransitive' and stressed ones, -<sup>2</sup>éwtx<sup>w</sup> and -álwət elsewhere:

(354a) ʒəy<sup>2</sup>əwtx<sup>w</sup>əm (5624) 'build a house'

(354b) ʒəyt (2235) 'make it'

(355a) t<sup>2</sup>əx<sup>w</sup>əlwətəm (5486) 'wash clothes'

(355b) t<sup>2</sup>x<sup>w</sup>ət (5597a) 'wash it'

(356a) ʒəpcənəm (5656) 'tie up one's shoes'

(356b) ʒəpət (5634d) 'tie it up'

(357a) nəw<sup>2</sup>iləm (6346a) 'come, go inside'

(357b) nəwəs (5183) 'put it in'

The word-final distribution of the class A suffixes is illustrated in examples (358)-(63):

(358a) ʒəkən<sup>2</sup>éwtx<sup>w</sup> (2328) 'chicken coop'

(358b) ʒəkən (4316) 'chicken'

(359a) yəq<sup>2</sup>éwtx<sup>w</sup> (3669b) 'a house burns'

(359b) yəq<sup>2</sup> (3602) 'burn'

(360a) ?itətálwət (812) 'pajamas'

(360b) ?itət (3692) 'sleep'

(361a) t<sup>19</sup>áməcən (4500) 'bracelet'

(361b) st<sup>19</sup>ám (78) 'bone'

(362a) ʔpí1 (6338b) 'go down, below'

(362b) ʔóp (6338a) 'deep'

(363a) ?ʔáqəl (3530) 'go out'

(363b) sʔəkq (3659) 'outside' (/ə-/ 'static' and resultative)

In examples (362)-(63) /-í1/ 'move, become' shows both stressed and unstressed allomorphs in word final position depending upon the individual lexical item. By contrast, when it is inflected with /-m/ 'intransitive' (example 357), it is always realized as -í1.

(b) Class B Suffixes

There are thirteen class-B suffixes, which are inflectible with /-t/ 'transitive'. They are as follows: /-as/ 'round objects, money (originally silver dollars)', /-é1ə/ 'container, people (in counting)', /-nəp/ 'ground, floor', /-als/ 'round, spherical', /-wíl/ 'inside of a round object', /-wé?c/ 'lower back', /-wé?ʔ/ 'side of the back', /-íwən/ 'rear end', /-eq/ 'penis', /-ínək/ 'front of the neck, throat', /-cəs/ 'hand, lower arm', /-énwəs/ 'heart' and /-ínəs/ 'chest'. The transitivity environment of these suffixes may be observed in examples (364)-(76), which illustrate them in the order of citation above:

(364a) k<sup>19</sup>ʔast (5643) 'count money'

(364b) k<sup>19</sup>ʔet (5837a) 'count them'

(365a) k<sup>19</sup>ʔé1ət (5489b) 'count people'

(365b) k<sup>19</sup>ʔet (5837a) 'count them'

- (366a) e<sup>o</sup>l<sup>o</sup>w<sup>o</sup>n<sup>o</sup>pt (5645b) 'turn over soil'  
 (366b) e<sup>o</sup>l<sup>o</sup>w<sup>o</sup>n<sup>o</sup>ep (5435) 'turn earth'  
 (366c) e<sup>o</sup>l<sup>o</sup>w<sup>o</sup>t (5645a) 'turn it over'
- (367a) q̄p<sup>o</sup>y<sup>o</sup>á<sup>o</sup>l<sup>o</sup>st (5648) 'tie a ribbon around it'  
 (367b) q̄p<sup>o</sup>y<sup>o</sup>á<sup>o</sup>ls (5409) 'tie a ribbon'  
 (367c) q̄p<sup>o</sup>t (5634c) 'put them together'
- (368) t<sup>o</sup>x<sup>o</sup>á<sup>o</sup>w<sup>o</sup>í<sup>o</sup>lt (1258) 'punch him in the stomach'
- (369a) x<sup>o</sup>á<sup>o</sup>q̄<sup>o</sup>w<sup>o</sup>í<sup>o</sup>ct<sup>o</sup>m (3973) 'grabbed by the neck' (/m/ 'passive')  
 (369b) á<sup>o</sup>q̄<sup>o</sup>t (THI) 'wrap it up, put it away'
- (370a) q̄<sup>o</sup>w<sup>o</sup>á<sup>o</sup>q̄<sup>o</sup>t (THI) 'elub someone on the side of the back'  
 (370b) q̄<sup>o</sup>aq̄<sup>o</sup> (5705) 'elubbed'
- (371a) x<sup>o</sup>á<sup>o</sup>q̄<sup>o</sup>w<sup>o</sup>í<sup>o</sup>w<sup>o</sup>t (2018) 'slap him on the behind'  
 (371b) á<sup>o</sup>q̄<sup>o</sup>t (708) 'slap him'
- (372a) q̄<sup>o</sup>í<sup>o</sup>s<sup>o</sup>q̄<sup>o</sup>t (THI) 'tie it on the penis'  
 (372b) q̄<sup>o</sup>í<sup>o</sup>s<sup>o</sup>q̄<sup>o</sup> (T1:1) 'tied up penis'  
 (372c) q̄<sup>o</sup>í<sup>o</sup>s<sup>o</sup>t (THI) 'tie it'
- (373a) t̄<sup>o</sup>í<sup>o</sup>q̄<sup>o</sup>m<sup>o</sup>ént (6368) 'strangle him'  
 (373b) t̄<sup>o</sup>q̄<sup>o</sup> (Kava) 'cut into him' (e.g. a rope)
- (374a) k<sup>o</sup>w<sup>o</sup>n<sup>o</sup>c<sup>o</sup>st (5528b) 'holding someone by the hand'  
 (374b) k<sup>o</sup>w<sup>o</sup>n<sup>o</sup>t (4166) 'take it'
- (375a) x<sup>o</sup>á<sup>o</sup>p<sup>o</sup>r<sup>o</sup>w<sup>o</sup>st (THI) 'claw out the heart'  
 (375b) á<sup>o</sup>p<sup>o</sup>t (Kava) 'scratch'
- (376a) e<sup>o</sup>q̄<sup>o</sup>w<sup>o</sup>í<sup>o</sup>n<sup>o</sup>st<sup>o</sup>m (4063) 'stabbed in the chest' (/m/ 'passive')  
 (376b) e<sup>o</sup>q̄<sup>o</sup> (4026a) 'pricked'

The word-final environment of the Class B suffixes may be observed in examples (377)-(89). With the exception of /-áls/ 'round, spherical', /-íw<sup>o</sup>n/ 'rear end' and /-á<sup>o</sup>n<sup>o</sup>t/ 'front of the neck, throat' the suffixes have a single allomorph. /-íw<sup>o</sup>n/ has two variants: -íw<sup>o</sup>-

before t and -lwan elsewhere. /-4nət/ is realized as 4nən before /-t/ 'transitive' and as -4nət elsewhere. /-als/ exhibits stress variation, being stressed in some lexical items (379) and unstressed in others (example 380).

(377a) šlənóla (3688) 'jar, bottle, glass'

(377b) lən (2420) 'liquor'

(378a) šələnəptən (564) 'rug'

(378b) šələnəpt (5930a) 'level up the ground'

(379a) kʷsɪʔáls (5481) 'bake (a potato)'

(379b) kʷəs (6366b) 'hot'

(380a) stʰámals (1709) 'bony'

(380b) stʰám (2480) 'bone'

(381) špəwɪltən (4541) 'lining on a house'

(382a) ləkʷəwɪc (6353) 'broken back'

(382b) ləkʷ (6005) 'broken off'

(383) sʔəhalwəʔ (4204) 'side' (e.g. of a house)

(384a) stʰámɪwən (6135) 'tailbone'

(384b) stʰám (2480) 'bone'

(385a) šɪsəʔa (T1:1) 'tied up penis'

(385b) šɪsət (T1:1) 'tie it'

(386a) šɪnət (T1:1) 'big necked'

(386b) šɪ (60) 'big'

(387a) špəyəs (4832) 'cedar branches'

(387b) špəy (2048) 'cedar'

(388a) ʔəyənwas (5454) 'brave'

(388b) ʔəy (4559) 'good'

(389a) stʰámɪnas (5144) 'Killeet Bay' (chestbone-shaped)

(389b) stʰám (1406) 'bone'

Among the class B morphemes /-wii-/ 'inside of a round object' is exceptional in not occurring word finally (example 381).

(c) Class C Suffixes

The class C suffixes, as mentioned earlier, are forms which are inflectible with /-t/ 'transitive' and /-m/ 'intransitive'. There are twelve such morphemes as follows: /-áíá/ 'eye, deep container', /-ps/ 'back of the neck', /-ohó/ 'ear', /-á?á/ 'head', /-áá/ 'face', /-qáán/ 'nose, point', /-óín/ 'mouth, language, round chape', /-één/ 'foot, part below the knee', /-qén/ 'container, inside throat, voice', /-íws/ 'side of the body', /-nae/ 'bottom, tail' and /-it<sup>(1)</sup>/ 'clothes'.

The lexical suffix /-it<sup>(1)</sup>/ 'clothes' has two allomorphs:

-it<sup>(1)</sup>e- before the transitivity suffixes, /-t/ 'transitive' and /-m/ 'intransitive' (examples 390-91), and -it<sup>(1)</sup> elsewhere (examples 392-93):

(390) 4wáit<sup>(1)</sup>e?ám (6015b) 'undress oneself'

(391a) 4it<sup>(1)</sup>e?st (6269a) 'cutting into pieces'

(391b) 4st (kava) 'cut into' (e.g. rope)

(392) 4wáit<sup>(1)</sup>e (6015) 'undressed'

(393a) 4it<sup>(1)</sup>e (T13) 'thick clothes'

(393b) 4st (6373) 'thick'

The suffix /-íws/ 'side of the body' has one allomorph -íwá

in all transitivity environments:

(394) x<sup>h</sup>áyíwásm (L1:13) 'shape up, do better, improve'

(395a) 4<sup>h</sup>q<sup>h</sup>íwást (T13) 'club them'

(395b) 4<sup>h</sup>aq<sup>h</sup> (65705) 'clubbed'

(396) yálemíwá (3922) 'right side (of one's body)'

The class C suffix /-áles/ 'eye; deep container' has an idiosyncratic semantic interpretation. In most contexts (397-98) it refers to the body part 'eye', but with one lexical set, that of colour names, it signified approximation (example 399).<sup>23</sup>

- (397a) ʔtəláləs (2293) 'eyeglasses'
- (397b) téls (4432) 'money, (silver) dollar'
- (398) qʷóáles (4000) 'long wooden plates'
- (399a) ekʷímaləs (5473) 'reddish'
- (399b) ekʷim (4289) 'red'

As a class C form /-áles/ 'eye' forms part of a stem which is inflected with either /-m/ 'intransitive' (example 400) or /-t/ 'transitive'

(401):

- (400a) yəwálesəm (6351) 'rub one's eyes'
- (400b) yəwət (715) 'rub it'
- (401a) yəwálest (5046a) 'rub it in someone's eyes'
- (401b) yəwət (5046b) 'rubbed in'

The lexical suffix /-ps/ 'back of the neck' has two allomorphs, -ps and -psén. The former appears in predicators that take /-m/ 'intransitive' (402-403) and the latter, with /-t/ 'transitive' inflected stems (404):

- (402) təpsəm (4336) 'back of the neck'
- (403a) təmstəpsəm (4382a) 'big black woodpecker'
- (403b) təmst (772) 'ochre'
- (404a) kʷənəpséntəm (3997) 'is grabbed by the neck'
- (404b) kʷənst (4166) 'take, have it'

The class C suffix /-əneʔ/ 'ear' has two allomorphs -əneʔ

and -ohə. The following examples (405-408) show that they are not conditioned by the transitivity of the predicate but by the individual lexical item:

- (405) həq<sup>w</sup>əns? (1643) 'deaf'  
 (406a) x<sup>w</sup>q<sup>w</sup>əhəm (6355a) 'pierce one's ear'  
 (406b) x<sup>w</sup>q<sup>w</sup>əhə (6355b) 'pierced ear'  
 (407a) həq<sup>w</sup>əhətəm (5182) 'slapped on the ear'  
 (407b) həq<sup>w</sup>ət (708) 'slap him'  
 (408a) həq<sup>w</sup>ətəhə (9221) 'mule' (-hə 'plural')  
 (408b) həq<sup>w</sup>t (802) 'long, tall'

The six remaining class C morphemes each have two types of allomorphs. They have stressed variants as follows: -həq<sup>w</sup> 'head', -həs 'face', -qəhən 'nose, point', -hən 'mouth, language', -hən 'foot, part below the knee' and -qən 'container, voice'. They also have unstressed variants as follows, in which the suffix vowel is reduced to ə: -əq<sup>w</sup>, -əs, -qəhən, -hən, -hən and -qən. The stressed variants occur with /-m/ 'intransitive' and, where the lexical suffix does not have a final n, with /-t/ 'transitive' (examples 409-411):

- (409a) həq<sup>w</sup>ət (5788a) 'scratch his head'  
 (409b) həq<sup>w</sup>əm (5788b) 'scratch one's own head'  
 (409c) həq<sup>w</sup>t (5788b) 'scratch it'  
 (410a) həq<sup>w</sup>ət (6393a) 'pour water on his head' (/həq<sup>w</sup>ət/)   
 (410b) həq<sup>w</sup>əm (5787a) 'pour water on one's own head'  
 (410c) həq<sup>w</sup>t (5999a) 'pour it'  
 (410d) həq<sup>w</sup>t (4523) 'spill'  
 (411a) həq<sup>w</sup>ət (5775c) 'push it out from the shore'  
 (411b) həq<sup>w</sup>əm (5775b) 'push oneself from the shore'

- (411c) ǫžot (5692) 'push it'  
 (411d) ǫž (5573) 'pushed'

Where the lexical suffix terminates in n, the stressed variants still occur with /-m/ 'intransitive', but the unstressed ones appear with n deletion before t (examples 412-16):

- (412a) x<sup>m</sup>ot<sup>m</sup>elqst (5271) 'wipe its nose'  
 (412b) x<sup>m</sup>ot<sup>m</sup>elqs<sup>n</sup>em (5772) 'wipe one's own nose'  
 (413a) ?x<sup>m</sup>ay<sup>m</sup>otem (5734) 'he is shaved' (/ -m/ 'passive')  
 (413b) ?x<sup>m</sup>ay<sup>m</sup>in<sup>m</sup>em (1911) 'shave oneself'  
 (414a) q<sup>m</sup>iy<sup>m</sup>šenem (2689) 'put on one's shoes'  
 (414b) q<sup>m</sup>iy<sup>m</sup>ot (5604c) 'put a shoe on him'  
 (414c) q<sup>m</sup>iy<sup>m</sup>šon (5604a) 'shoe'  
 (414d) q<sup>m</sup>iy (5587) 'log, timber'  
 (415a) q<sup>m</sup>éqst (5608c) 'cover it (with a lid)'  
 (415b) q<sup>m</sup>éqst<sup>n</sup>em (5608b) 'a cover'  
 (416a) x<sup>m</sup>is<sup>m</sup>qin<sup>m</sup>em (3868) 'give a war cry'  
 (416b) x<sup>m</sup>is (5605) 'war'

Putatively a form like q<sup>m</sup>ipš<sup>m</sup>élem 'I have a cramp in the leg' is a counterexample to the statement about n deletion. However, it is also possible to take the view that n deletion applies before the rule concerning the ǫ-allomorph of /-t/ 'transitive' (1.1.1.2.).

As well as occurring with /-t/ 'transitive' and /-m/ 'intransitive' the class C suffixes, like the class A and B ones, may enter into uninflected stems (417-25), in which case the unstressed variants occur.

- (417) s<sup>m</sup>š<sup>m</sup>qa<sup>m</sup> (4421) 'fish head=open fire roast'  
 (418) léyqson (4888) 'Valdes Island'

- (419a) snōžžōn (4340) 'toe'
- (419b) snōžžōss (5790) 'finger, thumb'
- (420a) qīlōs (TII) 'sad'
- (420b) qōl (4405) 'bad, mean'
- (421a) žwīžwōžās (5041) 'making faces'
- (421b) žwōžwōžō (6357) 'copycat'
- (421c) žwōžwōžōt (3756) 'copy it'
- (422a) žōyāžōqōn (5430) 'high-pitched voice'
- (422b) žōyāžō (4025) 'sharp' (/žōy/ 'good', /-āžō/ 'edge')
- (423a) spāalqōn (4134) 'raven carving'
- (423b) spaal (5843) 'raven'
- (424a) sqīqōtōq (4958) 'bandaged head'
- (424b) sqīqōt (5742b) 'wrapped up around oneself'
- (425a) žāyomōn (520) 'slow walker'
- (425b) žāyom (152) 'slow, late'

1.2.2.2. Connectors

While some lexical suffixes, such as /-āžō/ 'head', are simply attached to a base, others enter into a more complex morphological construction consisting of the suffix and a preceding accretive element, which modifies it. This type of element is termed a connector.<sup>24</sup> The following elements are connectors: /-ālow/ 'part of the arm or leg', /-āžō/ 'mouth', /-ā/ and /-ōl/ (no gloss).

The suffix /-ālow/ 'part of the arm or leg' particularizes the meanings of two lexical suffixes, namely, /-žōn/ 'foot, part below the knee' and /-ōss/ 'hand, part below the elbow'. In contrast to these forms the accretive constructions /-ālowžōn/ 'toe' and /-ālowōss/

'finger' designate a part of the foot and the hand respectively:

- (426a)  $\text{ʒəʔáɫwɛəs}$  (5785c) 'thumb'
- (426b)  $\text{ʒəʔáɫwɛsən}$  (4341) 'big toe'
- (426c)  $\text{ʒəʔáɫé}$  (95) 'eldest'
- (427a)  $\text{ʒəʔasəqʷáɫwɛəs}$  (5785a) 'little finger'
- (427b)  $\text{ʒəʔasəqʷáɫwɛsən}$  (5785b) 'little toe'
- (428a)  $\text{ʔxʷáɫwɛəs}$  (1156) 'fingernail'
- (428b)  $\text{ʔxʷáɫwɛsən}$  (1497) 'toenail'
- (429)  $\text{ʒəʔáɫwɛsən}$  (6371a) 'big toes'

The connector /-á-/ and the connector /-áʔe-/, which has two allomorphs -áʔe- and -áy- in free variation, characterize the lexical suffix /-θin/ 'mouth'. /-áʔe-/ occurs with /-θin/ in uninflected (430-31) and, in inflected (example 432) stems. /-á-/ appears in just uninflected stems (433-34). Where the stem is uninflected the distribution of /-áʔe-/ and /-á-/ is apparently lexically determined.

/-áʔe-/ 'mouth'

- (430)  $\text{ʒəʔáʔeθən}$  (5784) 'upper lip'
- (431a)  $\text{ʒəʔáʔeθən}$  (3952) 'big mouth'
- (431b)  $\text{ʒəʔáʔe}$  (5573) 'pushed'
- (432a)  $\text{ʔəʔáʔeθəm}$  (5734) 'he is shaved' (/əθm/ 'passive')
- (432b)  $\text{ʔəʔáʔeθəm}$  (1911) 'shave oneself'
- (432c)  $\text{ʔáʔe}$  (5322) 'scratched'

/-á-/ 'mouth'

- (433)  $\text{θən}$  (142) 'mouth'
- (434a)  $\text{xʷkʷəmɫəxʷθən}$  (3999) 'Coffin Point' (/xʷ-/ 'locative')
- (434b)  $\text{kʷəmɫəxʷ}$  (3552) 'root'

The connector /-af-/ has a wider distribution than /-áʔe-/.

/-áʔe-/ and /-á-/ . It appears with the lexical suffixes, /-xən/ 'edge, border', /-mæx<sup>w</sup>/ 'breast, milk', /-nəc/ 'bottom, tail' and /-nis/ 'tooth', and in addition with the non-inflectives, /-qən/ 'wool, fur' and /-cəp/ 'fire' (1.2.1,2.), and tends to render the meaning of its I.C. partner more specific.

/-xən/ by itself has the general meaning 'border, edge' (435-36), but with /-al-/ and a second connector /-é-/ (437-40) it denotes a body part, the arm, which may be viewed as a specific kind of edge:

/-xən/ 'border, edge'

- (435) spə<sup>h</sup>xən (4581) 'open field, meadow, prairie'  
 (436a) ləməxətən (5650a) 'someone looking out, keeping watch'  
 (436b) ləmət (5306b) 'look at it'

/-ələxən/ 'arm'

- (437a) θə<sup>h</sup>ələxəθələm (3847) 'I am poked in the elbow'  
 (437b) θə<sup>h</sup> (5195) 'poked'  
 (438a) st<sup>h</sup>amələxən (5649a) 'upper arm'  
 (438b) st<sup>h</sup>am (1406) 'bone'  
 (439a) ɬayələxən (4051) 'paralyzed arm'  
 (439b) ɬay. (4777) 'die'  
 (440a) stəlpələxən (5652a) 'bat' (creature)  
 (440b) təlpəət (5652b) 'make the sound of a flying bat'

The suffix /-nəc/ 'tail, bottom' by itself designates the lower (versus the upper) end of an individual object viewed in terms of height (441-42) and may refer to a body part below the waist (443).

/-nəc/ 'tail, bottom'

- (441) ləmnəct (6376b) 'fold them (e.g. ends of one's trousers)'  
 (442a) plətnəc (6373b) 'bark in the stump heavier down below than  
 higher up'  
 (442b) pɹet (6373a) 'thick'  
 (443) št<sup>θ</sup>əmx<sup>w</sup>nəc (4344) 'hip'

When, however, /-nəc/ is modified by /-al-/ the designation is more specific. /-əlnəc/ denotes a part of a lower end, the tail (444).

/-əlnəc/ 'tail'

- (444a) k<sup>w</sup>ayxəlnəcəm (3865) 'wag its tail'  
 (444b) k<sup>w</sup>eyxət (3764) 'stir, agitate it'

The suffixes /-məx<sup>w</sup>/ 'breast, milk' and /-nɪs/ 'tooth' are idiosyncratic. /-məx<sup>w</sup>/ (examples 445-47) apparently does not occur without its connector, a fact which suggests that -əlməx<sup>w</sup> might be analyzable as a single morpheme.

/-əlməx<sup>w</sup>/ 'breast, milk'

- (445a) snəsəlməx<sup>w</sup> (5210) 'butter' (milk fat)  
 (445b) snas (1407) 'grease' (/s-/ 'absolute')  
 (445c) nas (5751b) 'be fat'  
 (446a) θiθəlməx<sup>w</sup> (TEH) 'big breasts'  
 (446b) θiθə (TEH) 'big' (plural)  
 (446c) θi (2704) 'big, large'  
 (447a) pt<sup>θ</sup>əlməx<sup>w</sup> (2686) 'milk it'  
 (447b) pɪt<sup>θ</sup>ət (511) 'wring it out!'

In the case of /-nɪs/ (448-49) the connector does not affect the meaning of the lexical item in which it occurs except insofar as /-nɪs/ might refer to a set of teeth and /-əlnəs/ to a specific tooth.

/-nis/ 'tooth'

(448) t'əx<sup>9</sup>n<sup>9</sup>isəm (5300) 'bare one's teeth'

(449a) xətəl<sup>9</sup>nəs (5698c) 'have toothache'

(449b) xət (2653) 'ache, sore'

The distribution of the connectors is not entirely limited to the lexical suffixes. The non-inflective suffix /-tən/ 'instrument' (1.2.1.) is characterized by three connectors, /-né?-/ , /-nis-/ and /-θə-/ (examples 450-55), the distribution of which is conditioned by the individual lexical item:

(450a) ?iməšné?tən (5114) 'guest, visitor'

(450b) ?iməš (4142a) 'walk'

(451a) qpəné?tən (2233) 'ribbon'

(451b) qepət (5634d) 'tie it'

(452a) čəq<sup>w</sup>n<sup>9</sup>istən (6385b) 'brooch, safety pin'

(452b) čəq<sup>w</sup> (4026) 'pricked'

(453) təqn<sup>9</sup>istən (6385a) 'button'<sup>25</sup>

(454) šx<sup>w</sup>?eθətən (6383b) 'cloud'

(455) šqpálθətən (4987) 'knee-cap'

1.2.2.3. Numerals

The numerals in Cowichan enter into derivational paradigms that are formed productively from numeral morphemes and from certain lexical suffixes. These numerals do not have special morphological status. In formal terms numerals that take lexical suffixes are like any other predicators that take such suffixes. However, since these

lexical items have traditionally been of linguistic interest as a single semantic system, they are presented here in one section.

The numeral themes enter into three paradigms, which may be termed unit, iteration and decade. The unit numerals constitute the base paradigm from which the other two are formed. The unit numerals are as follows:

#### Unit Numerals

nəca? (147) 'one'	t̥xəm (3006) 'six'
yəsélə (3806) 'two'	t̥a?kʷəs (3007) 'seven'
ɬixʷ (3694) 'three'	té?cəs (3008) 'eight'
ʃa?áəən (3004) 'four'	tuuxʷ (5739A) 'nine'
ɬécəs (3005) 'five'	?ápən (4737) 'ten'
	ckʷəš (3020) 'twenty'

In this set there are no elements to designate the numbers eleven to nineteen. Instead, the numerals one to nine are applied in a phrase of the type ?ápən ?i? kʷ ɬixʷ 'ten and three'.<sup>26</sup>

The iteration paradigm is formed productively from the unit set by the suffixation of /-éɬ/ 'numeral iteration', which corresponds translationally to the English word 'times' in the expression 'four times'.

#### Iteration Numerals

nəcixʷ (150) 'once'	t̥xəméɬ (661) 'six times'
əmé (151) 'twice'	t̥a?kʷəséɬ (662) 'seven times'
ɬxʷéɬ (152) 'three times'	té?cséɬ (3606a) 'eight times'
ʃəθənéɬ (153) 'four times'	tuuxʷéɬ (3606b) 'nine times'
ɬécséɬ (154) 'five times'	?ápənéɬ (665) 'ten times'
	ckʷəšéɬ (3606e) 'twenty times'

In the above paradigm there are two irregular forms, namely, /nə'ciχ<sup>w</sup>/ 'once' and /θəmə/ 'twice', in which /-éi/ 'numeral iteration' does not appear.

The decade numerals, with the exception of ǰəθənše 'forty', are formed from the unit set by the addition, in this sequence, of the numeral suffixes /-éi/ 'numeral iteration' and /-še/ 'decade numeral', /-éi/ being realized as -əi- before /-še/. In this system the first vowel of each form is realized on the surface as ə, unless it is followed by ? or is long.

#### Decade Numerals

ǰəx <sup>w</sup> əiše (3021) 'thirty (times)'	ǰəxəməiše (3024) 'sixty (times)'
ǰəθənše (3022) 'forty (times)'	t <sup>θ</sup> ə'k <sup>w</sup> səiše (3025) 'seventy (times)'
ǰəqəcsəiše (3023) 'fifty (times)'	té'csəiše (3026) 'eighty (times)'
	túux <sup>w</sup> əiše (3027) 'ninety (times)'

Semantically, these decade numerals may be regarded both as a continuation of the unit paradigm and as an extension of the iteration paradigm to the extent that a numeral such as ǰəx<sup>w</sup>əiše may mean either 'thirty' or 'thirty times'.

For numbers beyond ninety-nine there are two numeral themes, né'cawəc 'one hundred' and θə'ənc 'two hundred', and one English loan word təwsən 'thousand'. The first of these may be preceded by a unit numeral as in túux<sup>w</sup> né'cawəc 'nine hundred' to express the numbers between three hundred and nine hundred. To indicate the numbers in between an expression of the type θə'ənc ?i? k<sup>w</sup> ǰəx<sup>w</sup>əiše ?i? k<sup>w</sup> ǰəqəcs 'two hundred and thirty-five' (two hundred and thirty and five) is used, in which the members of the different numeral paradigms are linked by ?i? and

k<sup>w</sup> 'the'.

The unit, iteration and decade forms may be extended by means of lexical suffixes. The suffixes which have been identified thus far in the numeral sets are as follows: /-élə/ 'people, container'; /-ás/ 'round things, (silver) dollars', /-ʔéwtx<sup>w</sup>/ 'building, house' (-ʔəwtx<sup>w</sup> allomorph) and /-qén/ 'container' (-qén allomorph). Of these, the lexical suffixes that occur most productively are /-ás/ and /-qén/, which are attached to both unit and decade numerals. In the first set the numeral suffix /-še/ is realized as -ša before /-ás/.

/-ás/ 'round things, (silver) dollars'

(a) Unit Numerals

nácəs (4193) 'one dollar'	tšəməs (4198) 'six dollars'
yəsáles (4194) 'two dollars'	t <sup>ə</sup> áʔk <sup>w</sup> səs (4199) 'seven dollars'
tšix <sup>w</sup> əg (4195) 'three dollars'	táʔcsəs (4200) 'eight dollars'
xəθínes (4196) 'four dollars'	túux <sup>w</sup> əs (4201) 'nine dollars'
tšəqacsəs (4197) 'five dollars'	ʔəpanəs (4202) 'ten dollars'
	ck <sup>w</sup> šás (4271) 'twenty dollars'

(b) Decade Numerals

tšəx <sup>w</sup> ətšáʔas (4272) 'thirty dollars'	tšəmətšáʔas (4275) 'sixty dollars'
xəθənsáʔas (4273) 'forty dollars'	t <sup>ə</sup> ək <sup>w</sup> sətšáʔas (4276) 'seventy "'
tšəqcsətšáʔas (4274) 'fifty dollars'	təʔcsətšáʔas (4277) 'eighty "'
	túux <sup>w</sup> ətšáʔas (4278) 'ninety "'

In the /-qén/ 'container' paradigm /-qén/ is preceded by ə after a consonant and i. The occurrence of /-qén/ triggers the vowel change é → i in the decade numerals.

/-qən/ 'container'(a) Unit Numerals

nəcəqən 'one container'	tʰəməqən 'six containers'
yəsələqən 'two containers'	tʰəkʷsəqən 'seven "'
ʔixʷəqən 'three "'	təʔcsəqən 'eight "'
ʔəθiŋəqən 'four "'	tuxʷəqən 'nine "'
ʔqəcsəqən 'five "'	ʔəpənəqən 'ten "'
	ckʷəʂiqən 'twenty "'

(b) Decade Numerals

ʔəxʷəʂiʔəqən 'thirty "'	tʰəməʔʂiʔəqən 'sixty "'
ʔəθəŋʂiʔəqən 'forty "'	tʰəkʷsəʂiʔəqən 'seventy "'
ʔqəcsəʂiʔəqən 'fifty "'	təʔcsəʂiʔəqən 'eighty "'
	tuxʷəʂiʔəqən 'ninety "'

The lexical suffixes /-élə/ 'people, container' and /-ʔəwtxʷ/ 'building' are limited to unit numerals, /-ʔəwtxʷ/ being attached only to the first five numerals:

/-élə/ 'people'

nəŋəcaʔ (148) 'one person'	tʰəmələ 'six people'
yəysələ (323) 'two people'	tʰəkʷsələ 'seven people'
ʔ(i)xʷələ 'three people'	təʔcsələ 'eight people'
ʔəθiŋə 'four people'	tuxʷələ 'nine people'
ʔqəcsələ (5723) 'five people'	ʔəpənələ 'ten people'
	ckʷsələ 'twenty people'

/-ʔəwtxʷ/ 'building'

nəcəwtxʷ 'one building'	ʔəθiŋəwtxʷ 'four buildings'
θəwtxʷ 'two buildings'	ʔqəcsəwtxʷ 'five buildings'
ʔixʷwtxʷ 'three buildings'	

Although non-inflective morphemes (1.2.1.) were found not to

occur productively with numeral themes, two partial paradigms were elicited in which /s-/ 'absolute' and /-áɪ/ 'canoe, vehicle' were present. The /-áɪ/ paradigm consists of just two elements: nécəx<sup>w</sup>áɪ 'one canoe, buggy' (formed from nécíx 'once') and θéməx<sup>w</sup>áɪ 'two canoes, buggies' (formed from θémé 'twice'). /s-/ 'absolute' along with /-s/ 'third possessive' and /-nét/ 'night' appears in a partial and irregular numeral paradigm, which denotes the days of the week.

#### Days of the Week

- sǎxǎɪnét (188) 'Sunday' (day of suffering--/xǎɪ/ 'hurt')
- siláwəɪnét (189) 'Monday'
- sθément (6259) 'Tuesday' (second night)
- sɪx<sup>w</sup>s (191) 'Wednesday' (the third of it)
- sǎaʔáθəns (192) 'Thursday' (the fourth of it)
- sɪqécəs-s (193) 'Friday' (the fifth of it)
- táq<sup>w</sup>təm (6327a) 'Saturday' (it is being cut)

Of the above elements the four underlined ones as in Clallam (Thompson 1971:270) contain numerals, the first belonging to the iteration paradigm and the others to the unit paradigm. No gloss has been discovered for the putative morpheme \*siláwəɪ-. In the case of táq<sup>w</sup>təm 'Saturday' the component morphemes appear to be táq<sup>w</sup> 'cut' (Actual), /-t/ 'transitive' and /-m/ 'general passive'.

### 1.3. Deictic System

The deictics in Cowichan are composite forms made up from a small stock of morphemes that do not inflect the non-deictic elements, which may take various derivational and aspectual morphemes. There are

two classes of deictics: determiners (1.3.1.) and locatives (1.3.2.). The latter are morphologically distinct from the former in being characterized by morphemes which are represented by the phoneme sequences ni and ʔi and which indicate the proximity in space of an entity to a speaker.

### 1.3.1. Determiners

The determiners are represented by the morphemes contained in the following table, in which the terminology is derived from two sources (Hukari 1977a:33 and Elmendorf and Suttles 1960:10).

	<u>Unmarked</u>	<u>Marked</u>
<u>Basic</u>	t <sup>0</sup> -	0-
<u>Absent</u>	k <sup>w</sup> 0-	t-
<u>Hypothetical</u>		k <sup>w</sup>

The determiners may be subdivided into two classes of elements: the articles, of which there is one paradigm, and the demonstratives, of which there are three paradigms. The demonstratives and articles have in common the affixes shown in the above table, but are morphologically distinct to the extent that the former, which will be discussed in 1.3.1.1., but not the latter, are marked by certain word-final morphemes, which will be analyzed in 1.3.1.2. Demonstratives.<sup>27</sup>

#### 1.3.1.1. Articles

As indicated in the table in 1.3.1. the meaning of a

determiner may be expressed in terms of a dichotomy between unmarked and marked determiners and a trichotomy between basic, absent and hypothetical elements. In the case of the articles the dichotomy between marked and unmarked corresponds respectively to a gender distinction between feminine and masculine where the referents are human.

	<u>Articles</u>	
	<u>unmarked</u>	<u>marked</u>
<u>basic</u>	$t^{\theta}ə$	$\thetaə$
<u>absent</u>	$k^w(\theta)ə$	$\text{ʔ}ə$
<u>hypothetical</u>	$k^wə$	$(k^wsə)$

The gender distinction may be observed in phrases which contain a kinship term like /šx<sup>w</sup>ʔáq<sup>w</sup>aʔ/ 'sibling' along with a preceding determiner. Whereas phrases like  $t^{\theta}ə$  nəšx<sup>w</sup>ʔáq<sup>w</sup>aʔ 'my brother' and  $k^w\thetaə$  nəšx<sup>w</sup>ʔáq<sup>w</sup>aʔ 'my brother (not present before the speaker)' both denote male (unmarked) referents,  $\thetaə$  nəšx<sup>w</sup>ʔáq<sup>w</sup>aʔ 'my sister' and  $\text{ʔ}ə$  nəšx<sup>w</sup>ʔáq<sup>w</sup>aʔ 'my sister (not present)' denote female (marked) referents.

The unmarked/marked distinction is not solely one of gender. In examples (456)-(59) it is not apparent that the articles denote male or female referents:

(456) melq cən ʔə  $t^{\theta}ə$  yásəq<sup>w</sup> (5384b) 'I forgot the hat'

(457) niʔ p əw nəswéʔ  $\thetaə$  lələm (277) 'That house is mine'

(458) x<sup>w</sup>éleqəp  $k^w\thetaə$  qəwət (5474) 'The drum is sounding in the distance'

(459) niʔ  $\text{ʔ}ə$  pəq nəq<sup>w</sup>léyšən niʔ ʔik<sup>w</sup> (5728) 'It is my white shoes that are lost'

Rather, the distinction is one of focus. In (457) and (459) the marked articles /θə/ and /ɬə/ describe an entity to which the speaker is directing attention. In (456) and (458), where there is no question of focus, the unmarked articles /t<sup>θ</sup>ə/ and /k<sup>w</sup>θə/ occur.<sup>28</sup>

As well as being interpreted as a marked or unmarked element, an article may be characterized as being basic, absent or hypothetical in accordance with the degree of accessibility the speaker has to an entity. The basic articles /t<sup>θ</sup>ə/ and /θə/ contrast with the absent ones /k<sup>w</sup>θə/ and /ɬə/. In examples (456)-(57) above, in which the basic articles occur, the entity (šet 'road/door' in (456) and léləm 'house' in (457)) is visible to the speaker. In examples (458)-(59) containing the absent articles the discourse situation in each case implies that the speaker cannot see the object he is talking about.

The article /k<sup>w</sup>/ 'hypothetical' differs from the basic and absent articles. Whereas the other four deictics denote a material entity, /k<sup>w</sup>/ designates one that does not exist--such as a deceased person--or whose existence is in question. This semantic interpretation may be observed in examples (460)-(62). In (460)-(61) it is implied that the entities 'John' and 'canoe' do not yet exist, but will exist.

(460) ni? né?ətes t<sup>θ</sup>ə nəšxəwéli t<sup>θ</sup>ə qeq ?ə k<sup>w</sup> Jan (5663)<sup>29</sup>

'My parents are calling the baby John'

(461) θəy<sup>w</sup>əɬ cən ?ə k<sup>w</sup> snəx<sup>w</sup>əɬ (5517) 'I am making a canoe'

In (462) /k<sup>w</sup>/ enters into a temporal phrase expressing a future event, that is, one that has yet to materialize.

