

# Musqueam Reference Grammar

## **FIRST NATIONS LANGUAGES**

The First Nations languages of the world, many of which are renowned for the complexity and richness of their linguistic structure, embody the cumulative cultural knowledge of Aboriginal peoples. This vital linguistic heritage is currently under severe threat of extinction. This new series is dedicated to the linguistic study of these languages.

Patricia A. Shaw, a member of the Department of Linguistics at the University of British Columbia and coordinator of the First Nations Languages Program, is general editor of the series.

The first two volumes in the series are:

*The Lillooet Language: Phonology, Morphology, Syntax*

Jan van Eijk

*Musqueam Reference Grammar*

Wayne Suttles

Preface and Acknowledgments xx

Introduction xxiii

## 1 Phonology

- 1.1 Consonants 3
  - 1.1.1 Obstruents 4
  - 1.1.2 Resonants 7
- 1.2 Vowels 9
  - 1.2.1 Vowel Length 13
- 1.3 Stress and Pitch 13
- 1.4 Phonotactics 14
- 1.5 Morphophonemics 15
  - 1.5.1 Losses in Rapid Speech 15
  - 1.5.2 Assimilation of Schwa 15
  - 1.5.3 Metathesis of Non-Labial Resonant and Schwa 16
  - 1.5.4 Glottalized Resonant Disengagement 17
  - 1.5.5 Coalescence of Glottal Stop and Resonant 17
  - 1.5.6 Loss of the First of Two Identical Resonants 17
  - 1.5.7 Emergent /θ/ 18
  - 1.5.8 Intrusive /h/ 18
  - 1.5.9 Alternation of /n/ and /l/ 19
  - 1.5.10 Alternation of /c/ and /k<sup>w</sup>/ and of /x/ and /x<sup>w</sup>/ 19
  - 1.5.11 Vowel Gradation 20
  - 1.5.12 Vowel Mutation 20
- 1.6 Special Forms of Speech 22

## 2 Synopsis of Morphology

- 2.1 Words 23
- 2.2 Roots and Their Internal Modification 23
- 2.3 Affixes 25

2.4	The Person System	27
2.5	The Ordering of Affixes	27
2.6	Ambivalent Affixes	28
2.7	Particles	29
<b>3</b>	<b>Syntax 1: Simple Sentences</b>	
3.1	The Minimal Sentence	31
3.1.1	Predicate Heads	33
3.1.2	The Second-Position Predicate Particles	33
3.2	Expanded Verbal Predicates	34
3.2.1	Auxiliary Verbs	34
3.2.2	Adverbs	38
3.2.3	Verb Complements	39
3.2.4	Hortative Forms	40
3.3	Types of Verbal Predicates	41
3.3.1	Intransitive Predicates	41
3.3.2	Active Transitive Predicates	42
3.3.3	Passive Predicates	43
3.4	Nominal Adjuncts	44
3.4.1	With Intransitive Predicates	45
3.4.2	With Active Transitive Predicates	48
3.4.3	With Passive Predicates	51
3.5	Verbal Adjuncts	53
3.6	Adverbial Adjuncts	57
3.7	Adjectival and Nominal Predicates	58
3.7.1	Adjectival Predicates	59
3.7.2	Nominal Predicates	60
3.7.3	Nominal Predicates with Adjectival Modifiers	61
3.8	Expanded Nominal Adjuncts in Simple Sentences	63
3.8.1	Possession	63
3.8.2	Particles	64
3.8.3	Adjectival Modifiers	64
3.8.3.1	Adjectives	64
3.8.3.2	Numerals	66
3.8.3.3	Adverbs	67
3.8.3.4	Adjective-like Forms	68
3.8.3.5	Verb Forms as Modifiers	69
3.8.3.6	Noun Premodifiers	70
3.8.4	Coordination	70
3.8.5	Apposition	71
<b>4</b>	<b>Syntax 2: Complex Sentences</b>	
4.1	Relative Clauses	74
4.1.1	Forms of Verbal Relative Clauses	75

4.1.1.1	With Extracted Subjects and Objects	75
4.1.1.2	With Extracted Oblique Adjuncts	76
4.1.1.3	With Extracted Possessors	78
4.1.2	Uses of Verbal Relative Clauses	79
4.1.3	Nominal Relative Clauses	81
4.1.4	Adjectival Relative Clauses	83
4.1.5	Pseudo-Cleft and Cleft Sentences	84
4.1.5.1	Pseudo-Cleft Sentences	84
4.1.5.1.1	With Nominal Predicates	84
4.1.5.1.2	With Pronominal Predicates	88
4.1.5.1.3	With Interrogative Predicates	89
4.1.5.2	Cleft Sentences	89
4.2	Subordinate Clauses	92
4.2.1	Conditional Clauses	93
4.2.2	Indirect Commands	95
4.2.3	Indirect Questions	95
4.2.4	Complements of Main Clauses Referring to the Future	96
4.2.5	Interrogative Complements with <i>ʔəł-</i>	97
4.3	Nominalized Clauses	98
4.3.1	Within Predicates	99
4.3.2	As Nominal Adjuncts	100
4.3.3	Clauses Nominalized with <i>šx<sup>w</sup>-</i>	104
4.3.4	Nominalized Narrative Sentences	105

## 5 Syntax 3: Compound Sentences

5.1	Coordinate Compound Sentences	113
5.2	Qualifying Compound Sentences	114
5.2.1	With Quantifying First Clauses	115
5.2.2	With Interrogative First Clauses	115
5.2.3	With Conditional First Clauses	116
5.2.4	With Modal First Clauses	116

## 6 Syntax 4: Negation

6.1	Negation with <i>ʔəwə</i>	118
6.1.1	Subordinate Clauses with Intransitive and Active Transitive Predicates	118
6.1.2	Subordinate Clauses with Passive Predicates	121
6.1.3	Subordinate Clauses with Non-Verbal Predicates	122
6.1.4	Nominalized Clauses	124
6.1.5	With Relative Clauses	125
6.1.6	Ellipsis with the Negative	126
6.2	Negation with <i>x<sup>w</sup>əwé</i>	126
6.3	Negation with <i>ʔəwəteʔ</i>	127

6.4	Negated Predicates in Complex and Compound Sentences	130
6.4.1	In Relative Clauses	131
6.4.2	In Subordinate Clauses	131
6.4.2.1	As Conditional Clauses	131
6.4.2.2	Expressing Necessity	132
6.4.2.3	In the Sense ‘Or’	132
6.4.3	In Nominalized Clauses	133
<b>7</b>	<b>Morphology of the Root 1: The Verb</b>	
7.1	The Verb Root	135
7.1.1	Canonical Shapes	135
7.1.2	Inherent Voice	136
7.1.3	Internal Modification of the Root	137
7.2	The Progressive Aspect	138
7.2.1	Progressives of CAC Roots	139
7.2.1.1	Progressives of Bare CAC Roots	139
7.2.1.2	Progressives of CAC Roots with Affixes	141
7.2.1.3	Progressives of C <sup>h</sup> ACVC Roots	146
7.2.2	Progressives of HAC Roots	147
7.2.2.1	Progressives of HAC(C)əC Roots	149
7.2.3	Progressives of TAH Roots	149
7.2.3.1	Progressives of TAHT Roots	152
7.2.4	Progressives of RAH Roots	152
7.2.4.1	Progressives of RA <sup>h</sup> CC and RA <sup>h</sup> əC Roots	153
7.2.5	Progressives of HAH Roots	153
7.2.6	Progressives of TəT Roots	153
7.2.6.1	Progressives of TəTəC Roots	157
7.2.6.2	Progressives of TTVC Roots	157
7.2.7	Progressives of TəR Roots	158
7.2.7.1	Progressives of TəRəC Roots	160
7.2.8	Progressives of RəC Roots	160
7.2.9	Progressives of HəC Roots	162
7.2.9.1	Progressives of HəC(C)V(C) Roots	162
7.2.10	Progressives of CəCT Roots	163
7.2.11	Unique Progressives	165
7.3	Plurals	165
7.3.1	CAC Plural Perfectives	166
7.3.1.1	CAC Plural Progressives	166
7.3.2	HAC and HACəC Plurals	168
7.3.3	CAH Plurals	168
7.3.4	CəC Plural Perfectives	169
7.3.4.1	CəC Plural Progressives	170

7.3.5	CəCT Plurals	171
7.3.6	HəC(C)V(C) Plurals	171
7.4	Diminutives	172
7.4.1	Diminutive Plurals	173
7.5	The Durative Aspect	174
7.5.1	Plural Duratives	177
7.5.2	Diminutive Duratives	178
7.6	The Dispositional-Iterative Aspect	181
7.6.1	Progressives of Dispositional-Iterative Forms	181
7.6.2	Plurals of Dispositional-Iterative Forms	181
7.6.3	Diminutives of Dispositional-Iterative Forms	181
7.7	Resultative Forms	182
7.7.1	Resultatives of CAC and CəCC Roots	182
7.7.2	Resultatives of CəC Roots	183
7.7.3	Resultatives of Other Tri-Consonantal Roots	184
7.7.4	Resultatives of Irregular Roots	185
7.7.5	Resultatives with Suffixes	185
7.7.6	Anomalous Resultative Forms	187
7.7.7	Plurals of Resultatives	188
7.7.8	Diminutives of Resultatives	189
7.7.9	Diminutive Plurals of Resultatives	189
7.8	Paradigms	190
7.8.1	Problematic Paradigms	198

## **8 Morphology of the Root 2: The Noun**

8.1	Types	199
8.2	Shapes of Noun Roots	200
8.3	Plurals	204
8.3.1	With Infixes -l-	205
8.3.2	With CV Reduplication	207
8.3.3	With CVC Reduplication	209
8.3.4	With Vowel Change Only	210
8.3.5	Suppletion	211
8.4	Diminutives	211
8.4.1	With C <sub>1</sub> Reduplication and No Vowel Change	212
8.4.2	With C <sub>1</sub> Reduplication and Vowel Change	213
8.4.3	With CV Reduplication	214
8.5	Diminutive Plurals	214
8.5.1	With Infixes -l-	214
8.5.2	With Vowel Change	215
8.6	Problematic Diminutives	215
8.7	Resultative Forms	217

- 8.8 The Inflection of Verbs Derived from Nouns 218
- 8.9 Verbs that Act as Nouns 218

## 9 Morphology of the Root 3: Adjectives and Adjective-like Words

- 9.1 Shapes of Adjective Roots 219
- 9.2 Plurals 221
- 9.3 Diminutives 222
- 9.4 Diminutive Plurals 223
- 9.5 Verbs Formed from Adjective Roots 223
- 9.6 Complex Adjectives 223
- 9.7 Adjective-like Words 224

## 10 Non-Personal Affixes 1: Voice

- 10.1 Transitive Suffixes 226
  - 10.1.1 *-t* ‘transitive’ (TR) 226
  - 10.1.2 *-nəx<sup>w</sup>* ‘limited control transitive’ (LCTR) 227
  - 10.1.3 *-x* ‘transitive’ (TR) 227
- 10.2 Intransitive Suffixes 229
  - 10.2.1 *-əm* ‘intransitive’ (INTR) 229
  - 10.2.2 *-éls* ‘activity’ (ACT) 232
  - 10.2.3 *-ənaq* ‘someone else, another person’ 233
  - 10.2.4 *-əttən ~ -əttín* ‘someone, another’ 234
- 10.3 The Causative Suffix *-stəx<sup>w</sup><sub>1</sub>* 234
  - 10.3.1 In the sense ‘cause to be’ 234
  - 10.3.2 In the sense ‘cause to do’ 236
- 10.4 Applicatives 237
  - 10.4.1 *-stəx<sup>w</sup><sub>2</sub>* ‘comitative’ (COM) 238
  - 10.4.2 *-nəs* ‘goal’ (GOAL) 239
  - 10.4.3 *-əs* ‘recipient’ (RECIP) 240
  - 10.4.4 *-lc-* ‘benefactive’ (BEN) 241
  - 10.4.5 *-mət* ‘concern’ (CON) 242
- 10.5 Reflexives 243
  - 10.5.1 *-θət* ‘oneself’ 244
  - 10.5.2 *-námət* ‘oneself (limited control)’ 245
  - 10.5.3 *-stənámət* ‘oneself (causative)’ 246
- 10.6 The Reciprocal *-təl* ‘each other’ 246
- 10.7 The Permissive *-s* 247
- 10.8 The Subordinate Passive *-ət* 249

## 11 Non-Personal Affixes 2: Aspectual and Modal Affixes

- 11.1 Aspectual Prefixes 250
  - 11.1.1 *wə<sub>2</sub>* ‘established’ (EST) 251
  - 11.1.2 *wət-* ‘already’ 254

- 11.1.3 *təw-* ‘like, somewhat, a bit, sort of (like)’ 255
- 11.1.4 *x<sup>w</sup>ən-* ‘still, soon’ 257
- 11.1.5 *yə<sub>-1</sub>* ‘along’ 258
- 11.1.6 *yə<sub>-2</sub>* (~ *i-*) ‘first, before doing anything else, above all (first)’ 260
- 11.1.7 *nəx<sup>w</sup>s-* (~ *x<sup>w</sup>s-*) ‘habitually’ (HAB) 260
- 11.2 Modal Suffixes 261
  - 11.2.1 *-əlmən* ‘want to, intend to, seem about to’ 261
  - 11.2.2 *-i<sup>t</sup> ~ -i<sup>ət</sup>* (*//-əyət//*) ‘arrange to, seek to (arrange)’ 262

## 12 Non-Personal Affixes 3: Derivational Affixes

- 12.1 Purely Grammatical Derivational Affixes 264
  - 12.1.1 *s<sub>-1</sub>* ‘(word-) nominalizer’ (NOM) 264
  - 12.1.2 *s<sub>-2</sub>* ‘resultative’ (RES) 265
  - 12.1.3 *x<sup>w</sup><sub>-1</sub>* ‘oblique relater’ (OBREL) 266
  - 12.1.4 *šx<sup>w</sup>-* ‘oblique (word) nominalizer’ (OBLNOM) 266
  - 12.1.5 *-a<sup>?</sup>t* ‘attributive’ (ATT) 268
  - 12.1.6 *-t* ‘stative’ (STAT) 269
- 12.2 Verbalizing Prefixes 269
  - 12.2.1 *c-* ‘get, have, make, do’ 269
  - 12.2.2 *x<sup>w</sup>ə- ~ x<sup>w</sup>i-* ‘become’ 273
  - 12.2.3 *tx<sup>w</sup><sub>-1</sub>* ‘buy’ 274
  - 12.2.4 *t<sub>-1</sub>* ‘partake, experience’ 274
  - 12.2.5 *š<sup>?</sup>* ‘go to’ 275
  - 12.2.6 *c<sup>t</sup>-* ‘die of’ 275
  - 12.2.7 *x<sup>w</sup><sub>-2</sub>* ‘move toward’ 275
- 12.3 Verbal Suffixes 275
  - 12.3.1 *-əl ~ -il* ‘move toward, turn to, become’ 275
  - 12.3.2 *-i<sup>m</sup>* ‘die from’ 276
  - 12.3.3 *-á<sup>t</sup>* ‘travel by’ 277
  - 12.3.4 *-áməx ~ -á<sup>m</sup>əx* ‘look, appear’ 277
- 12.4 Miscellaneous Lexical Prefixes 278
  - 12.4.1 *mə-* ‘come’ 278
  - 12.4.2 *təm-* ‘time of, season for’ 278
  - 12.4.3 *tən-* ‘from’ 279
  - 12.4.4 *tx<sup>w</sup><sub>-2</sub>* ‘(something) belonging to’ 279
  - 12.4.5 *tx<sup>w</sup><sub>-3</sub>* ‘remaining, only’ 280
  - 12.4.6 *t<sub>-2</sub>* ‘portion’ 280
  - 12.4.7 *c<sup>t</sup>-* ‘fellow, co-’ 280
  - 12.4.8 *x<sup>w</sup><sub>-3</sub>* ‘inward’ 280
  - 12.4.9 *wə<sub>-3</sub>* ‘suddenly, with a burst’ 283
  - 12.4.10 *həñ- ~ həm- ~ ?əm- ~ hən-* ‘come’ 283

**13 Non-Personal Affixes 4: Lexical Suffixes**

- 13.1 Forms 285
- 13.2 Meanings 286
- 13.3 Lexical Suffixes and Related Words 287
- 13.4 Relations between Suffix and Root 288
  - 13.4.1 With Verbal Roots 289
    - 13.4.1.1 Root and Suffix Related as Verb and Patient, Locus,  
or Instrument 289
    - 13.4.1.2 Root and Suffix Related as Modifier and Head 290
  - 13.4.2 With Adjective Roots 291
  - 13.4.3 With Noun Roots 292
    - 13.4.3.1 Related as Head and Modifier 293
    - 13.4.3.2 Related as Modifier and Head 293
- 13.5 Compounding of Suffixes 294
- 13.6 The Inventory 294
- 13.7 Possible Lexical Suffixes 315
- 13.8 Suffixes in Formal Personal Names 318

**14 Person Markers**

- 14.1 Person and Number 320
- 14.2 Forms 321
  - 14.2.1 The First- and Second-Person Subject Particles 322
  - 14.2.2 The Third-Person Transitive Subject Marker 323
  - 14.2.3 The Subordinate Subject Person Markers 323
  - 14.2.4 The Possessive Affixes 324
  - 14.2.5 The Object Person Markers 327
  - 14.2.6 The Passive Person Markers 329
  - 14.2.7 The Personal Words 331
    - 14.2.7.1 As Predicate Heads 331
    - 14.2.7.2 As Adjuncts 333
  - 14.2.8 The Possessive Words 336
  - 14.2.9 The Third-Person Plural Particle 336

**15 The Demonstrative System**

- 15.1 The Articles 339
  - 15.1.1 Gender 340
  - 15.1.2 Position 341
  - 15.1.3 The Contrast with English 347
  - 15.1.4 The Oblique Article 348
- 15.2 The Demonstratives 350
  - 15.2.1 The Simple Demonstratives 351

- 15.2.2 The Compound Demonstratives 351
  - 15.2.2.1 The Locative Demonstratives 351
  - 15.2.2.2 The Third-Person Demonstratives 353
- 15.2.3 Use as Determiners 353
- 15.2.4 Use as Adjuncts 358
  - 15.2.4.1 Pronominal Uses 358
  - 15.2.4.2 Locative Uses 362
- 15.3 The Demonstrative Auxiliaries 364

## 16 Predicate Particles and Tags

- 16.1 Clause-Initial Particles 367
- 16.2 Second-Position Predicate Particles 367
  - 16.2.1 *-ət* ‘past’ 368
  - 16.2.2 *ʔə* ‘interrogative’ (ROG) 372
  - 16.2.3 *yəx<sup>w</sup>* ‘inferential’ (INF) 373
  - 16.2.4 *cə* ‘quotative’ (QUOT) 373
  - 16.2.5 *ʔe* ‘plural imperative’ (PLPER) 374
  - 16.2.6 *ceʔ* ‘future’ (FUT) 375
  - 16.2.7 *tə ~ te* ‘imperative-optative’ (PER) 377
  - 16.2.8 *ʔal* ‘just’ 378
  - 16.2.9 *ʔewət* ‘reassuring’ (REAS) 381
  - 16.2.10 *yət* ‘expectable’ (EXP) 381
  - 16.2.11 *mə* (sometimes *m̄e*) ‘certain’ (CERT) 382
  - 16.2.12 *ətwaʔ* ‘speculative’ (SPEC) 384
  - 16.2.13 *k<sup>wə</sup> ~ k<sup>wə</sup>* ‘then’ 385
  - 16.2.14 *qə* ‘emphatic’ (EMPH) 387
  - 16.2.15 *θət* ‘adversative’ (ADV) 387
  - 16.2.16 *k<sup>w</sup>t* ‘by now, by then’(?) 389
  - 16.2.17 *waʔ* ‘presumptive’ (PRES) 390
  - 16.2.18 *ʔaʔa* ‘emphatic interrogative’ (ROG!) 391
- 16.3 Sentence-Final Tags 393
  - 16.3.1 *ʔa ~ ʔe* ‘question tag’ 393
  - 16.3.2 *yé* ‘taunting echo’ 393

## 17 Interrogative Words

- 17.1 *wét, təwét* ‘who?’ *wəʔəlt* ‘who (plural)?’ 396
- 17.2 *tx<sup>w</sup>wét, təwét* ‘whose?’ 398
- 17.3 *stém* ‘what?’ *stéləm* ‘what (plural)?’ 398
- 17.4 *témc* (pl. *téləmc*) ‘what people’ 402
- 17.5 *təmtém* ‘when?’ 402
- 17.6 *ctétəm* ‘be doing what?’ 404
- 17.7 *cástəx<sup>w</sup>* ‘do what with it? do what about it?’ 404
- 17.8 *ctámət* ‘do what with oneself?’ 405

- 17.9 *x<sup>w</sup>cél* ‘go where?’ 406  
 17.10 *x<sup>w</sup>cəlθat* ‘go where?’ 407  
 17.11 *x<sup>w</sup>cəlstax<sup>w</sup>* ‘put where?’ 407  
 17.12 *scék<sup>w</sup>əl* ‘how? how much? who?’ 407  
 17.13 *scək<sup>w</sup>əlím* ‘how? how constructed? how intended?’ 409  
 17.14 *x<sup>w</sup>əʔínt* ‘say what?’ 410  
 17.15 *sx<sup>w</sup>əʔínt* ‘what meaning?’ 410  
 17.16 *x<sup>w</sup>əʔíntstax<sup>w</sup>* ‘say what to him? say what to him about something?’ 411  
 17.17 *ʔánəca, ʔınca* ‘where?’ 411  
 17.18 *ʔánəcastax<sup>w</sup>* ‘put it where?’ 413  
 17.19 *nəcím* ‘why?’ 413  
 17.20 *k<sup>w</sup>ín* ‘how many?’ 414

## 18 Adverbs and Adverbial and Modal Words and Phrases

- 18.1 Adverbial and Modal Functions 416  
 18.2 Adverbs 417  
 18.3 Adverbial and Modal Predicates 419  
 18.4 Catalogue 422  
 18.4.1 *yáθ* ‘always, frequently’ 424  
 18.4.2 *təq* ‘usually, generally, habitually’ 424  
 18.4.3 *cəx<sup>w</sup>léʔ* ‘sometimes, there are times when’ 425  
 18.4.4 *néc* ‘at other times, sometimes’ 425  
 18.4.5 *nəcék<sup>w</sup>* ‘once, one time’ and so on 426  
 18.4.6 *qǎét* ‘often, many times’ 427  
 18.4.7 *ʔəwə scék<sup>w</sup>ələs* ‘never’ 427  
 18.4.8 *mák<sup>w</sup> swéyəl* ‘every day’ and so on 427  
 18.4.9 *híθ* ‘last long, be a long time’ 428  
 18.4.10 *nácaʔ swéyəl* ‘one day’ and so on 430  
 18.4.11 *tát* ‘long before, from long ago, earlier’ 431  
 18.4.12 *qéʔis* ‘recently, just a short time ago, formerly’ 432  
 18.4.13 *yét* ‘only now, only then’ 433  
 18.4.14 *wéyəl* ‘tomorrow’ and so on 434  
 18.4.15 *ǎe, ǎeʔ* ‘again, also, too’ 435  
 18.4.16 *qəlét* ‘do again, again,’ or with a negative ‘(no) more, (no) longer’ 436  
 18.4.17 *haʔ* ‘if, when’ 436  
 18.4.18 *mák<sup>w</sup>* ‘whenever’ 437  
 18.4.19 *x<sup>w</sup>əñáʔ* ‘first, when first, as soon as’ 437  
 18.4.20 *yəwén* ‘before’ 439  
 18.4.21 *tíʔáʔaq<sup>w</sup>t* ‘after’ 440  
 18.4.22 *táǎ<sup>w</sup>, táx<sup>w</sup>* ‘occur later, later, follow (an example)’ 441

- 18.4.23 *xʷənχəl'é?etθe?* ‘meanwhile, in the course of that, after some time, finally’ 441
- 18.4.24 *nán* ‘too, very, very much’ 441
- 18.4.25 *sc'écən* ‘really, certainly’ 442
- 18.4.26 *θəʔít* ‘truly’ 443
- 18.4.27 *táχʷ ~ táxʷ, tǎχʷ, táxʷ* ‘adjust, exactly, just’ 443
- 18.4.28 *cəlél* ‘nearly, about to’ 444
- 18.4.29 *cəlél ʔal* ‘barely’ 444
- 18.4.30 *xʷéləq* ‘nearly’ 444
- 18.4.31 *wəq'éqəl ʔal* ‘barely’ 445
- 18.4.32 *sniʔənt* ‘enough, just enough, permitting’ 445
- 18.4.33 *χəxʷláʔas (ʔal)* ‘worthless, of no account, no matter that, even if’ 446
- 18.4.34 *?iwáwə, ?iwáwəʔ ~ ?iwəwəwə, ?iwáwəʔ* ‘maybe, perhaps’ 447
- 18.4.35 *wálə, wá:lə,* ‘probably, presumably, I guess’ 447
- 18.4.36 *háy* ‘specifically, uniquely, as for, more’ 448
- 18.4.37 *wənáy* ‘only’ 450
- 18.4.38 *txʷáy* ‘only remaining’ 452
- 18.4.39 *cəlím* ‘even’ 453
- 18.4.40 *mǎkʷ* ‘all’ 454
- 18.4.41 *χʷəm* ‘move fast, be quick, immediately, be able to’ 456
- 18.4.42 *sχáχəm* ‘enough, ought, can’ 457
- 18.4.43 *skʷéy* ‘impossible, unable’ 458
- 18.4.44 *scəwét* ‘smart, capable, able’ 459
- 18.4.45 *sqiʔqəl, sqiqəl* ‘unable, ignorant (of how to do something)’ 459
- 18.4.46 *?əy* ‘better’ 459
- 18.4.47 *sχiʔ* ‘want, like’ 460

# Preface and Acknowledgments

The Musqueam people are now largely the residents of the Musqueam Indian Reserve on the North Arm of the Fraser River, adjacent to the city of Vancouver, British Columbia. Their language, which they call *hənqəmínəm*, is one of the Downriver dialects of the language known to anthropologists and linguists as Halkomelem. This latter term is based on the Upriver form of the name, and the Musqueam see it as inappropriate for the Downriver and Island forms of the language. I will have to use it, however, when referring to the language as a whole.

A “reference grammar” is said to be one written for laymen rather than for linguists, describing the language with as little technical jargon as possible, illustrating its various features with abundant examples, and cross-referencing and indexing so that readers with some knowledge of the language can indeed look something up and find an answer. I have tried to follow these principles in the hope that this grammar will be useful not only to linguists specializing in Salishan languages but also to interested non-linguists, students of Salish literature, and above all the Musqueam and speakers of other dialects of the language.

In writing this grammar I have not been able to dispense with all technical jargon. As much as possible, I have tried to use traditional terms, which reflect a rather traditional sort of analysis. In organization, however, I have not been traditional, placing morphology largely after syntax. For placing syntax before morphology, I have the Thompsons’ sketch of Clallam (Thompson and Thompson 1971) as a precedent. I was probably also influenced by my early exposure to the teaching method of Professor Henry S. Tatsumi, who began his course in Japanese with an outline of syntax, allowing the students to create Japanese sentences with a largely English vocabulary, or, in the case of nisei who were already doing this at home, making them aware of the principles they were using. But perhaps my choice was made largely on the basis of the feeling that tables and lists of affixes and particles are pretty dull anyway, especially if one does not yet know where and how these things are likely to be encountered.

Once the choice was made, however, it turned out to have a practical consequence. In the chapters on syntax, the sentences used as examples are graded according to what has already been introduced; I have tried to use no sentence with a construction that has not been previously accounted for. In the chapters on morphology, however, coming afterwards as they do, I have laboured under no such constraint and have been able to illustrate an affix, particle, or word with a special function in a construction of any sort.

This grammar is based on work I have engaged in from time to time over a period of many years. (For a history of the work, see Appendix 3.) Primarily it reflects the speech of Christine Charles (1894-1968) and James Point (1881-1979), as exemplified in elicited sentences and dictated texts. Some of the texts dictated by Mrs. Charles originated with her husband, Andrew Charles (1893-1961).

I reviewed all the texts dictated by Mrs. Charles with Mr. and Mrs. Charles's daughter, Della Kew (1929-1982), getting some additional material from her. Later I worked with Arnold Guerin (1910-1987), checking on many features of the language and going over many of the texts dictated by Mr. Point. Mr. Guerin's speech was, as he readily acknowledged, influenced by long residence in the Cowichan dialect area and so may be less representative of Musqueam. But working with him was doubly rewarding because he was a linguist in his own right and a colleague in the enterprise of exploring the language. I am profoundly grateful for all of the help these speakers of the language have given me and for the great pleasure it has been to work with them.

I should also express my gratitude to Professor Melville Jacobs for introducing me to the Native languages of our region and to Professor Harry Hawthorn for making my work at Musqueam possible. There are many others who have also given me help and encouragement in my work. In its early stages, Aert Kuipers generously gave me many hours of much-needed guidance. W.W. Elmendorf shared a summer's work with the Charleses and provided the concept and motivating force behind our joint paper on Halkomelem dialect differences (Elmendorf and Suttles 1960). Over the years, William H. Jacobsen, Laurence and Terry Thompson, Thomas Hess, and M. Dale Kinkade, among others, have shared insights and given advice. I have learned much about Halkomelem from the work of Brent Galloway on the Chilliwack dialect and of Thomas Hukari, Adrian Leslie, and Donna Gerdts on Island dialects. I must thank Barbara Efrat and Robert Levine, then of the Linguistics Division of the (then) British Columbia Provincial Museum, for inviting me to write this grammar for a projected series. Through no fault of theirs, the series did not materialize, but without their invitation and encouragement, I might not have completed the work. I thank Randy Bouchard and David Rozen for sharing information and references, Brent Galloway for computer help, and Mercedes Hinkson for suggestions on formatting. To Donna Gerdts I am especially indebted for her time and patience in reading and criticizing drafts of this work

and for her efforts to keep me from blundering in logic and usage. I thank Dale Kinkade for carefully reading and correcting the version prepared for the museum. I thank Patricia Shaw for catching a number of errors in the present version, and Francis Chow for catching still more errors and inconsistencies in the course of his meticulous copy-editing. Remaining errors and inconsistencies are, of course, mine.

I am grateful to the University of British Columbia Press for agreeing to publish this work, to Holly Keller-Brohman for her guidance, and to Charles Ulrich for the use of his Straight font and his long work in preparing the manuscript for publication. I thank my son Cameron for his frequent advice and help with my computer and for the maps. And finally to Shirley, who has cheerfully lived with this for an unconscionably long time and unfailingly given good advice on style and sense, my heartfelt thanks.

I must also express gratitude for financial support for my work with Halkomelem from the Leon and Thea Koerner Foundation in Vancouver, the President's Committee on Research at the University of British Columbia, the American Council of Learned Societies, the Phillips Fund of the American Philosophical Society, the Desert Research Institute in Reno, the Faculty Committee on Research and Publications at Portland State University, the Royal British Columbia Museum, and the Melville and Elizabeth Jacobs Research Fund.

# Introduction

## Halkomelem

Halkomelem is one of the twenty-three languages that belong to the Salish Family of Northwestern North America. It is the language of the Native peoples of southeastern Vancouver Island from the west shore of Saanich Inlet northward to somewhere beyond Nanoose Bay, and of the mainland from the Fraser Delta eastward upriver as far as Harrison Lake and the lower end of the Fraser Canyon. These peoples are known by a number of names – in their English forms, Malahat, Quamichan, Penelekuts, Nanaimo, Musqueam, Kwantlen, Katzie, Chilliwack, Tait, and many more. These are names that once designated single villages or clusters of villages. Many have come to designate “bands,” the administrative units established by the colonial and later federal authorities in the middle of the nineteenth century.

Within the Halkomelem area, the language is spoken with some marked differences in phonology, lexicon, and even grammar. Three main dialect groups are distinguishable: (1) an Island group, spoken by people whose old winter villages were on Vancouver Island and in the Gulf Islands, including the Cowichan, Chemainus, and Nanaimo dialects, with differences especially between Nanaimo and the rest; (2) a Downriver group, spoken by people whose old winter villages were around the mouth of the Fraser and upstream to the Stave River, including Musqueam, Tsawwassen, Kwantlen, and Katzie; and (3) an Upriver group, spoken from Matsqui on upstream, including Matsqui-Sumas (which shares some features with Downriver), Chilliwack, Chehalis, and Tait (Elmendorf and Suttles 1960; Galloway 1977, xii; Gerdts 1977). The Musqueam dialect, described in the present work, belongs in the Downriver group.

The language is identified in Island dialects as *həlqəmínəm*, in Downriver dialects as *hənqəmínəm* or *hə́nqəmínəm*, and in Upriver dialects as

*həlqəméləm*.<sup>1</sup> James Point identified *hənqəmínəm* as the language as “all as far as understand one another, on the Fraser River and the Island.” The term is thus the Musqueam equivalent of “Halkomelem.” This name (pronounced *həlqəméləm* in English) is an anglicization, first used by Charles Hill-Tout (1903), of the Native term for the language in its Upriver form. About the same time, the Downriver form was anglicized as “An-ko-me-num” by Crosby (1907). Wilson Duff used Hill-Tout’s version of the term in his ethnography of the Upper Stalo Indians (Duff 1952, 11), and the term has been in general use among anthropologists and linguists since then.<sup>2</sup>

The Halkomelem language and its speakers were formerly often identified as “Cowichan” (spelled variously), as by Boas (1890, 806; 1897, 320), Hodge (1910, 1:355), and the Department of Indian Affairs (Canada 1970, 28-35), but this usage runs counter to others. On the one hand, in Native usage the name “Cowichan” (or its native form) is restricted to the people of the Cowichan River and environs on Vancouver Island; on the other hand, some writers (Tolmie and Dawson 1884; Newcombe 1909; Goddard 1934) at one time extended the name “Cowichan” to all of the contiguous Coast Salish north of Puget Sound, including speakers of as many as seven Salishan languages. All in all, it seems best to restrict “Cowichan” as in Native usage.

### Halkomelem within Salish

In the most recent classification of the Salish languages (Thompson 1979, 693; Thompson and Kinkade 1990, 34-35), Halkomelem is one of the ten members of the Central Salish branch, which includes all of the Salish languages of the Strait of Georgia–Puget Sound Basin. There are four other branches of the family: Tsamosan, consisting of four languages in southwestern Washington; Interior Salish, consisting of seven languages in the Fraser and upper Columbia river drainages east of the mountains; Bella Coola, a single language on the central coast of British Columbia; and Tillamook, a single language on the northern Oregon coast. Bella Coola and Tillamook are geographically isolated from the rest; the other three branches are contiguous. The speakers of the Central and Tsamosan languages are identified in the ethnographic literature as “Coast Salish.”

- 
- 1 My phonetic recording of the word in the Tait area was [həlqəméləm] ~ [həlqəbéləb]. The Island form has been written “Hul’qumi”mum” by Hukari and Peter (1995). The name is said, perhaps only in the Upriver area, to be derived from *ləqéməl* or *nəqémən*, a village on Nicomen Slough, below Chilliwack (Duff 1952, 22; Galloway 1977, xviii). It is a progressive form with the suffix *-əm* ‘intransitive.’ My guess is that if indeed it is derived from ‘Nicomen,’ its literal meaning is ‘be Nicomening,’ i.e., ‘be speaking in the Nicomen manner.’ There is a close parallel in the Northern Straits term for that language, given to me in the late 1940s by Samish and Lummi people as *ləkʷəŋínəŋ*, from *ləkʷəŋən*, the name of the people around Victoria.
  - 2 The term *Stalo* is from *stáləw* (Downriver) or *stá’lo* (Upriver) ‘river.’ James Point believed that as a term for the peoples of the Fraser Valley it was first used by the early priests. Duff (1952) used the term “Upper Stalo” for the Halkomelem-speaking peoples from Chilliwack upstream. The spelling *Stó:lō* was adopted by the Coquileetza Education Training Centre in the late 1970s.

In spite of the linguistic differences, the Coast Salish region appears to have been, before European settlement, a social and biological continuum within which speakers of each language had ties of marriage with their neighbours and participated with them in joint social and ceremonial activities (Elmendorf 1960; Suttles 1987b; Kennedy 1993, 2000). Nevertheless, there were cultural differences, and on the basis of these differences, four segments of the continuum have been distinguished: Northern Coast Salish, consisting of the speakers of Comox, Pentlatch, and Sechelt; Central Coast Salish, consisting of the speakers of Squamish, Halkomelem, Nooksack, Northern Straits, and Clallam; Southern Coast Salish, consisting of the speakers of Lushootseed and Twana; and Southwestern Coast Salish, consisting of the speakers of the Tsamosan languages, Quinault, Lower Chehalis, Upper Chehalis, and Cowlitz (Suttles 1990). Thus, the Halkomelem language belongs to the *Central Branch* of the Salish Family, while the traditional cultures of the Halkomelem-speaking peoples belong to the *Central Coast Salish* group of Coast Salish cultures.<sup>3</sup>

### Diversity within Halkomelem

As we might expect, the differences are greatest between Island and Upriver dialects, with Downriver providing a link between the two other groups. An initial study (Elmendorf and Suttles 1960) suggested that Downriver Halkomelem is closer to Island phonologically and closer to Upriver lexically.

Phonologically, the most obvious differences are: Island has *š* where Mainland dialects have *x*, and Island and Downriver have both *n* and *l*, while Upriver has merged these as *l*. Upriver speakers often use *š*, *č*, and *č̣*, where Island and Downriver speakers have *s*, *c*, and *c̣*. Upriver lacks the glottalized resonants and post-vocalic glottal stops of Island and Downriver, vowel length usually but not consistently appearing where Downriver and Island have post-vocalic glottal stops. Upriver dialects also have greater pitch differences, with some words being distinguished by pitch alone. All of these differences, together with an overall laxness of the voice, make Upriver speech sound remarkably different from Downriver and Island. In this last respect, Downriver falls between the laxness of Upriver and the tenseness of Island speech. Downriver speakers often drop final glottal stops and glottalize resonants more lightly, making them harder to detect.

---

3 Thus “Central Salish” as a taxon in a linguistic taxonomy should not be confused with “Central Coast Salish” as a taxon in a cultural taxonomy. The linguistic taxonomy, I should add, is based on much solid research, while the cultural taxonomy is somewhat impressionistic and was adopted for Volume 7 of the *Handbook of North American Indians* in part as a means of coping with the task of describing the cultures of the whole Coast Salish region. The term “Central Coast Salish” has been used for some time, however (Suttles 1968, 1977, 1990; Kew 1980; Kennedy 1993), to designate a culturally distinguishable segment of the Coast Salish continuum. The possible confusion of the taxa is unfortunate.

Map 1 *Halkomelem Territory*

Lexically, the most immediately recognizable difference among the major divisions of the language is in the third-person personal word ‘he/she/it is the one,’ *nít* on the Island and *ǰá* on the Mainland, which occurs with great frequency and forms the basis for a set of frequently used demonstratives. But there are many other lexical differences (see Elmendorf and Suttles 1960; Gerdts 1977).

The grammatical differences remain to be worked out, but the detailed grammar by Galloway (1993) suggests to me that at least some of the grammatical differences are the result of phonological changes like the loss of the oblique particle, the merging of the interrogative particle with a preceding auxiliary, and the loss of the locative meaning of the auxiliaries (for examples, see Suttles 1994).

In earlier times, there was probably greater diversity within each of these dialect areas than there has been in the last generation or two. It is said that once every village had some unique features of speech, and even segments of a village

might differ. Some of the differences between my two principal sources at Musqueam were said to reflect such local variation, but even greater differences reportedly once existed there.

The diversity of Halkomelem dialects and the relationships among them (yet to be worked out) must be the products of complex social and economic forces as well as processes of linguistic change. The diversity certainly cannot be seen as simply the result of geographical barriers separating regions or of social and economic self-sufficiency isolating villages as “little communities.” On the contrary, during the period for which we have historical and ethnographic information, there were neither geographical barriers nor isolated villages.

### **The Regional Social System**

In particular, the Strait of Georgia was not a barrier. For the summer runs of salmon, many Island people crossed the strait and camped along the Fraser River, mainly in the Downriver area, while both Downriver people and Island people went on up the river to fish in the Upriver area. Northern Straits and Squamish speakers were also involved in this activity (Duff 1952, 25-26; Suttles 1998, 172-74). Thus, the Lower Fraser seasonally drew people together from all over the Halkomelem area and may have helped preserve the unity of Halkomelem even while promoting external contacts.

Both internal and external contacts were also promoted by the marriage system. As elsewhere in the Strait of Georgia–Puget Sound Basin, families with the means in each village arranged marriages for their children with families in other villages, often in other dialect or even language areas. Marriage ties established economic ties and led to participation in inter-village ceremonies and games. Without anything resembling European political institutions, the Halkomelem-speaking peoples were participants in a regional social network that had no discernible limits (Suttles 1960, 1963, 1987b; Elmendorf 1960, 277-305; Kennedy 1993). This regional social network probably extended, in spite of occasional conflict, throughout the Georgia-Puget basin and beyond.

Within this region, Halkomelem occupied an important position. Its territory lies close to the geographical centre of the Georgia-Puget basin and also close to the linguistic centre of the Central branch. To the north are (or were) four languages – Squamish, Sechelt, Pentlatch (now extinct), and Comox-Sliammon; to the south are another four (or five) – Nooksack (perhaps now extinct), Straits (perhaps divisible into Northern Straits and Clallam), Lushootseed, and Twana. These nine or ten languages constitute the Central Salish branch of the family. Traditions and genealogies indicate that the speakers of Halkomelem were aware of and had at least indirect ties with speakers of these other Central Salish languages. They were also aware of and occasionally intermarried with the nearest Interior Salish to the east and with the nearest Wakashans to the west and north.

Before the great epidemics that first came in the late eighteenth century, Halkomelem may also have been a demographic centre. In 1928 James Mooney estimated the pre-epidemic population of the Halkomelem-speaking peoples as 12,600, greater than that of any other Salishan language. A recent review of the data by Robert Boyd reduces the Halkomelem figure to 10,534, still much greater than the immediately adjacent languages but less than the 11,835 he gives for Lushootseed. For a comparison of Mooney's and Boyd's estimates for the whole Coast Salish, see Boyd 1999, 264-65.

It seems likely that the environmental richness of the Lower Fraser could account for a relatively larger population in the Halkomelem area. If this was the case, it may have had some influence on the course of linguistic history in the region. Hess (1979b) has shown that Halkomelem may be the centre of innovations in the terms for 'deer,' 'rabbit,' and 'lake,' and Kinkade's analysis (1986) of terms for 'blackcap' suggests a similar history.

### Musqueam

"Musqueam" (pronounced *máskwiyəm* in English) is from *x<sup>w</sup>máθk<sup>w</sup>áɣəm* 'place of *máθk<sup>w</sup>áɣ* or *máθ<sup>θ</sup>k<sup>w</sup>áɣ*' (a plant no longer identifiable, but see Appendix 2 for further discussion), the name of a village at the mouth of the North Arm of the Fraser, just southeast of Point Grey, on the present Musqueam Indian Reserve. According to tradition, the Musqueam people once had villages at Jericho, the mouth of the Capilano River, and perhaps elsewhere on Burrard Inlet, at Marpole up the North Arm, and elsewhere in the delta (see Appendix 2 for place names). The people of Indian Arm are said to have spoken the same as the Musqueam. How homogeneous the speech of this area was and how much it resembled recent Musqueam are questions we cannot now answer. By the latter half of the nineteenth century, the Native people of Burrard Inlet were becoming mainly Squamish in speech, and Musqueam was the only Halkomelem village on the North Arm.

At that time, Musqueam itself consisted of two principal groups of houses, *málay*, toward Point Grey, and *scálex<sup>w</sup>*, at the head of a now vanished slough. There are said to have been some differences in speech between these two settlements, and some even within *scálex<sup>w</sup>*, where the people of the row of houses called *scálg<sup>w</sup>áθən* used *n* for *l*, making theirs an all-*n* dialect, maximally contrasting in that feature with the all-*l* dialects of the Upriver area (Elmendorf and Suttles 1960, 7). By the late 1940s, there was said to be only one old person left who used *n* for *l*, Old William at Coquitlam. However, for several words I have found individuals differing in which sound they used.

In recent times, there have been other differences among families at Musqueam. My two principal sources, Christine Charles and James Point, differed in their treatment of the second-person possessive, in a few lexical items, and in some preferences in syntax. I cannot say to what extent these differences reflect older differences within Musqueam or differences in their life histories.

Andrew and Christine Charles and James Point were all native speakers of Musqueam and had lived as children at *sc'alex*<sup>w</sup>, the upper part of the village, but each had some familiarity with another dialect of Halkomelem. Mrs. Charles was raised at Musqueam by her Musqueam mother and stepfather. She went to school for three years near Chilliwack and was familiar with the Upriver dialect. Mr. Charles was born at Musqueam of Musqueam parents, but after his father died, his mother remarried at Duncan in the Cowichan area, and he lived for a few years there and spoke Cowichan as well as Musqueam. Mr. Point also had Musqueam parents, but he went to school for several years on Kuper Island in Island Halkomelem country and learned that dialect. His first wife was Katzie, and he lived for a time with her family, who must have spoken a form of Downriver Halkomelem very close to Musqueam.

The differences among Musqueam speakers seem slight when their speech is compared with samples of Upriver or Island dialects, however, and my impression is that there were no great differences in speech within Downriver Halkomelem. James Point mentioned one or two words that were different at Tsawwassen, but I do not believe he mentioned any differences at Katzie. The people at Coquitlam were Musqueam families who had moved upriver a generation earlier. Mr. Point once asserted that what the Musqueam speak is really “Langley,” and when we reconstructed one of Hill-Tout’s Kwantlen texts, he found only two or three places where he would have chosen different words. This similarity between Musqueam and Kwantlen may simply reflect earlier proximity. According to tradition, the Kwantlen once lived nearby, at the site of New Westminster, and after Fort Langley was established in 1827, they moved further upstream to be near the fort. However, records of the Hudson’s Bay Company’s first contact with the Kwantlen show that they were already in the area where the fort was built (Suttles 1998, 170-71). Alternatively, the similarity between Musqueam and Kwantlen may reflect a later influence resulting from the prestige that the Kwantlen enjoyed after 1827 as the neighbours, allies, and affines of the Hudson’s Bay Company men at the fort.

In recent years, however, the source of influence has clearly been from the other direction. In the 1950s and ’60s, younger people at Musqueam who spoke Halkomelem were said to speak more in the Cowichan fashion. This probably had several causes. One may be that a number of Musqueam, beginning before the turn of the twentieth century, attended the residential school on Kuper Island, where they were exposed to Island forms. Another must be that the Island people have for a long time been more numerous and more active in maintaining the Native ceremonial system. This has given Cowichan a preferred status for some people in some situations. Speeches at the big dances are more often in Cowichan than in anything else, and speakers of other dialects may switch to Cowichan for formal speeches if they can do so. Referring to this, Mike Underwood of Duncan once remarked, “Cowichan is our national language, you might say.” At present, however, there is a strong feeling among

the Musqueam that they ought to preserve Musqueam as a distinct form of speech.

Today, at the beginning of the twenty-first century, in all Halkomelem bands, Halkomelem speakers are a small minority. Most are middle-aged or older and very few are monolingual. Speakers are greatly outnumbered everywhere by children and young people who speak English only. It was probably inevitable that the Native people would learn English when, in the middle of the nineteenth century, English-speaking settlers and potential employers came into their country in overwhelming numbers, but their loss of their language must be largely the result of the policy of the government and of the church-operated residential schools to stamp out the Native languages (Levine and Cooper 1976). In several parts of the area, however, Native people are making efforts to teach the language to the young, and it has even been taught in public schools.

### **A Note on the Examples**

Most examples of sentences are identified as to source by initials. The principal sources are Christine Charles (CC) and James Point (JP). A number appearing after these initials refers to the number of the text from which the example comes. I have tried whenever possible to use examples from dictated texts rather than from elicited sentences. I have used examples elicited from Della Kew (DK) and from Arnold Guerin (AG) to show differences among speakers and to supplement material from the principal sources. I have especially relied on Mr. Guerin in exploring problems that I was quite unaware of when working with Mrs. Charles and Mr. Point. Andrew Charles (AC) is the source of a few examples. (Actually he contributed a great deal as the source and inspiration of much of the material given by Mrs. Charles, but I have credited him only when the record shows that the example came directly from him.) A few forms came from Simon Pierre (SP) of Katzie. One sentence is from Herman Guerin (HG), Arnold's much older brother.

The examples often appear in four lines. The first is simply the Halkomelem as recorded, ignoring what may have been or ought to have been there, such as glottalization of resonants. The second line gives the Halkomelem segmented into morphemes, except that I have not tried to represent components in the internal morphology of roots (infixes, forms of reduplication, and so on) as separate elements. In this line, I have also indicated what the rules of grammar imply ought to be there, most often oblique particles. The third line identifies the segments of the second line. Many of these segments, especially the most commonly occurring grammatical elements, are identified by abbreviations, listed below. But I have not given labels to all grammatical elements; those easily translated are simply translated in the third line. The fourth line is a fairly close, but normal, English translation. If a sentence is such that a closer translation might help explicate it, I have added one, following "lit." (meaning

“closer to a literal translation”). I have tried not to repeat an example but occasionally I have had to use the same sentence in two different contexts simply because it was the best example available.

Where the first and second lines in an example would be identical, I have given the example in only three lines.

### Abbreviations

ACT, act.	activity suffix <i>-els</i> , <i>-əl's</i>
ADV	adversative particle <i>θəł</i>
ART	article <i>tə</i> , <i>θə</i> , <i>k<sup>w</sup>θə</i> , <i>tə</i> , <i>k<sup>w</sup>ə</i> , <i>k<sup>w</sup>sə</i>
ART(OBL)	oblique article <i>ʃ</i>
ATT	attributive formant suffix <i>-a<sup>?</sup>ł</i>
AUX	auxiliary verb <i>?i</i> , <i>ni</i> ~ <i>ni<sup>?</sup></i>
BEN	benefactive suffix <i>-łc-</i>
BE3P	‘be third person’ personal word <i>ʃa</i>
BE3PL	‘be third person plural’ personal word <i>ʃálam</i>
CAUS	causative suffix <i>-stəx<sup>w</sup><sub>1</sub></i> ~ <i>-st-</i>
CERT	certainty particle <i>mə</i>
CJ	Chinook Jargon
COM	comitative suffix <i>-stəx<sup>w</sup><sub>2</sub></i> ~ <i>-st-</i>
CON	concern suffix <i>-mət</i> , <i>-ámət</i> , <i>-mit</i> , <i>-me<sup>?</sup>t</i>
DEM	demonstrative
DIM, dim.	diminutive
DISP	dispositional aspect
DUR	durative aspect
EMPH	emphatic particle <i>qə</i>
EST	‘established’ aspectual prefix <i>wə-</i>
EXP	expectable particle <i>yeł</i>
FN	feminine nearby (article or demonstrative) <i>tə</i> et al.
FP	feminine present (article or demonstrative) <i>θə</i> et al.
FR	feminine remote (article or demonstrative) <i>k<sup>w</sup>sə</i> et al.
FUT	future particle <i>ce<sup>?</sup></i>
gen.	generic
GOAL	goal-causal suffix <i>-nəs</i>
INF	inferential particle <i>yəx<sup>w</sup></i>
INTR, intr.	intransitive suffix <i>-əm</i>
INSTR	instrument (lexical suffix) <i>-tən</i>
LCTR	limited control transitive suffix <i>-nəx<sup>w</sup></i> ~ <i>-n</i> , <i>-ləx<sup>w</sup></i> ~ <i>-l-</i>
MN	non-feminine nearby (article or demonstrative) <i>k<sup>w</sup>θə</i> et al.
MP	non-feminine present (article or demonstrative) <i>tə</i> et al.
MR	non-feminine remote (article or demonstrative) <i>k<sup>w</sup>ə</i> et al.
n.	noun
NOM	nominalizer <i>s-</i>

OBL	oblique particle $ʔə$
OBLNOM	oblique nominalizer $ʃx^w-$
OBREL	oblique relater $x^w-$
p.n.	place name
PAS	passive
PER	imperative particle $te$
perf.	perfective
PERM	permissive suffix $-s$
PL, pl.	plural
PLPER	plural imperative particle $ʔe$
PRES	presumptive particle $waʔ$
PROG, prog.	progressive aspect
QUOT	quotative particle $cə$
REAS	reassuring particle $ʔewət$
RECIP	recipient suffix $-əs$
RES, res.	resultative aspect $s-$
ROG	interrogative particle $ʔə$
ROG!	emphatic interrogative particle $ʔaʔa$
s.t.	something
sev.	several
SPEC	speculative particle $cətwəʔ$
STAT	stative suffix $-t$
SUBPAS	subordinate passive suffix $-ət$
TR, tr.	transitive suffix $-t \sim -ət, -nəx^w \sim -n-, -ləx^w \sim -l-, -x$
v.	verb
2PLPOS	second person possessive suffix $-ʔələp$
3PL	third-person plural particle $ʔeʔtən$
3POS	third-person possessive suffix $-s$
3SUB	third-person subordinate subject $-əs$
3SUBPAS	third-person subordinate passive $-əyə- \sim i-$
3TR	third-person transitive subject $-əs$

### Symbols Used in Phonological Formulas

A	any full vowel ( <i>i, e, a, or u</i> )	R	any resonant
C	any consonant	T	any obstruent
H	/h/ or /ʔ/	V	any vowel (full vowel or schwa)
*	reconstructed phoneme or form	**	ungrammatical form

# Musqueam Reference Grammar

# 1 Phonology

Halkomelem shares many of the areal features of phonology that made the Native languages of the North Pacific coast of North America so long impermeable to European understanding. It has a (seemingly) simple vowel system but a richly developed consonant system with several features unparalleled in the languages of Western Europe. These include the presence of lateral and uvular obstruents, the opposition of glottalized to plain plosives and resonants, and the opposition of labialized to plain velars and uvulars. Well over half of the consonants of Halkomelem have no counterpart in English.