(462) nəm cən hēwə ?ə k<sup>w</sup> ?əpən sk<sup>w</sup>eyl (4737) 'I am going away for ten days'

The remaining article /k<sup>w</sup>sə/ 'marked, hypothetical' occurs when the hypothetical entity is money:

(463) ʔaməstəs k<sup>w</sup>θə nəmən k<sup>w</sup>θə nəʃx<sup>w</sup>ʔa<sup>w</sup>aʔ ʔə k<sup>w</sup>sə tɛlə (3686)  
'My father is giving my brother some money'

### 1.3.1.2. Demonstratives

The demonstratives may be categorized into three types according to the word-final morpheme. These classes of elements are termed attentional, personal and focal demonstratives. The attentional forms are characterized by the word-final morpheme /-eý/ 'attention-directed' (realized as i after /k<sup>w</sup>/ 'hypothetical'), which indicates that an entity is under the immediate observation of the speaker. With the exception of the deictic /t<sup>θ</sup>eliʔ/ 'unmarked, basic, plural' ("those ones") the attentional paradigm follows from that of the articles.

#### Attentional Demonstratives

	<u>unmarked</u>	<u>marked</u>
<u>basic</u>	t <sup>θ</sup> eý	θeý
<u>absent</u>	k <sup>w</sup> (θ)eý	ʔeý
<u>hypothetical</u>		k <sup>w</sup> i

/t<sup>θ</sup>eý/ and /k<sup>w</sup>θeý/, like the articles /t<sup>θ</sup>a/ 'basic, unmarked' and /k<sup>w</sup>θə/ 'absent, unmarked', denote masculine entities in expressions of the type t<sup>θ</sup>eý swəýqeʔ 'that man' and k<sup>w</sup>θeý ɔ́iseʔq 'that (man) ɔ́iseʔq', and entities that have no gender in phrases like t<sup>θ</sup>eý léləm 'that house' and k<sup>w</sup>(θ)eý sməýəθ 'that deer'. Moreover, /θeý/ and /ʔeý/ reflect the meanings of the articles /θə/ 'basic, marked' and /ʔə/

'absent, marked' respectively. They may denote feminine entities in expressions like Qey šx<sup>w</sup>?aq<sup>w</sup>a? 'that sister' and ley šx<sup>w</sup>?aq<sup>w</sup>a? 'that sister (whom the speaker cannot see)' or an entity which the speaker is focusing attention on in phrases of the type ley šk<sup>w</sup>e?xəcam 'the equipment (which he lent me is useless)'.

A second set of demonstratives, the personal deictics, contains the determiner morphemes /t<sup>θ</sup>-/ 'basic, unmarked', /θ-/ 'basic, marked', /k<sup>w</sup>θ-/ 'absent, unmarked' and /t-/ 'absent, marked', which are present in the articles and attentional demonstratives. However, it differs from them in morphological structure insofar as it exhibits both singular and plural forms.

Personal Demonstratives

(a) singular

	<u>unmarked</u>	<u>marked</u>
<u>basic</u>	t <sup>θ</sup> əwniɪ	θəwniɪ
<u>absent</u>	k <sup>w</sup> θəwniɪ	(təwniɪ)

(b) plural

<u>basic</u>	t <sup>θ</sup> əwné?əɪɪ	
<u>absent</u>	k <sup>w</sup> θəwné?əɪɪ	(təwné?əɪɪ)

An explanation for the singular/plural dichotomy may be provided if the personal demonstratives are viewed as morphemic constructions containing the proclitic /?əw/ 'contemporaneous' (2.1.3.2.) and the emphatic /niɪ/ 'referent' (2.2.1.3. Interrogatives and Emphatics). The plural demonstrative forms would follow from the fact that there is an emphatic né?əɪɪ 'referent, plural', which contains the -ɪ variant of the plural morpheme (1.1.3.3.).

The semantic interpretation of both the plural and singular personal demonstratives is idiosyncratic insofar as these elements denote only anthropomorphic entities unlike the articles and /ni:/ 'referent'. The anthropomorphic interpretation of the personal deictics is illustrated in examples (464)-(67). In (464)-(65) /t<sup>ə</sup>əwni:/ denotes masculine entities, while /θəwni:/ and /ʔəwni:/ in (466) and (467) respectively denote feminine ones:

(464) wəi x<sup>w</sup>ətiwən t<sup>ə</sup>əwni: (T1:119) 'Then he thought'

(465) t<sup>ə</sup>əwni: sxi:qəi (T1:39) 'that child (male one)'

(466) θəwni: ten-s (T1:28) 'that mother of his'

(467) ʔəwni: sʔeni (5807a) 'that woman'

The third set of demonstratives, the focal deictics, have a common word-final phonological shape -əná or -əńá.

#### Focal Demonstratives

	<u>unmarked</u>	<u>marked</u>
<u>basic</u>	təńá	θəńá
<u>hypothetical</u>		k <sup>w</sup> əńá

Some of the semantic distinctions apparent in the article paradigm are also represented in the focal paradigm. In some contexts /təńá/ (example 468) denotes a masculine referent whereas /θəńá/ (example 469) designates a feminine one:

(468) təńá Jow (5554) 'Joe'

(469) θəńá ten (T1:189) 'this mother'<sup>30</sup>

Like /t<sup>ə</sup>/ 'basic, unmarked' and /θə/ 'basic, marked', /təńá/ and /θəńá/ do not always reflect a gender dichotomy. In example (471) containing

/θəná/ in contrast to (470) containing /təhá/ the entity is semantically marked (as being familiar):

(470) ʔim ʔəy təhá (T2:52) 'This is very good'

(471) ʔəw nəswéʔ θəna léləm (276) 'This house is mine'

/kʷəhá/ 'hypothetical' corresponds to the article /kʷ/ insofar as it denotes an entity that does not yet exist. This semantic reading may be observed in example (472), in which it is understood that the weapon is not yet made.

(472) kʷəhá háytən 'this weapon'

(Context: 'let me make a weapon to kill the Stoneheads with')

The focal demonstratives differ from the articles and the other demonstratives in two respects. First, there are no absent forms of the type \*/kʷəhá/ 'absent, unmarked' or \*/təhá/ 'absent, marked'. In addition, the basic unmarked element /təhá/ 'this' is introduced not by t<sup>θ</sup> but by t, which, as will be observed in section 1.3.2. Locatives, may be analyzed as an allomorph of /t<sup>θ</sup>/ 'basic, unmarked'.

### 1.3.2. Locatives

In addition to being indicated by the determiners, the position in space and gender (more specifically, markedness) of the speaker may be expressed in Cowichan by means of the locative deictics, which may be divided into three classes as follows:

		<u>Nonproximal</u>	<u>Proximal</u>
<u>Class I</u>	<u>unmarked</u>	náʔət	ʔéʔət
	<u>marked</u>	náʔəθ	ʔéʔəθ

		<u>Nonproximal</u>	<u>Proximal</u>
<u>Class II</u>	<u>unmarked</u>	təni	təʔi
	<u>marked</u>		əʔi
<u>Class III</u>		niʔ	ʔi

As in the determiner system, there is a semantic distinction between marked and unmarked deictics. The marked forms are characterized by the morpheme /ə/, while the unmarked elements contain the morpheme /t/, which may be analyzed as a locative allomorph of the determiner morpheme /t<sup>ə</sup>/ 'basic, unmarked'. In the class I forms /ə/ and /t/ occur word-finally, whereas in the class II forms they appear word-initially.

Although the locatives resemble the determiners in regard to the markedness distinction, they differ from them in the expression of the spatial orientation of the speaker. Whereas the determiners indicate the presence or absence of an entity, the locatives denote the relative proximity of an entity to the speaker. On formal and semantic grounds the locatives may be divided into two classes of elements: nonproximal forms, which may often be translated by the English term 'there', and proximal elements, which are often equivalent in meaning to the term 'here'. The nonproximal elements are overtly marked by the n initial morphemes, /náʔ-/ 'non-proximal, class I', /-ni/ 'nonproximal', class II' and /niʔ/ 'nonproximal, class III'. The proximal locatives are signalled by morphemes containing i or e: /ʔéʔ-/ 'proximal, class I', /-ʔi/ 'proximal, class II' and the homophonous free form /ʔi/ 'proximal, class III'.

1.3.2.1. Class I Locatives

Of the two types of class I locatives, nonproximal and proximal, the former type expresses an entity distant from the speaker, while the latter denotes a referent regarded as being near. Nonproximal locatives do not occur with first or second person morphemes like /cən/ 'I' and /č/ 'you(sg)' (2.1.3.1. Enclitics). The semantic interpretation of the four class I elements, /náʔət/ 'nonproximal, unmarked, class I', /ʔéʔət/ 'proximal, unmarked, class I', /náʔəθ/ 'nonproximal, marked, class I' and /ʔéʔəθ/ 'proximal, marked, class I' reflects that of its constituent morphemes, /θ/ 'marked' and /t/ 'unmarked'. /náʔəθ/ and /ʔéʔəθ/ designate feminine (example 476) and familiar (examples 474 and 477) entities in contrast to /náʔət/ (475) and /ʔéʔət/ (473),

(473) ʔéʔət cən θéyəwtx<sup>w</sup>əm ʔə tənǵ léləm (6233b)

1 2 3 4 5 6

'I am building this house here'

1 proximal, emphatic 4 oblique

2 'I' 5 'this'

3 'build' (Actual) 6 'house'

(474) ʔéʔəθ θə nəléləm (6420) 'Here is my house'

1 2 3 4

1 proximal, emphatic, marked 3 'my'

2 article (marked) 4 'house'

(475) náʔət ǵ əw wəɪ təs (T7:58) 'It has now reached there'

1 2 3 4 5

1 nonproximal, emphatic 4 'already, now'

2 emphatic 5 'arrive'

3 contemporaneous

(476) ná?əθ q̣ əw wəɪ təs (6433b) 'She has now got there'

1 2 3 4 5

1 nonproximal, emphatic, marked 4 'already, now'

2 emphatic 5 'arrive'

3 contemporaneous

(477) ná?əθ θə nəléləm (6421) 'My house is over there'

1 2 3 4

1 nonproximal, emphatic, marked 3 'my'

2 article (marked) 4 'house'

### 1.3.2.2. Class II Locatives

The class II locatives consist of two types of elements, the nonproximal form /təní/ 'class II, nonproximal' and the proximal forms /tə?í/ 'class II, proximal, unmarked' and /θə?í/ 'class II, proximal, marked', which signify that the speaker is actually touching the entity being referred to. The proximal elements differ in two ways from /təní/. First, they exhibit the type of morphological marking that exists in the article system (1.3.1.1.) to the effect that they contain the morphemes /t-/ 'unmarked' and /θ-/ 'marked'. For example, /θə?í/ (478b) like the article /θə/, 'basic, marked' may denote a feminine entity whereas /tə?í/ (478a) like the unmarked article /t<sup>θ</sup>ə/ denotes non-feminine entities:

(478a) niɪ ce? tə?í k<sup>w</sup>ənətən (6470c) 'I will take this one'

1 2 3 4 5 6

1 referent

4 'take'

2 future

5 transitive

3 proximal

6 'I' (dependent)

(478b) niɪ ce? θə?í k<sup>w</sup>ənətən (6470b) 'I will take her/this one'

1 2 3 4 5 6

- |                    |                   |
|--------------------|-------------------|
| 1 referent         | 4 'take'          |
| 2 future           | 5 transitive      |
| 3 proximal, marked | 6 'I' (dependent) |

The second way in which the proximal forms /təʔi/ and /θəʔi/ differ from /təni/ lies in the fact that they may be attached to /niʔ/ 'referent' (2.2.1.3. Interrogatives and Emphatics) to form an element like təʔinəʔ 'this one', in which the unstressed i becomes ə:

(479) ʔəwə sʔiʔct təʔinəʔ (3795) 'We don't want this one'

1 2 3 4 5

- |   |                      |
|---|----------------------|
| 1 'not'                                   | 4 proximal, unmarked |
| 2 'desire'                                | 5 /niʔ/ 'referent'   |
| 3 'our' and /-ət/ 'we' (dependent) (sic!) |                      |

#### 1.3.2.3. Class III Locatives

The class III locatives /niʔ/ 'nonproximal', néʔiə (niʔ and -i- 'plural') 'nonproximal, plural' and /ʔi/ 'proximal' are morphologically distinct from the class I and II forms in that they do not contain either of the morphemes /t/ 'unmarked' or /θ/ 'marked'.

The proximal locative /ʔi/ indicates that a given entity is near to the speaker (example 480), whereas the more productively occurring element /niʔ/ has a more neutral interpretation (example 481):

(480) yaθ ʔəw ʔi t<sup>θ</sup>ə nəməhə (5694) 'My son is always here'

1 2 3 4 5 6

- |                   |               |
|-------------------|---------------|
| 1 'always'        | 4 article     |
| 2 contemporaneous | 5 'my'        |
| 3 proximal        | 6 'offspring' |

(481) niʔ səq t<sup>θ</sup>ə nəqum (5704) 'My ear is ripped'

1 2 3 4 5

1 nonproximal  
2 'ripped'  
3 article .

4 'my'  
5 'ear'

## FOOTNOTES: MORPHOLOGY

<sup>1</sup>One lexical item k<sup>w</sup>intəl 'fight' is exceptional in that apparently the base is uniquely inflectible with /-təl/ 'reciprocal'. This item might be regarded synchronically as one morpheme and diachronically as two: the erstwhile base /k<sup>w</sup>in-/ and /-təl/ 'reciprocal'.

<sup>2</sup>Putatively, the intransitive suffixes (1.1.1.1.) /-θət/ 'reflexive' and /-təl/ 'reciprocal' are further analyzable into morphemes like /-əl/ 'reciprocal', /-ət/ 'reflexive' and /-t/ 'transitive' (realized as -θ- before /-ət/ 'reflexive'). However, the fact that /-əs/ 'third transitive agent' follows /-t/ 'transitive' but not /-θət/ 'reflexive' and /-təl/ 'reciprocal' substantiates the view that /-təl/ and /-θət/ constitute just one morpheme.

<sup>3</sup>This vowel alternation is discussed in 1.1.1.1. Intransitive Suffixes in connection with the suffixes /-təl/ 'reciprocal' and /-θət/ 'reflexive'.

<sup>4</sup>A few exceptional passivized forms such as qəxətəm (TEH) 'he falls backwards' and ʔpiləstəm (L1:31) 'he sinks' involve no human agency.

<sup>5</sup>In Kava's analysis (1969) -am is [a<sup>m</sup>] phonetically, the vowel length being conditioned by a following resonant. Dr. Suttles suggests that the vowel length here is phonemic and that it is conditioned by the reduction of an underlying form /-áməm/.

<sup>6</sup>The fact that /-nəs/ may be followed by /-əs/ 'third transitive agent' (2.1.1.1.), which only follows transitive suffixes, also supports this view.

nəmməsəs 'he went towards him'

<sup>7</sup>The reduplicative morphemes, which are regarded here as being inflectional, are distributionally distinct from the aspectual prefixes. The former, but not the latter, may be preceded by derivational prefixes. This apparent contradiction to the standard notion of inflection and derivation is resolvable if the reduplicative morphemes are regarded not as constituting prefixes but as representing processes.

<sup>8</sup>In an alternative analysis (Hukari 1978:164) it may be stated that the CCV base, when uninflected, loses the final vowel and appears with a medial shwa. In this approach the shape of the uninflected base is considered to be derived from that of the inflected CCV base.

<sup>9</sup>Voiced sonorants are glottalized in the Actual excepting prefixes, stem-initial position and before a stressed vowel. Although glottalization is morphologically triggered, it does not seem to interact critically with the basic formation processes (c.f. Hukari 1978:206).

<sup>10</sup>Some of the CVCC stems co-occur with the intransitive /-m/ suffix, in which case the tense vowel appears in both the Actual and non-actual forms (Hukari 1978:172):

čátəq<sup>w</sup>əm 'fall apart (from cooking)'

čátq<sup>w</sup>əm 'falling apart'

<sup>11</sup>In Hukari's (1978:171) data certain variation has been noted:

x<sup>w</sup>-əyq<sup>w</sup>t 'dig it'

x<sup>w</sup>-əyq<sup>w</sup>t ~ x<sup>w</sup>-əyq<sup>w</sup>t 'digging it'

<sup>12</sup>Hukari (1978:167) finds that this rule also applies to bases containing a long vowel in the initial syllable:

t<sup>ə</sup>ət<sup>ə</sup>um 'picking berries'

t<sup>ə</sup>um 'pick berries'

<sup>13</sup>An alternative hypothesis is that the prefixed resonant elides with the subsequent insertion of h as a juncture phenomenon. Given such a hypothesis, the postulated relationship between h and resonants does not necessarily hold. Hukari (1977b) argues in some detail against this approach and in favour of the voiceless sonorant hypothesis.

<sup>14</sup>In Jones' (1976:51) analysis the underlying form of ne<sup>h</sup> 'go' is /ne<sup>h</sup>m/, which in fact contains an initial voiced sonorant followed by a tense vowel and glottal stop.

<sup>15</sup>Two lexical items are irregular in that they involve infixal vowel reduplication, which is phonetically realized as vowel lengthening:

sii<sup>h</sup>em (474) 'sirs'

sí<sup>h</sup>em (1439) 'sir, rich'

siiyé<sup>h</sup>e (178) 'friends'

syé<sup>h</sup>e (3487) 'friend'

<sup>16</sup>Pluralization of predicates may apparently focus on the event (happening repeatedly) or a participant (i.e. several subjects or objects).

I give stylized translations here, using a plural subject for intransitive predicates and a plural object for transitives, as these appear to be the preferred translations.

<sup>17</sup>There are some exceptions. Some stems show in the plural a stress difference signalling the Actual (Hukari 1978:177):

tə́tʰiləm (TEH) 'they sing' (plural)

tʰiləm (6141a) 'sing'

tʰiltə́ləm (TEH) 'they are singing' (plural, Actual)

tʰitə́ləm (4323) 'singing'

<sup>18</sup>I am grateful to Dr. Hukari for drawing to my attention to ? in the diminutive morpheme. However, there are exceptions:

kʷákʷsə́n (TEH) 'little star'

kʷásə́n 'star'

<sup>19</sup>The parentheses around h signify that it is not realized phonetically. s(h)ə́níq 'full', for example, represents [sə́níq].

<sup>20</sup>So far, no examples have arisen in which all three aspectual prefixes occur simultaneously.

<sup>21</sup>The vowel alternation is morphologically conditioned, the tense vowel of the stem becoming lax when /-tən/ 'instrument' is attached:

ʔə́xʷtən (TEH) 'broom'

ʔíxʷ (6498d) 'sweep it'

pətʰtən (4335) 'sewing needle'

pətʰət (5836b) 'sew it'

<sup>22</sup>The stems of examples (337)-(39) have not been found to occur separately.

<sup>23</sup>In Dr. Hukari's data /-áles/ enters into a lexical set of numerals having to do with knitting and sewing to form lexical items of the following type:

k<sup>w</sup>šálest (TEH) 'count stitches'

k<sup>w</sup>šet (5837a) 'count them'

ɬx<sup>w</sup>áles (TEH) 'three stitches'

ɬix<sup>w</sup> (3964) 'three'

<sup>24</sup>The term connector is used by Pidgeon (1971) in his analysis of lexical suffixes in Saanich to denote the morphemes which occur between the base and lexical suffix. According to Pidgeon (1971:19) the connectors "particularize and direct the reference to the lexical suffix or extend the meaning of the suffix."

<sup>25</sup>The bases of (453)-(55) have not been found to occur in any other context than the one shown here.

<sup>26</sup>k<sup>w</sup> is a variant of the article /k<sup>w</sup>ə/ 'absent, unmarked' (1.3.1.1. Articles). Dr. Hukari has found that in actually counting objects speakers use expressions like ʔápen ʔi? t<sup>ə</sup> náča? 'eleven' containing another article /t<sup>ə</sup>/.

<sup>27</sup>The demonstratives are also syntactically distinct from the articles to the effect that the former, but not the latter, may function not only as determiners, but also as adjuncts with a semantic interpretation

of the type 'that one' or 'this one'.

<sup>28</sup>The marked articles according to Dr. Hukari's experience may also refer to diminutive entities.

<sup>29</sup>Dr. Suttles finds in Musqueam that k<sup>w</sup> has the semantic signification of quotation marks in English. Thus /k<sup>w</sup> John/ would mean "John" in the Musqueam equivalent of example (460).

## 2. SYNTAX

In conformity with a commonly applied typology (Greenberg 1963: 61), Cowichan might be classified as a VSO language, where V stands for verb and S and O for subject and object nouns. Although such a characterization may serve as a basis for comparison with other languages of the world, it does not accurately reflect the grammatical structure of Cowichan. The hypothesis proposed by Kinkade (1976:17) for Inland Olympic Salish that the predicate rather than a noun/verb dichotomy is fundamental is relevant not only to the morphology of Cowichan (as observed in section 0.1.) but is also to some extent applicable to its syntax. In accordance with this approach Cowichan is observed to maintain a bipartite structure consisting of a predicate, which may by itself constitute a complete utterance, and adjuncts (the putative S and O nouns), which optionally modify it. The predicate occurs initially and is followed by an adjunct. Thus, in the sentence, swəyqe? t<sup>θ</sup>ə nəšx<sup>w?</sup>áq<sup>w?</sup>a? 'my brother is a man', swəyqe? '(be) a man' is a predicate. It is, moreover, a nominal predicate (noun)<sup>1</sup> since in another sentence it might function like šx<sup>w?</sup>áq<sup>w?</sup>a? 'sibling' in an adjunct.

Although adjuncts may appear to play a fundamental role in Cowichan on the basis of the above discussion, distributional criteria suggest that they are in fact peripheral elements. Their distribution and semantic interpretation in all clause types is determined by sets of person markers, elements which correspond semantically but not functionally to English pronouns like 'I', 'me', 'you' and 'it'.<sup>2</sup> These person markers play a dual role. They determine the internal structure of a given

clause and they signal its privileges of occurrence with other clauses. Within the clause the interaction between person markers and adjuncts reflects a dichotomy between third and non-third person forms. A predicate with a third person marker affixed to it may optionally occur with a generally coreferential adjunct, while a non-third marker and such an adjunct may not co-occur.

The different clause types are generally both morphologically and syntactically defined. Independent clauses are formally marked as being distinct from subordinate ones by main clause person markers (subject enclitics). Subordinate clauses are subdivided on the basis of morphological marking into dependent clauses, which are signalled by dependent person markers (2.3.1.), and nominalized clauses, which are marked by a possessive affix and a prefix--either /s-/ 'absolute' (2.3.2.) or /šx<sup>w</sup>-/ 'instrumental' (2.3.3.). The distribution of the clause markers (the dependent person markers and the prefixes) partially reflects a distinction between attributive clauses, which modify an adjunct head in a semantic structure of the type 'the man whom I saw', and complementary clauses, which modify the main clause as a whole. In complementary clauses the markers are affixed to the first element, whereas in attributive clauses of the morphologically marked kind they are affixed to the predicate. The unmarked attributive clause type is not included under subordinate clauses but is presented separately as a frame of reference for analyzing the internal structure of the attributive clause (2.2.1.).

## 2.1. The Constituents of a Cowichan Clause

The constituents of a Cowichan clause comprise both adjuncts and person markers, which correspond distributionally to the transitivity of the predicate, and other elements which do not, namely, predicate attributes (2.1.2.) and particles (2.1.3.) (except for the subject enclitics). The constituent structure of a main clause containing these elements corresponds to that of a subordinate clause containing them. However, for ease of explanation the analysis is presented in terms of the main clause. Subordinate clauses (2.3.) are discussed in general according to their interaction with main clauses. Compound constructions (2.4.), which contain an /?i?/ 'and' constituent and which may appear either as main clauses or as subordinate clauses, are analyzed according to their relationship to corresponding simple main and subordinate clauses.

### 2.1.1. Predication and Person Marking

Although person markers and adjuncts are distributionally distinct they are placed under one heading because of their interaction based on the transitivity of the predicate. There are two types of adjuncts: oblique ones, which are introduced by the catchall preposition /?ə/ 'oblique', and direct ones, which are not. The two types of adjuncts are semantically as well as formally distinct, since oblique adjuncts in contradistinction to direct ones represent semantic relationships which cannot be conveyed in a given syntactic context by person markers. The

distribution of oblique adjuncts is not limited to any given sentence type. They may occur in sentences containing /-əs/ 'third agent' or one of the subject enclitics, which do not mark third person. They may also occur with passivized predicates.

#### 2.1.1.1. Direct Relations

In non-passive constructions, person marker and adjunct interaction correlates with the transitivity of the predicate. A clause containing a transitive predicate (an element marked by one of the suffixes, /-t/ 'transitive', /-nəx<sup>w</sup>/ 'responsible' or /-stəx<sup>w</sup>/ 'causative') differs in morphological and syntactic properties and in coreference relations from one containing an intransitive predicate. The intransitive predicate construction constitutes the more elemental clause type, since it takes only a single referent--either one of the subject enclitics, which appears in second position in a clause, or an adjunct.

#### Subject Enclitics

	<u>singular</u>	<u>plural</u>
1 <sup>st</sup>	cən 'I' (cən ~ cə)	ct 'we'
2 <sup>nd</sup>	č 'you'	ceep 'you'

The syntactic status of intransitive predicates provides support for the hypothesis presented at the beginning of the syntax section that the predicate is a fundamental of Cowichan grammar. Examples (1)-(4) and (5)-(8) may be considered, of which the first group represents a predicate - subject enclitic construction and the second, a predicate - adjunct construction.

- (1) swəyqe? cən (82) 'I am a man'  
 (2) yəq<sup>w</sup> cən (6194b) 'I am burned'  
 (3) ʔəqtimət<sup>θ</sup> cən (74) 'I am tall'<sup>3</sup>  
 (4) ʔ<sup>w</sup>cənəm cən (60) 'I ran'

Semantically, example (1) represents an identity statement involving the entity 'I' and the element /swəyqe?/ 'man', while in example (2) the relationship is one of control, /cən/ 'I' being the patient of the form /yəq<sup>w</sup>/ 'is burned'. In example (3) /ʔəqtimət<sup>θ</sup>/ corresponds semantically to an English adjective<sup>1</sup> and in example (4) /ʔ<sup>w</sup>cənəm/ 'run' corresponds to an English verb. However, the substitution frame, \_\_\_cən, provides support for the hypothesis that syntactically these forms constitute members of a single form-class, that of the predicator.

The predicative function of the first elements in (1)-(4) is maintained in examples (5)-(8), where the expression attributive to the predicate is an adjunct. This phrase in contradistinction to the predicate is formally marked by a deictic (/t<sup>θ</sup>ə/ 'the' in the following examples):

- (5) swəyqe? t<sup>θ</sup>ə nəx<sup>w</sup>?áq<sup>w</sup>a? (3524b) 'My brother is a man'

1 2 3 4

1 'man' 3 'my'  
 2 article 4 'sibling'

- (6) yəq<sup>w</sup> t<sup>θ</sup>ə nəsnəx<sup>w</sup>əʔ (3763) 'My canoe is on fire'

1 2 3 4

1 'burn' 3 'my'  
 2 article 4 'canoe'

- (7) ʔəqtimət<sup>θ</sup> t<sup>θ</sup>ə swəyqe? (61) 'The man is tall'

1 2 3

1 'tall' 3 'man'  
 2 article

(8)  $\check{x}\check{c}\acute{e}n\acute{e}m\ t^{\theta} sw\acute{a}y\acute{q}e?$  (75) 'The man ran'

1 2 3

1 'run'

3 'man'

2 article

The semantic relationships holding between examples (1)-(4) also hold between the corresponding set of sentences, examples (5)-(8).

Terminologically, adjuncts which enter into such semantic correlations in a given type of construction may be referred to as subject adjuncts.<sup>4</sup>

On the basis of semantic structure one might expect predicates with third person referents to be able to occur without adjuncts as in the following examples:

(9)  $*sw\acute{a}y\acute{q}e?$  'He is a man'

(10)  $*y\acute{a}q^w$  'It is on fire'

(11)  $*\lambda\acute{o}qt\acute{i}m\acute{e}t^{\theta}$  'He is tall'

(12)  $*\check{x}\check{c}\acute{e}n\acute{e}m$  'He ran'

However, sentences (9)-(11) are not well-formed and sentence (12), which can occur, is interpreted not as a statement, but as an imperative construction with the meaning 'Run!'. Apparently, unless the lexical content of the predicate permits an imperative interpretation, overt marking of the referent of a predicate is required. Where the referent is a first or second person entity, the subject enclitics are used.

In addition to occurring with a subject enclitic or a direct adjunct, a predicate may enter into construction with either a class I locative (1.3.2.1.) such as  $/n\acute{a}^{\theta}e\acute{t}/$  'nonproximal, unmarked' or  $/\acute{e}^{\theta}e\acute{t}/$  'proximal, marked', which appear only in main clauses, or a class III locative (1.3.2.3.) like  $/ni^{\theta}/$  'nonproximal' or  $/\acute{e}i/$  'proximal', which appear in main and subordinate clauses. This type of construction may

be observed in examples (13) and (14), in which each underlined locative modifies the predicate that follows it:

(13) ná?ət ?əw səhíw (5884c) 'It is inside there'

1        2        3

1 nonproximal, emphatic

3 'inside'

2 contemporaneous

(14) ni? yəq<sup>w</sup> (5759) 'It burns'<sup>5</sup>

These sentences are grammatical even though no subject enclitic or adjunct is present.

Some of the distributional and semantic properties of an intransitive predicate construction also hold for transitive predicates. Examples (1)-(4) above, which illustrate intransitive predicates, are paralleled by transitive predicate constructions in which an enclitic may likewise follow the head element:

(15) yəq<sup>w</sup>ət cən (6206) 'I burned it'

Examples (1)-(4) and (15) are semantically parallel in being statements. There is even a partial correspondence between intransitive and transitive predicate constructions in respect to third person referents. However, whereas only a limited number of uninflected predicators, such as /xčənəm/ 'Run!' (example 12), may occur alone with imperative interpretation, transitive predicators do so characteristically:

(16) fəyxt (45a) 'Eat!'

(17) ?aɪstəx<sup>w</sup> (5140) 'Load it up!'

(18) həlínx<sup>w</sup> (5104) 'Save him!'

Semantically, the addressee, an entity sometimes overtly expressed by the subject enclitic /č/ 'you(sg)', is the agent, while a third person entity is the patient referent.

The correspondence between intransitive and transitive predicate constructions extends syntactically, but not semantically, to the distribution of adjuncts. Examples (19)-(20) of transitive predicates with adjuncts are parallel to examples (5)-(8) insofar as in each case there is a predicative centre (the first element) and an adjunct introduced by a determiner:

(19) ?áməst t<sup>ə</sup> swəyqe? (6232) 'Give it to the man'

1 2 3 4

1 'give'

3 article

2 transitive

4 'man'

(20) yəəst t<sup>ə</sup> nəsiyéye (6200b) 'Tell my friends'

1 2 3 4 5

1 'tell'

4 'my'

2 transitive

5 'friends'

3 article

Semantically, however, the two types of constructions are distinct. Only examples (19)-(20) have imperative interpretation. Moreover, whereas the interpretation of adjuncts in construction with intransitive predicates varies according to the lexical content of the predicate, the interpretation of single adjuncts attributive to transitive predicates (as in examples 19 and 20) is always object and may be correlated with elements of the syntactic representation, namely, the transitive suffixes.

The transitive predicate is inflectionally distinct from the intransitive one in being able to occur with any of three sets of person markers i.e. the subject enclitics, the goal suffixes, /-əs/ 'third agent'

and the passive suffixes (2.1.1.2. Oblique Relations) of which the first and second two interact.

Goal Suffixes

<u>singular</u>	<u>plural</u>
1 <sup>st</sup> -(S)ámš 'me'	-álx <sup>w</sup> 'us'
2 <sup>nd</sup> -(S)ámə 'you'	-ála 'you'

Distributionally, the subject enclitics and goal suffixes, both of which lack third person morphemes, are distinct. The subject enclitics occur in second position in a clause and may follow either an auxiliary element such as the type III locative (1.3.2.3.) in example (21) or the predicate (elements 1-3 in example 22). The goal forms on the other hand are always suffixed to a transitive predicate (example 22).

(21) ni? cə ləmnámə (4082) 'I see you'

1	2	3	4	5	
	1 nonproximal			4 /-nəx <sup>w</sup> / 'responsible'	
	2 /cən/ 'I'			5 'you(sg)'	
	3 'see'				

(22) yənyənəámə cə pə? (108) 'I am laughing at you'

1	2	3	4	5	
	1 'laughing' (Actual)			4 /cən/ 'I'	
	2 /-t/ 'transitive'			5 certain	
	3 'you(sg)'				

The transitive predicate inflected with a goal suffix corresponds syntactically to an uninflected predicate like /xčénəm/ 'run' (illustrated in example 12 earlier), since both forms may either occur alone with imperative interpretation (examples 23-24) or appear with subject enclitics.

(23) ʔaməθáms̄ (76) 'Give it to me!'

1 23

1 'give'

3 'me'

2 /-t/ 'transitive'

(24) yəθəstálx̄<sup>w</sup> (6200) 'Tell us!'

1 23

1 'tell'

3 'us'

2 transitive

Semantically, sentences (23) and (24) correspond to sentences (16)-(18) and (19)-(20), since they all have patient referents.

A transitive predication differs from an intransitive one not only in morphological marking and in coreference relations but also in terms of syntactic structure. In a clause containing a transitive predicate not marked by the third person suffix /-əs/ 'third agent' still only one adjunct is permitted. However, the clause may also take a subject enclitic as in the following examples:

(25) ni? č̄ ʔálə cəstəx̄<sup>w</sup> t̄<sup>θ</sup> ə sq̄<sup>w</sup>əméȳ (5706) 'What did you do to the dog?'

1 2 3 4 5 6

1 nonproximal

4 'do to'

2 'you(sg)'

5 article

3 curious

6 'dog'

(26) ni? cən č̄əwət t̄<sup>θ</sup> eý̄ swəýqe? (5685) 'I helped that man'

1 2 3 4 5

1 nonproximal

4 'that'

2 'I'

5 'man'

3 'help'

In constructions like (25)-(26), which contain an adjunct and a subject enclitic, the interpretation of the adjunct in the role of patient is

based on its non-coreferentiality with the enclitic. Such an adjunct, which is semantically analogous to a goal suffix, is defined as a goal adjunct. In (25) and (26) the interpretation of the adjuncts  $t^{\theta}ey'$  swəyqe? 'that man' and  $t^{\theta}əsq^wəméy'$  'the dog' in the role of goal is based on their non-coreferentiality with the respective subject enclitics /cən/ 'I' and /č/ 'you', which fulfill the subject role.

On the basis of semantic interpretation one might expect a sentence of the following type to be possible:

(27) \*yənyənə $\theta$ amš  $t^{\theta}ə$  swəyqe? 'The man laughed at us'

1 23 4 5

1 'laugh'

4 article

2 /-t/ 'transitive'

5 'man'

3 'me'

In such a sentence  $t^{\theta}ə$  swəyqe? 'the man' would fulfill the subject role of a subject enclitic, a semantic function analogous to that of the adjuncts in examples (5)-(8) vis-à-vis examples (1)-(4). However, this type of construction is not well-formed.

In order to express a direct adjunct as an agent the transitive predicate must be inflected with /-əs/ 'third agent', which follows any occurring first person goal suffix (example 28):

(28) ni? ?əw stətəlstālx<sup>w</sup>əs (165) 'He knows us'

1 2 3 4 5 6

1 nonproximal

4 /-stəx<sup>w</sup>/ 'causative'

2 contemporaneous

5 'us'

3 'know'

6 third agent

Where an adjunct occurs with a predicate inflected with both /-əs/ and

a goal suffix, its interpretation is based on its non-coreferentiality with the goal form:

(29) ni? čewəθámšəs t<sup>θ</sup>ey swəyqe? (5690) 'That man is helping me.'

1 2 34 5 6 7

1 nonproximal	5 third agent
2 'help'	6 'that'
3 /-t/ 'transitive'	7 'man'
4 'me'	

In example (29) /-ámš/ 'me' fulfills the role of goal. The adjunct t<sup>θ</sup>ey swəyqe? 'that man' is interpreted as an agent and is anaphorically related to /-əs/ 'third agent'.

When a goal suffix is not present, two third person referents are expressed and the principle of non-coreferentiality does not apply. In examples (30) and (31) in which the predicates are not marked with goal suffixes, there are two understood third person referents, one signalled by /-əs/ in the role of agent (31) or experiencer (30) and one in the role of patient.

(30) ni? nəm ləmētəs (688) 'He went and looked at it'

1 2 3 4 5

1 nonproximal	4 transitive
2 'go'	5 third agent
3 'look'	

(31) ni? ?áməstəs (104) 'He gave it'

1 2 34

1 nonproximal	3 transitive
2 'give'	4 third agent

If a single adjunct occurs it is generally interpreted as a patient and non-coreferential with /-əs/ as in the following examples:

(32) ni? k'w'icətəs t<sup>θ</sup>ə sməyəθ (5669a) 'He butchered the deer'  
1 2 3 4 5 6

- 1 nonproximal
- 2 'butcher'
- 3 transitive
- 4 third agent
- 5 article
- 6 'deer'

(33) sélqtəs t<sup>θ</sup>ə sčešt (4064) 'He is brandishing a stick'  
1 2 3 4 5

- 1 'brandish'
- 2 transitive
- 3 third agent
- 4 article
- 5 'stick'

In rare instances in texts, however, the adjunct has agent interpretation if the deictic /t<sup>θ</sup>əwniř/ 'that (one)' (1.3.1.2. Demonstratives) appears as in example (34), elements 3-4:

(34) k'w'ənəx<sup>w</sup>əs t<sup>θ</sup>əwniř swiwləs (TEH) 'That young man got him'  
1 2 3 4

- 1 'take, get'
- 2 'third agent'
- 3 'that (one)'
- 4 'young man'

During the elicitation of individual sentences and in some texts a marginal clause type was identified in which two direct adjuncts appeared in attribution to the predicate. In this type of construction the predominant reading is the one in which the first adjunct is anaphorically related to /-əs/ 'third agent' and correspondingly interpreted as an agent or an experiencer (example 35), although there is also a more marked reading in which the second adjunct is thus construed (example 36), usually where there is no possibility for ambiguity.