## 1.1. CONSONANTS

The following consonants have been recorded in the Musqueam dialect of Halkomelem:

	Obstruents					
	Plosives			Spirants	Resonants	
	Plain	Glottalized	Voiced	Voiceless	Plain	Glottalized
Labial	p	p̚	{b}	{f}	m	[m̚]
Dental	(t <sup>θ</sup> )	t̚ <sup>θ</sup>	–	θ	–	–
Alveolar	t c	t̚ c̚	{d}	s	n	[n̚]
Lateral	ʃ̚	–	–	ɬ	l	[l̚]
Palatal	(č)	–	{j}	(š)	y	[y̚]
Velar	(k)	(k̚)	–	x	{r}	–
Lab. velar	k <sup>w</sup>	k̚ <sup>w</sup>	–	x <sup>w</sup>	w	[w̚]
Uvular	q	q̚	–	χ	–	–
Lab. uvular	q <sup>w</sup>	q̚ <sup>w</sup>	–	χ <sup>w</sup>	–	–
Laryngeal	–	ʔ	–	h	–	–

Of these, twenty-eight (those not enclosed above) occur frequently and have unquestionable phonemic status. Five (enclosed in parentheses) occur less frequently or in limited environments and are of recent and/or peripheral phonemic

status. Five other sounds, the glottalized resonants (enclosed in square brackets) occur frequently but pose a problem in phonemic analysis. And in addition five consonants (enclosed in braces) occur only in a few foreign words and their derivatives and in one sound-imitative word.

### 1.1.1. Obstruents

For descriptive economy, stops and affricates are grouped together as plosives. There are thus four series of obstruents: plain plosives, glottalized plosives, voiced plosives (of marginal status), and spirants. The plain plosives are generally less aspirate before vowels than in English but more aspirate finally. The glottalized plosives are ejectives but are usually not strongly released. Sequences of plosives are rearticulated; that is, the first is not released into the second. The obstruents are produced at as many as nine places of articulation. Adding accompanying labialization, we have thirteen sets of obstruents.

*Labials.* /p/ and /p̚/ are bilabial stops. /f/ is the labiodental spirant of English. It occurs only in recent loans from English and their derivatives, e.g., /káf i/ ‘coffee,’ /šx<sup>w</sup>kafiel/ ‘coffeepot,’ /skíkf/ ‘little skiff,’ /číf/ ‘chief.’ In the past, older monolingual speakers reportedly used /p/ in such words. I have recorded /b/ only in /bás/ ‘boss,’ said to have been used for the first government-appointed chief.

*Dentals.* /θ/ is usually a dental or interdental spirant somewhat like the English ‘th’ in *thin*. /t̚/ is a glottalized affricate [t̚<sup>θ</sup>].<sup>1</sup> Some speakers, I believe, articulate these somewhat further back, reducing the difference between /θ/ and /s/ and between /t̚/ and /č/.<sup>2</sup> Halkomelem /θ/ and /t̚/ are the reflexes of Proto-Salish \*c and \*č and may have reached their present phonetic forms only recently.

I have recorded an unglottalized affricate, [t<sup>θ</sup>], at Musqueam in only two instances. First, AC gave [máθk<sup>w</sup>əý] as the name of the plant, now long gone, for which Musqueam itself was named, while CC and JP pronounced it [máθk<sup>w</sup>əý]. To explain AC’s pronunciation, I can only suggest that he may have been using an old-fashioned realization of /θ/ in this little-used and perhaps emotion-laden word. Second, JP occasionally used [t<sup>θ</sup>ə] instead of the expectable [tə] for the non-feminine visible article. This is the Cowichan form, as JP acknowledged. In Cowichan, [t<sup>θ</sup>] seems to be a fusion of the sequence //t-θ-// that

1 Elmendorf and Suttles (1960) used the symbol ʔ for this phoneme, basing it on Boas’s use of ç for θ. Galloway (1977) uses θ̚, noting that the phoneme has, in Upriver, a glottalized spirant allophone. Hukari et al. (1977) use t̚. Until the present work, I have used ž simply for convenience.

2 Working with SP, who was missing some front teeth, I often mistakenly recorded “s” for /θ/ and “č” for /t̚/. With CC and JP I had little trouble with the spirants but occasionally had to recheck the glottalized affricates. Early to mid-nineteenth-century spellings of Native names using “s” for /θ/, as in “Musqueam” for /x<sup>w</sup>máθk<sup>w</sup>əýəm/, suggest that at the time /θ/ was more generally pronounced with the tongue more retracted.

occurs in the demonstrative system, and I have written the Cowichan article /t<sup>θ</sup>ə/ when it has appeared. However, in Musqueam demonstratives, the sequence /tθ/ is clearly a stop followed by a spirant; cf. Cowichan [t<sup>θ</sup>éy] with Musqueam [tθéʔ] ‘he, that.’ I do not believe we need to posit a phoneme /t<sup>θ</sup>/ for Musqueam, though it may be needed for Cowichan.

*Alveolars.* The stops /t/ and /t̥/ appear to me to be articulated as a point perhaps slightly forward of that of the usual English “t” and “d.” I have recorded [d] in two items, [sk<sup>w</sup>dáedæ] ‘chickadee’ (also a person’s nickname), which may be imitative of the sound made by the bird, and [dædis], a pet name for a little girl, probably Chinook Jargon for ‘flower’ (Jacobs 1936, 12). This does not seem to justify positing a /d/ phoneme.

It appears to me that the affricates /c/ and /č/, phonetically [t̥<sup>s</sup>] and [t̥<sup>s</sup>], and the spirant /s/ are somewhat more retracted than the /t/ and /t̥/, but this may be true of some speakers only, and the difference may not be great.<sup>3</sup> Before a vowel, the affricate /c/, as in /cám/ ‘go inland,’ /cásæt/ ‘be telling him,’ is quite distinct from the sequence /ts/, as in /tsás/ ‘poor,’ /tsát/ ‘approach it.’ In final position, as in /yapənéc/ ‘going with the wind’ versus //s-k<sup>w</sup>ən-é-t-s// ‘his holding it,’ there may be little or no phonetic difference. However, in forms like the last, where the [t] and [s] represent different morphemes, it seems only sensible to write /ts/, and so I do. I have no contrasting examples with /č/ versus /ts/ but expect that they would be distinct.

In Musqueam, with rare exceptions, /c/ and /s/ do not occur before /x<sup>w</sup>/. Where we might expect them for morphological or historical reasons, we find instead /č/ and /š/.<sup>4</sup> However, /č/ does occur freely before /x<sup>w</sup>/, as in /čx<sup>w</sup>át/ ‘add to it.’

Halkomelem /c/ and /č/ are the reflexes of Proto-Salish \*k and \*k̥, while Halkomelem /s/ is the reflex of Proto-Salish \*s. The source of /c/ in \*k is reflected in one feature of the morphology (see §1.5.10 below).

*Palatals.* /č/ is a palatal affricate, phonetically [t̥<sup>ʃ</sup>], like the English ‘ch’ in ‘cheap.’ /š/ is a spirant like the English ‘sh’ in ‘sheep.’ There is no glottalized palatal affricate. As indicated, /c/ and /s/ are usually replaced by /č/ and /š/, respectively, before /x<sup>w</sup>/. If these were the only instances of [č] and [š], we could simply identify these two sounds as allophones of /c/ and /s/. However, there are a few words that have [č] and [š] in other environments, and these require, I believe, that we posit /č/ and /š/ phonemes. These include a very small number of words apparently of Native origin, as /čəčíʔqən/ ‘mink’ and

3 In Upriver dialects /c/, /č/, and /s/ can be as palatalized as [č], [č̥], and [š] (Galloway 1977, 5-9).

4 One exception is sx<sup>w</sup>əʔínt ‘what meaning,’ which was, I believe, consistently pronounced with an initial /s/. AG used an initial /s/ in /sx<sup>w</sup>əx<sup>w</sup>á/ ‘lowered,’ the resultative of /x<sup>w</sup>ét/ ‘lower it,’ but JP used /š/. It may be that for some speakers, the s<sub>2</sub> ‘resultative’ behaves differently from the s<sub>1</sub> ‘nominalizer.’

as /čəmæχ/ ‘pitch’ (identified as Cowichan but evidently also used at Musqueam) and the interjections /šéʔ/, /šá-/ , /šá-ǰ/ ‘pshaw!’ and so on. They also include a small number of loan words from Chinook Jargon (CJ), French (Fr) via Chinook Jargon, and English (E), as /čɪkmən/ ‘metal’ (CJ), /čé:k/ ‘iron kettle’ (< E *jug?*), /čé:yən/ ‘Chinese’ (< E *Chinaman*), /šét/ ‘lead’ (the metal, < E *shot*), /kʷəšú/ ‘pig’ (CJ from Fr *cochon*), /ləpláš/ ‘board’ (CJ from Fr *la planche*), /píši/ ‘sin’ (CJ < Fr *péché*), /šípmenqən/ ‘English’ (< E *shipman* and *-qən* ‘speech’), /šúkʷə/ ‘sugar’ (E), and from an unknown source /šəkʷəlúy/ ‘turnip.’ I have recorded [j] (as in English *judge*) only in /kinjáj/ ‘Englishman’ (CJ < E *King George*) and /kinjájqən/ ‘English (language).’

*Laterals.* /l/ is a lateral spirant. /ł/ is what is usually described as a glottalized lateral affricate, phonetically [t̚l̥], but the apex of the tongue at the onset is in the position for the lateral release rather than for a /t/ and there is little of the friction heard in the other affricates. /ł/ is quite distinct from the sequence /t̚l̥/, cf. /łá/ ‘be third person’ and /t̚láǰʷt/ ‘pry it off.’ As in most other Salishan languages, there is no unglottalized lateral affricate.

*Velars.* /x/ is a strongly palatalized front velar spirant, phonetically [xʲ].<sup>5</sup> It is the reflex of Proto-Salish \*x, which has become /š/ in Island dialects of Halkomelem and in neighbouring Coast Salish Languages.

/k/ is a plain, and /k̚/ a glottalized, unrounded front velar stop. These are less strongly palatalized than the spirant. They are rare and, because Proto-Salish \*k and \*k̚ have become /c/ and /č/ in Halkomelem, they may be of recent origin. I have recorded /k/ in two presumably Native words, /xʷən kéʔ/ ‘hold on, wait a bit’ and /skáti/ ‘crazy.’ It occurs in a small number of loan words from Chinook Jargon and English, as /kəpú/ ‘coat’ (CJ < Fr *capote*), /ləsék/ ‘bag’ (CJ < Fr *le sac*), /ləkí/ ‘key, lock’ (CJ < Fr *le clef*), /lá:k/ ‘log’ (E), /ká-/ ‘car’ (E). It occurs in “baby talk” as a substitute for /q/, as in /káʔ/ for /qáʔ/ ‘water’ when speaking to a child. I have recorded /k̚/ in only one word, where it is the baby-talk substitute for /ǰ/ (see §1.6).

*Labialized velars.* /kʷ/, /k̚ʷ/, and /xʷ/ are, respectively, a plain stop, glottalized stop, and a spirant produced at about the point of articulation of English /k/ in *cool* and accompanied throughout by the lip-rounding of /w/.

In the sequence /šxʷ/, especially in the common compound prefix //s-xʷ-// ‘oblique nominalizer,’ the rounding and velar friction of the /xʷ/ can occur, it seems, simultaneously with the palatal friction of the /š/. In the Cowichan dialect, in most environments the /xʷ/ of this prefix is lost, and Cowichan has /š-/ where Musqueam has /šxʷ-/. This pronunciation is also occasionally heard from Musqueam speakers, probably from Cowichan influence.

5 Elmendorf and Suttles (1960) and Galloway (1977) have used the symbol xʲ for this phoneme, but because there is no [x] contrasting with [xʲ], it seems more convenient to write /x/.

*Uvulars.* /q/ and /q̣/ are a plain and glottalized stop produced further back than English /k/, probably varying in place of articulation from uvular to back velar. The limited occurrence of /k/ and /ḳ/ may permit a wider range of articulation than might be permitted otherwise. Nevertheless, velars and uvulars are distinct, in the adult and baby-talk forms cited above and in the only near-minimal pair discovered, /ká/ ‘car’ and /qáʔ/ ‘water.’<sup>6</sup> /x̣/ is a uvular fricative. It is produced with a good deal of friction or uvular vibration and contrasts strongly with /x/.

*Labialized uvulars.* /qʷ/, /q̣ʷ/, and /x̣ʷ/ have a uvular or near-uvular place of articulation and are accompanied throughout by lip rounding. /qʷ/ and /q̣ʷ/ are not always easily distinguished from /kʷ/ and /ḳʷ/, but the uvulars have a different resonance produced by a different shape of the oral chamber and there may be some uvular friction. /x̣ʷ/ is more easily distinguished from /xʷ/ because of its more audible friction or uvular vibration.

*Glottals.* /ʔ/ is a glottal stop and /h/ a glottal spirant. They are listed here with the obstruents but possibly belong in a class by themselves. They are limited in their co-occurrence with other obstruents (obstruents proper), and they play unique roles in the morphology of the language.

### 1.1.2. Resonants

There are five plain resonants: two nasals /m/ and /n/, a lateral liquid /l/, and two semi-vowels /y/ and /w/. Perhaps /h/ too should be classed as a resonant, as Kuipers (1967, 21) has done for Squamish and Hukari (1976b) has suggested for Cowichan. I have also recorded [r] in [santusprí], also given as [santusplí] ‘Holy Spirit’ (< Fr *Saint-Esprit*, possibly through Chinook Jargon), and in *čéris* ‘cherry.’

There may also be five glottalized resonant phonemes. Phonetically, there are glottalized resonants (i.e., resonants with accompanying glottalization), symbolized [ṛ̣], and resonants preceded and followed by glottal stops, [ʔR] and [Rʔ]. There seems to be some free variation between [ʔR] and [ṛ̣], and there is certainly a good deal between [Rʔ] and [ṛ̣], but never between [ʔR] and [Rʔ]. I have found no instances of contrastive distribution among any of the three. These observations allow for two possibilities: that there are two sequences of phonemes, /ʔR/ and /Rʔ/, with overlapping [ṛ̣] allophones, or that there is a single phoneme /ṛ̣/ that is realized in three ways. I have come to prefer the latter.<sup>7</sup>

Positing /ṛ̣/, we can say that its allophones seem to be determined by the stress and quality of adjacent vowels. In all environments where /ṛ̣/ occurs, [ṛ̣] seems to be a possible realization, but following a stressed full vowel (one other than schwa) and before an unstressed vowel, it is usually realized as [ʔR], e.g.,

6 Early in my work, I often recorded “k” for what turned out to be /q/, but much less often confused /kʷ/ and /qʷ/ or /ḳʷ/ and /q̣ʷ/.

7 In his own transcription, AG treated [ʔR] as /ʔR/ and what I hear as [ṛ̣] and [Rʔ] as /Rʔ/.

/lámət/ [láʔmət]	‘throw it at him’
/píwət/ [píʔwət]	‘freeze it’
/st <sup>θ</sup> ámáq <sup>w</sup> / [st <sup>θ</sup> áʔmaq <sup>w</sup> ~ st <sup>θ</sup> ámáq <sup>w</sup> ]	‘skull’

Following an unstressed vowel and before a stressed vowel, it is usually [Rʔ], e.g.,

/pəw <sup>é</sup> ls/ [pəwʔéls]	‘freeze’
/ləm <sup>é</sup> ls/ [ləmʔéls]	‘throw something’
/šx <sup>w</sup> í <sup>θ</sup> əmíwən/ [šx <sup>w</sup> í <sup>θ</sup> əmʔíwən]	‘pit, seed’
/həmá/ [həmá ~ həmʔá]	‘pigeon’

Between a stressed schwa and an unstressed vowel, it varies between [R̥] and [Rʔ], e.g.,

/mǎnə/ [mǎnə ~ mǎnʔə]	‘child, offspring’
/láməθət/ [láməθət ~ lámʔəθət]	‘bend over’

Elsewhere, between unstressed vowels and between a vowel and a consonant or zero, it is realized as [R̥], e.g.,

/st <sup>θ</sup> əmǎléxən/ [st <sup>θ</sup> əmǎléxən]	‘arm bone’
/st <sup>θ</sup> əmcəs/ [st <sup>θ</sup> əmcəs]	‘hand bones’
/st <sup>θ</sup> ám/ [st <sup>θ</sup> ám]	‘bone’
/spíw/ [spíw]	‘ice’
/lám/ [lám]	‘get hit by something thrown’

As may be seen from the examples, a root such as /píw/ ‘freeze’ or /st<sup>θ</sup>ám/ ‘bone’ can appear in several forms with the /R̥/ alternately [ʔR], [Rʔ], and [R̥]. Assuming /R̥/, we can identify this variation as purely phonetic. But one could of course posit /ʔR/ and /Rʔ/ and consider the variation to be one of phonologically conditioned allomorphs.

Glottalized resonants do not occur as freely as the plain resonants. They do not occur in morpheme-initial position, with three exceptions: the particles /mǎ/ ‘certain’ and /yéɪ/ ‘as usual,’ and /mí/, a reduction of /ʔmí/ ‘come.’

Although glottalized resonants can occur in roots, I have not noted any pairs of roots contrasting for glottalization of resonant only. Nevertheless, minimal pairs do exist. The glottalization of resonants plays a role in the morphology. For example, in progressive forms of the verb, resonants occurring after the stress (some, but not all, following rules not yet worked out) are glottalized; cf. /íɪləm/ ‘sing,’ /ííɪlǎm/ ‘be singing.’ In most progressive forms, this aspect is signalled by reduplication (as in the example) or a different vowel, and so the glottalization of any resonants is redundant and need not be very audible. However, for a few verbs the progressive differs from the perfective form by the presence of a glottalized resonant only; cf. /í<sup>θ</sup>ím/ ‘pick berries’ and /í<sup>θ</sup>ím̥/ ‘be picking berries,’ /í<sup>θ</sup>ím/ ‘pick’ and /í<sup>θ</sup>ím̥/ ‘be picking,’ /xé<sup>θ</sup>ím/ ‘cry’ and /xé<sup>θ</sup>ím̥/ ‘be crying.’

There is some variation in the strength with which Musqueam speakers glottalize resonants. Transcribing texts dictated by JP, I often wrote plain resonants and only later discovered that they were glottalized. The glottal constriction of [Ṛ] was especially gentle, the glottal stop of [ʔR] more apparent. CC's glottalized resonants were more easily heard but I missed some. In most Upriver dialects, glottalized resonants do not exist, while on the Island, they are, I believe, more sharply articulated. Downriver Halkomelem stands between the other dialect areas, linguistically as well as geographically, and possibly its speakers vary in this and other features depending on Island or Upriver influence.

## 1.2. VOWELS

Musqueam has five vowel phonemes:

	Front	Central	Back rounded
High	i	–	u
Mid	e	ə	–
Low	–	a	–

Two distinctions can be made among these vowel phonemes. First, four of them, /i/, /e/, /a/, and /ə/, are common, play important roles in the morphology, and are old in the language (being reflexes of earlier \*i, \*a, \*u, and \*ə, respectively), while /u/ occurs mainly in loan words, has no morphological role, and is very likely of recent origin.

Second, the full vowels, /i/, /e/, /a/, and /u/, can be distinguished from schwa /ə/. All five vowels occur both with and without stress, but schwa is by far the most common unstressed vowel. The full vowels occur with phonemic length, as /i:/, /e:/, /a:/, and /u:/, while schwa does not. The full vowels can be followed by glottal stops without restrictions, but schwa can be followed by a glottal stop only when it is unstressed and with a stressed vowel following the glottal stop. In the morphology, there is an alternation between schwa and the full vowels /i/, /e/, and /a/.

Unlike the consonant phonemes, which show little phonetic variation, the vowel phonemes vary considerably phonetically. The phoneme /i/ has three fairly distinct allophones. Following unrounded uvulars, it is realized as [e]. Preceding both unrounded and rounded uvulars, it is realized as [ɪ] with a central off-glide. Elsewhere, it is realized as a low [i] or high [e]. It can be lower before a glottal stop or glottalized resonant, but speakers seem to vary in this. The /e/ is realized as a low to mid-front vowel, [ɛ] or high [æ]. The /a/ is low and central to back, usually close to [a]. The /u/ is fairly high, back, and rounded, a low [u] or high [o].

The schwa phoneme /ə/ when stressed appears in most environments as a mid-central [ə], but before /x/ it is fronted and higher, approaching [ɪ]; before

/y/ it is also fronted, approaching [ɛ]; before /w/ it is lower and back, approaching [a]; and before rounded velars it seems mid-back, toward [o].

Unstressed /ə/ is by far the most common unstressed vowel, and it seems even more chameleon-like than stressed /ə/. Before /x/ and /y/ it can be as high as [ɪ] or even [i], and before labialized velars and /w/ it can be realized as [o] or [ʊ]. Moreover, an unstressed /ə/ can be assimilated, by a kind of vowel harmony, to a stressed /e/ or stressed /a/ in an adjacent syllable.

Vowels before semi-vowels are especially troublesome, the schwa coming close to one or another of the full vowels. To complicate things further, there are some instances of forms with /-ə́y/ and /-íʔ/ alternating, such as /sθəθə́y/ ~ /sθəθíʔ/ ‘right,’ ‘fixed,’ /šxʷəxʷə́y/ ~ /šxʷəxʷíʔ/ ‘awake.’ In these cases, the morphology should yield the /-ə́y/ form.<sup>8</sup>

The following sequences of stressed vowel and (plain or glottalized) semi-vowel can be distinguished:

/ə́y/ in /xʷə́y/ ‘wake up,’ /θə́yt/ ‘fix it,’ /čə́yxʷt/ ‘dry it,’ /ʔə́y/ ‘good,’ /swə́yqeʔ/ ‘man, male,’ /smə́yəθ/ ‘deer.’

/éy/ in /skʷéy/ ‘impossible,’ /θéýt/ ‘be fixing it,’ /čéýxʷt/ ‘be drying it,’ /sqʷəməý/ ‘dog,’ /θéýəmə/ ‘be baking,’ /héý/ ‘go ahead.’

/áy/ in /háy/ ‘stop,’ /qáy/ ‘die,’ /cqʷáy/ ‘yellow,’ /ʔáyəmə/ ‘slow.’

/ə́w/ in /sə́wq/ ‘seek,’ /ʔə́wkʷ/ ‘be used up,’ /šxʷə́wqən/ ‘swan,’ /ʔə́wə/ ‘no, not,’ /nə́wə/ ‘you.’

/éw/ in /héwt/ ‘rat,’ /sqéwθ/ ‘potato,’ /séwq/ ‘be seeking,’ /ʔéwkʷ/ ‘possessions.’

/áw/ in /yəsʔə́wθ/ ‘in a rush,’ /ʔə́wqʷ/ ‘being used up’ (DK), /ʔə́wə/ ‘hour.’

8 With both CC and JP, I often wrote “éy” for what turned out to be /ə́y/ and “áw” for what turned out to be /ə́w/. (A few of these errors appear in Elmendorf and Suttles 1960.) I had less difficulty hearing the differences in the speech of DK and AG, because, I believe, in their Cowichan-accented speech there is more vocal tension differentiating full vowels from schwa. But they were also able to state explicitly, “That’s a schwa.”

No wonder Hill-Tout (1903, 370-71) complained bitterly that in the mouth of an informant, “-i, ai, and -e, as -o and au, were constantly interchanging in the most bewildering fashion.” More recently, Thompson (1979, 697-98), discussing Salishan in general, has written:

Vowel systems are usually small, although vowels often exhibit wide variation. The central lax vowel ə, in particular, adapts strongly to its consonantal environments, and in many cases the foreign ear has great difficulty recognizing whether a variant of ; or one of a tense vowels is being heard.

I would add that there may be difficulties even for Native ears. A younger but fluent speaker once assured me that ‘be burning’ is /hə́yqʷ/ and that ‘fire’ is /héýqʷ/. For older speakers, however, there is only one word, /hə́yqʷ/ ‘be burning,’ which if preceded by an article is ‘that which is burning,’ that is, ‘fire.’ One must suppose that for this younger speaker, and perhaps others, the two words in English and the closeness of /ə́y/ and /éý/ promoted a reanalysis of the Native word, splitting it into two.

/íw/ in /spíw/ ‘ice,’ /qíwǵ/ ‘steelhead,’ /sníw/ ‘advice,’ /x<sup>w</sup>íwəl/ ‘go upstream,’ /níwət/ ‘advise him.’

/úy/ in one presumably borrowed word, /šək<sup>w</sup>íúy/ ‘turnip.’

I have recorded no instances of /íy/, /íỵ/, /úw/, or /úẉ/.

The unstressed vowels differ from the stressed vowels in several respects. Unstressed /i/, /e/, and /a/ are relatively uncommon. In the interpretation presented here, unstressed /u/ does not occur, /ə/ is the only unstressed vowel that occurs with semi-vowels, and many instances of [i] and [u] are realizations of /əy/ and /əw/, respectively.

When stressed full vowels of roots lose their stress, as when they take stressed suffixes, they usually appear as schwa or zero. In affixes, too, unstressed vowels are usually schwa, and a stressed vowel, with loss of stress, usually becomes schwa.

Unstressed /i/ does appear as an unreduced full vowel in some words with stressed suffixes, as in /θiθáɫəs/ ‘big-eyed’ (from θí ‘big’), and in the unstressed auxiliaries /ʔi/ and /ni/ ~ /ni/. It also appears as an infix in some verb forms, as in diminutives and duratives (for unstressed /i/ in progressives of duratives, see §7.5). Unstressed /i/ also appears as a rapid speech variant of the prefix /yə-/ ‘along,’ as an individual variant of the initial of /yəséɫə/ ~ /iséɫə/ ~ /ʔiséɫə/ ‘two,’<sup>9</sup> and as a schwa assimilated to /i/, as in /tiʔi/ for /təʔi/ ‘this.’

Unstressed /e/ and /a/ occur in a small set of noun roots of the form CVCV<sup>ʔ</sup>, e.g., /méseqeʔ/ ‘snow,’ /íéseqeʔ/ ‘salal berry,’ /sk<sup>w</sup>áyeʔ/ ‘squirrel,’ /náčaʔ/ ‘one,’ /sqámaʔ/ ‘breast,’ /šácaʔ/ ‘lake,’ /ščáɫaʔ/ ‘leaf,’ or CVRCV<sup>ʔ</sup>, as in /swəyqeʔ/ ‘man, male.’ Historically these unstressed vowels may be assimilated schwas; /e/ occurs most commonly following /é/ and /a/ most commonly following /á/, and there seems to be no schwa before a glottal stop in such an environment. But the occurrence of /e/ or /a/ here is not (at this point) entirely predictable. There are also individual differences. A reduplicated form of *náča* ‘one’ meaning ‘one person’ was pronounced /nánəčeʔ/ [nánəčeʔ] by CC but /náʔənčaʔ/ by JP. From both CC and JP I recorded *syáɫəx<sup>w</sup>a* ‘old person,’ but from AG I recorded *syáɫəx<sup>w</sup>e*. Unstressed /e/ and /a/ also occur in a few suffixes. And they occur as ex-schwas that have become assimilated to nearby full vowels (of which more below).

Unstressed /əy/ and /əỵ/ occur in such words as /yəθéɫəỵ/ ‘those,’ /qáɫəỵ/ ‘die (pl.),’ /sθéseəỵən/ ‘blood,’ /čəỵx<sup>w</sup>éɫs/ ‘dry something,’ /ʔəỵθát/ ‘become better,’ /slénəỵ/ ‘woman,’ ‘female,’ /qéməỵ/ ‘young woman,’ /sləwəỵ/ ‘shredded cedarbark,’ and /ʔəỵ/ ‘and.’ The unstressed /əy/ is phonetically [ɪy] or [i]; unstressed /əỵ/ can vary from [ɤỵ] to [ɪỵ] to [i]. I have three reasons for

9 Thinking I heard it from someone this way, I asked CC if ‘two’ could be pronounced [yəséɫə]. “No,” she said, “that’s wrong. But of course a lot of Indians say it that way.”

interpreting these as /əy/ and /əý/ rather than as /i/ and /iʔ/, as others (Gerdts 1981; Hukari and Peter 1995; and Galloway 1977) have done for other dialects.

First, in CC's and JP's speech (though not in AG's), there seemed to be a phonetic difference between unstressed /əy/ and especially unstressed /əý/ on the one hand and unstressed /i/ and /iʔ/ on the other. The word 'woman,' for example, can appear as [słéniʔ] or, especially in slower speech, with the final nearly as diphthongized and low, as [əý]. The conjunction 'and' I have recorded as [i], [əý], and even [ʔeý].<sup>10</sup> On the other hand, there are unstressed [i] vowels that I have never heard as diphthongs, e.g., those in the auxiliaries /niʔ/ and /ʔi/; /niʔ/ is usually /ni/ and can be reduced to /nə/, but it is never [nɨy], nor is the auxiliary /ʔi/ ever [ɨy]. Phonemicizing these variable elements as /əy/ and /əý/, even though they may overlap allophonically with /i/ and /iʔ/, thus preserves what I believe is a real distinction.

A second reason for this choice is that it simplifies the description of the morphology. For example, /qálay/ can be described as /qáy/ 'die' with the infix /-lə-/ 'plural,' paralleling /néṁ/ 'go,' /néləṁ/ 'go (pl).' And it preserves the basic form of the root; cf. /čəýxʷt/ 'dry it' and /čəýxʷéls/ 'dry something,' /əý/ 'good' and /əýθát/ 'get better.' (In these last two and in parallel forms, however, there may be an alternation of /əý/ and /iʔ/ such as mentioned in note 8 for /əý/ and /iʔ/: 'dry something' may be /čəýxʷéls/ ~ /čiʔxʷéls/.)

Third, I am sure I have been influenced by the fact that for some of these words there is comparative evidence for /y/. For example, cf. Halkomelem [słénaý] ~ [słéniʔ], Squamish *stánay*?, Lushootseed *stádəy*? 'woman.'

Unstressed /əw/, phonetically [əw] ~ [u], occurs quite often as an allomorph of the aspectual prefix /wə-/ 'established.' It appears prefixed to roots as /wə-/ but can also follow other elements as /-əw/, e.g., following /s-/ 'nominalizer' as /səw/ ([səw] ~ [sɨw] ~ [su]), generally translated 'then.' (In AG's speech, /wə-/ 'established' was never [wə] but invariably [ʔu] or [ʔuʔ].)

Unstressed /əw/ also appears in one set of demonstratives, /təwʔá/ ([təwʔá] ~ [tuʔá]) 'he, that non-feminine visible one,' /θəwʔá/ 'she, that feminine visible one,' etc. And it probably occurs in the prefix /təw-/ 'somewhat.'

Unstressed /əw̄/, phonetically [əw̄] ~ [oʔ], appears in a number of words like /stáləw̄/ 'river,' /éləw̄/ 'arm, wing,' /kʷələw̄/ 'skin,' /léłəw̄/ 'be escaping,' /ləw̄élqʔ/ 'miss a shot, lose a fish, have one's prey escape.' In this case too, phonemicizing /əw̄/ simplifies description of the morphology. For example, /léłəw̄/, the progressive of /léw̄/ 'escape,' is a case of CV reduplication with the second vowel reduced to schwa, paralleling /kʷáqʷ/ 'get hit,' /kʷákʷəqʷ/ 'be getting hit.' Moreover, for some of these words there is comparative evidence

10 Transcribing texts dictated by CC, I usually wrote 'and' as [i], occasionally as [ʔi], and a few times as [ʔəý]. CC's daughter DK went over these texts with me later and expressed the opinion that [i] was correct. Perhaps the form was actually /yi/. In the example sentences, I have tried to leave the first line as I heard it.

for /w/; cf. Halkomelem /stáləw̃/ ‘river,’ Lushootseed *stúlak*<sup>w</sup> ~ *stúləg*<sup>w</sup>- ‘river’ (cf. Halkomelem *nəw̃*-, Lushootseed *dík*<sup>w</sup> ~ *díg*<sup>w</sup>- ‘be/go inside,’ Halkomelem /nəwə/, Lushootseed *dəg*<sup>w</sup>í ‘you,’ Halkomelem /wét/, Lushootseed *gʷát* ‘who’).

### 1.2.1. Vowel Length

Vowel length, written /·/, is phonemic in Musqueam. Long and short full vowels (but not schwa) contrast, as in /wí·l/ ‘tule’ and /wíl/ ‘appear,’ /té·m/ ‘shout,’ and /stém/ ‘what,’ /smé·nt/ ‘rock, mountain’ and /mén/ ‘father,’ /pá·t/ ‘blow on it’ and /ləpát/ ‘cup,’ /qá·yt/ ‘kill him’ and /qáy/ ‘die,’ /tú·x<sup>w</sup>/ ‘nine’ and /pús/ ‘cat.’

Phonetically some of the long vowels followed by resonants differ from the others in that the lengthening is shared by the resonant, but these two varieties of long vowels have not been observed to contrast and so they are marked the same way. Probably all of these long vowels are the products of either recent phonological change or ongoing morphophonemic processes. These sources will be discussed in §1.5.3. and §1.5.6.

Short vowels can vary somewhat in length. Stressed full vowels before final resonants may appear longer than normal short vowels in deliberate speech, as in [nə há·y] ‘It’s finished,’ but re-eliciting shows these vowels to be short.<sup>11</sup>

Rhetorical lengthening also occurs in conversation and narrative. A speaker may prolong a vowel in a key word for several times its normal length for emphasis. I mark this /··/, for example, /cá·k<sup>w</sup>/ ‘It’s faaar!’ (cf. /cák<sup>w</sup>/ ‘far’), /səw háye··s təwʃáləm x<sup>w</sup>íwəl/ ‘Then awaaay they went upstream’ (cf. /háyeʔ/ ‘go away’).

## 1.3. STRESS AND PITCH

Stress consists of an increase in intensity and a rise in pitch. There are three levels of stress: primary (marked /·/), secondary (marked /˘/), and weak (not marked). In every full word (as opposed to particles), there is one vowel with primary stress. Its occurrence is not wholly predictable at this time and so it is best marked.

In uninflected words with more than one vowel, the primary stress is generally on the first vowel, as in /léləmə/ ‘house,’ /céləx/ ‘hand,’ /lówəʃ/ ‘rib,’ /məhə/ ‘child,’ /tʰɪx<sup>w</sup>tʰəx<sup>w</sup>/ ‘fishhawk,’ /ʃóʃ<sup>w</sup>ʃəʃ<sup>w</sup>/ ‘oyster.’ But there are exceptions, such as /wəqəq/ ‘snail,’ /x<sup>w</sup>əʔít/ ‘wedge,’ /xəmə/ ‘enemy.’ If the word contains a full vowel and one or more schwas, the full vowel usually bears the stress, as in the last two examples. But again there are exceptions, such as words with final glottal stop, which cannot be preceded by schwa, e.g.,

11 Kava (1969, 39), writing on Cowichan, identifies these as “half-long allophones” of the short vowels.

/nə́caʔ/ ‘one.’ As will be seen, various morphological processes involve shifts in stress.

Minimal pairs contrasting stress are rare but do exist. When a verb root consisting of a resonant, a schwa, and an obstruent is followed by *-t* ‘transitive,’ the primary stress can be on either the root or the suffix, giving us the minimal pair /máḱ<sup>w</sup>ət/ ‘salvage it’ and /məḱ<sup>w</sup>ət/ ‘finish it all.’ Compare also /máḱət/ ‘swallow it’ and /məḱət/ ‘bend it.’ For roots with schwa, dispositional-iterative and plural forms may differ in stress only; cf. /səḳsəḳ/ ‘likely to split’ and /səḳsəḳət/ ‘split it up, split several.’ (There may be an intransitive /səḳsəḳ/ ‘several split,’ but I have not recorded it.) Also, the assimilation of schwa to an adjacent full vowel (discussed in the next section) results in the minimal pair /stéʔe/ (~ stéʔə) ‘on the way’ and /steʔé/ (~ stəʔé) ‘like, resembling.’

The secondary stress appears often in words composed of a root that has retained the stress and a stressed suffix. I find that in recording such words I have been inconsistent in marking which stressed vowel had the primary stress and which the secondary. For example, I recorded ‘help me’ as *čéwəθámx* and as *čèwəθámx*. I believe now that my perception was probably influenced by the sentence intonation pattern. What I recorded as a secondary stress in words like *čéwəθámx* may have been falling pitch, which seems to be characteristic of the last stressed syllable of a phrase, rather than heightened intensity. But I prefer not to try to determine which is “right” and “correct,” so in the illustrating sentences I have left the stresses as I recorded them.

I have not attempted an analysis of the sentence intonation pattern or patterns. This needs to be done.

#### 1.4. PHONOTACTICS

Obstruents (excluding the glottals) commonly follow one another in sequences of up to four. A sequence of five is possible, as in /tx<sup>w</sup>stx<sup>w</sup>ás ʔaí/ ‘just standing in shock.’ There seem to be no restrictions on the kinds of sequences of obstruents that can occur. Plosives in sequences are rearticulated. Sequences of /ss/ are not uncommon and are clearly audible, usually as a lengthened [s:].

Resonants occur only adjacent to vowels. An initial resonant must be followed by a vowel and a final resonant preceded by one. Medially, sequences of resonant-obstruent, resonant-resonant, and obstruent-resonant occur.

The laryngeals are more restricted. /ʔ/ occurs only adjacent to a vowel. Within the words, it does not occur following an obstruent other than /s/. It can (and commonly does) occur following /s/, when /s/ is a prefix. It can occur before any vowel but does not occur in final position following a schwa. (Its occurrence with resonants has been discussed in §1.2.) /h/ occurs only before vowels. It can follow a resonant or one of the spirants /s/, /ʃ/, or /x<sup>w</sup>/ at a morpheme boundary, but does not occur following other obstruents. It can appear between an unstressed and a stressed vowel. It does not appear between a stressed and an unstressed vowel. (See §1.5.1 and §1.5.8.)

## 1.5. MORPHOPHONEMICS

Under this heading, I will discuss alternations that occur fairly commonly. They will also be identified, however, in the appropriate sections on the morphology, as will any alternations of limited occurrence.

### 1.5.1. Losses in Rapid Speech

In other than slow, deliberate speech, there may be optional loss of some instances of schwa, glottal stop, glottalization of resonant, and /h/.

An unstressed schwa following an initial nasal resonant may be lost. If there is a vowel preceding, the nasal may be heard as part of that syllable, as in /tə nəmén/ ~ /tən mén/ ‘my father’ (tə ‘article,’ nə- ‘my,’ mén ‘father’), /tə məstáyəx<sup>w</sup>/ ~ /təməstáyəx<sup>w</sup>/ ‘the person’ (tə ‘article,’ məstáyəx<sup>w</sup> ‘person’).

Occasionally /nə/ with no preceding vowel appears as a syllabic [n] (written simply /n/), as in /x<sup>w</sup>nəčáwəθ/ ~ /x<sup>w</sup>nčáwəθ/ ‘one kind.’ I have recorded no instances of syllabic [m] or [l], but instances of /i/ alternating with /yə/ and /əw/ with /wə/ are perhaps comparable.

Both medial and final glottal stop may be lost in rapid or casual speech. A glottal stop between a stressed full vowel and an unstressed vowel (which is likely to be assimilated to the preceding one, as discussed below) can be lost, leaving a long vowel but one with a falling pitch contour that seems distinct from the long vowels identified in §1.2.2, such as /máʔəq<sup>w</sup>/ ~ /máʔaq<sup>w</sup>/ ~ /máaq<sup>w</sup>/ ‘larger bird,’ /spéʔəθ/ ~ /spéʔeθ/ ~ /spéèθ/ ‘black bear.’

A glottal stop after an unstressed final (and so necessarily full) vowel may be lost, in which case the vowel may appear as schwa, as in /méqeʔ/ ~ /méqe/ ~ /méqə/ ‘snow.’

The glottalization of resonants after unstressed vowels in final position is often inaudible, as in /léləm/ ~ /léləmə/ ‘house.’ In rapid speech, it may become inaudible elsewhere after unstressed vowels, as in /sməné-m/ ~ /smənə-m/ ‘descendants.’

An /h/ before a stressed vowel may be, but is not invariably, lost when preceded by a spirant, as in /wəʔhíθ/ ~ /wəʔiθ/ ‘be already a long time,’ composed of /wəʔ-/ ‘already,’ /híθ/ ‘last long’; /shá-y̆/ ~ /sá-y̆/ ‘finished,’ the resultative of /háy/ ‘stop, finish.’ On the other hand, between a spirant and an unstressed vowel, /h/ is probably never heard, as in /ʃx<sup>w</sup>əlí/ ‘life,’ from /ʃx<sup>w</sup>/ ‘oblique nominalizer’ (here ‘means of’), /həlí/ ‘be alive.’

### 1.5.2. Assimilation of Schwa

An unstressed schwa may take on the quality of a full vowel adjacent to it or separated from it by a glottal stop. In the Musqueam of CC and JP, this is usual within the word when the stressed vowel is first. In such cases, the schwa will echo the first vowel, as in ‘large bird’ and ‘black bear’ given in §1.4.1. For CC and JP, /máʔaq<sup>w</sup>/ and /spéʔeθ/ are usual and those with the glottal stop lost are rapid or casual forms. For AG, /máʔəq<sup>w</sup>/ and /spéʔəθ/ are usual. Within the

root, progressive assimilation of schwa to a following full vowel may be less regular. For CC and JP, /stəʔé/ may be more usual than /stəʔé/ ‘like,’ but I recorded /x̣wəʔít/ ‘wedge’ in the one form only.<sup>12</sup>

Across morpheme boundaries, the assimilation of schwa to a full vowel is also variable, as in /niʔəx̣w/ ~ /niəx̣w/ ~ /ni·x̣w/ ‘that you did’ (/niʔ/ ~ /ni/ ‘auxiliary,’ /-əx̣w/ ‘you (subordinate subject),’ /stəʔé ʔə tθéʔ/ ~ /steʔé ʔe tθéʔ/ ~ /ste·tθeʔ/ ‘like that’ (/stəʔé/ ‘like,’ /ʔə/ ‘oblique particle,’ /tθéʔ/ ‘that’), /təʔí/ ~ /tiʔí/ ‘this’ (/tə/ ‘article,’ /ʔí/ ‘be here’). The more assimilated forms are heard in more rapid or more informal speech.

There are also instances of a sequence of two schwas realized as /é/. This happens when a word-final schwa is followed by a schwa in a particle (with or without an intervening glottal stop). The result is a stressed full vowel, as in /sílé-ɬ/ ‘deceased grandparent,’ composed of /sílə/ ‘grandparent,’ /-əɬ/ ‘past’; /ʔəwé-ɬ/ ‘isn’t? didn’t? etc.,’ composed of /ʔəwə/ ‘not,’ /ʔə/ ‘interrogative.’ These particular forms and a few others with /-əɬ/ ‘past’ seem to be usual if not obligatory. This realization of the two schwas as /é/ suggests the possibility that the final vowel in words like /sílə/ ‘grandparent’ is basically (or historically) an /e/ reduced to /ə/ because it is unstressed.

There are also a few roots that seem to consist of just a consonant and a full vowel. When such a root is followed by a suffix beginning with an unstressed schwa, the result is necessarily a long vowel, as in /pá-t/ ‘blow on it,’ from /pá/ ‘get hit by the wind,’ /-ət/ ‘transitive’; /q̣wé-t/ ‘make a hole in it,’ from /q̣wé/ ‘get through,’ /-ət/ ‘transitive.’

One root of this shape, /θí/ ‘big,’ assimilates to the initial vowel of some suffixes, as in /θá-q̣w/ ‘big-headed,’ from /-aq̣w/ ‘head’; /sθé-wtx̣w/ ‘big house (“smokehouse,” winter dance house),’ from /-ewtx̣w/ ‘house.’

### 1.5.3. Metathesis of Non-Labial Resonant and Schwa

There are a number of words or forms of words in which there is phonetically a somewhat lengthened vowel followed by a resonant other than /m/ or /w/ that may also be somewhat lengthened or syllabic, as in [smé·nt] ~ [smé·n·t] = /smé·nt/ ‘rock, mountain’; [q̣á·yt] ~ [q̣á·y·t] ~ [q̣á·it] = /q̣á·yt/ ‘kill him.’ For such words, there is evidence for a basic shape //CARəT// (C is any consonant,

12 Looking at variation such as between [máʔəq̣w] ~ [máʔaq̣w] ~ [máaq̣w] or [stəʔé ʔə tθé] ~ [steʔ·tθéʔ], I decided not to overphonemicize and therefore I have written variants as I heard them. For one reason, dialect and idiolect differences are such that what is an occasional casual form for one speaker may be the usual form for another. For another reason, it may be useful to preserve stylistic differences for the same speaker. In the examples, therefore, I have generally written the assimilated schwas as I heard them in the first line and what I believe to be the basic form in the second line. It might be useful to have some diacritical mark to indicate a schwa that has taken on the value of an adjacent full vowel, as in /máʔəq̣w/, /təʔí/, and /stəʔé ʔə tθéʔ/, but I have not attempted this.

A a full vowel [i.e., /i/, /e/, /a/, or /u/], R a resonant, and T an obstruent), indicating a shift in position of the resonant and schwa and the assimilation of the schwa. Perhaps historically the resonant became syllabic before the preceding vowel was affected.

The clearest evidence for this is in the forms of the verb roots of the shape /CAR/ with the suffix /-ət/ transitive, as in /ʔé-1t/ ‘stick it on, apply it,’ from /ʔé1/ ‘get stuck’; /qá-yt/ ‘kill it,’ from /qáy/ ‘die’ (see §7.2.1). The process is also seen in the subordinate passive paradigm; the person markers /-é1-/ ‘I’ and /-á1-/ ‘we, you (plural)’ and the subordinate passive suffix /-ət/ are realized as /-é-1t/ and /-á-1t/ (see §10.2.6).

This process no doubt also accounts for the long vowels in nouns of the shape /CÁ-RT/, as in /smé-nt/ ‘rock, mountain,’ /kʷá-ní/ ‘porpoise,’ /ʔé-yt/ ‘lingcod.’ In the case of /smé-nt/, the morphology shows it; the diminutive /smémnət/ implies a base //sménət// (see §8.4.1). There is also comparative evidence in Northern Straits *sjénət* ‘rock,’ *kʷánət* ‘porpoise,’ *ʔéyət* ‘lingcod.’

Although phonetically the resonant may share the lengthening in words like /smé-nt/, there seems to be no ambiguity in phonemicizing them this way, but it might be as defensible to write /smén-t/ or /sménnt/. The lengthening must be marked in some way, however, for it is not simply an automatic phonetic phenomenon in words of the shape /CART/; cf. [mémnt] /mémnt/ ‘pass out food.’ Nor is the metathesis automatic in words of the shape /CÁRəT/; cf. /ʔéyəq/ ‘get angry,’ /sméləkʷ/ ‘warrior’s hide shirt.’

#### 1.5.4. Glottalized Resonant Disengagement

When a root of the shape /CAR/ takes the suffix /-ət/ transitive, the resulting form has the shape /CAʔəRt/; cf. /wí1/ ‘appear,’ /wíʔə1t/ ‘make it appear.’ The expectable form would be \*/wí1ət/ phonetically \*[wí1ət], and so it appears that the resonant and schwa have switched positions (as in §1.5.3) but with the glottal stop protecting the schwa from assimilation. This process is also seen in the progressive forms of verbs with initial /n/, as in /néçt/ ‘change it,’ /néʔənçt/ (from //néñəçt//) ‘be changing it.’ The term “glottalized resonant disengagement” is, of course, defensible only if one accepts [ʔR] as /R/.

#### 1.5.5. Coalescence of Glottal Stop and Resonant

Occasionally a sequence /VʔVR/ (V is any vowel) undergoes an optional change in which the vowels coalesce and the glottal stop appears as glottalization of the resonant. This can happen to the possessive /ʔən-/ ‘your’ after an article; for example, /tə ʔən-/ can be realized as /tə ʔən-/ ~ /te-ń/ ~ /təń/.

#### 1.5.6. Loss of the First of Two Identical Resonants

There are words in which long vowels are followed by final resonants (some glottalized, some not) that can be phonetically longer than usual, as in [qʷí-ń] ~ [qʷí-ńń] phonemicized /qʷí-ń/ ‘ear,’ and [spá-1] ~ [spá-11] phonemicized

/spá·l/ ‘raven.’ For these we can infer a basic shape //CVRəR// in which the two resonants are identical, except possibly for glottalization. In some instances, it appears that the stressed vowel is a full vowel, in others a schwa. The process //CVRəR// → /Cá·R/ (or /CV·RR/?), like that identified in §1.5.3, may have, historically, involved metatheses of the first resonant and the schwa (with or without a stage in which the resonant and schwa became a syllabic resonant) rather than involving a simple loss of the medial resonant.

One instance of this process appears in the passive paradigm where /-ám-/ ‘you (passive)’ and /-əm/ ‘intransitive’ are realized as /-á·m/ (see §10.2.6). Another clear case is /xʷí·m/ ‘flow fast,’ composed of /xʷəm/ ‘fast’ and /-əm/ ‘intransitive.’ The source of the full vowel /i/ is not clear, but since schwa does not occur long, a lengthened vowel would have to be one full vowel or another.

Similar bases for /qʷí·n/ ‘ear’ and /spá·l/ ‘raven’ are suggested by two diminutive forms. For ‘ear,’ JP offered a diminutive, saying that although he had never heard it, it would be /qʷíqʷnən/ ‘little ear.’ This form implies a base //qʷənən//. A diminutive plural given by CC, /spəlápləl/ ‘lots of little crows,’ implies a singular diminutive (not recorded) \*/spápləl/, which in turn implies a base //spá·l/ (see §8.6).

Comparative evidence from within Halkomelem supports the case for this process; the Nanaimo dialect has medial resonants in several of these words where Musqueam and other dialects have long vowels (see Elmendorf and Suttles 1960, 32).

This process may also occur in instances of /l/ followed by /h/, as in /spé·l̥xən/, probably //spəl̥l̥xən// ‘prairies,’ the plural of /spəl̥xən/ ‘prairie’ (see §8.3.4).