(35) cək<sup>w</sup>əlétəs θə pus θə sq<sup>w</sup>ələš (6034)  
1 2 3 4 5 6 7 8

'The cat is chasing the bird'

1 'chase'	5 article (marked)
2 stative	6 'cat'
3 transitive	7 article (marked)
4 third agent	8 'bird'

(36)  $\text{t}^{\theta}\text{éyxtəs t}^{\theta}\text{ə scéertən t}^{\theta}\text{ə sq}^{\text{w}}\text{əméyct}$  (4637a)

1 23 4 5 6 7 8

'Our dog eats salmon'

1 'eat'	5 'salmon'
2 transitive	6 article
3 third agent	7 'dog'
4 article	8 'our'

These facts suggest that person markers in Cowichan form a system syntactically independent of adjuncts and that the role of an adjunct (subject or goal) is a function of semantic interpretation rather than of syntactic function. From the viewpoint of syntax, therefore, there is no basis for dividing the direct adjunct into syntactic subcategories.

#### 2.1.1.2. Oblique Adjuncts

As well as containing direct adjuncts a Cowichan clause may be marked by prepositional phrases referred to as oblique adjuncts, which usually modify a proposition<sup>6</sup> and consist of two elements, an oblique catchall preposition and a following adjunct in exocentric relationship to it. The preposition exhibits two variants:  $\text{?ə}$  before adjuncts introduced by deictics (1.3.) and  $\text{?ə}^{\text{z}}$  elsewhere. The oblique adjuncts are semantically distinct from the direct ones. In addition to expressing the roles of agent and patient, which may be represented by direct adjuncts, the oblique phrases may depict various other semantic relationships.

The semantic distinctions found to be expressed by oblique adjuncts are as follows: possession, location, temporal duration, patient, agent, instrument and comparison. These distinctions are partially reflected in the syntactic representation. An oblique adjunct which denotes an entity viewed as a possessor is syntactically distinctive in that it modifies a direct adjunct rather than a predicate. In example (37) the direct adjunct (elements 2-3) is modified by the possessor oblique adjunct (elements 4-5):<sup>7</sup>

- (37)  $\dot{x}a?á\theta\theta en t^{\theta} e \text{ } \dot{s}c\dot{e}\dot{s}t \text{ } ?\dot{a}\dot{x} \text{ } \underline{Jow}$  (4651) 'Joe has four sticks'.  
 1        2    3        4    5                    (The sticks of Joe are four)  
 1 'four'    4 oblique  
 2 article    5 'Joe'  
 3 'stick'

A locative oblique adjunct is distributionally distinctive in that it may occur in two syntactic environments. It may appear in attribution to a predicate centre or to a class II (1.3.2.2.) or class III (1.3.2.3.) locative. The former type of distribution is illustrated in example (38):

- (38)  $n\acute{e}w\acute{e}\dot{s} \text{ } ?\dot{a} \text{ } t^{\theta} e \text{ } \underline{\theta i\acute{m}at}$  (5190) 'Put it in the refrigerator'  
 1        2    3    4  
 1 'put inside'                                    3 article  
 2 oblique    4 'refrigerator'

In (38) the locative oblique adjunct (elements 2-4) modifies the predicate centre  $n\acute{e}w\acute{e}\dot{s}$  'put it inside'.

The locative type of distribution may be observed in sentences (39) to (41), of which the first represents a class III locative (1.3.2.3.), while the other two exemplify a class II (1.3.2.2.) locative:

(39) ni? yáayəs ni? ?ə́ Point Grey (3498)

1 2 3 4 5

'He is working at Point Grey'

- |                           |                  |
|---------------------------|------------------|
| 1 nonproximal             | 4 /?ə/ 'oblique' |
| 2 'work'                  | 5 'Point Grey'   |
| 3 nonproximal (predicate) |                  |

(40) hay kʷə?ə́ tə́ná qə́wicən tə́?i ?ə́ tə́ná skʷə́y (L1:93)

1 2 3 4 5 6 7 8

'It has reached as far as Cowichan here on this island'

- |                    |                      |
|--------------------|----------------------|
| 1 'finish, end up' | 5 proximal, unmarked |
| 2 factual          | 6 oblique            |
| 3 'this'           | 7 'this'             |
| 4 'Cowichan'       | 8 'island'           |

(41) ni? sni? w̄ səsələəts ?ai t<sup>θ</sup>ey təní ?ə́ kʷə́y nə́ca? məstíməxʷ

1 23 4 5 6 7 8 9 10 11 12 13

'That is how it happened through that one family' (L1:88)

- |                     |                     |
|---------------------|---------------------|
| 1 nonproximal       | 8 'that'            |
| 2 absolute          | 9 'here'            |
| 3 nonproximal       | 10 oblique          |
| 4, 7 'only, just'   | 11 'that'           |
| 5 'happen' (Actual) | 12 'one'            |
| 6 third possessive  | 13 'people, family' |

In each example the underlined locative predicator and the following /?ə/ 'oblique' phrase, which modifies it, form a locative construction. This construction in turn modifies the rest of each sentence, which may potentially form an independent clause.<sup>8</sup>

Although oblique adjuncts in the roles of possessor and of location have special syntactic status, oblique phrases belonging to other semantic categories do not, but function alike as subordinate I.C. partners to a proposition. In sentence (42) this analysis applies to a

temporal oblique phrase (elements 4-7), which modifies a proposition (elements 1-3):

(42) ni? ct ?ítat ?ə k<sup>w</sup>θə yəséla sk<sup>w</sup>eyl (3692)

1 2 3 4 5 6 7

'We slept for two days'

1 nonproximal	5 article
2 'we'	6 'two'
3 'sleep'	7 'day'
4 oblique	

In examples (43) and (44) the semantic role of patient is denoted by the oblique adjuncts (elements 5-7 in example 43 and 6-8 in 44), but the syntactic relationship is the same as in example (42).

(43) ?iwáwə ?éitən cə ce? ?ə t<sup>θ</sup>ə scéetən (5344a)

1 2 3 4 5 6 7

'Maybe I will eat the salmon'

1 'maybe, perhaps'	7 oblique
2 'eat'	6 article
3 /cən/ 'I'	7 'salmon'
4 future	

(44) ni? cən ?aməst t<sup>θ</sup>ə sq<sup>w</sup>əmóy ?ə k<sup>w</sup>θə smóyəθ

1 2 3 4 5 6 7 8

'I gave the dog some (deer) meat'

1 nonproximal	5 'dog'
2 'I'	6 oblique
3 'give'	7 article
4 article	8 'deer (meat)'

The occurrence of an oblique adjunct with agent or patient interpretation in a given construction as opposed to that of a direct one with such an interpretation is not arbitrary. As indicated in section 2.1.1.1. Direct Relations a direct adjunct fulfills the

semantic role of a person marker set. For example, the direct adjunct ʒə sʲeni 'the woman' may appear with patient interpretation in a given clause if the clause predicate as an alternative is inflectible with a goal suffix like /-ámš/ 'me'. An oblique adjunct, on the other hand, appears instead of a direct one if such a person marker alternative is not possible. In sentence (43), for example, ʔəɪtən 'eat', which expresses a patient referent, does not appear with the direct patient adjunct t<sup>ə</sup> scéɪtən 'the salmon' but with the oblique one, ʔə t<sup>ə</sup> scéɪtən '(of) the salmon', since ʔəɪtən 'eat' as an intransitive predicate does not take a patient suffix like /-ámš/ 'me'. Again in (44) the expression of a patient entity by means of an oblique adjunct ʔə k<sup>w</sup>ə sməyəθ '(with) the deer meat' is not anomalous since the goal role is fulfilled by a direct adjunct t<sup>ə</sup> sq<sup>w</sup>əméy 'the dog'. This adjunct denotes a recipient patient referent just like the analogously interpreted goal suffix /-ámš/ 'me' in ʔáməsθámš 'give it to me'.

The syntactico-semantic interplay between oblique and direct adjuncts is maintained in constructions containing predicates inflected with passive person markers. There are two sets of passive markers, one of which (the general passive) enters into both main and subordinate clauses, the other of which (the subordinate passive) enters only into subordinate clauses.

General Passive

	<u>singular</u>	<u>plural</u>
1 <sup>st</sup>	-éləm 'I'	-áləm 'we'
2 <sup>nd</sup>	-ám 'you'	-áləm 'you'
3 <sup>rd</sup>		-m 'she, he, it, they'

Subordinate Passive

<u>singular</u>	<u>plural</u>
1 <sup>st</sup> -élt 'I'	-ált 'we'
2 <sup>nd</sup> -ámət 'you'	-ált 'you'

These forms have patient interpretation. A passive construction like yəq<sup>w</sup>θéləm 'I am burned' thus resembles semantically an intransitive predicate construction like yəq<sup>w</sup> cən 'I am burned' except that in the former unlike in the latter there is an implied agent.<sup>9</sup>

A Cowichan passive construction has syntactic and semantic significance insofar as it permits not two sets of person markers, the subject enclitics and the goal suffixes, but only one, the passive markers.<sup>10</sup> Correspondingly, such a construction never contains two direct adjuncts even on a marginal basis. A single direct adjunct may appear if the passive marker, with which it is coreferential, is third person. A construction of this type is illustrated in example (45), in which the direct adjunct t<sup>θ</sup>ə šet 'the road' is coreferential with the third general passive form /-m/:

(45) n əw x<sup>w</sup>əi<sup>q</sup>étstəm t<sup>θ</sup>ə šet (3513) 'The road is being widened'

1 2 3 4 5 6 7 8

1 /ni?/ 'nonproximal'

2 contemporaneous

3 developmental

4 'wide'

5 /-stəx<sup>w</sup>/ 'causative'

6 third general passive

7 article

8 'road, door'

The adjunct (elements 7-8) is not obligatory. In fact, elements 1-6 may constitute an independent sentence meaning 'it is being widened'.

If the passive marker is a non-third person morpheme like /-éləm/ 'I'

in the sentence  $y\dot{a}q^{w\theta}el\dot{a}m$  (6194c) 'I am burned (by someone)', a coreferential adjunct is semantically excluded, since the only role (patient) which it might assume is already fulfilled by the passive form.

The difference in semantic structure between a passive and a nonpassive clause is reflected in the interpretation of oblique adjuncts. Since a passive construction permits only one direct adjunct, which has patient interpretation, an oblique adjunct in such a construction expresses the role of agent in addition to other semantic roles. The distribution of an agent oblique phrase may be observed in examples (46)-(48). Apparently it has no special syntactic status vis-à-vis other oblique adjuncts. It may appear alone as in example (46), elements 6-8:

(46)  $?i\ c\dot{a}k^{w\theta}el\dot{a}t\dot{a}m\ ?\dot{a}\ t^{\theta}\ sp\acute{e}?\dot{e}\theta$  (3489)

1 2 345 6 7 8

'He is being chased by a bear'

1 proximal

5 third general passive

2 'chase' (Actual)

6 oblique

3 stative

7 article

4 transitive

8 'bear'

Alternatively an agent oblique adjunct may occur along with other adjuncts. In example (47) the agent phrase (elements 11-14) is in apposition to a preceding direct adjunct (elements 6-7) and to an oblique adjunct (elements 8-10):

(47)  $ni?\ k^{w\theta}l\dot{a}st\dot{a}m\ t^{\theta}\ pi\dot{s}\ ?\dot{a}\ t^{\theta}\ milk\ ?\dot{a}\ t^{\theta}\ n\dot{a}st\dot{a}l\dot{a}s$  (3587)

1 2 3 45 6 7 8 9 10 11 12 13 14

'My wife splashed the cat with milk'

(The cat was splashed with milk by my wife)

1 nonproximal	8 oblique
2 'splash'	9 article
3 'face'	10 'milk'
4 transitive	11 oblique
5 third general passive	12 article (marked)
6 article	13 'my'
7 'cat'	14 'spouse'

In example (48) the agent phrase is followed by the direct adjunct (elements 7-8) and the oblique adjunct (elements 9-11):

(48) ni? ʔáɪstəm ʔə́ Jan t<sup>θ</sup>ə sáx<sup>w</sup>əl ʔə t<sup>θ</sup>ə snóx<sup>w</sup>əɪ (4633)

1 2 3 4 5 6 7 8 9 10 11

'The hay is loaded on to the vehicle by John'

1 nonproximal	7 article
2 'load'	8 'hay, grass'
3 /-stəx <sup>w</sup> / 'causative'	9 oblique
4 third general passive	10 article
5 oblique	11 'vehicle, canoe'
6 'John'	

These examples suggest that although direct and oblique adjuncts differ in internal structure they share a common distribution pattern.

### 2.1.2. Predicate Attributes

A predicate attribute is a non-locative element which may occur in attribution to a predicate or to an expression within a proposition. Such an attribute differs from a direct adjunct in that its distribution is not conditioned by the presence of person markers or by the transitivity of the predicate. There are two types of predicate attributes: direct attributes and adverbs.

2.1.2.1. Direct Attributes

A direct attribute is a form which may either precede or follow the element it modifies. This type of distribution is apparent in examples (49) and (50) in which the I.C. partner of the attribute is a predicate /ɬiçət/ 'cut it'. /qəlét/ precedes the predicate in example (49), but follows it in (50):

(49) qəlét ɬiçət (3514a) 'Cut it again'

(50) ɬiçət qəlét (3514b) 'Cut it again'

The same type of distribution pattern may be observed where the I.C. partner of the attribute is a locative like /ni?/ 'nonproximal' or a directional form, /mi/ 'come' or /nem/ 'go'. In examples (51) and (52) /qəlét/ modifies the directional form /nem/ 'go'. Just as in (49) and (50) /qəlét/ either precedes (example 52) or follows (example 51) its I.C. partner:

(51) nem cən qəlét wəq<sup>w</sup>iłəm (5382a) 'I went further downriver'

1 2 3 4

1 'go'

3 'again'

2 'I'

4 'go downriver'

(52) ni? ct ?əw qəlét nem cak<sup>w</sup> (5411a) 'We went further'

1 2 3 4 5 6

1 nonproximal

4 'again'

2 'we'

5 'go'

3 contemporaneous

6 'go far'

Again, in examples (53) and (54) the distribution pattern remains unchanged where the I.C. partner of the attribute /qəlét/ 'again' is the locative /ni?/ 'nonproximal'. In (53) /qəlét/ precedes /ni?/, but in (54) it follows /ni?/:

(53) ?əw̄ qəléet ct ni? nem̄ x<sup>w</sup>ck<sup>w</sup>iləm̄ (5411d)

1 2 3 4 5 6

'We went much further on'

1 contemporaneous

4 nonproximal

2 'again'

5 'go'

3 'we'

6 'go further'

(54) ni? cə qəléet θəyənəpt t<sup>ə</sup> təm̄x<sup>w</sup> (5993b) 'I dug the soil again'

1 2 3 4 5 6

1 nonproximal

4 'dig'

2 /cən/ 'I'

5 article

3 'again'

6 'soil, earth'

Alternative analyses of the above sentences (examples 51-54) are possible. One might view /qəléet/ 'again' as being a subordinate I.C. partner to the predicate immediately following it in examples (51) and (54) and as being in attribution to a proposition in examples (52) and (53) (elements 5-6 and 4-6 respectively). Moreover, example (53) may be analyzed as an adjunct head - attributive clause construction (2.2.1. Attributive Clauses) with the semantic structure, 'we again who went further on'. However, the first approach is the only one that provides a single consistent explanation of the data.

In the above discussion it was indicated that a direct attribute functions attributively. There is also evidence for the view that this type of form constitutes a subclass of predicator. In examples (55) and (56) the distribution of /yəstítəm/ 'hard' is consistent with the hypothesis that it is functioning as a predicate attribute in that it precedes the predicate in (55) but follows it in (56):

(55) ?i cən yəstítəm x<sup>w</sup>áñcənəm (6230)

1 2 3 4 5

'I am running hard'

1 proximal 4 'hard'  
2 'I' 5 'running' (Actual)  
3 serial

(56) ?i cən yəx<sup>w</sup>áñcənəm yəstítəm (6230)

1 2 3 5 3 4

However, yəstítəm 'hard' is also inflected with /yə-/ 'serial', an aspectual prefix (1.1.3.6.) which characterizes predicators, suggesting that /yəstítəm/ itself is in fact a predicator albeit with direct attribute function in these two examples.

As /qəlét/ 'again' differs from /stítəm/ 'hard' in not being inflectible with /yə-/ 'serial', the view that /qəlét/ is a type of predicator must rest upon syntactic evidence alone. Such evidence is found in examples (57)-(59) in which /qəlét/ maintains the syntactic functions of a predicate. In examples (57) and (58) /qəlét/ is the head of the sentence with particles (elements 2-3 in (57) and elements 2-3 in (58)) modifying it.

(57) qəlét č pe? (5421) 'Do it again'

1 2 3

1 'again' 3 certain  
2 'you(sg)'

(58) ni? ʔə wəɪ qəlét (1596) 'It happened again'

1 2 3 4

1 nonproximal 3 'already'  
2 'again' 4 'again'

In the following example /qəlét/ 'again' has adjectival function:

(59) mi ʔéx<sup>w</sup>əθ ʔə k<sup>w</sup> qəlét milk (3132) 'Give me some more milk'

1	2	3	4	5	6	7
1	'come'					5 article
2	'give'					6 'again'
3	'me'					7 'milk'
4	oblique					

### 2.1.2.2. Adverbs<sup>12</sup>

An adverb is an element which modifies a following predicative expression or proposition containing a proclitic (2.1.3.2.)--usually /ʔəw/ 'contemporaneous'. Six adverbs have been identified as follows: /ʔeʔ/ 'also, too', /yaθ/ 'always, often', /ʔim/ 'very much so', /nan/ 'very much so', /taʔx<sup>w</sup>/ 'soon' and /mæk<sup>w</sup>/ 'all, every, both'. Except for /mæk<sup>w</sup>/ the adverbs do not assume predicative function.

The distribution of the adverbs as predicate modifiers may be seen in sentences (60)-(65), which exemplify each of the above-mentioned elements. In (60) the functioning of /ʔeʔ/ 'also, too' as an adverb is shown by the fact that it precedes the predicate /ʔəɬtən/ 'eat', which is introduced by /ʔəw/ 'contemporaneous':

(60) ʔeʔ ʔe č ceʔ w ʔəɬtən (3656) 'Are you going to eat too?'

1	2	3	4	5	6
1	'also, too'				4 future
2	interrogative				5 contemporaneous
3	'you(sg)'				6 'eat'

The presence of the enclitics (elements 2-4) after /ʔeʔ/ 'also, too' is consistent with the hypothesis that an adverb is a non-particle. Such a view is also applicable to /taʔx<sup>w</sup>/ 'soon, just' in (61),

which is modified by the enclitic /ct/ 'we':

(61) taʔx<sup>w</sup> ct ʔəw čx<sup>w</sup>ənəm ʔəʔ nəwə (5318b)

1 2 3 4 5 6

'We were just talking about you'

1 'soon, just'

4 'talk about'

2 'we'

5 oblique

3 contemporaneous

6 'you(sg)'

In example (62) the sentence structure is different from that of (61) inasmuch as it contains a transitive predicate followed by two adjuncts. However, the distribution of /yaθ/ 'always' as an adverb is no different from that of /ʔeʔ/ and /taʔx<sup>w</sup>/ above.

(62) ʔəw yaθ ʔəw tɛyxtəs t<sup>θ</sup>ə sməyəθ t<sup>θ</sup>eý sq<sup>w</sup>əméý (5309)

1 2 3 4 5 6 7 8 9

'That dog is always eating the meat'

1 contemporaneous

6 article

2 'always'

7 '(deer) meat'

3 contemporaneous

8 'that'

4 'eat'

9 'dog'

5 third agent

It is conceivable that adverbs might exhibit special distributional properties in sentences with imperative interpretation. However, the adverbs /ʔim/ 'very much so' and /mək<sup>w</sup>/ 'all, every' in the imperative sentences, (63)-(64), follow the same pattern as in non-imperative sentences in their occurrence with /ʔəw/ 'contemporaneous' before a predicate.

(63) mək<sup>w</sup> č ʔəw ʔəšətálx<sup>w</sup> (3562) 'Invite us all over'

1 2 3 4 5

1 'all'

4 'invite'

2 'you(sg)'

5 'us'

3 contemporaneous

(64) xih č ?əw yəq<sup>w</sup>ət. (678) 'Burn it once and for all'

1 2 3 4

1 'very much so'

3 contemporaneous

2 'you(sg)'

4 'burn it'

Where the predicative centre of a clause contains more than one element the constituent structure of the clause is problematical. In example (65) /nan/ 'very much so' may be analyzed as an I.C. partner to /?əw kəqtimət<sup>θ</sup>/ or to /?əw kəqtimət<sup>θ</sup> swəyqe?/:

(65) nan ?əw kəqtimət<sup>θ</sup> swəyqe? kə nəJan (4619)

1 2 3 4 5 6 7

'My John is a tall man'

1 'very much so'

5 article

2 contemporaneous

6 'my'

3 'tall'

7 'John'

4 'man'

Neither analysis is idiosyncratic. In the former case /nan/ appears as an expansion of an adjectival expression, which modifies the nominal predicator /swəyqe?/, and in the latter, as an expansion of a predicative expression.

A predicate may be modified by a sequence of adverbs as examples (66)-(69) illustrate. The distribution of the adverbs does not suggest any basis for subcategorizing them. In (66) /mək<sup>w</sup>/ 'all' precedes /yaθ/ 'always', but vice versa in (67). In (68) /yaθ/ precedes /nan/ 'very much so', but vice versa in (69).

(66) ?əw čəwətələ cən s?əw mək<sup>w</sup> ce? w yaθ ?əw si?em (4636b)

1 2 3 4 5 6 7 8 9 10 11 12

'I will help you(pl) so that you will all always be rich'

1 contemporaneous	7 'all'
2 'help'	8 future
3 'you(pl)'	9 contemporaneous
4 'I'	10 'always'
5 /ʔəŋ-/ 'your', /s-/ 'absolute'	11 contemporaneous
6 contemporaneous	12 'rich'

(67) ʔəw čewətálə cən ʔə sʔəw yaθ ceʔ w məkʷ ʔəw síʔəm  
 'I will help you(pl) so that you will always be rich'

(68) yaθ ʔəw nan ʔəw pəqʷəm šeɪ (5398c)

1 2 3 4 5 6

'It is always a very dusty road'

1 'always'	4 contemporaneous
2 contemporaneous	5 'dusty'
3 'very much so'	6 'road, door'

(69) nan ʔəw yaθ ʔəw pəqʷəm šeɪ (5398b)

'It is always a very dusty road'

Examples (68)-(69) correspond syntactically to example (65) in that the adverbs may be assigned as I.C. partners either to /pəqʷəm/ 'dusty' or to the predicative expression /pəqʷəm šeɪ/ 'dusty road' with equal plausibility.

The indeterminacy of constituent structure found in sentences containing a nominal predicative expression (examples 68-69) may also be observed in sentences containing an adverb and a direct attribute. In example (70) /məkʷ/ 'all' may be an I.C. partner to either /qəlét/ 'again' or to /qəlét yəθəst/ 'tell him again':

(70) ʔəw məkʷ ct ceʔ w qəlét yəθəst (5203)

1 2 3 4 5 6 7

'We are all going to tell him again'

- 1 contemporaneous,  
2 'all'  
3 'we'  
4 future

- 5 contemporaneous  
6 'again'  
7 'tell him'

In example (71) /kim/ 'very much so' may modify either the direct attribute stitəm 'hard' or stitəm θəyεq<sup>w</sup>ət 'dig hard':

(71) kim cən ?əw stitəm θəyεq<sup>w</sup>ət t<sup>θ</sup>ə təməx<sup>w</sup> (5423)

1 2 3 4 5 6 7

'I am really digging' up the soil'

- |                   |           |
|-------------------|-----------|
| 1 'very much so'  | 5 'dig'   |
| 2 'I'             | 6 article |
| 3 contemporaneous | 7 'soil'  |
| 4 'hard'          |           |

The first analysis is motivated by the fact that kim cən ?əw stitəm 'I am hard at it' may occur independently, although it is not further substantiated distributionally by a construction of the type \*θəyεq<sup>w</sup>ət cən kim ?əw stitəm, in which the adverb would be dependent on the direct attribute even when it follows the predicate.

In the discussion so far sentences were considered in which an adverb modifies a predicate. An adverb may also be attributive to a proposition. This type of dependency is apparent in example (73) where /kim/ precedes /ni?/ as opposed to (72) in which /kim/ follows /ni?/ and modifies the predicate /θi?it/:

(72) ni? pə? kim ?əw θi?it (345) 'It is really true'

1 2 3 4 5

- |                  |                   |
|------------------|-------------------|
| 1 nonproximal    | 4 contemporaneous |
| 2 certain        | 5 'true'          |
| 3 'very much so' |                   |

(73) kim n əw ɬənp̄təs (4222) 'He really gobbled it down'

1	2	3	4	5	
1	'very much so'			4	'gobble it down'
2	/ni?/ 'nonproximal'			5	third agent
3	contemporaneous				

The adverb - proposition construction is maintained in examples (74) and (75). Although in (74) the adverb and the subject enclitic /cən/ 'I' appears to form an adjunct head, example (75), in which the enclitic follows the initial element /ni?/ and not /mək<sup>w</sup>/, shows more clearly that /mək<sup>w</sup>/ is functioning normally as an adverb.

(74) mək<sup>w</sup> cən ni? ʔəw x<sup>w</sup>əyt (3589) 'I woke them all up'

1	2	3	4	5	
1	'all'			4	contemporaneous
2	'I'			5	'wake them up'
3	nonproximal				

(75) ni? cə mək<sup>w</sup> n əw ɬəyxt kə sməyəθ (5791a)

1	2	3	4	5	6	7	8
'I ate all the deer meat'							
1	nonproximal			5	contemporaneous		
2	/cən/ 'I'			6	'eat'		
3	'all'			7	article		
4	/ni?/ 'nonproximal'			8	'deer meat'		

The view that an adverb is attributive to a following proposition is further substantiated in syntactic environments in which the proposition is an attributive clause (2.2.1.2.) as in example (76). In (76) the attributive clause n əw wəɬ ɬciws 'who is already tired' has as its head I.C. partner /ni?/ 'referent', which precedes it and is translated as 'he' in the discourse situation. /kim/ accordingly

is not analyzed as an adjunct head.

(76)	ni	xi	n	pw	wai	iciws	(5337c)	'He is already very tired'
	1	2	3	4	5	6		(He who is already very tired)
	1	referent				4	contemporaneous	
	2	'very much so'				5	'already'	
	3	/ni?/ 'nonproximal'				6	'tired'	

This distributional privilege of the adverb provides support for the hypothesis that an adverb is more closely bound to a proposition than an adjunct is.

### 7.1.3. Particles

Predicates and elements attributive to them often co-occur with particles. These forms are single morpheme elements which are not modified by any other type of free form. They are of two types: enclitics, which follow a head element, and proclitics, which precede it. These two classes of forms exhibit further differences from each other. Enclitics follow the first non-particle<sup>13</sup> in a clause (most productively in a main one) and thereby formally mark one of its boundaries. The proclitics, which include on the basis of distribution the discontinuous morpheme /ʔəw...ʔa/ 'only', are not restricted in this way. In addition, unlike the enclitics, which are uninflectible; the proclitics are inflectible with /s-/ 'absolute' (2.3.2.) and the possessive prefixes /nə-/ 'my' and /ʔəh-/ 'your(sg)' in a subordinate clause.

The particles express three types of semantic relationships. They indicate modality (the attitude of a speaker towards a situation

in interpersonal communication). They also denote the temporal viewpoint of the speaker, although no distributional basis has been found for defining a system of tenses. The particles in addition indicate person since they include the subject enclitics, which have already been discussed in section 2.1.1. Predication and Person Marking. Although these person markers are idiosyncratic in that they affect the distribution of adjuncts unlike the other particles, from a formal standpoint they constitute a subclass of enclitics.

#### 2.1.3.1. Enclitics

Enclitics occur in second position in a clause, the first element being any form that is not a particle or determiner (1.3.1.). This distribution of the enclitics is independent of the syntactic relationship between the first element and some other form. A predicative expression like ʔæqtímət<sup>θ</sup> swáyqe? '(be) a tall man', which is substitutable for a predicate such as ʔæqtímət<sup>θ</sup> '(be) tall', might be expected to appear with enclitics following it in a sentence of the type, \*ʔæqtímət<sup>θ</sup> swáyqe? cə pə? 'I am a tall man'. However, as example (77) illustrates, the enclitics follow ʔæqtímət<sup>θ</sup>, which is the first element of the clause:

(77)	ʔæqtímət <sup>θ</sup>	cə	pə?	swáyqe?	(83)	'I am a tall man'
	1	2	3	4		
	1	'tall'			3	certain
		2	/cən/ 'I'		4	'man'

That the status of ʔæqtímət<sup>θ</sup> as a first element is the conditioning factor behind the occurrence of the enclitics /cən/ 'I' and /pə?/ 'certain' is shown in example (78) where the adverb /ʔim/ 'very much so' and not the predicative expression ʔæqtímət<sup>θ</sup> swáyqe? introduces the

main clause. The enclitics again follow the first non-particle.

(78)  $\lambda\text{im}$   $\text{c}\bar{\text{a}}$   $\text{p}\bar{\text{e}}?$   $\text{?}\bar{\text{a}}\text{w}$   $\lambda\text{aqt}\bar{\text{i}}\text{m}\bar{\text{a}}\text{t}^{\circ}$   $\text{sw}\bar{\text{a}}\text{y}\bar{\text{q}}\text{e}?$  (84)

1 2 3 4 4 5

'I am a very tall man'

1 'very much so'

4 contemporaneous

2 /cən/

5 'tall'

3 certain

6 'man'

As may be observed on the basis of examples (77) and (78) above, a Cowichan clause permits more than one enclitic. The enclitics apparently do not enter into an I.C. hierarchy, but form order classes. Any three enclitics may occur in a Cowichan clause in the sequence shown in the following schemata:

(a) /?eɪ/ 'past complete', /yəx<sup>w</sup>/ 'surprise', subject enclitic, /ce?/ 'future', /p̄e?/ 'certain', /?áɫə/ 'speaker wonders', /k<sup>w</sup>ə?eɪ/ 'factual'.

(b) /?e/ 'interrogative', /yəx<sup>w</sup>/ 'surprise', /čə/ 'confirmative', /q̄ə/ 'emphatic', /p̄e?/ 'certain', /θəɪ/ 'really'.

#### Subject Enclitics

	<u>singular</u>	<u>plural</u>
1 <sup>st</sup>	cən 'I'	ct 'we'
2 <sup>nd</sup>	č 'you'	ceep 'you'

The distribution of the enclitics is also affected by semantic co-occurrence restrictions. For example, /p̄e?/ 'certain' does not appear with /?e/ 'interrogative' or /yəx<sup>w</sup>/ 'surprise' and /?eɪ/ 'past' does not co-occur with /ce?/ 'future'.

In order to facilitate the description it would be appropriate to present each enclitic in turn according to its order class sequence. The enclitic which most immediately follows the first non-particle of a clause is /ʔeɪ/ 'past complete'. This form denotes an event viewed as being completed in the past and when applied to people or animals it indicates that they are dead. The distribution of /ʔeɪ/ may be observed in examples (79) and (80). In (79) /ʔeɪ/, which is realized as ʔəɪ in fast speech, appears to inflect the predicate qáʔetəm 'is killed'.

- (79) qáʔetəm ʔəɪ t<sup>ə</sup> nəmǎhə (5356) 'My son is killed'
- |                         |   |   |   |               |   |
|-------------------------|---|---|---|---------------|---|
| 1                       | 2 | 3 | 4 | 5             | 6 |
| 1 'kill'                |   |   |   | 4 article     |   |
| 2 third general passive |   |   |   | 5 'my'        |   |
| 3 past complete         |   |   |   | 6 'offspring' |   |

In example (80), however, where the predicate is no longer the first element, /ʔeɪ/, which precedes the subject enclitic /cən/ 'I' in accordance with the order class schemata, is still in second position as an I.C. partner to /niʔ/.

- (80) niʔ ʔəɪ cən nəm tǎq<sup>w</sup> (4265a) 'I went home'
- |                 |   |   |             |   |
|-----------------|---|---|-------------|---|
| 1               | 2 | 3 | 4           | 5 |
| 1 nonproximal   |   |   | 4 'go'      |   |
| 2 past complete |   |   | 5 'go home' |   |
| 3 /cən/ 'I'     |   |   |             |   |

The distribution of /ʔeɪ/ 'past complete' is idiosyncratic. In example (81) this morpheme does not follow the first non-particle of the main clause, /niɪ/ 'referent', and in (82) it does not follow the first element, /niʔ/ 'nonproximal', of the attributive clause

(elements 3-8) 'who killed my father'.

(81) niʔ peʔ kʷə sʔaʔ-ʔəʔ pus, ʔeʔ (5364)

1 2 3 4 5 6 7

'It used to be our cat'

1 referent	5 past complete
2 certain	6 'cat'
3 article	7 'that (one)' (marked)
4 'ours'	

(82) niʔ peʔ niʔ qáʔet kʷə nəmən-ʔəʔ kʷəʔ məstíməxʷ (T1:162)

1 2 3 4 5 6 7 8 9 10

'Those people are the ones who killed my (late) father'

1 referent	6 'my'
2 certain	7 'father'
3 nonproximal	8 past complete
4 'kill'	9 'that'
5 article	10 'people'

In each example /ʔeʔ/ 'past complete' follows the first non-determiner in a direct adjunct construction: -kʷə sʔaʔ-ʔəʔ pus 'our dead cat' in (81) and kʷə nəmən-ʔəʔ in (82). Apparently, /ʔeʔ/ has special status as a suffix in direct adjuncts.

/ʔe/ 'interrogative', which has two allomorphs ʔe and ʔə in free variation, corresponds in distribution to /ʔeʔ/ 'past complete' insofar as both forms precede any occurring subject enclitic. This distribution is illustrated in examples (83) and (84) of which (84) exemplifies a fully expanded construction consisting of three enclitics, /ʔe/ 'interrogative', /č/ 'you(sg)' and /ceʔ/ 'future':

(83) niʔ ʔe č ləmnəxʷ (15) 'Did you see him?'

1 2 3 4

- |                 |             |
|-----------------|-------------|
| 1 nonproximal   | 3 'you(sg)' |
| 2 interrogative | 4 'see him' |
- (84) ni? ?e č ce? šešəGámš (5733) 'Will you invite me over?'
- |                 |   |   |   |                     |   |   |
|-----------------|---|---|---|---------------------|---|---|
| 1               | 2 | 3 | 4 | 5                   | 6 | 7 |
| 1 nonproximal   |   |   |   | 5 'invite'          |   |   |
| 2 interrogative |   |   |   | 6 /-t/ 'transitive' |   |   |
| 3 'you(sg)'     |   |   |   | 7 'me'              |   |   |
| 4 future        |   |   |   |                     |   |   |

Unlike a language like English or French Cowichan shows no special distribution pattern for interrogation. /?e/ is like any other enclitic except the subject enclitics in not being restricted as to clause type and structure. The one special restriction applying to /?e/ is semantic. /?e/, which denotes yes-or-no questions, does not generally appear with predicates like /stem/ 'what' and /nəcím/ 'why',<sup>14</sup> which express interrogation of a different type.

/yəx<sup>w</sup>/ 'dubitative' follows /?e/ 'interrogative' and /?eł/ 'past complete' if either of these enclitics co-occurs with /yəx<sup>w</sup>/. The semantic interpretation of this form may be observed in example (85), which contains three enclitics, /yəx<sup>w</sup>/, /č/ 'you(sg)' and /?álə/ 'curious', and in example (86):

- (85) ni? yəx<sup>w</sup> č ?álə yəcák<sup>w</sup>ələəət (5488b)
- |                                    |   |   |   |            |   |
|------------------------------------|---|---|---|------------|---|
| 1                                  | 2 | 3 | 4 | 5          | 6 |
|                                    |   |   |   |            |   |
| 'I wonder where you(sg) are going' |   |   |   |            |   |
| 1 nonproximal                      |   |   |   | 4 'curious |   |
| 2 dubitative                       |   |   |   | 5 Serial   |   |
| 3 'you(sg)'                        |   |   |   | 6 'go far' |   |

- (86) ni? yəx<sup>w</sup> t'iq<sup>w</sup>əstəm ?ə k<sup>w</sup>əə nəyeyə (5360)
- |  |   |   |   |   |   |   |   |   |    |
|--|---|---|---|---|---|---|---|---|----|
| 1  | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
|  |   |   |   |   |   |   |   |   |    |
| 'He must have been punched in the face by my friend' |   |   |   |   |   |   |   |   |    |

1 nonproximal	6 third general passive
2 dubitative	7 oblique
3 'punch'	8 article
4 'face'	9 'my'
5 transitive	10 'friend'

As (85) and (86) illustrate, /yəx<sup>w</sup>/ indicates that the speaker is in doubt about or surprised by some aspect of the statement that he or she is making. In some discourse situations (example 85) this dubitative interpretation corresponds to the English expression 'I wonder' indicating curiosity, while in others such as (86) an inference is being made, in which case /yəx<sup>w</sup>/ translates as 'must be'.

The enclitic /yəx<sup>w</sup>/ 'dubitative' may be followed by /ce<sup>?</sup>/ 'future' as example (87) shows. In this sentence the temporal viewpoint is that of the agent and not that of the speaker.

(87) ni<sup>?</sup> yəx<sup>w</sup> ce<sup>?</sup> k'eləw hənəmət (T2:7) 'He was to hurry home'

1 2 3 4 5

1 nonproximal

4 'hurry'

2 dubitative

5 'be home'

3 future

In addition, like the enclitics mentioned above /ce<sup>?</sup>/ enters into a three-enclitic pattern as illustrated by elements 2-4 in the following example:

(88) ni<sup>?</sup> ?ə č ce<sup>?</sup> k<sup>w</sup>i<sup>?</sup>qənstānš (S572) 'Will you take me climbing?'

1 2 3 4 5 6 7

1 nonproximal

5 'climb'

2 /ʔe/ 'interrogative'

6 /-stəx<sup>w</sup>/ 'causative'

3 'you(sg)'

7 'me'

4 future

In its distribution--after /yəx<sup>w</sup>/ in (87) and after a subject enclitic in (88)--/tə<sup>?</sup>/ 'future' differs from /ʔeɪ/ 'past', which precedes these forms. It is therefore apparent that although /tə<sup>?</sup>/ and /ʔeɪ/ constitute a semantic category, that of temporal enclitics, they do not form a syntactic class.