### 1.5.7. Emergent /θ/

Historically, Halkomelem /θ/ is the reflex of an earlier \*c. The lexicon seems pretty consistently to reflect this. In two places in the morphology, however, there is a /θ/ that is probably the result of a coalescence of \*t and \*s. In the transitive verb paradigm, /θ/ appears as the realization of /-t/ transitive and a first- and second-person object marker that I identify as //S// (see §10.2.5). In the possessive paradigm in JP’s and AG’s speech (but not in CC’s and DK’s), /ʔəθ-/ appears as the realization of an allomorph of the second-person possessive that I identify as //ʔəT-// and an initial /s/ in the noun or nominalization (see §10.2.4).<sup>13</sup>

### 1.5.8. Intrusive /h/

There are a few roots that appear alone as CA, as in /θí/ ‘big,’ /qʷé/ ‘pass through,’ /pá/ ‘get blown on.’ When such a root is followed by a suffix beginning

13 My model for this use of morphophonemic symbols was William H. Jacobsen’s treatment of Washo morphophonemics in his course in the language at the University of Nevada.

with a stressed vowel, an /h/ appears, as in /θəhínəs/ ‘barrel-chested’ (< /-ínəs/ ‘chest’), /q<sup>w</sup>əhíłəm/ ‘go through’ (< /q<sup>w</sup>é/ ‘pass through,’ /-íłəm/ ‘move toward’), /spəhéłs/ ‘wind’ (< /s-/ ‘nominalizer,’ /pá/ ‘get blown on,’ /-éłs/ ‘activity’). It may be that these roots have an underlying CAC shape (a very common one) in which the final /h/ is not realized after the stressed vowel (a position in which it cannot occur); for example, //θíh// is realized as /θí/ ‘big.’ Or it may be that /h/ is simply automatic when an unstressed vowel is followed by a stressed vowel. (For possible CAh roots, see §7.2.4.)

### 1.5.9. Alteration of /n/ and /l/

A few suffixes with initial /n/ have forms with initial /l/ when added to a root or stem ending in /l/. The transitive suffix /-nəx<sup>w</sup>/ ‘limited control’ appears as /-ləx<sup>w</sup>/ in /łəq̄łłəx<sup>w</sup>/ ‘know it’ and /cəłłəx<sup>w</sup>/ ‘catch up with him’ (cf. /céłt/ ‘follow him’). But this may vary with speakers; JP said /təłłəx<sup>w</sup>/ but CC said /təłnəx<sup>w</sup>/ for ‘understand it, learn about it’ (cf. /təł/ ‘be understood, be settled’). The suffix /-namət/, the reflexive of /-nəx<sup>w</sup>/, appears as /-lámət/ in /k<sup>w</sup>éłlámət/ ‘manage to get a hideout’ (< /k<sup>w</sup>éł/ ‘hide’; cf. /k<sup>w</sup>éłx/ ‘hide him’). The applicative /-nəs/ ‘goal’ appears as /-ləs/ in /łéyələs/ ‘leave him’ (cf. /łéyəl/ ‘get out of the way’). And the lexical suffix /-nəc/ appears as /-ləc/ in /słəłləc/ ‘bum’ (from /łəl-/ ‘behind’), /s<sup>ʔ</sup>əłləc/ ‘stump, base of standing tree’ (from /łəl-/ ‘dummy root’), and /šx<sup>w</sup>łəpələc/ ‘tail’ (cf. /łəp/ ‘deep,’ /łpíl/ ‘go downward’), and as /-əłləc/ (probably composed of a connective /-əl-/ and /-nəc/) in /x<sup>w</sup> əq̄<sup>w</sup>əłləcət/ ‘cut its tail off’ (from /łəq̄<sup>w</sup>/ ‘get cut off’). There is also a form /-əłəc/ in /x<sup>w</sup>əp̄ləcəm/ ‘wipe one’s bum.’ The lexical suffix for ‘tooth’ has the forms /-nís/, /-nəs/, and /-əłəs/, the last in /θíθəłəs/ ‘big teeth,’ /łəłqtəłəs/ ‘long teeth,’ etc. The Cowichan form corresponding to /-əłəs/ is *-əlnəs* (Hukari and Peter 1995, 318), suggesting that the Musqueam /-nəs/ became assimilated to the connective /-əl-/.

### 1.5.10. Alternation of /c/ and /k<sup>w</sup>/ and of /x/ and /x<sup>w</sup>/

In the progressives and resultatives of a few verbs with initial /c/ or /x/ followed by /a/, the /c/ is reduplicated as /k<sup>w</sup>/ and the /x/ as /x<sup>w</sup>/. This is seen in /cám/ ‘go/come inland’ and its progressive /cák<sup>w</sup>əm/ ‘be going/coming inland,’ in /xák<sup>w</sup>/ ‘get bathed’ and its progressive /xák<sup>w</sup>k<sup>w</sup>əm/ ‘be getting bathed,’ and in /x<sup>w</sup>xáp̄əθət/ ‘sit cross-legged’ (from the root √xap̄) and the resultative /sxák<sup>w</sup>əp̄/ ‘seated cross-legged’ (see also §7.2.1.1). This irregularity is probably the result of historical change. The process must have been:

\*kúm > \*kúkum > \*kúk<sup>w</sup>um > \*čúk<sup>w</sup>əm > cák<sup>w</sup>əm

First, the root was reduplicated by a grammatical rule. Then, the second \*/k/ was labialized under the influence of the preceding /u/. Next, the initial \*/k/ was palatalized to become \*/č/, and perhaps at this point the second vowel was

reduced to /ə/. In this process, the second \*/k/ was protected from palatalization by labialization. Finally, the \*/u/ became /a/, and the \*/č/ became /c/.

There is one apparent root with /c/ that reduplicates as /kʷ/ in which the following vowel is not /a/. This is the /cə-/ ~ /ce-/ that appears in several interrogative words (see §17.7-17.13), as in /xʷcél/ ‘go where’ and its progressive /xʷcékʷəl/ ‘be going where.’ This irregularity must be the product of a more complex history.

### 1.5.11. Vowel Gradation

Alternation of a full vowel, schwa, and zero, depending on the type of root or stem, type of suffix, and placement of stress, occurs widely in the morphology and will be described there, where relevant.

### 1.5.12. Vowel Mutation

The joining of some suffixes to some stems results in a change in the quality of the stressed vowel, from one full vowel to another, in the stem, or, rarely, in the suffix. Three kinds of mutation of this sort have been discovered. Only the first occurs commonly.

(1) Stem /e/ to /a/. There are several suffixes that have this umlaut effect, causing an /e/ in the stem to appear as /a/. These include both grammatical and lexical suffixes. For some the effect seems quite regular, but for others only a few mutated forms have been recorded. These suffixes are listed below with a few examples showing the mutation. The first three are grammatical suffixes that seem to have this effect quite regularly.

-θət ~ -θát	‘oneself’
íáʔθət	‘test oneself’ (cf. íéʔt ‘test him, try it’)
páθəθət	‘spread out’ (cf. péθət ‘spread it out’)
kʷtáθət	‘capsize’ (cf. kʷtét ‘spill it, tip it over’)
θáyθət	‘be fixing oneself’ (cf. θáyθət ‘fix oneself,’ θáyt ‘fix it,’ θéyt ‘be fixing it’)
nácθət	‘become different’ (< néč ‘differ, be different’)
siʔámθət	‘become rich’ (< siʔém ‘rich, upper-class person’)
-təl ~ -tál	‘each other’
íáí:tál	‘keep testing each other’ (cf. íéʔt ‘test him’)
nəčnáč:təl	‘differ from one another’ (< néč ‘differ’)
čtámántəl	‘half-sibling with the same father’ (< čt- ‘fellow-, co-,’ mén ‘father’)
-aʔt	‘attributive’
snác:aʔt	‘different, somebody else’s’ (< s- ‘nominalizer,’ néč ‘differ’)
siʔámaʔt	‘wealthy person’s’ (< siʔém ‘rich, upper-class person’)
syəwáñaʔt	‘old-time, ancestral’ (cf. syəwén ‘ancestor,’ yəwén ‘before’)

There are two combinations of grammatical suffixes that have this umlauting effect, at least in some words. These are the passive endings /-nəm/ (the passive of /-nəx<sup>w</sup>/ ‘limited control transitive’) and /-stəm/ (the passive of /-stəx<sup>w</sup>/ ‘causative’). We see this effect in the following:

<i>ǰáńəm</i>	‘be brought back as a bride’ (cf. <i>ǰéʔt</i> ‘go and get him, invite him’)
<i>həyáʔstəm</i>	‘be taken away’ (< <i>həyéʔstəx<sup>w</sup></i> ‘take him away,’ < <i>həyeʔ</i> ‘leave’)
<i>nəʔáməstəm</i>	‘be taken away’ (< <i>nəʔémeəstəx<sup>w</sup></i> ‘take him away,’ causative of <i>néń</i> ‘go’)
<i>xtáməstəm</i>	‘be swum away with’ (< <i>xtéməstəx<sup>w</sup></i> ‘swim away with it,’ <i>xtém</i> ‘swim’)

Three lexical suffixes have this effect. Examples with the first are numerous, with the second fewer, and with the third only the one given.

<i>-ás ~ -əs</i>	‘face, round object’
<i>x<sup>w</sup>ǰáqtəs</i>	‘long-faced’ (< <i>ǰéqt</i> ‘long’)
<i>ʔisáĺəs</i>	‘two dollars’ (< <i>ʔiséĺə ~ yəséĺə</i> ‘two’)
<i>páʔaθəs</i>	‘bear mask (a type of <i>sxwayxwey</i> )’ (< <i>spéʔeθ</i> ‘black bear’)
<i>aq<sup>w</sup> ~ -əq<sup>w</sup></i>	‘head’
<i>ǰáqtaq<sup>w</sup></i>	‘high (of a mountain)’ (< <i>ǰéqt</i> ‘long’)
<i>ǰəláqtaq<sup>w</sup></i>	‘long-heads (i.e., the Kwakiutl with Quatsino-style head-lengthening)’
<i>yəsállaq<sup>w</sup></i> (probably <i>yəsállaq<sup>w</sup></i> )	‘two-headed’ (in a translation of a Snohomish song) (JP) (< <i>yəséĺə</i> ‘two’)
<i>-ətcə</i>	‘water’
<i>θáʔətətcə</i>	‘dark tide (i.e., a low tide on a moonless night)’ (< <i>θéʔt</i> ‘dark’)

(2) Stem /a/ to /e/. This has been recorded in one word only, /pé-í<sup>θ</sup>eʔ/ ‘buzzard (turkey vulture),’ which appears to be composed of the root of /spá-ĺ/ ‘raven’ and the suffix /-í<sup>θ</sup>eʔ/ ‘clothing, blanket.’

(3) Suffix /e/ to /a/. This has been recorded in one word only, /sǰəǰəxán/ ‘partner,’ which is composed of /sǰəǰáʔ/ ‘accompanying’ and the suffix /-xən ~ -xén/ ‘foot.’

These vowel mutations are no doubt the product of the assimilation of one vowel to that of an adjacent syllable at an earlier stage in the history of the language. In the first and second types, the vowel mutation is comparable to the umlauting effect of a suffix on the stem in Germanic languages, while in the third it is comparable to the effect of the stem on the suffix in the vowel harmony of Uralic and Altaic languages.

## 1.6. SPECIAL FORMS OF SPEECH

I am aware of some distinctive features that are heard in songs, baby talk, and the speech of a few animal characters in stories. I do not have many examples, however, and so there may be other features I have not recorded.

In songs, to judge by a very few examples, vowels may be lengthened and to some extent changed in quality. In a song composed for a *sɬʷáyɬʷəy* performance, the phrase *tə nəmémə́n̄* ‘my dear father’ appears as *te nememə́n̄*. In this song, the compound prefix *ɬxʷ-* ‘oblique nominalizer’ appears as *səxʷ-*. I do not know whether this is an older pronunciation of the prefix or an instance of a schwa being introduced simply to separate the consonants.

Adults speaking to babies, as mentioned in §1.1.1, will substitute the rare unrounded velars for unrounded uvulars, as in *káʔ* for *qáʔ* ‘water’ and in /kɛʔek/ for /qɛʔeq/ ‘younger sibling’ used affectionately. AC’s much older half-brother addressed him this way throughout life. The /k/ also substitutes for /q/ in /skánək/ for /sqánəq/ ‘dear.’ A Tsawwassen woman is said to have been called this as a pet name by her family all her life. I have recorded /k/ in only one word, /skíkənək/, the baby-talk form of /sqíqənəq/, the diminutive of /sqánəq/ ‘dear.’ A Musqueam man is said to have been called this as his ordinary name, and a younger sister might be called this.

In stories told by James Point, the characters Raven and Mink both begin words, generally the initial words in a clauses, with *ɬ-*. He also said that an initial *ɬ-* was used in talking to dogs, adding, “A trained dog is supposed to talk that way; it will show it’s teeth and laugh ‘*ɬ...*, *ɬ...*, *ɬ...*.” A niece talked to her dog Daisy that way, saying “*ɬstém kʷeeθɬíʔ* (‘What do you want?’),” and when offering food, “*ɬɬəwəls ɬxʷ yəwén* (‘Bark first’).”

The very few examples I have of spells (verbal formulae with inherent power) suggest that while they contain esoteric vocabulary, there is nothing distinctive in their phonology.

## 2 Synopsis of Morphology

### 2.1. WORDS

A word may consist of a root standing alone and unaltered, or of a root altered by one or more processes of internal modification or accompanied by one or more affixes or both. We can distinguish several classes of words. Verbs (§7) and nouns (§8) constitute two large open sets, adjectives (§9) a smaller open set, and adverbs (§18) a still smaller one. There are also several small closed sets: personal words (§14.2.7), possessive words (§14.2.8), demonstratives (§15.2), interrogative words (§17), numerals (§19), and exclamatory words (§20). Four (lexical) verbs also serve as auxiliary verbs (§3.2.1), and several verbs also serve as prepositions (§3.1).

Except for a few adverbs, all words can function as predicate heads and so there is no basis in this function for distinguishing verbs, nouns, and adjectives. Nevertheless, there are other bases for distinguishing these classes and not doing so would, I believe, needlessly mystify the language, making it seem more exotic than it really is. The most obvious differences are these: verbs have progressive forms and (with a few exceptions) cannot take possessive affixes, nouns do not have progressive forms and do take possessive affixes, while adjectives neither have progressive forms nor take possessive affixes. Verb roots and noun roots also have different canonical shapes.

Compounding seems rare or non-existent. For possible examples, see §12.3.3 and §13.3, and for noun modifiers of nouns, see §4.1.3.<sup>1</sup>

### 2.2. ROOTS AND THEIR INTERNAL MODIFICATION

The great majority of verb roots have the shapes CAC, CəC, and CəCC (C is any consonant and A is any full vowel), while noun roots most commonly have

---

<sup>1</sup> A few recent coinages that are constructed from borrowed elements or are loan translations may perhaps be identified as compounds, such as *ləmətú tıntən* ‘sheep bell’ (CJ *ləmətú* ‘sheep,’ *tıntən* ‘bell’) (see §4.1.3), *pípə tēlə* ‘paper money’ (CJ *pípə* ‘paper,’ *tēlə* ‘money, dollar’), *číkman tēlə* ‘coins’ (CJ *číkman* ‘metal, iron’), *kəlisməs θqét* ‘Christmas tree’ (*θqét* ‘tree’).

the shape CVCVC (V is any vowel), but show a greater variety than verb roots. Adjective roots are more like verb roots in that the most common shapes are CəC and CAC, but there is some variation.

We can identify roots as verbal, nominal, and adjectival, but we must note that there is a prefix that nominalizes verbs and adjectives, there are several prefixes that make verbs of nouns, and there are several ways of making adjective-like words out of nouns.

Processes of internal modification of the root include reduplication (of initial CV and CVC), infixation, shift in stress and vowel grade, and glottalization of resonants. The first two affect the root only; the last also affects suffixes. These processes express progressive and other aspects, plural, and diminutive. Overall, there is no one-to-one relationship between process of internal modification of the root and grammatical form. Roots of different shapes can undergo different processes to produce grammatically identical forms. It appears that most forms can be predicted from the shape of the root, although there are also many irregular forms.

Verb roots can be internally modified for progressive, durative, iterative-dispositional, and resultative aspects, for the plural, for the diminutive, and for various combinations of these. Nearly all verbs have progressive forms. The verb root is identifiable as perfective, as opposed to progressive, aspect (compare the perfectives *péi<sup>θ</sup>* ‘sew,’ *sə́q* ‘split, tear,’ and *k<sup>w</sup>ə́t* ‘spill, flow’ with the progressive *pé́pə́i<sup>θ</sup>* ‘be sewing,’ *səsə́q* ‘be splitting, be tearing,’ and *k<sup>w</sup>ə́k<sup>w</sup>ə́t* ‘be flowing’). The choice between perfective and progressive forms is obligatory. A number of verbs also have a durative aspect, which can appear in both perfective and progressive forms (compare *qí́k<sup>w</sup>ə́t* ‘bite it’ and *qí́qə́k<sup>w</sup>ə́t* ‘be biting it’ with *qə́qk<sup>w</sup>é́t* ‘hold it in the teeth’ and *qí́qk<sup>w</sup>é́t* ‘be holding it in the teeth’). A number also have an iterative-dispositional aspect (as *sə́qsə́q* ‘easy to split,’ *k<sup>w</sup>ə́tk<sup>w</sup>ə́t* ‘cranky, easily tipped over,’ *sə́qk<sup>w</sup>ə́qk<sup>w</sup>* ‘prone to bite’), which for a few roots appears in a progressive as well as a perfective form. Most verbs have resultative forms (as *spé́pə́i<sup>θ</sup>* ‘sewed,’ *ssəsí́q* ‘spit, torn,’ and *s<sup>k<sup>w</sup></sup>ə́k<sup>w</sup>í́t* ‘spilled, capsized’), which are adjective-like and do not have the perfective–progressive distinction. The plural can be marked, optionally, in nearly all of these forms, that is, there can be plural perfective, plural progressive, plural durative, plural iterative-dispositional, and plural resultative forms. The diminutive and diminutive plural are also optionally marked, but only in the progressive and resultative aspects. The internal morphology of the verb is presented in §7.

Noun roots can be internally modified for the plural, the diminutive, and the diminutive plural (compare *cé́lax* ‘hand,’ *cə́lcé́lax* ‘hands,’ *cé́clax* ‘little hand,’ *cə́lé́clax* ‘lots of little hands’). A few have what seem to be resultative forms. As nouns, they do not have progressive forms, but a noun may be made into a verb by means of a verbalizing affix and then have a progressive form. The internal morphology of the noun is described in §8.

Adjective roots, like noun roots, can be internally modified for plural, diminutive, and diminutive plural. They have progressive forms only if made into verbs through an affix. Their internal morphology is described in §9.

A small set of roots that do not undergo any internal modification can be identified as adverbs. These and a number of other words and phrases that perform adverbial functions are described in §18.

A few of the demonstrative words, personal words, interrogative words, and numerals also undergo internal modification.

### 2.3. AFFIXES

Strictly speaking, there are prefixes, suffixes, and infixes. However, I have chosen to describe the infixes, along with reduplication and other processes, under the heading “internal morphology of the root,” as described above. This leaves prefixes and suffixes to be accounted for under “affixes.” In theory, affixes should also be divisible into inflectional or derivational, depending on their involvement in paradigms, and grammatical or lexical, depending on their meaning. In reality, however, a number of Halkomelem affixes mix these categories. For descriptive purposes, I have simply divided the affixes into non-personal affixes (§11-13) and personal affixes. The latter are included in the person system (§14).

The non-personal affixes are described under four headings: suffixes of the voice system, aspectual and modal affixes, derivational affixes, and lexical suffixes.

Suffixes of the voice system (see §10) include transitive, intransitive, causative, permissive, applicative, reflexive, reciprocal, and subordinate passive.

Most verb roots are semantically inactive or patient-oriented (i.e., they have glosses like ‘get hit,’ ‘get buried,’ or ‘get washed,’ there being no roots with glosses ‘hit,’ ‘bury,’ or ‘wash’), but there are a few that are semantically active or agent-oriented (e.g., ‘look,’ ‘seek’). All are grammatically intransitive. They take subjects only.

With the suffixes of the voice system relations are different. A verb composed of an inactive root and an intransitive suffix is still grammatically intransitive but is semantically active (agent-oriented) and can take an oblique object. A verb composed of either an inactive or active root and transitive suffix is grammatically transitive and can take an object. The transitive suffix also provides the necessary base for an object or passive person suffix. The applicatives change the valence of the verb root, allowing what would have been in an oblique relationship to it to be its grammatical object.

The two most commonly used transitive suffixes, as well as their reflexive counterparts, distinguish actions performed with limited control or done accidentally from those performed with full control or purposefully.

The aspectual and modal affixes (§11) include aspectual prefixes and modal suffixes. The aspectual prefixes (§11.1) are a small set of elements with aspectual or adverbial meaning that can precede a predicate head and that express mainly temporal distinctions such as ‘already,’ ‘still,’ ‘habitually,’ but also ‘become’ and ‘somewhat.’ One of these, *wə-*, tentatively identified as ‘established,’ occurs very often and in a variety of ways that still present problems in analysis. (Further analysis may also identify some or all of these as particles rather than prefixes.)

The modal suffixes (§11.2) are a still smaller set of elements that can follow suffixes of the voice system. The only two recorded indicate desire or intention and search or arrangement.

The derivational affixes (see §12) include some that have purely grammatical meaning, simply converting a word from one class to another; some that combine grammatical and lexical meaning; and others that have purely lexical meaning. On the basis of form, function, and meaning, we can distinguish a small set of purely grammatical affixes, a small set of verbalizing affixes, and a small set of lexical prefixes.

The purely grammatical affixes (§12.1) include a nominalizing prefix, a prefix that appears in resultative forms of the verb, a prefix that seems to show an oblique relationship between a verb root and lexical suffix, a compound of the nominalizer and the last, and a suffix that forms adjective-like words. Of these, the prefix *s-* ‘nominalizer’ deserves special mention here. It appears as an essential part of a number of nouns and appears prefixed to verbs and adjectives, which can thereupon take possessives. But it does not function simply as a component of nouns. It plays a role in the formation of one type of relative clause (§4.1.1.2) and in the formation of nominalized clauses (§4.3). The compound prefix *šx<sup>w</sup>-* ‘oblique nominalizer’ plays parallel roles. In their roles as clause nominalizers, *s-* and *šx<sup>w</sup>-* may also be identified as particles.

The verbalizing affixes (§12.2) combine this function with lexical meanings, as *c-* ‘get, make, do, go to,’ *l-* ‘partake of,’ *tx<sup>w</sup>-* ‘buy,’ and *-əl* ~ *-il* ‘move toward, become,’ *-át* ‘travel by,’ *-im* ‘die from.’ The lexical prefixes (§12.4) include *təm-* ‘time of,’ *-tən* ‘originating from,’ and *čl-* ‘fellow.’

Logically the lexical suffixes should be included among derivational affixes, but they form such a large class that I have given them a separate section (§13). They are nominal in meaning, referring to body parts (as *-əs* ~ *-as* ‘head,’ *-aq<sup>w</sup>* ‘head,’ *-cəs* ‘hand’), common artifacts (as *-əwtx<sup>w</sup>* ~ *-éwtx<sup>w</sup>* ‘house,’ *-wət* ‘canoe’), natural phenomena (as *-əlp* ‘plant, tree,’ *-ənəp* ‘ground’), and a variety of other things. They are often joined to the root with a connective element, which may give the suffix a narrower meaning. A lexical suffix can be related to a verb root as object, locus, or instrument; to an adjective root as noun head; or to noun root as noun possessor or as noun head of noun modifier. Words formed with lexical suffixes can be verbs, adjectives, or nouns.

## 2.4. THE PERSON SYSTEM

The personal affixes are only a part of the personal system, which is presented as a whole in §14. The language distinguishes first, second, and third persons in singular and plural. (There are neither dual forms nor inclusive/exclusive distinctions.) These persons are expressed in two sets of words, in particles of two sorts, and in affixes of six types.

For the first and second persons, particles and suffixes distinguish subjects and objects and, among subjects, non-passive from passive and main-clause from dependent-clause subjects. For third person, in main clauses a suffix marks transitive subjects while intransitive subjects and objects are unmarked, but in dependent clauses both transitive and intransitive subjects are marked.<sup>2</sup> There is also a set of possessive affixes; these are prefixes for first and second person singular, suffixes for first-person plural and third person, and a combination or prefix and suffix for second-person plural. A particle marks plurality for third-person subjects, objects, and possessors.

The two sets of words are personal words and possessive words. The personal words (§14.2.7) can serve as predicates with the sense ‘It is I, I am the one who,’ etc., and as oblique nominal adjuncts comparable to English personal pronouns as objects of prepositions. The possessive words (§14.2.8) can serve as predicates with the sense ‘It is mine,’ etc.

## 2.5. THE ORDERING OF AFFIXES

Derivational prefixes and suffixes form an inner layer around the root, while inflectional affixes form an outer layer. Among derivational affixes, those with lexical meaning stand closer to the root than those with purely grammatical meaning. Among inflectional affixes, those of the voice and person systems stand closer than the aspectual prefixes and modal suffixes.

Preceding the root, the verbalizing and miscellaneous lexical prefixes (derivational with lexical meaning) stand closest to it. If a word formed with a lexical prefix is a noun, a first-person singular or second-person possessive prefix (inflectional) can precede the lexical prefix, as in:

- (a)  $n\acute{a}\acute{c}\acute{t}x\text{ }^w\acute{o}lm\acute{x}^w$   
 $n\acute{a}\text{-}\acute{c}\acute{t}\text{-}x\text{ }^w\acute{o}lm\acute{x}^w$   
 my-fellow-people  
 ‘my fellow villagers, my fellow Indians’

If a verb formed with a verbalizing prefix is nominalized, the nominalizer (derivational with purely grammatical meaning), symbolized NOM, precedes the verbalizer and it can be preceded by a possessive, as in:

2 Thus as Gerdts (1981) has pointed out, the language is split in its case system, making a nominative-accusative distinction for first and second persons but an ergative-absolutive distinction for third person in main clauses.

- (b)  $n\acute{a}scl\acute{a}'\theta\acute{a}n$   
 $n\acute{a}-s-c-l\acute{a}'\theta\acute{a}n$   
 my-NOM-make-plate  
 ‘something to serve as my plate’

If a word with a possessive prefix is a predicate, it can take an aspectual prefix, as in:

- (c)  $x^w\acute{a}'\theta w\acute{e}'\acute{a}l\acute{a}p.$   
 $x^w\acute{a}-'\theta T-s-w\acute{e}'-\acute{a}l\acute{a}p$   
 become-your-NOM-own-your (pl)  
 ‘It has become yours.’

Following the root, the lexical suffixes (derivational) appear first (with or without connective elements). A noun formed with a lexical suffix can have a possessive suffix following it, as in:

- (d)  $x^w\acute{a}lm\acute{a}x^w\acute{e}wtx^wct$   
 $x^w\acute{a}lm\acute{a}x^w-\acute{e}wtx^w-ct$   
 Indian-house-our  
 ‘our “smokehouse”’

A verb formed with a lexical suffix can take suffixes of the voice system followed by suffixes of the personal system, as in:

- (e)  $x^wq^w\acute{e}n\acute{a}ct\acute{a}s.$   
 $x^w-q^w\acute{e}-n\acute{a}c-t-\acute{a}s$   
 inward-penetrate-bottom-TR-3TR  
 ‘[She] punches holes in the bottom of it.’

Passive forms are exceptional in that a suffix of the voice system stands on either side of the personal suffix, as in:

- (f)  $x^w\acute{t}^{\theta}i\acute{q}^w\acute{a}sn\acute{e}l\acute{a}m.$   
 $x^w-\acute{t}^{\theta}i\acute{q}^w-\acute{a}s-n-e l-\acute{a}m$   
 inward-get.hit-face-TR-I.PASSIVE-INTRANS  
 ‘I was (accidentally) hit on the face.’

## 2.6. AMBIVALENT AFFIXES

Five morphemes, the possessives  $n\acute{a}$ - ‘my’ and  $'\theta n$ - ‘your,’ the aspectual prefixes  $w\acute{a}$ - ‘established’ and  $w\acute{a}t$ - ‘already,’ and the  $s$ - ‘clause nominalizer’ (see below) deserve a special comment. I have identified the first four as prefixes, and in the second line of the examples I treat all five as such. However, phonetically they may, but do not necessarily, become attached to preceding morphemes. Where I recorded this, it appears in the first line of the examples.

A possessive may become attached to a preceding article, as in (a).

- (a) tən mén  
 tə nə-mén  
 ART my-father  
 ‘my father’

One of the aspectual prefixes may become attached to a preceding clause nominalizer, as in (b).

- (b) səw néms.  
 s-wə-ném-s  
 NOM-EST-go-3POS  
 ‘Then he went.’

The clause nominalizer may become attached to a preceding article, as in (c).

- (c) kʷs néms  
 kʷə s-ném-s  
 ART NOM-go-3POS  
 ‘when he went’

For more complex clusters, see §4.3.4.

## 2.7. PARTICLES

What distinguishes a particle from an affix is the fact that it is the partner not of a single root or stem, as an affix is, but of a larger construction such as a predicate, a nominal adjunct, a clause, or a sentence. Particles are also movable and separable from the heads of the constructions they relate to, while affixes firmly adhere to their roots or stems. With few exceptions, the particles are unstressed. Phonetically most seem separate from adjacent words (and are written so), but a few seem phonetically like affixes (and are written so). Particles can also form clusters that seem to be phonetic units.

On the basis of the constructions they relate to, we can distinguish particles that relate to predicates and those that relate to nominal adjuncts.

The particles that relate to predicates include clause-initial particles, second-position particles, and sentence-final tags.

There are four clause-initial particles. These introduce two kinds of embedded clauses. Two are the clause subordinaters, *wə-<sub>1</sub>* ‘if, when, that’ and *ʔət-* ‘whenever, whatever, that.’ These can precede the first word in a clause, marking it as a subordinate clause. If the subordinate clause is non-passive, its subject is expressed by a subordinate subject suffix, if passive by a subordinate passive form. (See §4.2, “Subordinate Clauses.”) The other two clause-initial particles are *s-* ‘nominalizer’ and *šx-* ‘oblique nominalizer’ in their roles as clause nominalizers. Either of these can precede the first word in a clause and serve to nominalize the whole clause. If the nominalized clause is non-passive, its subject is expressed by a possessive; if it is passive, the subject is expressed by a subordinate passive form. (See §4.3, “Nominalized Clauses.”)

There are about twenty second-position predicate particles. Some of these are introduced in §3.1.2. For details, see §16. Usually these appear after the first word in the predicate. Four distinguish first- and second-person singular and plural subjects in non-passive main clauses. Another, somewhat freer in its possible positions, is the third-person plural marker. These five are dealt with primarily in §14, “The Person System.” Of the non-personal second-position predicate particles, two mark tense, past and future. Most of the others are modal, distinguishing questions, requests, exclamations, quality of information, and so on. These and the sentence-final tags are described in §16.

The nominal particles include the articles and the oblique case marker. The articles include (1) a set of six members (with some variants) identifiable by the intersection of two distinctions: gender (feminine versus non-feminine) and position (present and visible, nearby but invisible, remote or hypothetical); and (2) a single article marking a proper noun in the oblique case. The articles serve to introduce nominal adjuncts, and they enter into the formation of several sets of demonstratives that can also introduce nominal adjuncts or stand as nominal adjuncts themselves. The articles, as well as the demonstratives, are described in §15.

The oblique particle  $\text{ʔə}$  serves as a case marker introducing oblique nominal adjuncts (see §3.4) and one kind of noun possessor (§3.8.1).

Finally, there is one conjunction,  $\text{ʔəy} \sim i$  ‘and, but,’ which links both coordinate nominal adjuncts (§3.8.4) and coordinate clauses (§5).

# 3

## Syntax 1: Simple Sentences

### 3.1. THE MINIMAL SENTENCE

A sentence consists minimally of a predicate. A predicate may consist of a single word.

- (a) θí.  
big  
'It's big.'
- (b) ʔé·nθə.  
be.I  
'It's me.'
- (c) n éḿ.  
go  
'Go!'

Such predicates are probably not very common, except perhaps as commands, as in the last instance. More commonly, this word, now identifiable as the predicate head, is followed by one or more second-position predicate particles (see §3.1.2 below).

- (d) n éḿ ɬə.  
go PER  
'Go!'
- (e) n éḿ čə.  
go QUOT  
'He is said to be going.'
- (f) n éḿ cən ceʔ.  
go I FUT  
'I'll go.'

- (g)  $n\acute{e}m\ ?\acute{a}\ \check{c}x^w\ k^w\acute{a}$ .  
 go ROG you then  
 ‘Will you go then?’
- (h)  $k^w\acute{a}q^w\ \check{c}x^w\ ce?$ .  
 be.hit you FUT  
 ‘You’ll get hit.’
- (i)  $c\acute{a}k^w\ \acute{q}\acute{a}$ .  
 far EMPH  
 ‘It’s far!’
- (j)  $sp\acute{e}?\acute{e}\theta\ ?\acute{a}$ .  
 black.bear ROG  
 ‘Is it a bear?’
- (k)  $sp\acute{e}?\acute{e}\theta\ m\acute{a}$ .  
 black.bear CERT  
 ‘It’s (certainly) a bear.’
- (l)  $sp\acute{e}?\acute{e}\theta\ \acute{c}\acute{a}$ .  
 black.bear QUOT  
 ‘It’s said to be a bear.’
- (m)  $sp\acute{e}?\acute{e}\theta\ y\acute{a}x^w\ m\acute{a}$ .  
 black.bear INF CERT  
 ‘It must be a bear (even though we cannot see it).’
- (n)  $sw\acute{a}y\acute{q}e?\ c\acute{a}n$ .  
 male I  
 ‘I am a man.’
- (o)  $st\acute{e}m\ ce?\ k^w\acute{a}$ .  
 what FUT then  
 ‘What will it be (then)?’
- (p)  $c\text{-}y\acute{a}w\acute{a}n\ ce?\ m\acute{a}$ .  
 VERB-sing.possessed FUT CERT  
 ‘He’s going to sing his  $sy\acute{a}w\acute{a}n$  [possessing song].’
- (q)  $\acute{c}\acute{e}w\acute{a}t\ c\acute{a}n\ ce?$ .  
 $\acute{c}\acute{e}w\text{-}\acute{a}t\ c\acute{a}n\ ce?$   
 help-TRANSITIVE I FUT  
 ‘I’ll help him/her/them.’
- (r)  $\acute{c}\acute{e}w\acute{a}\theta\acute{a}s\ ce?$ .  
 $\acute{c}\acute{e}w\text{-}\acute{a}t\text{-}S\text{-}\acute{a}s\ ce?$   
 help-TR-me-3TR FUT  
 ‘He will help me.’

- (s)  $k^w\acute{a}cn\acute{e}l\acute{a}m\ ce^? m\acute{a}$ .  
 $k^we\text{-}n\text{-}\acute{e}l\text{-}\acute{a}m\ ce^? m\acute{a}$   
 see-TR-I(PAS)-INTR FUT CERT  
 ‘I will be seen. They (somebody) will see me.’
- (t)  $k^w\acute{a}xn\acute{a}ct\ \acute{c}x^w\ m\acute{e}$ .  
 $k^wi\text{-}n\acute{a}c\text{-}t\ \acute{c}x^w\ m\acute{e}$ .  
 name-base-TR you CERT  
 ‘Name a price.’
- (u)  $n\acute{a}w\acute{n}\acute{a}ct\ \acute{t}\acute{a}\ \acute{q}\acute{a}$ .  
 $n\acute{a}w\text{-}n\acute{a}c\text{-}t\ \acute{t}\acute{a}\ \acute{q}\acute{a}$ .  
 insert-base-TR PER EMPH  
 ‘Pay him!’

(Note that in (s) and (t) the full vowels of  $k^w\acute{e}c$  ‘look’ and  $k^wi\acute{x}$  ‘name’ are reduced to schwa when the roots are followed by the suffixes *-n-* ‘transitive’ and *n\acute{a}c* ‘base.’)

### 3.1.1. Predicate Heads

Predicate heads can be bare roots like  $\theta\acute{i}$  ‘big,’  $c\acute{a}k^w$  ‘far,’  $k^w\acute{a}q^w$  ‘get hit,’ derived forms like  $sp\acute{e}^?e\theta$  ‘black bear,’  $cy\acute{a}w\acute{a}n$  ‘sing a possessing song,’ inflected forms like  $\acute{c}\acute{e}w\acute{a}t$  ‘help him/her/them,’  $\acute{c}\acute{e}w\acute{a}\theta\acute{a}s$  ‘he/she helps me,’ and  $k^w\acute{a}cn\acute{e}l\acute{a}m$  ‘I am seen,’ and forms with both derivational and inflectional affixes like  $k^w\acute{a}xn\acute{a}ct$  and  $n\acute{a}w\acute{n}\acute{a}ct$  in the sentences above. (These affixes will be identified later.)

Predicate heads can also be words definable morphologically as verbs ( $n\acute{e}m\acute{h}$  ‘go’), adjectives ( $\theta\acute{i}$  ‘big’), nouns ( $sw\acute{a}y\acute{q}e^?$  ‘man’), or members of the closed sets of personal words ( $^?e\text{-}n\theta\acute{a}$  ‘be-I, me’) and interrogative words ( $st\acute{e}m$  ‘what’). In fact, perhaps there are only a few adverbs that cannot serve as predicate heads.

While members of these several classes of words can all serve as predicate heads, it is nevertheless useful to distinguish verbal, adjectival, and nominal predicates. In expanded predicates, members of these classes enter into somewhat different sorts of relations with other elements. And because of analytical problems that adjectival and nominal predicates pose, it seems best to postpone consideration of them until we have considered expanded verbal predicates and their nominal adjuncts. But first let us look at the second component of most minimal sentences.

### 3.1.2. The Second-Position Predicate Particles

The second-position predicate particles form a closed set of twenty or so members. Many of them can co-occur and do so in a fixed order. A fuller discussion, with examples, appears in §16. Here we need only note those that occur most commonly.

The second-position predicate particles include four person markers

<i>cən</i> ‘I’	<i>ct</i> ‘we’
<i>čx<sup>w</sup></i> ‘you (singular)’	<i>ce·p</i> ‘you (plural)’

which mark first- and second-person subjects of non-passive (intransitive and active transitive) predicates in main clauses. In the absence of any of these or the imperative particle, the subject of a non-passive main clause is understood to be third person. They also include

*ʔé·ttən* ‘third person plural’ (3PL)

which optionally marks plurality for a third-person subject (or object or possessor).

The second-position predicate particles also include two tense markers

<i>-əł</i> ‘past’	<i>ceʔ</i> ‘future’ (FUT)
-------------------	---------------------------

and a number of modal particles, marking questions

*ʔə* ‘interrogative’ (ROG)

requests and instructions

*lə ~ lə* ‘imperative’ (PER)

degree of certainty and quality of information

<i>m̄e ~ m̄ə</i> ‘certainty’ (CERT)	<i>yəx<sup>w</sup></i> ‘inference’ (INF)
<i>čə</i> ‘hearsay, quotative’ (QUOT)	<i>čtwaʔ</i> ‘speculative’ (SPEC)

relationship to old information or assumptions

<i>k<sup>w</sup>ə</i> ‘then’	<i>q̄ə</i> ‘emphatic’ (EMPH)
<i>θəł</i> ‘though, but, adversative’ (ADV)	<i>ʔəl</i> ‘just, only’

and others, many of them difficult to gloss.

As examples in the following sections will illustrate, the second-position predicate particles, except for *ʔəl* ‘just’ (see §16.2.8) and *ʔé·ttən* ‘third-person plural’ (see §14.2.9), always follow the first word in a predicate. When a predicate is expanded by the addition of one or more words before the head, the particles are shifted in position so as to follow the first word.

### 3.2. EXPANDED VERBAL PREDICATES

A verbal predicate may be expanded by the addition of one or two auxiliary verbs before the head and/or one or more adverbs either before or after the head. We also find verbs with verb complements and compound verbs.

#### 3.2.1. Auxiliary Verbs

Two pairs of verbs function as auxiliaries, a locative pair, *ʔi* ‘be here’ and *niʔ ~ ni ~ nə* ‘be there,’ and a directional pair, *ʔəmí ~ mí* ‘come’ and *ném* ‘go.’ I will

refer to these as the locative auxiliaries and the directional auxiliaries. They may also function as predicate heads and as prepositional verbs.

The auxiliaries serve as pegs on which to hang subject (or, in nominalizations, possessive) person markers and non-personal particles. They also serve to set the predicate within a spatial context.

The choice between *?i* and *ni?* depends on the location of the speaker relative to whatever the predicate refers to. The auxiliary *?i* ‘be here’ locates the phenomenon or event (whether real or hypothetical, present, past, or future) near the speaker at the time of utterance. The auxiliary *ni?* ‘be there’ locates it somewhere else. Consider the following sentences with *?i*.

- (a) *?i cən céćəwət.*  
*?i cən céćəw-ət*  
 AUX I be.helping-TR  
 ‘I am helping him.’
- (b) *?i cən técəl.*  
 AUX I arrive.here  
 ‘I arrived here.’
- (c) *?i técəl.*  
 AUX arrive.here  
 ‘He’s here. He has arrived here.’
- (d) *?i-ł yəx<sup>w</sup> cən mə ?i?tət.*  
*?i-əl yəx<sup>w</sup> cən mə ?i?tət*  
 AUX-past INF I CERT be.sleeping  
 ‘I must have been asleep.’
- (e) *?i cən cənəx<sup>w</sup>əl.*  
*?i cən c-ənəx<sup>w</sup>əl*  
 AUX I get-canoe  
 ‘I have a canoe.’

In each of these, the *?i* shows that the speaker is where he/she is helping or has arrived, where someone else has arrived, and so on. In the following, with *ni?*, the speaker is not where the event has happened, is happening, or may happen.

- (f) *ni cən céwət.*  
*ni? cən céw-ət*  
 AUX I help-TR  
 ‘I helped him.’
- (g) *ni cən tápəłt. (JP)*  
*ni? cən tápəł-t*  
 AUX I be.stretching.on.a.frame-TR  
 ‘I’m stretching it [a hide] on a frame.’

- (h) *niʔ ʔíʔələm.*  
*niʔ ʔíʔəl-əm*  
 AUX be.singing-INTR  
 ‘There is someone singing.’
- (i) *ni ʔə ʔxʷ ceʔ qʷiqʷéiʔ?*  
 AUX ROG you FUT make.a.speech  
 ‘Will you be speaking?’
- (j) *niʔ kʷəcnéləm.*  
*niʔ kʷec-n-él-əm*  
 AUX look-TR-IPAS-INTR  
 ‘I am seen. They see me.’
- (k) *niʔəʔ kʷəcnéləm.*  
*niʔ-əʔ kʷéc-n-él-əm*  
 AUX-past look-TR-PAS-INTR  
 ‘I was seen. They saw me.’
- (l) *ni ʔə yəxʷ ceʔ wəném.*  
*niʔ ʔə yəxʷ ceʔ wə-ném*  
 AUX ROG INF FUT ESTABLISHED-go  
 ‘I wonder if he will go.’

The locative auxiliaries may indirectly convey information about time. Very often, when the auxiliary *niʔ* appears with a perfective form of the verb, the reference is to a past event, as in *niʔ cən céwət* ‘I helped him.’ But this is not because *niʔ* is a past marker. It is simply because the event is remote in space from the speaker, as are, in the examples just given, my hide stretching on a frame somewhere, somebody singing somewhere, the speech that you may give, and my being seen by other people. Similarly, the auxiliary *ʔi* often appears with a progressive form and reference to the present, as in *ʔi cən cééwət* ‘I am helping him.’ But again, this is simply because the speaker is present at this ongoing event. In *ʔi cən técəl* ‘I arrived here,’ the reference is to a past event, but the speaker is still present where the event occurred and so uses *ʔi* rather than *niʔ*. The locative auxiliaries clearly refer to space and not to time, though perhaps more often than not the ‘then’ is ‘there’ and the ‘now’ is ‘here.’ The only true tense markers, however, are the particles *-əʔ* ‘past’ and *ceʔ* ‘future.’

The directional auxiliaries *ʔəmí ~ mí* ‘come’ and *ném* ‘go’ identify actions as involving motion toward or away from the speaker.

- (m) *mí ʔe ʔéxʷeʔ.*  
 come PER give.food  
 ‘Give me some [of something to eat].’

(n) *m̄i lə k<sup>w</sup>ətX<sup>w</sup>ɪləm.*  
 come PER enter  
 ‘Come inside.’

(o) *ném̄ lə méʔx.*  
*ném̄ lə méʔ-x*  
 go PER come.off-TR  
 ‘Take it away.’

These auxiliaries can also have aspect-like senses, *ʔəm̄i* meaning ‘become’ and *ném̄* ‘be going to (do something).’

(p) *ʔəm̄i x<sup>w</sup>əθí.*  
*ʔəm̄i x<sup>w</sup>ə-θí*  
 come become-big  
 ‘It became big.’

(q) *ném̄ cən ʔíməx.*  
 go I walk  
 ‘I’m going to walk.’

If auxiliaries appear in sequence, the locational precedes the directional, *ʔi* nearly always appearing before *ʔəm̄i* and *niʔ* before *ném̄*.

(r) *ʔi m̄i ləfí:l.*  
 be.here come be.moving.shoreward  
 ‘He’s coming in [shoreward].’

(s) *ʔi wəf̄m̄i təw-yə-ʃáýʃ̄θət.*  
*i wəf̄-ʔəm̄i təw-yə-ʃáýʃ̄θət*  
 be.here already-come somewhat-along-be.getting.cold  
 ‘It’s been getting a little colder.’

(t) *ni nēm̄ k<sup>w</sup>ən k<sup>w</sup>ən.*  
 be.there go be.captured  
 ‘He was taken captive.’

(u) *ni nēm̄ cpéʔeθ.*  
*niʔ nēm̄ c-péʔeθ*  
 be.there go get-black.bear  
 ‘He has gone hunting bear.’

(v) *ni nēm̄ f̄ák<sup>w</sup> ʔé:tən.*  
 be.there go return.home 3PL  
 ‘They went home.’

The locative auxiliaries can also occur with their own lexical counterparts.

- (w) ʔi ʔi. (AG)  
 AUX be.here  
 ‘He’s here.’
- (x) ni niʔ. (AG)  
 AUX be.there  
 ‘He’s there.’

There is also a set of demonstrative auxiliaries, which combine elements identifiable with the locative auxiliaries and elements of the demonstrative system. They are described in §15.

### 3.2.2. Adverbs

An adverb is a word that can appear within the predicate as a modifier, specifying frequency, intensity, or some other quality (see §18). Most adverbs can appear initially in the predicate, as do *yáθ* ‘always,’ *ǰé* ‘again, also,’ *táq* ‘usually,’ and *qéʔis* ‘recently’ in (a) to (e).

- (a) wəyáθ ʔə čx<sup>w</sup> nəw yəʔé.ý. (JP)  
 wə-yáθ ʔə čx<sup>w</sup> niʔ wə-yə-ʔé.ý  
 EST-always ROG you AUX EST-along-be.continuing  
 ‘Do you always keep going?’
- (b) ǰé cən nəwł ǰté. (CC)  
 ǰé cən niʔ wəł-ǰtéʔ  
 again I AUX already-do  
 ‘I did it again.’
- (c) táq cən wəmi técəl. (DK)  
 táq cən wə-mi técəl  
 usually I EST-AUX(come) arrive.here  
 ‘I generally get here.’
- (d) táqəł ǰé-m̄. (JP)  
 táq-əł ǰé-m̄  
 usually-past be.crying  
 ‘She used to be crying.’
- (e) qéʔis cən ni k̄<sup>w</sup>ác<sup>n</sup>əx<sup>w</sup>. (JP)  
 qéʔis cən niʔ k̄<sup>w</sup>éc-nəx<sup>w</sup>  
 recently I AUX look-TR  
 ‘I saw him just now.’

Some adverbs can appear between the auxiliary and the predicate head, as *ǰé* ‘again, also’ and *má k̄<sup>w</sup>* ‘all’ in (f) and (g).

- (f) ni ʔə ʒəw némʔ. (CC)  
 niʔ ʔə ʒé wə-ném  
 AUX ROG also EST-go  
 ‘Did he go too?’
- (g) ni cən wəmáḱ<sup>w</sup> pənət. (CC)  
 niʔ cən wə-máḱ<sup>w</sup> pən-ət  
 AUX I EST-all get.buried-TR  
 ‘I buried them all.’

And some adverbs can appear after the predicate head, as *qəlét* ‘again’ and *máḱ<sup>w</sup>* ‘all’ in (h) and (i).

- (h) ni nēm x<sup>w</sup>ən-nt qəlét. (JP 12)  
 niʔ nēm x<sup>w</sup>ə-néʔənt qəlét  
 AUX AUX(go) become-be.getting.night again  
 ‘It became evening again.’
- (i) mi čx<sup>w</sup> x<sup>w</sup>əx<sup>w</sup>ét máḱ<sup>w</sup>. (JP)  
 mi čx<sup>w</sup> x<sup>w</sup>əx<sup>w</sup>é-t máḱ<sup>w</sup>  
 AUX(come) you be.descending-TR all  
 ‘Bring them all down.’

### 3.2.3. Verb Complements

Several verbs often appear with verb complements. Such verbs include *íáʔθət* ‘try,’ *θát* ‘intend, try,’ *íʔix<sup>w</sup>əm* ‘pity, be so kind as to, please,’ *íʔix<sup>w</sup>ímət* ‘pity him, be so kind as to ... for him,’ *ʔé-y* ‘continue,’ *hé-y* ‘go ahead,’ *há-y* ‘finish,’ as in (a) to (e).

- (a) íáʔθət ʔe cʒám. (CC 1)  
 íéʔ-θət ʔe cʒám  
 test-self PER jump  
 ‘Try to jump.’
- (b) θát ʔák<sup>w</sup> ... (JP 4)  
 try fly  
 ‘He tried to fly ... [but]’
- (c) íʔix<sup>w</sup>əm ʔe cčwət.  
 íʔix<sup>w</sup>əm ʔe cčw-ət  
 please PER help-TR  
 ‘Please help him.’
- (d) ʔi cən ʔé-y k<sup>w</sup>úk<sup>w</sup> ... (CC 12)  
 AUX I be.continuing cook  
 ‘I continued to cook ...’

- (e) *héy čx<sup>w</sup> k<sup>wə</sup> ʃ<sup>wə</sup>ʃ<sup>wə</sup>ýém.* (CC)  
 go.ahead you then be.story.telling  
 ‘Go ahead then and tell a story.’

The verb *háy* ‘finish’ with *wəl-* ‘already’ can have the sense of an English perfect tense, as in (f) and (g).

- (f) *niwəl háy cyəwən.* (CC)  
*ni<sup>?</sup> wəl-háy cyəwən*  
 AUX already-finish sing.possessing.song  
 ‘He has finished singing. He has already sung.’

- (g) *ni<sup>?</sup>əł ə čx<sup>w</sup> wəláy k<sup>w</sup>əc<sup>nəx<sup>w</sup></sup>* (CC)  
*ni<sup>?</sup>-əł ə čx<sup>w</sup> wəl-háy k<sup>w</sup>éc-nəx<sup>w</sup>*  
 AUX-past ROG you already-finish look-TR  
 ‘Have you ever seen him?’

Verbs of motion can be followed by verb complements, as in (h) and (i).

- (h) *əməí θəł əłtən.* (JP)  
 come ADV eat  
 ‘Come and eat now [regardless of other matters].’
- (i) *ném cən k<sup>wə</sup> íák<sup>w</sup> əyéłəsəmə.* (JP 3)  
*ném cən k<sup>wə</sup> íák<sup>w</sup> əyéł-ləs-əmə*  
 go(AUX) I then return.home leave-TR-you  
 ‘Now I can go home and leave you.’

### 3.2.4. Hortative Forms

The auxiliary *əi* or the verb *héy* ‘go ahead’ followed by the particle *lə* ‘imperative,’ with the stress on the particle (possibly a unique case of such a stress pattern), has the sense of a first-person plural imperative: ‘Let’s go!’ JP and AG both gave (a), while CC gave (b).