/čə/ 'confirmative', which is idiosyncratic because it has been found only with third person referents in texts, like /tə<sup>?</sup>/ 'future' follows /yəx<sup>w</sup>/ 'dubitative' as example (89) illustrates:

(89) ni<sup>?</sup> yəx<sup>w</sup> čə ni<sup>?</sup> ʔə t<sup>ə</sup> slək<sup>w</sup> ʔinək t<sup>ə</sup> ni<sup>?</sup> šni<sup>?</sup>s (L1:25)

1 2 3 4 5 6 7 8 9 10

'It must have been right on the edge of the cliff  
where he was'

1 nonproximal	6 article
2 dubitative	7 'bluff, cliff'
3 confirmative	8 article
4 nonproximal	9 nonproximal
5 oblique	10 'his location'

Where /čə/ occurs, it is implied that the speaker believes a statement to be true, but contrary to expectations. This meaning, which is sometimes conveyed in English by terms like really, actually or even, may be observed in example (89) above and in (90) below, where it is expected in the discourse situation that the entity would surface after diving.

(90) ʔəwə čə ni<sup>?</sup>s wəɪ pəq<sup>w</sup> t<sup>ə</sup> əwniɪ (T3:34)

1 2 3 4 5 6 7

'Only he never surfaced (after diving in)'

1 'not'	4 /-əs/ 'third dependent'	
2 confirmative	5 'already'	
3 nonproximal	6 'float, surface'	7 'that (one)'

The enclitic /ǫə/ 'emphatic' differs from /čə/ 'confirmative' in that /ǫə/ may appear either with a subject enclitic (example 91, element 2) or without it (example 92). In the former example /ǫə/ precedes the enclitic.

(91) ni? cə ǫə wəɪ ʔáməst (5706) 'But I already gave it to him'

1 2 3 4 5

1 nonproximal

4 'already, now'

2 /cən/ 'I'

5 'give it'

3 emphatic

(92) náʔət ǫə ʔəw wəɪ təs (T7:58) 'It (rope) has now reached'

1 2 3 4 5

1 nonproximal emphatic

4 'already, now'

2 emphatic

5 'reach, arrive'

3 contemporaneous

In its semantic capacity /ǫə/ expresses a change in circumstances that is viewed by the speaker as being significant.

The enclitic /pəʔ/ 'certain' follows /ceʔ/ 'future' and /čə/ 'confirmative' as in the following examples:

(93) ʔəwə č ceʔ pəʔ xʔásəxʷ (4224) 'You are not going to eat!'

1 2 3 4 5 6

1 'not'

4 certain

2 'you(sg)'

5 'eat'

3 future

6 'you' (dependent)

(94) ʔi č pəʔ xʷiʔ ʔəw haʔqʷ (L1:40) 'There was even a fire'

1 2 3 4 5 6

1 proximal

4 'next, then'

2 confirmative

5 contemporaneous

3 certain

6 'fire'

/pəʔ/ indicates that the speaker is certain about the statement (example

94) or command (example 93) he or she is making.

/θəɪ/ 'really, truly' may either follow /čə/ 'confirmative' (example 95) or may occur directly after the first non-particle of a sentence (example 96):

(95) ?i čə θəɪ dʷəɪlətəs t<sup>θ</sup>ə sʔəɪtəns (T5:50)

1 2 3 4 5 6 7 8

'She was really cooking her food' (while beating a drum)

1 proximal	5 third transitive agent
2 confirmative	6 article
3 'really, truly'	7 'food'
4 'cook it'	8 third possessive

(96) ?i θəɪ wəɪ wəqʷənəs t<sup>θ</sup>ə səmsáθət (T6:37)

1 2 3 4 5 6

'The sun had already appeared'

1 proximal	4 'appear (over the mountain)'
2 'really, truly'	5 article
3 'already, now'	6 'sun'

/θəɪ/ emphasizes the speaker's view that a given statement is true and corresponds translationally to English expressions like 'in fact' and 'actually'. This semantic interpretation is reflected in example (95) and in (96) in which the emphasis is on the sun's actual appearance after being just below the mountain and on the point of appearing.

The enclitic /ʔáɪə/ 'curious' follows /pəʔ/ 'certain' as exemplified in example (97):

(97) ?i ceʔ p ʔáɪə stámət (67) 'What is going to happen?'

1 2 3 4 5

1 proximal	4 curious
2 future	5 'happen'
3 certain	

/ʔáǎ/ expresses curiosity on the part of the speaker to obtain an answer and thereby has an interrogative force like /ʔe/ 'interrogative'. However, unlike /ʔe/ it designates questions other than yes-or-no ones (examples 98-99):

(98) stem ʔáǎ (T2:47) 'What is it?'

1 2

1 'what'

2 curious

(99) niʔ ʔéǎ yəxʷ ʔáǎ wəǎ kʷin silánəm (1087)

1 2 3 4 5 6 7

'How many years ago was it?'

1 nonproximal

5 'already, now'

2 past complete

6 'how many'

3 dubitative

7 'year'

4 curious

/ʔáǎ/ 'curious' is followed by /kʷəʔéǎ/ 'factual' as indicated in the following example:

(100) nəcím ʔáǎ kʷəʔéǎ ʔə šniʔ ʃʷayt kʷə nəməstíməxʷ (T:60)

1 2 3 4 5 6 7 8 9 10

'Why did you kill my people?'

1 'why'

6 nonproximal

2 curious

7 'kill'

3 factual

8 article

4 /ʔəǎ-/ 'your(sg)'

9 'my'

5 /ʃxʷ-/ 'instrumental'

10 'people'

/kʷəʔéǎ/ expresses the view of the speaker that the statement he or she is making is a well-known and/or definite fact. This enclitic occurs frequently in texts with /niǎ/ 'referent', which has the meaning 'that is how' in such a semantic context (example 101).

(101) ni<sup>1</sup> k<sup>wə?</sup>e<sup>1</sup> ?əw štes ?a<sup>1</sup> (T2:80) 'That is the way they are'

1 2 3 4 5 6 3

1 referent 4 /šx<sup>w</sup>-/ 'instrumental'  
 2 factual 5 /ste/ 'be like'  
 3 'just, only' 6 third possessive

(102) ni<sup>1</sup> k<sup>wə?</sup>e<sup>1</sup> ha<sup>1</sup>stálem (3857) 'So, you(pl) were fired'

1 2 3 4 5

1 nonproximal 4 /-stəx<sup>w</sup>/ 'causative'  
 2 factual 5 'we' (general passive)  
 3 'fire someone'

Translationally /k<sup>wə?</sup>e<sup>1</sup>/ corresponds to English expressions like 'of course', 'you know', 'then', 'therefore' and 'accordingly'.

Although most enclitics enter into the order class system described at the beginning of this section, there is one enclitic /te<sup>?</sup>/ 'exhortatory' which does not occur with any other enclitic. The semantic interpretation of this form, which often translates as 'let's', varies according to the discourse situation. In example (103) /te<sup>?</sup>/ implies permission whereas in (104)-(105) it has an imperative force:

(103) nēm te<sup>?</sup> (T7:171) 'Go ahead' (permission being granted)

1 2

1 'go' 2 exhortatory

(104) ?i te<sup>?</sup> ?əmət (2131) 'Let's sit down'

1 2 3

1 proximal 3 'sit down'  
 2 exhortatory

(105) ?əw həlístámš te<sup>?</sup> ?a<sup>1</sup> (5401) 'Just let me live!'

1 2 3 4 5 1

1 'just, only' 4 'me'  
 2 'live' 5 exhortatory  
 3 /-stəx<sup>w</sup>/ 'causative'

### 2.1.3.2. Proclitics

As stated earlier (2.1.3.), proclitics are particles which may be inflected with /s-/ 'absolute' (2.3.2.) and the possessive prefixes /nə-/ 'my' and /ʔəh-/ 'your(sg)' and which precede the element they modify. Seven proclitics have been identified. They are as follows: /x<sup>w</sup>iʔ/ 'next, then', /ʔeʔ/ 'again, any more', /ʔəw/ 'contemporaneous', /təw/ 'sort of', /wəɬ/ 'already, now', /x<sup>w</sup>əh/ 'still, yet' and the discontinuous morpheme /ʔəw...ʔaɪ/ 'only' of which all forms except /təw/ express temporal relationships.

In order to facilitate the description it would be appropriate to analyze each proclitic in turn according to its position relative to other proclitics before a head element. The proclitic which most immediately precedes such an element is /x<sup>w</sup>əh/ 'still, yet'. This element, which is often preceded by /ʔəw/ 'contemporaneous' in constructions not marked by /s-/ 'absolute' (2.3.2.), denotes an activity which has not been completed (example 106).

(106) niʔ ct pəʔ ʔəw x<sup>w</sup>əh ʔəhəʃ (183) 'We still go hunting'

1	2	3	4	5	6
1 nonproximal				4 contemporaneous	
2 'we'				5 'still, yet'	
3 certain				6 'hunt'	

In example (106) it is implied that the speaker has hunted in the past and has not given up hunting. As expected on the basis of semantic interpretation, /x<sup>w</sup>əh/ does not co-occur with the enclitic /ʔeɪ/ 'past complete', which unlike /x<sup>w</sup>əh/ denotes an activity that has been completed.

/x<sup>w</sup>əŋ/ 'still, yet' is preceded by /wəɫ/ 'already, now' where the two proclitics co-occur:

(107) ni? wəɫ x<sup>w</sup>əŋ nəswé? (3816) 'It is still mine now'

1 2 3 4 5

1 nonproximal 4 'my'  
2 'already, now' (begin) 5 'own'  
3 'still'

/wəɫ/ indicates that the discourse situation is being viewed by the speaker instantaneously, that is, that an event is considered to occur at a given point of time rather than over a duration. This meaning is conveyed in English translations by words like 'now', 'then' and 'just' as indicated in examples (108)-(109):

(108) ni? wəɫ wíl t<sup>ə</sup> səmšáðət (T6:34) 'Then the sun appeared'

1 2 3 4 5

1 nonproximal 4 article  
2 'already, now' (begin) 5 'sun'  
3 'appear'

(109) wəɫ nəm ct həyé? (5301) 'We are just going away'

1 2 3 4

1 'already, now' (begin) 3 'we'  
2 'go' 4 'go away'

/wəɫ/ 'already, now' may be preceded by /təw/ 'sort of' as indicated in example (110) where /təw/ and /wəɫ/ are attributive to the adverb /kim/ 'very much so':

(110) təw wəɫ kim x<sup>w</sup>əmeenáləš t<sup>ə</sup> stálas (T6:41)

1 2 3 4 5 6 7

'The husband was getting kind of weak'

- |                  |            |
|------------------|------------|
| 1 'sort of'      | 5 'weak'   |
| 2 'already, now' | 6 article  |
| 3 'very much so' | 7 'spouse' |
| 4 developmental  |            |

/təw/ indicates that the speaker considers his or her statement to be an approximation. In some discourse situations this form denotes vagueness or uncertainty on the part of the speaker. /təw ʔəncə/ (3538), for example, means 'whereabouts' whereas /ʔəncə/ by itself means 'where'. The concept of uncertainty is assumed by /təw/ in example (111a), which contrasts semantically with (111b) where /ʔəw/ 'contemporaneous' is present:

(111a) təw q<sup>w</sup>ənəs (1567) 'It looks like a whale'

1 2

1 'sort of'

2 'whale'

(111b) ʔəw q<sup>w</sup>ənəs (1568) 'It is a whale'

1 2

1 contemporaneous

2 'whale'

In other discourse situations /təw/ has a lenitive interpretation:

(112) ʔim təw ʔəʔəq<sup>w</sup> (3676) 'It kind of sticks'

1 2 3

1 'very much so'

3 'stick' (Actual)

2 'sort of'

In example (112) the presence of /təw/ indicates that the sticking is regarded as being minimal.

/təw/ 'sort of' may be preceded by /ʔəw/ 'contemporaneous' as in example (113), in which the predicate /ʔəy/ 'good' is modified by three proclitics, /ʔəw/, /təw/ and /x<sup>w</sup>əh/:

(113) ni? w̄ təw x<sup>w</sup>əh̄ ?əȳ t̄<sup>o</sup> n̄ léləh̄ (4559)

1 2 3 4 5 6 7 8

'Your house is still in kind of good shape'

1 nonproximal	5 'good'
2 contemporaneous	6 article
3 'sort of'	7 'your(sg)'
4 'still'	8 'house'

/ʔəw/ indicates that there is an immediate point of reference in connection with which a speaker makes a statement. This statement may be in response to a question posed by the addressee in a given situation or may be a confirmation of a fact in question. In dependent subordinate clauses (2.3.1.), in which /ʔəw/ is usually employed, the point of reference is presented in the form of a condition in a semantic structure of the type 'if I leave'.

The identification of the meaning of /ʔəw/ 'contemporaneous' in main clauses was facilitated by the conscious awareness of it by two native speakers of Cowichan, Mr. Stan James (SJ) and Mr. Elwood Modeste (EM), in examples (114)-(16). In (114), when SJ was asked the meaning of the sentence when it contained /ʔəw/, he indicated that it meant 'I will' in response to a question like 'who is going to cut it?'. This question apparently provides a point of reference in response to which the statement (114) is made.

(114) (ʔəw) qələt cən ce? t̄icət (5235) 'I will cut it again'

1 2 3 4 5

1 contemporaneous	4 future
2 'again'	5 'cut it'
3 'I'	

In example (115) SJ indicated that /ʔəw/ would be appropriate if

another person asked for five people. In such a case the statement containing /ʔəw/ would confirm the presence of five people, if only some of the people could be seen.

(115) (ʔəw) kq̄ac̄elə ct (5796b) 'There are five of us'

1	2	3	4		
1	contemporaneous			3	'people'
2	'five'			4	'we'

In this example the statement introduced by /ʔəw/ is interpreted as a confirmation and is contemporaneous with the addressee's interest in the situation. Concerning example (116) EM explained that if /ʔəw/ were present it would imply that it was in doubt whether or not Joe had been seen and example (116) would constitute a confirmation.

(116) niʔ kə Jow niʔ ləmməxʷəs ʔə kʷəh̄a cələqəʔ (5719b)

1	2	3	4	5	6	7	8	9
'It was Joe he saw yesterday'								
1	referent			6	third transitive agent			
2	article			7	oblique			
3	'Joe'			8	'this'			
4	nonproximal			9	'yesterday'			
5	'see'							

The proclitic /ʔəw/ 'contemporaneous' is preceded by /xʷiʔ/ 'next, then'. This morpheme expresses a sequence of activities as suggested by the following /ʔiʔ/ 'and' construction:

(117) ʔəwə cə ceʔ x̄iʔson ʔiʔ xʷiʔ ʔəw ʔələd̄ən ʔələ k̄ənd̄ən (4225a)

1	2	3	4	5	6	7	8	9	10	11	12
'I am not going to eat and then lie down all day'											
1	'not'			7	'then, next'						
2	/cən/ 'I'			8	contemporaneous						
3	future			9	'lie down'						

4 'eat'	10 'I' (dependent)
5 'I' (dependent)	11 curious
6 'and'	12 'all day'

Another morpheme which may precede /ʔəw/ 'contemporaneous' is /ʔeʔ/ 'again, any more'. As examples (118)-(119) suggest, /ʔeʔ/ expresses the repetition of an activity.

(118) neŋ cə ʔə wəʔ x<sup>w</sup>əʔáɫəŋ (5513) 'I am going back again'

1 2 3 4 5

1 'go'

\*4 'already, now'

2 /cən/ 'I'

5 'go back'

3 'again'

(119) sk<sup>w</sup>ey k<sup>w</sup> nəʔeʔ háʔk<sup>w</sup>əʂ ( ) cannot use it any more'

1 2 3 4 5 6

1 'not permitting'

4 absolute

2 article

5 'again, any more'

3 'my'

6 'use it'

In addition to all the above-mentioned elements the proclitic set includes a discontinuous morpheme /ʔəw...ʔaɪ/ 'only, merely', which expresses the speaker's view that the activity described represents a limitation. This morpheme has an idiosyncratic property; when /ʔəw...ʔaɪ/ 'only, merely' modifies certain predicates such as /niʔ/ 'referent' (2.2.1.3. Interrogatives and Emphatics), they may function adjectivally, which they cannot do independently:

(120) niʔ cə nəŋəstəx<sup>w</sup> ʔəw niʔ ʔaɪ stíɫəm (5406a)

1 2 3 4 5 6 5 7

'I sang (brought out) the same song'

1 nonproximal

5 'only'

2 /cən/ 'I'

6 referent

3 'go'

7 'song'

4 causative

In (120) ?əw niɪ ?aɪ 'same' modifies stɪlɔm 'song', a syntactic function which /niɪ/ alone does not have.

The adjectival distribution of /?əw...?aɪ/ 'only' is not limited to /niɪ/ 'referent', but extends to other predicates such as /pq<sup>w</sup>ay/ 'rotten' in example (121):

(121) ʔim ?əw wɔɪ pq<sup>w</sup>ay ?aɪ syaɪ (5247) 'It was very rotten wood'

1 2 3 4 2 5

1 'very much so'

4 'rotten'

2 'only'

5 'wood'

3 'already, now'

It is significant in this example that ?aɪ follows pq<sup>w</sup>ay and not syaɪ, because it suggests that ?əw...?aɪ and wɔɪ 'already, now' are attributive not to a whole noun phrase pq<sup>w</sup>ay syaɪ but just to the adjectival predicate. This distributional property of /?əw...?aɪ/ provides a motivation for a similar analysis of other proclitics. For example, in (122) /?əw/ 'contemporaneous' may be construed as an I.C. partner to /qaɪ/ 'a lot':

(122) ʔim ?əɪ ?əw qaɪ sməyɔθ (125) 'There used to be lots of deer'

1 2 3 4 5

1 'very much so'

4 'a lot'

2 past complete

5 'deer'

3 contemporaneous

As an alternative to viewing /?əw...?aɪ/ 'only' as a single morpheme, this form may be analyzed into two forms: /?əw/ 'contemporaneous' and /?aɪ/ 'only', an enclitic. As evidence for this approach one might cite the fact that ?əw with or without ?aɪ enters

into the following order class schema: /ʔeʔ/, /ʔəw/, /xʷəŋ/, /wəʔ/.

Examples (123)-(24) illustrate this schema. ʔəw follows /ʔeʔ/ 'again' in (123) and precedes /xʷəŋ/ 'still, yet' in (124):

(123) niʔ ʔəw ʔəw ste ʔaɪ (T4:28) 'It is just the same'

1 2 3 4 3

1 nonproximal

3 'only, just'

2 'again'

4 'be like so'

(124) ʔəw xʷəŋ sčənéč č ʔaɪ (4837) 'Just stay seated'

1 2 3 4 1

1 'only, just'

3 'be seated'

2 'still, yet'

4 'you(sg)'

The morphemic status of ʔaɪ as an enclitic appears to be supported by the fact that it enters into the order class system of the enclitics. As examples (125)-(26) show, ʔaɪ follows subject enclitics and /eʔ/ 'future', but precedes /pəʔ/ 'certain':

(125) ʔəw ʔi č ʔaɪ pəʔ ʔə kʷ tixʷ skʷeyl (4851a)

1 2 3 1 4 5 6 7 8

'You may stay for three days'

1 'only, just'

5 oblique

2 proximal

6 article

3 'you(sg)'

7 'three'

4 certain

8 'day'

(126) ʔəw txʷʔi č eʔ ʔaɪ ʔə təhá (3450)

1 2 3 4 5 1 6 7

'So, you can stay right here!'

1 'only, just'

5 future

2 developmental

6 oblique

3 'here' (proximal)

7 'this'

4 'you(sg)'

6-7 'here'

Despite the above-mentioned evidence the view adopted here is that /ʔəw...ʔaɪ/ 'only' constitutes a single morpheme. There are two motivations for this hypothesis. First, ʔəw and ʔaɪ more frequently than not co-occur with each other, although in imperative sentences and in adjectival constructions ʔaɪ by itself appears in free variation with ʔəw...ʔaɪ. Secondly, there is counterevidence against the hypothesis that ʔaɪ is an enclitic. Although ʔaɪ appears to function as an enclitic when the predicate is the first non-particle of a clause, its distribution is distinct from that of the enclitics when the predicate is not the first element as in the following example:

(127) ʔi ʔe č ʔəw hay ʔaɪ (1094) 'Are you alone?'

1 2 3 4 5 4

1 proximal

2 interrogative

3 'you(sg)'

4 'only, just'

5 'alone'

In (127) the enclitics /ʔe/ 'interrogative' and the subject marker /č/ 'you(sg)' follow the first non-particle /ʔi/ 'proximal'. However, ʔaɪ remains attracted to the predicate /hay/ 'alone'.

## 2.2. Adjuncts and Attribution to them

As well as being expanded by means of elements attributive to a predicate, a Cowichan sentence may also be expanded through forms embedded to an adjunct. There are two ways in which an adjunct may be thus modified. An adjunct construction may contain an element like /ʔəqtimət<sup>9</sup>/ 'tall', which may precede, but not follow the adjunct, and which is accordingly said to have adjectival function (2.2.2. Structure

of the Noun Phrase). The construction may also contain an attributive clause, which usually follows the adjunct head, but which may precede it.<sup>15</sup> This type of clause corresponds semantically but not syntactically to English relative clauses such as the underlined expressions in 'Joe talked to the man whom John saw' and 'Joe talked to the man who saw John'. Unlike in English, an adjunct construction containing an attributive clause may either be embedded to a predicate or function as an independent sentence with a semantic structure of the type '(It was) the man who saw John'.

#### 2.2.1. Attributive Clauses

A Cowichan attributive clause differs from an English type of relative clause in internal structure. Cowichan does not have special markers corresponding to the relative pronouns, 'who' and 'whom', in order to express the understood relationship between an attributive clause and its head. Instead, the different types of semantic relationships are marked by means of different clause subordination devices except for one attributive clause type in which there is no special marking. If the predicate of the attributive clause takes /s-/ 'absolute' (2.3.2.), one type of semantic relationship is signalled and if it is inflected with /šx<sup>w</sup>-/ 'instrumental' (2.3.3.) or with dependent clause person markers (2.3.1.) other types of relationships are signalled. These devices are not restricted to attributive clauses, but also characterize the non-attributive (complementary) subordinate clauses.

Since attributive clauses may be analyzed both as constituents of adjunct expressions and as subordinate clauses, a dichotomy is maintained between the marked and the unmarked types of clauses in the grammatical presentation. Attributive clauses that are morphologically marked as subordinate clauses are analyzed in section 2.3. Subordinate Clauses. The unmarked clauses are presented here as the means for analyzing the internal structure of an adjunct construction.

#### 2.2.1.2. Attributive Clauses with Adjunct Heads

The syntactic structure and the semantic interpretation of an attributive clause not marked for subordination are determined by whether the predicate of it is intransitive or transitive and, if transitive, by whether or not the predicate is further inflected with /-əs/ 'third transitive agent' or the general (but not the subordinate) passive person markers. If the attributive clause predicate is intransitive, then the clause is homophonous with an independent sentence, since independent clause intransitive constructions do not take /-əs/ 'third transitive agent'.

The intransitive predicate construction may be observed in sentences (128)-(29). Example (128) consists of a proposition (elements 1-3) and an adjunct phrase (4-9). Within the phrase the adjunct head (element 5) is the anaphoric subject of the attributive clause (elements 6-8):

(128) ni? ʔəw mək<sup>w</sup> k<sup>wə</sup> ɬqəcélə ni? wəɬ háye (595)  
 1 2 3 4 5 6 7 8

'All five of them left'

(The five who left were all)

1 nonproximal	5 'five people'
2 contemporaneous	6 nonproximal
3 'all'	7 'already, now'
4 article	8 'leave'

Since this clause contains an intransitive predicate /həyé/ 'leave', it has no special marker and could in fact stand as an independent sentence ni? wəɪ həyé 'they left'. Example (129) is a compound clause (a type of construction which will be discussed in section 2.4.) consisting of an adjunct phrase conjoined to a main clause to form a semantic structure of the type 'the house which is over there and it is still mine now'.

(129) t<sup>ə</sup> ni? ni? ?ə təní léləm ?i? ni? wəɪ x<sup>w</sup>əñ nəswe?  
 1 2 3 4 5 6 7 8 9 10 1112

'The house over there is still mine now'

1 article	7 'and'
2 nonproximal	8 nonproximal
3 'be there' (nonproximal)	9 'already, now'
4 oblique	10 'still'
5 'this'	11 'my'
6 'house'	12 'own'

As in example (128) the adjunct phrase (elements 1-6) consists of an adjunct head (element 6) and an attributive clause (2-5). The phrase in (129), however, is distinct in internal structure from the one in example (128), elements 6-8. In (129) the attributive clause precedes the adjunct head, whereas in (128) above it follows the head. This distribution of the attributive clause suggests that it is functioning as an I.C. partner to the adjunct head by itself (ɪqəcəla 'five people' in (128) and léləm 'house' in (129)) and not to the adjunct head and the

preceding determiner ( $k^w\theta\theta$  in (128) and  $t^\theta$  in (129)), an element which is clearly separated from the head in (129).

Where the predicate of an attributive clause is transitive, it may be inflected with the same person markers that may be present in a main clause, namely, the goal suffixes (1.1.2.1. and 2.1.1.1.), the passive markers (1.1.2.2. and 2.1.1.2.) and /-əs/ 'third transitive agent' (2.1.1.1.). However, the attributive clause construction differs from the main clause in coreference relations between person markers and direct adjuncts.

In one type of transitive predicate clause the predicate is marked by the absence of /-əs/ 'third agent', when the adjunct head is interpreted as the subject of the clause:

(130)  $?\theta w$  hay  $t^\theta$  s $^?$ at sq $^w$ améy  $?\theta w$  t $^\theta$ éyxt  $t^\theta$  sti $q^w$ iw (s $q^w$ iq $^w$ )

1 2 3 4 5 6 7 8 9 10 11

'Only our dog eats horse meat' (3634)

(Our dog who eats horse meat is alone)

1 contemporaneous

7 'eat it'

2 'only, alone'

8 transitive

3 article

9 article

4 'our'

10 'horse'

5 'dog'

11 'meat'

6 contemporaneous

In example (130) there is a main clause predicative expression  $?\theta w$  hay 'be alone' and an adjunct (elements 3-10), which contains an attributive clause (6-11). This clause, from which /-əs/ is absent, might also function as an independent sentence albeit with the distinct imperative interpretation 'Eat the horse meat!'. Although in each

case the goal referents are the same, the subject referents are different. In the main clause version the referent is a second person entity, whereas in the attributive clause it is a third person one, the adjunct head (elements 4-5).

The attributive clause predicate may be characterized by /-əs/ 'third transitive agent'. Where this morpheme is present the adjunct head is interpreted as the goal of the attributive clause as in the following example:

(131) ?i ?əɬ mək<sup>w</sup> ?əw ni? ?əwk<sup>w</sup> tās t<sup>θ</sup> sq<sup>w</sup> əmēy kə m<sup>u</sup>sməs (4221)

1 2 3 4 5 6 7 8 9 10 11 12

'The dog had eaten all the meat'

(The meat is everything which the dog had eaten)

1 proximal	7 transitive
2 past complete	8 third agent
3 'all, every'	9 article
4 contemporaneous	10 'dog'
5 nonproximal	11 article
6 'consume'	12 'cow (meat)'

In example (131) the attributive clause (elements 4-10) modifies the adjunct head /mək<sup>w</sup>/ '(be) all' and enters into a predicative expression (elements 1-10). The main clause adjunct kə m<sup>u</sup>sməs 'the meat' is in turn attributive to the expression. Like the unmarked construction described above, the attributive clause (4-10) containing /-əs/ 'third agent' may also function as an independent sentence with the meaning 'he ate the dog'. Although the main clause version is still a statement, there is a change in the controller relationship. As indicated earlier (2.1.1.1.) the single adjunct in a main clause

generally has patient interpretation. In the attributive clause, however, the adjunct (elements 9-10) is coreferential with /-əs/ and correspondingly appears in the role of agent; the adjunct head (element 3) modified by the attributive clause is construed as a patient.

If the adjunct head is interpreted as a patient, the predicate of the attributive clause may be marked by a general passive suffix, which is coreferential with the adjunct head. Example (132) illustrates this type of attributive clause:

(132) ni təʔəncə sɪkqət ni? ɔiqʷətəm ʔə t<sup>θ</sup> ə sqʷəməy (3623)

1 2 3 4 5 6 7 8 9 10

'Which child was (it who was) bitten by the dog?'

1 referent

6 transitive

2 'which'

7 third general passive

3 'child'

8 oblique

4 nonproximal

9 article

5 'bite'

10 'dog'

This sentence contains a predicate (element 1) and an adjunct expression (2-10). Within this expression the adjunct head (2-3) is modified by the attributive clause (4-10) and is coreferential with /-m/ 'third general passive', which has patient interpretation.

Unlike the unmarked and /-əs/ 'third agent' attributive clause types the passive construction may constitute an independent sentence without any change in interpretation. In (132) ni? ɔiqʷətəm ʔə t<sup>θ</sup> ə sqʷəməy by itself would mean 'It was bitten by the dog'.

In addition to modifying a predicate, an adjunct expression containing an attributive clause may function as an independent

construction, which may be termed an emphatic sentence. This type of sentence reflects a semantic dichotomy between a presupposition (the information shared by the speaker and the listener) and a focus (the information assumed by the speaker not to be shared by the listener).<sup>16</sup>

The adjunct head, which specifies who or what performed a given action, corresponds to the focus; and the attributive clause, which expresses what the action is, corresponds to the presupposition.

From a syntactic point of view the emphatic construction is not idiosyncratic in its internal structure. As in other attributive clause constructions, the semantic relationship between the adjunct head and the attributive clause is determined by the inflectional status of the clause predicate. Where the predicate is intransitive the clause is a potentially independent sentence as illustrated in (133):

(133) t<sup>h</sup> ɔ̃ ʃx<sup>w</sup>ʔáq<sup>w</sup>a<sup>ʔ</sup>o (ʔi) k<sup>w</sup>ám<sup>w</sup>óm (4255c) 'His brother is strong'

1 2 3 4 5

1 article

4 proximal

2 'sibling'

5 'strong'

3 third possessive

The emphatic sentence in this example corresponds in semantic and syntactic structure to the non-emphatic sentence illustrated earlier in example (128). In (133) the adjunct head (elements 2-3) is the anaphoric subject of the attributive clause (4-5). As in (128) the attributive clause in example (133) may function as an independent sentence ʔi

k<sup>w</sup>ám<sup>w</sup>óm 'he is strong'.

In an emphatic construction containing a transitive predicate

the same morphological marking and coreference relations occur as in a non-emphatic adjunct expression. In the emphatic sentence represented by example (134) as in (133) above the absence of /-əs/ 'third transitive agent' marks the predicate (elements 4-5) when the adjunct head (element 3) is interpreted in the role of agent.

(134) tən<sup>1</sup> t<sup>2</sup>ve ni? ?ex<sup>3</sup>e?t θə nən<sup>4</sup>ə ?ə t<sup>5</sup>ə s<sup>6</sup>ax<sup>7</sup>a (3493)

1 2 3 4 5 6 7 8 9 10 11

'This friend gave my daughter some clams'

1 'this'

7 'my'

2 'friend'

8 'offspring'

3 nonproximal

9 oblique

4 'give'

10 article

5 transitive

11 'clams'

6 article (marked)

Where /-əs/ 'third agent' occurs the coreference relationships are altered in the emphatic construction as in the non-emphatic one. The emphatic sentence (135) corresponds in internal structure to the adjunct expression in the non-emphatic sentence in example (131) above.

(135) mək<sup>1</sup> stem ni? t<sup>2</sup>ə?tos t<sup>3</sup>ə n<sup>4</sup>əm (T1:126)

1 2 3 4 5 6 7 8

'The man tried everything'

(Everything which the man tried)

1 'all, every'

5 transitive

2 'thing, what'

6 third transitive agent

3 nonproximal

7 article

4 'try'

8 'sir, rich (person)'

In contrast to what happens in (134) the adjunct head (elements 1-2) in (135) is construed as a patient and the adjunct (elements 7-8)

within the attributive clause (3-8) as an agent.

The syntactic and semantic parallelism between emphatic and non-emphatic constructions remains when the attributive clause contains a passive person marker. In example (136) as in the non-emphatic sentence (132) the adjunct head (element 2) is modified by the attributive clause (3-9) and is coreferential with /-m/ 'third general passive'.

(136) t<sup>o</sup>.sq<sup>o</sup>omóy ni? ?ámōstōm ?ō kō smóysō (3652a)

1 2 3 4 5 6 7 8 9

'The dog (which) was given the deer meat'

1 article

6 third general passive

2 'dog'

7 oblique

3 nonproximal

8 article

4 'give'

9 'deer (meat)'

5 transitive

The attributive clause in this example as in (132) is potentially an independent sentence with the meaning 'He was given the (deer) meat'.

One might expect the adjunct head of an emphatic sentence to interact with the clause enclitics (2.1.3.1.) since it occurs in sentence initial position. The enclitics, however, do not occur productively with adjunct heads. There are four examples in the corpus. One (example 137) contains an emphatic /nōwə/ 'you(sg)' (2.2.1.3. Interrogatives and Emphatics) with the same meaning as its I.C. partner /č/ 'you(sg)' and three examples contain adjunct heads that denote quantity, namely, /qǎle/ 'many people', /k<sup>o</sup>ihə/ 'how many people' and /?əpənə/ 'ten people', as illustrated in (138), (139) and (140) respectively.

- (137) nówə ẽ kʷəʔəɪ ʔəw ʔɪ (T2:102) 'You will be here!'

| 5 | locative      |   |   |     |   |   |   |   |

### 2.2.1.2. Headless Attributive Clauses

In the previous section it was stated that attributive clauses in I.C. partnership to adjunct heads are similar in internal structure whether they occur in an emphatic or non-emphatic adjunct phrase.

Attributive clauses may also appear without adjunct heads. Where the attributive clause is headless the internal structure of an emphatic construction differs from that of a non-emphatic one.

When a headless attributive clause forms an emphatic sentence there are two initial occurrences of /ni?/ 'nonproximal' rather than one or none when the clause has a head. In the morphological marking of the predicate this type of construction is like any other type of attributive clause. The predicate may be either uninflected (141) or inflected with a general passive person marker (example 142, element 6):

(141) ni? ni? lam (T5:23) 'There were enough'

1 2 3

1, 2 nonproximal 3 'enough'

(142) ni? ni? tow 6synom (S077b) 'He sort of fixed it'

1 2 3 4 5 6

1, 2 nonproximal 5 /-nox<sup>w</sup>/ 'responsible'

3 'sort of' 6 third general passive

4 'fix, make'

In these two examples the subordinate clause status of the predications within these sentences is not immediately apparent. In fact, it would appear to follow from normal sentence structure that they are functioning as main clauses. But in an attributive clause containing a transitive predicate that is not further inflected (example 143) the subordinative status of the double /ni?/ 'nonproximal' construction is clear.

(143) ni? ni? ?ex<sup>w</sup>e?t ?a t<sup>o</sup> o ?ax<sup>w</sup>a (3495)

1 2 3 4 5 6 7

'(There was) someone (who) gave him clams'

1, 2 nonproximal 5 oblique

3 'give' 6 article

4 transitive 7 'clams'

In (143) the absence of /<sup>o</sup>es/ 'third transitive agent' characterizes the sentence as a subject-type attributive clause. The syntactic

analysis of the double /ni?/ expression is further supported by the interpretation of it. The clause functions semantically as a presupposition to a focus that is not overtly expressed and is equivalent to the literal translation 'There is someone who gives him clams',

A non-emphatic headless attributive clause which modifies a predicate differs from the emphatic type in that it is introduced by a determiner (1.3.1.) and is accordingly analyzable as an adjunct that contains an attributive clause as its head. The determiner reflects the usual semantic distinctions of the Cowichan article system indicating that it is not functioning idiosyncratically. For example, /t<sup>h</sup>o/ 'article, unmarked' may denote a masculine referent and /θo/ 'article, marked', a feminine one. The absence of an adjunct head not only does not affect the determiners, but also has no effect on the internal structure of the attributive clause or on coreference relations. From an anaphoric standpoint it is no longer an overt adjunct head but the referent of the attributive clause that is understood to play a particular role within the clause.

The distribution of non-emphatic headless attributive clauses follows that of noun adjuncts (2.1.1. Predication and Person Marking). This parallelism between the two types of constructions is apparent in examples (144)-(45). In each of these two examples there is an initial noun adjunct (elements 3-6 in (144) and 4-6 in (145)) followed by a headless attributive clause (elements 7-9 in (144) and 7-11 in (145)). In (145) the headless clause contains a locative construction (elements 9-12):

(144) ni? lómox<sup>w</sup>os kə nəšx<sup>?</sup>ád<sup>w</sup>a? .kə ni? hē?k<sup>w</sup>oioš (3560)

1 2 3 4 5 6 7 8 9 10

'My brother saw the one who was shooting'

1 nonproximal	6 'my'
2 'see'	7 'sibling'
3 responsible	8 article
4 third agent	9 nonproximal
5 article	10 'shooting' (Actual)

(145) ni? lómox<sup>w</sup>os ʔə notén k<sup>w</sup>ə ni? ʔə t<sup>9</sup>ə tāmən (5490)

1 2 3 4 5 6 7 8 9 10 11 12

'My mother saw something on the wall'

1 nonproximal	7 'mother'
2 'see'	8 article
3 responsible	9 nonproximal
4 third agent	10 oblique
5 article (marked)	11 article
6 'my'	12 'wall'

Nonetheless, sentences (144)-(145) contain a transitive main clause predicate inflected with /-os/, 'third transitive agent' and two expressions introduced by an article. It is, therefore, possible to view them as representing the marginal type of main clause described in section 2.1.1. in which two direct adjuncts appear. Such a view is supported by the semantic interpretation of the noun adjunct, which in these cases is experiencer, and by the interpretation of the headless attributive clause, which is patient.