- (a) *əi lé.* ‘Let’s go!’  
 (b) *héy lé.* ‘Let’s go!’

AG also used a sequence of two particles, *lə* ‘imperative’ and *əe* ‘plural imperative.’

- (c) *əi lé əe.* ‘Let’s go!’

CC used *heý lé* followed by a verb complement, as in (d).

- (d) *heý lé íáx<sup>w</sup>.* (CC)  
 go.ahead PER move.down.toward.shore  
 ‘Let’s go down toward the shore.’

In JP's usage, however, *heý lé* was followed by what seems to be a separate predicate in (e).

- (e) *heý lé ném ct.*  
 go.ahead PER go we  
 'Let's go' or 'Get ready ... we'll go.'

AG's usage in (f) looks like CC's use of *heý lé*.

- (f) *ʔi lé tɪləm.*  
 AUX PER sing  
 'Let's sing.'

However, in (g) it appears that 'sing' is a separate predicate in that the 'plural imperative' follows it. (See also §16.2.9. and §16.2.11.)

- (g) *ʔi lé tɪləm ʔe.*  
 AUX PER sing PLPER  
 'Let's sing.'

### 3.3. TYPES OF VERBAL PREDICATES

On the basis of suffixes of the voice system (see §10) borne by the predicate head, we can distinguish grammatically three types of verbal predicates: intransitive, active transitive, and passive.

#### 3.3.1. Intransitive Predicates

A predicate in which the head bears no transitive suffix can be identified as grammatically intransitive. Examples of intransitive predicates taken from among the sentences given in the preceding sections are:

- (a) *ʔi təcəl.*  
 AUX arrive.here  
 'He has arrived here.'
- (b) *ném cən ʔíməx.*  
 go I walk  
 'I'm going to walk.'
- (c) *kʷáqʷ čxʷ ceʔ.*  
 be.hit you FUT  
 'You'll get hit.'
- (d) *ni ném kʷənkʷən.*  
 be.there go be.captured  
 'He was taken captive.'

- (e) *m̄i*    *ɬe*    *ʔéx<sup>w</sup>eʔ*.  
 come PER give.food  
 ‘Give me some (of something to eat).’

In (e) ‘me’ is implied by the directional auxiliary *m̄i* ‘come.’

- (f) *ʔi*    *cən*    *c-náx<sup>w</sup>əl*.  
 AUX I    get-canoe  
 ‘I have a canoe.’
- (g) *ni* *nem̄* *cpéʔeθ*.  
*niʔ*    *nem̄*    *c-péʔeθ*  
 be.there go    get-black.bear  
 ‘He has gone bear hunting.’

Some of these sentences are translated with English transitive verbs in the active or passive voice, but this has no bearing on the grammatical status of the Halkomelem sentences. It is simply a reflection of the fact that many Halkomelem roots, such as *k<sup>w</sup>áq<sup>w</sup>* ‘get hit’ and *k<sup>w</sup>ón* ‘get taken,’ are non-active or patient-oriented, while others, including *ʔéx<sup>w</sup>eʔ* ‘give food,’ are active or agent-oriented, and of the fact that the prefix *c-* ‘get, make, do’ produces an active form.

There are also four suffixes that produce intransitive verbs, the most commonly used of which are *-əm* ‘intransitive’ and *-els* ‘activity’ (see §10.2).

### 3.3.2. Active Transitive Predicates

A predicate in which the verb bears one of the transitive suffixes *-t*, *-nəx<sup>w</sup>* (~ *-n-*), *-x*, etc. (for a full account, see §10.1) may be identified as grammatically transitive, and when this suffix is not followed by the suffix *-əm* ‘intransitive,’ it is active.

The transitive suffix may be followed by one of the first- and second-person object markers, *-S* ‘me, you,’ *-Samx* ~ *-amx* ‘me,’ *-Samə* ~ *-amə* ‘you,’ *-alx<sup>w</sup>* ‘us,’ and *-alə* ‘you plural.’ (The transitive suffix *-t* and the object marker *-S* are realized as *θ*). In the absence of one of these, the object is third person. A transitive form may also bear the third-person transitive subject (ergative) marker *-əs*. (For a fuller account of the person markers, see §14.)

Among the sentences given in the preceding sections, the following are transitive:

- (a) *ni* *cən* *čéwət*.  
*niʔ*    *cən*    *čéw-ət*  
 AUX I    help-TR  
 ‘I helped him.’

- (b)  $\check{c}\acute{e}w\acute{\theta}$   $c\grave{a}n$   $ce?$   
 $\check{c}ew\text{-}\acute{\theta}\text{-}S$   $c\grave{a}n$   $ce?$   
 help-TR-me I FUT  
 ‘I’ll help you.’
- (c)  $\check{c}\acute{e}w\acute{\theta}\acute{\alpha}s$   $ce?$   
 $\check{c}ew\text{-}\acute{\theta}\text{-}S\text{-}\acute{\alpha}s$   $ce?$   
 help-TR-me-TR FUT  
 ‘He will help me.’
- (d)  $q\acute{e}^{\prime}is$   $c\grave{a}n$   $ni$   $\acute{k}^w\acute{\alpha}cn\acute{x}^w$ .  
 $q\acute{e}^{\prime}is$   $c\grave{a}n$   $ni?$   $\acute{k}^w\acute{\epsilon}c\text{-}n\acute{x}^w$   
 recently I AUX look-TR  
 ‘I saw him just now.’
- (e)  $ne\acute{m}$   $\acute{l}\acute{a}$   $m\acute{e}^{\prime}x$ .  
 $ne\acute{m}$   $\acute{l}\acute{a}$   $m\acute{e}^{\prime}\text{-}x$   
 go PER be.off-TR  
 ‘Take it away.’

### 3.3.3. Passive Predicates

A predicate in which the verb bears a transitive suffix followed by the suffix *-əm* ‘intransitive,’ with or without an intervening passive person marker, may be identified as grammatically passive. If there is no passive person marker between the transitive and intransitive suffixes, the subject is third person. The passive person markers are *-Sel-* ~ *-el-* ‘I,’ *-Sam-* ~ *-am-* ‘you,’ and *-al-* ‘we, you plural.’ The second-person *-Sam-* and the *-əm* ‘intransitive’ are realized as *-Sam*. (Passive forms are not grammatically accompanied by the subject particles *cən* ‘I,’ *čx* ‘you,’ etc.)

Examples of passive predicates are:

- (a)  $ni$   $\check{c}\acute{e}w\text{-}\acute{\theta}\text{-}\acute{\alpha}m$ .  
 AUX help-TR-INTR  
 ‘He was helped.’
- (b)  $\text{?}i$   $\check{c}\acute{e}w\acute{\theta}\acute{e}l\acute{\alpha}m$ .  
 $\text{?}i$   $\check{c}\acute{e}w\text{-}\acute{\theta}\text{-}Sel\text{-}\acute{\alpha}m$   
 AUX help-TR-I-INTR  
 ‘I was helped.’
- (c)  $\check{c}\acute{e}w\acute{\theta}\acute{\alpha}\cdot m$   $ce?$   
 $\check{c}\acute{e}w\text{-}\acute{\theta}\text{-}Sam\text{-}\acute{\alpha}m$   $ce?$   
 help-TR-you-INTR FUT  
 ‘He (she, they) will help you. You will be helped.’

- (d) niʔ čéw-ət-àl-əm.  
 AUX help-TR-we-INTR  
 ‘We were helped. You (pl.) were helped.’
- (e) niʔ kʷəcná·m.  
 niʔ kʷec-n-am-əm  
 AUX see-TR-you-INTR  
 ‘He (she, they) sees (see) you. You are seen.’
- (f) kʷəcnéləm ceʔ m̄ə.  
 kʷec-n-eI-əm ceʔ m̄ə  
 see-TR-I-INTR FUT CERT  
 ‘I’ll be seen.’

Speakers’ translations ‘He will help you’ and ‘He sees you’ reflect the fact that active forms cannot have second-person objects with third-person subjects. Often, however, speakers will translate all of these forms with the active voice and ‘they’ as the subject.

### 3.4. NOMINAL ADJUNCTS

In a simple sentence, the predicate may be followed by one or more nominal adjuncts functioning as subject, object, locus, instrument, and so on.

The presence of a nominal adjunct is signalled by one of the deictic elements that constitute the demonstrative system (§15), an article or a demonstrative. These particles and words distinguish gender (non-feminine or feminine) and position (present and visible, near and invisible, or remote or non-existent).

A nominal adjunct consists minimally of a demonstrative standing alone and functioning as a third-person pronoun, such as *kʷθéʔ* ‘he, that one (near, invisible),’ *θəwǎ́á* ‘she (present, visible),’ and so on. Or, a nominal adjunct may consist of a demonstrative or an article followed by a word functioning as the nominal adjunct head, as in *tə spéʔeθ* ‘the/a (non-feminine, present, visible) black bear,’ *θə nəmáńə* ‘my (feminine, present, visible) child,’ that is, ‘my daughter here.’ (It is also possible for nominalized clauses and relative clauses to serve as nominal adjuncts, in what are, by that fact, complex sentences, described in §4.)

Nominal adjuncts relate to verbal predicates either directly or obliquely. A direct nominal adjunct is unmarked, while an oblique nominal adjunct may (but see directly below) be preceded by the oblique case marker *ʔə*. Direct nominal adjuncts serve as subjects and (direct) objects, while oblique nominal adjuncts serve as loci and goals, instruments, oblique objects of intransitives, agents of passives, and possessors.

The role of oblique also differs from that of direct nominal adjunct in that it can be filled by a personal word, *ʔé·nθə* ‘me,’ *náwə* ‘you,’ and so on (see

§14.2.7). Furthermore, before personal words and proper nouns serving as oblique nominal adjuncts, instead of one of the articles that appear elsewhere we find the oblique article  $\acute{x}$  (§15.1.4), which conveys no information about gender or position.

The difference between direct and oblique nominal adjuncts is not always apparent. In the Musqueam dialect as spoken by CC and JP, the particle  $\text{ʔə}$  is optional and in some contexts is usually omitted. In this respect, as in several others, Musqueam stands between Cowichan, in which the particle is obligatory, and Upriver, in which it seems not to occur. In the Musqueam of DK and AG, which is influenced by Cowichan, the particle  $\text{ʔə}$  appears with all oblique nominal adjuncts. Despite the absence of the particle for some speakers, however, the fact that an adjunct is oblique can be established in two ways. First, if a proper noun or personal word is substituted, the article  $\acute{x}$  will appear. CC and JP used this article pretty consistently even when omitting the particle. Second, as described later (§4.1.1.2), if the oblique is “extracted” for a relative clause, the verb in the relative clause bears the prefix  $s-$  (for an oblique object) or  $\acute{s}x^w-$  (for a locus, goal, or instrument).

Let us now look at nominal adjuncts in relation to the three types of verbal predicates identified in §3.3.

### 3.4.1. With Intransitive Predicates

An intransitive verbal predicate may have a single direct nominal adjunct, which is its subject, as in (a) to (c).

- (a)  $ni \quad méʔ \quad tə \quad s\acute{p}í\acute{t}^{\theta}$  (DK)  
 AUX come.off ART dye  
 ‘The dye ran.’
- (b)  $\text{ʔi} \quad wə\text{ʔ}í \quad tə \quad nə\text{m}ó\acute{n}ə$ . (CC)  
 $\text{ʔi} \quad wə\text{ʔ}í \quad tə \quad nə\text{m}ó\acute{n}ə$   
 AUX EST-be.here ART my-child  
 ‘My daughter is here [somewhere not visible].’
- (c)  $ni \quad í\acute{á}k^w \quad \text{ʔ}ə\acute{x}qə\acute{l} \quad tə \quad s\acute{q}^w\acute{e}l\acute{x}$ . (CC)  
 AUX fly exit ART bird  
 ‘The bird flew out.’

Intransitive verbal predicates can have oblique nominal adjuncts in several roles. A predicate that expresses location or motion can have an oblique nominal adjunct as its locus or goal, as in (d) to (h).

- (d)  $\text{ʔi} \quad cən \quad \text{ʔi} \quad \text{ʔə} \quad tə\acute{n}á$ .  
 AUX I be.here OBL this  
 ‘I am here.’

- (e) ni níʔ ə təná.nə.  
AUX be.there OBL that.over.there  
'He/she is over there.'
- (f) néṃ cən ceʔ tə spólǰən. (CC)  
néṃ cən ceʔ [ʔə] tə spólǰən  
go I FUT [OBL] ART pasture/prairie  
'I'm going to the pasture.'
- (g) mí čxʷ təhá səqín. (JP)  
ʔəmí čxʷ [ʔə] təhá səqín  
come you [OBL] this near.end  
'Come to this end of the house.'
- (h) ni čéʔ ə tə smé.nt. (AG)  
ni čéʔ ʔə tə smé.nt.  
AUX land/perch OBL ART rock  
'It landed on the rocks.'

When a subject and a locus or goal both appear, the order of the two adjuncts may be either way. Compare (i) and (j):

- (i) ni níʔ ǰ stʰáməs kʷlə nəmáṃə. (CC)  
ni níʔ [ʔə] ǰ stʰáməs kʷlə nə-máṃə  
AUX be.there [OBL] ART Victoria[Songhees] ART my-child  
'My daughter is in Victoria.'
- (j) ni scəcéʔ tə nəwáč ʔə tə púk. (CC)  
niʔ scəcéʔ tə nə-wáč ʔə tə púk [púkʷ]  
AUX atop ART my-watch OBL ART book  
'My watch is on top of the book.'

(Constructions like these, composed of intransitive verbs with oblique nominal adjuncts as loci or goals, also commonly serve as verbal adjuncts, comparable to English prepositional phrases. See §3.5.)

A predicate that refers to some action that may have a patient but is non-active (patient-oriented) may have an oblique nominal adjunct as instrument, as in (k) and (l).

- (k) ni cən kʷáqʷ ʔə kʷθə kʷqʷómən. (AG)  
AUX I get.hit OBL ART ax  
'I got hit by an ax.'
- (l) ni cən łáccəs ʔə kʷθə łéctən. (AG)  
AUX I get.hand.cut OBL ART knife  
'I got cut in the hand with a knife.'

An intransitive predicate that is active (agent-oriented) can have an oblique object. Active intransitive verbs that participate in this construction include some bare roots, some forms with *c-* ‘get, make, do,’ some with *-əm* ‘intransitive,’ and some with *-éls* ‘activity.’ These affixes all seem to produce agent-oriented verbs. Examples with bare roots are (m), (n), and (o).

(m) *mí lə ʔéxʷeʔ ə k̄ʷ qáʔ.* (CC)  
*mí lə ʔéxʷeʔ ʔə k̄ʷ qáʔ*  
 AUX(come) PER give.food OBL ART water  
 ‘Give me some water.’

(n) *ném lə sáwq̄ k̄ʷə sʔáhtən.* (CC)  
*ném lə sáwq̄ [ʔə] k̄ʷə sʔáhtən*  
 go PER seek OBL ART food  
 ‘Go look for food.’

(o) *ni ʔə θát ʔə tθéʔ.* (DK)  
*ni ʔə θát ə tθéʔ*  
 AUX ROG say OBL that  
 ‘Did he say that?’

Examples with affixes are (p) to (s).

(p) *ni cən ckʷən k̄ʷ náčaʔ.* (DK)  
*ni cən c-kʷən [ʔə] k̄ʷ náčaʔ*  
 AUX I get-get.taken [OBL] ART one  
 ‘I was able to get one.’

(q) *ném cən ʔtéʔem k̄ʷ snétəłqən.* (CC)  
*ném cən ʔtéʔ-əm [ʔə] k̄ʷ s-nét-əł-qən*  
 AUX(go) I make-INTR [OBL] ART NOM-night-past-meal  
 ‘I’m going to make breakfast.’

(r) *ni ʔəxíls ʔə kʷθə qʷléý.* (AG)  
*niʔ ʔəxəl-éls ʔə kʷθə qʷléý*  
 AUX paddle-ACT OBL ART log  
 ‘They towed the logs.’

(s) *ni mə ném təmélis ʔə kʷθə snáxʷəłs.* (CC)  
*ni mə ném təm-éls ʔə kʷθə snáxʷəł-s*  
 AUX CERT AUX(go) get.hit-ACT OBL ART canoe-3POS  
 ‘He’s gone to hew his canoe.’

It is also possible for an oblique nominal adjunct to appear as an instrumental following a predicate head with the suffix *-éls* ‘activity,’ as in (t).

- (t)  $\text{Íćéls } \text{ʔə } \text{tə } \text{Íććtən. (AG)}$   
 $\text{Íć-éls } \text{ʔə } \text{tə } \text{Íććtən}$   
 cut-ACT OBL ART knife  
 ‘cut with a knife’

But it may not be possible, AG believed, to have an *-éls* form with two oblique adjuncts, one the oblique object and the other the instrumental.

### 3.4.2. With Active Transitive Predicates

An active transitive predicate may have one or two direct nominal adjuncts.

If the subject is a first or second person, a direct nominal adjunct may appear as the object, as in (a) and (b).

- (a)  $\text{ćéwət cən ceʔ təwǎa.}$   
 $\text{ćéw-ət cən ceʔ təwǎá}$   
 help-TR I FUT he/him  
 ‘I will help him.’
- (b)  $\text{ni } \text{ʔə } \text{ćx}^w \text{ k}^w\text{əcnəx}^w \text{ k}^w\text{θe}ʔ \text{ swáýqe}ʔ.$   
 $\text{ni } \text{ʔə } \text{ćx}^w \text{ k}^w\text{ec-nəx}^w \text{ k}^w\text{θe}ʔ \text{ swáýqe}ʔ$   
 AUX ROG you look-TR that man  
 ‘Did you see that man?’

If the object is a first person, a direct nominal adjunct may appear as the subject, as in (c).

- (c)  $\text{ćéwəthəm xəs ceʔ tθeʔ swáýqe}ʔ.$   
 $\text{ćéw-ət-Sam x-əs ceʔ tθeʔ swáýqe}ʔ$   
 help-TR-me-3TR FUT that man  
 ‘That man will help me.’

Active transitive forms with second-person objects and third-person subjects, however, do not occur. Instead we find passive forms.

Unless another condition is met, if a predicate has a third-person subject and a third-person object, a single direct nominal adjunct will be interpreted as the object. Thus (d) must have the first interpretation rather than the second (starred), improbable though it may be.

- (d)  $\text{ǰíǰəǰ}^w\text{ətəs } \text{tə } \text{nəsǰ}^w\text{əméý. (DK)}$   
 $\text{ǰíǰəǰ}^w\text{-ət-əs } \text{tə } \text{nə-sǰ}^w\text{əméý}$   
 be.biting-TR-3TR ART my-dog  
 ‘He is biting my dog.’ (\*\*‘My dog is biting him.’)

The other condition is the appearance of *təwǎa* and other demonstratives formed with *ǎá* ‘be third person.’ After a predicate head with the suffix *-əs* ‘third-person transitive subject,’ *təwǎa* or one of its counterparts must be interpreted as subject, as in (e).

- (e) k<sup>w</sup>ánətəs təwǎa swíwǎs. (JP 27)  
 k<sup>w</sup>án-ət-əs təwǎa swíwǎs  
 get.taken-TR-3TR that young.man  
 ‘The young man took it.’

An active transitive predicate may also have both object and subject nominal adjuncts. When this occurs, the normal order seems to be predicate, subject, object (VSO), as in (f).

- (f) ni qáyətəs θə pús θə k<sup>w</sup>étǎn. (JP)  
 ni<sup>?</sup> qáy-ət-əs θə pús θə k<sup>w</sup>étǎn  
 AUX die-TR-3TR ART cat ART mouse  
 ‘The cat killed the mouse.’

But the order predicate, object, subject (VOS) is also possible, as in (g).

- (g) k<sup>w</sup>ék<sup>w</sup>áyətəs tə mémǎnəs tθe swǎyqə<sup>?</sup>. (JP)  
 k<sup>w</sup>ék<sup>w</sup>áy-ət-əs tə mémǎnə-s tθe<sup>?</sup> swǎyqə<sup>?</sup>  
 be.training-TR-3TR ART children-3POS that man  
 ‘That man is training his sons [preparing them for vision quests].’

In (g), perhaps the sense requires that the father be the subject. But any possible ambiguity can be avoided by the use of *təwǎa*, which can mark the subject only, as in (h).

- (h) ni qáyətəs tə smǎyəθ təwǎa swǎyqə<sup>?</sup>. (DK)  
 ni<sup>?</sup> qáy-ət-əs tə smǎyəθ təwǎa swǎyqə<sup>?</sup>  
 AUX die-TR-3TR ART deer that man  
 ‘The man killed the deer.’

The sentences offered by me,

ni qáyətəs tə swǎyqə<sup>?</sup> təwǎa smǎyəθ.  
 ni qáyətəs təwǎa smǎyəθ tə swǎyqə<sup>?</sup>.

would both, DK insisted, have to mean ‘The deer killed the man.’

This subject-marking function of *təwǎa* (or a counterpart) allows for freedom in the ordering of subject and object nominal adjuncts. In texts dictated by JP, there are a few complex sentences suggesting that he used *təwǎa* or a counterpart to postpone a subject with dependent elements until after the object.

There is one further constraint on transitive predicates with two third-person participants. A proper name cannot assume the role of subject. It must be the agent in a passive construction.

An active transitive predicate can have an oblique nominal adjunct serving as an instrumental, as in (i), (j), and (k).

- (i) ni cən lámət ʔə kθə smé·nt. (CC)  
 ni cən lámət ʔə k<sup>w</sup>θə smé·nt  
 AUX I get.hit(by something thrown)-TR OBL ART rock  
 ‘I hit him with a rock.’
- (j) lámət tə smé·nt. (CC)  
 lámət [ʔə] tə smé·nt  
 get.hit-TR OBL ART rock  
 ‘Hit him with a rock.’
- (k) Ícət ʔə tə Íéctən. (AG)  
 Ícət ʔə tə Íéctən  
 cut-TR OBL ART knife  
 ‘Cut it with a knife.’

We also find oblique nominal adjuncts playing other roles when they appear following active transitive predicate heads bearing the suffix *-stəx<sup>w</sup>* ‘causative’ (see §10.3.2) or one of the applicative suffixes (see §10.4.)

A causative formed from an intransitive verb of motion may have an oblique nominal adjunct for its goal or recipient, as in (l) and (m).

- (l) místəx<sup>w</sup> čx<sup>w</sup> ʔé·nθə. (JP)  
 ʔəmí·stəx<sup>w</sup> čx<sup>w</sup> [ʔə] ʔé·nθə  
 come-CAUS you OBL ART me  
 ‘Bring it to me.’
- (m) nəʔéməstəx<sup>w</sup> ɪə təwʔa. (CC)  
 ném·stəx<sup>w</sup> ɪə [ʔə] təwʔa  
 go-CAUS PER OBL him  
 ‘Take it to him.’

Probably for most verbs of this sort, however, a goal or recipient is expressed in a verbal complement (prepositional phrase) (see §3.5).

A causative formed from an agent-oriented verb may have an oblique nominal adjunct for what is the patient in the action performed by what is its grammatical object (the causee), as in (n) and (o).

- (n) k<sup>w</sup>əcstəx<sup>w</sup> tə John ʔə k<sup>w</sup>θə́n pút. (AG)  
 k<sup>w</sup>əc·stəx<sup>w</sup> tə John ʔə k<sup>w</sup>θə ʔə·n·pút  
 look-CAUS ART John OBL ART your-boat  
 ‘Show John your boat.’
- (o) ni cən ʔáftənəstəx<sup>w</sup> k<sup>w</sup>θə sʔíʔqə́t ʔə k<sup>w</sup>θə sqéwθ. (AG)  
 niʔ cən ʔáftən·stəx<sup>w</sup> k<sup>w</sup>θə sʔíʔqə́t ʔə k<sup>w</sup>θə sqéwθ  
 AUX I eat-CAUS ART child OBL ART potato  
 ‘I fed the child potatoes.’

These are more literally ‘Cause John to look at your boat’ and ‘I caused the child to eat potatoes.’

The applicatives *-stəx<sup>w</sup>* ‘comitative,’ *-ləc-* ‘benefactive,’ and *-əs* ‘recipient’ allow someone playing a role other than that of patient to become the grammatical object, at which point the original patient must be expressed by an oblique nominal adjunct, as in (p), (q), and (r).

- (p)  $\check{x}t\acute{e}^{\prime}stəx^w \text{ } \text{?ə} \text{ } t\acute{i}^{\prime}i.$  (AG)  
 $\check{x}t\acute{e}^{\prime}-stəx^w \text{ } \text{?ə} \text{ } t\acute{ə}^{\prime}i$   
 do-COM OBL this  
 ‘Do this to it.’
- (q)  $\theta\acute{e}y\acute{a}lc\theta\grave{a}m\chi \text{ } l\acute{e} \text{ } [^{\prime}\text{ə}] \text{ } k^w\text{ə} \text{ } t\acute{a}\check{x}^wac.$  (CC)  
 $\theta\acute{e}y-lc-t-Sam\chi \text{ } l\acute{ə} \text{ } [^{\prime}\text{ə}] \text{ } k^w\text{ə} \text{ } t\acute{a}\check{x}^wac$   
 be.created-BEN-TR-me PER OBL ART bow  
 ‘Make me a bow.’
- (r)  $\text{?}\acute{a}x^w\acute{a}s\theta\grave{a}m\chi \text{ } \check{c}x^w \text{ } \text{?ə} \text{ } k^w \text{ } l\acute{e}c\acute{t}\acute{a}n.$  (AG)  
 $\text{?}\acute{e}x^w-\acute{a}s-t-Sam\chi \text{ } \check{c}x^w \text{ } \text{?ə} \text{ } k^w\text{ə} \text{ } l\acute{e}c\acute{t}\acute{a}n$   
 give-REC-TR-me you OBL ART knife  
 ‘Give me a knife.’

The last three sentences might be rendered with grammatically more parallel forms as ‘Affect it with this,’ ‘Supply me with a bow,’ and ‘Present me with a knife.’ (For a full analysis of Halkomelem causative and applicative or “redirective” forms, see Gerdts 1981.)

### 3.4.2. With Passive Predicates

A passive predicate can have only one direct nominal adjunct, which is its subject, as in (a), (b), and (c).

- (a)  $\check{\lambda}\acute{e}x\acute{a}t\acute{a}m \text{ } t\acute{ə} \text{ } x^w\text{m}\acute{a}\theta k^w\acute{a}y\acute{a}m.$  (CC)  
 $\check{\lambda}\acute{e}x\acute{a}n-t-\acute{a}m \text{ } t\acute{ə} \text{ } x^w\text{m}\acute{a}\theta k^w\acute{a}y\acute{a}m$   
 invite-TR-INTR ART Musqueam  
 ‘The Musqueam were invited.’
- (b)  $\check{x}^w\acute{a}yt\acute{a}m \text{ } t\acute{ə} \text{ } st\acute{e}^{\prime}ex^w\acute{a}l.$  (JP 12)  
 $\check{x}^w\acute{a}y\acute{a}-\acute{a}t-\acute{a}m \text{ } t\acute{ə} \text{ } st\acute{e}^{\prime}ex^w\acute{a}l$   
 die.off-TR-INTR ART children  
 ‘The children were all killed.’
- (c)  $k^w\acute{l}\acute{e}t\acute{a}m \text{ } t\acute{ə} \text{ } sn\acute{a}x^w\acute{a}l\acute{s}.$  (JP 12)  
 $k^w\acute{a}l\acute{e}t-\acute{a}m \text{ } t\acute{ə} \text{ } sn\acute{a}x^w\acute{a}l-s$   
 spill-TR-INTR ART canoe-3POS  
 ‘Their canoe was tipped over.’

The agent of a passive predicate is an oblique nominal adjunct, as in (d) to (h).

- (d) *máq̣ətəm ʔə tə sʰéləqəm.* (JP 6)  
*máq̣-ət-əm ʔə tə s-ʰéləqəm*  
 swallow-TR-INTR OBL ART NOM-fierce  
 ‘They were swallowed by the monster.’
- (e) *ni céwətəm tə céhəm.* (CC)  
*ni céw-ət-əm [ʔə] tə céhəm*  
 AUX help-TR-INTR OBL ART Shaker  
 ‘He was helped by the Shakers.’
- (f) *kʷəcnà-m ceʔ təwʰa.* (CC)  
*kʷəc-n-am-əm ceʔ [ʔə] təwʰa*  
 look-TR-you(PAS)-INTR FUT OBL him  
 ‘He will see you.’ (lit. ‘You will be seen by him.’)
- (g) *céwətəm ceʔ ʰ Tom təwʰa.* (CC)  
*céw-ət-əm ceʔ [ʔə] ʰ Tom təwʰa*  
 help-TR-INTR FUT OBL ART Tom he  
 ‘Tom will help him.’ (lit. ‘He will be helped by Tom.’)
- (h) *niʔəʔ céwəθələm ʰ Tom.* (JP)  
*niʔ-əʔ céw-ət-Sal-əm [ʔə] ʰ Tom*  
 AUX-past help-TR-I(PAS)-INTR OBL ART Tom  
 ‘Tom helped me.’ (lit. ‘I was helped by Tom.’)

These last three sentences are passive with no active counterparts, since the rules do not permit the active voice with a second-person object and a third-person subject, or with a proper name as subject.

There is yet another constraint on passive constructions. The role of agent cannot be filled by a personal word; for example, the active sentences *ni cən qá:yt* ‘I killed him’ and *ni čxʷ qá:yt* ‘You killed him’ have no passive counterparts. You cannot say *\*\*ni qá:ytəm ʔə ʰ ʔé:nθə* or *\*\*ni qá:ytəm ʔə ʰ nəwə*.

An instrumental can also appear with a passive predicate as an oblique nominal adjunct, as in (i) and (j).

- (i) *niʔ céwəθələm ʔə kʷθə sʰíləm.* (CC)  
*niʔ céw-ət-SeI-əm ʔə kʷθə s-ʰíləm*  
 AUX help-TR-I(PAS)-INTR OBL ART NOM-sing  
 ‘I got helped with a song.’
- (j) *láləməθà-m tə yəyqʷí-n.* (CC)  
*láləm-ət-Sam-əm [ʔə] tə yəyqʷí-n*  
 be.getting.hit-TR-you(PAS)-INTR OBL ART light  
 ‘They [the Shakers] are throwing the light [or heat, of their candles] on you.’

We also find, with passives of causatives, oblique nominal adjuncts serving the same purposes that they do with active causatives, as in (k) and (l).

- (k) ... i wəlnəʔáməstəm θə ǰéməy̆ tə stáɫəw̆. (CC 19)  
 ʔəy̆ wəl-ném-stəx<sup>w</sup>-əm θə ǰéməy̆ [ʔə] tə stáɫəw̆  
 and already-go-CAUS-INTR ART girl OBL ART river  
 ‘... and the girl was taken to the river.’
- (l) ʔí-wəstəm tə syəw̆ín̆, tə sǰəléls. (CC 19)  
 ʔí-w-əs-t-əm [ʔə] tə syəw̆ín̆ tə sǰəléls  
 be understanding-REC-TR-INTR OBL ART spell ART painting  
 ‘She was being taught the spells and the painting.’

A sentence may contain an intransitive predicate with a stated or implied subject followed by a passive form with a different subject where we might expect a transitive and an object. An example is (m).

- (m) m̆i θət̆ céwətəm təwǰa. (JP 22)  
 m̆i θət̆ céw-ət-əm təwǰa  
 come try help-TR-INTR he  
 ‘They came intending to help him.’

Perhaps because *təwǰa* must be a subject, the verb must be passive. For other examples, see §4.3.4, (c) and (d).

### 3.5. VERBAL ADJUNCTS

A predicate head of any of the three types described in §3.3, with or without nominal adjuncts related as described in §3.4, may be followed by another verb, secondary to the head (and often unstressed), introducing an oblique nominal adjunct. These secondary verbs specify location, direction of motion, and a few notions of other sorts expressed by English prepositions. They serve to relate their oblique nominal adjuncts to the predicate head in ways other than those described in §3.4. Because these secondary verbs have functions like those of English prepositions, they may be conveniently called “prepositional verbs.” (Galloway [1977, 483] has called the phrase composed of such a verb and its nominal adjunct a “prepositional phrase.”)

Prepositional verbs do not constitute a separate class of words used for this purpose only; most, if not all, can appear as predicate heads. They include the locative verbs *ʔí* ‘be here’ and *níʔ* ‘be there,’ the directional verbs *ʔəmí* ‘come’ and *ném* ‘go’ (all four of which also appear as auxiliaries), derivatives of the last two, *x<sup>w</sup>əmí* ‘come to’ and *x<sup>w</sup>ném* ‘go to,’ and several other simple verbs, such as *técəl* ‘arrive here,’ *tás* ‘arrive there,’ *ǰ<sup>w</sup>təʔ* ‘head toward, than (in comparative constructions),’ *təlí* (~ *təlíʔ*) ‘be from,’ *yətəlé* (~ *yətəʔé*) ‘be going along.’ They include a number of resultative forms (described in §7.7), such as *stətés* ‘near,’ *sǰəǰáʔ* ‘accompanying, with,’ *stəʔé* ‘resembling, like,’ and so on,

and some more complex forms, such as *yəstálwət* ‘passing over,’ *cláqʷθət* ‘passing through,’ and so on.

Sentences (a) and (b) illustrate *ʔi* ‘be here’ used as auxiliary, predicate head, and prepositional verb.

- (a) *ʔi ʔi ʔə kʷən sʰəqʷəwət.* (CC)  
*ʔi ʔi ʔə kʷə nə-sʰəqʷəwət*  
 AUX be.here OBL ART my-back  
 ‘He is behind me.’
- (b) *ʔi ʔámət ʔi kʷən sʰətálwət.* (CC)  
*ʔi ʔámət ʔi [ʔə] kʷə nə-sʰətálwət*  
 AUX be.sitting be.here OBL ART my-rear.side  
 ‘He is sitting behind me (as in a canoe).’

In (a), the stressed *ʔi* is the predicate head. In (b), the predicate head is *ʔámət* ‘be sitting’ and the *ʔi* following is a prepositional verb, required to locate the oblique nominal adjunct.

The locatives *ʔi* and *ni* are usually translatable as ‘at,’ ‘in,’ ‘on,’ or ‘into,’ as in (c) to (e).

- (c) *nəwʰt ʰəqʷəlɬəxʷəs ʔi kʷi šxʷqʷéləwəns.* (JP 10)  
*niʔ wət-ʰəqʷəl-ləxʷ-əs ʔi [ʔə] kʷi šxʷqʷéləwən-s*

### 3.6. ADVERBIAL ADJUNCTS

A predicate may be accompanied by an article or demonstrative followed by an adverb or adjective. Such constructions may be obliquely related to the predicate, although in the examples recorded from Musqueam speakers there is no oblique particle. These adverbial adjuncts usually appear last in the clause.

- (a) m̄ə ?əǰqəl k<sup>w</sup>ə ǰ<sup>w</sup>əm. (JP 24)  
 m̄i ?əǰqəl k<sup>w</sup>ə ǰ<sup>w</sup>əm  
 AUX(come) exit ART fast

 $\acute{t}\acute{e}?\text{-}\theta\acute{a}t\ \check{c}x^w\ n\acute{a}q\acute{a}m\ k^w\acute{a}\ \acute{z}\acute{a}p$   
 test-self you dive ART deep  
 ‘Try to dive deep.’
- (h)  $n\acute{a}w\ \theta\acute{a}y\acute{t}\acute{a}m\ t\acute{a}\ m\acute{a}st\acute{a}y\acute{a}x^w\ k^w\acute{a}w\ x^w\acute{a}n\acute{a}?\acute{a}t\ \text{?}\acute{a}l\ \dots$  (JP11)  
 $ni\ w\acute{a}\text{-}\theta\acute{a}y\text{-}t\text{-}\acute{a}m\ t\acute{a}\ m\acute{a}st\acute{a}y\acute{a}x^w\ k^w\acute{a}\ w\acute{a}\text{-}x^w\acute{a}n\acute{a}?\text{-}\acute{a}t\ \text{?}\acute{a}l$   
 AUX EST-come.into.being-TR-INTR ART people ART EST-first-past just  
 ‘People were made in the beginning ... [but] ...’
- (i)  $\theta\acute{a}y\acute{t}\ \theta\acute{a}\ h\acute{a}y^w\acute{q}^w\ k^w\acute{a}\ \theta\acute{a}.$  (JP 2)  
 $\theta\acute{a}y\text{-}t\ \theta\acute{a}\ h\acute{a}y^w\acute{q}^w\ k^w\acute{a}\ \theta\acute{a}$   
 come.into.being-TR ART be.burning ART big  
 ‘Make a big fire.’

In this last sentence,  $\theta\acute{a}$  ‘big’ might be seen as an object complement, the sentence being literally ‘Make the fire big’ rather than ‘Make the fire greatly.’ I do not have enough data to justify setting up such a category, however.

These adverbial adjuncts are perhaps simply phrases substituting for the simple adverbs identified in §3.2.2. Giving them separate status here is based on the presence of the article or demonstrative, which makes them resemble nominal adjuncts. We might also note that in their not having an oblique particle to introduce them, these adverbial adjuncts resemble nominalized clauses used adverbially (see §4.3.3).

### 3.7. ADJECTIVAL AND NOMINAL PREDICATES

As seen in §3.1.1, adjectives and nouns can appear as predicate heads. Like verbal predicates, adjectival and nominal predicates can be expanded with other elements and can have nominal adjuncts. As predicate heads, however, adjectives and nouns differ from verbs in several respects. Morphologically, adjectives and nouns do not have distinctions of aspect. Syntactically, they differ from verbs in their use of auxiliaries, adjectives appearing with auxiliaries less often and nouns in certain constructions only. Adjectives and nouns can also appear together in nominal predicates expanded with adjectives. (Nominal predicates also differ from both verbal and adjectival predicates in their use in pseudo-cleft sentences, described in §4.1.5.1.1).

### 3.7.1. Adjectival Predicates

Adjectives may appear as predicate heads accompanied by particles only, as in (a) and (b).

- (a)  $k^wámk^wəm$  cən. (JP)  
 strong I  
 ‘I’m strong.’
- (b)  $k^wámk^wəm$  ?ə čx<sup>w</sup>. (AG)  
 strong ROG you  
 ‘Are you strong?’

They can be preceded by auxiliaries, as in (c) to (f), but they have been recorded less commonly so than have verbs.

- (c) ?í ?ə čx<sup>w</sup> wə?əy̆ ?aí (often ?i·čx<sup>w</sup>əw?əy̆aí)  
 ?í ?ə čx<sup>w</sup> wə-?əy̆ ?aí  
 AUX ROG you EST-good(well) just  
 ‘How are you?’ (a common greeting)
- (d) ?i cən wə?əy̆ ?aí. (CC)  
 ?í cən wə-?əy̆ ?aí  
 AUX I EST-well just  
 ‘I am well.’ (the usual response)
- (e) ?i cən ?uk<sup>w</sup>ámk<sup>w</sup>əmə. (AG)  
 AUX I EST-strong  
 ‘I am strong.’ (not as emphatic as  $k^wámk^wəm$  cən [AG])
- (f) ni ?uk<sup>w</sup>ámk<sup>w</sup>əmə. (AG)  
 AUX EST-strong  
 ‘He [absent] is strong all right.’

Adjectival predicate heads can be preceded by adverbs acting as intensifiers, as in (g) to (i).

- (g) wəhán wəqəx̆.  
 EST-too/very EST-many/much  
 ‘There are too many. They are too many. It is too much.’
- (h) x̆ət̆ q̆áq̆əy̆.  
 hurt/sore sick  
 ‘He was very sick.’
- (i) wəhán cən wəx̆ət̆ q̆áq̆əy̆. (CC 21)  
 EST-very I EST-hurt sick  
 ‘I am really sick.’

An adjectival predicate may have a noun subject, as in (j) and (k).

- (j) p̄lét tə pték<sup>w</sup>əm. (CC)  
 thick ART brake.fern  
 ‘The brake ferns are thick.’
- (k) ǰíʔ tə syəwəŋ. (CC)  
 difficult ART song  
 ‘The song is hard.’

The subject of an adjectival predicate can be compared with something else by means of *x<sup>w</sup>ném* ‘go to,’ *x<sup>w</sup>əmí* ‘come to,’ or *ǰ<sup>w</sup>téʔ* ‘head for, move toward,’ used as prepositional verbs (see §3.5) with the sense ‘than,’ as illustrated in (l) and (m).

- (l) k̄<sup>w</sup>ám̄k̄<sup>w</sup>əm̄ x<sup>w</sup>əm̄i· ǰ ʔé·nθə. (JP)  
 k̄<sup>w</sup>ám̄k̄<sup>w</sup>əm̄ x<sup>w</sup>əm̄i [ʔə] ǰ ʔé·nθə  
 strong come.to OBL ART me  
 ‘He’s stronger than I.’
- (m) cák<sup>w</sup> k̄<sup>w</sup>ám̄k̄<sup>w</sup>əm̄ x<sup>w</sup>nem̄ ʔə ǰ nəwə. (CC)  
 far strong go.to OBL ART you  
 ‘He’s far stronger than you.’

The focusing word *háʔ* ‘specifically’ (usually with the particle *ʔaí* ‘just’) preceding the adjective give a superlative sense, as in (n).

- (n) háʔ ʔaí k̄<sup>w</sup>ám̄k̄<sup>w</sup>əm̄ ǰ<sup>w</sup>té· k̄<sup>w</sup>əw mǰk̄<sup>w</sup>. (JP)  
 háʔ ʔaí k̄<sup>w</sup>ám̄k̄<sup>w</sup>əm̄ ǰ<sup>w</sup>té ʔə k̄<sup>w</sup>ə wə-mǰk̄<sup>w</sup>  
 especially just strong head.for OBL ART EST-all  
 ‘He’s the strongest of all. He is stronger than anybody.’

### 3.7.2. Nominal Predicates

As shown in §3.1, nominal predicate heads can appear alone, followed by particles and adverbs.

- (a) təmǰáʔǰ. (CC 20)  
 təm-ǰáʔǰ  
 time.of-cold  
 ‘It was winter.’
- (b) swəʔyqeʔ cən. (JP)  
 man I  
 ‘I am a man.’
- (c) səwwəʔyqeʔ ct.  
 men we  
 ‘We are men.’

- (d) x<sup>w</sup>álməx<sup>w</sup> ʔə čx<sup>w</sup>. (CC)  
 Indian ROG you  
 ‘Are you an Indian?’
- (e) sʔíʔqə́tə́t cən. (JP)  
 sʔíʔqə́t-ə́t cən  
 child-past I  
 ‘I was a child.’
- (f) swáʔqeʔ čx<sup>w</sup> ʔe. (JP)  
 man you also  
 ‘You’re a man too.’
- (g) wəqáʔə́t čə ʔál mə́k<sup>w</sup>. (JP 1)  
 wə-qáʔ-ə́t čə ʔál mə́k<sup>w</sup>  
 EST-water-past QUOT just all  
 ‘It is said that it was all just water.’

There may be a nominal adjunct serving as the subject of the sentence, as in (h) and (j).

- (h) ʔcésə́t čə tθéʔ. (JP 1)  
 ʔcés-ə́t čə tθéʔ  
 island-past QUOT that  
 ‘That [Point Roberts] is said to have been an island.’
- (i) syəwín<sup>n</sup> k<sup>w</sup>θeʔ sk<sup>w</sup>íx. (JP 22)  
 spell.word that name  
 ‘That name is a spell word.’

Auxiliaries have not been recorded with nominal predicates in simple sentences.

### 3.7.3. Nominal Predicates with Adjectival Modifiers

A nominal predicate head can be preceded by a modifying adjective (or numeral), the noun and its modifier standing in a relationship like that of a verb head and a preceding adverb. As always, the predicate particles follow the first word.

- (a) ʔə́y čx<sup>w</sup> swáʔqeʔ. (AG)  
 good you man  
 ‘You’re a good man.’
- (b) k<sup>w</sup>ámk<sup>w</sup>ə́m sʔá́lə́yəs. (JP 25)  
 k<sup>w</sup>ámk<sup>w</sup>ə́m sʔá́lə́yəs-s  
 strong dream-3POS  
 ‘His dream was strong. He had a strong dream.’ (lit. ‘It was his strong dream.’)

In (b), the absence of an article before *sʔəlyəs* ‘his dream’ makes the whole phrase a predicate.

- (c) *i wənéc θəɫ sɔ̃wəlɛx*. (JP 25)  
 ʔəỹ wə-néc θəɫ sɔ̃wəlɛx  
 and/but EST-different ADV bird  
 ‘But it was a different bird.’

The adjective can be preceded by an intensifying adverb, as in (d).

- (d) *sćécəñ ce·p wəʔéləỹ səwwáỹqeʔ*. (JP 12)  
 sćécəñ ce·p wə-ʔéləỹ səwwáỹqeʔ  
 really you(PL) EST-good(PL) men  
 ‘You are really good men.’

There may be a nominal adjunct as the subject, as in (e) and (f).

- (e) *ʔəỹ swáỹqeʔ tə John*. (AG)  
 good man ART John  
 ‘John is a good man.’
- (f) *ḵʷámḵʷəm sćénəm θə nətén*. (CC 21)  
 strong Shaker ART my-mother  
 ‘My mother was a strong Shaker.’

If the modifier of the noun is a quantifying word, the sentence can have the existential sense of the English ‘There is’ or ‘There are,’ as in (g) to (j).

- (g) *qáx̃ ceʔ spéqəm*. (CC)  
 many FUT flower  
 ‘There will be lots of flowers [the tree being covered with buds].’
- (h) *sćécəñ yəxʷ ceʔ wəqáx̃ spéqəm*. (CC)  
 really INF FUT EST-many flower  
 ‘There will really be lots of flowers.’
- (i) *yəléqəcəs cə snəxʷəɫ*. (JP 12)  
 five.conveyances QUOT canoe  
 ‘They say there were five canoes.’
- (j) *qáx̃əɫ cə məstəyəxʷ ni ə kʷθéʔ*. (JP 25)  
 many-past QUOT person be.there OBL that  
 ‘It is said there were many people there.’

In the last four examples, because there is no article preceding the noun, the adjective, particles, and noun together must constitute the predicate. In (j), the *ni ʔə kʷθéʔ* is a verbal adjunct or prepositional phrase modifying the predicate.

In (k), there is a subject.

- (k) qáǰ spkʷóm tə lətém. (CC)  
 much dust ART table  
 ‘The table is dusty.’

I am uncertain how to interpret this. It appears to be literally ‘The table is much dust.’ But is it ‘The table has much dust,’ or is there an understood prepositional verb and oblique particle making it ‘There is much dust on the table’?

### 3.8. EXPANDED NOMINAL ADJUNCTS IN SIMPLE SENTENCES

Noun heads of nominal adjuncts can take possessive affixes and have noun possessors (§3.8.1), they can be followed by a few of the predicate particles (§3.8.2), and they can have various adjectival modifiers, including noun premodifiers (§3.8.3). Nominal adjuncts can also be expanded by coordination and possibly by apposition.

#### 3.8.1. Possession

The possessive affixes are *nə-* ‘my,’ *ʔən- ~ ʔət-* ‘your,’ *-ct* ‘our,’ *ʔən- ~ ʔət-* ... *-əlap* ‘your (pl.),’ *-s* ‘his, her, its,’ and *-s* (*ʔéttən*) ‘their’ (see §14.2.4).

Noun possessors can be related to noun heads in one of two ways. In the first, the noun head takes the possessive *-s* and is followed by the possessor with its own article, as in (a) to (d).

- (a) tə sʔíləyəθəns tə stáíəw (CC 11)  
 tə sʔíləyəθən-s tə stáíəw  
 ART bank-3POS ART river  
 ‘the bank of the river’
- (b) tə sʔíqʷs tə scéttən (CC 13)  
 ART flesh-3POS ART salmon  
 ‘the flesh of the salmon’
- (c) tə sqʷéls θə nətén (CC 11)  
 tə s-qʷél-s θə nə-tén  
 ART NOM-speak-3POS ART my-mother  
 ‘my mother’s words’
- (d) kʷθə snéʔems kʷθə ʃxʷnéʔm (CC 21)  
 ART shaman’s.vision.power-3POS ART shaman  
 ‘the “power” of the Indian doctor’

A demonstrative can also be a possessor, as in (e).

- (e) tə siʔéms təwʔáíəm (JP 27)  
 ART leader-3POS those  
 ‘the leader of them’

In the second way, the noun head, without the possessive *-s*, is followed by an optional oblique particle *ʔə*, the oblique article *ǰ*, and the possessor noun. With proper nouns as possessors, this type of construction is usual, as in (f) and (g).

- (f) *θə tén ʔə ǰ ǰáʔxǰʰəltən* (CC 11)  
 ART mother OBL ART ǰáʔxǰʰəltən  
 ‘the mother of ǰáʔxǰʰəltən [Peter Pierre, the Katzie shaman]’
- (g) *tə sǰʷəyém ǰ ʰəkʷtəyǰč* (JP 3)  
 tə sǰʷəyém [ʔə] ǰ ʰəkʷtəyǰč  
 ART story OBL ART ʰəkʷtəyǰč  
 ‘the story of ʰəkʷtəyǰč [the name of a magical dog]’

This construction has also been recorded for a few common nouns (see §15.1.4).

### 3.8.2. Particles

A few of the second-position predicate particles can also appear following the noun heads of nominal adjuncts, as *-ət* ‘past’ and *ceʔ* ‘future,’ in (a) and (b).

- (a) *kʷθə nəménət* (CC)  
 kʷθə nə-mén-ət  
 ART my-father-past  
 ‘my late father’
- (b) *kʷθə nəpúk ceʔ* (CC)  
 kʷθə nə-púk ceʔ  
 ART my-book FUT  
 ‘my book-to-be’

A few also appear with adjectives modifying noun heads (see below). In contrast, the whole range of second-position predicate particles can appear in nominal predicates (see §3.7.2).

### 3.8.3. Adjectival Modifiers

These include adjectives, numerals, a few adverbs, adjective-like forms of several kinds, and one or more verb forms. It seems that all of these always precede the noun head except for numerals, which sometimes follow.

#### 3.8.3.1. Adjectives

Adjectives are simple and complex (see §4.3). Simple adjectives are roots such as *θí* ‘big,’ *ǰéws* ‘new,’ *ǰəq* ‘white,’ and *qəl* ‘bad,’ and their plural and diminutive forms, as in (a) to (d).

- (a) *kʷθə θí qʷléy* (JP)  
 ART big log  
 ‘a big log’

- (b) tə ʃéw̃s ptékʷəm (CC 14)  
 ART new brake.fern.fron  
 ‘new ferns’
- (c) qáʃ kʷθə p̃éřq̃ nəsqʷəm qʷəm éyálɪ (JP)  
 many ART white(PL) my-dogs-young  
 ‘I have lots of white puppies.’ (lit. ‘My white puppies are numerous.’)
- (d) xʷləmeʔíwəθəs kʷə́nə qál nəstáɪəs. (JP)  
 xʷ-ləméʔ-íwən-t-S-əs kʷə́nə qál nə-stáɪəs  
 LOC-kick-rear-TR-me-3TR that bad my-spouse  
 ‘My ugly husband kicked me in the bum.’

Complex adjectives are formed from adjective roots and lexical suffixes, as in (e).

- (e) tə θəθíw̃s máʔaqʷ (JP 23)  
 tə θíθə-íw̃s máʔaqʷ  
 ART big(PL)-body large.bird  
 ‘the larger [kinds of] birds [waterfowl]’

The adjective may be followed by some of the predicate particles. In (f), it is followed by two.

- (f) kʷθə θíɪ ɕtwaʔ məstáyəxʷ (JP 14)  
 ART big-past SPEC person  
 ‘that great person, as he must have been’

The adjective can be preceded by an intensifying adverb, as in (g) and (h).

- (g) kʷθə s̃céčə́ñ wəθí qʷtáyθən (JP 23)  
 ART really EST-big sturgeon  
 ‘a really big sturgeon’
- (h) kʷθə háy ʔaɪ ʃéqt sʔənəm (JP 23)  
 ART specifically just long shaft  
 ‘the longest [harpoon] shaft’

An adjective may precede a possessed noun, as in (i).