A headless attributive clause may act like an oblique adjunct (2.1.1.2.) as well as like a direct one. In (146) the oblique adjunct function is maintained by the headless attributive clause t<sup>9</sup>ə ʔi?məš 'those who are walking', which is introduced by /ʔə/ 'oblique'.

(146) (ni?) ɬɛɬəqʷšán ʔə tʰəy ʔiʔməš (6119d)

1 2 3 4 5 6

'He is tripping those who are walking'

1 nonproximal

4 oblique

2 'trip' (Actual)

5 'that, those'

3 'foot, leg'

6 'walking' (Actual)

Like a nominal predicator an attributive clause may function as an adjunct head to another attributive clause in an emphatic construction. Such a construction is maintained in example (147), which reflects the semantic structure 'Those on the mainland alone who use it':

(147) tʰə ni? ʔə tʰə šnáʔəð txʷay ʔi háʔkʷəš ʔəy (L1:94)

1 2 3 4 5 6 7 8 9 10 11

'Only those on the mainland use it'

1 article

7 /hay/ 'only, alone'

2 nonproximal

8 proximal

3 oblique

9 'use it'

4 article

10 /-t/ 'transitive'

5 'mainland, across'

11 'that'

6 'become'

In (147) the first clause (elements 2-5) constitutes the adjunct head to the second one (8-11), which is modified by txʷay 'only, alone', and is substitutable for a single nominal predicator like /məstíməxʷ/ 'person'.

Headless attributive clauses may occur with nominal predicate phrases, in which case the main clause predicate is a referent of the attributive clause predicate. This type of construction may be observed in examples (148a)-(149a):

(148a) (ni?) nōča? lēlēm tō ni? yōq<sup>w</sup> (5667)

1 2 3 4 5 6

'One house burned down'

(That which burned down is one house)

1 nonproximal	4 article (marked)
2 'one'	5 nonproximal
3 'house'	6 'burn down'

(149a) ni? tix<sup>w</sup> sītōn tō ni? θōytōs tō nāšx<sup>w</sup>?āq<sup>w</sup>a? (5211)

1 2 3 4 5 6 7 8 9 10 11

'There were three baskets which my sister wove'

1 nonproximal	7 transitive
2 'three'	8 third transitive agent
3 'basket'	9 article (marked)
4 article (marked)	10 'my'
5 nonproximal	11 'sibling'
6 'make'	

These sentences are semantically significant in the manner in which they correspond to non-emphatic main clauses as illustrated by examples (148b)-(149b). The predicate phrase of the emphatic sentence (elements 1-3 in both (148a) and (149a)) corresponds to the adjunct of its non-emphatic counterpart (elements 3-5 in (148b) and 8-10 in (149b)).

(148b) ni? yōq<sup>w</sup> k<sup>w</sup>ō nōča? lēlēm (6436a) 'One house burned down'

1 2 3 4 5

1 nonproximal	4 'one'
2 'burn'	5 'house'
3 article	

(149b) ni? θōytōs tō nāšx<sup>w</sup>?āq<sup>w</sup>a? tō tix<sup>w</sup> sītōn (6437c)

1 2 3 4 5 6 7 8 9 10

'My sister wove three baskets'

1 nonproximal	6 'my'
2 'make'	7 'sibling'
3 transitive	8 article (marked)

4 third transitive agent

9 'three'

5 article (marked)

10 'basket'

The emphatic pattern, however, requires no special syntactic explanation in Cowichan. From the point of view of distribution the headless attributive clause acting as an adjunct to a nominal predicate is no different from an adjunct like t<sup>o</sup> swá'ye? 'the man' with such a function. Moreover, the internal structure of such a clause does not differ from that of other headless attributive clauses.

Headless attributive clauses have special semantic significance where they occur in apposition to each other as direct adjuncts modifying a predicate. The type of coreference relations which occur between an adjunct head and an attributive clause may also occur between two or more headless clauses or between such clauses and a nominal adjunct (examples 150-51). In example (150) the two adjuncts in apposition are a nominal adjunct (elements 4-5) and the headless attributive clause (6-10) that follows it:

(150) ni? taw' ?áncə kə šəptən, kə sčəčé ?ə t<sup>o</sup> lətəm (3538)

1 2 3 4 5 6 7 8 9 10

'Where is the knife, the one which is on the table?'

1 nonproximal

6 article

2 'sort of'

7 'is on top of'

3 'where'

8 oblique

2-3 'whereabouts'

9 article

4 article

10 'table'

5 'knife'

From the point of view of semantic interpretation the first adjunct is the subject of the attributive clause predicate sčəčé 'is on top of'.

In example (151) the appositional adjuncts are both headless attributive

clauses. The patient referent of the first one (elements 2-7) is also the subject referent of the second one (elements 8-9).

(151) pəq kə ni? sye<sup>3</sup>dtəs kə səniw (5407a)

1 2 3 4 5 6 7 8 9

'It is painted white on the inside'

(It is white--what he painted--the inside)

1 'white'	6 transitive
2 article	7 third transitive agent
3 nonproximal	8 article
4 static (?)	9 'inside'
5 'paint it'	

However, despite the anaphoric significance of these appositional constructions they are like any other headless attributive clauses in internal structure and in the morphological marking of person.

### 2.2.1.3. Interrogatives and Emphatics

The emphatic attributive clause is a type of construction in which certain predicators called interrogatives and emphatics predominantly occur. The interrogatives are /ʔ(w)et/ 'who, someone', in which ʔ is unaccounted for, /stem/ 'what, something' and /ʔəncə/ 'where, somewhere'. Contrary to what the term "interrogative" might suggest these elements are only interrogative in meaning when they occur as adjunct heads or predicate heads. Where they function attributively in direct or oblique adjuncts or appear in construction with /mək<sup>w</sup>/ 'all, every, both' the interrogatives have an indefinite meaning. The emphatics, on the other hand, resemble English pronouns insofar as they have pronominal meaning and partially correspond to nominal predicators in their distribution. These forms are as follows:

Pronominal Emphatics

<u>singular</u>	<u>plural</u>
1 <sup>st</sup> ʔenθə 'I'	ɪnɪmɔɪ 'we'
2 <sup>nd</sup> nəwə 'you'	ɪwəlɔp 'you'
3 <sup>rd</sup> niɪ 'referent'	nəʔəlɪ 'referent, plural'

The distribution of the interrogatives and emphatics partially reflects that of the nominal predicators and headless attributive clauses. In emphatic sentences an emphatic or an interrogative may act as an adjunct head to an attributive clause just as an element like /məstɪmɔx/ 'person' can -albeit without an introductory determiner. This type of distribution is illustrated in examples (152)-(54). In (152) the attributive clause (elements 3-6) contains an intransitive predicate and is homophonous with an independent sentence:

(152) ʔenθə ce? ɪim ʔəw xʷəsiʔem (4786)

1      2      3      4      5      6

'I (am the one who) will really be the boss'

1 'I'

4 contemporaneous

2 future

5 developmental

3 'very much so'

6 'boss'

In the other two examples, however, the attributive clause (elements 3-5 in example (153) and 4-8 in (154)) is morphologically marked as such. Moreover, the respective adjunct head constructions niɪ ce? and ʔəw məkʷwet, as expected, are anaphorically related as subjects to the clause predicates həʔkʷəʃ and lɔmmɔxʷ.

(153) niɪ ce? (niʔ) həʔkʷəʃ (L1:81) 'He is the one to use it'

1      2      3      4      5

- |               |                     |
|---------------|---------------------|
| 1 referent    | 4 'use it'          |
| 2 future      | 5 /-t/ 'transitive' |
| 3 nonproximal |                     |

(154) ?əw mək<sup>w</sup> wet (ni?) ləmnəx<sup>w</sup> kə nəšx<sup>w</sup>?əq<sup>w</sup>a? ni? w ?əystəx<sup>w</sup> kəwni?

1 2 3 4 5 6 7 8 9 10 11 12 13 14

'Everyone who saw my brother (who) liked him' (5418)

- |                   |                    |
|-------------------|--------------------|
| 1 contemporaneous | 8 'my'             |
| 2 'every, all'    | 9 'sibling'        |
| 3 'someone'       | 10 nonproximal     |
| 4 nonproximal     | 11 contemporaneous |
| 5 'see'           | 12 'like'          |
| 6 responsible     | 13 causative       |
| 7 article         | 14 'that (one)'    |

The syntactic and semantic parallelism between nominal predicators and interrogatives and emphatics is maintained in headless-attributive clause constructions like sentences (155) and (156). In these examples wet 'who' is a predicate to which the rest of each sentence is an adjunct as shown by the introductory article kə. The inflection of the attributive clause predicate ləmnəx<sup>w</sup> 'see' is not idiosyncratic. In (155) this predicate is not inflected and correspondingly its referent wet is interpreted as an experiencer.

(155) wet kə ni? ? əw ləmnəx<sup>w</sup> t<sup>ə</sup> swəyqe? (3647)

1 2 3 4 5 6 7 8 9

'Who else saw that man?'

- |                   |               |
|-------------------|---------------|
| 1 'who'           | 6 'see'       |
| 2 article         | 7 responsible |
| 3 nonproximal     | 8 article     |
| 4 'also, too'     | 9 'man'       |
| 5 contemporaneous |               |

In example (156) in which the predicate is inflected with /-əs/

'third transitive agent' wet is in the characteristic role of patient:

(156) wet kə ni? ʔ əw lənnəx<sup>w</sup> əs t ə swəyqe? (5252)

1 2 3 4 5 6 7 8 9 10

'Whom else did that man see?'

1 'who(m)'

6 'see'

2 article

7 responsible

3 nonproximal

8 third transitive agent

4 'also, too'

9 article

5 contemporaneous

10 'man'

Although the interrogatives and emphatics pattern like nouns in emphatic sentences, the interrogatives occur less productively than nouns in adjuncts to predicates and the emphatics do not function in this way at all. Furthermore, whereas non-interrogative adjuncts may be introduced by any determiner, the interrogatives are only modified by the article /k<sup>w</sup>ə/ 'hypothetical' or by the proclitic (2.1.3.2.) /ʔəw...ʔa/ 'only'. The adjunct function of the interrogatives is illustrated in (157)-(61) by the elements /wet/ 'who', /stem/ 'what' and /ʔəncə/ 'where'. In (157) and (158) the interrogatives are functioning as oblique adjuncts (elements 5-7 and 7-9 respectively) with /k<sup>w</sup>/ 'hypothetical':

(157) ʔəwə č q<sup>w</sup> ilq<sup>w</sup> ələx<sup>w</sup> ʔə kə wet (5290) 'Don't tell anybody!!'

1 2 3 4 5 6 7

1 'not'

5 oblique

2 'you(sg)'

6 article

3 'tell, speak' (Actual)

7 'someone, who'

4 'you(sg)' (dependent)

(158) ʔəwə tə k<sup>w</sup> sšəncəs ʔə k<sup>w</sup> stem (L1:12)

1 2 3 4 5 6 7 8 9

'He didn't catch anything'

- |                           |                    |
|---------------------------|--------------------|
| 1 'not'                   | 6 third possessive |
| 2 negative attributivizer | 7 oblique          |
| 3 article                 | 8 article          |
| 4 absolute                | 9 'thing, what'    |
| 5 'catch (fish, game)'    |                    |

In examples (159)-(61) the interrogatives appear with /ʔəw...ʔaɪ/  
'just, only' and in (159)-(60) they are acting as direct adjuncts:

(159) niʔ ʔə ləmməx<sup>w</sup>əs t<sup>θ</sup> ey swəyqeʔ ʔəw wet ʔaɪ (5253)

1 2 3 4 5 6 7 8 9 8

'Did that man see anyone?'

- |                 |                  |
|-----------------|------------------|
| 1 nonproximal   | 5 third agent    |
| 2 interrogative | 6 'that'         |
| 3 'see'         | 7 'man'          |
| 4 responsible   | 8 'just, only'   |
|                 | 9 'someone, who' |

(160) ʔəwə č k<sup>w</sup>k<sup>w</sup>əntəx<sup>w</sup> ʔəw stem ʔaɪ (3532) 'Don't take anything!'

1 2 3 4 5 6 7 6

- |                   |                         |
|-------------------|-------------------------|
| 1 'not'           | 5 'you(sg)' (dependent) |
| 2 'you(sg)'       | 6 'just, only'          |
| 3 'take' (Actual) | 7 'thing, what'         |
| 4 transitive      |                         |

(161) niʔ ʔe č ləmməx<sup>w</sup> ʔə k əw ʔəncə ʔaɪ (6265)

1 2 3 4 5 6 7 8 9 8

'Did you see it somewhere (else)?'

- |                 |                      |
|-----------------|----------------------|
| 1 nonproximal   | 6 oblique            |
| 2 interrogative | 7 article            |
| 3 'you(sg)'     | 8 'just, only'       |
| 4 'see'         | 9 'somewhere, where' |
| 5 responsible   |                      |

The distributional distinction between nouns and interrogatives and emphatics is maintained in their syntactic function as predicates.

The non-third person emphatics form sentences that either consist of a single predicate phrase (examples 162-63) or take an interrogative form as a direct adjunct (examples 164-65):

(162) ?əw ?enθə (6311) 'It is me'

1 2

1 contemporaneous

2 'I', 'me'

(163) ?ə wəɪ nəwə (3721) 'It is you again'

1 2 3

1 'again'

3 'you(sg)'

2 'already, now'

(164) nəw ?aɪə ɪwet (6291) 'Who are you?'

1 2 3

1 /nəwə/ 'you(sg)'

3 'who'

2 curious

(165) niɪ ɪwet (3641) 'Who (was it)?'

1 2

1 referent

2 'who'

The interrogatives and the third person emphatic /niɪ/ 'referent' unlike the non-third emphatics characteristically take adjuncts without any limitation as to type (examples 166-69):

(166) niɪ ?ə kʷə nəswə? (5216b) 'Is that mine?'

1 2 3 4 5

1, referent

4 'my'

2 interrogative

5 'own'

3 article

(167) stem kʷə?eɪ (kʷəeɪ) (3842) 'What is that?'

1 2 3

1 'what'

3 'that (one)'

2 factual

(168) ɪwet kʷə?ənsné (3033) 'What is your name?'

1 2 3 4

1 'who'	3 'your(sg)'
2 article	4 'name'
(169) ni? ʔǎncə kə šəptən ni? sčəčé ʔə t <sup>θ</sup> ə lətém (3537)	
1 2 3 4 5 6 7 8 9	
'Where is the knife that was on the table?'	
1 nonproximal	6 'on top of'
2 'where'	7 oblique
3 article	8 article
4 'knife'	9 'table'
5 nonproximal	

The three interrogatives /ʔǎncə/ 'where, somewhere', /(t)wət/ 'who, someone' and /stem/ 'what, something', are distributionally distinct from each other. /ʔǎncə/ has special status in that unlike /stem/ or /(t)wət/, which appears with a pronominal emphatic (example 164) to denote a non-third person entity, /ʔǎncə/ (example 170) may take a subject enclitic (2.1.1.1.) but not an emphatic. Thus, while example (170), in which /č/ 'you(sg)' is present, is grammatical, a sentence like \*ni? ʔǎlə ʔǎncə nəwə/ 'where are you?' would not be.

(170) ni? č ʔǎlə ʔǎncə (6292) 'Where are you?'	
1 2 3 4	
1 nonproximal	3 'curious'
2 'you(sg)'	4 'where'

/stem/ 'what, something' is distinctive in that it may be modified by /mək<sup>w</sup>/ 'all, every, both' to form a construction mək<sup>w</sup> stem 'all kinds of' which functions as an adjectival to a following noun sʔəltən 'food' in example (171):

(171) ʔi? mək <sup>w</sup> stem sʔəltən ʔəw k <sup>w</sup> ənətəs t <sup>θ</sup> ə sʔələléx <sup>w</sup> s (L1:6)	
1 2 3 4 5 6 7 8 9 10 11 12	

'Their parents received all kinds of food'

1 'and'	7 stative
2 'all'	8 transitive
3 'thing, what'	9 third transitive agent
4 'food'	10 article
5 contemporaneous	11 'old, parent' (pl.)
6 'take, receive'	12 third possessive

/tʷet/ 'who, someone' and /ʔəncə/ 'where, somewhere' correspond morphologically insofar as they are both inflectible with the prefix /tə-/ 'adjectival',<sup>17</sup> to form elements which function not only predicatively but also adjectivally (examples 172-73). Example (172) shows that təʔəncə 'which' may either function as a nominal predicate--ʔəsxi? 'which is your desire', an attributive clause, being its I.C. partner--or as an adjectival modifying a noun (sītən 'basket').

(172) niɿ təʔəncə (sītən) ʔəsxi? (6281b)

1 2 3 4 5 6

'Which (basket) do you want?'

1 referent	4 'basket'
2 adjectival	5 /ʔəñ-/ 'your(sg)'
3 'where, somewhere'	6 'desire, like'
2-3 'which'.	

In (173) /təwét/ 'whose' is acting adjectivally in attribution to /x̣əm/ 'box':

(173) təwét x̣əm t̄ey (6339) 'Whose box is that?'

1 2 3 4

1 adjectival	3 'box'
2 'who, someone'	4 'that' (marked)

### 2.2.2. The Structure of the Noun Phrase

Besides being modified by an attributive clause, a nominal predicator may also have as a subordinate I.C. partner an adjectival element which precedes it. There are two types of adjectival - noun constructions, which are termed here noun phrases. In one type, the single-possessive phrase, only the noun is inflected with a possessive person marker. In the other type, the double-possessive phrase, both the noun and the adjectival are thus inflected and form a construction in which the adjectival is interpreted as the focus.

#### 2.2.2.1. The Single-Possessive Phrase

In the single-possessive construction the constituent structure of a noun phrase reflects one of the following schemata:

Adjectival expression, Possessive Prefix, Noun

Adjectival expression, Noun, Possessive suffix

The noun phrase thus presented may occur either as the predicative centre of a clause or after a determiner (1.3.1.) in an adjunct.

Thus, a phrase like ʔəqtimət<sup>0</sup> swəyqe? functions as a predicative expression and has the meaning 'be a tall man' whereas the phrase t<sup>0</sup>ə ʔəqtimət<sup>0</sup> swəyqe? functions as an adjunct and has the meaning 'the tall man'. The former, but not the latter, type of construction may take

enclitics (2.1.3.1.).

Possessive Affixes

	<u>singular</u>	<u>plural</u>
1 <sup>st</sup>	nə- 'my'	-ct 'our'
2 <sup>nd</sup>	ʔəñ- 'your'	ʔəñ...ələp 'your'
3 <sup>rd</sup>		-s 'hers, his, its, their' <sup>18</sup>

In constructions containing possessive forms a dichotomy is maintained between third and non-third person markers. Non-third person markers are simply affixed to nouns to form constructions of the following type: nə-sq<sup>w</sup>əməy 'my dog' and sq<sup>w</sup>əməy-ct 'our dog'. On the other hand /-s/ 'third possessive' may either enter into a morphological construction of the type sq<sup>w</sup>əməy-s 'his dog' or be coreferential with a following adjunct as in sq<sup>w</sup>əməy-s t<sup>ə</sup> swəyqe? 'the man's dog'.

In a noun phrase containing an adjectival expression, the expression consists minimally of a single element. Examples (174)-(75) illustrate this type of construction.<sup>19</sup> In example (174) the noun phrase, which is included in an adjunct (elements 3-6), contains a single adjectival pəq 'white', a possessive nə- 'my' and a noun q<sup>w</sup>ɛyʂən 'shoe'.

(174) niʔ ʔik<sup>w</sup> kə pəq nəq<sup>w</sup>ɛyʂən (3632b) 'My white shoes are lost'

1 2 3 4 5 6

1 nonproximal

2 'lost'

3 article

4 'white'

5 'my'

6 'shoe'

In example (175), which is a compound sentence (section 2.4) with the semantic structure 'My older brother and his friend who are in town',

the noun phrase contains a single adjectival sáñxe 'eldest', a possessive nə- 'my' and a noun šx<sup>w</sup>ʔáq<sup>w</sup>aʔ 'sibling' and, as in (174), is included in an adjunct (elements 1-4).

(175) k<sup>w</sup>ə sáñxe nəšx<sup>w</sup>ʔáq<sup>w</sup>aʔ ʔiʔ t<sup>ə</sup> syéyes niʔ ʔəʔ tawn (101)

1 2 3 4 5 6 7 8 9 10 11

'My older brother and his friend are in town'

1 article	7 'friend'
2 'eldest'	8 third possessive
3 'my'	9 nonproximal
4 'sibling'	10 oblique
5 'and'	11 'town'
6 article	

A noun phrase may be expanded to include two adjectival elements both of them following any determiner that might modify the phrase and preceding the noun just as a single adjectival does. This type of adjectival construction may be observed in examples (176), elements 4-7, and in (177).

(176) niʔ cən ləmnəx<sup>w</sup> t<sup>ə</sup> ʔi ʔqíx sq<sup>w</sup>əméy (5234)

1 2 3 4 5 6 7

'I saw a big black dog'

1 nonproximal	5 'big'
2 'I'	6 'black'
3 'see'	7 'dog'
4 article	

(177a) ʔim cən ʔəw ʔəystəx<sup>w</sup> t<sup>ə</sup> ʔəw ʔəyáʔə nəšəptən (5387a)

1 2 3 4 5 6 7 8 9

'I like my new sharp knife'

1 'very much so'	6 'new'
2 'I'	7 'sharp'
3 contemporaneous	8 'my'

4 'like'

9 'knife'

5 article

(177b)  $\lambda'im$  cən  $\text{?əw}$   $\text{?əystəx}^w$  t<sup>ə</sup>  $\text{?əyá?ə}$  xəws nəšəptən (5387a)

1 2 3 4 5 7 6 8 9

In (177) the fact that xəws and ?əyá?ə are interchangeable without any apparent alteration in meaning suggests that there are no special adjectival distribution classes and that the two forms are in apposition to each other.

An adjectival expression within a noun phrase may be expanded to include an adverb (2.1.2.2.) or the idiosyncratic predicators /hay/ 'only' and /hay/ 'very', which are homophonous with each other. The pattern for an adverb may be observed in example (178):

(178) kə  $\lambda'im$   $\text{?əw}$   $\theta i$  sməyəθ (5380c) 'A very big deer'

1 2 3 4 5

1 article

4 'big'

2 'very much so'

5 'deer'

3 contemporaneous

As indicated earlier (2.1.2.2. Adverbs) the constituent structure of an expression containing an adverb followed by an adjectival and a noun is problematical. In example (178) the adverb  $\lambda'im$  may be analyzed as the subordinate I.C. partner of either  $\text{?əw } \theta i$  or  $\text{?əw } \theta i$  sməyəθ. If the former approach is adopted whereby  $\lambda'im$   $\text{?əw } \theta i$  is viewed as an adjectival expression, example (178) follows the canonical pattern for a noun phrase.

The adjectival pattern for /hay/ 'only' and /hay/ 'very' may be observed in example (179) and in examples (180)-(81) respectively.

In (179) hay 'only' is attributive to ?əy 'good' and is part of an adjectival expression (elements 1-4) which modifies the noun šk'w'isətəns 'his ladder':

(179) ?əw hay ?ət ?əy šk'w'isətəns kə nəs'əm (4670)

1 2 3 4 5 6 7 8 9

'It was my boss' only good ladder'

- |                   |                    |
|-------------------|--------------------|
| 1 contemporaneous | 6 third possessive |
| 2 'only'          | 7 article          |
| 3 past complete   | 8 'my'             |
| 4 'good'          | 9 'boss'           |
| 5 'ladder'        |                    |

In (180) hay 'very' is the subordinate element in the predicative expression hay ?al ?əy 'very good' modified by kim and in apposition to s'əliqənəp 'smooth, even':

(180) kim hay ?al ?əy səliqənəp təna šə (5386a)

1 2 3 4 5 6 7 8 9 10

'This road is really even'

- |                  |                   |
|------------------|-------------------|
| 1 'very much so' | 6 resultative     |
| 2 'very'         | 7 'smooth'        |
| 3 'just, merely' | 8 'ground, floor' |
| 4 'good'         | 9 'this'          |
| 5 static         | 10 'road, door'   |

In (181) hay 'very' is a part of the adjectival expression hay ?al kəqtimət 'very tall', which functions adjectivally.

(181) t'x'elə t'ə hay ?al kəqtimət šx'w'ad'w'aš (3490)

1 2 3 4 5 6 7 8

'He has three very tall siblings'

- |            |                    |
|------------|--------------------|
| 1 'three'  | 5 'just, merely'   |
| 2 'people' | 6 'tall'           |
| 3 article  | 7 'sibling'        |
| 4 'very'   | 8 third possessive |

On the basis of these examples it may be inferred that there is no special class of adjectivals of the type found in English, but rather a subcategory of predicators which may assume either an adjectival or a predicative function.

In the discussion of the noun phrase so far, the exemplification of the adjectival function has been in terms of uninflected elements such as /pəq/ 'white'. Predicators with inflectional affixes may also function adjectivally as the following examples illustrate:

(182) ni? ləmnəx<sup>w</sup>əs k<sup>w</sup>ə nəsye<sup>y</sup>e k<sup>w</sup>ə yəpəpək<sup>w</sup> scēektən (3774)

1 2 3 4 5 6 7 8 9 10

'My friend saw a floating salmon!

1 nonproximal	6 'friend'
2 'see it'	7 article
3 third agent	8 serial
4 article	9 'floating'
5 'my'	10 'salmon'

(183) t<sup>ə</sup> qeyqtəm spə<sup>əm</sup> (3891) 'chewing tobacco'

1 2 3 4 5

1 article	4 third general passive
2 'chew'	5 'tobacco'
3 transitive	

Putatively the underlined forms in (182)-(83) might be analyzed as attributive clauses--in this instance preceding the adjunct head in each example. However, no sentences have been elicited in which yəpəpək<sup>w</sup> 'floating' or qeyqtəm 'is chewed' follow the adjunct head.

There is a distributional distinction between inflected and uninflected forms in construction with a noun. When a noun is modified by both an uninflected form and an inflected one, (əi 'big' and

yəhəwʔqʷətəm 'floating downstream' respectively in (184)), the uninflected element still functions adjectivally, but the inflected one appears in an attributive clause (elements 7-12) after the noun:

(184) niʔ cə ləmməxʷ kə ʔi qʷɛyʔ ʔi yəhəwʔqʷətəm (4684a)

1 2 3 4 5 6 7 8,9 10,11

'I saw a large floating log'

1 nonproximal

7 proximal

2 /cən/ 'I'

8 serial

3 'see'

9 'floating downstream' (Actual)

4 article

10 transitive

5 'large'

11 third general passive.

6 'log'

Uninflected predicators like /ʔikʷ/ 'lost', which is potentially inflectible with /-t/ 'transitive', follow the same distribution as the inflected predicators:

(185) niʔ tə pəq nəqʷɛyʔsən niʔ ʔikʷ (5728)

1 2 3 4 5 6 7

'My white shoes are lost'

1 referent

5 'shoe'

2 article (marked)

6 nonproximal

3 'white'

7 'lost'

4 'my'

The view that /pəq/ 'white' and /ʔikʷ/ 'lost' pattern differently is substantiated by the fact that they are not interchangeable to form the following sentence:

\*niʔ tə ʔikʷ nəqʷɛyʔsən niʔ pəq 'My lost shoes are white'

The adjectival function is not limited to predicators like /ʔi/ 'big' and /pəq/ 'white', but extends to nouns--albeit non-productively. There are two semantic contexts in which a noun modifies

a noun. In one context the second noun denotes an animal and the first noun expresses its sex as in the following examples:

(186) swəyqe? mʊsməs (2006) 'bull' (male bovine)

(187) sləni mʊsməs (2007) 'cow' (female bovine)

In the other semantic context the second noun denotes meat, while the first one specifies the type of meat:

(188) t<sup>ə</sup> stiqiw sməyəθ (5357b) 'horse meat'

1	2	3	
1 article			3 'meat (of a deer)'
2 'horse'			

That the initially occurring noun in the foregoing examples, (186)-(88), is in fact functioning adjectivally and not in apposition to the following noun is borne out by /-s/ 'third possessive' constructions such as in the following:

(189) θə sləni šx<sup>w</sup>ʔaq<sup>w</sup>a?s (T3:82) 'his sister' (his female sibling)

1	2	3	4	
1 article (marked)				3 'sibling'
2 'woman'				4 third possessive

The noun phrase in (189) containing two nouns corresponds to the simpler one (elements 1-2) in example (190) insofar as both the noun phrase in (189) and the one in (190) are marked by a single occurrence of /-s/ 'third possessive':

(190) swəltəns t<sup>ə</sup> qətqətcála (4554) 'spider's web'

1	2	3	4	
1 'web, net'				3 article
2 third possessive				4 'spider'

The reason for this distributional correspondence between (189) and (190) is not apparent if in (189) sləni 'woman' and šx<sup>w</sup>ʔaq<sup>w</sup>a? 'sibling' are viewed as being in apposition to each other. On the basis of the

apposition hypothesis one might expect a construction like \* $\theta_a$   $s_i n_i s$   $\check{s}x^w \check{a}q^w a^?s$ , which contains two occurrences of /-s/, to be well-formed. However, if / $s_i n_i$ / 'woman' is viewed as having adjectival function comparable to that of / $\check{a}q t i m \check{e} t^{\theta}$ / 'tall' in a construction like  $\theta_a$   $\check{a}q t i m \check{e} t^{\theta}$   $\check{s}x^w \check{a}q^w a^?s$  'his tall sister', then the single occurrence of /-s/ 'third possessive' in (189) is not idiosyncratic.

The adjectival function may also be assumed by the interrogative predicator /stem/ 'some(thing), what' as follows:

- (191)  $t^{\theta} a$  stem  $s m \acute{e} y \acute{e} \theta$  (T5:8) 'some deer'
- |                     |   |   |          |
|---------------------|---|---|----------|
| 1                   | 2 | 3 |          |
| 1 article           |   |   | 3 'deer' |
| 2 'what, something' |   |   |          |

It is not immediately obvious in (191) that /stem/ is functioning adjectivally. As indicated in 2.2.1. Attributive Clauses, /stem/ is like a noun in that it may enter into an adjunct. However, the analysis of /stem/ in (191) as an adjectival is borne out by the fact that this form does not appear as a modifying adjunct except when it is introduced by / $^? \acute{e} w$ / 'contemporaneous' or / $^? \acute{e} w \dots ^? a l$ / 'just, merely' (2.1.3.2. Proclitics).

/stem/ 'what, something' in its adjectival occurrence is different from a nominal predicator. In example (192) /stem/ is the head of an adjunct (elements 8-11) and is reminiscent of a noun in a noun phrase.

- (192) hay  $\check{c}^w$   $l \acute{e} l \acute{e} m \acute{e} t$   $k \acute{e}$   $n \acute{e} l \acute{e} l \acute{e} m$   $^? i$   $t^{\theta} a$   $w$   $m \acute{e} k^w$  stem (4252)
- |   |     |   |     |   |   |      |                                   |
|---|-----|---|-----|---|---|------|-----------------------------------|
| 1 | 2 3 | 4 | 5 6 | 7 | 8 | 9 10 | 11                                |
|   |     |   |     |   |   |      |                                   |
|   |     |   |     |   |   |      | 'Look at my house and everything' |

- |                |                   |
|----------------|-------------------|
| 1 'very'       | 7 'and'           |
| 2 'you(sg)'    | 8 article         |
| 3 'look at it' | 9 contemporaneous |
| 4 article      | 10 'every, all'   |
| 5 'my'         | 11 '(some) thing' |
| 6 'house'      |                   |

However, unlike a noun phrase ʔəw mək<sup>w</sup> stem may also function adjectivally as in the following example:

(193) ħəm<sup>w</sup>θám ʔə t<sup>ə</sup> w mək<sup>w</sup> stem sħəléləqən (3875)

- |  |    |   |   |                     |   |   |   |
|--|----|---|---|---------------------|---|---|---|
| 1  | 23 | 4 | 5 | 6                   | 7 | 8 | 9 |
| 'You are swarmed over by all kinds of insects' |    |   |   |                     |   |   |   |
| 1 'swarm over'                                 |    |   |   | 6 contemporaneous   |   |   |   |
| 2 /-t/ 'transitive'                            |    |   |   | 7 'all, every'      |   |   |   |
| 3 'you(sg)' (general passive)                  |    |   |   | 8 'something, what' |   |   |   |
| 4 oblique                                      |    |   |   | 9 'insect'          |   |   |   |
| 5 article                                      |    |   |   |                     |   |   |   |

#### 2.2.2.2. Double-Possessive Phrase

In the second type of noun phrase construction, the double-possessive phrase, two possessive person markers agreeing in number and person appear, one being affixed to the adjectival and the other, to the noun. In this type of construction semantic focus is placed on the adjectival. The double-possessive pattern is illustrated in example

(194), elements 4-7, in which the possessive form nə- 'my' is prefixed to both the adjectival pép<sup>q</sup> 'white' and the noun q<sup>w</sup>léyšən 'shoe':

(194) ni<sup>?</sup> x<sup>w</sup>əʔik<sup>w</sup> nəpép<sup>q</sup> nəq<sup>w</sup>léyšən (3632) 'My white shoes are lost'

- |                 |   |   |                                   |          |   |        |
|-----------------|---|---|-----------------------------------|----------|---|--------|
| 1               | 2 | 3 | 4                                 | 5        | 6 | 7      |
| 1 nonproximal   |   |   | 4 <u>kə</u> (article), /nə-/ 'my' |          |   |        |
| 2 developmental |   |   | 5 'white' (plural)                | 7 'shoe' |   |        |
| 3 'lost'        |   |   |                                   |          |   | 6 'my' |

Semantically, this construction differs from one like pəpə nəq<sup>w</sup> t̪eyʃən 'my white shoes' in that emphasis is laid in the case of nəpəpə on the whiteness of the shoes.

The dual occurrence of the same possessive form in a double-possessive construction provides a morphological motivation for considering the adjectival to be in apposition to the noun as a co-adjunct. However, this analysis is not supported by the syntactic structure of Cowichan. Although a noun with a possessive form affixed to it may function as the head of a direct adjunct (example 195, elements 3-4), such an analysis does not hold for an adjectival (example 196, elements 3-5).

(195) ʔəy̆ t̪<sup>ə</sup> ən sməyət̪ (62) 'Your meat is good'

1 2 3 4

1 'good'

3 'your(sg)'

2 article

4 'meat (of deer)'

(196) \*x<sup>w</sup>əʔik<sup>w</sup> t̪<sup>ə</sup> nəpəpə (6206b) 'My white ones are lost'

1 2 3 4 5

1 developmental

4 'my'

2 'lost'

5 'white' (plural)

3 article

There is one idiosyncratic morpheme, /sweʔ/ 'own', in Cowichan that may function either as an adjectival in a double-possessive phrase or as a nominal predicator. In example (197) the inflection of sweʔ with nə- 'my' and its being preceded by a determiner k<sup>w</sup>ə 'the' is consistent with the view that it is acting as a noun within an adjunct.

(197) niʔ ʔə k<sup>w</sup>ə nəswéʔ (5216) 'Is that mine?'

1 2 3 4 5

1 referent	4 'my'
2 interrogative	5 'own'
3 article	

The distributional correspondence between /swe?/ 'own' and a noun is further maintained in example (198) in which /swe?/ occurs in a goal adjunct (elements 3-6)--albeit without an introductory determiner:

(198) mi nǎwǎš ʔǎw mǎkʷ ʔǎnswé? (3592b) 'Bring in all your belongings'

1	2	3	4	5	6	
1 'come'						4 'all'
2 'bring in'						5 'your'
3 contemporaneous						6 'own'

The fact that /swe?/ 'own' may act as a predicate supports the view that it is distributionally analogous to a noun. In (199) the appearance of /swe?/ with the possessive nǎ- 'my' and without an introductory determiner is compatible with the explanation that it is functioning as a nominal predicate.

(199) ni? p̄ ǎw nǎswé? ʔǎ lélǎm (277) 'The house is mine'

1	2	3	4	5	6	7
1 nonproximal						5 'own'
2 certain						6 article (marked)
3 contemporaneous						7 'house'
4 'my'						

Again in example (200) /swe?/ like any nominal predicator is inflectible with /-s/ 'third possessive', which is coreferential with the following adjunct (elements 3-5). The predicative phrase (elements 1-5) composed of /swe?/ and the adjunct is modified in turn by a direct adjunct (elements 6-7).

(200) swe?s kǎ nǎmén t̄<sup>θ</sup> lélǎm (3579) 'The house is my father's'

1	2	3	4	5	6	7
---	---	---	---	---	---	---

- |                    |            |
|--------------------|------------|
| 1 'own'            | 5 'father' |
| 2 third possessive | 6 article  |
| 3 article          | 7 'house'  |
| 4 'my'             |            |

There is evidence to the effect that /sweʔ/ 'own' may function as an adjectival. In examples (201)-(203) /sweʔ/ is distributionally analogous to the adjectival form pepə 'white' in example (194) above in that the same person marker (nə- 'my' in examples (194), (201) and (203) and -s 'third possessive' in example (202)) appears twice, once affixed to the adjectival and once to the noun.

(201) kʷənət tʰə nəswéʔ nəsnəxʷət (2629) 'Take my canoe'

- |             |   |     |     |           |
|-------------|---|-----|-----|-----------|
| 1           | 2 | 3 4 | 5 6 |           |
| 1 'take it' |   |     |     | 4 'own'   |
| 2 article   |   |     |     | 5 'my'    |
| 3 'my'      |   |     |     | 6 'canoe' |

(202) niʔ təʔəncə sweʔs snəxʷətʰs kʷəə n̄sxʷʔáqʷaʔ (6325)

- |                                     |     |   |     |     |      |                    |
|-------------------------------------|-----|---|-----|-----|------|--------------------|
| 1                                   | 2 3 | 4 | 5 6 | 7 8 | 9 10 |                    |
| 'Which one is your brother's boat?' |     |   |     |     |      |                    |
| 1 referent                          |     |   |     |     |      | 6 'canoe'          |
| 2 adjectival                        |     |   |     |     |      | 7 third possessive |
| 3 'where'                           |     |   |     |     |      | 8 article          |
| 4 'own'                             |     |   |     |     |      | 9 'your(sg)'       |
| 5 third possessive                  |     |   |     |     |      | 10 'sibling'       |

(203) nəswéʔ nəsqʷəméy təhá (3543) 'That is my dog'

- |         |     |   |          |
|---------|-----|---|----------|
| 1 2     | 3 4 | 5 |          |
| 1 'my'  |     |   | 4 'dog'  |
| 2 'own' |     |   | 5 'this' |
| 3 'my'  |     |   |          |

The adjectival status of /sweʔ/ is maintained whether the noun phrase

which it occurs in enters into an adjunct (elements 3-6 in (201) and 2-7 in (202)) or acts as a predicative expression (example 203).

On the basis of the foregoing analysis one might expect /sweʔ/ 'own' to be inflectible with /-ct/ 'our'. However, there is no occurrence in the corpus of \*sweʔct 'ours'. Instead, the suppletive morpheme /sʔaʔ/ 'ours' is used to denote first person plural referents. Distributionally, /sʔaʔ/ has the status of an adjectival predicator. Example (204) illustrates its function as predicate, the phrase tāna tāməx<sup>w</sup> 'this property' being its adjunct:

(204) sʔaʔ tāna tāməx<sup>w</sup> (50) 'It is our property'

1	2	3	
1 'ours'			3 'land, property'
2 'this'			

In (205) the occurrence of /sʔaʔ/ before the noun sq<sup>w</sup>əméy 'dog' in the adjunct t<sup>ə</sup> sʔaʔ sq<sup>w</sup>əméy 'our dog' is consistent with the hypothesis that it is functioning adjectivally.

(205) t<sup>ə</sup> sʔaʔ sq<sup>w</sup>əméy niʔ t<sup>ə</sup> stiqiw sməyəθ (5357)

1	2	3	4	5	6	7	8	9	10
'Our dog eats horse meat'									
(Our dog and it eats horse meat)									
1 article					6 transitive				
2 'ours'					7 third agent				
3 'dog'					8 article				
4 nonproximal					9 'horse'				
5 'eat'					10 'meat (of deer)'				

### 2.3. Subordinate Clauses

In the previous section (2.2.) on adjuncts and attribution to them one type of subordinate clause was presented which does not exhibit special subordinate clause morphology, but which nonetheless cannot appear as an independent sentence. In regard to morphological marking there are three types of subordinate clauses: dependent clauses (2.3.1.), /s-/ 'absolute' constructions (2.3.2.) and /šx<sup>w</sup>-/ 'instrumental' clauses (2.3.3.). A dependent clause is a construction which is characterized by a suffix of the dependent set.

#### Dependent Suffixes

	<u>singular</u>	<u>plural</u>
1 <sup>st</sup>	-ən 'I'	--ət 'we'
2 <sup>nd</sup>	-əx <sup>w</sup> 'you'	-ələp 'you'
3 <sup>rd</sup>		-əs 'he, she, it, they' <sup>20</sup>

A nominalization<sup>21</sup> is a clause that is marked by one of two prefixes-- either /s-/ 'absolute' or /šx<sup>w</sup>-/ 'instrumental'. Constructions so marked also take affixes of the possessive set, which as mentioned earlier (2.2.2. The Structure of the Noun Phrase) also characterize noun phrases. These person markers are attached to whichever element of the subordinate clause is marked by /s-/ or /šx<sup>w</sup>-/.

#### Possessive Affixes<sup>22</sup>

	<u>singular</u>	<u>plural</u>
1 <sup>st</sup>	nə- 'my'	-ct 'our'
2 <sup>nd</sup>	?ən- 'your'	?ən...ələp 'your'
3 <sup>rd</sup>		-s 'his, her, its, their'

As an alternative, all three types of clauses may contain subordinate passive suffixes, which are always attached to predicates.

Subordinate Passive Suffixes

	<u>singular</u>	<u>plural</u>
1 <sup>st</sup>	-élt 'I'	-ált 'we'
2 <sup>nd</sup>	-ámət 'you'	-ált 'you'
3 <sup>rd</sup>		-éwət 'she, he, it, they'

The morphologically marked subordinate clauses may be morpho-syntactically classified into two types of clauses--attributive ones and what will be called complementary clauses--according to the distribution of /-əs/ 'third transitive agent' (2.1.1.1.) and the general passive suffixes (2.1.1.2.) and according to that of the clause marker morphemes. These morphemes are the dependent suffixes in dependent clauses and in nominalizations they are /s-/ 'absolute' or /šx<sup>w</sup>-/ 'instrumental'. In a complementary construction a clause marker is affixed to the first element of the clause, which may or may not be a predicate. In an attributive clause, however, the marker is affixed to the predicate, which may or may not be the first element. Furthermore, in attributive clauses there is a distributional distinction not applying to complementary constructions between /-əs/ and the general passive suffixes and the subordinate passive morphemes. /-əs/ and the general passive forms occur only in non-nominalized attributive clauses, whereas the subordinate passive suffixes appear only in the nominalized clauses (table 1).

Person Marker Characterization of Clause Types

	Any Predicate	Transitive		Predicate	
				SUBORDINATE	
				Attributive	Complementary
MAIN	subject enclitics		general passive or /-əs/ 'third agent'	X	
SUBORDINATE: no special marking		goal	X		/-əs/ 'third agent' or general passive
Dependent	dependent suffixes	suffixes	X		(clause also takes third dependent or third
Nominalized	possessive affixes			subordinate passive	possessive) OR sub. pass.

General Passive

<u>singular</u>	<u>plural</u>
1 <sup>st</sup> -éləm 'I'	-áləm 'we'
2 <sup>nd</sup> -ám 'you'	-áləm 'you'
	-m 'he, she, it, they'

2.3.1. Dependent Clauses

As indicated above (2.3.), dependent clauses are either attributive or complementary, both types being marked by dependent person markers, which correspond semantically and in the internal structure of a clause to the subject enclitics (2.1.1.1.).

Dependent Person Markers

<u>singular</u>	<u>plural</u>
1 <sup>st</sup> -ən 'I'	-ət 'we'
2 <sup>nd</sup> -əx <sup>w</sup> 'you'	-ələp 'you'
	-əs 'he, she, it, they'

In this paradigm the first person forms reflect a true singular/plural distinction. The second person ones, however, reflect a dichotomy between negative and non-negative complementary clauses. In non-negative constructions the singular/plural distinction is maintained. In negative clauses /-əx<sup>w</sup>/ 'you(sg)' denotes singular and plural referents.<sup>23</sup>

2.3.1.1. Attribution to the Main Clause

A non-negative complementary clause is a construction that is

dependent on the main clause as a whole and that is characteristically introduced by ʔəw, which may on the basis of meaning be analyzed as being a separate morpheme from the proclitic /ʔəw/ 'contemporaneous (2.1.3.2.) and as being cognate with /wə/ 'hypothetical' in Musqueam. A non-negative clause containing ʔəw is in many cases translatable by an English 'if' clause. This interpretation holds in example (206), which contains a complementary clause (elements 8-12) marked by the dependent suffix /-əx<sup>w</sup>/ 'you(sg)'.<sup>1</sup>

(206) wəɬ ʔəyθət kə nəsném tək<sup>w</sup>, ʔəw níʔəx<sup>w</sup> ʔəw θay (4626)

1 2 3 4 5 6 7 8 9 10 11 12

'I am ready to go home, if you are ready'

1 'now, already'	5 absolute	9 nonproximal
2 'ready'	6 'go'	10 'you(sg)' (dep.)
3 article	7 'go home'	11 contemporaneous
4 'my'	8 contemporaneous(?)	12 'ready'

In (206) the view that the dependent clause (elements 8-12) modifies the main one as a whole (1-7) is supported by the fact that it cannot function as a direct adjunct to the main clause predicate ʔəyθət 'ready'. This syntactic role is played by the /s-/ 'absolute' clause (elements 3-7), which enters into a semantic structure of the type 'My going home is ready'. In example (207) the I.C. relationship between the main clause (7-9), which has imperative interpretation, and the subordinate one is more clear.

(207) ʔəw mí·s ceʔ wəɬ técal, ʔiwáwə q<sup>w</sup>əlq<sup>w</sup>əlstəx<sup>w</sup> (5495)

1 2 3 4 5 6 7 8 9

'When he arrives, perhaps you will talk to him'

1 contemporaneous(?)	6 'arrive'
2 'come'	7 'perhaps'
3 third dependent	8 'talk to' (plural)

4 future

9 causative

5 'already, now'

In (207), a marked sentence type in which the subordinate clause appears first, the intervening element ?i'wawə 'perhaps' separates the main clause predicate q'əlq'əlstəx' 'talk to him' from the subordinate clause and renders implausible the hypothesis that they are I.C. partners.

Putative sentences do exist, in which the complementary dependent clause is apparently embedded to the main clause predicate. In (208) the subordinate clause (elements 6-10) marked by /-əs/ 'third dependent' (element 8) may be semantically interpreted as the goal referent of the predicate státəlstəx' 'know it' since no other expression fulfills the goal role.

(208) ni? ?e č ?əw státəlstəx' ?əw təwētəs tēna xθəm (5447b)

1 2 3 4 5 6 7 8 9 10

'Do you know whose box this is?'

1 nonproximal

6 contemporaneous

2 interrogative

7 'whose'

3 'you(sg)'

8 third dependent

4 contemporaneous

9 'this'

5 'know'

10 'box'

This analysis, however, is not the only one possible. As in examples (206)-(207) the main clause may occur independently--in this case with the interpretation 'Did you know it?'. Moreover, the dependent clause is not idiosyncratic in its distribution or internal structure. In fact, sentence (208) follows the same pattern as (206)-(207).

Where the predicate of the dependent clause is transitive and inflected with /-əs/ 'third transitive agent' or a passive suffix,

there is special morphological marking. The clause may contain a subordinate passive suffix--for example, /-éwət/ 'third subordinate passive' as in the following example:

- (209) sii?si kə nəsyéye ?əw təyxtəwət kə sɔ̄wələs̄s ?ə kə nəpíš
- |   |                           |   |   |   |   |   |   |    |                  |    |    |    |    |    |
|---|---------------------------|---|---|---|---|---|---|----|------------------|----|----|----|----|----|
| 1   | 2                         | 3 | 4 | 5 | 6 | 7 | 8 | 9  | 10               | 11 | 12 | 13 | 14 | 15 |
| 'My friend is afraid in case his bird is eaten by my cat' |                           |   |   |   |   |   |   |    |                  |    |    |    |    |    |
| 1   | 'afraid'                  |   |   |   |   |   |   | 9  | article          |    |    |    |    |    |
| 2   | article                   |   |   |   |   |   |   | 10 | 'bird'           |    |    |    |    |    |
| 3   | 'my'                      |   |   |   |   |   |   | 11 | third possessive |    |    |    |    |    |
| 4   | 'friend'                  |   |   |   |   |   |   | 12 | oblique          |    |    |    |    |    |
| 5   | contemporaneous           |   |   |   |   |   |   | 13 | article          |    |    |    |    |    |
| 6   | 'eat'                     |   |   |   |   |   |   | 14 | 'my'             |    |    |    |    |    |
| 7   | transitive                |   |   |   |   |   |   | 15 | 'cat'            |    |    |    |    |    |
| 8   | third subordinate passive |   |   |   |   |   |   |    |                  |    |    |    |    |    |

As may be observed in (209) the dependent clause (elements 5-15) containing a subordinate passive suffix is reminiscent of a main clause having a predicate inflected with a general passive suffix insofar as it permits only one direct adjunct (9-11).

If the dependent clause contains /-əs/ 'third transitive agent' or a general passive ending, forms which may also appear in a main clause, the morpheme /-əs/ 'third dependent' is suffixed to the first element of the clause. This type of marking may be observed in examples (210) and (211), which contain /-éləm/ 'I' (general passive) and /-əs/ 'third transitive agent' respectively:

- (210) niɪ ?əw ni?əs ləmméləm (6319) 'It is, in case I am seen'
- |   |                 |   |   |   |   |                                    |  |
|---|-----------------|---|---|---|---|------------------------------------|--|
| 1 | 2               | 3 | 4 | 5 | 6 | 7                                  |  |
| 1 | referent        |   |   |   | 5 | 'see'                              |  |
| 2 | contemporaneous |   |   |   | 6 | /-nəx <sup>w</sup> / 'responsible' |  |
| 3 | nonproximal     |   |   |   | 7 | 'I' (general passive)              |  |
| 4 | nonproximal     |   |   |   |   |                                    |  |

(211) k<sup>w</sup>esətəs, ní?es cóstx<sup>w</sup>əs (T5:36)

1 2 3 4 5 6 7

'She heated it up--don't know how she did it'

(She heated it up however she did it)

1 'heat it up'	5 third dependent
2 transitive	6 'do it'
3 third transitive agent	7 third transitive agent
4 nonproximal	

Although the dependent clause construction in example (210) containing a transitive predicate reflects the syntactic structure of the dependent clauses in examples (206)-(208), which contain intransitive predicates, it differs from them in coreference relations. In (210) the dependent suffix /-əs/ 'third dependent' does not denote the referent of the clause predicate.

From the above two examples, (210)-(211), it appears that clauses containing /-əs/ 'third transitive agent' and those with a general passive ending are distributionally analogous. However, where the dependent clause predicate immediately follows /?əw/ 'contemporaneous' and contains /-əs/ 'third transitive agent', the clause patterns idiosyncratically. One might expect on the basis of examples (210)-(211) a clause of the following type to be possible, in which /-əs/ 'third agent' precedes /-əs/ 'third dependent':

\* (212a) cset ?əw qa?etəs t<sup>ə</sup> sməyəθ (5820)

1 2 3 4 5 6 7

'Tell him to kill the deer'

However, only /-əs/ 'third transitive agent' may appear as follows:

• (212b) cset ?əw qa?etəs t<sup>ə</sup> sməyəθ (5820)

1 2 3 4 5 6 7

'Tell him to kill the deer'

1 'tell'	5 third transitive agent
2 contemporaneous	6 article
3 'kill'	7 'deer'
4 transitive	

### 2.3.1.2. Negation

The complementary sentence pattern, in which a dependent person marker follows the first non-particle of a dependent clause, is maintained in one type of negative construction. In a negative sentence /ʔəwə/ 'not' forms the predicative centre of the main clause and the statement being negated is represented syntactically as a dependent clause. If the main clause contains person markers, one of them is coreferential with the dependent person marker in the subordinate clause. This is the case in example (213), in which /-am̩s/ 'me', the main clause marker, is coreferential with the dependent marker /-ən/ 'I' (dependent).

(213) ʔəwəstam̩s ʔəmməx<sup>w</sup>ən (5850c) 'Don't let me step on it!'

1	2	3	4	5	6	
1 'not'						4 'step on it'
2 /-stəx <sup>w</sup> /						5 'responsible'
3 'me'						6 'I' (dependent)

The distribution of negative constructions parallels that of non-negative clauses. Example (214a) shows a negative construction (elements 1-7) functioning as an independent sentence with imperative interpretation:

(214a) ?əwə č x<sup>w</sup>t<sup>θ</sup> iq<sup>w</sup>əstəx<sup>w</sup> (3527) 'Don't punch him in the face'

1 2 3 4 5 6 7

1 'not'	5 'face'
2 'you(sg)'	6 transitive
3 location	7 'you(sg)' <sup>θ</sup> (dependent)
4 'punch'	

Semantically, (214a) may be correlated with (214b), which also has imperative interpretation:

(214b) x<sup>w</sup>t<sup>θ</sup> iq<sup>w</sup>əst č (3527) 'Punch him in the face'

3 4 5 6 2

In example (215a) a negative construction (elements 4-12)

functions as a subject attributive clause:

(215a) niž təná swəýqe? ?əwə ni?əs ?əw xlast kə sq<sup>w</sup>əméys (3576a)

1 2 3 4 5 6 7 8 9 10 11 12

'It was this man who didn't feed his dog'

1 referent	7 contemporaneous
2 'this'	8 'eat it'
3 'man'	9 transitive
4 'not'	10 article
5 nonproximal	11 'dog'
6 third dependent	12 third possessive

Example (215a) reflects the normal negative pattern. As in (213)-(14) the clause following ?əwə (elements 5-12) is marked by a dependent person marker, in this case, /-əs/ 'third dependent', which is suffixed to the first element /ni?/ 'nonproximal'. Also in (215a) the subordinate clause reflects the usual pattern for a subject attributive construction (2.2.1. Attributive Clauses) in that the transitive predicate xlast 'eat it' is characterized by the absence of /-əs/ 'third transitive agent'. The negative attributive clause (elements

4-12) in (215a) is thereby syntactically parallel to the attributive clause in a non-negative construction like (215b), elements 4-10:

(215b) niʔ tēna swəyqe? ni? ʔəw̄ x̄last kə sqʷəméys (3576b)

1 2 3 4 5 6 7 8 9 10

'This is the man who fed his dog'

1 referent	6 'feed it'
2 'this'	7 transitive
3 'man'	8 article
4 nonproximal	9 'dog'
5 contemporaneous	10 third possessive

If the negative dependent clause contains /-əs/ 'third transitive

If the negative dependent clause contains /-əs/ 'third transitive

agent' or a general passive suffix, the morpheme /-əs/ 'third dependent'

is suffixed to the first element. This type of marking may be observed in examples (210)-(10), which thereby correspond to examples (210)-(10).

(216) ʔəwə níʔəs ʔaməstəs t̄ə sqʷəméy ʔə t̄ə st̄əm̄ (5276)

1 2 3 4 5 6 7 8 9 10 11

'He didn't give the dog a bone'

1 'not'	7 article
2 nonproximal	8 'dog'
3 third dependent	9 oblique
4 'give'	10 article
5 transitive	11 'bone'
6 third agent	

(217) ʔəwə st̄ət̄elst̄əx̄əs (6394) 'He doesn't know'

1 2 3 4

1 'not'	3 causative
2 'know'	4 third agent

(218) ʔəwə níʔəs x̄əyəθ̄eləm (6295a) 'I wasn't beaten up'

1 2 3 4 5 6

- |                   |                         |
|-------------------|-------------------------|
| 1 'not'           | 4 'beat up'             |
| 2 nonproximal     | 5 /-t/ 'transitive'     |
| 3 third dependent | 6 'I' (general passive) |

Sentence (217) above, in which there is no surface realization of /-əs/ 'third dependent' is not anomalous, but patterns like the non-negative sentence, example (212), in the previous section; /-əs/ 'third dependent' does not appear when a predicate inflected with /-əs/ 'third agent' is the first non-particle of a subordinate clause.

The formal correspondence between negative and non-negative dependent clauses is not limited to /-əs/ 'third dependent', but extends to the subordinate passive suffixes. Example (219), insofar as it contains the subordinate passive form /-ámət/ 'you(sg)' resembles formally the non-negative sentence, example (209), in section 2.3.1.1.

(219) ʔəwəs t̪<sup>9</sup> iq̪<sup>w</sup> əsnámət (3658b) 'Don't get punched in the face'

- |               |     |                                      |
|---------------|-----|--------------------------------------|
| 1             | 2 3 | 4 5 6                                |
| 1 'not'       |     | 4 'face'                             |
| 2 exhortative |     | 5 /-nəx <sup>w</sup> / 'responsible' |
| 3 'punch'     |     | 6 'you(sg)' Subordinate pass.        |

This parallelism and the one mentioned above between negative and non-negative constructions substantiates the view that the negative construction consists of a main clause with /ʔəwə/ 'not' as the predicate and of a dependent clause.

Negative sentences along with sentences containing /ʔəwə teʔ/ 'not any' (2.3.3.2. on /šx<sup>w</sup>-/ 'instrumental' clauses) or a pronominal emphatic (2.2.1.3.) like /ʔənθə/ 'I' are distinctive in that they may be marked by /-s/ 'exhortative', which provides a given sentence with

imperative interpretation. Examples (220)-(22) illustrate the occurrence of /-s/:

(220) ʔəwəs nənəs ʔənnəxʷəs (5850a) 'Don't let him step on it'

1 2 3 4 5 6 7

1 'not'	5 'step on it'
2 exhortative	6 responsible
3 'go'	7 third agent
4 third dependent	

(221) ʔəwə teʔs wet qʷəqʷəl (4665) 'Don't speak, anybody'

1 2 3 4 5

1 'not'	4 'someone, who'
2 adjectival	5 'speak'
3 exhortative	

(222) ʔəw ʔənθəs ʔeʔ θəyt (248) 'Let me do it'

1 2 3 4 5

1 contemporaneous	3 hortatory
2 'I'	4 'do it'
3 exhortative	

Apart from the appearance of /-s/ 'exhortative' these sentences pattern normally--example (220) as a negative sentence and examples (221)-(22) as attributive clause constructions (2.2.1.).

### 2.3.1.3. Attributive Clauses: Goal Reference

In an attributive clause a dependent marker is suffixed to the predicate regardless of the predicate's position in the clause (except in the dialect of the northern speakers of Cowichan). This morpheme affects the semantic structure of the clause inasmuch as the dependent person marker is interpreted in the role of subject whereby the adjunct

head is construed non-coreferentially as a goal form. This type of semantic structure is illustrated in the following example:

(223) ni? cə ləmməx<sup>w</sup> kə swəyqə? ni? ?áməstən ?ə kə ?ápən néçawəç télə

1 2 3 4 5 6 7 8 9 10 11 12 13 14

'I saw the man to whom I gave a thousand dollars'

1 nonproximal	8 transitive
2 /cən/ 'I'	9 'I' (dependent)
3 'see'	10 oblique
4 article	11 article
5 'man'	12 'ten'
6 nonproximal	13 'hundred'
7 'give'	14 'dollar, money'

In example (223) the adjunct head (element 5) represents the goal referent of the attributive clause (6-14) the subject of which is designated by /-én/ 'I' (dependent). This goal type of attributive clause does not exhibit a special distribution pattern, but reflects that of the unmarked type of attributive clause (2.2.1.) in its capacity as a constituent of an adjunct expression (4-14) modifying a main clause predicate (element 3).

The distributional correspondence between dependent and unmarked attributive clauses is not limited to non-emphatic adjunct expressions, of which example (223) is representative. A dependent clause may modify an adjunct head to form an emphatic sentence as follows:

(224) t<sup>θ</sup> ə sq<sup>w</sup>əméy ni? ?áməstən ?ə kə sméyəθ (3652b)

1 2 3 4 5 6 7 8 9

'It is the dog that I gave the meat to'

1 article	6 'I' (dependent)
2 'dog'	7 oblique
3 nonproximal	8 article

4 'give'

9 'deer'

5 transitive

The semantic structure remains the same as in example (223). As before, the adjunct head (element 2) is interpreted as the goal referent of the attributive clause.

A dependent clause may be a headless attributive construction in which, as in unmarked clauses, the article conveys its usual semantic distinctions (1.3. Deictic System). This type of construction is illustrated in example (225):

(225) Өi čqix sq<sup>w</sup>əméy kə ni? ləmməx<sup>w</sup>ən (5234b)

1 2 3 4 5 6 7 8

'What I see is a big black dog'

1 'big'

5 nonproximal

2 'black'

6 'see'

3 'dog'

7 responsible

4 article

8 'I' (dependent)

Syntactically, the headless attributive clause in this example (elements 4-8) is an adjunct to a nominal predicative phrase (1-3).

Anaphorically, the nominal phrase is the goal referent of the attributive clause.

### 2.3.2. /s-/ 'absolute' Nominalizations

As an alternative to being morphologically marked by dependent person markers a subordinate clause may take /s-/ 'absolute' or /šx<sup>w</sup>-/ 'instrumental'. This type of subordinate construction, which is termed here a nominalized clause or nominalization, partially reflects the

distribution of a noun phrase. Both types of constructions may function as adjuncts. Moreover, a nominalization like a noun phrase is marked by a possessive person marker, which is affixed to the element inflected with /s-/ 'absolute' or /šx<sup>w</sup>-/ 'instrumental'. The possessive forms (2.2.2. The Structure of the Noun Phrase), which in a nominalization correspond semantically to the main clause subject enclitics (2.1.1.1.), are as follows:

Possessive Person Markers

	<u>singular</u>	<u>plural</u>
1 <sup>st</sup>	nə- 'my'	-ct 'our'
2 <sup>nd</sup>	ʔəñ- 'your'	ʔəñ-...-élep 'your'
	-s 'her, his, its, their'	

In this paradigm, for first and second person, there are two singular prefixes, one plural suffix and one discontinuous plural morpheme. In the third person the singular/plural distinction is neutralized. In the second person there is allomorphic variation in material elicited since 1975; the morph ʔəñ- (in the singular and the plural) is realized as ʔə or zero before s or š and as ʔəñ elsewhere.

The second person affixes /ʔəñ-/ 'your(sg)' and /ʔəñ-...-élep/ 'your(pl)' are distributionally distinct from /nə-/ 'my' and /-ct/ 'our', which reflect a true singular/plural dichotomy. /ʔəñ-...-élep/ is a marked morpheme denoting plurality whereas /ʔəñ-/ may denote plural as well as singular referents if 'plurality' is denoted by another coreferential person marker in the sentence. This is the case in example (226), in which /ʔəñ-/ 'your' is coreferential with /-álep/

'you(pl)' and has the meaning 'you(pl)':

- (226) ʔəw̄ c̄əwətáɬə cən ʔəsʔəw̄ yaθ ceʔ w̄ məkʷ ʔəw̄ síʔem̄ (4636c)
- |   |                   |   |   |   |   |   |    |                 |    |    |    |    |
|---|-------------------|---|---|---|---|---|----|-----------------|----|----|----|----|
| 1   | 2                 | 3 | 4 | 5 | 6 | 7 | 8  | 9               | 10 | 11 | 12 | 13 |
| 'I will help you(pl) so that you will all always be rich' |                   |   |   |   |   |   |    |                 |    |    |    |    |
| 1   | contemporaneous   |   |   |   |   |   | 8  | 'always'        |    |    |    |    |
| 2   | 'help'            |   |   |   |   |   | 9  | future          |    |    |    |    |
| 3   | 'you(pl)'         |   |   |   |   |   | 10 | contemporaneous |    |    |    |    |
| 4   | 'I'               |   |   |   |   |   | 11 | 'all'           |    |    |    |    |
| 5   | /ʔəñ-/ 'your(sg)' |   |   |   |   |   | 12 | contemporaneous |    |    |    |    |
| 6   | absolute          |   |   |   |   |   | 13 | 'rich'          |    |    |    |    |
| 7   | contemporaneous   |   |   |   |   |   |    |                 |    |    |    |    |

Syntactically, example (226) is representative of the canonical structure of an /s-/ 'absolute' complementary clause. The possessive prefix /ʔəñ-/ 'your' and /s-/ 'absolute' are prefixed not to the predicate síʔem '(be) rich' but to the first element, namely, the proclitic /ʔəw̄/ 'contemporaneous' (2.1.3.2.).

Within the corpus there are a few sentences which appear to deviate from the canonical structure of an /s-/ 'absolute' complementary construction. These sentences are illustrated in examples (227)-(228):

- (227) niʔ yəxʷ lələmətáləm kʷəct ɬeyʔt t<sup>θ</sup>ə sməyəθ (6401b)
- |   |                        |   |   |   |   |    |         |   |    |  |
|---|------------------------|---|---|---|---|----|---------|---|----|--|
| 1   | 2                      | 3 | 4 | 5 | 6 | 7  | 8       | 9 | 10 |  |
| 'We were being watched while we were eating the deer' |                        |   |   |   |   |    |         |   |    |  |
| 1   | nonproximal            |   |   |   |   | 6  | article |   |    |  |
| 2   | surprise               |   |   |   |   | 7  | 'our'   |   |    |  |
| 3   | 'watch' (Actual)       |   |   |   |   | 8  | 'eat'   |   |    |  |
| 4   | transitive             |   |   |   |   | 9  | article |   |    |  |
| 5   | 'we' (general passive) |   |   |   |   | 10 | 'deer'  |   |    |  |

- (228) niʔ cə ləmmáɬə kʷ séləp yəxʷáñçənəm̄ (3733)
- |                         |   |   |   |   |   |   |   |   |    |
|-------------------------|---|---|---|---|---|---|---|---|----|
| 1                       | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| 'I saw you(pl) running' |   |   |   |   |   |   |   |   |    |

1 nonproximal	6 article
2 /cən/ 'I'	7 absolute
3 'see'	8 'your(pl)'
4 /-nəx <sup>w</sup> / 'responsible'	9 serial
5 'you(pl)'	10 'running' (Actual)

In (227) -ct 'our' is apparently suffixed to an article and in (228) -ələp 'your(pl)' appears to be bound to a prefix /s-/ 'absolute' to form idiosyncratic constructions. These constructions, however, are not idiosyncratic if k<sup>w</sup>əct and k<sup>w</sup>sələp are analyzed morphophonemically as /k<sup>w</sup> sni?ct/ and /k<sup>w</sup> ?ənsni?ələp/ respectively. Such an analysis would be compatible with the interpretation of each of the /s-/ clauses, which both denote action in progress just like /s-/ constructions in which /ni?/ 'nonproximal' appears overtly as in the following example:

(229) ni? ?e č léləməθ k<sup>w</sup>ə nəsní? t<sup>ə</sup> sməyəθ (6401a)

1 2 3 4 5 6 7 8 9 10 11 12

'Did you watch me eating the deer?'

1 nonproximal	7 'my'
2 interrogative	8 absolute
3 'you(sg)'	9 nonproximal
4 'watch, see'	10 'eating' (Actual)
5 'me'	11 article
6 article	12 'deer'

#### 2.3.2.1. Attribution to the Main Clause

/s-/ 'absolute' complementary clauses enter into one of two types of constructions. They are either embedded as direct or oblique adjuncts to predicates or more loosely bound as I.C. partners to potentially independent clauses. Semantically, this distinction corresponds to that between the English sentences, 'I know when they

left' and 'I knew the people, when they left'. In its capacity as an I.C. partner to a whole main clause an /s-/ clause is syntactically parallel to a dependent construction albeit different in grammatical meaning. Whereas dependent clauses denote hypothetical action --as conveyed frequently in translation by the term 'if'--/s-/ inflected ones designate action that has been or is about to be accomplished.

On the basis of formal marking two kinds of complementary /s-/ 'absolute' constructions have been identified that modify the main clause as a whole. In one type the article /k<sup>w</sup>/ 'hypothetical' is present in the subordinate clause; in the other it is absent. Where /k<sup>w</sup>/ is present, the /s-/ clause corresponds semantically to an English construction introduced by an expression like 'while', 'when', 'in order to' or 'because'. Sentences (230)-(31) exemplify the /k<sup>w</sup>/ construction. More specifically, example (230) illustrates the most productive type of sentence in which the main clause (elements 1-5) precedes the /s-/ clause (6-11):

(230) ?i cən ?aat k <sup>w</sup> ə daktə k <sup>w</sup> ə sləməθamšs (4287)										
1	2	3	4	5	6	7	8	9	10	11
'I called a doctor to look me over'										
1	proximal							7	absolute	
2	'I'							8	'look over'	
3	'call him'							9	/-t/ 'transitive'	
4	article							10	'me'	
5	'doctor'							11	third possessive	
6	article									

Example (231) illustrates a less productive type of sentence in which the main clause (6-11) follows the subordinate clause (1-5):

(231) k<sup>w</sup>ə nəsx<sup>w</sup>əñ s<sup>x</sup>ixqət, ni? ?ət č čəcəwəθámš (6395)

1 2 3 4 5 6 7 8 9 10 11

'When I was still a child you used to help me'

1 article	7 past complete
2 'my'	8 'you(sg)'
3 absolute	9 'help' (Actual)
4 'still, yet'	10 /-t/ 'transitive'
5 'child'	11 'me'
6 nonproximal	

That the /s-/ clauses in these examples are not direct adjuncts is demonstrated by the fact that the semantic roles of subject and goal are already fulfilled by other elements--by cən 'I' and k<sup>w</sup>əθə dákte in (230) and by č 'you(sg)' and -ámš 'me' in (231).

There are two types of complementary /s-/ 'absolute' clauses that are not introduced by the article /k<sup>w</sup>/: In one type, the /s-/ clause has as its I.C. partner the predicate /yeł/ 'at this instant', which does not occur independently or with a noun adjunct or headless attributive clause. The following two examples illustrate the /yeł/ construction:

(232) ?i? yeł ce? nsqayθámš (T1:179) 'And then you can kill me'

1 2 3 4 5 6 7 8

1 'and'	5 absolute
2 'at this instant'	6 'kill'
3 future	7 /-t/ 'transitive'
4 'your(sg)'	8 'me'

(233) ?əw yeł nəsni? ?ik<sup>w</sup>ət (4822) 'I just threw it away'

1 2 3 4 5 6

1 contemporaneous	4 absolute
2 'at this instant'	5 nonproximal
3 'my'	6 'throw it away'

Semantically, /yeʔ/ 'at this instant' designates a specific point in time at which an action is performed and may correspond to the English term 'until' in an expression like 'You cannot see him until tomorrow'.

In the other type of construction that is not marked by the article /kʷ/ the semantic relationship between the main clause and the /s-/ 'absolute' construction is one of sequence. This relationship is illustrated in example (234) in which the main clause (elements 1-7) and the subordinate clause (8-12), which apparently reflect the semantic structure 'I locked the house, my leaving', designate two consecutive events that are denoted in English by the conjunction 'and':

(234) niʔ cən xʷləklít tʰə léləm, nəsn əw həyeʔ (5774)

1 2 3 4 5 6 7 8 9 10 11 12

'I locked up the house and left'

1 nonproximal	7 'house'
2 'I'	8 'my'
3 location	9 absolute
4 'lock it'	10 /niʔ/ 'nonproximal'
5 transitive	11 contemporaneous
6 article	12 'leave'

#### 2.3.2.2. Adjunct Function

Although in some syntactic contexts as stated in section 2.3.2.1. an /s-/ 'absolute' clause is clearly an I.C. partner to a potentially independent clause, in others the sentence is incomplete without the /s-/ clause. In the latter type of syntactic context its distribution is consistent with the view that it is acting as an adjunct. Like a

noun an /s-/ construction functioning in this way may appear either with /ʔə/ 'oblique' (2.1.1.2.) in an oblique adjunct or without it in a direct adjunct. Moreover, in such syntactic environments the /s-/ clause has the semantic status of a noun in an adjunct insofar as it may occur in the role of subject or goal.

There are two syntactic contexts in which an /s-/ 'absolute' clause characteristically appears in the semantic role of subject: after noun predicates and after /ʔəwə/ 'not'. Examples (235a)-(36a) illustrate the former type of context. In (235a) the occurrence of the /s-/ clause (2-6) after the nominal predicate /scéeɪtən/ '(be) salmon' is consistent with the hypothesis that it is acting as a subject adjunct:

(235a) scéeɪtən kʷ sʔəɪtənct ceʔ (5344) 'We will eat salmon'					
1	2	34	5	6	
1 'salmon'				4 'eat'	
2 article				5 'our'	
3 absolute				6 future	

Semantically, /scéeɪtən/ constitutes the patient referent of the subordinate clause predicate (element 4) and thereby has the same anaphoric status as the oblique adjunct (elements 3-5) in example 235b):

(235b) ʔəɪtən ct ʔə t <sup>ə</sup> scéeɪtən (5344a) 'We eat salmon'				
1	2	3	4	5
1 'eat'				4 article
2 'we'				5 'salmon'
3 oblique				

In example (236a) the /s-/ 'absolute' clause (elements 4-8) again acts as the subject of a predicate phrase (2-3):

(236a) ni? ɬix<sup>w</sup> sk<sup>w</sup>eyl k<sup>w</sup>ə nəʔi ʔitət (3705b)

1 2 3 4 5 6 7 8

'I have been sleeping for three days'

1 nonproximal	5 'my'
2 'three'	6 absolute
3 'day'	7 proximal
4 article	8 'sleep'

However, example (236a) differs from (235a) in terms of semantic reference. In (236a) the predicative phrase as a temporal expression does not represent a patient entity, but has the same anaphoric status as the oblique adjunct (4-7) in example (236b):

(236b) ʔi cən ʔitət ʔə k<sup>w</sup>ə ɬix<sup>w</sup> sk<sup>w</sup>eyl (3692)

1 2 3 4 5 6 7

'I have been sleeping for three days'

1 proximal	5 article
2 'I'	6 'three'
3 'sleep'	7 'day'
4 oblique	

Where an /s-/ 'absolute' clause acts as the subject referent of the predicator /ʔəwə/ 'not' there are no special coreference relations. Instead, the negative construction containing an /s-/ clause is semantically significant in the manner in which it compares to a dependent clause negative construction. The two differ insofar as a dependent clause with /ʔəwə/ 'not' denotes a transitory event--as conveyed by the semantic structure 'I didn't lose it'--whereas an /s-/ clause, as illustrated in example (237), designates a habitual state of affairs.

(237) ?əwə kʷə nəs?əkʷnəxʷ (6264b) 'I never lose it'

1 2 3 4 5 6

1 'not'	4 absolute
2 article	5 'lose it'
3 'my'	6 responsible

The occurrence of an /s-/ 'absolute' clause as a subject adjunct is not limited to /?əwə/ 'not' and nominal predicate constructions. This wider privilege of occurrence is illustrated in example (238), in which the /s-/ clause (4-11) is the subject of əy '(be) ready':

(238) ni? wə? əy kə snəms təqʷ ə nəstá?əs (6288)

1 2 3 4 5 6 7 8 9 10 11

'My wife is ready to go home'

(My wife's going home is ready)

1 nonproximal	7 third possessive
2 'now, already'	8 'go home'
3 'ready'	9 article (marked)
4 article	10 'my'
5 absolute	11 'spouse'
6 'go'	

In this sentence -s 'third possessive' (element 7) is coreferential with a following adjunct (9-11) and thereby has the same semantic status that it has in noun phrases (2.2.2.).

The hypothesis that an /s-/ 'absolute' clause may function as an adjunct is further supported by the existence of /?ə/ 'oblique' constructions containing /s-/ clauses. This type of construction is illustrated in the following example:

(239) ste č ?ə kʷə nəsyəθəsθámə (T3:85)

1 2 3 4 5 6 7 8 9

'Do what I tell you'

(Be like according to my telling you)

1 'be like'	6 absolute
2 'you(sg)'	7 'tell'
3 oblique	8 /-t/ 'transitive'
4 article	9 'you(sg)'
5 'my'	

The occurrence of the /s-/ clause in an oblique adjunct rather than a direct one in (239) does not call for a special explanation. As /ste/ 'be like' is an intransitive predicator, only a construction in the semantic role of subject may occur as a direct adjunct. Since the subject role is already fulfilled by /č/ 'you(sg)', a direct adjunct cannot occur. Accordingly, the occurrence of the /s-/ clause with /ʔə/ 'oblique' is consistent with the view that it is syntactically analogous to a noun adjunct of the type described in section 2.1.1.2.