- (i) kʷθə qál ʔəθsxəménəɪəp (JP 2)  
 kʷθə qál ʔəT-s-xəmén-əɪəp  
 ART bad your-NOM-enemy-your(PL)  
 ‘your bad enemy’

(It is not clear why JP pronounced the initial *s*- in *sxəmén* ‘enemy.’)

Sequences of adjectives, either in nominal adjuncts or in predicates, hardly ever occur in the texts. In (j), there is a rare instance of a sequence of two adjectives.

- (j)  $\theta\acute{\alpha}t$   $\acute{\lambda}\acute{\alpha}k^w$   $t\acute{\omega}w\lambda\acute{\alpha}$   $q\acute{\alpha}l$   $\theta\acute{\iota}$   $sp\acute{\alpha}\acute{\iota}$  ... (JP 4)  
 try fly that bad big raven  
 ‘That bad big raven [the bigger and greedier of two] tried to fly ...’

(AG said the order ‘bad big’ in this sentence sounds normal, but I have no basis for any classification of adjectives by the order in which they can appear. Perhaps the phrase was ‘that bad Big Raven,’ Big Raven being a proper name.)

### 3.8.3.2. Numerals

Numerals, both simple and complex (i.e., composed of a numeral root and a lexical suffix; see §19), usually precede the nouns they modify, as in (a), (b), and (c).

- (a)  $n\acute{e}m$   $\acute{c}\acute{\alpha}$   $\text{?}\acute{\alpha}\acute{\iota}$   $t\acute{\alpha}$   $\acute{\iota}\acute{\chi}\acute{\alpha}m\acute{\alpha}l\acute{\alpha}$   $st\acute{\alpha}nt\acute{e}n\acute{\alpha}y\acute{\iota}$ . (JP 14)  
 AUX(go) QUOT embark ART six-person women  
 ‘Six women embarked, it is said.’
- (b)  $t\acute{\alpha}$   $is\acute{e}l\acute{\alpha}$   $m\acute{\alpha}ll\acute{\alpha}s$  (CC 8)  
 ART two racoon  
 ‘two racoons’
- (c)  $t\acute{\alpha}$   $n\acute{\acute{\alpha}}\acute{c}\acute{\alpha}s$   $sm\acute{e}\acute{n}t$  (JP 6)  
 $t\acute{\alpha}$   $n\acute{\acute{\alpha}}\acute{c}\acute{\alpha}\text{?}-\acute{\alpha}s$   $sm\acute{e}\acute{n}t$   
 ART one-round.object rock  
 ‘one rock/another rock’

If there is an adjective, it will follow the numeral when the numeral precedes the noun, as in (d) and (e).

- (d)  $w\acute{\alpha}\theta\acute{\alpha}\text{?}\acute{\iota}t$   $\acute{c}\acute{\alpha}$   $k^w\acute{\alpha}$   $q\acute{\alpha}y\acute{n}\acute{\alpha}x^w\acute{\alpha}s$   $t\acute{\alpha}$   $n\acute{\acute{\alpha}}\acute{c}\acute{\alpha}\text{?}$   $\text{?}\acute{\alpha}x^w\acute{\iota}n$   $sm\acute{\acute{\alpha}}y\acute{\alpha}\theta$ . (JP 5)  
 $w\acute{\alpha}\text{-}\theta\acute{\alpha}\text{?}\acute{\iota}t$   $\acute{c}\acute{\alpha}$   $k^w\acute{\alpha}$   $q\acute{\alpha}y\text{-}n\acute{\alpha}x^w\text{-}\acute{\alpha}s$   $t\acute{\alpha}$   $n\acute{\acute{\alpha}}\acute{c}\acute{\alpha}\text{?}$   $\text{?}\acute{\alpha}x^w\acute{\iota}n$   $sm\acute{\acute{\alpha}}y\acute{\alpha}\theta$   
 EST-truly QUOT then die-TR-3TR ART one little deer  
 ‘He really killed one little deer then, they say.’
- (e) ...  $ni\text{?}$   $k^w\acute{\acute{\alpha}}n\acute{n}\acute{\alpha}x^w\acute{\alpha}s$   $k^w\theta\acute{\alpha}$   $y\acute{e}y\acute{s}\acute{\alpha}l\acute{\alpha}$   $\text{?}\acute{\alpha}m\acute{\acute{\alpha}}m\acute{\acute{\alpha}}n$   $st\acute{e}\text{?}\acute{\alpha}x^w\acute{\alpha}\acute{\iota}$ . (JP 2)  
 $ni\text{?}$   $k^w\acute{\acute{\alpha}}n\text{-}n\acute{\alpha}x^w\text{-}\acute{\alpha}s$   $k^w\theta\acute{\alpha}$   $y\acute{e}y\acute{s}\acute{\alpha}l\acute{\alpha}$   $\text{?}\acute{\alpha}m\acute{\acute{\alpha}}m\acute{\acute{\alpha}}n$   $st\acute{e}\text{?}\acute{\alpha}x^w\acute{\alpha}\acute{\iota}$   
 AUX get.taken-TR-3TR ART two-persons little(PL) children  
 ‘... she got two small children.’

But the numeral may also follow the noun, as in (f) and (g). It is not clear what difference, if any, in meaning this makes.

- (f)  $w\acute{\alpha}\theta\acute{\alpha}\text{?}\acute{\iota}t$   $k^w\acute{\acute{\alpha}}n\acute{n}\acute{\alpha}x^w\acute{\alpha}s$   $k^w\theta\acute{\alpha}$   $s\acute{q}\acute{\acute{\alpha}}m\acute{\acute{\alpha}}l$   $is\acute{\acute{\alpha}}l\acute{e}l\acute{w}e\text{?}\acute{s}$ . (JP 12)  
 $w\acute{\alpha}\text{-}\theta\acute{\alpha}\text{?}\acute{\iota}t$   $k^w\acute{\acute{\alpha}}n\text{-}n\acute{\alpha}x^w\text{-}\acute{\alpha}s$   $k^w\theta\acute{\alpha}$   $s\acute{q}\acute{\acute{\alpha}}m\acute{\acute{\alpha}}l$   $y\acute{\acute{\alpha}}s\acute{e}l\acute{\acute{\alpha}}\text{-}\acute{\acute{\alpha}}l\acute{w}e\text{?}\acute{s}$   
 EST-truly get.taken-TR-3TR ART paddle two-paddle  
 ‘They truly did get two paddles.’

- (g)  $\acute{c}á\lambda\acute{s}\acute{e}m\ t\acute{a}w\lambda\acute{a}\ w\acute{e}l\acute{k}^w\acute{e}c\acute{n}\acute{x}^w\acute{e}s\ t\acute{a}\ s\acute{n}\acute{x}^w\acute{e}l\ \acute{\theta}\acute{e}m\acute{x}^w\acute{e}l$ . (JP 12)  
 $\acute{c}á\lambda\text{-}\acute{e}s\text{-}\acute{e}m\ t\acute{a}w\lambda\acute{a}\ w\acute{e}l\text{-}\acute{k}^w\acute{e}c\text{-}\acute{n}\acute{x}^w\text{-}\acute{e}s\ t\acute{a}\ s\acute{n}\acute{x}^w\acute{e}l\ \acute{\theta}\acute{e}m\text{-}\acute{e}x^w\acute{e}l$   
 turn-face-INTR he already-look-TR-3TR ART canoe two-vessel  
 ‘He turned around. He saw two canoes.’

One possible interpretation is that these numerals that follow their heads are relative clauses (see §4.1), in which case (f) would be more literally ‘They truly did get paddles, which were two (paddles).’ See also comment on example (a) in §3.8.5.)

### 3.8.3.3. Adverbs

A few words that usually appear as adverbs (see §18) can also appear as noun modifiers. These include  $m\acute{s}\acute{k}^w$  ‘all,’  $\acute{\lambda}\acute{e}$  ‘also,’  $x^w\acute{a}\acute{n}\acute{a}$  ‘first,’ and  $\acute{a}t$  ‘earlier, long ago,’ among others.

The word  $m\acute{s}\acute{k}^w$  ‘all’ (§18.4.40) is exceptional in that it can appear either before or after the article. Compare (a) with (b) and (c):

- (a)  $m\acute{s}\acute{k}^w\ t\acute{a}\ s\acute{t}\acute{e}^{\prime}e\acute{x}^w\acute{e}l$  (JP 2)  
 all ART children  
 ‘all the children’
- (b)  $t\acute{a}w\ m\acute{s}\acute{k}^w\ s\acute{t}\acute{e}^{\prime}e\acute{x}^w\acute{e}l$  (JP 2)  
 ART EST-all children  
 ‘all the children’
- (c)  $t\acute{a}w\ m\acute{s}\acute{k}^w\ s\acute{t}\acute{e}m\ s\acute{m}\acute{y}\acute{a}\theta$  (JP 3)  
 $t\acute{a}\ w\acute{a}\text{-}m\acute{s}\acute{k}^w\ s\acute{t}\acute{e}m\ s\acute{m}\acute{y}\acute{a}\theta$   
 ART EST-all what deer  
 ‘any kind of [game] animal’

An adverb can precede an adjective, as in (d).

- (d)  $k^w\acute{e}w\ m\acute{s}\acute{k}^w\ \acute{?}\acute{a}\acute{m}\acute{a}m\acute{a}\acute{n}\acute{n}\ s\acute{t}\acute{e}^{\prime}e\acute{x}^w\acute{e}l$  (JP 2)  
 $\acute{k}^w\acute{e}\ w\acute{a}\text{-}m\acute{s}\acute{k}^w\ \acute{?}\acute{a}\acute{m}\acute{a}m\acute{a}\acute{n}\acute{n}\ s\acute{t}\acute{e}^{\prime}e\acute{x}^w\acute{e}l$   
 ART EST-all little(PL) children  
 ‘all the little children’

For the use of  $w\acute{a}$ - ‘established’ in (b), (c), and (d), see §3.8.3.4. below.

Other adverbs appear following the article, as in (e), (f), and (g).

- (e)  $t\acute{a}\ y\acute{a}^{\prime}y\acute{s}\acute{e}l\acute{e}\ \acute{\lambda}\acute{e}w\ s\acute{w}\acute{a}\text{-}\acute{w}l\acute{e}s$  (JP 12)  
 $t\acute{a}\ y\acute{a}^{\prime}y\acute{s}\acute{e}l\acute{e}\ \acute{\lambda}\acute{e}\ w\acute{a}\text{-}s\acute{w}\acute{a}\text{-}\acute{w}l\acute{e}s$   
 ART two.persons also EST-boys  
 ‘two other boys’

- (f) k<sup>w</sup>θə wə́átətəl məstáyəx<sup>w</sup> (JP 1)  
 k<sup>w</sup>θə wə-ít-ət məstáyəx<sup>w</sup>  
 ART EST-earlier-past person  
 ‘the people of long ago’
- (g) k<sup>w</sup>θə x<sup>w</sup>əńáʔət x<sup>w</sup>ənítəm (AG)  
 k<sup>w</sup>θə x<sup>w</sup>əńáʔ-ət x<sup>w</sup>ənítəm  
 ART first-past White.person  
 ‘the first White people’

(The prefix *wə-* ‘established’ appears here in ways that are not, at this stage of analysis, predictable.)

#### 3.8.3.4. Adjective-like Forms

Nouns, adverbs, and interrogative words can be given an adjectival meaning and used attributively (as well as predicatively) by the prefix *wə-* ‘established’ and (usually) the particle *ʔal* ‘just.’ (Enclosing a verb with *wə- ... ʔal* gives the meaning ‘just, only,’ but enclosing a noun, adverb, or interrogative word gives only an adjectival sense.) These forms appear before the noun head, as in (a) to (e).

- (a) təw sθéθəýən ʔal pték<sup>w</sup>əm (CC 14)  
 tə wə-sθéθəýən ʔal pték<sup>w</sup>əm  
 ART EST-blood just bracken.fron  
 ‘the bloody ferns’
- (b) k<sup>w</sup>θəw x<sup>w</sup>əlməx<sup>w</sup> ʔal məstáyəx<sup>w</sup> (JP 2)  
 k<sup>w</sup>θə wə-x<sup>w</sup>əlməx<sup>w</sup> ʔal məstáyəx<sup>w</sup>  
 ART EST-Indian just person  
 ‘the Indian people’
- (c) k<sup>w</sup>əw ʔəx<sup>w</sup>láʔas ʔal məstáyəx<sup>w</sup> (JP)  
 k<sup>w</sup>ə wə-ʔəx<sup>w</sup>láʔas ʔal məstáyəx<sup>w</sup>  
 ART EST-no.matter just person  
 ‘any common people’
- (d) k<sup>w</sup>əw təlónəcə ʔal məstáyəx<sup>w</sup> (JP 3)  
 k<sup>w</sup>ə wə-təl-ʔónəcə ʔal məstáyəx<sup>w</sup>  
 ART EST-from-where just person  
 ‘people from anywhere’
- (e) təw mək<sup>w</sup> ʔal təlónəcə məstáyəx<sup>w</sup> (JP 13)  
 tə wə-mək<sup>w</sup> ʔal təl-ʔónəcə məstáyəx<sup>w</sup>  
 ART EST-all just from-where person  
 ‘people from everywhere’

Some of these forms can precede adjectives, as in (f) and (h).

- (f) k<sup>w</sup>θəw mək<sup>w</sup> ʔal<sup>l</sup> θiθiws máʔaq<sup>w</sup> (JP 23)  
 k<sup>w</sup>θə wə-mək<sup>w</sup> ʔal<sup>l</sup> θiθə-íws máʔəq<sup>w</sup>  
 ART EST-all just big(PL)-body bird(large)  
 ‘all bigger [kinds of] waterfowl’
- (h) k<sup>w</sup>əw stém ʔal<sup>l</sup> ʔəx<sup>w</sup>ín<sup>n</sup> tʰi<sup>l</sup>tʰk<sup>w</sup> (JP 25)  
 k<sup>w</sup>ə wə-stém ʔal<sup>l</sup> ʔəx<sup>w</sup>ín<sup>n</sup> tʰi<sup>l</sup>tʰk<sup>w</sup>  
 ART EST-what just little little.bug  
 ‘some kind of little bug’

Adjective-like words are also produced from nouns with the prefix *s-* ‘nominalizer’(or ‘resultative’?) and the suffix *-aʔ* ‘attributive formant’ (see §12.1.5), as in (i) and (j).

- (i) tə šx<sup>w</sup>l məx<sup>w</sup>aʔ<sup>l</sup> təməx<sup>w</sup>  
 tə s-x<sup>w</sup>əl məx<sup>w</sup>-aʔ<sup>l</sup> təməx<sup>w</sup>  
 ART NOM-Indian-ATT land  
 ‘Indian land’

 tə s-x<sup>w</sup>ʔéləmə-aʔ<sup>l</sup> smən mé-n t  
 NOM ART-Clallam-ATT mountains  
 ‘the Olympic Mountains’

### 3.8.3.5. *Verb Forms as Modifiers*

Resultative forms (see §7.7) can precede nouns as adjective-like modifiers, as in (a), (b), and (c).

- (a) k<sup>w</sup>θə st<sup>l</sup>ə<sup>l</sup>t<sup>l</sup>íx<sup>w</sup> sqəl<sup>l</sup>eʔ<sup>l</sup> (CC 12)  
 k<sup>w</sup>θə st<sup>l</sup>ə<sup>l</sup>t<sup>l</sup>íx<sup>w</sup> sqəl<sup>l</sup>eʔ<sup>l</sup>  
 ART washed diaper  
 ‘clean diapers’
- (b) k<sup>w</sup>θə syé<sup>l</sup>q<sup>l</sup> nəpút (AG)  
 k<sup>w</sup>θə syé<sup>l</sup>q<sup>l</sup> nə-pút  
 ART painted my-boat  
 ‘my painted boat’
- (c) tə səyhá·yə<sup>l</sup> čtwaʔ léləmə (JP 2)  
 tə səyhá·y-ə<sup>l</sup> čtwaʔ léləmə  
 ART finished(PL)-past SPEC house  
 ‘the houses built then’

In the texts, occasionally another verb form appears before a noun, as in (d).

- (d) tə ǰé·m̄ sǰíǰqəǰ (JP 2)  
 ART be.crying child  
 ‘the crying child’

I can suggest that this progressive verb form, *ǰé·m̄*, may be a relative clause, which may precede a noun it modifies (see §4.1.2, [h] and [i]). However, this suggestion does not relieve me of the obligation to explain why ʔəx·vín in (e)

- (e) kʷθə ʔəx·vín sǰíǰqəǰ (JP 2)  
 ‘the little child’

is not a relative clause, which at this point I cannot do.

### 3.8.3.6. Noun Premodifiers

Nouns may precede nouns as their modifiers. They will be treated in §4.1.3 in connection with nominal relative clauses.

### 3.8.4. Coordination

Nominal adjuncts can be linked with the conjunction ʔəy̆ ~ i ‘and,’ as in (a) to (e).

- (a) ǰélxəs tə táməǰ i tə steʔé· kʷ snás. (JP 22)  
 ǰél-x-əs tə táməǰ ʔəy̆ tə stəʔé ʔə kʷə snás  
 apply-TR-3TR ART red.ochre and ART like OBL ART oil  
 ‘He applied red ochre and something like oil.’
- (b) kʷənətəs tə spǰǰxʷəm i tə tʰélə i tə másən. (JP 22)  
 kʷən-ət-əs tə spǰǰxʷəm ʔəy̆ tə tʰélə ʔəy̆ tə másən  
 get.taken-TR-3TR art lung and ART heart and ART gall  
 ‘He took the lungs and the heart and the gall.’
- (c) tə ʔéšxʷ, tə kʷá·n, əy tə xés (JP 22)  
 ART seal ART porpoise and ART sea.lion  
 ‘seals, porpoises, and sea lions’
- (d) ni ʔənəcə kʷ léləǰ ǰ smələǰ i sqələcəməs. (CC 1)  
 ni ʔənəcə kʷə léləǰ [ʔə] ǰ smələǰ ʔəy̆ sqələcəməs  
 AUX where ART house OBL ART s. and s.  
 ‘Where is the house of smələǰ and sqələcəməs?’
- (e) θət kʷsə nətén i tən cʰiléʔem. (CC 21)  
 θət kʷsə nə-tén ʔəy̆ tə nə-cʰiléʔem  
 say ART my-mother and ART my-stepparent  
 ‘... said my mother and my stepfather.’

Nouns cannot be linked with first- and second-person subjects and objects in the same way they are linked with other nouns. Instead, the appropriate plural

person marker appears in its proper place and the conjunction and noun appear as a nominal adjunct, as in (f) and (g).

- (f) ʔi ct mi háyeʔ ʔi kʷθə nəmén. (AG)

ʔi ct mi háyeʔ ʔi kʷθə nə-mén  
AUX we AUX(come) leave and ART my-father  
'My father and I left to come here.'

- (g) ni kʷəcnáɬxʷəs ɬə sléniʔ ʔi kʷθə nəsqéʔəq.

or ni kʷəcnáɬxʷəs ʔi kʷθə nəsqéʔəq ɬə sléniʔ. (AG)  
ni kʷéc-n-áɬxʷ-əs ɬə sléniʔ ʔi kʷθə nə-sqéʔəq  
AUX look-TR-US-3TR ART woman and ART my-junior.sibling/cousin  
'The woman saw my younger brother and me.'

In an oblique adjunct, a personal word can be coordinated with a noun, and the personal word is plural, as in (h).

- (h) sǰəqáʔ ʃ ɬníməɬ i tə nəméməhə (JP 22)

sǰəqáʔ [ʔə] ʃ ɬníməɬ ʔəy tə nə-méməhə  
accompanying OBL ART us and ART my-children  
'with my sons and me'

### 3.8.5. Apposition

It seems that a nominal adjunct can also be amplified by an appositive word or phrase. In the texts, indisputable examples are rare, since other interpretations are often possible. What may be instances of appositive phrases are seen in (a) and (b).

- (a) kʷənətəs tə qələm, iséɬə qələm. (JP 22)

kʷən-ət-əs tə qələm yəséɬə qələm  
get.taken-TR-3TR ART eye two eye  
'He took the eyes, two eyes.'

- (b) ʃéʃələtəs kʷə təwqáx sqʷél, sʃéləqəm sqʷél. (JP 22)

ʃéʃəl-ət-əs kʷə təw-qáx sqʷél sʃéləqəm sqʷél  
be.applying-TR-3TR ART somewhat-many word dangerous word  
'He was applying words, powerful words, to it.'

However, it is possible that the final phrases in (a) and (b) are in fact separate sentences: 'They were two eyes'; 'They were powerful words.' Or they could be construed as relative clauses (see §4.1): 'He took the eyes, which were two eyes'; 'He was applying words, which were powerful words.' If this latter is correct, these would be examples of non-restrictive relative clauses, which seem rare or non-existent. In (a), 'two eyes' seems parallel to the complex numerals in sentences (f) and (g) in §3.8.3.2 above.

There are also instances of proper nouns that seem to be standing in apposition to the nouns that precede them, as in (c), (d), and (e).

- (c) k<sup>w</sup>θə sɣəmə́nɪs yáq<sup>w</sup>ə́tɛʔǰ̃ (JP 14)  
 k<sup>w</sup>θə sɣəmə́n-s yáq<sup>w</sup>ə́tɛʔǰ̃  
 ART enemy-3POS Lekwiltok  
 ‘their enemies, the Yuculta [Lekwiltok]’
  
- (d) tə mə́nə́s tə cícə́t siʔé́m̃ *Jesus*  
 tə mə́nə́-s tə cícə́t siʔé́m̃ *Jesus*  
 ART child-3POS ART high lord Jesus  
 ‘the son of God, Jesus’
  
- (e) wəʔí́m̃əx ʔál̃ tə siʔé́m̃ ǰé̃.ǰ̃s. (JP 18)  
 wə-ʔí́m̃əx ʔál̃ tə siʔé́m̃ ǰé̃.ǰ̃s  
 EST-be.walking just ART lord transformer  
 ‘The Lord Transformer was just walking.’

Here, too, it is possible that these are all nominal relative clauses and more literally translated ‘their enemies, who were the Yuculta,’ ‘the son of God, who was Jesus,’ and ‘the lord [honoured person], who was ǰé̃.ǰ̃s.’ Again, they would be non-restrictive relative clauses.

## 4 Syntax 2: Complex Sentences

A complex sentence consists of a main clause and one or more embedded clauses termed relative clauses, subordinate clauses, and nominalized clauses. It may be useful to identify each of these clause types here in a preliminary way. In the following examples, the embedded clauses are enclosed in square brackets.

(1) A relative clause is an embedded clause that can modify a nominal adjunct head, such as ‘whom I saw’ in (a).

- (a) tə swə́yqəʔ [ni-n kʷə́c-nəxʷ]  
tə swə́yqəʔ niʔ-ən kʷə́c-nəxʷ  
ART man AUX-I look-TR  
‘the man [whom I saw]’

(2) A subordinate clause is an embedded clause that can stand as a conditional or complement clause in relation to a main clause, such as ‘if you go’ in (b).

- (b) kʷə́c-n-əm ceʔ [wə-niʔ-əxʷ ném].  
kʷə́c-n-əm ceʔ wə-niʔ-əxʷ ném  
look-TR-you(PAS)-INTR FUT if-AUX-you go  
‘You’ll be seen [if you go].’

(3) A nominalized clause is an embedded clause that can serve as a nominal adjunct, such as ‘my going’ in (c).

- (c) sʰéy kʷə́ [nəsném].  
sʰéy kʷə́ nə-s-ném  
impossible ART my-NOM-go  
‘I can’t go.’ (lit. ‘[My going] is impossible.’)

Each of these clause types has other forms and uses, which will be described in the following sections.

### 4.1. RELATIVE CLAUSES

The term “relative clause” is one that I will use for embedded clauses resulting from “extraction.” These correspond to English attributive clauses (“relative clauses” in the narrowest sense) such as ‘who saw me’ and ‘whom I saw’ in ‘the man who saw me’ and ‘the man whom I saw,’ and to clauses that appear in English “cleft” and “pseudo-cleft” sentences (Quirk and Greenbaum 1973, 414-17) such as ‘who saw me’ in ‘It was John who saw me’ (cleft) and ‘John was the one who saw me’ (pseudo-cleft).<sup>1</sup> Halkomelem relative clauses (in this broad sense) appear as attributive clauses; as subjects in sentences whose predicates are nouns, personal words, and interrogative words; and even as predicates. When we compare a relative clause with the corresponding simple clause, we see that one of the nominals of the simple clause is missing in the relative clause, having been “extracted” so that it may appear, in the larger context of a complex sentence, as the relative clause head. Thus, when we compare the simple clause ‘I saw a bear’ and the relative clause ‘that I saw,’ we see that ‘bear’ is missing from the relative clause. It has been “extracted” so that it may stand, for example, as the subject in the complex sentence ‘The bear that I saw ate our lunch.’ In this complex sentence, ‘bear’ is now modified by (is the head of) the relative clause ‘that I saw.’ In this way, a relative clause singles out a participant in one event or condition (expressed by one clause) in order to identify that participant with or in another event or condition (expressed by another clause), as in ‘the bear that I saw with whatever it was that ate our lunch.’ Relative clauses in their various uses in Halkomelem all seem to have this function. In this section, relative clauses are enclosed in square brackets.

Relative clauses often appear modifying noun heads (the extracted nouns), as in (a).

- (a) tə swáýqeʔ [ni·n kʷácnəxʷ]  
 tə swáýqeʔ niʔ-ən kʷéc-nəxʷ  
 ART man AUX-I look-TR  
 ‘the man (that, whom) I saw’

However, they can also simply follow an article or demonstrative expressing the gender, position, and number of the extracted noun, as in (b).

- (b) tə [ni·n kʷácnəxʷ]  
 tə niʔ-ən kʷéc-nəxʷ  
 ART AUX-I look-TR  
 ‘the one (that, whom) I saw’

1 Gerdtts (1981, 59-84), discussing extraction, confines the term “relative clause” to attributive clauses and uses the phrase “embedded clauses of extraction” for what I am calling “relative clauses.”

Following Gerdts (1981, 62), I will identify this last construction as a relative clause with an “eclipsed” head. The examples that follow in the next section are mainly relative clauses with eclipsed heads.

Depending on the type of predicate embedded, relative clauses can be identified as verbal, nominal, and, possibly, adjectival. We will first consider verbal relative clauses.

#### 4.1.1. Forms of Verbal Relative Clauses

Verbal relative clauses vary in form depending on what is extracted and from what type of clause. One major difference separates relative clauses with extracted subjects and objects from relative clauses with extracted oblique nominal adjuncts. In the first set the predicate head is a finite form of the verb, while in the second set the predicate head is nominalized.

##### 4.1.1.1. With Extracted Subjects and Objects

If what is extracted is the subject of an intransitive or passive clause, the relative clause will have the same form as the corresponding simple clause. Compare the following simple-clause predicates, (a) and (b) with the corresponding relative clauses with eclipsed heads, (a') and (b').

- |  |   |
|--|---|
| <p>(a) ni qáy.<br/>AUX die<br/>'He died.'</p>                                      | <p>(a') k<sup>w</sup>θə [ni qáy]<br/>ART AUX die<br/>'the one who died'</p>   |
| <p>(b) ni qáy-ət-əm.<br/>ni qáy-ət-əm<br/>AUX die-TR-INTR<br/>'He was killed.'</p> | <p>(b') k<sup>w</sup>θə [ni qáy-ətəm]<br/>k<sup>w</sup>θə ni qáy-ət-əm<br/>ART AUX die-TR-INTR<br/>'the one who was killed'</p> |

However, if either the subject or the object of a transitive clause is extracted, the relative clause will be different, in all but one case, from the corresponding simple clause. This is because the presence or absence of subject markers must show whether it is the subject or object that has been extracted.

If the object is extracted, the relative clause will bear one of the subordinate subject suffixes (*-en* ~ *-ən* 'I,' *-əx* 'you [singular],' *-ət* 'we,' *-ep* ~ *-əp* 'you [plural],' *-əs* 'he, she, it, they'; see §14.2.3). Compare (c) to (f) with (c') to (f'):

- |  |   |
|--|---|
| <p>(c) c'ew-ət cən ce?<br/>help-TR I FUT<br/>'I'll help him.'</p>                  | <p>(c') k<sup>w</sup>θə [c'ew-ət-èn ce?]<br/>ART help-TR-I FUT<br/>'the one (whom) I'll help'</p>   |
| <p>(d) ni cən c'ewət.<br/>ni cən c'ew-ət<br/>AUX I help-TR<br/>'I helped him.'</p> | <p>(d') k<sup>w</sup>θə [ni-n c'ewət]<br/>k<sup>w</sup>θə ni<sup>?</sup>-ən c'ew-ət<br/>ART AUX-I help-TR<br/>'the one (whom) I helped'</p> |

- |   |  |
|---|--|
| (e) $\acute{c}\acute{e}w\text{-}\acute{a}t$ $\acute{c}x^w$ $ce?$<br>help-TR you FUT<br>‘You’ll help him.’   | (e’) $k^w\theta\acute{a}$ [ $\acute{c}\acute{e}w\text{-}\acute{a}t\text{-}\acute{a}x^w$ $ce?$ ]<br>ART help-TR-you FUT<br>‘the one (whom) you’ll help’ |
| (f) $ni$ $\acute{c}\acute{e}w\text{-}\acute{a}t\text{-}\acute{a}s$ .<br>AUX help-TR-3TR<br>‘He helped him.’ | (f’) $k^w\theta\acute{a}$ [ $ni$ $\acute{c}\acute{e}w\text{-}\acute{a}t\text{-}\acute{a}s$ ]<br>ART AUX help-TR-3SUB<br>‘the one (whom) he helped’     |

In (f) and (f’), the forms of the simple predicate and the corresponding relative clause are identical in appearance. However, the third-person subject markers are probably not the same, that in the simple predicate being the transitive subject marker and that in the relative clause being the subordinate subject marker.

If a third-person subject of a transitive is extracted, the relative clause will have no third-person subject marker. Compare (g) to (i) with (g’) to (i’):

- |  |   |
|--|---|
| (g) $\acute{c}\acute{e}w\acute{a}\theta\acute{a}s$ $ce?$<br>$\acute{c}\acute{e}w\text{-}\acute{a}t\text{-}S(amx)\text{-}\acute{a}s$ $ce?$<br>help-TR-me-3TR FUT<br>‘He will help me.’            | (g’) $k^w\theta\acute{a}$ [ $\acute{c}\acute{e}w\acute{a}\theta\grave{a}m\acute{x}$ $ce?$ ]<br>$k^w\theta\acute{a}$ $\acute{c}\acute{e}w\text{-}\acute{a}t\text{-}Samx$ $ce?$<br>ART help-TR-me FUT<br>‘the one who will help me’           |
| (h) $\acute{c}\acute{e}w\acute{a}\theta\grave{a}\cdot m$ $ce?$<br>$\acute{c}\acute{e}w\text{-}\acute{a}t\text{-}Sam\text{-}\acute{a}m$ $ce?$<br>help-TR-you(PAS)-INTR FUT<br>‘He will help you.’ | (h’) $k^w\theta\acute{a}$ [ $\acute{c}\acute{e}w\acute{a}\theta\grave{a}m\acute{a}$ $ce?$ ]<br>$k^w\theta\acute{a}$ $\acute{c}\acute{e}w\text{-}\acute{a}t\text{-}Sam\acute{a}$ $ce?$<br>ART help-TR-you FUT<br>‘the one who will help you’ |
| (i) $ni$ $\acute{c}\acute{e}w\acute{a}\theta\acute{s}$ .<br>$ni?$ $\acute{c}\acute{e}w\text{-}\acute{a}t\text{-}\acute{a}s$<br>AUX help-TR-3TR<br>‘He helped him.’                               | (i’) $k^w\theta\acute{a}$ [ $ni$ $\acute{c}\acute{e}w\acute{a}t$ ]<br>$k^w\theta\acute{a}$ $ni?$ $\acute{c}\acute{e}w\text{-}\acute{a}t$<br>ART AUX help-TR<br>‘the one who helped him’   |

In (h), the form  $\acute{c}\acute{e}w\acute{a}\theta\grave{a}\cdot m$  in the simple clause is passive, literally ‘You are helped,’ there being no form in the active paradigm with a second-person object and a third-person subject. However, the corresponding relative clause is active.

In (i’), the absence of the subject marker in the relative clause is what distinguishes it from ‘the one he helped,’ (f’) above.

#### 4.1.1.2. *With Extracted Oblique Adjuncts*

Relative clauses of this type differ from those of the last type in that in these the predicate head is nominalized. There are also differences within this type depending on whether the extracted nominal adjunct is an oblique object or a locus, goal, or instrument, and on the voice of the predicate.

If what is extracted is an oblique object, the predicate head takes the prefix *s-* ‘nominalizer’ (see §12.1.1) and, if the predicate head is intransitive or active transitive, it takes a possessive affix (see §14.2.4) as a subject marker. Compare

the following simple clauses (a) and (b) with the corresponding relative clauses (a') and (b').

- (a) ni cən ʔá·m ʔə tə qáʔ. (AG)  
 ni cən ʔá-əm ʔə tə qáʔ  
 AUX I call-INTR OBL ART water  
 'I called for water.'
- (a') kʷθə [nəsʔá·m] qáʔ (AG)  
 kʷθə nə-s-ʔá-əm qáʔ  
 ART my-NOM-call-INTR water  
 'the water I called for'
- (b) ni cən ʔəxím t ʔə kʷθə ʔəpánəs. (AG)  
 niʔ cən ʔəxím-t ʔə kʷθə ʔəpən-əs  
 AUX I borrow-TR OBL ART ten-face  
 'I lent him ten dollars.'
- (b') kʷθə [ni nəsʔəxím t] (AG)  
 kʷθə niʔ nə-s-ʔəxím-t  
 ART AUX my-NOM-borrow-TR  
 'what I lent him'

If the predicate is passive, the predicate head in the relative clause is a nominalized passive with the passive person marker (see §14.2.6) and subordinate passive suffix (see §10.8). Compare (c) and (c'):

- (c) ni ʔáx ʷəstəm ʔə kʷθə sʔəłtən.  
 niʔ ʔéx ʷ-əs-t-əm ʔə kʷθə sʔəłtən  
 AUX give-REC-TR-INTR OBL ART food  
 'They were given food.'
- (c') kʷθə sʔəłtən [nem sʔáx ʷəstì·t]  
 kʷθə sʔəłtən nem s-ʔéx ʷ-əs-t-əy-ət  
 ART food AUX(go) NOM-give-REC-TR-3SUBPAS-SUBPAS  
 'the food they were given'

If the extracted oblique nominal adjunct is a locus, goal, or instrument, the predicate head in the relative clause takes the compound prefix  $\check{s}x^w$ - 'oblique nominalizer' (see §12.1.4). This compound prefix is composed of  $s$ - 'nominalizer' and  $x^w$ - 'oblique.' It may be roughly translated 'place of, time of, means of, reason for,' and so on. The predicate head also has either a possessive (if intransitive or active transitive) or a subordinate passive person marker (if passive) as a subject marker. It may be preceded by an auxiliary linking it to the noun the clause modifies. Compare (d) to (g) with (d') to (g'):

- (d) ni níʔ ʔə kʷə spólǰən.  
 ni níʔ ʔə kʷə spólǰən  
 AUX be.there OBL ART prairie  
 ‘He is at the pasture.’
- (dʻ) kʷəθə spólǰən [ni šxʷníʔs]  
 kʷəθə spólǰən níʔ šxʷ-níʔ-s  
 ART prairie AUX OBLNOM-be.there-3POS  
 ‘the pasture where he is’ (lit. ‘the pasture that is his place of being there, his locus’)
- (e) ni cən néǰ ʔə kʷəθə ǰácaʔ.  
 níʔ cən néǰ ʔə kʷəθə ǰácaʔ  
 AUX I go OBL ART lake  
 ‘I went to the lake.’
- (eʻ) kʷəθə ǰácaʔ [ni nəšxʷnéǰ]  
 kʷəθə ǰácaʔ níʔ nə-šxʷ-néǰ  
 ART lake AUX my-OBLNOM-go  
 ‘the lake where I went’ (lit. ‘the lake that was my place of going, my goal’)
- (f) ni láməθəs ʔə tə smé·nt.  
 ni lám-ət-S-əs ʔə tə smé·nt  
 AUX get.hit-TR-me-3TR OBL ART rock  
 ‘He hit me with a rock.’
- (fʻ) tə smé·nt [ni šxʷláməθəs]

 ART rock AUX OBLNOM-get.hit-TR-me-3SUB  
 ‘the rock he hit me with’ (lit. ‘the rock that was his means of hitting me’)
- (g) ni láməθələm ʔə tə smé·nt.  
 ni lám-ət-Sel-əm ʔə tə smé·nt  
 AUX get.hit-TR-I(PAS)-INTR OBL ART rock  
 ‘I was hit with a rock. Somebody hit me with a rock.’
- (gʻ) tə smé·nt [ni šxʷláməθələm]  
 tə smé·nt níʔ šxʷ-lám-ət-Sel-ət  
 ART rock AUX OBLNOM-get.hit-TR-I(PAS)-SUBPAS  
 ‘the rock I was hit with’ (lit. ‘the rock that was the means by which I was hit’)

#### 4.1.1.3. *With Extracted Possessors*

If a possessor is extracted, the possessed noun retains the possessive affix, and the relative clause has the form appropriate to the grammatical status of the noun possessed. For example, if the noun possessed is the subject of an intransitive

clause, the relative clause will have the same form as the corresponding simple clause. Compare (a) and (a´):

(a) ni méʔkʷɪ kʷθə stiɻíws kʷθéʔ swáýqeʔ. (AG)  
 niʔ méʔkʷɪ kʷθə stiɻíw-s kʷθéʔ swáýqeʔ  
 AUX get.hurt ART horse-3POS that man  
 ‘That man’s horse got hurt.’

(a´) kʷθə (swáýqeʔ) [ni méʔkʷɪ kʷθə stiɻíws] (AG)  
 kʷθə swáýqeʔ niʔ méʔkʷɪ kʷθə stiɻíw-s  
 ART man AUX get.hurt ART horse-3POS  
 ‘the man whose horse got hurt’

(In considering (a´), AG preferred to omit the noun head, saying that it seemed redundant with the article indicating a male possessor.)

Gerdts (1988, 73-74) has determined that in the Cowichan dialect there are restrictions on what possessors can be extracted. My data are not extensive enough to corroborate this.

#### 4.1.2. Uses of Verbal Relative Clauses

Relative clauses with eclipsed heads can serve as nominal adjuncts. In (a), the relative clause is the subject.

(a) nə háyeʔ kʷθə [ni-ɪ čéwəθàmχ]. (JP)  
 ni háyeʔ kʷθə niʔ-əɪ čéw-ət-Samχ  
 AUX leave ART AUX-past help-TR-me  
 ‘The one who helped me is gone.’

In (b), it is the object.

(b) niʔ cən kʷəcɪnəxʷ kʷθə [ʔi-ɪ čéwəθàmχ]. (CC)  
 niʔ cən kʷəc-nəxʷ kʷθə ʔi-əɪ čéw-ət-Samχ  
 AUX I look-TR ART AUX-past help-TR-me  
 ‘I saw the one who helped me.’

In (c), the relative clause is the possessor of the noun that precedes it.

(c) niw xʷənhəlɪ tə ɪʰéleʔs tθeʔ [ʔi-p mi ɪé-ləstəxʷ]. (JP 22)  
 ni wə-xʷən-həlɪ tə ɪʰéleʔ-s tθeʔ ʔi-əp mi  
 AUX EST-still-live ART heart-3POS that AUX-you AUX  
 é-l-əstəxʷ  
 move.shoreward-CAUS

‘The heart of that which you have brought ashore is still alive.’

The examples given above are of relative clauses consisting of predicates only, but relative clauses may also contain nominal adjuncts, as in (d) to (g).

- (d) niʔ cən kʷəcnəxʷ kʷθə [niʔ cəwət təwʂa]. (CC)  
 niʔ cən kʷəc-nəxʷ kʷθə niʔ cəw-ət təwʂa  
 AUX I look-TR ART AUX help-TR him  
 ‘I saw the one who helped him.’
- (e) ni cən kʷəcnəxʷ kʷθə [nem ceʔ cəwətəs kʷəná-ʔtən]. (JP)  
 ni cən kʷəc-nəxʷ kʷθə nem ceʔ cəw-ət-əs kʷəná-ʔtən  
 AUX I look-TR ART AUX(go) FUT help-TR-3SUB they  
 ‘I saw the one they will help.’
- (f) ... θət tə [qʷəl-stəxʷ kʷə nə-cliléʔəm]. (CC)  
 θət tə qʷəl-stəxʷ kʷə nə-cliléʔəm  
 say ART speak-COM ART my-step.parent  
 ‘... said the one who scolded my late-stepfather.’
- (g) nəw xáʔtəmətəm yəθéləy [niʔ nem yəsqəqáʔ ə təwʂa]. (CC 21)  
 ni wə-xáʔtəm-ət-əm [ʔə] yəθéləy niʔ nem  
 AUX EST-be.watching-TR-INTR OBL those AUX AUX(go)  
 yə-sqəqáʔ ʔə təwʂa  
 along-accompanying OBL him  
 ‘He was looked after by those who had gone with him.’

In (d), *təwʂa* is a third-person object, a role it cannot play in a main clause with a third-person subject indicated by *-əs* suffixed to the verb. Here, in a relative clause, the *-əs* is absent, and there is no such restriction.

Relative clauses can precede their noun heads, as in (h) and (i).

- (h) kʷθə [ʔəqəl-ləxʷ-əxʷ] wəʔθíθə (CC 10)  
 kʷθə ʔəqəl-ləxʷ-əxʷ wəʔθíθə

*nə-sčáməqʷ*  
 my-great.grandparent  
 ‘the ritualist’s rattle that my great-grandmother used’

#### 4.1.3. Nominal Relative Clauses

Nominal predicates, too, can be embedded as relative clauses.<sup>2</sup> In the texts they have the same form we would expect in corresponding simple clauses. This lack of distinguishing features makes for problems in interpretation, however. First, there are clear examples of nominal relative clauses appearing after their noun heads, as in (a) to (d).

- (a) *tə sqʷəm qʷəm éy̆ [stəlqáyə]* (JP 3)  
 ART dogs wolves  
 ‘the dogs that were wolves’
- (b) *kʷθəw məkʷ sʔəl tən [sčéʔxəʔs]*. (CC 17)  
*kʷθə wə-məkʷ s-ʔəl tən s-čéʔxəʔ-s*  
 ART EST-all NOM-eat NOM-holy-3POS  
 ‘all the foods that were his taboos’
- (c) *kʷθə spəl kʷítʰaʔ [wətátəł čtwaʔ síʔə̀m]* (JP 16)  
*kʷθə spəl kʷítʰaʔ wə-tát-əl čtwaʔ síʔə̀m*  
 ART dead.person EST-anciently-past SPEC upper-class.people  
 ‘the dead that were leaders long ago’
- (d) *tə sšíłqəl [[swéʔs θə sáʔsəqʷt] mə́nə]* (JP 1)  
*tə sšíłqəl s-wéʔ-s θə sáʔsəqʷt mə́nə*  
 ART child NOM-OWN-3POS ART junior child  
 ‘the boy who was the son of the younger sister’ (lit. ‘the male child who was the son who was the property of the female junior sibling/cousin’)

In (d), there is a relative clause (doubly bracketed) within a relative clause. The relative clause *swéʔs θə sáʔsəqʷt* ‘who is the property of (belongs to) the

2 If the distinction between verb and noun that I have made is artificial, then every word following an article might be identified as a relative clause, *tə swəʔqəʔ* being ‘the one who is a man’ rather than ‘the man,’ and so on.

junior’ modifies *mə́nə* ‘who is the child’ (the kin term), which modifies *sʰíʰqət* ‘child’ (the age status term). The outer relative clause follows its head, while the inner one precedes its head.

It may be that some noun modifiers that stand before the head are nominal relative clauses. This interpretation seems possible in (e), (f), and (g).

- (e) *tə sənɬénəy məstəyəx*<sup>w</sup> (JP 25)  
 ART women person  
 ‘the women’ (lit. ‘the persons who are women’?)
- (f) *k<sup>w</sup>θə sčələx<sup>w</sup>əm məstəyəx*<sup>w</sup> (CC 17)  
 ART old-dancer person  
 ‘the old dancer’ (lit. ‘the person who is an old-dancer’?)
- (g) *tə x<sup>w</sup>əlməx<sup>w</sup> məstəyəx*<sup>w</sup> (JP 28)  
 ART Indian person  
 ‘the Indian people’ (lit. ‘the persons who are Indians’?)

Compare (g) with (h):

- (h) *k<sup>w</sup>θəw x<sup>w</sup>əlməx<sup>w</sup> ʔaɿ məstəyəx*<sup>w</sup>  
*k<sup>w</sup>θə wə-x<sup>w</sup>əlməx<sup>w</sup> ʔaɿ məstəyəx*<sup>w</sup>  
 ART EST-Indian just person  
 ‘the Indian people’

In (h), the combination *wə- ʔaɿ* seems to make an adjective-like word of *x<sup>w</sup>əlməx<sup>w</sup>* ‘Indian.’ Here ‘Indian’ is clearly not a nominal relative clause.

On the other hand, it might be simpler just to identify these modifiers in (e), (f), and (g) as nouns used adjectivally and label them “noun premodifiers.”

There are in fact noun premodifiers that cannot be identified as embedded nominal predicates because they relate obliquely (rather than equatively) to the head. They may not be common, but one example is *šx<sup>w</sup>nəwíł* ‘far-side’ in (i),

- (i) *tə šx<sup>w</sup>nəwíł məstəyəx*<sup>w</sup> (JP 22)  
 ART far.side person  
 ‘the far-side people’ (i.e., the people from across the Gulf)

which may be a reduction of (j), which occurred later in the same story.

- (j) *yəθéłəy [təlí tə šx<sup>w</sup>nəwíł] məstəyəx*<sup>w</sup> (JP 22)  
*yəθéłəy təlí [ʔə] tə šx<sup>w</sup>nəwíł məstəyəx*<sup>w</sup>  
 those be.from OBL ART far.side person  
 ‘those people who are from the far side’

Here the modifier is a verbal relative clause.

Another example of an obliquely related noun premodifier is *ləmətú* ‘sheep’ in (k).

- (k) tə ləmətú tɪntən nínça (CC 21)  
 ART sheep bell one(DIM)  
 ‘a small sheep-bell’

Here, as in (i), it is not possible to interpret either the first or the second noun as a relative clause modifying the other. Neither ‘a sheep that is a bell’ nor ‘a bell that is a sheep’ makes sense. But this case may be marginal. The words *ləmətú* ‘sheep’ and *tɪntən* ‘bell’ are both from Chinook Jargon, and they form here what is probably a loan translation of the English compound *sheep-bell*. So this use of *ləmətú* as a noun premodifier with the oblique sense ‘for sheep’ may be atypical for Halkomelem. (I suspect that in a more conservative style, one might use the *s-* *-aʔt* formation and say *\*sləmətəwaʔt tɪntən*.)

The fact that nouns can stand as modifiers both before and after the nouns they modify means that, at this stage of analysis, it is hard to know how to interpret some juxtaposed nouns. CC interpreted her own

- (l) tə sʰéləqəm stəlqáyə  
 ART fierce(PL) wolf(PL)

as ‘the fierce wolves,’ but DK (her daughter) suggested ‘the fierce ones who were wolves.’

JP translated his

- (m) təná·nə ʃcés smé·nt (JP 15)  
 that.over.there island mountain/rock

as ‘that high island,’ but AG translated it ‘that island that is a mountain.’ Later in the story, JP made it *kʷθə smé·nt ʃcés*, which AG translated either ‘rock island’ or ‘mountainous island.’ But again it could be ‘that island that is a mountain’ or ‘that mountain that is an island.’

#### 4.1.4. Adjectival Relative Clauses

Adjectives precede nouns as modifiers in nominal adjuncts (as described in §3.8.3) and in predicates (as described in §3.7.3). They have not been recorded as modifiers following their noun heads. Whether adjective modifiers can be identified as embedded predicates and therefore relative clauses is an open question.

However, adjectives can also appear in adjuncts without nouns, as in (a).

- (a) ʔáməsθàm x čxʷ ʔə kʷθə [ʔəy]. (AG)  
 ʔém-əs-t-Sam x čxʷ ʔə kʷθə ʔəy  
 give-REC-TR-me you OBL ART good  
 ‘Give me the good one. Give me the one that is good.’

These may be identified as relative clauses with eclipsed heads.

Adjectives also appear in pseudo-cleft sentences (see below), as in (b).

- (b) ʔé·nθə [kʷámkʷəm].  
 be.I strong  
 ‘I am the one who is strong.’

These may be identified as embedded predicates, and so relative clauses in the sense used here.

#### 4.1.5. Pseudo-Cleft and Cleft Sentences

These are sentences that are constructed so as to give prominence or focus to some element (the focal element), such as a noun, pronoun, or interrogative. Both of these sentence types involve the splitting of a simple clause into a focal element and an embedded clause from which the focal element has been extracted.

In a pseudo-cleft sentence, the focal element is the predicate and the embedded clause is either the subject or a predicate complement, as in (a).

- (a) náwə [ni kʷácnəxʷè·n].  
 náwə niʔ kʷéc-nəxʷ-è·n  
 be.you AUX look-TR-I  
 ‘You are the one I saw.’

Here *náwə* ‘be you’ is the predicate and *ni kʷácnəxʷè·n* ‘whom I saw’ is a predicate complement.

In a cleft sentence, the focal element is the subject and the embedded clause is a predicate complement, as in (b).

- (b) wənáy tə swéyəl [wəθəʔít ǰéʔǰə]. (JP 21)  
 wənáy tə swéyəl wə-θəʔít ǰéʔǰə  
 be.only ART daylight EST-truly holy  
 ‘It is only the Daylight that is truly holy.’

Here *wənáy* ‘be only’ is the predicate, *tə swéyəl* ‘the daylight’ is the subject, and *wəθəʔít ǰéʔǰə* ‘(that) is truly holy’ is a predicate complement.

##### 4.1.5.1. Pseudo-Cleft Sentences

These can have nouns, personal words, and interrogative words as predicates. We will consider them here according to type of predicate.

###### 4.1.5.1.1. With Nominal Predicates

These give prominence to nouns that would be heads of nominal adjuncts in simple sentences. A sentence of this type consists of a noun (or noun with modifying adjective) standing as the predicate, followed by a relative clause formed by the extraction of this noun.

The relative clause may be preceded by an article (as a relative clause with eclipsed head) and serve as the subject of the sentence, as in (a) and (b).

- (a) sʔí-tqə́y̌ kʷlə [ni níʔ ə kʷθéʔ]. (JP 13)  
 two-headed.serpent ART AUX be.there OBL that  
 ‘What is there is a two-headed serpent.’
- (b) sqʷəméy̌ kʷθə [nəsʔíʔ]. (JP 2)  
 sqʷəméy̌ kʷθə nə-s-c-ʔíʔ  
 dog ART my-NOM-make-value  
 ‘What I want is a dog.’

In (a), the predicate is *sʔí-tqə́y̌* ‘be a two-headed serpent’ and the subject is *kʷlə ni níʔ ʔə kʷθéʔ* ‘that (feminine absent) which is there at that (place).’ In (b), the predicate is *sqʷəméy̌* ‘be a dog’ and the subject is *kʷθə nəsʔíʔ* ‘that which I want,’ which is a relative clause with nominalized head because *cʔíʔ* ‘want’ takes an oblique object. (For this interpretation of *sʔíʔ*, see §12.2.1 under [g].)

Sentences of this type with a locative subject, like that of (a), often, though not always, have the existential sense of English ‘there is, there are,’ as in (c), (d), and (e).