#### Oblique Relations.

In addition to being construed as a direct adjunct in the role of subject or as an oblique adjunct, an /s-/ 'absolute' clause might be viewed as a patient or goal adjunct in some syntactic environments. This type of analysis is feasible in examples (240)-(41). In (240) the subject role is fulfilled by /č/ 'you(sg)' and it is possible to analyze the /s-/ clause (5-11) as a goal adjunct:

(240) ni? č ʔəw státelstəx<sup>w</sup> k<sup>w</sup>ə nesni? ʔəw státelstəx<sup>w</sup> (67)

1 2 3 4 5 6 7 8 9 10

'You know that I know it'

1 nonproximal	6 'my'
2 'you(sg)'	7 absolute

3 contemporaneous	8 nonproximal
4 'know'	9 contemporaneous
5 article	10 'know'

In (241) the /s-/ construction (6-11), which has patient interpretation, may be viewed as a direct adjunct to the passive predicate (1-3):

(241) tətə?təm ?ə? Jow k<sup>h</sup> s-se?ts t<sup>ə</sup> lətəm (3619a)

1 23 4 5 6 7 8 9 10 11

'Joe tried to lift the table'

(Lifting the table was being tried by Joe)

1 'trying' (Actual)	7 absolute
2 transitive	8 'lift'
3 third general passive	9 third possessive
4 oblique	10 article
6 article	11 'table'

Since the main clause in each example (elements 1-4 in (240) and 1-5 in (241)) may occur as an independent sentence without the /s-/ clause, the evidence in favour of analyzing them as adjuncts is not compelling. However, such an analysis would be in accord with the aforementioned distributional parallelism found to occur between /s-/ clauses and nouns in oblique adjuncts and in direct adjuncts interpreted in the role of subject.

### 2.3.2.3. Double Person Marking

If the predicate of an /s-/ construction is transitive, the clause undergoes special morphological marking just like a dependent construction (2.3.1.). As before, a dichotomy may be made between forms which occur only in subordinate clauses--the subordinate passive

suffixes, which mark both nominalized and dependent clauses--and those which occur in both main and subordinate clauses, namely, /-əs/ 'third transitive agent' and the general passive person markers.

General Passive

	<u>singular</u>	<u>plural</u>
1 <sup>st</sup>	-éləm 'I'	-áləm 'we'
2 <sup>nd</sup>	-ám 'you'	-áləm 'you'
3 <sup>rd</sup>	-m 'she, he, it, they'	

Subordinate Passive

	<u>singular</u>	<u>plural</u>
1 <sup>st</sup>	-élt 'I'	-ált 'we'
2 <sup>nd</sup>	-ámət 'you'	-ált 'you'
3 <sup>rd</sup>	-éwət 'he, she, it, they'	

When a subordinate passive suffix occurs, the /s-/ 'absolute' clause is not further marked for person and is thereby parallel in constituent structure to a main clause passive construction. The distribution of the subordinate passive suffixes is illustrated in the following two examples:

(242) ni? ct tálqəs ?ə k<sup>w</sup>θə ck<sup>w</sup>im pátən k<sup>w</sup> sləmmált (6388)

1 2 3 4 5 6 7 8 9 10 11 12

'We waved the red rag in order that we may be seen'

1 nonproximal	7 'rag'
2 'we'	8 article
3 'wave'	9 absolute
4 oblique	10 'see'
5 article	11 /-nəx <sup>w</sup> / 'responsible'
6 'red'	12 'we' (subordinate passive)

(243) nəʂki? kʷ slèlɛməθélt ?ə kʷə nəsnəxʷət ?ə k əw wet ?ai

1 2 3 45 67 8 9 10 11 12 13 14 15 16

'I want someone to look after my canoe' (5515)

(My desire is to be looked after in respect to my canoe  
by someone)

1 'my'	9 article
2 'desire'	10 'my'
3 article	11 'canoe'
4 absolute	12 oblique
5 'look after'	13 article
6 /-t/ 'transitive'	14, 16 'just, merely'
7 'I' (subordinate passive)	15 'someone, who'
8 oblique	

In (242) and (243) the syntactic structure of the /s-/ clause (elements 8-12 and 3-16 respectively) corresponds to that of a main clause passive construction (2.1.1.2.). In each case the patient referent is denoted by a passive person marker and in (243) an agent referent is represented by an oblique adjunct (12-16).

If the /s-/ 'absolute' construction contains /-əs/ 'third transitive agent' or a general passive ending, the first element of the clause is inflected with /-s/ 'third possessive'. This type of marking may be observed in example (244), element 13, and in (245), element 6:

(244) ni? cən tálqəs ?ə t<sup>θ</sup>ə ckʷim pátən kʷ sləmméləms (4289)

1 2 3 4 5 6 7 8 9 10 11 12 13

'I waved a red rag so that I would be seen'

1 nonproximal	8 article
2 'I'	9 absolute
3 'wave'	10 'see'
4 oblique	*11 /-nəxʷ/ 'responsible'

- |           |                          |
|-----------|--------------------------|
| 5 article | 12 'I' (general passive) |
| 6 'reg'   | 13 third possessive      |
| 7 'rag'   |                          |

(245) sʰiʔs k sqəléts xʷəŋ čéxʷtəs tʰə sʔáxʷaʔs, tʰə kʷtəys  
 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16

'He wanted to obtain more nicks--butter clams' (T6:19)

- |                    |                           |
|--------------------|---------------------------|
| 1 'desire'         | 9 transitive              |
| 2 third possessive | 10 third transitive agent |
| 3 article          | 11 article                |
| 4 absolute         | 12 'nicks'                |
| 5 'again'          | 13 third possessive       |
| 6 third possessive | 14 article                |
| 7 'still, yet'     | 15 'butter clams'         |
| 8 'obtain'         | 16 third possessive       |

In (244) the first element of the /s-/ clause is a predicate and in (245) it is the direct attribute qəléts 'again' (2.1.2.1.), both of which are inflected with /-s/ 'third possessive'. Although an /s-/ clause containing a transitive predicate reflects the syntactic structure of intransitive constructions insofar as it is marked with a possessive morpheme, it differs from them in coreference relations. In (244) the possessive suffix /-s/ 'third possessive' does not denote the referent of the transitive predicate sləmméləms 'so that I may be seen', which belongs to the nominalized clause.

On the basis of examples (244)-(45) above it might be deduced that /-əs/ 'third transitive agent' and general passive constructions are distributionally analogous. The parallelism, however, is not complete. Where the predicate of the /s-/ 'absolute' clause is the first element and contains /-əs/ 'third agent' the morphological

marking is anomalous. The expected morpheme, /-s/ 'third possessive', does not follow /-əs/ 'third agent' as may be observed in the following example:

(246)	léləmətəs	t <sup>ə</sup>	sq <sup>w</sup> əméy	θə	pus	k <sup>w</sup>	síéyxtəs	θə	k <sup>w</sup> é?k <sup>w</sup> ətən	
	1	2	3	4	5	6	7	8	9	
	'The dog is watching the cat eating the little mouse'									
	1	'watching' (Actual)					8	absolute		
	2	third transitive agent					9	'eat'		
	3	article					10	transitive		
	4	'dog'					11	third transitive agent		
	5	article (marked)					12	article (marked)		
	6	'cat'					13	'little mouse'		
	7	article								

Although in most syntactic contexts /-s/ 'third possessive' marks an /s-/ 'absolute' clause once, there are two instances in which it marks the clause twice. If the construction contains two initial predicates in apposition, both are marked with /-s/. This type of appositional construction is exemplified by sentence (247), in which the predicates in question are the intransitive forms néwə 'you(sg)' and si<sup>ə</sup>ən 'Lord, sir'.

(247)	?əy	k <sup>w</sup>	snéwəs,	si <sup>ə</sup> əns	t <sup>ə</sup>	s <sup>ə</sup> at	šq <sup>w</sup> aləwən.	(4122:2)	
	1	2	3	4	5	6	7	8	
	'Let our thoughts be of you, Lord' (Church text)								
	(It is good that our thoughts be of you, Lord)								
	1	'good'					6	'Lord, sir'	
	2	article					7	third possessive	
	3	absolute					8	article	
	4	'you(sg)'					9	'our'	
	5	third possessive					10	'thought'	

The other instance in which /-s/ 'third possessive' occurs twice is when the initial element of the /s-/ 'absolute' clause is /ʔəwə/ 'not' followed by /teʔ/ 'adjectival' as in the following example:

(248) sk<sup>w</sup>ey k<sup>w</sup> sʔəi<sup>ʔ</sup>tan k sʔəwəs teʔs ʔənlətəm (5518)

1 2 34 5 67 8 9 10 11 12.

'You cannot eat without your table'

(Eating when you have no table is not feasible)

1 'not feasible'	7 'not'
2 article	8 third possessive
3 absolute	9 adjectival
4 'eat'	10 third possessive
5 article	11 'your(sg)'
6 absolute	12 'table'

This status of /ʔəwə teʔ/ as a double-marked phrase is not limited to /s-/ clauses, but applies also to dependent clauses (3.3.1.), for example, to sentence (249):

(249) ...ʔəw ʔəwəs teʔes téləs (TEH) '...in case he had no money'

1 2 3 4 5 6 7

1 contemporaneous	5 third dependent
2 'not'	6 'money'
3 third dependent	7 third possessive
4 adjectival	

There is no apparent reason for the double-marking of /ʔəwə teʔ/ 'not any' except on the basis of its being a crystallized form.

#### 2.3.2.4. Attributive Clause Pattern<sup>25</sup>

An /s-/ 'absolute' attributive clause differs from the hitherto described complementary construction in internal structure. The

constituent structure of an attributive /s-/ construction may be observed in example (250a), in which an attributive clause (6-11) is embedded in an adjunct phrase (4-11) that is the subject of the predicate θi.

(250a) nan ?əw θi k<sup>w</sup>θə sq<sup>w</sup>əméy ni? ?əns?əməsθáms̃ (955)

1 2 3 4 5 6 7 8 9 10 11

'The dog which you gave me is too big'

1 'very, too'	7 'your(sg)'
2 contemporaneous	8 absolute
3 'big'	9 'give'
4 article	10 /-t/ 'transitive'
5 'dog'	11 'me'
6 nonproximal	

In (250a) /s-/ 'absolute' and the possessive form are not prefixed to /ni?/ 'nonproximal', the first element of the clause, but rather to the predicate ?əməsθáms̃ 'give me it'. Example (250a) also has semantic significance in that the anaphoric relationship between the adjunct head (element 5) and the attributive clause (6-11) corresponds to that between an oblique adjunct (elements 6-8 in example 250b) and the rest of the sentence in a non-nominalized predication.

(250b) ni? č ?əməsθáms̃ ?ə k<sup>w</sup>θə sq<sup>w</sup>əméy (4804)

1 2 3 4 5 6 7 8

'You gave me the dog'

1 nonproximal	5 'me'
2 'you(sg)'	6 oblique
3 'give'	7 article
4 /-t/ 'transitive'	8 'dog'

The phrase ?ə k<sup>w</sup>θə sq<sup>w</sup>əméy in (250b) corresponds semantically to k<sup>w</sup>θə sq<sup>w</sup>əméy in (250a), since both phrases are in the role of patient.

The internal structure of an attributive /s-/ 'absolute' construction is maintained in headless attributive clauses. This is apparent in example (251a). Although (251a) differs from (250a) to the extent that it consists of a nominal predicate (element 1) modified by a headless attributive clause (2-9), it resembles (250a) in morphological marking. As in (250a) /s-/ 'absolute' and the possessive form (element 4) are prefixed to the predicate (element 6) and not to the first element ni? 'nonproximal'.

(251a) scéektən kə ni? nəsxías ?ə tēna nētət (5794a)

1            2 3    4 5 6    7 8    9

'Salmon is what I ate this morning'

1 'salmon'	6 'eat'
2 article	7 oblique
3 nonproximal	8 'this'
4 'my'	9 'morning'
5 absolute	

Furthermore, the attributive clause construction (example 250a) and the headless construction (251a) are characterized by the same semantic structure. Like (250a) example (251a) may be semantically correlated with a non-nominalized main clause containing an oblique adjunct:

(251b) xías cən ?ə t<sup>θ</sup> scéektən ?ə tēna nētət (5794b)

1    2    3    4    5            6    7    8

'I ate salmon this morning'

1 'eat'	5 'salmon'
2 'I'	6 oblique
3 oblique	7 'this'
4 article	8 'morning'

In (251a) scéektən is anaphorically related to kə ni? nəsxías 'that which I ate' in the same way that ?ə t<sup>θ</sup> scéektən is related to

xias cən 'I ate' in (251b); both expressions are in the role of patient.

Although an attributive clause marked by /s-/ 'absolute' resembles other attributive clause types insofar as it may appear with or without an adjunct head, there is one syntactic environment in which it occurs uniquely. An /s-/ construction that is morphologically marked as an attributive clause may act as a predicative phrase--either with a modifying adjunct (252a) or without it (253a).

(252a) nəsmélq kə nəyásəq<sup>w</sup> (5384) 'I forgot my hat'

1	23	4	5	6	
1	'my'				4 article
2	absolute				5 'my'
3	'forget'				6 'hat'

(253a) ?əw nəshé?k<sup>w</sup> (6214) 'I keep remembering'

1	2	34	
1	contemporaneous		3 absolute
2	'my'		4 'remembering' (Actual)

Semantically, sentences like (252a) and (253a) resemble the aforementioned types of attributive /s-/ clauses. As in the earlier examples the direct adjunct (elements 4-6 in 252a above) of an /s-/ clause corresponds in interpretation to an oblique adjunct in a non-nominalized clause (elements 3-5 in 252b), while the possessive form (/nə-/ 'my' in both 252a and 253a) corresponds to a subject enclitic (/cən/ 'I' in both 252b and 253b) in a non-nominalized clause.

(252b) melq cən ?ə t<sup>ə</sup> yásəq<sup>w</sup> (5384) 'I forgot my hat'

1	2	3	4	5	
1	'forget'				4 article
2	'I'				5 'hat'
3	oblique				

(253b) he?k<sup>w</sup> cən (6214) 'I remember'

1            2  
1 'remembering' (Actual)            2 'I'

An attributive clause is morphologically distinct from a complementary one not only when it contains an intransitive predicate, but also when it has a transitive one marked for third person or for passivity. In an attributive /s-/ 'absolute' clause the predicate is inflected with /s-/ 'third possessive' (as in 254) or with a subordinate passive suffix (as in 255), but not with /-əs/ 'third transitive agent' or with a general passive suffix.

(254) cəx<sup>w</sup>lé ?i? mək<sup>w</sup> ?əncə ni? s<sup>w</sup>i<sup>w</sup>šətálx<sup>w</sup>s (4838)

1        2    3        4        5    67    8 9    10

'He usually invites us everywhere'

1 'usually, sometimes'	6 absolute
2 'and'	7 'invite' (Actual)
3 'every, all'	8 transitive
4 'where, somewhere'	9 'us'
5 nonproximal	10 third possessive

(255) ni? ?i səy<sup>w</sup>əstált təhá (6071a)

1    2    34        56    7

'This is what we were being told about'

1 referent	5 transitive
2 proximal	6 'we' (subordinate pass.)
3 absolute	7 'this'
4 'tell'	

### 2.3.3. /šx<sup>w</sup>-/ 'instrumental'

/šx<sup>w</sup>-/ 'instrumental', which has two allomorphs (šx<sup>w</sup>- before

vowels and š before consonants) functions like /s-/ 'absolute' to the extent that an element inflected with /šx<sup>w</sup>-/ is also inflected with a possessive person marker. Moreover, a /šx<sup>w</sup>-/ clause, whether complementary or attributive, follows the pattern for /s-/ clauses in respect to marking with the passive person markers and with /-əs/ 'third transitive agent' (2.3.2.3. Double Person Marking and 2.3.2.4. Attributive Clause Pattern).

The distribution of /šx<sup>w</sup>-/ 'instrumental' does not totally match that of /s-/ 'absolute'. In complementary clauses /šx<sup>w</sup>-/ unlike /s-/ is not prefixed to a proclitic (2.1.3.2.), but has been found to inflect the initial element /ni<sup>?</sup>/ 'nonproximal' exclusively except for one example in the corpus in which the first element is /yaθ/ 'always' (2.1.2.2. Adverbs). These types of clauses, moreover, are not introduced by the article /k<sup>w</sup>/, which characterizes some /s-/ complementary constructions.

#### 2.3.3.1. Complementary Clauses

Where a /šx<sup>w</sup>-/ 'instrumental' construction functions as a complementary clause, it denotes causality and appears in one of two characteristic syntactic contexts: after /nəci<sup>m</sup>/ 'why' or after /ni<sup>t</sup>/ 'referent' with the interpretation 'that is why (it is so)'. The syntactic status of a /šx<sup>w</sup>-/ complementary clause may be explained by either of two hypotheses. According to one hypothesis it is functioning as an adjunct to the main clause predicate and according to the other it is in attribution to the main clause as a whole.

The adjunct hypothesis appears to be plausible when the predicate of the main clause, which the /šx<sup>w</sup>-/ 'instrumental' construction modifies, does not contain a noun adjunct. This is the case in examples (256) and (257), in which the main clauses are respectively nəciṃ ʔále 'it is why' and niṭ 'that is why (it is so)'. In (256) it is possible to analyze nəciṃ 'it is why' as the predicate centre and the /šx<sup>w</sup>-/ clause (3-9) as its subject referent in a semantic structure of the type 'Your killing my people is why?'.  
 . (256) nəciṃ ʔále ʔəšni? š<sup>w</sup>ayt k<sup>w</sup>ə nəməstíməx<sup>w</sup> (T1:160)

1 2 3 4 5 6 7 8 9

'Why did you kill my people?'

1 'why'	6 'kill'
2 curious	7 article
3 /ʔəš-/ 'your(sg)'	8 'my'
4 /šx <sup>w</sup> -/ 'instrumental'	9 'people'
5 nonproximal	

Again, in example (257) niṭ is the predicate centre and the /šx<sup>w</sup>-/ clause (2-6) is putatively its subject referent in a semantic structure of the type 'His always farting is it (the reason)':

(257) niṭ šyaθs ʔəw tēqəls (T7:150) 'It was because he was always farting'

1 2 3 4 5 6 7

1 referent	5 contemporaneous
2 /šx <sup>w</sup> -/ 'instrumental'	6 'fart'
3 'always'	7 activity (Actual)
4 third possessive	

The adjunct hypothesis is not the only possible approach to sentences like (256) and (257). The /šx<sup>w</sup>-/ 'instrumental' constructions may be construed as modifying the main clauses, but without being

adjunct expressions. This type of analysis is supported by sentences which contain a predicate, a noun adjunct and a /šx<sup>w</sup>-/ clause (examples 258-60). In (258) and (259) the distribution of the main clause constituents (elements 1-4 and 1-6 respectively) reflects the normal sentence pattern of Cowichan. In (258) niʔ 'referent' is the predicate and the adjunct, t<sup>ə</sup> ck<sup>w</sup>im pátən 'the red rag', is its subject referent.

(258) niʔ t<sup>ə</sup> ck<sup>w</sup>im pátən šis wəʔ ləmméləm (4282b)

1 2 3 4 5 6 7 8 9 10 11

'It was by the red rag that I was seen'

1 referent	7 third possessive
2 article	8 'already, now'
3 'red'	9 'see'
4 'rag'	10 /-nəx <sup>w</sup> / 'responsible'
5 /šx <sup>w</sup> -/ 'instrumental'	11 'I' (general passive)
6 /niʔ/ 'nonproximal'	

In (259) k<sup>w</sup>əna sʔəlíqəʔ 'the children' modifies the proposition niʔ yəx<sup>w</sup> ʔále nəcím 'it is why':

\*(259) ʔa, niʔ yəx<sup>w</sup> ʔále nəcím k<sup>w</sup>əna sʔəlíqəʔ šis ʔeem (T5:13)

1 2 3 4 5 6 7 8 9 10

'Oh, I wonder why the children are crying'

1 nonproximal	6 'children'
2 surprise	7 /šx <sup>w</sup> -/ 'instrumental'
3 curious	8 /niʔ/ 'nonproximal'
4 'why'	9 third possessive
5 'this'	10 'cry'

Putatively the /šx<sup>w</sup>-/ 'instrumental' clause in each of the above examples (elements 5-11 in 258 and 7-10 in 259) are in apposition to the noun adjuncts. However, there is counterevidence

against this hypothesis. Although this view appears plausible in examples (258)-(59), in (260) the noun adjunct (2-3) is separated from the complementary /šx<sup>w</sup>-/ construction (8-12) by an /s-/ 'absolute' clause, which modifies the main clause (1-3):<sup>26</sup>

(260) niž k<sup>w</sup>ěna snet k sšěxěyct šes k<sup>w</sup>ěnetálem (T5:98)

1 2 3 4 5 6 7 8 9 10 11 12 13

'It is because we are crybabies that she took us last night'

1 referent	8 /šx <sup>w</sup> -/ 'instrumental'
2 'this'	9 /ni?/ 'nonproximal'
3 'night'	10 third possessive
4 article	11 'take'
5 absolute	12 transitive
6 'crying' (Actual)	13 'we' (general passive)
7 'our'	

It follows, then, that a complementary /šx<sup>w</sup>-/ clause (elements 8-13 in 260) does not constitute a direct adjunct but modifies the potentially independent construction (1-7 in 260), which precedes it.

#### 2.3.3.2. Attributive Clauses

Besides denoting causality as a complementary clause a /šx<sup>w</sup>-/ 'instrumental' construction may also appear as an attributive clause with instrumental or (trans)locative interpretation. This type of construction is different in internal structure from the aforementioned complementary type of clause. The constituent structure of an attributive /šx<sup>w</sup>-/ clause may be observed in examples (261)-(62), in which the attributive clause (elements 4-7 in 261 and 7-11 in 262) is embedded in an adjunct phrase (2-7 in 261 and 5-11 in 262) that modifies a predicative expression--niž in (261) and 1-4 in (262).

(261) ni<sup>θ</sup> t<sup>θ</sup> sčest ni<sup>?</sup> nəšx<sup>w</sup>?iwəs (6277)

1 2 3 4 5 6 7

'It was a stick which I pointed with'

1 referent	5 'my'
2 article	6 instrumental
3 'stick'	7 'point to'
4 nonproximal	

(262) ni<sup>?</sup> yəqətəm kə ʅqet nəm<sup>?</sup> ?əɪ nəšk<sup>w</sup>ək<sup>w</sup>i<sup>?</sup> (5348)

1 2 3 4 5 6 7 8 9 10 11

'The tree I used to climb has been felled'

1 nonproximal	7 'go'
2 'fell, topple'	8 past
3 transitive	9 'my'
4 third general passive	10 /šx <sup>w</sup> -/ 'instrumental'
5 article	11 'climb'
6 'tree'	

In (261) and (262) /šx<sup>w</sup>-/ 'instrumental' and the possessive form /nə-/ 'my' are not prefixed to the first element of the attributive clause (ni<sup>?</sup> 'nonproximal' in (261) and nəm<sup>?</sup> 'go' in (262)), but rather to the predicate (?iwəs 'point at' in (261) and k<sup>w</sup>ək<sup>w</sup>i<sup>?</sup> 'is felled' in (262)).

The attributive type of /šx<sup>w</sup>-/ clause has special semantic status in that the anaphoric relationship between the adjunct head and the attributive clause corresponds to that between an oblique adjunct and the rest of the clause in a non-nominalized<sup>21</sup> sentence such as example (263) or (264). The adjunct head (element 3) in example (261) corresponds in its instrument interpretation to the oblique adjunct (3-5) in the following example:

(263) ?iwəs cən ?ə t<sup>θ</sup> sčest (6277) 'I pointed with a stick'

1 2 3 4 5

1 'point'	4 article
2 'I'	5 'stick'
3 oblique	

Similarly, the adjunct head (element 6) in example (262) is interpreted in the same way as the oblique adjunct (4-6) in example (264).

(264) k <sup>w</sup> ək <sup>w</sup> i <sup>?</sup> cən ʔəʔ ʔə kə ʔet (5348) 'I used to climb a tree'	
1 2 3 4 5 6	
1 'climb' (Actual)	4 oblique
2 'I'	5 article
3 past complete	6 'tree'

The internal structure of an attributive construction is maintained in headless /šx<sup>w</sup>-/ 'instrumental' clauses. In (265a) a headless clause (2-10) functions syntactically as an adjunct to the nominal predicate sčest '(be) a stick':

(265a) sčest t <sup>θ</sup> ni <sup>?</sup> špásəts ʔəsʔəliqəʔ t <sup>θ</sup> šx <sup>w</sup> əlmásten (3582)	
1 2 3 4 5 6 7 8 9 10	
'A stick is what your children hit the window with'	
1 'stick'	6 third possessive
2 article	7 /ʔəŋ-/ 'your(sg)'
3 nonproximal	8 'children'
4 /šx <sup>w</sup> -/ 'instrumental'	9 article
5 'hit'	10 'window'

In this sentence as in the attributive clauses represented by examples (261)-(62) /šx<sup>w</sup>-/ and /-s/ 'third possessive' are affixed to the predicate--pásət 'hit him'--and not to the first element--ni<sup>?</sup> 'nonproximal'. Moreover, as an attributive clause construction example (265a) may be semantically correlated with a non-nominalized main clause, such as the one in example (265b) containing an oblique adjunct.

(265b) ni<sup>?</sup> pásetəs ?ənsʰəliqəʔ t<sup>θ</sup>ə šx<sup>w</sup>əlmástən ?ə t<sup>θ</sup>ə sčéšt

1 2 3 4 5 6 7 8 9 10 11

'Your children hit the window with the stick' (4406)

1 nonproximal	7 article
2 'hit'	8 'window'
3 transitive	9 oblique
4 third transitive agent	10 article
5 'your(sg)'	11 'stick'
6 'children'	

sčéšt in (265a) is anaphorically related to the headless attributive clause in the same way that ?ə t<sup>θ</sup>ə sčéšt 'with a stick' is related to the rest of the sentence in (265b), both expressions being in the role of instrument.

In emphatic constructions, in which the adjunct head and attributive clause form an independent construction, the /šx<sup>w</sup>-/ 'instrumental' clause may have the same semantic structure as an /s-/ 'absolute' construction that is attributive to a locative predicator. Example (266) of a /šx<sup>w</sup>-/ clause may be compared with (267a), an example of an /s-/ clause. In example (266) the same relationship (locative) exists between the attributive /šx<sup>w</sup>-/ clause (elements 3-6) and the adjunct head (1-2) as exists in (267a) between the /s-/ 'absolute' complementary clause (5-10) and the locative predicative phrase (1-4).

(266) mək<sup>w</sup> ?əncə ni<sup>?</sup> šneŋct, kə ct səwq<sup>w</sup>t (4624)

1 2 3 4 5 6 7 10 11

'We looked everywhere for him'

1 'every, all'	7 article
2 'where, somewhere'	8 /s-/ 'absolute'
3 nonproximal	9 /ni <sup>?</sup> / 'nonproximal'

- |                                      |               |
|--------------------------------------|---------------|
| 4 /šx <sup>w</sup> -/ 'instrumental' | 10 'our'      |
| 5 'go'                               | 11 'look for' |
| 6 'our'                              |               |

(267a) ?i ?ə təna cécəw k<sup>w</sup> shi?wələmct ?əʔ (5689b)

1 2 3 4 5 6 7 8 9

'It is on this beach that we used to play'

- |            |                   |
|------------|-------------------|
| 1 proximal | 6 absolute        |
| 2 oblique  | 7 'play' (Actual) |
| 3 'this'   | 8 'our'           |
| 4 'beach'  | 9 past complete   |
| 5 article  |                   |

From a syntactic viewpoint the /s-/ 'absolute' construction is distinct from the /šx<sup>w</sup>-/ 'instrumental' construction in that the former contains a locative predicator like /?i/ 'proximal' or /sčičəm/ 'near' modified by an oblique adjunct (elements 2-4 in 267a above). A locative phrase unlike a noun phrase has the same internal structure whether it is a predicate centre itself (elements 1-4 in 267a) or in subordinate immediate constituency with another element acting as a predicate (elements 6-9 in 267b).

(267b) ni? ct yaθ ?əw hi?wələm ?i ?ə təna cécəw (1086)

1 2 3 4 5 6 7 8 9

'We always play on this beach'

- |                   |            |
|-------------------|------------|
| 1 nonproximal     | 6 proximal |
| 2 'we'            | 7 oblique  |
| 3 'always'        | 8 'this'   |
| 4 contemporaneous | 9 'beach'  |
| 5 'play' (Actual) |            |

Although a /šx<sup>w</sup>-/ 'instrumental' attributive clause resembles other attributive clause types insofar as it may appear with or

without an adjunct head, like an /s-/ 'absolute' clause it may occur in one syntactic environment in which non-nominalized attributive clauses do not appear. A /šx<sup>w</sup>-/ construction morphologically marked as an attributive clause may function predicatively as in the following example (elements 1-4):

(268) ?i nəšq<sup>w</sup>ilq<sup>w</sup>əliwən k<sup>w</sup>əy swəyqe? (5729a)

1 2 34 5 6

'I have been thinking about that man'

1 proximal 4 'think about'

2 'my' 5 'that'

3 /šx<sup>w</sup>-/ 'instrumental' 6 'man'

As well as occurring in construction with an adjunct a /šx<sup>w</sup>-/ 'instrumental' construction that is morphologically marked as an attributive clause may, in addition, modify an apparently idiosyncratic expression /?əwə te?/ 'not any'. This occurrence of the /šx<sup>w</sup>-/ clause is illustrated in examples (269) and (270). That the /šx<sup>w</sup>-/ clauses (elements 3-6 in both 269 and 270) are of the attributive type is clear. In both (269) and (270) /šx<sup>w</sup>-/ is prefixed to the predicate, although in (269) another form, ni? 'nonproximal', is the first element of the subordinate clause.

(269) ?əwə te? ni? šstətəlstəx<sup>w</sup>s (6394a)

1 2 3 45 6

'He didn't know about it'

1 'not' 4 /šx<sup>w</sup>-/ 'instrumental'

2 adjectival 5 'know'

3 nonproximal 6 third possessive

(270) ?əwə te? šstətəlstəwət (5157) 'Nobody knows him'

1 2 34 5 6

- |                                      |                                     |
|--------------------------------------|-------------------------------------|
| 1 'not'                              | 4 'know'                            |
| 2 adjectival                         | 5 /-stəx <sup>w</sup> / 'causative' |
| 3 /šx <sup>w</sup> -/ 'instrumental' | 6 third subordinate passive         |

The person markers of the /šx<sup>w</sup>-/ clause in each example, moreover, are characteristic of an attributive construction. As examples (269) and (270) might suggest, the subordinate clause predicate is inflectible with /-s/ 'third possessive' or a subordinate passive ending, but not with /-əs/ 'third transitive agent' or a general passive suffix.

Conceivably /ʔəwə teʔ/ 'not any', despite its semantic interpretation, might be analyzed as an adjunct head, in which case its occurrence with a /šx<sup>w</sup>-/ clause would not be idiosyncratic. However, its distribution in non-nominalized constructions provides no motivation for such a hypothesis. In (271), in which the occurrence of /ʔe/ 'interrogative' shows that /ʔəwə teʔ/ consists of two free forms, /ʔəwə teʔ/ is in adjectival attribution to the interrogative predicator /wet/ 'someone, who' (2.2.1.3.), ʔəwə ʔe teʔ wet 'nobody' being an adjunct head to ʔi '(who is) here'.

(271) ʔəwə ʔe teʔ wet ʔi (1215a) 'Is there nobody (who is) here?'

- |                 |   |   |                  |   |  |
|-----------------|---|---|------------------|---|--|
| 1               | 2 | 3 | 4                | 5 |  |
| 1 'not'         |   |   | 4 'someone, who' |   |  |
| 2 interrogative |   |   | 5 proximal       |   |  |
| 3 adjectival    |   |   |                  |   |  |

#### 2.4. Compound Clauses

Up to this point sentence types have been discussed in which one clause is dependent upon another. In Cowichan as in a language like

English there is also the compound clause, in which two or more clauses of the same type (main or subordinate) are characteristically conjoined by the morpheme /ʔiʔ/ 'additive'.<sup>27</sup> This form is semantically equivalent to the English words 'and', 'but', 'or' and 'then' (after an 'if' clause), but syntactically distinct from them. In English the constituents coordinated by 'and' have to be of the same type, for example, two nouns or noun phrases in expressions of the type, 'three sheep and three cows' or 'three sheep and cows'. In Cowichan, expressions are not conjoined by /ʔiʔ/ on this basis. A compound clause consists of either an adjunct (2.4.3.) or an additive emphatic (2.4.2.) and a clause or of two clauses (2.4.1.). As will be observed later, a compound clause is syntactically parallel to a simple one in that main or subordinate compound clauses are morphologically marked on the same basis as main or subordinate simple ones.

As an introductory element to a clause /ʔiʔ/ 'additive' differs from other forms such as /niʔ/ 'nonproximal' and /ʔi/ 'proximal' in that it does not occur with enclitics (2.1.3.1.). One other form, /ʔiwáwə/ 'perhaps, probably' apparently functions in this way:

(272) ʔiwáwə ʔéməx<sup>w</sup> ceʔ ʔəw k<sup>w</sup>éyələs (956)

1        2        3    4    5        6

'Perhaps it will rain tomorrow'

1 'perhaps'

3 future

5 'tomorrow'

2 'rain'

4 contemporaneous

6 third dependent

Possibly this latter anomaly may be resolved if the ʔiwáwə expression is viewed as a compound sentence in which ʔiwáwə is conjoined to the rest of the construction.

2.4.1. Clause Conjoining

In a compound predication two types of clauses may be conjoined: main ones and dependent ones (2.3.1.). Where two main clauses are conjoined there is a temporal or causal anaphoric relationship between them. Such a relationship may be explicitly expressed by a predicative expression with a temporal meaning such as /nétəʃ/ 'morning', /cələqəʃ/ 'yesterday' or /skʷeyl/ 'day'. This type of expression may be observed in example (273a), elements 1-5, as follows:

(273a) ʔəw yaθ pəʔ məkʷ nətəʃ ʔiʔ nəm taxʷ ʔə tʰə stələw (T4:3)

1 2 3 4 5 6 7 8 9 10 11

'Always every morning (and) he went down to the river'

1 contemporaneous	7 'go'
2 'always'	8 'go down'
3 certain	9 oblique
4 'every, all'	10 article
5 'morning'	11 'river'
6 additive	

In (273a) the phrase, məkʷ nətəʃ 'every morning', typifies the semantic role of a temporal predicative expression in an /ʔiʔ/ 'additive' construction. This phrase in its temporal meaning resembles an oblique adjunct like ʔə kʷə nətəʃ 'in the morning' in (273b), although unlike the latter it receives focus.

(273b) niʔ č ʔálə xčəət kʷə sniʔ həyéʔ ʔə kʷə nətəʃ (3707)

1 2 3 4 5 6 7 8 9 10 11 12

'Where do you go, when you leave in the morning?'

1 nonproximal	7 /s-/ 'absolute'
2 'you(sg)'	8 /niʔ/ 'nonproximal'
3 curious	9 'leave'

4 'go off'	10 oblique
5 article	11 article
6 /ʔəh-/ 'your(sg)'	12 'morning'

The temporal-conditional semantic relationship between two conjoined main clauses is not limited to constructions in which a temporal predicator is present. In some compound constructions the first clause denotes an activity that is not completed, while the second one denotes another activity that interrupts it. This is the case in the following example:

(274) x<sup>wə</sup>?é cən hənʔəmətən ?i? x<sup>wiyák</sup>wəm kə nekāa (4235a)

1 2 3 4 5 6 7 8 9 10 1112

'My car broke down before I got home'

(I wasn't home and my car broke down)

1 developmental	7 additive
2 /ʔəwə/ 'not'	8 developmental
3 'I'	9 'break (down)'
4 'return'	10 article
5 'be home'	11 'my'
6 'I' (dependent)	12 'car'

In other compound constructions the interrelationship between the first and second clause is conditional. This relationship is expressed in (275), in which the first clause (elements 1-3) denotes the condition and the second (4-11), the consequence:

(275) mi č x<sup>wə</sup>?álem ?i? x<sup>wə</sup>? cən ce? wə? ləmstámə (259)

1 2 3 4 5 6 7 8 9 1011

'You come back and I will then show you again'

1 'come'	7 future
2 'you(sg)'	8 'then, already'
3 'come-back'	9 'show'

4 additive	10 /-stəx <sup>w</sup> / 'causative'
5 'again'	11 'you(sg)'
6 'I'	

The relationship of conditionality may be more explicitly expressed by means of a complex formula /ha...?i?/ 'if...then', in which /ha/ 'if' introduces the first clause and /?i?/ 'then', the second:

(276) <u>ha</u> č nəm hēye? <u>?i?</u> nəm cən ʔ əw hēye? (679)	
1 2 3 4 5 6 7 8 9 10	
'If you(sg) go away, I will go away too'	
1 'if'	6 'go'
2 'you(sg)'	7 'I'
3 'go'	8 'also, too'
4 'go away'	9 contemporaneous
5 additive	10 'go away'

Although semantically there is a special relationship between two main clauses in a compound predication, the syntactic structure of each clause follows from that of an independently occurring main clause. In example (274) mentioned earlier the first clause (1-5) maintains the pattern that is characteristic of negative constructions (2.3.1.2.) and in (273a) above the occurrence of the adverb /yaθ/ 'always' (2.1.2.2.) before the predicative expression (elements 4-6) follows from normal sentence structure.

The internal structure of a compound predication is maintained when it is embedded as a complementary dependent clause. As such the predication is morphologically marked in the same manner as a simple subordinate clause. This marking is apparent in example (277a) as follows:

(277a) ?əwə cə ce? x̣iásən ?i? x<sup>w</sup>i? ?əw̄ ʔéʔəqən ?áʔə x̣ámqən  
 1 2 3 4 5 6 7 8 9 10 11 12

'I am not going to eat and then lie down all day' (4225a)

1 'not'	7 'then, next'
2 /cən/ 'I'	8 contemporaneous
3 future	9 'lie down'
4 'eat'	10 'I' (dependent)
5 'I' (dependent)	11 curious
6 additive	12 'all day'

In (277a) the internal structure of the compound clause (elements 4-12) follows from that of the sentence in (277b) insofar as the subordinate clause morpheme -ən 'I' corresponds to the main clause one cən 'I' just as it does in simple sentences.

(277b) x̣iás cən ?i? x<sup>w</sup>i? ?əw̄ ʔéʔəq̄ cən ?áʔə x̣ámqən (4225b)

1 2 3 4 5 6 7 8 9

'I am going to eat and lie down all day'

1 'eat'	6 'lie down'
2 'I'	7 'I'
3 additive	8 curious
4 'then, next'	9 'all day'
5 contemporaneous	

#### 2.4.2. Additive Emphatics

In addition to containing two or more potentially independent sentences, both of which may be marked by subject enclitics (2.1.3.1.), a compound predication may consist of two major constituents only one of which contains a subject enclitic. The predicative centre of the initial construction is an additive emphatic, one of a group of predicators with a special syntactic property: either the emphatic,

which occurs initially, or the /ʔiʔ/ 'additive' constituent or both cannot function as an independent sentence. The emphatics are as follows: /x̣wáleq/ 'almost (non-control)', /cələ́l/ 'almost', /x̣wəm/ 'can, able to', /scékʷəl/ 'how, somehow', /cəxʷlé/ 'sometimes', /təmtəm/ 'sometime, when' and /nəcəxʷ/ 'once'.

#### 2.4.2.1. Class 1 Additive Emphatics

The additive emphatics may be divided into two classes on the basis of the distribution of the enclitics (2.1.3.1.). In a compound clause containing a class 1 emphatic all the enclitics that occur are attracted to the emphatic. In a clause containing a class 2 emphatic the subject enclitic (2.1.1.1.) follows the first element after /ʔiʔ/ 'additive' of the /ʔiʔ/ constituent. /x̣wáleq/ 'almost (non-control)', /cələ́l/ 'almost', /x̣wəm/ 'can, able to' and /scékʷəl/ 'how, somehow' are class I emphatics. /x̣wáleq/, the first of these elements, differs from /cələ́l/ in that it denotes an action performed without the speaker's full control whereas /cələ́l/ is semantically neutral.

Where a class 1 emphatic occurs, the /ʔiʔ/ 'additive' constituent of the compound sentence has some of the formal properties of an independent clause. This is the case in sentences (278)-(281), which illustrate the distribution of the four class I emphatics. In (278)-(79), for example, the predicate is followed by a direct adjunct in the usual manner (2.1.1. Predication and Person Marking).

(278) x̣im cən ʔəw cələ́l ʔiʔ ɬəxʷnəxʷ t<sup>o</sup>ə nəsyéye (1316)

1 2 3 4 5 6 7 8 9 10

'I nearly spat upon my friend'

- |                   |               |
|-------------------|---------------|
| 1 'very much so'  | 6 'spit'      |
| 2 'I'             | 7 responsible |
| 3 contemporaneous | 8 article     |
| 4 'almost'        | 9 'my'        |
| 5 additive        | 10 'friend'   |

(279) scék<sup>w</sup>əl, yəx<sup>w</sup> c ʔálə ʔi? k<sup>w</sup>ənəx<sup>w</sup> t<sup>ə</sup> yəx<sup>w</sup>ələ? (T1:86)

1 2 3 4 5 6 7 8

'How am I going to catch that eagle?'

- |                  |            |
|------------------|------------|
| 1 'how, somehow' | 5 additive |
| 2 surprise       | 6 'take'   |
| 3 /cən/ 'I'      | 7 article  |
| 4 curious        | 8 'eagle'  |

(280) ʃ<sup>w</sup>ələq cən ʔi? ni? híləm (6085) 'I almost fell over'

1 2 3 4 5

- |                          |               |
|--------------------------|---------------|
| 1 'almost (non-control)' | 4 nonproximal |
| 2 'I'                    | 5 'fall over' |
| 3 additive               |               |

(281) ʃ<sup>w</sup>əm cən ʔi? ʔəw čewetále (T7:40) 'I can help you'

1 2 3 4 5 6 7

- |                   |              |
|-------------------|--------------|
| 1 'can, able to'  | 5 'help'     |
| 2 'I'             | 6 transitive |
| 3 additive        | 7 'you(pl)'  |
| 4 contemporaneous |              |

However, since all the enclitics are attracted to the additive emphatic, the /ʔi?/ constituent is not a potentially independent clause. A compound clause containing an additive emphatic, therefore, is of a different syntactic type from one containing two main clauses.

Two of the class 1 additive emphatics, /ʃ<sup>w</sup>əm/ 'can, able to' and /scék<sup>w</sup>əl/ 'how, somehow' as predicators are not limited in their

distribution to compound predications, but may be modified by complementary /s-/ 'absolute' clauses (examples 282-83) as follows:

(282) x<sup>w</sup>əm k<sup>w</sup>ə nəs<sup>?</sup>əw čəwətálə (T7:43) 'I could help you'

1 2 3 4 5 6 7 8

1 'can, able to'	5 contemporaneous
2 article	6 'help'
3 'my'	7 transitive
4 absolute	8 'you(pl)'

(283) scék<sup>w</sup>əl k<sup>w</sup> s<sup>?</sup>áməsθámš (5505) 'How much will you give me?'

1 2 3 4 5 6 7

1 'how, somehow'	5 'give'
2 article	6 /-t/ 'transitive'
3 /ʔəñ-/ 'your(sg)'	7 'me'
4 absolute	

/scék<sup>w</sup>əl/ 'how, somehow' is in two respects idiosyncratic. As a predicate it may, unlike the other emphatics, be modified by a noun adjunct. This distribution of /scék<sup>w</sup>əl/ is illustrated in example (284) in which the direct adjunct (elements 2+4) is interpreted as a subject:

(284) scék<sup>w</sup>əl k<sup>w</sup>ə ʔəntéle (973) 'How much money do you have?'

1 2 3 4

1 'how much'	3 'your(sg)'
2 article	4 'money'

/scék<sup>w</sup>əl/ 'how, somehow' is also idiosyncratic in that in a negative construction it is marked for third person. Example (285) differs from the syntactically expected expression \*ʔəwə cən scék<sup>w</sup>ələn ʔi? mi ʔe? təq<sup>w</sup>.

(285) ʔəwə scék<sup>w</sup>ələs ʔi? mi cə ʔe? təq<sup>w</sup> (5501b)

1 2 3 4 5 6 7 8

'I am never going to come back home'

1 'not'	5 'come'
2 'somehow, how'	6 /cən/ 'I'
3 third dependent	7 'again'
4 additive	8 'go home'

In this type of construction the conjoined constituents, elements 1-3 and 5-8, are potentially independent sentences.

#### 2.4.2.2. Class 2 Additive Emphatics

The class 2 additive emphatics may be divided into two subtypes on the basis of the distribution of the enclitics: /təmtəm/ 'when, sometime', which occurs with any enclitic except a subject one,<sup>28</sup> and /cəx<sup>w</sup>lé/ 'sometimes' and /nəcəx<sup>w</sup>/ 'once', which are not modified by any enclitics. This distribution of elements is illustrated in examples (286)-(88). In each of the three examples the subject enclitics (/cən/ 'I' in 286-87 and /č/ 'you(sg)' in 288) occur in the /ʔiʔ/ 'additive' construction.

(286) cəx<sup>w</sup>lé ʔiʔ yəʔitət cən (5162) 'Sometimes I take a nap'

1	2	3	4	5	6	7	8
1 'sometimes'					4 'sleep'		
2 additive					5 'I'		
3 serial							

(287) nəcəx<sup>w</sup> ʔiʔ niʔ cən qáʔqaʔ ʔə t<sup>ə</sup>ə pəyə (5521a)

1	2	3	4	5	6	7	8
'Once in a while I drink beer'							
1 'once'					5 'drink'		
2 additive					6 oblique		
3 nonproximal					7 article		
4 'I'					8 'beer'		

(288) təmtém ce? (?i?) k̄e? č wəɬ ləmnaĩš (6088b)

1 2 3 4 5 6 7 89

'Some day you will see me again'

- |                    |                                      |
|--------------------|--------------------------------------|
| 1 'sometime, when' | 6 'already, then'                    |
| 2 future           | 7 'see'                              |
| 3 additive         | 8 /-nəx <sup>w</sup> / 'responsible' |
| 4 'again'          | 9 'me'                               |
| 5 'you(sg)'        |                                      |

In example (288) the presence of the enclitic /ce?/ 'future' after /təmtém/ 'when, sometime' gives substance to the view that this emphatic is syntactically distinct from /cəx<sup>w</sup>lé/ 'sometimes' and /nəčéx<sup>w</sup>/ 'once'.

Like the class 1 emphatics, /scék<sup>w</sup>əl/ 'how, somehow' and /x<sup>w</sup>əm/ 'can, able to' (2.4.2.1.), the class 2 emphatics, /təmtém/ 'when, sometime' and /nəčéx<sup>w</sup>/ 'once', may be modified by a complementary /s-/ 'absolute' clause as in the following:

(289) ni? ce? təmtém sk<sup>w</sup>eyl k<sup>w</sup>ə shəyé? (6075d)

1 2 3 4 5 678

'What day are you leaving?'

- |                    |                     |
|--------------------|---------------------|
| 1 nonproximal      | 5 article           |
| 2 future           | 6 /?əñ-/ 'your(sg)' |
| 3 'sometime, when' | 7 absolute          |
| 4 'day'            | 8 'leave'           |

(290) nəčéx<sup>w</sup> k<sup>w</sup>ə s?ə́k<sup>w</sup>nəx<sup>w</sup>əs k<sup>w</sup>əθə nəšx<sup>w</sup>?áq<sup>w</sup>a? ?ə ɬə bowt (6090)

1 2 3-4 5 6 7 8 9 10 11 12

'Once my brother lost the boat'

- |                          |                      |
|--------------------------|----------------------|
| 1 'once'                 | 7 article            |
| 2 article                | 8 'my'               |
| 3 absolute               | 9 'sibling'          |
| 4 'lose'                 | 10 oblique           |
| 5 responsible            | 11 article (marked)* |
| 6 third transitive agent | 12 'boat'            |

A compound construction containing an additive emphatic may act as a subordinate clause. When it has this syntactic function it is like any other type of compound construction in that it is morphologically marked in the same way as a simple clause. In a compound complementary /s-/ clause /s-/ 'absolute' and a possessive person marker mark the first element of it and in a dependent compound clause a dependent person marker appears.

The morphological marking of subordinate compound clauses containing additive emphatics may be observed in examples (291)-(92). In (291a) /s-/ 'absolute' and the possessive marker /-s/ 'third possessive' do not inflect the first element of the /?i?/ 'additive' clause, but only the first element of the compound construction as a whole, namely, /cəx<sup>w</sup>l<sup>é</sup>/ 'sometimes'. This fact may be verified by comparing example (291a), elements 6-19, with example 291b, elements 8-19:

(291a) ni? č ?əw stətəlstəx<sup>w</sup> k<sup>w</sup>ə scəx<sup>w</sup>l<sup>és</sup> ?i? ?əwə nəx<sup>i</sup>?əs

1 2 3 4 5 6 7 8 9 10 11 12 13 14

k<sup>w</sup>ə nəsn<sup>é</sup>n x<sup>w</sup>čəθət (3805a)

15 16 17 18 19

'You know that sometimes I don't want to go out'

1 nonproximal	8 'sometimes'	15 article
2 'you(sg)'	9 third possessive	16 'my'
3 contemporaneous	10 additive	17 absolute
4 'know'	11 'not'	18 'go'
5 causative	12 'my'	19 'go out'
6 article	13 'desire'	
7 absolute	14 third dependent	

(291b) cəx<sup>w</sup>lé ?i? ?əwə nəsx<sup>i</sup>?əs k<sup>w</sup>ə nəsnəm x<sup>w</sup>čəθət (3805b)

8 10 11 1213 14 15 161718 19

'Sometimes I don't want to go out'

This morphological marking is consistent with the view that the compound predication corresponds distributionally to a simple clause in its embedding to a main clause.

In example (292a) the dependent compound predication (6-12) is formally analogous to a simple dependent predication. The dependent person marker (element 8) in inflecting only š<sup>w</sup>əm 'can, able to' and not the first element of the /?i?/ 'additive' clause, mi 'come', as well is not idiosyncratic in its occurrence.

(292a) mi cən c əw ?əwə ?əw š<sup>w</sup>əmən ?i? mi w təcəl (3288)

1 2 3 4 5 6 7 8 9 10 11 12

'I will come if I can (get there)'

1 'come'	7 'can, able to'
2 'I'	8 'I' (dependent)
3 /ce?/ 'future'	9 additive
4 contemporaneous	10 'come'
5 'come'	11 contemporaneous
6 contemporaneous	12 'arrive, get there'

The single appearance of -ən 'I' (dependent) in the first clause (6-8) of the compound predication follows from that of its main clause counterpart cən 'I' in (292b), just as it would in the case of a simple clause.

(292b) š<sup>w</sup>əm cən ?i? mi w təcəl (3288) 'I can come'

1 2 3 4 5 6

1 'can, able to'	4 'come'
2 'I'	5 contemporaneous
3 additive	6 'arrive'

### 2.4.3. Conjoining of Adjuncts and Clauses

There are two types of constructions in Gowichan in which a direct adjunct and a potentially independent sentence are conjoined: the preposing and the postposing. In the preposing type an adjunct is conjoined to an /ʔiʔ/ 'additive' construction that contains a main clause. In the postposing type an adjunct is introduced by /ʔiʔ/ and follows either an entire main clause or a single part of it--either a predicator or one of the directional forms, /neñ/ 'go' or /ni/ 'come', which may modify a predicator. In the preposing type of construction the adjunct is coreferential with another form whereas in the postposing type the adjunct is semantically coequal to another element.

#### 2.4.3.1. Preposed Adjunct

In a preposed adjunct construction there is a coreference relationship between the adjunct and the following /ʔiʔ/ 'additive' clause. Accordingly, the adjunct is interpreted as the subject of the /ʔiʔ/ clause predicate when it is intransitive, but as being in the role of agent or experiencer and coreferential with /-əs/ 'third transitive agent' when the predicate is transitive. The latter type of coreference relationship is illustrated in examples (293)-(94). In (293) the adjunct (elements 2-4) is anaphorically related to the predicate (7-9) of a main clause (6-11).

(293) (niʔ) ʔə pusct ʔiʔ (niʔ) ʔéyxtəs t<sup>ə</sup> smáyəθ (6307)

1 2 3 4 5 6 7 89 10 11

'Our cat--she eats deer meat'

1 nonproximal	7 'eat'
2 article (marked)	8 transitive
3 'cat'	9 third transitive agent
4 'our'	10 article
5 additive	11 'deer (meat)'
6 nonproximal	

In (294) the coreference relationship between the adjunct (elements 1-2) and the morpheme /-əs/ 'third transitive agent' exists even though the predicate (11-13) to which it is attached belongs to a subordinate clause (10-13).

(294) t <sup>ə</sup> s <sup>ʔ</sup> eləx <sup>w</sup> ?i <sup>ʔ</sup> x əw ni <sup>ʔ</sup> ?al tə stiləm ni <sup>ʔ</sup> nəməstx <sup>w</sup> əs	
1 2 3 4 5 6 7 8 9 10 11 12 13	
'The old man sang the same song again' (5363)	
(The old man and it was the same song which he brought out'	
1 article	8 article (marked)
2 'old'	9 'song'
3 additive	10 nonproximal
4 'again'	11 'go'
5, 7 'just, merely'	12 causative
6 referent	13 third transitive agent

In each of the above two examples the agent/experiencer interpretation of the preposed adjunct is predictable from the semantic structure of the /?i?/ construction, in which the adjunct head (element 11 in (293) and elements 4-9 in (294)) has patient interpretation.

The preposed adjunct construction has syntactic as well as semantic import to the extent that whatever phrase may act as a preposed adjunct may also enter into construction with the main clause contained within the /?i?/ 'additive' expression. This type of distribution may be observed in examples (295a) and (295b) in each of which the adjunct,

t<sup>ə</sup> sməyəθ 'the deer', has patient interpretation.

(295a) t<sup>ə</sup> sməyəθ ?i? ?əwə nəsʔi?əs (5675c)

1 2 3 4 5 6 7

'I don't like deer meat'

1 article

5 'my'

2 'deer'

6 'desire'

3 additive

7 third dependent

4 'not'

(295b) ?əwə nəsʔi?əs t<sup>ə</sup> sməyəθ (5675b) 'I don't like deer meat'

4 5 6 7 1 2

Syntactically, the occurrence of t<sup>ə</sup> sməyəθ 'the deer' as a preposed adjunct is not arbitrary, but may be connected with the fact that the predicate nəsʔi? 'I like' may take a direct adjunct. In a generative approach one might state that the simple clause adjunct (example 295b) is moved to sentence initial position to form a compound construction (example 295a).

#### 2.4.3.2. Postposed Adjunct<sup>29</sup>

In a postposed adjunct construction the adjunct, which is introduced by /?i?/ 'additive', may be semantically coequal to either another adjunct or to a person marker, which may be either plural or--less acceptably-- singular without apparently affecting the semantic structure. Thus, semantic collocations are possible as follows, the latter two being identical in meaning: t<sup>ə</sup> swəyqe? ?i? ə sɛni 'the man and the woman', ceep ?i? k ənsyēye 'you and your friend' and č ?i? k ənsyēye 'you and your friend'.

Conceivably the semantically coordinated expressions of a postposed adjunct construction might be analyzed like the English phrases 'the man and the woman' and 'you and your friend' as constituents formed by phrasal coordination. This hypothesis appears to be plausible in sentences like (296)-(97), in which the putatively coordinated expressions are juxtaposed. In (296) the sentence consists of an attributive clause (9-11) and an adjunct head construction (1-8), which contains two apparently coordinated adjuncts (1-4) and (6-8).

(296) k<sup>w</sup>θə sən̄kə nəšx<sup>w</sup>?áq<sup>w</sup>a?, ?i? t<sup>θ</sup>ə syéyes, ni? ?əʔ tawn (101)

1 2 3 4 5 6 7 8 9 10 11

'My older brother and his friend are in town'

1 article	6 article
2 'eldest'	7 'friend'
3 'my'	8 third possessive
4 'sibling'	9 nonproximal
5 additive	10 oblique
	11 'town'

In (297) the putative adjunct expression (3-9), in which two adjuncts appear to be conjoined, may be construed as the subject of the predicate, téyəl 'go upriver'.

(297) ni? téyəl k<sup>w</sup>θə nəšáyəʔ (?i? k<sup>w</sup>θə syéyes) ?ə t<sup>θ</sup>ə stáləw

1 2 3 4 5 6 7 8 9 10 11 12

'My older brother (and his friend) went upriver' (5331)

1 nonproximal	7 article
2 'go upriver'	8 'friend'
3 article	9 third possessive
4 'my'	10 oblique
5 'older sibling'	11 article
6 additive	12 'river'

These analyses of (296) and (297) constitute one approach.

The constructions exemplified in examples (296)-(97) above may be given an alternative explanation, which will be termed the paratactic hypothesis, to that of phrasal coordination. The /ʔiʔ/ 'additive' adjunct (elements 5-8 in (296) and 6-9 in (297)) may be analyzed as an I.C. partner to the rest of the sentence. Although this type of analysis is not motivated by the semantic structure of the English translation, it is consistent with the facts of Cowichan syntax. The hypothesis that the /ʔiʔ/ adjunct in (296) and (297) is a dependent constituent is supported by the fact that the rest of the clause may occur as an independent sentence without it.

The argument in favour of the paratactic hypothesis and against the hypothesis of phrasal coordination becomes more compelling when applied to a clause in which it is an adjunct and a person marker that are semantic coequals. This type of clause is illustrated by example (298), in which the coequal person marker and adjunct are respectively ceep 'you(pl)' and k ənsyɛye 'your friend':

(298) nem ʔə ceep ʔiʔ k ənsyɛye təmct kə st<sup>9</sup>uum (5262)

1 2 3 4 5 6 7 8 9 10

'Are you and your friend going to pick berries?'

1 'go'

6 'your(sg)'

2 /ʔe/ 'interrogative'

7 'friend'

3 'you(pl)'

8 'pick (berries)'

4 additive

9 article

5 article

10 'berry'

Although the person marker and the adjunct might appear to be phrasally coordinated to form the constituent, ceep ʔiʔ k ənsyɛye 'you and your friend', on the basis of juxtaposition, this type of analysis is

anomalous, since without the /ʔiʔ/ 'additive' adjunct (4-7) ceep 'you(pl)' as an enclitic would otherwise be an I.C. partner to the preceding head element, neṃ 'go'.

If the paratactic hypothesis is applied, according to which the /ʔiʔ/ 'additive' adjunct modifies the rest of the sentence, there is no longer an anomaly in example (298) above. If the rest of the sentence neṃ ʔə ceep...ṭəmčt kə st<sup>ʔ</sup>uṃ 'Are you going to pick berries?', which may occur independently, is analyzed as a head constituent in (298), the occurrence of ceep 'you(pl)' along with ʔə 'interrogative' after the first element follows from the general distribution of enclitics in clauses of all types (2.1.3.1.). The paratactic hypothesis is still plausible in the alternative type of compound construction in which a singular person marker /č/ 'you(sg)' appears--albeit less acceptably--instead of /ceep/ 'you(pl)'. In this case the head constituent would be neṃ ʔə č...ṭəmčt kə st<sup>ʔ</sup>uṃ 'Are you going to pick berries?', which may occur independently.

In clauses in which an adverb (2.1.2.2.) is present, the hypothesis of phrasal conjunction becomes even less plausible than in examples (296)-(98) above. In a sentence like (299) below, in which the predicate k<sup>w</sup>eyk<sup>w</sup>i 'hungry' is modified by the adverb, ṭim 'very much so', the subject enclitic (element 2a or 2b) is no longer juxtaposed to the predicate. In accordance with the normal pattern of a Cowichan sentence the enclitic is attracted to the first element of the clause, ṭim, whereas the /ʔiʔ/ 'additive' adjunct follows the predicate.

(299)  $\lambda i m$  cən/ct  $\text{?əw}$   $k^w e y k^w i$   $\text{?i?}$   $t^{\theta}$  nəmən (5231)

1 2a 2b 3 4 5 6 7 8

'My father and I are very hungry'

1 'very much so'	5 additive
2a 'I'	6 article
2b 'we'	7 'my'
3 contemporaneous	8 'father'
4 'hungry'	

Just as in examples (296)-(98) the internal structure of (299) is consistent with the view that the  $\text{/?i?/}$  adjunct is a subordinate I.C. partner to the rest of the sentence, which as before may occur independently.

An adjunct may be the semantic coequal of a goal suffix. As in the case of the subject enclitics the internal structure of the clause does not reflect a special pattern based on phrasal coordination. Syntactically, a sentence like (300), which contains a goal person marker, resembles (298)-(99) insofar as the  $\text{/?i?/}$  'additive' adjunct may be analyzed as being subordinate to the rest of the sentence, which potentially forms an independent clause.

(300)  $n i ?$   $\text{?e}$   $\check{c}$   $\underline{l \acute{e} m n \acute{a} m \acute{s} / l \acute{e} m n \acute{a} l x^w}$   $\text{?i?}$   $\text{?ə}$   $n \acute{e} \check{s} x^w \text{?} \acute{a} q^w a ?$  (5342)

1 2 3 4 56a 4 56b 7 8 9 10

'Did you see me and my sister?'

1 nonproximal	6a 'me'
2 interrogative	6b 'us'
3 'you(sg)'	7 additive
4 'see'	8 article (marked)
5 $\text{-n \acute{e} x^w /}$ 'responsible'	9 'my'
	10 'sibling'

In this type of sentence, in which both a subject enclitic and a goal suffix appear, one might anticipate ambiguity in coreference relations depending upon whether the /?i?/ adjunct is coequal to the enclitic or to the suffix. Thus, sentence (300) is putatively amenable to the interpretation 'Did you and my sister see me?'. However, the latter type of interpretation is only minimally acceptable to Cowichan speakers, who prefer one of the type 'Did you see me and my sister?', in which the person marker is anaphorically related to the possessive form attached to the head of the coequal adjunct.

An /?i?/ 'additive' adjunct may be semantically coequal not only to a subject enclitic or to a goal suffix, but also to a passive suffix. This type of semantic collocation is apparent in example (301), in which, as in the case of the aforementioned /?i?/ adjuncts, the /?i?/ construction is attributive to the rest of the sentence, which may occur independently.

(301) ni? ləmnaləm, ?i? k<sup>w</sup>θə nšx<sup>w</sup>?áq<sup>w</sup>a?, k<sup>w</sup> sni? q<sup>w</sup>im

1 2 34 5 6 78 9 101112 13

'You and your brother were seen disembarking'

1 nonproximal

8 'sibling'

2 'see'

9 article

3 /-nəx<sup>w</sup>/ 'responsible'

10 /?əh-/ 'your'

4 'you(pl)'

11 absolute

5 additive

12 nonproximal

6 article

13 'disembark (from a vehicle)'

7 'your'

In (301) the view that the /?i?/ adjunct is an I.C. partner to the rest of the sentence is further substantiated by the fact that the complementary /s-/ 'absolute' clause (elements 9-13) is marked not with,

/-s/ 'third possessive', but with /ʔəñ-/ 'your(sg)', which would in fact still appear, if the /ʔiʔ/ adjunct were not present.

The semantic relationship of coequality applies not just to the subject enclitics, goal suffixes and passive person markers, but also to the possessive morphemes. This is apparent in example (302), in which the coequal person marker and adjunct are respectively ʔəñ- 'your(sg)' and ʔiʔ t<sup>θ</sup> ñmən 'and your father's'.

(302) niʔ yəx<sup>w</sup> ʔáǎ scék<sup>w</sup>ǎl k<sup>w</sup>ə niʔ šləqəts tǎna ʔəñtóməx<sup>w</sup>,

1 2 3 4 5 6 7 8 9 10 11 12

ʔiʔ t<sup>θ</sup> ñmən (5502)

13 14 15 16

'How much is the cost of this land of yours and your father's?'

1 nonproximal

9 third possessive

2 surprise

10 'this'

3 curious

11 'your(sg)'

4 'how much'

12 'land'

5 article

13 additive

6 nonproximal

14 article

7 /šx<sup>w</sup>-/ 'instrumental'

15 'your(sg)'

8 'buy'

16 'father'

5-8 'the cost'

The syntactic structure of (302) follows the previously indicated pattern for postposed adjunct constructions. As before, the person marker (element 11) is included in the potentially independent main clause (elements 1-12), which the /ʔiʔ/ adjunct (elements 13-16) modifies.

The greatest divergence between syntactic and semantic structure occurs when the coequal referents are both third person. In this case,

if the predicate is intransitive, the /ʔiʔ/ adjunct appears without an overt person marker as its coequal referent as shown in the following example:

(303) wəɬ nɛm həyeʔ ʔiʔ Jáni (5296)

1 2 3 4 5

'He is going away with Johnny'

(He and Johnny are going away)

'now, already'

4 additive

'go'

5 'Johnny'

3 'go away'

The absence of a person marker does not affect the plausibility of the paratactic hypothesis. As in previous constructions, the postposed adjunct (elements 4-5) is analyzable as a subordinate I.C. partner to the potentially independent clause wəɬ nɛm həyeʔ 'he is going away', in which the absence of an overt third person marker after həyeʔ follows from the internal structure of a simple main clause containing an intransitive predicate.

## FOOTNOTES: SYNTAX

<sup>1</sup>The view maintained here is that on the basis of distribution predicators may be analyzed into subclasses of which nouns constitute one, adjectivals (2.2.2.1.) like /θi/ 'big' and interrogatives (2.2.1.3.) such as /stem/ 'what, something' constituting further subclasses.

<sup>2</sup>The hypothesis that person markers and adjuncts are syntactically independent of each other, albeit semantically interdependent, is presented by Hukari (1976a:305) in an article on the Skagit dialect of Lushootseed. Much of his discussion of Lushootseed adjuncts and person markers also reflects the syntactic structure of Cowichan.

<sup>3</sup>In many fast speech elicitations ʔæqtimət<sup>θ</sup> 'tall' was perceived as ending in [t<sup>θ</sup>]. If this predicator were analyzed as containing t<sup>θ</sup> it would be idiosyncratic inasmuch as this phoneme is otherwise restricted to the deictic system (1.3.). It is probable, then, that t<sup>θ</sup>, which appears in deliberate speech, represents the appropriate phonemic representation, the loss of glottalization being conditioned by word final position.

<sup>4</sup>The labels subject and goal were formulated by Hukari (1977a:50) to show semantic equivalences between person markers and adjuncts which have the same interpretation in the same syntactic context, both being, for example, agents in one environment and patients in another.

<sup>5</sup>The class I and III locatives may also act as predicates as the following examples show:

ná?ət t<sup>ə</sup> nəléləm̄ (6421) 'My house is over there'

1 2 3 4

1 nonproximal, emphatic

3 'my'

2 article

4 'house'

ni? ?əw̄ ni? kə sməyəθ (3564) 'The deer are there'

1 2 3 4 5

1 nonproximal

4 article

2 contemporaneous

5 'deer'

3 nonproximal

In each sentence the underlined locative follows the normal pattern for a predicate in being modified by a following adjunct (elements 2-4 in the first example and 4-5 in the second).

<sup>6</sup>The term proposition was first adopted by Hukari (1976a:306 and 1977:63) to describe the basic constituent of a Puget sentence to which an adjunct may be attributive. A Cowichan proposition may contain just a predicate or a predicate and an adverb (2.1.2.2.) and/or locative (1.3.2.).

<sup>7</sup>So far, no sentences of the following type, which would suggest that the oblique phrase modifies the predicate, have been elicited:

\*xá?əθən ?əʔ Joe 'Joe has four'

\*xá?əθən ?əʔ Joe t<sup>ə</sup> sčəšt 'Joe has four sticks'

<sup>8</sup>As well as appearing in construction with an /?ə/ 'oblique' phrase, the class III locatives /təʔi/ 'proximal, unmarked' and /təni/

'nonproximal' may also occur within an /ʔə/ phrase to form the expressions ʔə təʔi 'right here' and ʔə təní 'here' as the following examples illustrate:

ʔi ct ʔi ʔə təʔi (1457) 'We are right here!'

1 2 3 4 5

1 proximal

2 'we'

3 proximal (predicate)

4 oblique

5 proximal, unmarked

mi ʔəwə ʔə təní (285) 'Come here!'

1 2 3 4

1 'come'

2 'come'

3 oblique

4 'here'

<sup>9</sup>The lexical item wəwətəm 'is carried down stream', which is inflected with /-m/ 'third general passive', is an exception to this statement. No implied agent is apparent at least not human agent.

<sup>10</sup>Cowichan differs thereby from a Straits Salish language like Saanich. In Saanich there is no passive person marker set. A predicator inflected with /n/ 'passive', which is cognate with /-m/ 'third general passive', takes subject enclitics like sən 'I' as in the following example (elicited by Dr. Hess in a course (1970) on fieldwork techniques):

t<sup>9</sup> sətən sən 'I was hit by someone'

1 2 3 4

1 'hit'

2 transitive

3 passive

4 'I'

<sup>11</sup>In the examples shown here it appears that an oblique adjunct with agent interpretation may either precede or follow a direct adjunct

whereas a non-agent phrase always follows the direct adjunct. This hypothesis remains to be further substantiated.

<sup>12</sup>The term adverb is adopted by Hukari (1976a:307) and is synonymous with the earlier word auxiliary used in Salish research.

<sup>13</sup>The expressions 'first element' and 'first non-particle' in this dissertation designate the first form in a clause which may be inflected with a syntactic affix. Determiners, which are not thus inflectible, do not constitute first elements even when they appear clause initially. This notion of the 'first element' is pertinent to the description of the morphological marking of clauses.

<sup>14</sup>Dr. Hukari has found in fieldwork that one Cowichan speaker, Mrs. Ellen White, uses /ʔe/ 'interrogative' in /nəciŋ/ 'why' questions.

<sup>15</sup>Dr. Hukari drew my attention to the syntactic relationship between attributive clauses and adjectivals in personal communication in the summer of 1977.

<sup>16</sup>The definitions of the terms focus and presupposition presented here are based on those of Jackendoff (1972:16), who maintains that they designate semantic and not syntactic relationships within a sentence.

<sup>17</sup>The morpheme /tə-/ may alternatively be identified as the same form as /tə-/ 'basic, unmarked', which is present in the deictics (1.3.) /təna/ 'this' and /təʔi/ 'this, here':

<sup>18</sup>In the speech of Dr. Hukari's speakers a -ə variant of /-s/ 'third possessive' occurs after s. Thus /stá<sup>l</sup>əs-s/ 'his/her spouse' is realized as stá<sup>l</sup>əsə although stá<sup>l</sup>əss is apparent in slow speech.

<sup>19</sup>In accordance with Kinkade's view (1977:10) one might alternatively construe k<sup>w</sup>əə sən<sup>ə</sup> nəx<sup>w</sup>ʔa<sup>w</sup>aʔ 'my older brother' as 'the one who is my older brother' and the whole sentence as 'the ones who are my older brother and his friend who are in town' to reflect the view that an adjunct constitutes a headless attributive clause. In consequence, the headless attributive clause would then constitute the only type of attributive clause construction in Cowichan.

<sup>20</sup>In most environments the surface realization of /-əs/ 'third dependent' corresponds to that of /-əs/ 'third transitive agent'. The fact that niʔəs is realized phonetically as [ni:s], [niʔes] or [niʔəs] is putatively a basis for representing the underlying form as /-es/ or /-s/ 'third dependent'. However, since /-əs/ 'third transitive agent' appears only after transitive suffixes (1.1.1.2.), which are limited in number, a phonological explanation is plausible. The phoneme sequence -əs is realized as [-s], [-es] or [-əs] after the morpheme /niʔ/ 'nonproximal'.

<sup>21</sup>Contrary to what the expressions 'nominalization' and 'nominalized clause' might imply, the Cowichan clause type being designated is not completely equivalent in distribution to a noun predicator insofar as it may modify a main clause without acting either as an adjunct or as a

predicate. However, unlike a dependent clause, such a construction, which is morphologically marked like a noun with possessive person markers, does have adjunct function as one of its distributional properties.

<sup>22</sup> Translation glosses such as 'my' used here are intended to reflect the semantic structure of Cowichan. They do not signify that the syntactic structure of the Cowichan construction necessarily corresponds to that of an English noun phrase containing a possessive.

<sup>23</sup> Apparently, when plurality is once established in the sentence the singular form thereafter semantically neutral and the /-ələp/ suffix does not reappear.

<sup>24</sup> This type of correlation between oblique phrases and head elements modified by nominalizations was made earlier by Hess (1973).

<sup>25</sup> A detailed analysis of how the morphological marking of each type of attributive clause reflects its semantic relationship to its adjunct head is presented by Hukari (1977a). Whereas the organization of this dissertation places the emphasis on the relationship between attributive and non-attributive /s-/ 'absolute' and /šx<sup>w</sup>-/ 'instrumental' clauses, in Hukari's work /s-/ and /šx<sup>w</sup>-/ attributive clauses are correlated with other types of attributive clauses.

<sup>26</sup> Within the construction preceding the /šx<sup>w</sup>-/ clause, the /s-/ 'absolute' clause (elements 4-7) follows the general distribution of

such clauses if analyzed as having the semantic interpretation 'when we were crying' and as being attributive to the main clause niɬ kʷə́ə́nə snet 'it was this night' rather than as being in apposition to kʷə́ə́nə snet. 'This night was the one when we were crying that we were taken' would be the semantic interpretation for (260) which would accord with this analysis.

<sup>27</sup>An alternative gloss which may be applied is 'comitative' (Hukari 1976a:313).

<sup>28</sup>Dr. Hukari finds in his data that skʷeyl 'day' and lexical items denoting days of the week optionally take enclitics (at least /ceʔ/ 'future').

<sup>29</sup>This type of construction is not unique to Cowichan, but appears in Lushootseed (Hess 1967 and Hukari 1976a).

- 5) mək<sup>w</sup> stem niʔ ʃnéməstəx<sup>w</sup>s ʔəyəqθəs.  
 36 37 38 39 40 41 42 43 44 45

Translation

- 1) A long time ago the people knew about the Transformer. 2) They were afraid of the Transformer--those people were afraid of the Transformer, who changed everything. 3) It became a rock. 4) Or it became a deer. 5) Into whatever he (wanted to) transform it he changed it.

Morpheme Analysis

- 1) 1 'this', 2 'then', 3 'long time', 4 past complete, 5 serial, 6 static, 7 'know' (resultative), 8 causative, 9 third transitive agent, 10 article, 11 'people', 12 article, 13 'Transformer'.
- 2) 14 'afraid of', 15 affective transitive, 16 third transitive agent, 17 'those (ones)', 18 article, 19 'Transformer', 20 'those', 21 'people', 22 article, 23 'Transformer', 24 nonproximal, 25 'change into', 26 transitive, 27 third transitive agent, 28 article, 29 contemporaneous, 30 'every', 31 'thing, what'.
- 3) 32 developmental, 33 '(be) a rock'.
- 4) 34 developmental, 35 '(be) a deer'.
- 5) 36 'every', 37 'thing, what', 38 nonproximal, 39 /ʃx<sup>w</sup>-/ 'instrumental',

40 'go', 41 causative, 42 third possessive, 43 'change it into',  
: 44 /-t/ 'transitive', 45 third transitive agent.

The first two sentences contain main clauses (elements 5-13 and 14-31) each of which consists of a transitive predicate followed by two direct adjuncts. In sentence 2) there is anacoluthon; apparently Abel Joe first decided upon one set of adjuncts (elements 17-19) and then decided that instead another set (elements 20-31) would be appropriate.

The text also contains attributive clauses (elements 24-31 in sentence 2) and 38-42 in sentence 5)). In sentence 2) the attributive clause modifies an adjunct head xels 'Transformer' to form a direct adjunct. Sentence 5) is an emphatic construction in which the adjunct head expression (36-42) modified by an attributive clause (43-45) itself consists of an adjunct head (elements 36-37) and an attributive clause (38-42).