- (c) swáʔqeʔ tə [níʔ ə təníʔ]. (CC)  
 man ART be.there OBL there  
 ‘There is a man over there.’ (lit. ‘The [male] one over there is a man.’)
- (d) slénəy̌ θə [níʔ ə təníʔ] (CC)  
 woman ART be.there OBL there  
 ‘There is a woman over there.’ (lit. ‘The [female] one over there is a woman.’)
- (e) snəxʷət kʷθə [ʔi ʔi ʔə kʷə cé-cəw̌]. (CC)  
 canoe ART AUX be.here OBL ART shore  
 ‘There is a canoe on the beach here.’ (lit. ‘The [thing] here on the beach is a canoe.’)

Sentences with this existential sense can also have the relative clause following the predicate directly as a modifier or complement rather than as the subject.

- (f) qə́x̌ slənłénəy̌ [nem̌ kʷənətəm]. (JP 12)  
 qə́x̌ slənłénəy̌ nem̌ kʷən-ət-əm  
 many women AUX(go) be.taken-TR-INTR  
 ‘There were many women who were captured.’

Sentences like (f) may appear to be simply examples of subject-verb word order, but they are better interpreted as pseudo-cleft sentences.

Sentences with this existential sense can also have *niʔ* ‘be there’ or *ʔi* ‘be here’ preceding the noun. The *niʔ* can have the sense ‘some,’ as in (g) and (h).

- (g) niʔ məstáyəxʷ kʷθə [məhákʷnəs kʷθə siyéyəsəl niwł nem ʔíkʷ].  
 niʔ məstáyəxʷ kʷθə mə-hékʷ-nəs kʷθə  
 be.there person ART come-remember-GOAL ART  
 syəyéyə-s-əl ni wəl-nem ʔíkʷ  
 friends-3POS-past AUX already-AUX(go) be.lost  
 ‘Some people came to remember their friends [or relatives] who had passed away.’

- (h) ʔi ʔə qáχ swíwə [ni ʔə ʔ qícəyʔ]. (CC)  
 ʔi ʔə qáχ swíwə ni ʔə ʔ qícəyʔ  
 be.here ROG many eulachon be.there OBL ART Katie  
 ‘Are there lots of hooligans [eulachons] at Katie?’

In all of the examples given so far, the noun predicate is an extracted subject. In (i), (j), and (k), they are extracted objects.

- (i) qáχ θəláʔθən [ʔiʔtənəstxʷ-è-n]. (CC)  
 qáχ θəláʔθən ʔiʔtən-əstəxʷ-è-n  
 many mouth(DIM.PL) be.eating-CAUS-I  
 ‘I have lots of little mouths to feed.’ (lit. ‘There are many little mouths that I am feeding.’)

- (j) məstáyəxʷ kʷθə [ni-n kʷəc-nəxʷ]. (CC)  
 məstáyəxʷ kʷθə ni-ən kʷec-nəxʷ  
 person ART AUX-I see-TR  
 ‘I see a person. I see somebody.’ (lit. ‘The one whom I see is a person. It’s a person I see.’)

- (k) ləyám tə síwəyət [ʔi-p háʔkʷəx]. (CC 21)  
 ləyám tə s-íwəyət ʔi-p háʔkʷ-əx  
 devil ART NOM-worship AUX-you(PL) being.used-TR  
 ‘The religion that you are practising is of the Devil.’

In (l) and (m), the noun predicate is an extracted possessor.

- (l) niʔ məstáyəxʷ [ʔəyʔ šxʷqʷéləwəns]. (JP 18)  
 niʔ məstáyəxʷ ʔəyʔ šxʷqʷéləwən-s  
 be.there person good feeling-3POS  
 ‘Some people were glad.’ (lit. ‘There were people whose feelings were good.’)

- (m) ná-ncaʔ sténəy [qʷəs cə tə mánəs]. (JP 20)  
 ná-ncaʔ sténəy qʷəs cə tə mánə-s  
 one.person woman submerge QUOT ART child-3POS  
 ‘There was a woman whose son was drowned.’

In (n), it is an oblique object and so the predicate head in the relative clause bears *s-* ‘nominalizer.’

- (n) sqéwθ k<sup>w</sup>θə [ni nəs<sup>w</sup>?əltənəstəx<sup>w</sup> tə sʃíʃqəʃ]. (AG)  
 sqéwθ k<sup>w</sup>θə ni nə-s-?əltən-əstəx<sup>w</sup> tə sʃíʃqəʃ  
 potato ART AUX my-NOM-eat-CAUS ART child  
 ‘It was potatoes that I fed the child.’

And in (o) it is an extracted locus and so the predicate head in the relative clause bears *šx<sup>w</sup>-* ‘oblique nominalizer.’

- (o) nēcəwtx<sup>w</sup> cə léləmə tə [šx<sup>w</sup>ni<sup>?</sup>s [k<sup>w</sup>s cʃimmátəʃ tə spá·i i tə  
 q<sup>w</sup>əlítəq]]. (JP 7)  
 nēcəw-tx<sup>w</sup> cə léləmə tə šx<sup>w</sup>-ni<sup>?</sup>-s k<sup>w</sup>  
 one-house QUOT house ART OBLNOM-AUX-3POS ART  
 s-cʃimmát-təʃ tə spá·i ?əy tə  
 NOM-together-sit(PL DUR?)-each.other-3POS ART raven and ART  
 q<sup>w</sup>əlítəq.  
 seagull  
 ‘Raven and Seagull were living together in one house.’ (lit. ‘Their place,  
 when Raven and Seagull were living together, is said to have been  
 one house.’)

(The construction beginning with *k<sup>w</sup>s-* in (o) is a nominalized clause of a type described in §4.3.2 [7]).

The pseudo-cleft sentence with a nominal predicate is unusual in that the predicate can begin with a demonstrative. Demonstratives, of course, normally introduce adjuncts. In (p), the noun head is preceded by a demonstrative and a particle.

- (p) θə?ínə k<sup>w</sup>ə nə?íməθ [ni<sup>?</sup>é·p k<sup>w</sup>ék<sup>w</sup>əcət]. (JP 26)

 this then my-grandchild AUX-you(PL) be.looking-TR  
 ‘Now it’s this granddaughter of mine that you’re looking at.’

In (q), the predicate has the same structure but the relative clause is a nominal relative clause.

- (q) k<sup>w</sup>θe<sup>?</sup> k<sup>w</sup>ə smákw [sʃəkw cə ?aʃ, mákw stém sʃəkw] ... (JP 17)  
 k<sup>w</sup>θe<sup>?</sup> k<sup>w</sup>ə smákw sʃəkw cə ?aʃ, mákw stém sʃəkw  
 that then ball worm QUOT just all what worm  
 ‘that ball now, they say it was just worms [and/or bugs], all kinds of  
 worms ...’ (lit. ‘It is then that ball that is said to be of worms ...’)

4.1.5.1.2. *With Pronominal Predicates*

A sentence of this type consists of a personal word standing as the predicate head followed by a relative clause. The personal words are *ʔənθə* ~ *ʔé·nθə* ‘I,’ *náwə* ‘you,’ *tnímət* ‘we,’ *twálap* ‘you plural,’ *ǰá* ‘he, she, it,’ and *ǰáləm* ‘they’ (see §14.2.7). The person that is expressed by the predicate head is extracted from the relative clause. The relative clause can be either a predicate complement, following the predicate head directly, or the subject, following an article. Compare the following simple sentences (left) with the corresponding pseudo-cleft sentences (right).

- |   |   |
|---|---|
| (a) <i>ni cən ném̄.</i><br>AUX I go<br>‘I went.’  | (a’) <i>ʔé·nθə [ni ném̄].</i><br>be.I AUX go<br>‘I am the one who went.’  |
| (b) <i>ni ném̄.</i><br><i>ni ném̄.</i><br>AUX go<br>‘He went.’  | (b’) <i>ǰá [ni·t̄ ném̄].</i><br><i>ǰá niʔ-ət̄ ném̄</i><br>BE3P AUX-past go<br>‘He’s the one who went.’                                |
| (c) <i>kʷám̄kʷəm̄ cən.</i><br>strong I<br>‘I am strong.’  | (c’) <i>ʔé·nθə [kʷám̄kʷəm̄].</i><br>be.I strong<br>‘I am the one who is strong.’  |
| (d) <i>nə-mén̄ə yəθéləȳ.</i><br>my-children those<br>‘They’re my children.’  | (d’) <i>ǰáləm [nə-mém̄ən̄ə].</i><br>be.they my-children<br>‘THEY are my children.’  |
| (e) <i>ʔi ʔəm̄i ʔə ǰ ʔé·θə.</i><br><i>ʔi ʔəm̄i ʔə ǰ ʔé·θə.</i><br>AUX come OBL ART me<br>‘He came to me.’             | (e’) <i>ʔé·nθə [ʔi šxʷəm̄ís].</i><br><i>ʔé·nθə ʔi šxʷ-ʔəm̄i-s.</i><br>be.I AUX OBLNOM-come-3POS<br>‘I am the one he came to.’         |
| (f) <i>ni cən kʷácnəm̄ə.</i><br><i>niʔ cən kʷec-n-əm̄ə</i><br>AUX I look-TR-you<br>‘I saw you.’                       | (f’) <i>náwə [ni kʷácnəxʷè·n].</i><br><i>náwə niʔ kʷec-nəxʷ-è·n.</i><br>be.you AUX look-TR-I<br>‘You are the one I saw.’              |
| (g) <i>ni kʷácnəm̄xəs.</i><br><i>niʔ kʷec-n-əm̄x-əs</i><br>AUX look-TR-me-3TR<br>‘He saw me.’                         | (g’) <i>ʔé·nθə [ni·t̄ kʷácnəxʷəs].</i><br><i>ʔé·nθə niʔ-ət̄ kʷec-nəxʷ-əs</i><br>be.I AUX-past look-TR-3SUB<br>‘I am the one he saw.’  |
| (h) <i>ni cə kʷácnəm̄.</i><br><i>niʔ cə kʷec-n-ám-əm</i><br>AUX QUOT look-TR-you-INTR<br>‘He saw you. You were seen.’ | (h’) <i>náwə cə [ni kʷácnəxʷəs].</i><br><i>náwə cə niʔ kʷec-nəxʷ-əs.</i><br>be.you QUOT AUX look-TR-3SUB<br>‘You are the one he saw.’ |

Reportedly, speakers vary in their treatment of complement clauses in sentences of this type. For (g') and (h'), AG gave (i) and (j) as forms he had heard used but judged less correct.

- (i) ʔé·nθə ni ḳʷəcna·mχəs.  
 ʔé·nθə ni ḳʷéc·n·amχ·əs  
 be.I AUX look-TR-me-3TR  
 'I am the one he saw.'
- (j) nəwə ni ḳʷəcna·m.  
 nəwə ni ḳʷéc·n·am·əm  
 be.you AUX look-TR-you-INTR  
 'You are the one he saw.'

In these, the speaker used simple predicates instead of relative clauses. I do not believe CC or JP used such forms.

#### 4.1.5.1.3. With Interrogative Predicates

Some interrogative words such as *wét* 'who,' *stém* 'what,' and so on (see §17) can be used in questions in which the interrogative word is the predicate and the subject a relative clause, usually with eclipsed head, as in (a), (b), and (c).

- (a) wét kʷə ḳʷəná·tən [yə·mí]. (CC)  
 wét kʷə ḳʷəná·tən yə·ʔə·mí  
 who then those long-come  
 'Who are those coming then?'
- (b) stém ʔaʔa tə [ni·əxʷ kʷə·n·é·t]. (JP)  
 stém ʔaʔa tə ni·əxʷ kʷə·n·é·t  
 what ROG ART AUX-you be.taken-DUR-TR

 how.much then ART AUX-you lie-TR  
 'How much did you put down (as down payment)?'

Other examples appear in §17.

#### 4.1.5.2. Cleft Sentences

In a sentence of this type, the predicate is *ʔá* 'be third person' (BE3P) or one of a small number of other words that can link a subject, which is the focal element, and a complement, which is a relative clause formed by the extraction of that subject. For example:

- (a)  $\dot{\lambda}a$  tə tām [ni·n čéčəwət]. (JP)  
 $\dot{\lambda}a$  tə tām niʔ-ən čéčəw-ət  
 BE3P ART Tom AUX-I be.helping-TR  
 ‘It’s Tom that I am helping.’

Here  $\dot{\lambda}a$  is the predicate, ‘Tom’ the subject, and ‘that [whom] I am helping’ a relative clause from which Tom has been extracted.<sup>3</sup>

Other examples of this type of sentence follow in (b) to (i).

- (b)  $\dot{\lambda}a$  tθéʔ [ném ceʔ]. (JP)  
 BE3P that(MP) go FUT  
 ‘He is the one who will go.’
- (c)  $\dot{\lambda}a$  tə tām [ni čéwəθàm x]. (JP)  
 $\dot{\lambda}a$  tə tām niʔ čéčəw-ət-Sàm x  
 BE3P ART Tom AUX be.helping-TR-me  
 ‘Tom is the one who is helping me.’
- (d)  $\dot{\lambda}a$  ceʔ mə tθeʔ swəyʔqeʔ [čéwəθàm ə]. (JP)  
 $\dot{\lambda}a$  ceʔ mə tθeʔ swəyʔqeʔ čéw-ət-Sàm ə  
 BE3P FUT CERT that man help-TR-you  
 ‘It’s that man who will help you.’
- (e)  $\dot{\lambda}a$  təʔínə [nəsʔíʔ]. (CC)  
 $\dot{\lambda}a$  təʔínə nə-s-c-ʔíʔ  
 BE3P this my-NOM-make-valued  
 ‘This is the one I want.’
- (f)  $\dot{\lambda}a$  tθeʔ smé·nt [niʔ šxʷláməθs]. (CC)  
 $\dot{\lambda}a$  tθeʔ smé·nt niʔ šxʷ-lám-ət-S-s  
 BE3P that rock AUX OBLNOM-get.hit-TR-me-3POS  
 ‘That’s the rock he hit me with.’
- (g)  $\dot{\lambda}á$  mə təʔí smé·nt [niʔ šxʷláməθè·lt]. (CC)  
 $\dot{\lambda}á$  mə təʔí smé·nt niʔ šxʷ-lám-ət-Sè·l-t  
 BE3P CERT this rock AUX OBLNOM-get.hit-TR-I-SUBPAS  
 ‘This is the rock I was hit with.’
- (h)  $\dot{\lambda}a$  kʷθeʔ swéyəl [ni·n šxʷčéwət]. (CC)  
 $\dot{\lambda}a$  kʷθeʔ swéyəl niʔ nə-šxʷ-čéw-ət  
 BE3P that day AUX my-OBLNOM-help-TR  
 ‘That was the day when I helped him.’

3 The relative clause following the subject is a complement rather than a modifier of the subject. Example (a) is not ‘The Tom whom I am helping is the one,’ which would make sense only if there were several Toms. Nor is it ‘Tom, whom I am helping, is the one,’ since there do not seem to be non-restrictive relative clauses.

- (i)  $\dot{\lambda}a$   $\text{?ə}$   $ti\text{?}i$   $[ni \text{?ə}\dot{\lambda}x^w\dot{k}^w\acute{a}q^w\text{ət}]$ .  $\dot{\lambda}a$   $m\grave{a}$ .  
 $\dot{\lambda}a$   $\text{?ə}$   $ti\text{?}i$   $ni\text{?}$   $\text{?ə}-\dot{\lambda}x^w-\dot{k}^w\acute{a}q^w-\text{ət}$   $\dot{\lambda}a$   $m\grave{a}$   
 BE3P ROG this AUX your-OBLNOM-get.hit-TR BE3P CERT  
 ‘Is this what you hit him with? Yes, it is.’

In these examples, the relative clause follows the subject. However, it is also possible for the subject to follow the relative clause, as in (j) and (k). It is not clear what difference, if any, this makes in the sentence.

- (j)  $\dot{\lambda}a$   $[ni\text{-}\dot{t} \text{c}\acute{e}w\text{ət}\text{-}\grave{e}n \text{ (~ } ni\text{-}n\grave{a}\dot{t} \text{c}\acute{e}w\text{ət})]$   $t\grave{a}$   $t\acute{a}m$ . (JP)  
 $\dot{\lambda}a$   $ni\text{?}-\text{ət}$   $\text{c}\acute{e}w\text{-}\text{ət}-\grave{e}n$  (~  $ni\text{?}-\text{ən}-\text{ət}$   $\text{c}\acute{e}w\text{-}\text{ət}$ )  $t\grave{a}$   $t\acute{a}m$   
 BE3P AUX-past help-TR-I (AUX-I-past help-TR) ART Tom  
 ‘Tom is the one I helped.’
- (k)  $\dot{\lambda}a$   $ni\text{-}\dot{t} \text{c}\acute{e}w\text{ə}\theta\text{am}x$   $t\theta\acute{e}\text{?}$ . (JP)  
 $\dot{\lambda}a$   $ni\text{?}-\text{ət}$   $\text{c}\acute{e}w\text{-}\text{ət}-\text{Sam}x$   $t\theta\acute{e}\text{?}$   
 BE3P AUX-past help-TR-me that(MP)  
 ‘He is the one who helped me.’

In (l), we have a triply complex sentence, containing three nesting relative clauses.

- (l)  $k^w\theta e\text{?}$   $m\acute{a}st\acute{a}y\acute{a}x^w$   $[\dot{\lambda}a$   $[ni$   $h\acute{a}\text{?}k^w\text{-}\acute{a}x$   $t^{\theta}\text{ə}$   $[k^w\acute{ı}k^w\text{-}\acute{a}x\text{ət}$   $t^{\theta}\text{ə}$   $q^w\acute{ı}q^w\text{-}\acute{a}m\acute{a}s]]]$ .  
 (JP 28)  
 $k^w\theta e\text{?}$   $m\acute{a}st\acute{a}y\acute{a}x^w$   $\dot{\lambda}a$   $ni\text{?}$   $h\acute{a}\text{?}k^w\text{-}\acute{a}x$   $t^{\theta}\text{ə}$   $k^w\acute{ı}k^w\text{-}\acute{a}x\text{-}\text{ət}$   $[\text{?ə}]$   
 that person BE3P AUX be.using-TR ART be.naming-we OBL  
 $t^{\theta}\text{ə}$   $q^w\acute{ı}q^w\text{-}\acute{a}m\acute{a}s$ .  
 ART headdress  
 ‘It’s that person who is the one that uses what we call the “ $q^w\acute{ı}q^w\text{-}\acute{a}m\acute{a}s$ ” [hair headdress].’

It is a pseudo-cleft sentence in which the predicate ( $k^w\theta e\text{?}$   $m\acute{a}st\acute{a}y\acute{a}x^w$ ) is extracted from a cleft sentence (of the form  $\dot{\lambda}a$   $k^w\theta e\text{?}$   $m\acute{a}st\acute{a}y\acute{a}x^w$   $ni$   $h\acute{a}\text{?}k^w\text{-}\acute{a}x$   $t\grave{a}$  ... ‘It is that person who ...’), in which the object ( $t^{\theta}\text{ə}$   $k^w\acute{ı}k^w\text{-}\acute{a}x\text{ət}$  ...) is a relative clause with eclipsed head.

There are a few other words that can function instead of  $\dot{\lambda}a$  as predicates of cleft sentences or in predicates of pseudo-cleft sentences. These include  $h\acute{a}y$  ‘specifically,’  $w\acute{a}n\acute{a}y$  ‘only,’  $t\acute{x}^w\acute{a}y$  ‘only remaining,’ and perhaps a few more, as in (m) to (p).

- (m)  $i$   $h\acute{a}y$   $\theta\grave{a}$   $n\acute{a}\acute{n}\acute{e}\acute{c}\acute{a}\text{?}$   $[ni$   $t\acute{a}s$   $\text{?ə}$   $\dot{\lambda}$   $\acute{q}\acute{ı}\acute{c}\acute{a}\acute{y}\acute{?}]$ . (CC 11)  
 and specifically ART one.person AUX reach OBL ART Katzie  
 ‘But the other one went to Katzie.’
- (n)  $w\acute{a}n\acute{a}y$   $t\grave{a}$   $l\acute{a}pl\acute{ı}t$   $[n\acute{a}\dot{\lambda}x^w\text{-}n\acute{a}\text{?}\acute{a}s]$ . (CC 13)  
 $w\acute{a}n\acute{a}y$   $t\grave{a}$   $l\acute{a}pl\acute{ı}t$   $n\acute{a}-\dot{\lambda}x^w\text{-}n\acute{a}\text{?}-\acute{a}s$   
 be.only ART priest my-OBLNOM-be.there-face

 be.only.remaining be.speaking-COM-me  
 ‘He’s the only one who still speaks to me.’

In the last example, the absence of a third-person transitive *-əs* makes it clear that the second word is a relative clause.

## 4.2. SUBORDINATE CLAUSES

A subordinate clause is one that stands apart from the main clause of a sentence but in a relationship subordinate to or dependent on the main clause, such as “when he comes” in “I’ll see him when he comes” or “that he goes” in “I’ll see that he goes.”

A subordinate clause is produced by prefixing one of the two subordinating particles, *wə-* ‘if, when, that’ and *ʔət-* ‘whenever, whatever,’ to the first word in the predicate and replacing its coordinate subject person marker with a subordinate subject person marker.

The subordinate subject person markers in intransitive or transitive active predicates are *-en* ~ *-ən* ‘I,’ *-əx<sup>w</sup>* ‘you,’ *-ət* ‘we,’ *-ep* ~ *-əp* ‘you (plural),’ and *-əs* ‘third person’ (§14.2.3). In passive predicates, the first- and second-person

passive person markers, *-Sel-* ~ *-el-* ‘I,’ *-Sam-* ~ *-am-* ‘you,’ *-al-* ‘we, you (plural),’ and *-əy-* ‘third person,’ are followed by *-ət* ‘subordinate passive.’ The third-person marker in the subordinate passive is *-əy-* followed by *-ət*, usually realized as *-it* (see §14.2.6 and §10.8).

Compare the following main-clause forms (on the left) with the corresponding subordinate-clause forms (on the right):

- |   |  |
|---|--|
| (a) <i>ném cən.</i><br><i>ném cən</i><br><i>go I</i><br>‘I go.’                       | (a’) <i>wənémhèn</i><br><i>wə-ném-èn</i><br><i>if-go-I</i><br>‘if/when/that I go’                                    |
| (b) <i>kʷəcnéləm.</i><br><i>kʷec-n-él-əm</i><br><i>look-TR-I-INTR</i><br>‘I am seen.’ | (b’) <i>wəkʷəcnélt</i><br><i>wə-kʷec-n-él-t</i><br><i>if-look-TR-I-SUBPAS</i><br>‘if I am seen’                      |
| (c) <i>ni ʔítət.</i><br><i>niʔ ʔítət</i><br><i>AUX sleep</i><br>‘He slept.’           | (c’) <i>ʔəłniəs ʔítət</i><br><i>ʔəł-niʔ-əs</i> <i>ʔítət</i><br><i>whenever-AUX-3SUB sleep</i><br>‘whenever he slept’ |

Subordinate clauses are used as conditional clauses, indirect commands, indirect questions, and complements of certain kinds of main clauses of temporal and interrogative meaning.

#### 4.2.1. Conditional Clauses

Subordinate clauses with *wə-* and with *ʔəł-* are both commonly used as conditional clauses. The difference between them is that a subordinate clause with *wə-* refers to a hypothetical future event, while one with *ʔəł-* refers to a real ongoing activity or series of repeated events. Compare (a) with (b) and (c) with (d):

- (a) *kʷəcnəxʷ čxʷ ceʔ wəʔəmi-s técəl.* (CC)  
*kʷec-nəxʷ čxʷ ceʔ wə-ʔəmi-əs*                      *técəl*  
*look-TR you FUT when-AUX(come)-3SUB arrive.here*  
‘You’ll see him when he comes.’
- (b) *ni ʔə čxʷ kʷékʷəcnəxʷ ʔəłmi-s técəl.* (CC)  
*ni ʔə čxʷ kʷékʷəc-nəxʷ ʔəł-ʔəmi-əs*                      *técəl*  
*AUX ROG you be.looking-TR whenever-AUX(come)-3SUB arrive.here*  
‘Do you see him, when he comes?’
- (c) *xʷcél čxʷ ceʔ kʷə wəniəxʷ ceʔ háyeʔ təliʔ ə təña.* (CC)  
*xʷcél čxʷ ceʔ kʷə wə-niʔ-əxʷ ceʔ háyeʔ təliʔ ʔə təña*  
*go.where you FUT then when-AUX-you FUT leave from OBL this*  
‘Where are you going when you leave here?’

- (d) ni ʔəlyámətəs ʔəlniəs ʔítət. (JP 28)  
 ni ʔəlyə-mət-əs ʔəł-niʔ-əs ʔítət  
 AUX have.vision-CON-3TR whenever-AUX-3SUB sleep  
 ‘He dreams about it whenever he goes to sleep.’

Time in the future may be expressed by a subordinate clause with a conditional sense, as in (e) and (f).

- (e) ḳʷəcnámə cən ceʔ wəwéyələs. (CC)  
 ḳʷec-n-ámə cən ceʔ wə-wéyəl-əs  
 see-TR-you I FUT when-become.day-3SUB  
 ‘I’ll see you tomorrow.’ (lit. ‘I’ll see you when [another] day comes.’)
- (f) ʔəmí čxʷ wəxʷənénéntəs. (CC 21)  
 ʔəmí čxʷ wə-xʷə-né-nt-əs  
 come you when-become-becoming.night-3SUB  
 ‘Come this evening.’ (lit. ‘Come when it becomes evening.’)

Subordinate clauses with a conditional sense may appear after ʔóỵ ‘good,’ as in (g).

- (g) ʔəỵ čtwaʔ q̣ə wənémè-n táʔəlt. (JP 3)  
 ʔəỵ čtwaʔ q̣ə wə-ném-è-n tál-t  
 good SPEC EMPH if-go-I be.understood-TR  
 ‘I think it would be better if I went to find out!’

Nominalized clauses occur more often in this context, however (§4.3.3).

The conditional sense also seems present in the following sentences with ʔəł-.

- (h) stəʔé čxʷ ʔəłqʷəlstáməʔè-n.  
 stəʔé čxʷ ʔəł-qʷəl-st-ámə-ʔè-n  
 be.like you whenever-speak-COM-you-I  
 ‘You do whatever I tell you.’ (lit. ‘You comply whenever I speak to you.’)
- (i) híʔ, háy ʔe ʔəłp̣əlq̣élsəxʷ. (JP, quoting grandson to flirting girl)  
 híʔ, háy ʔe ʔəł-p̣əlq̣-él-s-əxʷ  
 hey stop PER whenever-glimpse-ACT-you  
 ‘Hey, stop making googoo eyes at me.’ (lit. ‘Hey, stop whenever you take sidelong glances.’)

Subordinate clauses usually follow main clauses, as in the preceding examples, but this is not invariably so, as (j) and (k) show.

- (j) wəmíʔè-n xʷəntécəl ʔi ʔə čxʷ ceʔ wəʔí. (CC)  
 wə-míʔ-e-n xʷən-técəl ʔi ʔə čxʷ ceʔ wə-ʔí  
 if-come-I still-arrive.here AUX ROG you FUT EST-be.here  
 ‘If I come early, will you be here?’

- (k) wəniʔəs ceʔ kʷə wəlxákʷ, ʕa ceʔ kʷθə wəθíθə [θáyt kʷθə scéécəxt  
 [ʃxʷʕíʕáqʔqʷəm ceʔ]]. (CC 17)

- (c) ʕə́təstámxəs kʷθə dákʷtə wə́léləqətè-n. (JP)  
 ʕə́tə-st-ámx-əs kʷθə dákʷtə wə́-léləqət-è-n  
 be.telling-COM-me-3TR ART doctor that-stick.out.tongue-I  
 ‘The doctor told me to stick out my tongue.’
- (d) ni cən neim yá-t ɬə Edna wə́xté-ɬcθámxəs kʷ swétə. (JP)  
 niʔ cən neim yáh-ət ɬə Edna wə́-xté-ɬc-t-ámx-əs  
 AUX I AUX(go) alert-TR ART Edna that-make-BEN-TR-me-3SUB  
 [ʔə] kʷ swétə  
 OBL ART sweater  
 ‘I went and ordered a sweater from Edna.’

#### 4.2.3. Indirect Questions

Subordinate clauses with *wə-* occur with this function when they contain interrogative words (§17) and follow main clauses with verbs referring to knowing, discovering, and so on.

- (a) *ni cən ʒəw mɛlqt wəniʔəs ʔənəcə θə tɪntən.* (CC 21)  
*ni cən ʒe wə-mɛlq-t wə-niʔ-əs ʔənəcə θə tɪntən*  
 AUX I also EST-forget-TR that-be.there-3SUB where ART bell  
 ‘I too had forgotten where the bell was.’
- (b) *nəwɪ ləqəlɪxʷəs i kʷi ʃxʷqʷɛləwəns wəni:s ctámət kʷθə siyéyəsəl.*  
 (JP 10)  
*niʔ wəɪ-ləqəl-ləxʷ-əs ʔi [ʔə] kʷi ʃxʷqʷɛləwən-s*  
 AUX already-know-TR-3TR be.here OBL that mind-3POS  
*wə-ni-əs ctámət kʷθə siyéyəs-əl*  
 that-AUX-3SUB do.what.with.oneself ART friends-3POS-past  
 ‘He already knew in his mind what had happened to his late friends.’

#### 4.2.4. Complements of Main Clauses Referring to the Future

Subordinate clauses with *wə-* appear after main clauses referring to future time, as in (a).

- (a) *wéyəl ceʔ wəqéwəθamè:n.* (CC)  
*wéyəl ceʔ wə-qéw-ət-Samə-è:n*  
 become.day FUT that-pay-TR-you-I  
 ‘I’ll pay you tomorrow.’ (lit. ‘It will be tomorrow that I will pay you.’)

Here the subordinate clause is not, properly speaking, a conditional clause, since my paying you is not a condition for the sun rising tomorrow. Compare with (b), given earlier in §4.2.1 (e).

- (b) *kʷəcnámə cən ceʔ wəwéyələs.*  
*kʷec-n-ámə cən ceʔ wə-wéyəl-əs*  
 see-TR-you I FUT when-become.day-3SUB  
 ‘I’ll see you tomorrow.’

Here ‘tomorrow’ is a conditional clause and a condition for my seeing you.

Nor can the subordinate clause in (a) be identified as ‘when I pay you’ in the sense of a relative clause ‘on which I pay you.’ Compare with (c), given in “Cleft Sentences” (§4.1.5.2).

- (c) *ʒa kʷθeʔ swéyəl ni:n ʃxʷcéwət.*  
*ʒa kʷθeʔ swéyəl ni-ən ʃxʷ-céw-ət*  
 be3P that day AUX-I OBLNOM-help-TR  
 ‘That was the day when/on which I helped him.’

Here *ni:n* (*ni nə-*) *ʃxʷcéwət* ‘on which I helped him’ is a proper relative clause identifying *swéyəl* ‘day’ as an oblique nominal adjunct in the corresponding main clause, with the sense ‘I helped him on that day.’

Presumably, *wéyal ceʔ* in (a) is not followed by a true relative clause because is not a noun (like *swéyal*) but a verb. Perhaps, then, a subordinate clause provides the only way of relating a future event to a verb relating to future time.

In “when” questions about the future, we find the same construction, as in (d). (See also §17.5.)

- (d) *təmtém ceʔ kʷə wəniəxʷ háyeʔ*. (CC)  
*təmtém ceʔ kʷə wə-niʔ-əxʷ háyeʔ*  
 when FUT then that-AUX-you leave  
 ‘When are you leaving?’

#### 4.2.5. Interrogative Complements with *ʔəl-*

Following an interrogative, the prefix *ʔəl-* and the suffix *-əs* ‘third-person subordinate subject’ can be affixed to a noun to give the sense ‘kind of a,’ as in (a) to (e).

- (a) *stém ʔəłsqʷəméyəs tθeʔ*. (JP)  
*stém ʔəł-sqʷəméy-əs tθeʔ*  
 what that-be.dog-3SUB that  
 ‘What kind of a dog is it?’ (lit. ‘What that it may be a dog is that?’)
- (b) *stém ʔəłsqʷəmḡʷəméyəs kʷə ʔiəxʷ kʷənét*. (JP)  
*stém ʔəł-sqʷəmḡʷəméy-əs kʷə ʔi-əxʷ kʷən-é-t*  
 what that-dogs-3SUB ART AUX-you be.held-DUR-TR  
 ‘What kind of dogs do you have?’
- (c) *scékʷəl ʔał ʔəłməstáyəxʷəs kʷθéʔ*. (JP)

 how just that-person-3SUB that  
 ‘What kind of a person is that guy?’
- (d) *stém kʷə ʔəłskʷəléxəs kʷə ni ʔəšxʷkʷəléxt*. (CC)  
*stém kʷə ʔəł-s-kʷəléx-əs kʷə niʔ ʔə-šxʷ-kʷəléx-t*  
 what then that-NOM-shoot-3SUB ART AUX your-OBLNOM-shoot-TR  
 ‘What kind of a gun did you shoot him with?’ (lit. ‘What kind of a gun was the one you shot him with?’)
- (e) *ʔe ʔə kʷə wənéc ʔəłsqʷəméyəs*. (CC)  
*ʔe ʔə kʷə wə-néc ʔəł-sqʷəméy-əs*  
 also ROG then EST-different that-dog-3SUB  
 ‘Was it another kind of dog?’

This use of *ʔəl-* ... *-əs* seems to be restricted to contexts like those in the examples given, and the use is difficult to interpret. The relevant facts are these: There is no separate word for ‘kind,’ although there are lexical suffixes with the

meaning ‘kind’ and these appear in words for ‘how many kinds,’ ‘one kind,’ and so on. The word *stém* ‘what,’ however, appears not to combine with lexical suffixes (except *-c* ‘tribe’). And so, again (as with a main clause referring to future time), the subordinate clause may serve a purpose not open to other constructions. The prefix may be *ʔəl-* rather than *wə-* because *ʔəl-* refers to a continuing state while *wə-* refers to a future or unreal state.

Unlike the construction with *wə-* and *ʔəl-* identified in the preceding sections (§4.2.1 to 4.2.4.), those described in this section seem to be expansions of the main predicate rather than separate subordinate clauses. The nominal adjuncts in the examples given in this section seem to be subjects of the whole predicates that precede them rather than subjects simply of the subordinate clauses, that is, the immediate constituents of (a) are *stém ʔətsqʷəméyəs* and *tθeʔ*, rather than *stém* and *ʔətsqʷəméyəs tθeʔ*.

### 4.3. NOMINALIZED CLAUSES

A nominalized clause is formed by prefixing *s-* ‘nominalizer’ (or *šxʷ-* ‘oblique nominalizer’ in one subtype) to the first word of a predicate. If the predicate is intransitive or active transitive, its subject must be marked by a possessive affix instead of a main-clause subject marker. Compare the following predicates (left column) with the corresponding nominalizations (right column):

- |   |   |
|---|---|
| (a) <i>ném cən.</i><br><i>ném cən</i><br>go I<br>‘I go’                               | (a') <i>nəsném</i><br><i>nə-s-ném</i><br>my-NOM-go<br>‘my going’                                    |
| (b) <i>kʷəcnəxʷəs.</i><br><i>kʷec-nəxʷ-əs</i><br>look-TR-3TR<br>‘he sees it’          | (b') <i>skʷəcnəxʷs</i><br><i>s-kʷec-nəxʷ-s</i><br>NOM-look-TR-3POS<br>‘his seeing it’               |
| (c) <i>ni cən kʷəcnəxʷ.</i><br><i>ni cən kʷec-nəxʷ</i><br>AUX I look-TR<br>‘I saw it’ | (c') <i>nəsnikʷəcnəxʷ</i><br><i>nə-s-niʔ kʷec-nəxʷ</i><br>my-NOM-AUX look-TR<br>‘my having seen it’ |

Passive predicates can be nominalized in their subordinate forms only and do not require possessives, since their subjects are already indicated by their passive affixes. Compare (d) and (e) with (d') and (e'):

- |  |   |
|--|---|
| (d) <i>kʷəcnéləm</i><br><i>kʷec-n-él-əm</i><br>look-TR-I-INTR<br>‘I am seen’ | (d') <i>skʷəcnélt</i><br><i>s-kʷec-n-él-ət</i><br>NOM-look-TR-I-SUBPAS<br>‘my being seen’ |
|--|---|

- |  |   |
|--|---|
| (e) kʷəcnəm<br>kʷec-n-əm<br>look-TR-INTR<br>'he is seen' | (e') skʷəcní:t<br>s-kʷec-n-əy-ət<br>NOM-look-TR-3PAS-SUBPAS<br>'his being seen' |
|--|---|

Nominalized clauses can appear within predicates, and they can appear as direct nominal adjuncts, as oblique nominal adjuncts, and as narrative sentences.

#### 4.3.1. Within Predicates

Nominalized clauses can appear following the adverbial words *yél* 'just now,' *wənáy* 'only,' *mə́kʷ* 'all, every,' and perhaps a few others (see §18), as in (a) to (e).

- (a) *yél mə nəstécəl*. (CC)  
*yél mə nə-s-técəl*  
 just.now CERT my-NOM-arrive.here  
 'I just got here.'
- (b) *yél mə stécəls*. (CC)  
*yél mə s-técəl-s*  
 just.now CERT NOM-arrive.here-3POS  
 'He just got here.'
- (c) *yél mə nəsi təcəl*. (CC)  
*yél mə nə-s-ʔi təcəl*  
 just.now CERT my-NOM-AUX arrive.here  
 'I just got here.'
- (d) *yél mə səs təcəl*. (CC)  
*yél mə s-ʔi-s təcəl*  
 just.now CERT NOM-AUX-3POS arrive.here  
 'He just got here.'
- (e) *yél mə səs néṁ*. (CC)  
*yél mə s-niʔ-s néṁ*  
 just.now CERT NOM-AUX-3POS go  
 'He just went.'

In (d) and (e), the auxiliary appears as *s*. In (c), it is probably *ʔi* 'be here,' consistent with *təcəl* 'arrive here.' But in (d) it is probably *niʔ* 'be there,' consistent with *néṁ* 'go.' (JP often used *sis* in seemingly parallel constructions.)

- (f) *wənáy sqʷél-s təwʷa šxʷnéʔem ...* (CC)  
*wənáy s-qʷél-s təwʷa šxʷnéʔem*  
 be.only NOM-speak-3POS that shaman  
 'That shaman only said ...'

- (g)  $má\acute{k}^w$   $nəs\acute{n}ém$   $ʔíməx$  ...  
 $má\acute{k}^w$   $nə-s-ném$   $ʔíməx$   
 every my-NOM-go walk  
 ‘Whenever I go about ...’

A construction of this type with  $má\acute{k}^w$  ‘all, every’ has the sense of a conditional clause, but grammatically it is the first of a pair of coordinate clauses (see §5.2.3).

The personal word  $ǰá$  ‘be third person’ (see §14.2.7) can be followed by a nominalization with  $wət-$  ‘already,’ the construction having the sense ‘be now about to, be now starting,’ as in (h) to (k).

- (h)  $ǰan$   $səwł$   $ǰləm$ . (CC)  
 $ǰa$   $nə-s-wət-ǰləm$   
 BE3P my-NOM-already-sing  
 ‘I’m going to start to sing.’
- (i)  $ǰa$   $mə$   $səwł$   $ǰləms$ . (CC)  
 $ǰa$   $mə$   $s-wət-ǰləm-s$   
 BE3P CERT NOM-already-sing-3POS  
 ‘He’s going to start to sing.’
- (j)  $ǰa$   $mə$   $ʔəsəwł$   $ǰtəʔstəx^w$ . (CC)  
 $ǰa$   $mə$   $ʔə-s-wət-ǰtəʔ-stəx^w$   
 BE3P CERT your-NOM-already-do-COM  
 ‘Do it now.’
- (k)  $ǰa$   $mən$   $səwł$   $ném$ . (CC)  
 $ǰa$   $mən$   $nə-s-wət-ném$   
 BE3P CERT my-NOM-already-go  
 ‘I’m going now.’ (lit. ‘It is my already going.’)

AG gave his equivalent of (k) as  $ǰa$   $mən$   $nəs\acute{u}$   $wət\acute{n}ém$ , with the sequence  $wə_2$  ‘established’ plus  $wət-$  ‘already.’ In the material obtained from CC and JP,  $wə_2$  and  $wət-$  do not seem to co-occur, although it is possible that what I recorded as  $səwł$  may be //s-wə-wət-//.

The word  $ǰa$  can also introduce a nominalized clause beginning with  $s-$  ‘nominalizer’ followed by  $wə_2$  ‘established,’ commonly, but not always, realized as  $səw$ , but these nominalized clause also commonly occur without any preceding  $ǰa$ . Because of this, I treat them as a separate type. See §4.3.4.

#### 4.3.2. As Nominal Adjuncts

Nominalized clauses can appear as nominal adjuncts in a number of ways.

- (1) As subjects. They can appear as subjects of intransitive verbs, as in (a).

- (a) xəq k<sup>w</sup>θən s<sup>l</sup>k<sup>w</sup>éwəł. (JP)  
 xəq k<sup>w</sup>θə nə-s-tək<sup>w</sup>-éwəł.  
 be.finished ART my-NOM-get.stuck-vessel  
 ‘I’m all finished with my “corking” [caulking of a boat].’ (lit. ‘Finished is my caulking.’)

They may be subjects of verbs that are adverbial in sense, referring to manner, as in (b).

- (b) yəxəłxəłθət tə s<sup>x</sup>wən xénəms. (JP 10)  
 yə-xəłxəł-θət tə s-x<sup>w</sup>ən xénəm-s  
 along-turning.from.side.to.side-self ART NOM-run-3POS  
 ‘He ran zigzagging along.’ (lit. ‘His running was turning itself from side to side.’)

Or referring to time (perhaps past only), as in (c) and (d).

- (c) híθ k<sup>w</sup>ən s<sup>l</sup>íməx.  
 híθ k<sup>w</sup>ə nə-s-<sup>l</sup>íməx  
 last.long ART my-NOM-be.walking  
 ‘I walked for a long time.’
- (d) xə<sup>l</sup>áθən swéyəl k<sup>w</sup>ə nəsni<sup>?</sup> sk<sup>w</sup>téx<sup>w</sup>.  
 xə<sup>l</sup>áθən swéyəl k<sup>w</sup>ə nə-s-ni<sup>?</sup> sk<sup>w</sup>téx<sup>w</sup>  
 four day ART my-NOM-AUX inside  
 ‘I was in there for four days.’

Nominalized clauses also very often appear as subjects with predicates that are modal in sense (see §18.3), as in (e), (f), and (g).

- (e) <sup>l</sup>əy<sup>?</sup> k<sup>w</sup>s qá-nθətct. (CC 21)  
<sup>l</sup>əy<sup>?</sup> k<sup>w</sup>ə s-qén-əθət-ct  
 good ART NOM-return-self-our  
 ‘We’d better return.’ (lit. ‘Our returning would be good.’)

Because the article *k<sup>w</sup>ə* ~ *k<sup>w</sup>* implies remote or non-existent status (see §14.1), an even more literal version of (e) might be ‘Be good our hypothetical returning.’

- (f) nəs<sup>l</sup>í<sup>?</sup> k<sup>w</sup>ə nəs<sup>n</sup>ém.  
 nə-s-c-<sup>l</sup>í<sup>?</sup> k<sup>w</sup>ə nə-s-ném  
 my-NOM-make-valuable ART my-NOM-go  
 ‘I want to go.’ (lit. ‘My hypothetical going is what I want.’)

In (f), *nəs<sup>l</sup>í<sup>?</sup>* is probably a relative clause (see §12.2.1 [g]) rather than a nominalized clause.

(g) sk<sup>w</sup>éy k<sup>w</sup>ə nəsífləm.

sk<sup>w</sup>éy k<sup>w</sup>ə nə-s-ífləm  
impossible ART my-NOM-sing

‘I can’t sing.’ (lit. ‘Impossible is my singing.’)

(2) As objects. A nominalized clause can appear as the object of a transitive verb, as in (h).

(h) ʔé-nθə ceʔ xqát tə ʔəssqálcəp. (CC 12)

ʔé-nθə ceʔ xəq-ət tə ʔə-s-səq-əlçəp  
be.I FUT finish-TR ART your-NOM-split-firewood

‘I will finish splitting the wood for you myself.’ (lit. ‘I will be the one who will finish your wood-splitting.’)

(3) As oblique objects. In sentences like (i) to (l), the nominalized clauses probably relate to the predicates as oblique objects, although the oblique particle does not appear.

(i) sí:səy cən k<sup>w</sup>ən sném̄.

sí:səy cən k<sup>w</sup>ə nə-s-ném̄  
fear I ART my-NOM-go

‘I’m afraid to go.’ (lit. ‘I am afraid of my [hypothetical] going.’)

(j) ni tətáʔθət k<sup>w</sup>s ʔíməxs.

ni tətáʔ-θət k<sup>w</sup>ə s-ʔíməx-s  
AUX be.testing-self ART NOM-walk-3POS

‘He is trying to walk.’ (lit. ‘He’s testing himself in his walking.’)

(k) ʔícəl ct k<sup>w</sup>s ném̄ct.

ʔícəl ct k<sup>w</sup>ə s-ném̄-ct  
uncomplying we ART NOM-go-our

‘We refuse to go.’ (lit. ‘We are uncomplying in our going.’)

(l) niʔəl cən m̄ə šx<sup>w</sup>teʔé-wən k<sup>w</sup>ə nəs-ném̄.

niʔ-əl cən m̄ə šx<sup>w</sup>teʔé-wən k<sup>w</sup>ə nə-s-ném̄  
AUX-past I CERT conceive ART my-NOM-go

‘I’ve been intending to go.’ (lit. ‘I have certainly conceived of my going.’)

In all these sentences, the nominalization is translated most naturally by an English infinitive. In some sentences, however, such as (l), the nominalized clause might also be translated by an English subordinate clause with “may,” or in an older style with a subjunctive form, identifying the event as hypothetical: ‘I have certainly conceived that I may go.’

(4) As indirect quotations, as in (m).

(m) ni mə ʒə́tə kʷə sniʔs ném.

niʔ mə ʒə́tə kʷə s-niʔ-s ném  
AUX CERT be.saying ART NOM-AUX-3POS go

s-čénə́m  
NOM-shake

'I have a licence to use the Shaker religion.' (lit. 'I have a licence for my using the religion that is the Shaker.')

(6) As indicators of cause, as in (o) and (p).

(o) ʔi cən xʷʔítcəsəsmət tθeʔ swə́yqeʔ kʷsʔə́ys kʷθeʔ lélə́m̄s. (JP)

ʔi cən xʷʔítcəs-s-mət tθeʔ swə́yqeʔ kʷə s-ʔə́y-s  
AUX I envious-CON that man ART NOM-good-3POS  
kʷθeʔ lélə́m̄-s  
that house-3POS

'I am envious of that man because he has a good house.' (lit. 'I envy that man his house's being good.')

(p) sčé́cən ctəw híləkʷ kʷíct kʷəcnámə, háy čxʷ qə́ kʷeʔesʔi mi  
kʷécətà́xʷ. (CC)

sčé́cən ct wə-híləkʷ kʷ s-ni-ct kʷéc-n-ámə háy  
really we EST-happy ART NOM-AUX-we see-TR-you finish  
čxʷ qə́ kʷə ʔes-ʔi mi kʷéc-ət-à́xʷ  
you EMPH ART your-AUX come see-TR-us

'We were really happy to see you. Thank you for coming to see us.'

(But cf. nominalized clauses with ʒxʷ- in §4.3.3.)

(7) Adverbial adjuncts referring to past time. These correspond to English adverbial clauses introduced by 'when' in the sense of 'at the time (in the past) that' (in contrast to 'when' in the sense of 'if'; cf. *wə-* in §4.2.1 and *haʔ* in §5.2.3). They can appear both following and preceding the predicate (the main clause), as in (q) and (r).

(q) ni cən mē kʷə́cnəxʷ kʷθəwʒə́ kʷsniʔs níʔ ə́ kʷθéʔ. (CC)

ni cən mē kʷə́c-nəxʷ kʷθəwʒə́ kʷə s-niʔ-s níʔ  
AUX I CERT look-TR him ART NOM-AUX-3POS be.there  
ʔə́ kʷθéʔ  
OBL that

'I saw him there.' (lit. 'I saw him at his being there.')

- (r) k<sup>w</sup>smis técəl k<sup>w</sup>θeʔ məstəyəx<sup>w</sup>, ni ʔə čx<sup>w</sup> k<sup>w</sup>ácəx<sup>w</sup>.  
 k<sup>w</sup>ə s-mi-s                                      técəl                      k<sup>w</sup>θeʔ      məstəyəx<sup>w</sup>      ni  
 ART    NOM-AUX(come)-3POS    arrive.here    that            person            AUX  
       ʔə      čx<sup>w</sup>      k<sup>w</sup>ec-nəx<sup>w</sup>  
       ROG    you      look-TR  
 ‘When that person got here, did you see him?’

**4.3.3. Clauses Nominalized with šx<sup>w</sup>-**

When used to form a nominalized clause, the compound prefix šx<sup>w</sup>- ‘oblique nominalizer’ (composed of s- ‘nominalizer’ and x<sup>w</sup>- ‘oblique relater’) has the sense of ‘reason why,’ and it identifies the clause it nominalizes as the effect of some other event or condition.

These clauses can appear in predicates, usually following šá ‘be third person,’ as in (a).

- (a) šá šx<sup>w</sup>k<sup>w</sup>ənés tə sq<sup>w</sup>əm q<sup>w</sup>əm éy stəlqáyə. (JP 3)  
 šá      šx<sup>w</sup>-k<sup>w</sup>ən-é-t-s                                      tə      sq<sup>w</sup>əm q<sup>w</sup>əm éy      stəlqáyə  
 BE3P    OBLNOM-be.held-DUR-TR-3POS    ART    dogs                                      wolves  
 ‘That’s why he kept the dogs that were wolves.’

From its context, it is clear that (a) is a complete sentence. However, in (b) and (c), the status of the clause beginning with šá is not clear.

- (b) niʔ híləm šá šx<sup>w</sup>niʔs yák<sup>w</sup>əm. (JP)  
 niʔ      híl-əm      šá      šx<sup>w</sup>-niʔ-s                                      yák<sup>w</sup>-əm  
 AUX    fall-INTR    BE3P    OBLNOM-AUX-3POS    break-INTR  
 ‘It fell, and that’s why it broke.’ ‘It fell, which is why it broke.’

- (c) slénəy šá šx<sup>w</sup>čátəs tθéʔ. (JP)  
 slénəy      šá      šx<sup>w</sup>-čátə-s                                      [ʔə]      tθéʔ  
 woman    BE3P    OBLNOM-be.doing-3POS    OBL    that  
 ‘She’s a woman, and that’s why she does that.’ ‘She’s a woman, which is why she does that.’

Are the clauses beginning with šá separate sentences or are they, as in the alternate English versions, relative clauses with the preceding predicates as their heads?

A clause nominalized with šx<sup>w</sup>- can be introduced by the oblique particle ʔə, as in (d).

- (d) niʔ ct wəqáyənəx<sup>w</sup> k<sup>w</sup>θə niəł wéčmətəl x<sup>w</sup> ʔə šx<sup>w</sup>ʔict mi šəwnámət.  
 (JP 12)

       OBL    OBLNOM-AUX-our    AUX(come)    escape-self

‘We succeeded in killing those who were guarding us, and that’s how we got away.’

A clause nominalized with  $\check{s}x^w$ - can also appear as a subject, as in (e).

- (e)  $\check{\lambda}i^? \ k^w\text{ən} \ \check{s}x^w\text{?}\text{ə}m\acute{i}$ . (JP 3)  
 $\check{\lambda}i^? \quad k^w\text{ə} \quad n\text{ə-}\check{s}x^w\text{-?}\text{ə}m\acute{i}$   
 important ART my-OBLNOM-come  
 ‘I’ve come for an important reason.’ (lit. ‘The reason why I have come is important.’)

#### 4.3.4. Nominalized Narrative Sentences

Nominalized clauses with  $w\text{ə-}_2$  ‘established’ appear frequently in narratives, either following  $\check{\lambda}á$  ‘be third person’ as predicate complements or, more often, simply standing alone as complete sentences. The  $\check{\lambda}á$  followed by the nominalized clause may be translated ‘It is (was) then ...’ or ‘That is when ...’ With no  $\check{\lambda}á$ , the nominalized clause is generally translated with an initial ‘then’ or ‘so then.’

In these nominalized clauses, the  $w\text{ə-}_2$  precedes the predicate head or, when there is one, the directional auxiliary ( $?\text{ə}m\acute{i}$  ‘come,’  $n\acute{e}m$  ‘go’), and it is preceded by the  $s$ - ‘nominalizer’. It can appear as  $w\text{ə-}$  prefixed to the verb or as  $-\text{ə}w$  suffixed to the  $s$ -. The  $s$ - ‘nominalizer’ and  $w\text{ə-}$  usually, but not always, appear as  $s\text{ə}w$  (phonetically [səw] ~ [səw] ~ [su] (in AG’s speech usually  $su^?$ )). The verb may have an intransitive or a transitive suffix and, if the latter, an object pronoun suffix. The whole must have a possessive, either at the beginning (if first- or second-person singular) or at the end (if first- or second-person plural or third person).

If there is no locative auxiliary ( $?i$  or  $ni^?$ ), the order of elements for an intransitive or active transitive predicate is:

- ( $\check{\lambda}a$ )  $n\text{ə-}$ , or  $?\text{ə}T$ -  $s$ -  $w\text{ə-}$  VERB (-t, -nəx<sup>w</sup>) -ct, -ələp, or -s  
 (BE3P) 1, or 2POS NOM- EST- VERB STEM (-TR) 1PL, 2PL, or 3POS

Examples are shown in (a) to (d).

- (a)  $n\text{ə}s\text{ə}w \ m\acute{i} \ c\acute{a}m\text{ə}t$ . (CC 5)  
 $n\text{ə-s-wə-m}\acute{i} \quad c\acute{a}m\text{-}\text{ə}t$   
 my-NOM-EST-AUX(come) pack[carry on the back]-TR  
 ‘Then I packed it up.’
- (b)  $?\text{ə}\theta w\text{ə}\check{\lambda}\acute{i}l\text{ə}x$ . (JP 22)  
 $?\text{ə}T\text{-s-wə-}\check{\lambda}\acute{i}l\text{ə}x$   
 your-NOM-EST-stand  
 ‘Then you stand up.’

(c) *səw néms.* (CC)

s-wə-ném-s

NOM-EST-go-3POS

‘Then he went.’

(d) *səw kʷəcnaχ<sup>ws</sup>.* (CC)s-wə-kʷec-naχ<sup>w</sup>-s

NOM-EST-look-TR-3POS

‘Then he saw it.’

For a passive predicate (with no locative auxiliary), the order is:

(ǰá)	s-	wə-	VERB	-t or -n-	-Sel-, -Sam-, etc.	-ət
(BE3P)	NOM	EST	VERB STEM	TR	PAS	SUBPAS

An example is shown in (e).

(e) *səw yəθəstɪ-t* (CC 12)

s-wə-yəθ-əs-t-əy-ət

NOM-EST-tell-RECIP-TR-3SUBPAS-SUBPAS

‘Then they were told.’

If there is a locative auxiliary, the order of elements for an intransitive or active transitive predicate is:

(ǰá)	nə-,?əT-	s-	?i, ni?	-ct, -ələp, -s	wə-	VERB
(BE3P)	POS	NOM	AUX	POS	EST	VERB

Examples are shown in (f), (g), and (h).

(f) *nəsnəw ném ?əǰqəl.* (CC 12)

nə-s-ni? wə-ném ?əǰqəl

my-NOM-AUX EST-AUX(go) exit

‘Then I went out.’

(g) *səct wəhəye?* (CC 8)

s-ni?-ct wə-həye?

NOM-AUX-our EST-leave

‘Then we left ...’

(h) *səsəw kʷəlɪəxtəs.* (CC 8)

s-ni?-s wə-kʷəlɪəx-t-əs

NOM-AUX-3POS EST-shoot-TR-3TR

‘Then he shot it.’

From forms like *nəsnəw* and from the requirements of syntax, we may infer the presence of an auxiliary (*ni?* or *?i*) in forms like *səctəw* ~ *səct wə-* and *səsəw* ~ *səs wə-* (other examples of which will appear below). In JP’s texts, the third-person forms are usually *sisəw* ~ *sis wə-*.

For a passive predicate with a locative auxiliary, the nominalized auxiliary takes a third-person possessive regardless of the person of the passive person marker suffixed to the head, and the order is:

(ǰá)	s-	ʔi or niʔ	-s	wə-	VERB STEM	-t, -n-	-SeI-, -Sam-, etc.
(BE3P)	NOM	AUX	3POS	EST-	VERB STEM	TR	PAS
							-əm
							INTR

Examples are shown in (i), (j), and (k).

(i) səsəw nəʔéməstéləm tə qàqəyétx<sup>w</sup>. (CC 12)

s-niʔ-s	wə-nəʔém-əst-él-əm	[ʔə]	tə	qàqəy-étx <sup>w</sup>
NOM-AUX-3POS	EST-go-CAUS-I-INTR	OBL	ART	sick-house

‘Then I was taken to hospital.’

(j) səsəw céwətəm k<sup>w</sup>sə nətén. (CC 21)

s-niʔ-s	wə-céw-ət-əm	k <sup>w</sup> sə	nə-tén
NOM-AUX-3POS	EST-help-TR-INTR	ART(FR)	my-mother

‘Then my late mother was helped.’

(k) səsəw mi ǰánəm tə yáysələ qélməy̆. (CC 11)

s-ʔi-s	wə-mi	ǰá-n-əm	tə	yáysələ
NOM-AUX-3POS	EST-AUX(come)	fetch-TR-INTR	ART	two.persons

qélməy̆  
young women

‘So the two young women were brought here as brides.’

In (k), the locative auxiliary concealed in *səsəw* must be *ʔi* ‘be here’ rather than *niʔ* ‘be there,’ as in (i) and (j). This is required by the *mi* ‘come’ that follows it.

It is not at all clear what determines the choice of a form with an auxiliary over a form without one. In narratives, *səw* and *səsəw* (or *sisəw*) occur in consecutive sentences with, as yet, no discernible pattern.

There is another problem. With a third-person subject, there are inconsistencies in the verb forms that follow. In discussing *səw* and *səsəw*, CC insisted that the forms implied by the formulas given above are “correct”: *səw* should be followed by a verb with a possessive *-s* or a subordinate passive ending with *-ət* (as in the left column below), while *səsəw* should be followed by the form appearing in a main clause, the intransitive with zero, the transitive active with *-əs*, and the passive with *-əm* (as in the right column).

(l) səw ném.s.

s-wə-ném-s
NOM-EST-go-3pos

These forms are consistent with the identification of the initial *s-* of *səw* and *səsəw* as *s-* ‘nominalizer’ and the second *-s* of *səsəw* as *-s* ‘third-person possessive,’ and CC usually followed these rules. However, in the texts she dictated, I occasionally recorded forms like (o) and (p) with *səw* but no *-s* ‘third-person possessive’ suffixed to the verb.

- (o) *səw qʷəl tə Gabe.* (CC 18)  
*s-wə-qʷəl[-s] tə Gabe*  
 NOM-EST-speak[-3POS] ART Gabe  
 ‘Then Gabe spoke.’
- (p) *səw cset θə stáləss kʷs ...* (CC 12)  
*s-wə-cəs-ét[-s] θə stáləs-s kʷ s-*  
 NOM-EST-tell-TR[-3POS] ART spouse-3POS ART NOM-  
 ‘Then he told his wife to ...’

In (o), where the verb is intransitive, it is possible that CC said *səsəw* and I misheard it as *səw*, or that she contracted *səsəw* to *səw*. In (p), however, where the verb is active transitive, had the form been *səsəw*, the verb should have been *csétəs* with the *-əs* ‘third-person transitive subject.’ Thus it seems more likely that she said *səw* and then omitted the possessive. In texts dictated by JP, sentences with *səw* and *sisəw* follow CC’s rules part of the time, but fairly often *səw* is followed by a main-clause form of the verb. In these instances, perhaps he did contract *sisəw* to *səw*.<sup>4</sup>

4 This inconsistency occurs in other dialects as well. In Cowichan texts that I have recorded, *səw* (*suʷ*) is usually followed by a possessed form, but sometimes it is followed by a main-clause form (cf. Hukari 1982). In Chilliwack, main-clause forms seem to be usual. Galloway (1993, 363) identifies *su* (glossed ‘so, then’) as a conjunction, without identifying the *s-* as the nominalizer. He gives a number of sentences with third-person subjects showing *su* followed by main-clause verbs. When in one example (p. 367) the suffix *-s* does appear (as it should by CC’s rules), he suggests that it may be an error. More likely it was the product of a speaker who treated the *s-* as nominalizer, which it clearly is with first- and second-person subjects (see Galloway’s examples at the bottom of his p. 363). For most Upriver speakers and perhaps for some

Another inconsistency appears in the placement of the predicate particles. An initial *ǰá* can be followed by one or more particles (*ceʔ* ‘future,’ *yaxʷ* ‘inferential,’ etc.). In fact, speakers may use *ǰá* to introduce nominalized clauses just to have a peg to hang particles on. In a few instances, however, CC used a particle in a sentence without *ǰá*, as in (q) and (r).

(q) *səs yaxʷ wən-é-m̓ tə ʔitət-éwtxʷ*. (CC 21)  
*s-niʔ-s yaxʷ wə-ném̓ [ʔə] tə ʔitət-éwtxʷ*  
 NOM-AUX-3POS INF EST-go OBL ART sleep-house  
 ‘And then he must have gone to a hotel.’

(r) *səsəw yaxʷ wəkʷənəθəs ʔé-łtən*. (CC 12)  
*s-niʔ-s wə-yaxʷ wə-kʷən-ət-S-əs ʔé-łtən*  
 NOM-AUX-3POS EST-INF EST-be.taken-TR-me-3TR 3PL  
 ‘Then they must have taken me.’

In the first example, the *yaxʷ* is placed where one might expect it, following the auxiliary and preceding the *wə-<sub>2</sub>*, which is prefixed to the verb. In the second, however, it follows *səsəw*, which contains a *wə-<sub>2</sub>*, and is followed by another *wə-<sub>2</sub>*. This suggests again that there is a tendency to disengage the cluster of elements that includes the *s-* ‘nominalizer’ from the rest of the sentence.

This cluster of elements can also include the adverb *ǰé* ‘again, also,’ as in (s) and (t).

(s) *səsǰəw ʔákʷəstəm*. (CC 14)  
*s-niʔ-s ǰe wə-ʔákʷəs-t-əm*  
 NOM-AUX-3POS also EST-hang.up-TR-INTR  
 ‘Then they were hung up too.’

(t) *nəsiǰəw ʔəmət*. (CC 21)  
*nə-s-niʔ ǰe wə-ʔəmət*  
 my-NOM-AUX also EST-get.up  
 ‘Then I got up too.’

The prefix *wət-* ‘already’ can also appear, either in place of *wə-<sub>2</sub>* or perhaps incorporating it (cf. §11.1.2), as in (u) and (v).

---

elsewhere, however, Galloway’s view may be correct: when there is a third-person subject, *səw* (or *su* or *suʔ*) may be simply a conjunction with no government of the following verb.

Dialect differences in this respect seem to go back to the beginning of the twentieth century. In Hill-Tout’s Kwantlen texts (1903, 430-34), it appears that “ē-tlās-wä” (*ʔəy ǰá səwə-*) is usually followed by a verb with a possessive, while in his Chehalis and Scowlits texts (1904, 336-37, 368-74) it appears that “tla-sδ” (*ǰa səw*) and “sδ” (*səw*) are usually followed by a main-clause form.

(u) səwł xqáts tə skʷícs. səw hípəts. (CC 16)

s-[wə- ?] wəł-xəq-ət-s tə s-kʷícs-s.  
 NOM-[EST- ?] already-get.finished-TR-3POS ART NOM-butcher-3POS  
 s-wə-híp-ət-s  
 NOM-EST-cut.up-TR-3POS

(v) ʒá səšʒəwł híqəθət. (CC 13)

ʒá s-niʔ-s ʒe [wə- ?]wəł-híq-əθət  
 BE3P NOM-AUX-3POS again [EST- ?] already-launch-self

‘Then they shoved off again.’

At this point, it is not clear just what *wəł-* adds to these sentences. It may simply help establish a temporal relationship between the sentence in which it appears and the following sentence or sentences. A freer translation of the first example above might be ‘When he had finished butchering, he cut up the meat.’ But not all instances of *səwł-* lend themselves to this kind of interpretation. Besides, pairs of nominalized narrative sentences with *səw* can also be interpreted in this fashion.

Although nominalized narrative sentences usually appear in narratives after the action has started, it is also possible to begin a narrative with such a sentence. An account of how CC’s parents became Shakers begins thus:

(w) səšəw xʷəʒəléł məstáyəxʷ kʷsə nətén. səšəw xʷəsqəléʔł. (CC 21)

s-niʔ-s wə-xʷə-ʒəléł məstáyəxʷ kʷsə  
 NOM-AUX-3POS EST-become-middle-aged person ART  
 nə-tén. s-niʔ-s wə-xʷə-sqəléʔł  
 my-mother NOM-AUX-3POS EST-become-sickly

‘My late mother became a middle-aged person. She was sickly.’

A more literal translation of this would be: ‘It was my late mother’s having become a middle-aged person. It was her having become sickly.’ A freer translation might be: ‘When my mother got to be middle-aged, she became sickly.’ However, there is nothing that explicitly marks these two nominalizations as standing in the relationship of conditional clause and main clause.

It is not usual to begin a narrative in this fashion. This last is the only example in my collection of Musqueam texts, but there are other examples in Cowichan texts. More often, nominalized narrative sentences appear after the action has started. Those introduced by *ʒá* seem especially to imply that some precondition has been met. A few examples follow.

In an account of a personal experience, the narrator’s husband asks her to buy shotgun shells adding:

- (x)  $\lambda^a$  ceʔ nəsəw neṁ páyətəł kʷ máʔaqʷ wəwéyələs. (CC 12)

 s-niʔ-s wəł-háy-əyəθən  
 NOM-AUX-3POS already-finish-mouth  
 ‘Then they must have fallen asleep when they had finished eating.’

Sentences consisting of the nominalized clause alone are more common than those with  $\lambda^a$ . In some narratives, they are by far the most frequent type of sentence. For example, in an account of a hunting expedition, the whole of which

is given in §23.3, of the first twelve sentences, ten are nominalized clauses. Only the first and third (together with two quoted within the fourth) are not. Analysis of narrative structure and style may show that sentences of this type play a role not discernible at present. Such an analysis might also answer some of the other questions raised in this section.

Sentences (cc) and (dd) are examples of intransitives with one subject followed by passives with a different subject, as seen in §3.4.2 (m).

- (cc) səsəw ném̄ tə ni ném̄ k̄<sup>w</sup> cécəw k̄<sup>w</sup>écətəm tə stáləw̄. (CC 7)

## Syntax 3: Compound Sentences

A compound sentence consists of two or more predicates joined by the conjunction  $\text{ʔə́y} \sim i$ . It is useful to distinguish two broad classes of compound sentences: coordinate and qualifying.

### 5.1. COORDINATE COMPOUND SENTENCES

In these, the predicates are semantically coordinate and the conjunction is translatable as ‘and,’ ‘but,’ or ‘and at that time.’ A coordinate compound sentence may consist of a series of verbs with the same subject, joined by conjunction, as in (a).

- (a)  $k^w\acute{a}n\acute{a}t\acute{a}s \ i \ c\acute{a}m\acute{a}t\acute{a}s \ i \ \acute{t}\acute{x}^wstx^w\acute{a}s$ . (JP 7)  
 $k^w\acute{a}n\text{-}\acute{a}t\text{-}\acute{a}s \quad \text{ʔə́y} \quad c\acute{a}m\text{-}\acute{a}t\text{-}\acute{a}s \quad \text{ʔə́y} \quad \acute{t}\acute{x}^w\text{-}st\acute{x}^w\text{-}\acute{a}s$   
 be.taken-TR-3TR and pack-TR-3TR and move.to.shore-CAUS-3TR  
 ‘He took it and put it on his back and brought it down.’

Such a sentence may differ from a simple sentence with a verb complement (cf. §3.2.3) only in the presence of the conjunction.

A coordinate compound sentence can consist of two clauses with different subjects, joined with  $\text{ʔə́y}$  in the sense ‘and,’ as in (b).

- (b)  $s\acute{t}\acute{a}q^w\acute{t}q\acute{a}n \ t\acute{a} \ sm\acute{e}\text{-}nt \ \text{ʔə́y} \ \acute{x}\acute{a}w \ s\acute{t}\acute{a}q^w \ t\acute{a} \ st\acute{a}l\acute{a}w$ . (CC 7)  
 $s\text{-}\acute{t}\acute{a}q^w\text{-}\acute{t}q\acute{a}n \quad t\acute{a} \ sm\acute{e}\text{-}nt \quad \text{ʔə́y} \quad \acute{x}\acute{a} \quad w\acute{a}\text{-}s\text{-}\acute{t}\acute{a}q^w$   
 RES-be.cut.off-slope ART mountain and also EST-RES-be.cut.off  
 $t\acute{a} \ st\acute{a}l\acute{a}w$   
 ART river  
 ‘The mountain face is sheer and so is the river[’s bank].’

If the two clauses are contradictory, the conjunction may be translated ‘but,’ as in (c) and (d).

- (c) ʔəy̆ tiʔinə i qəl̆ tə nə̀ʔaʔ. (CC)  
 good this but bad ART one  
 ‘This one is good but the other is no good.’
- (d) wəhán wəhíθ kʷsəs skʷékʷəlt θə tɪntən i ni ʧxʷ nem̆ kʷənət. (CC 21)  
 wə-ńán wəhí-θ kʷ s-niʔ-s skʷékʷəlt θə  
 EST-very already-last.long ART NOM-AUX-3POS hidden(RES) ART  
 tɪntən ʔəy̆ ni ʧxʷ nem̆ kʷən-ət  
 bell but AUX you go be.taken-TR  
 ‘The bell was hidden for a long time but you went and got it.’

A simple sentence can begin with the conjunction, as in (e). What precedes this sentence seems to require interpreting it as an independent sentence.

- (e) ʔəy̆ ʔəwə tə nə̀ʧf̆l̆əʔem. (CC 21)  
 but refuse ART my-step.parent  
 ‘But my stepfather refused.’

In joining two clauses, the conjunction ʔəy̆ can also relate them in time, what is expressed in the first clause preceding what is expressed in the second. English may require a subordinating conjunction, as in (f), (g), and (h).

- (f) xʷʔámət cən ceʔ i xqət cən. (CC)

 EST-all just die  
 ‘It was the only religion of my parents until they both died.’

## 5.2. QUALIFYING COMPOUND SENTENCES

These are compound sentences in which the first clause qualifies the second, standing semantically in an adverbial relationship to it. The logic of these

sentences seems to be a simple extension of that of the last three examples in §5.1. We may distinguish several types depending on how the first clause qualifies the second.

### 5.2.1. With Quantifying First Clauses

In these the first clause qualifies the second by indicating the amount of time or number of things required, as in (a) to (f).

- (a) ʔisélə swéyəl i nə tás ʔə ʃ sʔámənə. (CC 21)  
 ʔisélə swéyəl ʔəy niʔ tás ʔə ʃ sʔámənə

- (d) txʷkʷín máʔaqʷ i ʔəwkw. (DK)  
 txʷ-kʷín máʔaqʷ ʔəy ʔəwkw  
 remaining-how.many larger.bird and run.out  
 ‘How many more ducks [are there to cook] before they’re gone?’
- (e) cəxʷléʔ i qáynəxʷəs tə smáyəθ. (JP 7)  
 cəxʷléʔ ʔəy qáy-nəxʷ-əs tə smáyəθ  
 once.in.a.while and die-TR-3TR ART deer  
 ‘Once in a while he killed a deer.’
- (f) ʔəwə scékʷələs i ʃe cən wəqʷəlstámə. (CC)  
 ʔəwə scékʷəl-əs ʔəy ʃe cən wə-qʷəl-st-ámə  
 not how-3SUB and again I EST-speak-COM-you  
 ‘I’ll never speak to you again.’

For other examples of this construction, see §18. For the negative construction, see §6.

### 5.2.2. With Interrogative First Clauses

Two interrogative words (see §17) can stand as first-clause predicates in sentences of this type. These are *təmtém* ‘when’ and *nəcím* ‘why,’ as in (a) and (b).

- (a) *təmtém ceʔ i néṁ čxʷ.* (DK)  
 when FUT and go you  
 ‘When are you going?’
- (b) *nəcím kʷe i néṁ cən.* (CC)  
 why then and go I  
 ‘Why should I go?’

### 5.2.3. With Conditional First Clauses

In these, the first clause begins with *haʔ* ‘if, when’ or *máḱʷ* ‘whenever’ (lit. ‘all’), two words that produce what are in effect conditional clauses. As noted in §4.3.1, *máḱʷ* is followed by a nominalized clause. See also §18.4.18 and 18.4.40.

- (a) *haʔ čxʷ ceʔ qəlét ʔté i ʔəl čxʷ ceʔ.* (CC)  
 if you FUT again do and hurt you FUT  
 ‘If you do it again, you’ll get hurt.’ [a threat]
- (b) *háʔ čxʷ mé wə-ʔí ʔaí i háy cən ceʔ*  
 if you CERT EST-be.here just and specifically I FUT  
*wə-néṁ.* (CC)

- (c) *máḱʷ nəsnéṁ ʔíməx ʔi wəkʷəcnəxʷ cən.* (JP)  
*máḱʷ nə-s-néṁ ʔíməx ʔəy wə-kʷec-nəxʷ cən*  
 whenever my-NOM-AUX(go) walk and EST-look-TR I  
 ‘Whenever I go about, I see him.’
- (d) *máḱʷəł nəsnéṁ xʷcəlθət ʔiw kʷəcnəxʷ cən.* (JP)  
*máḱʷ-əł nə-s-néṁ xʷcəl-θət ʔəy wə-kʷec-nəxʷ cən*  
 whenever-past my-NOM-AUX(go) go.where-self and EST-look-TR I  
 ‘Whenever I went somewhere, I saw him.’

### 5.2.4. With Modal First Clauses

There are at least three words with a modal sense (see §18.1) that can serve as a predicate head in the first clause. These are *ʔám* ‘can’ (also ‘fast’), *cəlél* ‘nearly,’ and *xʷéləq* ‘nearly.’ In sentences of this type, the subject of both predicates is the same. A particle marking a first- or second-person subject appears in the first clause and is not repeated in the second.

- (a) *ʔám cən i ʔəw néṁ.* (CC)  
*ʔám cən ʔəy ʔe wə-néṁ*  
 can I and also EST-go  
 ‘I can go too.’

- (b)  $\check{x}^w\acute{a}m$        $\check{c}x^w$      $i$        $m\acute{e}^?k^w\acute{l}$ . (CC)

 OBL    ART  
 ‘The Transformer was almost beaten at ...’

In the placement of the subject particles and the nominal adjunct, these sentences resemble simple sentences with initial auxiliaries or adverbs. However, the conjunction suggests that they are a special type of compound sentence.

# 6

## Syntax 4: Negation

The basic negative word is *ʔəwə* ‘not’ (as the most common negator of a predicate), ‘no’ (as an interjection or answer), ‘refuse’ (see §6.1.6). Two other negative words, probably derivatives of *ʔəwə*, are also used to negate predicates. These are *x<sup>w</sup>əw’é* ‘not yet’ and *ʔəwəteʔ* ‘none, absent.’ (Other words with negative meanings include *sḱ<sup>w</sup>éy* ‘impossible’ (§18.4.43) and *sqiʔqəl* ‘unable’ (§18.4.45).

### 6.1. NEGATION WITH *ʔəwə*

An affirmative predicate of most types is most commonly negated by embedding it in a matrix clause of which the head is *ʔəwə* ‘not.’ The embedded clause may be a subordinate clause or a nominalized clause.

#### 6.1.1. Subordinate Clauses with Intransitive and Active Transitive Predicates

The negation with a subordinate clause seems to be the basic (unmarked) form, except that there is one hole in the paradigm that is filled by a negation with a nominalized clause.

If the embedded clause being negated is an intransitive or active transitive subordinate clause, the negative word is followed by a main-clause subject marker (one of the particles *cən* ‘I,’ *čx<sup>w</sup>* ‘you,’ *ct* ‘we,’ *ce·p* ‘you (pl.),’ or zero for a third-person subject), while the embedded affirmative, unless it is passive, appears with the corresponding subordinate subject suffix (*-e·n* ~ *-ən* ‘I,’ *-əx<sup>w</sup>* ‘you,’ *-ət* ‘we,’ *-e·p* ~ *-əp* ‘you (pl.),’ or *-əs* ‘third person’).

The negative paradigm for an intransitive predicate without an auxiliary is as shown in (a) to (f).

- (a) *ʔəwə cən ném-è·n.*  
 not I go-I  
 ‘I do/will not go.’

- (b) ʔəwə čx<sup>w</sup> néǵ-əx<sup>w</sup>  
not you go-you  
'You do/will not go.'
- (c) ʔəwə ct néǵ-ət.  
not we go-we  
'We do/will not go.'
- (d) ʔəwə ce·p néǵ-è·p.  
not you(PL) go-you(PL)  
'You folks do/will not go.'
- (e) ʔəwə néǵ-əs.  
not go-3SUB  
'He/she/it does/will not go.'
- (f) ʔəwə néǵ-əs (ʔé·tən)  
not go-3SUB 3PL  
'They do not go.'

(I am identifying the *néǵe·n*, *néǵəx<sup>w</sup>*, and so on as subordinate clauses, even though there is no subordinating prefix *wə-*, or *ʔət-*. Alternatively, one might identify ʔəwə as an adverb of a unique type that requires a subordinate person marker suffixed to the predicate head. I think, however, that the interpretation presented here will turn out to be the most parsimonious.)

If there is an auxiliary in the embedded affirmative, it will take the subordinate subject suffix, as in (g) and (h).

- (g) ʔəwə cən ni·n néǵ.  
ʔəwə cən niʔ-ən néǵ  
not I AUX-I go  
'I did not go.'
- (h) ʔəwə cən ʔi·n yá·ýəs.  
ʔəwə cən ʔi-ən yá·ýəs  
not I AUX-I be.working  
'I am not working.'

If the embedded affirmative is an active transitive predicate, the negation is formed as above for first- and second-person subjects, as in (i) to (m).

- (i) ʔəwə čx<sup>w</sup> k<sup>w</sup>e méltəx<sup>w</sup>.  
ʔəwə čx<sup>w</sup> k<sup>w</sup>e mélt-əx<sup>w</sup>  
not you then forget-TR-you  
'Don't forget it.'

- (j) ʔəwə ʧx<sup>w</sup> ʃíʔʃeʔəx<sup>w</sup>. (JP)  
 ʔəwə ʧx<sup>w</sup> ʃíʔʃeʔ-əx<sup>w</sup>  
 not you ashamed-you  
 ‘Don’t be shy.’
- (k) ʔəwé· cən ʃtéʔeʔcθame·n k̄<sup>w</sup> tǎʃ<sup>w</sup>ac. (CC)  
 ʔəwə ʔə cən ʃtéʔ-əʔc-t-Samə-ən k̄<sup>w</sup> tǎʃ<sup>w</sup>ac  
 not ROG I make-BEN-TR-you-I ART bow  
 ‘Shall I make you a bow?’ (lit. ‘Shall I not make you a bow?’)
- (l) ʔəwə ʧx<sup>w</sup> niʔəx<sup>w</sup> k̄<sup>w</sup>əcnàm x.  
 ʔəwə ʧx<sup>w</sup> niʔ-əx<sup>w</sup> k̄<sup>w</sup>ec-n-àm x  
 not you AUX-you look-TR-me  
 ‘You didn’t see me.’
- (m) ʔəwə cən ni·n ʧéwət.  
 ʔəwə cən niʔ-ən ʧéw-ət  
 not I AUX-I help-TR  
 ‘I didn’t help him.’

However, if the embedded affirmative is an active transitive predicate with a third-person subject and no auxiliary, it must be negated as a nominalized clause, as in (n) and (o).

- (n) ʔəwə k<sup>w</sup>s k̄<sup>w</sup>əcnəx<sup>w</sup>s.  
 ʔəwə k<sup>w</sup> s-k̄<sup>w</sup>ec-nəx<sup>w</sup>-s  
 not ART NOM-look-TR-3POS  
 ‘He doesn’t see him.’
- (o) ʔəwə m̄ə k<sup>w</sup>s k̄<sup>w</sup>əcnàm x s ʔé·ʔtən.  
 ʔəwə m̄ə k<sup>w</sup> s-k̄<sup>w</sup>ec-n-àm x-s ʔé·ʔtən  
 not CERT ART NOM-look-TR-me-3POS 3PL  
 ‘They do not see me.’

A form like *\*ʔəwə k̄<sup>w</sup>əcnàm x əs* is not possible (CC). On the other hand, if there is an auxiliary, an active transitive predicate with a third-person subject can appear as a subordinate clause, as in (p).

- (p) ʔəwə niʔəs k̄<sup>w</sup>əcnàm x əs. (CC)  
 ʔəwə niʔ-əs k̄<sup>w</sup>ec-n-àm x-əs  
 not AUX-3SUB look-TR-me-3TR  
 ‘He didn’t see me.’

Here, the first *-əs* is the third-person subordinate subject marker while the second *-əs* is the third-person transitive subject marker. The auxiliary provides a base for the first, and the head provides a base for the second. Without the auxiliary, the head would have to have either two suffixes with the form *-əs* or else

one *-əs* serving both functions. Switching to a nominalization in such instances avoids this dilemma.

### 6.1.2. Subordinate Clauses with Passive Predicates

When the embedded predicate is passive, the negative (with the exceptions noted below) has a third-person subject. This holds regardless of the subject of the embedded passive. The ʔəwə takes no person marker, and if there is no auxiliary, the predicate head takes one of the passive person markers *-el-* ‘I,’ *-am-* ‘you,’ *-al-* ‘we, you (pl.),’ or *-əy-* ‘third-person subordinate passive’ (see §14.2.6), and the subordinate passive suffix *-ət*, as in (a) and (b).

- (a) ʔəwə ceʔ mə kʷəcné·lt. (CC)  
 ʔəwə ceʔ mə kʷec-n-él-ət  
 not FUT CERT look-TR-I-SUBPAS  
 ‘I will not be seen.’
- (b) ʔəwə ceʔ mə kʷəcnì·t. (CC)  
 ʔəwə ceʔ mə kʷec-n-əy-ət  
 not FUT CERT look-TR-3SUBPAS-SUBPAS  
 ‘He will not be seen.’

If there is an auxiliary, it takes the third-person subordinate subject marker *-əs*, while the predicate head has a coordinate passive form, that is, the stem takes the passive suffixes for first or second person or zero for third person and the suffix *-əm*, as in (c) to (f).

- (c) ʔəwə ni·s kʷəcnèləm. (CC, JP)  
 ʔəwə ni-əs kʷec-n-èl-əm  
 not AUX-3SUB look-TR-I-INTR  
 ‘I am not seen.’
- (d) ʔəwe·t niʔəs kʷəcnèləm. (JP)  
 ʔəwe-ət niʔ-əs kʷec-n-èl-əm  
 not-past AUX-3SUB look-TR-I-INTR  
 ‘I was not seen.’
- (e) ʔəwə ni·s yəkʷəcnèləm. (JP)  
 ʔəwə ni-əs yə-kʷec-n-èl-əm  
 not AUX-3SUB along-look-TR-I-INTR  
 ‘I wasn’t seen by anyone.’ (lit. ‘I was not seen all along.’)
- (f) ʔəwə ni·s kʷəcnà·m. (JP)  
 ʔəwə ni-əs kʷec-n-am-əm  
 not AUX-3SUB look-TR-you-INTR  
 ‘You are not seen.’

Imperative forms are exceptional in that second-person subject markers may appear, as in (g) and (h).

- (g) ʔəwə ce·p yəkʷəcnà·lt. (CC)  
 ʔəwə ce·p yə-kʷəc-n-àl-ət  
 not you(PL) along-look-TR-you(PL)-SUBPAS  
 ‘Don’t let yourselves be seen.’
- (h) ʔəwə čxʷ yəkʷəcnàmət. (JP)  
 ʔəwə čxʷ yə-kʷec-n-àm-ət  
 not you along-look-TR-you-SUBPAS  
 ‘Avoid being seen.’

(After giving [h], JP denied the possibility of *\*\*ʔəwə cən kʷəcnè·lt* for ‘I am not seen.’)

Such imperative forms may be influenced by or be simply errors for forms with *-s* ‘permissive’ (§10.7), like (i) and (j).

- (i) ʔəwəs čxʷ qə kʷəcnàmət. (CC)  
 ʔəwə-s čxʷ qə kʷec-n-àm-ət  
 not-PERM you EMPH look-TR-you-SUBPAS  
 ‘Don’t let yourself be seen.’
- (j) ʔəwəs čxʷ kʷəcnàmət. (AG)  
 ʔəwə-s čxʷ kʷec-n-àm-ət  
 not-PERM you look-TR-you-SUBPAS  
 ‘Don’t be seen.’

In (i) and (j), the suffix *-s* ‘permissive’ has produced a new verb, ʔəwəs ‘let it not be,’ which presumably requires ‘you’ as a subject.

### 6.1.3. Subordinate Clauses with Non-Verbal Predicates

Adjectival, nominal, and other non-verbal predicates are negated in the manner of intransitive (and most transitive) verbal predicates, a coordinate subject person marker following the negative word and the corresponding subordinate subject person marker suffixed to the first word of the embedded affirmative.

Examples of negated adjectival predicates are shown in (a) and (b).

- (a) ʔəwə θfʔəs. (AG)  
 ʔəwə θf-ʔəs  
 not big-3SUB  
 ‘It is not big.’
- (b) ʔəwé·t θfʔəs. (AG)  
 ʔəwə-ət θf-ʔəs  
 not-past big-3SUB  
 ‘It was not big.’

(See §14.2.3 for AG's treatment of the subordinate subject marker.)

Examples of negated nominal predicates are shown in (c) to (g).

- (c) 'əwə cən sʃíʃqəf-è-n. (JP)  
 'əwə cən sʃíʃqəf-è-n  
 not I child-I  
 'I am not a child.'
- (d) 'əwe-ɪ cən sʃíʃqəf-è-n. (JP)  
 'əwe-əɪ cən sʃíʃqəf-è-n  
 not-past I child-I  
 'I was not a child.'
- (e) 'əwə sʃíʃqəf-əs θeʔ. (JP)  
 'əwə sʃíʃqəf-əs θeʔ  
 not child-3SUB that(FP)  
 'She is not a child.'
- (f) 'əwə ct stéʔexʷəf-ət. (JP)  
 'əwə ct stéʔexʷəf-ət  
 not we children-we  
 'We are not children.'
- (g) ni čxʷ wəf-čísəm. wəf'əwə čxʷ niʔəxʷ sʃíʃqəf. (JP)  
 ni čxʷ wəf-čísəm wəf-ʔəwə čxʷ niʔ-əxʷ sʃíʃqəf  
 AUX you already-grow already-not you AUX-you child  
 'You have grown up. You are not a child any more.'

In (h), the negated predicate consists of an adjective modifying a noun.

- (h) 'əwə pépłətəs smé-nt i wəf-łéfət θəɪ. (JP 23)  
 'əwə pépłət-əs smé-nt 'əý wəf-łéfət θəɪ  
 not thick(PL)-3SUB rock but already-wide(PL) ADV  
 'They were not thick rocks but they were wide.' (freely, 'They were rocks that were wide but not thick.')

In (i) and (j), the negated predicates each consist of a noun modified by an adjective modified by an intensifier.

- (i) 'əwə nánəs θí snəxʷəɪ. (JP)  
 'əwə nán-əs θí snəxʷəɪ  
 not very-3SUB big canoe  
 'It's not a very big canoe.'
- (j) 'əwə čəw nánəs wəqəʃ xʷəl-məxʷ. (JP 21)  
 'əwə čə wə-nán-əs wə-qəʃ xʷəl-məxʷ  
 not QUOT EST-very-3SUB EST-many people  
 'They were not very many people, they say.'

In (k) and (l), the negated predicates each consist of a noun modified by a possessive word (see §14.2.8).

- (k) ጎጃጃ ነጻሰግጃ ነጻስጎጃ ግጃ. (CC)  
 ጎጃጃ ነጻ-s-ወግ-ጻስ ነጻ-ስጎጃ ግጃ  
 not my-NOM-OWN-3SUB my-canoe

 ‘That name doesn’t belong to him. He doesn’t come from the ones who own the right to use that name.’ (more lit. ‘He doesn’t have the right to use the name. He is not one who is from those who own the right to use the name.’)

#### 6.1.4. Nominalized Clauses

Negations with ጎጃጃ and nominalized clauses (see §4.3) have been recorded less commonly than those with subordinate clauses, except for the third-person forms required by the subordinate-clause paradigm, as explained above. These forms may be more emphatic than those with subordinate clauses; they can be, but are not always, translated with ‘never.’ Examples are shown in (a) to (d).

- (a) ጎጃጃ ጎጃን ሰጎጃጃጎጃ ግጃ. (JP)  
 ጎጃጃ ጎጃ ነጻ-s-ጎጃጃ-ጎጃ ግጃ  
 not ART my-NOM-look-TR

*wəɪ-pax<sup>w</sup>-éɪs*  
 already-blow-ACT  
 ‘Away went that thing that was running away. It didn’t get far when it blew again.’

There is considerable variation in how *ʔəwə* is realized phonetically in such constructions; *ʔəwə k<sup>w</sup> ...* can be [*ʔəwə k<sup>w</sup>*] ~ [*ʔó-k<sup>w</sup>*] and *ʔəwə k<sup>w</sup> ...* can be [*ʔəwə k<sup>w</sup>*] ~ [*ʔó-k<sup>w</sup>*] or lose its stress and be [*ʔəwk<sup>w</sup>*] ~ [*ʔok<sup>w</sup>*]. I have indicated above only the loss of the second vowel with loss of stress.

### 6.1.5. With Relative Clauses

A few examples have been recorded of *ʔəwə* followed by a relative clause introduced by *ɪ* or *k<sup>w</sup>ɪ*, which are probably forms of the articles *ɪə* and *k<sup>w</sup>ɪə* (§15.1) and may be translated, if at all, as ‘anyone who, anything that.’ This construction is used for negative statements of general validity, often translated with ‘never.’

- (a) *ʔəwə čx<sup>w</sup> ɪ ni ɔ̆áy tə nəwə.* (JP 9)  
*ʔəwə čx<sup>w</sup> ɪ niʔ ɔ̆áy tə nəwə*  
 not you ART AUX die ART you  
 ‘You yourself don’t die [so why should I worry].’ (lit. ‘You are not anyone who dies, you yourself.’ Cf. *ʔəwə čx<sup>w</sup> niəx<sup>w</sup> ɔ̆áy* ‘You do not die.’)
- (b) ... *ʔəy̆ ʔəwə ce·p k<sup>w</sup>ɪ k<sup>w</sup>əcnəx<sup>w</sup>.* (JP 26)  
*ʔəy̆ ʔəwə ce·p k<sup>w</sup>ɪ k<sup>w</sup>ec-nəx<sup>w</sup>*  
 and not you ART look-TR  
 ‘... but you never saw it.’ (lit. ‘You are not anyone who saw it.’)

AG rephrased (b), shifting the second-person plural subject to the relative clause in (c).

- (c) *ʔəwə k<sup>w</sup>ɪ ni·ləp k<sup>w</sup>əcnəx<sup>w</sup>.* (AG)  
*ʔəwə k<sup>w</sup>ɪ ni-ələp k<sup>w</sup>ec-nəx<sup>w</sup>*  
 not ART AUX-you(PL) look-TR  
 ‘You never saw it.’ (lit. ‘It is not anything that you saw.’)

In a speech given at a winter dance upriver in a big house that had not been used for the purpose for a long time, JP said:

- (d) tə́ña léləm šx<sup>w</sup>ʔíct wə́fíθ k<sup>w</sup>sʔəwəs ɪ ni yə́q<sup>w</sup>. (JP 5)  
 tə́ña léləm šx<sup>w</sup>-ʔí-ct wə́fí- híθ k<sup>w</sup>  
 this house OBLNOM-be.here-our already-last.long ART  
 s-ʔəwə-s ɪ ni tə́q<sup>w</sup>  
 NOM-not-3POS ART AUX burn

‘This house where we are, it was a long time without fire.’ (perhaps lit. ‘It is this house where we are that has long been not anything that has burned.’)

And, describing the Coast Mountains, he used (e).

- (e) tə ʔəwə k<sup>w</sup>ɪ t<sup>θ</sup>əw méqeʔ ni tə smé·nt. (JP)  
 tə ʔəwə k<sup>w</sup>ɪ t<sup>θ</sup>əw méqeʔ ni [ʔə] tə smé·nt  
 ART not ART disappear snow be.there OBL ART mountain  
 ‘the place where snow never melts on the mountains’ (lit. ‘the snow on the mountain that is not anything that melts’)

**6.1.6. Ellipsis with the Negative**

The negative ʔəwə can appear without a negated predicate, as in (a), (b), and (c).

- (a) ʔə́y ʔəwə tə nə́çfíleʔem. (CC 21)  
 ʔə́y ʔəwə tə nə́-çfíleʔem  
 but not ART my-stepparent  
 ‘But my stepfather refused.’

- (b) ʔəwə cən. (JP, AG)  
 not I  
 ‘I won’t.’

- (c) ʔi ʔəwə θə́ɪ. (AG)  
 but not ADV  
 ‘But he didn’t though.’

Although in some contexts ʔəwə may be translated ‘refuse,’ it does not function as a verb. For example, one cannot say *\*\*ni cən ʔəwə* for ‘I refused’ (AG), so these are best seen as cases of ellipsis.

**6.2. NEGATION WITH x<sup>w</sup>əwé**

The negative word x<sup>w</sup>əwé ‘not yet’ is probably derived from ʔəwə ‘not,’ but its formation is not transparent. Its use with subordinate clauses is parallel to that of ʔəwə.

- (a) x<sup>w</sup>əwé cən ni-n k<sup>w</sup>əcnəx<sup>w</sup>. (JP)

- (e) x<sup>w</sup>əwé cə ʔaí i x<sup>w</sup>əs wáýqeʔ cən. (JP)  
 x<sup>w</sup>əwé ceʔ ʔaí ʔáý x<sup>w</sup>ə-swáýqeʔ cən  
 not.yet FUT just and become-man I  
 ‘Soon I will be a man.’

### 6.3. NEGATION WITH *ʔəwətəʔ*

The negative *ʔəwətəʔ* ‘absent, non-existent, none’ is probably identifiable as a compound word or phrase composed of *ʔəwə* ‘not’ and *təʔ* perhaps ‘present, existent’ (compare the article *tə*). The position of the predicate particles with *ʔəwətəʔ* suggests an uncertain status as a word. The interrogative *ʔə* follows the *ʔəwə*, giving *ʔəwéʔətəʔ* ~ *ʔəwé:təʔ* ‘are there none?’ while the past particle *-ət* can follow either the *ʔəwə*, the *təʔ*, or both, giving *ʔəwé:tteʔ*, *ʔəwəté:t*, or *ʔəwé:tte:t* ‘there were none.’

Followed by a nominal adjunct, *ʔəwətəʔ* has the sense ‘be absent,’ as in (a) and (b).

- (a) ʔəwətəʔ łə nəwáč, ni yəx<sup>w</sup> k<sup>w</sup>ənətəm. (CC)  
 ʔəwətəʔ łə nə-wáč ni yəx<sup>w</sup> k<sup>w</sup>ən-ət-əm  
 absent ART my-watch AUX INF be.taken-TR-INTR  
 ‘My watch is gone. It must have been taken.’

- (b) ᎠᏍᏚᎠᏅᎠ? ᎠᏍᏚᎠ ᎠᏅᏍᏚᎠᏅᎠᏅᎠ. (AG)  
 ᎠᏍᏚᎠᏅᎠ? ᎠᏍᏚᎠ ᎠᏅ-ᏍᏚᎠᏅᎠᏅᎠ  
 absent ART my-dog  
 ‘My dog is not around.’

Compare (a) and (b) with (c) and (d), in which the negative is ᎠᏍᏚᎠ.

- (c) ᎠᏍᏚᎠ ᎠᎠᎠ ᎠᎠ ᎠᏍᏚᎠ ᎠᏅᏍᏚᎠᏅᎠᏅᎠ. (AG)  
 ᎠᏍᏚᎠ ᎠᎠ-ᎠᏅ ᎠᎠ ᎠᏍᏚᎠ ᎠᏅ-ᏍᏚᎠᏅᎠᏅᎠ  
 not AUX-3SUB be.here ART my-dog  
 ‘My dog is not here.’
- (d) ᎠᏍᏚᎠ ᏅᎠ ᎠᎠᎠ ᎠᎠᎠᎠ ᎠᏍᏚᎠ ᎠᏅᏍᏚᎠᏅᎠᏅᎠ. (AG)  
 ᎠᏍᏚᎠ ᏅᎠ ᎠᎠ-ᎠᏅ ᎠᎠᎠᎠ ᎠᏍᏚᎠ ᎠᏅ-ᏍᏚᎠᏅᎠᏅᎠ  
 not QUOT AUX-3SUB be.there ART my-dog  
 ‘I’m told my dog is not there.’

If it is a person who is absent, the oblique case is used, as in (e) and (f).

- (e) ᎠᏍᏚᎠᏅᎠ? ᏅᎠ ᎠᎠ ᎠᏍᏚᎠᎠᎠᎠᎠ. (JP 7)  
 ᎠᏍᏚᎠᏅᎠ? ᏅᎠ [ᎠᎠ] ᎠᎠ ᎠᏍᏚᎠᎠᎠᎠᎠ  
 absent QUOT OBL ART seagull  
 ‘Seagull, it is said, was not there.’
- (f) ᎠᏍᏚᎠᏅᎠ? ᏅᎠᎠᎠ ᎠᎠ ᎠᎠ ᎠᎠ ᎠᎠ ᎠᎠ. (AG)  
 ᎠᏍᏚᎠᏅᎠ? ᏅᎠ ᎠᎠᎠ ᎠᎠ ᎠᎠ ᎠᎠ Ꭰ  
 absent QUOT ADV OBL ART A  
 ‘But they say Arnold was not present.’

The oblique case here seems to imply that the subject of such sentences is an implicit “the place” and that the predicate ᎠᏍᏚᎠᏅᎠ is more literally glossed ‘be without, be lacking, be devoid of,’ the first sentence being more literally ‘It [the house] was, it is said, devoid of Seagull.’

Followed by a noun standing as a predicate complement (with no article or demonstrative), ᎠᏍᏚᎠᏅᎠ has the sense ‘be none, be non-existent,’ providing the negative counterparts of existential nominal predicates (see §3.7.3 and §4.1.5.1.1) and predicates with *c-* ‘have’ (see §12.2.1), as in (g) to (k).

- (g) ᎠᏍᏚᎠᏅᎠ? ᎠᎠᎠᎠᎠᎠᎠ. (CC 12)  
 none streetcar  
 ‘There was no streetcar.’
- (h) ᎠᏍᏚᎠᏅᎠᎠ? ᎠᎠᎠ, ᎠᎠᎠᎠᎠ. (CC 12)  
 ᎠᏍᏚᎠ ᎠᎠ ᎠᎠᎠ ᎠᎠᎠ, ᎠᎠᎠᎠᎠ  
 not ROG existent cloth grandchild  
 ‘Do you have any cloth, grandchild?’ (lit. ‘Is there no cloth, grandchild?’)

- (i) *ʔəwəteʔ nəsqʷəmɛ́y̆.* (CC, AG)  
*ʔəwəteʔ nə-sqʷəmɛ́y̆*  
 none my-dog  
 ‘I have no dog.’

(Compare [i] with the absent-dog sentences [c] and [d] above.)

- (j) *ʔəwə-teʔ ʔən-kəpú.* (AG)  
*ʔəwə ʔə teʔ ʔən-kəpú*  
 not ROG existent your-coat  
 ‘Don’t you have a coat?’

- (k) *ʔəwəteʔ nə-kəpú.* (AG)  
 absent my-coat  
 ‘I have no coat.’

Sentence (k) does not preclude my having a coat at home. I’m simply now coat-less and outside in the cold. But compare (l):

- (l) *ʔəwəteʔ kʷθə nə-kəpú.* (AG)  
 absent ART my-coat  
 ‘My coat is not around.’

This implies that I definitely own a coat but can’t lay my hands on it.

In (m), the *ʔəwəteʔ* has two ‘past’ particles.

- (m) *ʔəwə-ttə-t xʷənítəm ʔə kʷə́nə wəłhíθəl.* (AG)  
*ʔəwə-ttə teʔ-ttə xʷənítəm ʔə kʷə́nə wəł-híθ-el*  
 not-past existent-past White.person OBL that already-last.long-past  
 ‘There were no White people long ago.’

The predicate complement may be a noun derived from a verbal root or a nominalization.

- (n) *ʔəwəteʔ sníw̆s.* (JP)

 ‘If I don’t go, I won’t see him.’
- (b) wəwə·s mi-s x<sup>w</sup>əʔámət k<sup>w</sup>θe ʔeθiyéy̆ə i yeł ... (JP 22)  
 wə-ʔəwə-əs ʔəmi-əs x<sup>w</sup>ə-ʔámət k<sup>w</sup>θe  
 if-not-3SUB AUX(come)-3SUB become-be.sitting(at.home) ART  
 ʔeT-səyéy̆ə ʔəy̆ yeł  
 your-friends and thereafter  
 ‘If your friends do not come home, then ...’

#### 6.4.2.1. As Conditional Clauses

In (a) and (b) above, the presence of the conjunction ʔəy̆ ‘and’ shows these to be a kind of compound sentence, even though the first clause has the form of a subordinate clause.

What are no doubt compound sentences can also be constructed with *haʔ* ‘if, when’ introducing the first of a pair of coordinate clauses, as in (c), (d), and (e).

- (c) haʔ cən ʔəwə némè-n ʔəý skʷéy kʷən skʷəcnəxʷ. (JP)  
 haʔ cən ʔəwə ném-è-n ʔəý skʷéy kʷə nə-s-kʷec-nəxʷ

 ‘If I hadn’t gone, I wouldn’t have seen him.’
- (e) haʔ ce-p ceʔ ʔəwə háye-p i ném cən qíqʔətələ. (CC 21)  
 haʔ ce-p ceʔ ʔəwə háy-e-p ʔəý ném cən  
 if you(PL) FUT not stop-you(PL) and AUX(go) I  
 qíqʔ-ət-ələ  
 get.bound-TR-you(PL)  
 ‘If you don’t stop, I’ll arrest you.’

See §5.2.3 for conditional first clauses like (c) to (e) in the affirmative.

#### 6.4.2.2. Expressing Necessity

The word *skʷéy* ‘impossible’ as a main clause predicate followed by an ‘if not’ clause expresses necessity, as in (a) and (b).

- (a) skʷéy mə wəʔəwə-n némè-n. (CC)  
 skʷéy mə wə-ʔəwə-e-n ném-e-n  
 impossible CERT if-not-I go-I  
 ‘I must go. I have to go. I ought to go.’ (lit. ‘It is impossible that I do not go.’)
- (b) skʷéy mə wəʔəwə-s kʷəcnè-lt. (CC)  
 skʷéy mə wə-ʔəwə-əs kʷec-n-el-ət  
 impossible CERT if-not-3SUB look-TR-I-SUBPAS  
 ‘I had to be seen.’

See also *skʷéy* with nominalized negatives in §6.4.3.

#### 6.4.2.3. In the Sense ‘Or’

An ‘if not’ clause is also used in the sense ‘or,’ as in (a) and (b).

- (a) səw xʷənínsəs kʷθə stém ʔəl ʔəý ʃáʃceʔ wəwə-s stáʔtələwəs. (CC 17)  
 s-[ni-s] wə-xʷə-ní-nəs-əs kʷθə stém ʔəl

## Morphology of the Root 1: The Verb

### 7.1. THE VERB ROOT

The basic shapes of many verb roots may be seen when they appear bare of affixes, as in *ákʷ* ‘return home,’ *qʷǎł* ‘wash ashore,’ or *kʷáqʷ* ‘get hit (by something wielded with a clubbing motion),’ as in (a) to c).

- (a) *ném̄ cən tákʷ*.  
AUX(go) I go.home  
‘I’m going home.’
- (b) *niʔ qʷǎł*.  
AUX wash.ashore  
‘It washed ashore.’
- (c) *kʷáqʷ čxʷ ceʔ*.  
get.hit you FUT  
‘You’ll get hit.’

But other verb roots occur (or, at any rate, have been recorded) only with affixes and so their basic shapes must be inferred. And since the presence of an affix may modify the shape of a root and do so differently depending on type of root, process of root expansion, and type of affix, we find that inferring the basic shapes of these roots is not simply a matter of lopping off the affixes but of working out the paradigms and identifying them through analogy. Inferred roots will be written with the root sign ( $\sqrt{\quad}$ ) preceding them.

#### 7.1.1. Canonical Shapes

Most verb roots are di-consonantal. They consist of a consonant, a full vowel (/e/, /a/, or /i/), and a second consonant ( $C_1AC_2$ ), or else a consonant, a schwa, and a second consonant ( $C_1əC_2$ ). There are also a number of tri-consonantal roots that consist of a consonant, a schwa, a second, and a third consonant ( $C_1əC_2C_3$ ), and there seem to be a few of other shapes ( $C_1AC_2əC_3$ ,  $C_1AC_2AC_3$ ,

C<sub>1</sub>C<sub>2</sub>AC<sub>3</sub>, etc.). However, some of what appear to be tri-consonantal roots may, upon further analysis, turn out to be di-consonantal roots with petrified affixes. Several roots that appear to have the shape CV (V is any vowel) are probably CVh and thus di-consonantal. There is, however, at least one single-consonant root, the *c-* ~ *cə-* that appears in several interrogative words (§17.6 to 17.13) and that may be identical to the verbalizing prefix *c-* ‘do, get, make’ (§12.2.1).

Limitations on the consonants that can occur in these root types are few. As elsewhere in the language, glottalized resonants do not occur initially. Otherwise, there seems to be no restriction on what consonant can occur as the first. Likewise, as /h/ and /ʔ/ do not occur between schwa and zero, CəC roots cannot have /h/ or /ʔ/ as a second consonant. Otherwise, there seems to be no restriction on what consonant can occur as the second in a di-consonantal root. I have not yet worked out all of the forms of tri-consonantal root, and so cannot yet say what restrictions may occur in them.

Roots of different shapes follow different paradigms. Not only do CAC, CəC, and CəCC roots behave differently but it also makes a difference whether the first, second, or third consonant is an obstruent (T), a resonant (R), or a laryngeal (H). Accordingly, it is useful to distinguish CAC roots as belonging to subtypes TAT, TAR, TAH, RAT, RAR, RAH, and HAH, to distinguish CəC roots as belonging to subtypes TəT, TəR, RəT, RəR, HəT, and HəR, and so on.

### 7.1.2. Inherent Voice

All verb roots are grammatically intransitive in the sense that they cannot take grammatical objects without first being provided with one of the transitivizing suffixes. In their relationship with grammatical subjects, however, they fall into two classes, non-active and active. Most roots fall into the first of these classes.

(1) Non-active root. These are inherently intransitive or passive in the sense that their grammatical subjects are either acting by themselves or are undergoing or experiencing the action, process, or whatever may be denoted.

Examples of this class are *íákw* ‘return home,’ *íákw* ‘fly,’ *kʷiʔ* ‘climb, ascend,’ *éʔ* ‘land atop,’ *qʷəs* ‘enter the water,’ *qʷət* ‘wash ashore,’ *pət* ‘become conscious,’ *qáy* ‘die,’ *səq* ‘split, tear,’ *pən* ‘get buried,’ *íʔxʷ* ‘get washed,’ *kʷáqʷ* ‘get hit.’

If the non-active root names an action that involves an agent and it appears bare of affixes, the grammatical subject is the patient, as in (a).

- (a) *kʷáqʷ*    *čxʷ*    *ceʔ*  
 get.hit    you    FUT  
 ‘You’ll get hit.’

But when a non-active root is transitivized, there is a shift in case relations. Now the grammatical subject is the agent, as in (b).

- (b) niʔ ʔə ʧx<sup>w</sup> k̄<sup>w</sup>áq<sup>w</sup>-ət  
 AUX ROG you get.hit-TR  
 ‘Did you hit it?’

Not all non-active roots can take the transitivizer *-t* (*-ət*, *-ət*, *-ét*, *-át*), but compare the following:

<i>čéʔ</i> ‘land atop’	<i>čéʔt</i> ‘put it atop’
<i>q<sup>w</sup>šs</i> ‘enter the water’	<i>q<sup>w</sup>šət</i> ‘put it into the water’
<i>p̄ət</i> ‘become conscious’	<i>p̄ət</i> ‘make him conscious’
<i>q̄áy</i> ‘die’	<i>q̄áy·yt</i> ‘kill him’
<i>sšq̄</i> ‘split, tear’	<i>sšq̄ét</i> ‘split it, tear it’
<i>t̄<sup>θ</sup>š<sup>w</sup></i> ‘get washed’	<i>t̄<sup>θ</sup>š<sup>w</sup>át</i> ‘wash it’

(See also §10.1, “Transitive Suffixes.”)

(2) Active roots. These are inherently active in the sense that the grammatical subject is the agent in the activity denoted. This relatively small group includes *p̄éí<sup>θ</sup>* ‘sew,’ *k̄<sup>w</sup>éc* ‘look,’ *k̄<sup>w</sup>íc* ‘cut open, butcher,’ *qén̄* ‘steal,’ *q<sup>w</sup>él* ‘speak,’ *yék<sup>w</sup>* ‘hire,’ *héý* ‘make a canoe,’ *sšwq̄* ‘seek,’ *štélʔ* ‘do.’ When an active root is transitivized, there is no shift in case relations: whether the root is bare of affixes or has a transitivizer, the grammatical subject is still the agent. Compare (c) and (d):

(c) ʔi	cən	k̄ <sup>w</sup> ík̄ <sup>w</sup> əč̄.
be.here(AUX)	I	be.cutting.open
‘I am butchering.’		
(d) ʔi	cən	k̄ <sup>w</sup> ík̄ <sup>w</sup> əč̄-ət.
be.here(AUX)	I	be.cutting.open-TR
‘I am butchering it.’		

Compare also:

<i>p̄éí<sup>θ</sup></i> ‘sew’	<i>p̄éí<sup>θ</sup>ət</i> ‘sew it’
<i>k̄<sup>w</sup>éc</i> ‘look’	<i>k̄<sup>w</sup>écət</i> ‘look at it’
<i>qén̄</i> ‘steal’	<i>qéʔənt</i> ‘steal it’
<i>sšwq̄</i> ‘seek’	<i>sšwq̄t</i> ‘look for it’

### 7.1.3. Internal Modification of the Root

Verb roots undergo a number of different grammatical processes of internal modification to produce a number of different grammatical forms. Processes of internal modification include reduplication (both CV and CVC), infixing, shift in stress and position of vowel, shift from full vowel to schwa and from schwa to full vowel, vowel lengthening, and glottalization of resonants. The grammatical forms produced by these processes include progressive, plural, diminutive, durative,

iterative-dispositional, and resultative forms. Verb roots also undergo internal modification to form stems for various affixes.

There is no one-to-one relationship between process of internal modification and grammatical form. Differently shaped roots may undergo different processes to produce grammatically identical forms. However, most forms can be predicated from the shape of the root, although there are also some irregular forms.

The following sections will deal with the principal forms of the verb and the processes that produce them.

## 7.2. PROGRESSIVE ASPECT

Nearly all verbs appear in both a simple, unmarked perfective form and a progressive form<sup>1</sup> marked variously, as described below. This opposition of perfective and progressive appears in bare roots functioning as verbs and in verbs composed of roots and various kinds of affixes. It also appears in (or intersects with) plural, durative, and dispositional forms. Diminutive forms, however, occur in the progressive aspect only. Resultatives stand apart in not making this distinction.

Halkomelem progressive forms are often equatable with English progressives, for example, compare *íítáǎm* ‘be singing’ (progressive) with *íílám* ‘sing’ (perfective) in the following:

<i>ni íítáǎm.</i>	<i>ni íílám.</i>	<i>íílám ce?</i>
‘He is singing.’	‘He sang.’	‘He will sing.’

But Halkomelem progressives may also be used for habitual action where English would have a simple present or ‘used to’ for the past, as in (a) to (e).

(a) *wəyáθ cən wək<sup>w</sup>ék<sup>w</sup>əcnəx<sup>w</sup> ni ʔə tθé?*

<i>wə-yáθ</i>	<i>cən</i>	<i>wə-k<sup>w</sup>ék<sup>w</sup>əc-nəx<sup>w</sup></i>	<i>ni</i>	<i>ʔə</i>	<i>tθé?</i>

‘From when I first came to my senses, I used to see four dancers.’

1 The form I am calling “progressive” is the “actual” of Thompson and Thompson (1971), the “continuative” of Galloway (1977) and my own earlier usage, and the “imperfective” of Hukari (1978). I have adopted the terms used by Comrie (1976) for comparable aspects.

- (c) kʷákʷəc-θət čxʷ.  
be.looking-self you  
'Look after yourself.'
- (d) wə-ʔéʔxəθ čxʷ ʔaɪ.  
EST-be.lying you just  
'Just stay in bed.'
- (e) ɪáq̣ ʔə ɟíq̣əkʷəɪs tən sqʷəméy. héʔe. ɟíq̣əkʷəɪs. (DK)  
ɪáq̣ ʔə ɟíq̣əkʷəɪs tə ʔən-sqʷəméy héʔe ɟíq̣əkʷəɪs  
habitually ROG be.biting-ACT ART your-dog yes be.biting-ACT  
'Does your dog bite? Yes. He bites.'

In these sentences, the Halkomelem for 'see,' 'look after oneself,' 'lie down,' and 'bite' are all progressive forms.

Also, the Halkomelem progressive is used with some verbs to denote conditions for which English would use adjectives, as in *ǰéǰətəm* 'salty, taste salty' (a progressive form; cf. *ǰétəm qáʔ* 'salt water'), *iʰéiʰəxʷəm* 'blue' (seemingly a progressive form, although no perfective has been recorded).

The formation of progressive forms depends on the form of the verb root.

### 7.2.1. Progressives of CAC Roots

These are roots consisting of an obstruent or resonant, a full vowel, and an obstruent or resonant (i.e., TAT, RAT, TAR, and RAR roots, C being any consonant but /h/ or /ʔ/). They behave in the same way (with minor variations and exceptional types noted below) and so may be identified as constituting a single class, the largest in the language.

#### 7.2.1.1. Progressives of Bare CAC Roots

The bare roots of this type form their progressives by CV reduplication with the stress on the first vowel and the second appearing as schwa (C<sub>1</sub>ÁC<sub>2</sub> → C<sub>1</sub>ÁC<sub>1</sub>əC<sub>2</sub>), as in the following TAT roots with their progressives:

<i>péiʰ</i> 'sew'	<i>pépəiʰ</i> 'be sewing'
<i>iʰéq</i> 'go bald'	<i>iʰéiʰəq</i> 'be going bald'
<i>kʷéc</i> 'look'	<i>kʷékʷəc</i> 'be looking'
<i>íáḱʷ</i> 'go/come home'	<i>íáíáḱʷ</i> 'be going/coming home'
<i>tás</i> 'fish with a net'	<i>tátəs</i> 'be fishing with a net'
<i>táḱʷ</i> 'fly'	<i>tátəḱʷ</i> 'be flying'
<i>kʷáqʷ</i> 'get hit'	<i>kʷákʷəqʷ</i> 'be getting hit'
<i>tíq̣ʷ</i> 'bump'	<i>títəq̣ʷ</i> 'be bumping'
<i>kʷíç</i> 'butcher'	<i>kʷíḱʷəç</i> 'be butchering'
<i>ǰʷíqʷ</i> 'rub, slip'	<i>ǰʷíǰʷəqʷ</i> 'be rubbing'

Non-initial resonants are generally (or always) glottalized in progressive forms. (Where I have not recorded such a resonant as glottalized, as in 'be

disappearing’ below, I may simply have missed the glottalization, since it can be quite light.) Examples of RAT roots with initial /y/ and /m/ and their progressives follow:

<i>yékʷ</i> ‘hire’	<i>yéyəkʷ</i> ‘be hiring’
<i>yéq̣</i> ‘topple’	<i>yéyəq̣</i> ‘be toppling’
<i>yáx̣ʷ</i> ‘thaw’	<i>yáyəx̣ʷ</i> ‘be thawing’
<i>yíq</i> ‘snow’	<i>yíyəq</i> ‘be snowing’
<i>máʂ</i> ‘get storm-bound’	<i>máməʂ</i> ‘be getting storm-bound’

I have no examples with initial /l/.

RAT roots with initial /n/ form their progressives with a reordering or metathesis of elements following the stressed vowel; instead of the expectable \*/-nə-/, we find /-ʔən-/. I have no example of a bare root of this type, but those with affixes follow:

<i>néct</i> ‘change it’	<i>néʔənc̣t</i> ‘be changing it’
<i>násθət</i> ‘get fat’	<i>náʔənsθət</i> ‘be getting fat’

Examples of TAR roots with their progressives are:

<i>íén</i> ‘disappear’	<i>íéʔən</i> ‘be disappearing’
<i>íθém</i> ‘be out (the tide)’	<i>íθéʔəm</i> ‘be ebbing’
<i>téw</i> ‘flee’	<i>téʔəw</i> ‘be fleeing’
<i>qéṇ</i> ‘steal’	<i>qéqəṇ̃</i> ‘be stealing’
<i>qáy</i> ‘die’	<i>qáqəỵ</i> ‘be sick’
<i>ʂíw</i> ‘flee’	<i>ʂíʂəw</i> ‘be fleeing’
<i>q̣ʷím</i> ‘disembark’	<i>q̣ʷíq̣ʷəm</i> ‘be disembarking’

Note that the final resonant of the root may be glottalized, as in ‘steal.’

Examples of RAR roots and their progressives are:

<i>wíl</i> ‘show up’	<i>wíwəl</i> ‘be showing up’
<i>wéỵ</i> ‘be exposed/discovered’	<i>wéwəỵ</i> ‘be getting exposed’

There are two small sets of exceptional CAC roots that form their progressives in other ways.

(1) A few roots (but not all) with initial /c/ and /x/ have /kʷ/ and /xʷ/, respectively, in their progressives, as in:

<i>cám</i> ‘go/come inland’	<i>cákʷəm</i> ‘be going/coming inland’
<i>xákʷ</i> ‘get bathed’	<i>xáxʷəkʷ</i> ‘be getting bathed’
<i>xáʂ</i> ‘get an erection’	<i>xáxʷəʂ</i> ‘have an erection’

Other roots of this set include *ce-* ‘do what,’ *ce-* ‘borrow,’ *cel-* ‘follow,’ *xap-* ‘sit cross-legged,’ and *xal-* ‘drill,’ which have been recorded only with affixes. They will be discussed in connection with those affixes. For an explanation of this irregularity, see §1.5.10.

(2) A small set of roots with initial labialized obstruents and the vowel /e/ have /a/ in their progressives. They are:

<i>kʷéy</i> ‘get hungry’	<i>kʷákʷəy</i> ‘be feeling hungry’
<i>qʷél</i> ‘speak’	<i>qʷáqʷəl</i> ‘be speaking’

### 7.2.1.2. Progressives of CAC Roots with Affixes

CAC roots take the form *-ət* of *-t* ‘transitive.’ With the exceptions noted below, they form their progressives with the same type of reduplication seen with the bare root ( $C_1ÁC_2ət \rightarrow C_1ÁC_1əC_2ət$ ), as in the following progressives of TAT roots.

<i>péi<sup>ə</sup>ət</i> ‘sew it’	<i>pépəi<sup>ə</sup>ət</i> ‘be sewing it’
<i>kʷáqʷət</i> ‘strike him’	<i>kʷákʷəqʷət</i> ‘be striking him’
<i>tíqʷət</i> ‘bump him’	<i>títəqʷət</i> ‘be bumping him’
<i>qé<sup>ə</sup>pət</i> ‘tie it’	<i>qéqəpət</i> ‘be tying it’

Roots of the first three of these have been recorded bare of affixes and are given in §7.2.1.1. The bare root of the fourth, *qé<sup>ə</sup>pət* ‘tie it,’ has not been recorded as such, but its form with *-t* ‘transitive’ and its resultative form *sqéqəp* ‘knot’ support its identification as a CAC root. Similarly, some of the roots identified below as CAC roots have not been recorded bare of affixes, and their identification is tentative.

RAT roots with *-t* ‘transitive,’ except for those with initial /n/, form their progressives in the same way.

<i>wéi<sup>ə</sup>ət</i> ‘pry it’	<i>wéwəi<sup>ə</sup>ət</i> ‘be prying it’
<i>yákʷət</i> ‘smash it’	<i>yáyəkʷət</i> ‘be smashing it’
<i>mísət</i> ‘sort them out’	<i>míməsət</i> ‘be sorting them out’

RAT roots with initial /n/ form their progressives as described above, with the expectable *\*/nə/* reordered as */ʔən/*, as in:

<i>nítət</i> ‘decide it’	<i>níʔəntət</i> ‘be deciding it’
--------------------------	----------------------------------

TAR and RAR roots in combining with *-t* ‘transitive’ fall into two classes: those with labial resonants as their second consonant and those with non-labial resonants as their second consonant.

Those with /m/, /w/, /m̥/, or /w̥/ as the second consonant follow the usual formula, as in:

<i>qámət</i> ‘bend it’	<i>qáqəmət</i> ‘be bending it’
<i>céwət</i> ‘help him’	<i>cécéwət</i> ‘be helping him’
<i>lámət</i> ‘throw at him’	<i>láləmət</i> ‘be throwing at him’
<i>níwət</i> ‘advise him’	<i>nínəwət</i> ‘be advising him’

Those with /n/, /l/, and /y/ or /ñ/, /l/, and /ý/ as the second consonant show in their perfective forms the kind of reordering or metathesis already noted in the progressives of roots with initial /n/. If the second consonant is /n/, /l/, or /y/, instead of the expectable resonant followed by schwa, we find the vowel of the root lengthened and followed by the resonant, which may itself be phonetically slightly lengthened. For example, the root *ǰél* ‘get stuck, be detained’ and *-t* ‘tr,’ expectably \*/ǰélət/, is realized as /ǰé·lɪt/ ‘stick it on’ (phonetically [ǰé·lɪt] ~ [ǰé·l·tɪ]) and the root *qáy* ‘die’ and *-t* ‘tr,’ expectably \*/qáyət/, is realized as /qá·yt/ ‘kill him’ (phonetically [qá·yt] ~ [qá·ɪt]). Other examples are:

<i>pélt</i> ‘skim it’	<i>pépələt</i> ‘be skimming it’
<i>íelt</i> ‘cut it along the back’	<i>íétələt</i> ‘be cutting it along the back’
<i>ǰélt</i> ‘stick it on’	<i>ǰéǰələt</i> ‘be sticking it on [him?]’
<i>célt</i> ‘chase him’	<i>cékʷələt</i> ‘be chasing him’
<i>kʷéyt</i> ‘“train” him’	<i>kʷékʷəyət</i> ‘be “training” him’

(The verb glossed ‘“train” him’ means prepare him for a vision quest.)

If the second consonant is /ñ/, /l/, or /ý/, instead of the expectable glottalized resonant followed by schwa, we find the sequence glottal stop (phonetically possibly lost), schwa (phonetically possibly echoing the stressed vowel), and the resonant. For example, the root *céñ* ‘be straight’ and *-t* ‘transitive,’ expectably \*/céñət/, are realized as /céʔənt/ (phonetically [céʔənt] ~ [cé·nt]). Other examples are:

<i>táʔəlt</i> ‘learn it’	<i>tátələt</i> ‘be learning it’
<i>cíʔəlt</i> ‘seize it’	<i>cícələt</i> ‘be seizing it’
<i>máʔəyt</i> ‘aim it’	<i>máməyət</i> ‘be aiming it’
<i>wíʔəlt</i> ‘show it, make it visible’	<i>wíwələt</i> ‘be showing it, etc.’
<i>wé·yt</i> ‘publicize it’	<i>wéwəyət</i> ‘be publicizing it’

Two CAC roots (so far noted) have irregular forms with *-t* ‘transitive.’ One, *néc* ‘be different,’ is exceptional in that the suffix appears as *-t* rather than *-ət*.

<i>néc·t</i> ‘change it’	<i>néʔənc·t</i> ‘be changing it’
--------------------------	----------------------------------

The other, composed of the prefix *xʷ-* ‘locative’ (here ‘within’?) and *qʷél* ‘speak,’ is exceptional in that it forms its progressive on the pattern of a TAH root (see below).

<i>xʷqʷé·lt</i> ‘sing out the words (of a <i>syáwəñ</i> )’	<i>xʷqʷəqʷé·lt</i> ‘be singing out the words’ mus-forms
---	--

With *-x* ‘transitive,’ CAC roots form their progressives with the type of reduplication undergone by a bare root and with no linking schwa, as in:

<i>wélx</i> ‘throw it’	<i>wéwəl·x</i> ‘be throwing it’
<i>télx</i> ‘follow it’	<i>tétəl·x</i> ‘be following it’
<i>kʷélx</i> ‘hide it’	<i>kʷékʷəl·x</i> ‘be hiding it’

With *-əm* ‘intransitive,’ CAC roots form their progressives regularly with the type of reduplication undergone by a bare root, as in:

<i>tícəm</i> ‘swim (on the surface)’	<i>títácəm</i> ‘be swimming, etc.’
<i>číśəm</i> ‘grow’	<i>číćəsəm</i> ‘be growing’
<i>méqəm</i> ‘jump (as a fish)’	<i>méməqəm</i> ‘be jumping (as a fish)’
<i>yáq<sup>w</sup>əm</i> ‘sweat’	<i>yáyáq<sup>w</sup>əm</i> ‘be sweating’
<i>píləm</i> ‘overflow’	<i>pípələm</i> ‘be overflowing’
<i>tíləm</i> ‘sing’	<i>títələm</i> ‘be singing’
<i>x<sup>w</sup>áyəm</i> ‘sell’	<i>x<sup>w</sup>áx<sup>w</sup>əyəm</i> ‘be selling’
<i>qéwəm</i> ‘rest’	<i>qéqəwəm</i> ‘be resting’
<i>ǰínəm</i> ‘growl’	<i>ǰíǰənəm</i> ‘be growling’

There is a small set of words that are or appear to be composed of TAR roots plus *-əm* ‘intransitive’ or *-əl* ‘move toward,’ in which the final resonant of the root is lost, leaving a long vowel; for example, //tém-əm// ‘call out’ is realized as *tém* and //k<sup>w</sup>él-əl// ‘hide’ is realized as *k<sup>w</sup>el*. The underlying forms can be inferred from the transitives *témət* ‘call him’ and *k<sup>w</sup>élx* ‘hide it.’ These words form their progressives by CV reduplication with the stress on the second vowel, following the pattern of TAH roots (see below), but with that vowel raised to /i/, as with some TəR roots with *-əm* (see below). Members of this set discovered so far are:

<i>tém</i> ‘call out’	<i>tətím</i> ‘be calling out’
(cf. <i>témət</i> ‘call him’)	<i>tətímət</i> ‘be calling him’)
<i>k<sup>w</sup>el</i> ‘hide’	<i>k<sup>w</sup>ək<sup>w</sup>íł</i> ‘be hiding’
(cf. <i>k<sup>w</sup>élx</i> ‘hide it’)	<i>k<sup>w</sup>ék<sup>w</sup>əlx</i> ‘be hiding it’)
<i>tél</i> ‘come/go shoreward’	<i>tətíł</i> ‘be coming/going shoreward’
(cf. <i>télx</i> ‘move it back from the centre of the fire’)	<i>tétəl<sup>w</sup>x</i> ‘be moving, etc.’)
<i>tál</i> ‘come/go seaward’	<i>tətíł</i> ‘be coming/going seaward’

In the first example, *tətímət*, the progressive of the transitive seems to be based on the progressive of the form with *-əm*. In the third example, there is no direct evidence for a root *tal-*, but the evidence for *k<sup>w</sup>él-* and *tél-* implied by *k<sup>w</sup>élx* and *télx* suggests it. (AG gave *tətál* as ‘be going/coming seaward,’ but CC gave *tətál* as ‘being out to sea,’ a possible durative form.)

With *-nəx<sup>w</sup>* ~ *-ləx<sup>w</sup>* ‘limited control,’ *-stəx<sup>w</sup>* ‘causative,’ and *-stəx<sup>w</sup>*<sub>2</sub> ‘comitative,’ CAC roots appear in the perfective with the vowel weakened to schwa although retaining the stress, but in the progressive the full vowel reappears (C<sub>1</sub>əC<sub>2</sub>- → C<sub>1</sub>ÁC<sub>1</sub>əC<sub>2</sub>-), as in:

<i>pátnəx<sup>w</sup></i> ‘recognize him’	<i>pípətnəx<sup>w</sup></i> ‘be recognizing him’
<i>pátstəx<sup>w</sup></i> ‘have him identify it’	<i>pípəstəx<sup>w</sup></i> ‘be having him identify it’
(cf. <i>cpít</i> ‘recognize’)	

<i>kʷɔcnəxʷ</i> ‘see it’	<i>kʷékʷəcnəxʷ</i> ‘be seeing it’
<i>kʷɔcstəxʷ</i> ‘show it to him’	<i>kʷékʷəcstəxʷ</i> ‘be showing it to him’
(cf. <i>kʷéc</i> ‘see’)	<i>kʷécət</i> ‘look at it’)
<i>tɔqʷnəxʷ</i> ‘bump him (accidentally)’	<i>títəqʷnəxʷ</i> ‘be bumping him (accidentally)’
(cf. <i>títqʷət</i> ‘bump him’)	
<i>iʰəqʷnəxʷ</i> ‘hit him (accidentally)’	<i>iʰiʰəqʷnəxʷ</i> ‘be hitting him (accidentally)’
(cf. <i>iʰiʰqʷət</i> ‘punch him’)	
<i>kʷəqʷnəxʷ</i> ‘hit him (accidentally)’	<i>kʷákʷəqʷnəxʷ</i> ‘be hitting him (accidentally)’
(cf. <i>kʷákʷət</i> ‘hit him, as with a club’)	
<i>čəwnəxʷ</i> ‘manage to help him’	<i>čéčəwnəxʷ</i> ‘be managing to help him’
(cf. <i>čéwət</i> ‘help him’)	
<i>cəlləxʷ</i> ‘overtake him’	<i>cékʷəlləxʷ</i> ‘be overtaking him’
(cf. <i>célt</i> ‘follow him’)	
<i>qʷəlstəxʷ</i> ‘speak to him’	<i>qʷáqʷəlstəxʷ</i> ‘be speaking to him’
(cf. <i>qʷél</i> ‘speak’)	

With *éls* ‘activity,’ CAC roots appear in the perfective with loss of stress and the vowel reduced to zero where both consonants are obstruents, but again in the progressive CAC roots appear in their full form ( $C_1C_2- \rightarrow C_1\acute{A}C_1\text{ə}C_2-$ ), as in:

<i>pəkʷéls</i> ‘warm something’	<i>pépəkʷəlś</i> ‘be warming s.t.’
(cf. <i>pékʷət</i> ‘warm it up’)	
<i>iʰqʷéls</i> ‘hit (with the fist)’	<i>iʰiʰiʰqʷəlś</i> ‘be hitting’
(cf. <i>iʰiʰqʷət</i> ‘punch him’)	
<i>təkʷéls</i> ‘hook s.t., hook fish’	<i>títəkʷəlś</i> ‘be hooking fish’
(cf. <i>títəkʷət</i> ‘hook it, gaff it’)	
<i>kʷqʷéls</i> ‘hit, go to bat’	<i>kʷákʷəqʷəlś</i> ‘be hitting’
(cf. <i>kʷákʷət</i> ‘hit him, club him’)	

Or if one or both consonants are resonants, the vowel is reduced to schwa ( $C_1\text{ə}C_2- \rightarrow C_1\acute{A}C_1\text{ə}C_2-$ ), as in:

<i>pəwéls</i> ‘freeze s.t.’	<i>pípəwəlś</i> ‘be freezing s.t.’
(cf. <i>píwət</i> ‘freeze it’)	
<i>nətéls</i> ‘give orders’	<i>níʔəntəlś</i> ‘be giving orders’
(cf. <i>nítət</i> ‘set a time, decide’)	
<i>ləmélś</i> ‘throw s.t.’	<i>láləməlś</i> ‘be throwing s.t.’
(cf. <i>lámət</i> ‘throw it at him’)	

With lexical suffixes, CAC roots appear in forms similar to those seen with grammatical suffixes. The form of the root usually depends on whether the suffix is unstressed or stressed and whether it begins with a vowel or with a consonant.

Before an unstressed suffix that begins with a vowel, a CAC root appears as CÁC- in the perfective and likewise in its full form in the progressive (cf. CAC roots with -əm ‘intransitive’), as in:

*x<sup>w</sup>lÁq<sup>w</sup>əst* ‘slap his face’                      *x<sup>w</sup>lÁlÁq<sup>w</sup>əst* ‘be slapping his face’  
 (cf. *lÁq<sup>w</sup>ət* ‘slap him,’ -əs ‘face,’ *x<sup>w</sup>*- ‘locative’)  
*qísəcən* ‘make a net’                              *qíqásəcən* ‘be making a net’  
 (cf. *qísət* ‘make it fast with a line,’ -əcən ‘surface’)  
*lícá<sup>?</sup>q<sup>w</sup>əm* ‘get a haircut’                      *lílÁcá<sup>?</sup>q<sup>w</sup>əm* ‘be getting a haircut’  
 (cf. *lícət* ‘cut it,’ -a<sup>?</sup>q<sup>w</sup> ‘head,’ -əm ‘intransitive’)  
*ǰéləwst* ‘hitch him (a horse) up’              *ǰéǰéləwst* ‘be hitching him up’  
 (cf. *ǰélt* ‘stick it on,’ -əws ‘body,’ -t ‘transitive’)

There are exceptions, such as

*x<sup>w</sup>láməst* ‘throw it in his face’              *x<sup>w</sup>[h]ǰlíməst* ‘be throwing in his face’  
 (cf. *lámət* ‘throw it and hit him,’ -əs ‘face’)

in which the root is reduced to RəR- and then inflected like a root of that type (see §7.2.8).

Before an unstressed lexical suffix beginning with a consonant, a CAC root appears as CÁC- in the perfective but with the full vowel in the progressive (like CAC roots with -nəx<sup>w</sup>).

*k<sup>w</sup>áx<sup>w</sup>csəm* ‘knock on a door’                      *k<sup>w</sup>ák<sup>w</sup>əx<sup>w</sup>csəm* ‘be knocking on the door’  
 (cf. *k<sup>w</sup>áx<sup>w</sup>ət* ‘knock on it,’ -cəs ‘hand,’ -əm ‘intransitive’)  
*x<sup>w</sup>təlqət* ‘answer him’                              *x<sup>w</sup>tétəlqət* ‘be answering him’  
 (cf. *tél* ‘copy, follow suit,’ -qən ‘voice,’ -t ‘transitive’)  
*pák<sup>w</sup>nəct* ‘put it on the fire to heat’              *šx<sup>w</sup>pépək<sup>w</sup>nəc* ‘s.t. heating’  
 (cf. *pék<sup>w</sup>ət* ‘warm it,’ -nəc ‘base, butt,’ -t ‘transitive’)

In the last example, *šx<sup>w</sup>pépək<sup>w</sup>nəc* is derived from the progressive with *šx<sup>w</sup>*- ‘oblique nominalizer.’

Before a stressed lexical suffix beginning with a vowel, a CAC root appears in the perfective as CC- (if both consonants are obstruents) or CəC- (if one or both are resonants). Before a stressed lexical suffix beginning with a consonant, a CAC root appears in the perfective as CəC-. In the progressives of such verbs, the full vowel of the root may or may not appear and may or may not bear a secondary stress.

*ǰí<sup>?</sup>ǰlíməx<sup>w</sup>* ‘milk a cow’                              *ǰí<sup>?</sup>ǰí<sup>?</sup>ǰlíməx<sup>w</sup>* ‘be milking a cow’  
 (cf. *ǰí<sup>?</sup>ǰət* ‘wring it out,’ -əlməx<sup>w</sup> ‘breast, milk’)  
*pék<sup>w</sup>énx<sup>w</sup>* ‘smoke fish’                              *pèpék<sup>w</sup>énx<sup>w</sup>* ‘be smoking fish’  
 (cf. *pék<sup>w</sup>ət* ‘warm it,’ -énx<sup>w</sup> ‘fish’)  
*lícənəp* ‘harrow a field’                              *lÁlícənəp* ‘be harrowing a field’  
 (cf. *lícət* ‘cut it across,’ -ənəp ‘plot of land’)

*nəw'éyət* ‘advise a child’                      *nənəw'éyət* ‘be advising a child’  
 (cf. *níwət* ‘advise him,’ -*éyət* ‘child’)  
*kʷəc.čénəm* ‘keep a lookout’                      *kʷəkʷəc.čénəm* ‘be keeping a lookout’  
 (cf. *kʷéc* ‘look,’ -*éčən* ‘side,’ -*əm* ‘intransitive’)

### 7.2.1.3. Progressives of CÁCV C Roots

There are a number of what appear to be roots consisting of a consonant, a full vowel, and a second consonant, followed by a schwa and a third consonant (CÁCəC) and that form their progressives as CAC roots do, by CV reduplication with the stress on the first vowel. These include:

<i>íéyąq</i> ‘get angry’	<i>íéíəyąq</i> ‘be getting angry’
<i>íáíəxʷ</i> ‘chase away’	<i>íáíəłəxʷ</i> ‘be chasing away’
<i>číłəx</i> ‘make war’	<i>číčəłəx</i> ‘be making war’
<i>síwəl</i> ‘feel, be aware’	<i>sísəwəl</i> ‘be feeling’
(possibly with - <i>əl</i> ‘move toward’)	
<i>ctéwən</i> ‘make mats’	<i>ctéłəwən</i> ‘be making mats’
(< <i>c-</i> ‘make, have,’ and the root of <i>stéwən</i> ‘sleeping mat’)	
<i>kʷítəw</i> ‘live with in-laws’	<i>kʷíkʷətəw</i> ‘be living with in-laws’
(cf. <i>sčkʷítəw</i> ‘co-parent-in-law, second-degree affine’)	
<i>yá:yəs //yáyəs//</i> ‘work’	<i>yá:yəs //yáyəyəs//</i> ‘be working’

There are at least two roots that might be grouped with the last set, except that the third consonant is a glottal stop, which must be preceded by a full vowel (CÁCAH). This pattern suggests that the full vowel is an underlying schwa.

<i>cmékʷe?</i> ‘attend a funeral’	<i>cméməkʷe?</i> ‘be attending as funeral’
(< <i>c-</i> ‘make, have,’ cf. <i>mékʷe?t</i> ‘condole them’)	
<i>míte?</i> ‘dance possessed’	<i>míməte?</i> ‘be dancing possessed’ <sup>2</sup>

With -*t* ‘transitive,’ presumed CÁCəC and CÁCAH roots appear with similar progressive forms, as in:

<i>íáíəxʷət</i> ‘chase him away’	<i>íáíəłəxʷət</i> ‘be chasing him away’
<i>mékʷe?t</i> ‘condole them’	<i>méməkʷe?t</i> ‘be condoling them’
<i>síwəłt</i> ‘make him aware’	<i>sísəwəłt</i> ‘be letting him know’

The schwa before the -*t* in ‘chase him away’ is expectable if *íáíəxʷ* is a root. Its absence in *mékʷe?t* is also expectable for a root ending with a glottal stop.

2 As Boas (1897, 645) noted, *míte?*, meaning ‘dance possessed by one’s *syəwən* in the winter dance,’ is probably a loan from Kwakwala. Cf. Lincoln and Rath (1980), root 261, Kwakiutl *míłxa* ‘teasing,’ also the Kwakwala name of a series of dances.

Its absence in *siwəlt*, however, suggests that the root is *siw-* and that the *-əl* is a suffix.

There is also a set of words that are composed of stems of the shape  $C\acute{A}C\grave{a}C-$  (in which the full vowel is either /e/ or /a/) and the suffixes *-əm* ‘intransitive’ or *-əl* ‘move toward’ and that form their progressives in quite a different way. Some of these stems are clearly identifiable as expansions of  $C\grave{a}CT$  roots and so this set will be described under that class (see §7.2.10).

### 7.2.2. Progressives of HAC Roots

Roots consisting of /h/ or /ʔ/, a full vowel, and an obstruent or resonant (HAT and HAR roots) seem to form a single class with HAT and HAR subclasses.

Bare HAT roots form their progressives by inserting a glottal stop after the vowel (HÁT → HÁʔT), as in:

<i>héḱ<sup>w</sup></i> ‘remember’	<i>héʔḱ<sup>w</sup></i> ‘be remembering’
<i>háḱ<sup>w</sup></i> ‘get used’	<i>háʔḱ<sup>w</sup></i> ‘be getting used’
<i>ʔíḱ<sup>w</sup></i> ‘be lost’	<i>ʔíʔḱ<sup>w</sup></i> ‘be getting lost’
<i>ʔáḱ<sup>w</sup></i> ‘get hung up’	<i>ʔáʔḱ<sup>w</sup></i> ‘be getting hung up’

Bare HAR roots, however, form their progressives by lengthening the vowel and glottalizing the resonant (HÁR → HÁ·Ṛ), as in:

<i>háḃ</i> ‘stop’	<i>há·ṙ</i> ‘be stopping, be coming to a stop’
<i>héḃ</i> ‘make a canoe’	<i>hé·ṙ</i> ‘be making a canoe’

A progressive form like *héʔḱ<sup>w</sup>* ‘be remembering’ may be the product of CV reduplication with /ʔ/ the realization of /h/ glottalized (as resonants are in progressive forms) and with the second vowel (expectably a schwa) deleted, that is, *héḱ<sup>w</sup>* is reduplicated as //həḱḱ<sup>w</sup>// → //héʔḱ<sup>w</sup>// → *héʔḱ<sup>w</sup>*. A progressive form like *há·ṙ* ‘be stopping’ may be produced in the same way but with the schwa retained because of the final resonant and the glottal stop deleted, that is, *háḃ* is reduplicated as //həḃḃ// → //háʔḃ// → //háṙ// → *há·ṙ*.

With *-t* ‘transitive,’ HAT roots form their progressives like the bare roots.

<i>hík<sup>wət</sup></i> ‘give a war cry’	<i>híʔk<sup>wət</sup></i> ‘be giving a war cry’
<i>híqət</i> ‘put it under’	<i>híʔqət</i> ‘be putting it under’
<i>háq<sup>wət</sup></i> ‘smell it’	<i>háʔq<sup>wət</sup></i> ‘be smelling it’
<i>ʔéḣət</i> ‘wipe it’	<i>ʔéʔḣət</i> ‘be wiping it’
<i>ʔáíət</i> ‘stretch it’	<i>ʔáʔíət</i> ‘be stretching it’
<i>ʔíḱ<sup>wət</sup></i> ‘throw it away’	<i>ʔíʔḱ<sup>wət</sup></i> ‘be throwing it away’

With *-t* ‘transitive,’ HAR roots form the perfective according to a pattern already seen in TAR and RAR roots; if the final resonant is a non-labial, the vowel is lengthened and there is no schwa after the resonant. The progressive is formed by inserting a glottal stop, as in:

*hí·lt* ‘roll it over, push it off’      *híʔǎlt* ‘be rolling it over, etc.’  
*ʔá·nt* ‘agree with his request’      *ʔáʔǎnt* ‘be agreeing with his request’

Following arguments used earlier, we might suppose that for the first set above a perfective is the product of //hí1ət// → //híǎt// → *hí·lt* and the progressive of //híhǎ1ət// → //híʔǎ1ət// → //híʔǎt// → *híʔǎlt*.

With *-əm* ‘intransitive’ and other unstressed suffixes with initial vowels, HAT roots also follow the pattern of the bare root.

*héiʔəm* ‘breathe’      *héʔiʔəm* ‘be breathing’  
*hésəm* ‘sneeze’      *héʔsəm* ‘be sneezing’  
*háqʷəm* ‘stink’      *háʔqʷəm* ‘be stinking’  
*ʔiʔʔəm* ‘dress oneself’      *ʔiʔʔəm* ‘be dressing oneself’  
*ʔiʔxəm* ‘borrow money’      *ʔiʔxəm* ‘be borrowing money’  
*xʷʔáʔəsəm* ‘wipe one’s face’      *xʷʔáʔəsəm* ‘be wiping one’s face’  
(cf. *ʔéʔət* ‘wipe it,’ *-əs* ‘face’)

With *-əm* ‘intransitive’ and other vowel-initial suffixes, HAR roots form their progressives in two ways:

(1) by simply glottalizing the resonant, as in

*hí1əm* ‘roll, fall off’      *hí1ǎm* ‘be rolling, be falling off’

As I recorded it, the progressive here is phonetically [híʔ1ǎm], which is possibly the realization of //híʔ1ǎm//, which is what the rules ought to produce.

(2) by lengthening the vowel and glottalizing the resonant, as in

*ʔiʔwǎst* ‘show him, instruct him’      *ʔiʔwǎst* ‘be showing him, etc.’  
*ʔámǎst* ‘give it to him’      *ʔámǎst* ‘be giving it to him’

The roots of these words are  $\sqrt{ʔem}$  ‘give’ and  $\sqrt{ʔiʔ}$  ‘show,’ and both are formed with *-əs* ‘recipient’ (§10.4.3). Here too the progressives may be the realizations of //ʔiʔwǎst// and //ʔámǎst//.

One seemingly anomalous verb may belong here:

*ʔéʔəm* ‘give’      *ʔé·mǎm* ‘be giving’

This verb is probably composed of  $\sqrt{ʔem}$  ‘give’ and *-əm* ‘intransitive.’ The underlying forms may be //ʔéməm// ‘give’ and //ʔéʔmǎm// ‘be giving,’ but if so, the replacement of the medial resonant by a glottal stop is unique.

With *-nəxʷ* ‘limited control’ and other unstressed suffixes beginning with a consonant, an HAC root appears as HǎC- in the perfective and as with vowel-initial suffixes in the progressive, as in:

*háqʷnəxʷ* ‘smell it’      *háʔqʷnəxʷ* ‘be smelling it’  
*ʔáʔkʷnəxʷ* ‘lose it’      *ʔiʔkʷnəxʷ* ‘be losing it’  
*háʔynəxʷ* ‘finish it’      *há·ʔnəxʷ* ‘be finishing it’

$x^w\acute{e}ʔt$ ‘lessen it, lighten it’	$x^w\acute{a}x^w\acute{e}ʔt$ ‘be lessening it, be lightening it’
$\acute{q}^w\acute{e}ʔt$ ‘sweep it’	$\acute{q}^w\acute{a}\acute{q}^w\acute{e}ʔt$ ‘be sweeping it’
$\acute{\lambda}\acute{a}ʔt$ ‘comfort him, calm him’	$\acute{\lambda}\acute{a}\acute{\lambda}\acute{a}ʔt$ ‘be comforting him, etc.’
$c\acute{a}ʔt$ ‘pry it apart’	$c\acute{a}c\acute{a}ʔt$ ‘be prying it apart’
$\acute{q}\acute{a}ʔt$ ‘put it together’	$\acute{q}\acute{a}\acute{q}\acute{a}ʔt$ ‘be putting it together’
$\acute{x}iʔt$ ‘reveal it, create it’	$\acute{x}\acute{a}\acute{x}iʔt$ ‘be revealing it, be creating it’

With  $-\acute{a}m$  ‘intransitive,’ the glottal stop of a TAʔ root may be lost, leaving a long vowel, as in:

$i^{\theta}\acute{e}:m \sim i^{\theta}\acute{e}ʔ\acute{a}m$ ‘chew’	$i^{\theta}\acute{a}i^{\theta}\acute{e}:m$ ‘be chewing’
--	---

(cf.  $i^{\theta}\acute{e}ʔt$  ‘chew it,’  $i^{\theta}\acute{a}i^{\theta}\acute{e}ʔt$  ‘be chewing it’)

With  $-n\acute{a}x^w$  ‘limited control’ and other consonant-initial unstressed suffixes, a TAʔ root retains the full vowel in the perfective. The suffix  $-n\acute{a}x^w$  may appear as  $-\acute{n}x^w$ .

$s\acute{e}\acute{n}\acute{a}x^w \sim s\acute{e}\acute{n}x^w$ ‘manage to lift it’	$s\acute{a}s\acute{e}\acute{n}x^w$ ‘be managing to lift it’
$\acute{x}i\acute{n}\acute{a}x^w$ ‘catch him in the act’	$\acute{x}\acute{a}\acute{x}i\acute{n}x^w$ ‘be catching him in the act’
$i\acute{e}ʔx\acute{a}t$ ‘try out a new dancer’	$i\acute{a}i\acute{e}ʔx\acute{a}t$ ‘be trying out a new dancer’

(<  $i\acute{e}ʔt$  ‘try it,’  $-x\acute{a}n$  ‘foot,’  $-t$  ‘transitive’)

With a suffix with an initial stressed vowel, a TAʔ root appears as T\acute{a}ʔ in the perfective but is T\acute{a}T\acute{A}ʔ in the progressive, as in:

$\acute{\lambda}\acute{a}ʔ\acute{e}y\acute{a}t$ ‘comfort a child’	$\acute{\lambda}\acute{a}\acute{\lambda}\acute{a}:\acute{y}\acute{a}t$ ‘be comforting a child’
---	--

(cf.  $\acute{\lambda}\acute{a}ʔt$  ‘comfort him,’  $-\acute{e}y\acute{a}t$  ‘child’)

With stressed consonant-initial suffixes, a TAʔ root appears as T\acute{a} in the perfective and variably in the progressive, to judge from the following:

$\acute{\lambda}\acute{a}t\acute{e}l\acute{a}m$ ‘go after food’	$\acute{\lambda}\acute{e}ʔt\acute{a}l\acute{a}m$ ‘be going after food’ (JP)
$\acute{\lambda}\acute{a}t\acute{n}\acute{e}n\acute{a}m$ ‘go after sea food’	$\acute{\lambda}\acute{a}\acute{\lambda}\acute{a}t\acute{n}\acute{e}\acute{n}\acute{a}m$ ‘be going after sea food’ (CC)

(cf.  $\acute{\lambda}\acute{e}ʔt$  ‘fetch it,’  $-t\acute{e}l \sim -t\acute{e}n$  ‘food,’  $-\acute{a}m$  ‘intransitive’)

The following verb, evidently formed from the root of  $\acute{\lambda}\acute{e}ʔt$  ‘fetch him’ and  $-x\acute{a}n$  ‘foot,’ seems to be irregular. My sources differed in its forms.

$\acute{\lambda}\acute{e}:x\acute{a}n \sim \acute{\lambda}\acute{a}ʔ\acute{e}x\acute{a}n$ ‘invite’	$\acute{\lambda}i\acute{\lambda}\acute{e}x\acute{a}n$ ‘be inviting’ (JP)
$\acute{\lambda}\acute{e}x\acute{a}n$ ‘invite’	$\acute{\lambda}i\acute{\lambda}\acute{e}x\acute{a}n$ ‘be inviting’ (CC)
$\acute{\lambda}\acute{e}x\acute{a}\acute{n}$ ‘invite’	$\acute{\lambda}i\acute{\lambda}\acute{e}x\acute{a}\acute{n}$ ‘be inviting’ (AG)

There are a few possible TAh roots. Two have the shape TA when bare of suffixes.

$p\acute{a}$ ‘get hit by the wind’	$p\acute{a}p\acute{a}$ ‘be getting hit by the wind’ (AG)
$q^w\acute{e}$ ‘get through’	$q^w\acute{a}q^w\acute{e}$ ‘be getting through’

With *-t* ‘transitive,’ a long vowel appears in the perfective and a glottal stop may appear in the progressive.

<i>pá:t</i> ‘blow on it’	<i>pəpáʔət</i> ‘be blowing on it’
<i>x<sup>w</sup>pá:t</i> ‘inflate it’	<i>x<sup>w</sup>pəpáʔət</i> ‘be inflating it’
<i>q<sup>w</sup>é:t</i> ‘make a hole in it’	<i>q<sup>w</sup>əq<sup>w</sup>éʔət ~ q<sup>w</sup>əq<sup>w</sup>é:t</i> ‘be making a hole in it’

With stressed vowel-initial suffixes, these roots appear as Təh or Tə in the perfective:

<i>pəhé:ls ~ pé:ls</i> ‘blow’	<i>pəpé:ls ~ pé:ls</i> ‘be blowing’
(< <i>-é:ls</i> ‘activity,’ cf. <i>spəhé:ls</i> ‘wind’)	
<i>q<sup>w</sup>əhíləm</i> ‘pass through’	(no progressive recorded)
(< <i>-íl</i> ‘move toward,’ <i>-əm</i> ‘intransitive’)	

From forms like *spəhé:ls* ‘wind’ and *q<sup>w</sup>əhíləm* ‘pass through,’ we might suppose that these roots are //pəh// and //q<sup>w</sup>eh// and that with *-t* ‘transitive’ we have:

<i>pá:t</i> //páhət//	<i>pəpáʔət</i> //pəpáhʔət//
-----------------------	-----------------------------

Another possible TAh root appears in

<i>ǰám</i> ‘swell, rise’	<i>ǰəǰám</i> ‘be swelling, be rising’
--------------------------	---------------------------------------

for which the resultative is *spǰám* ‘swollen, risen,’ from which we might suppose the root to be //ǰəh//.

However, a problem with this interpretation is posed by the forms

<i>x<sup>w</sup>ét</i> ‘lower it, starve him’	<i>x<sup>w</sup>əx<sup>w</sup>ét</i> ‘be lowering it, be starving him’
---	--

in which the vowels are short. Yet in the derivative *x<sup>w</sup>étcət* ‘throw down a gift for him (from the scaffold in front of the house at a potlatch)’ (< *-tc-* ‘benefactive,’ *-t* ‘transitive’) the vowel is long. And in the derivative *x<sup>w</sup>əhíləws* ‘half starved’ (< *íl* ‘move toward,’ *-əws* ‘body’) there is an /h/. These derivatives would suggest a root //x<sup>w</sup>eh//. But if the root has that form, then why is the vowel of the forms with *-t* ‘transitive’ short?

Another possible TAh root, with a differently formed progressive appears in

<i>ǰém</i> ‘cry’	<i>ǰém</i> ‘be crying’
------------------	------------------------

Cf. *ǰəǰém* ‘several are crying.’ For similarly formed progressives, see TəR roots with *-əm* below. From a derivative *ǰəhámələtca* (CC) (also *ǰámələtca* [JP]) ‘a giant frog that cries like a baby and bestows wealth’ (suffix, *-ələtca ~ -átca* ‘giant’), we may infer a root √ǰah.

### 7.2.3.1. Progressives of TAHT Roots

There are a few roots consisting of an obstruent, a full vowel, /ʔ/ or /h/, and another obstruent. These form their progressives like TAH roots, by CV reduplication with the stress on the second vowel and the first appearing as schwa.

*lɛʔx̣t* ‘put it on a dish, put s.t. under it’    *lətɛʔx̣t* ‘be putting it, etc.’  
*kʷiʔx̣wt* ‘pitch it, seal it with pitch’    *kʷəkʷiʔx̣wt* ‘be pitching it, etc.’  
 (cf. *kʷiʔx̣w* ‘pitch’ [noun])  
*x̣wáʔt* ‘brace it’    *x̣wəx̣wáʔt* ‘be bracing it’  
*síʔx̣əm* ‘duck, dodge’    *səsíʔx̣əm* ‘keep ducking’

### 7.2.4. Progressives of RAH Roots

Roots consisting of a resonant, a full vowel, and /ʔ/ or (presumably) /h/ form their progressives by CV reduplication but with the initial resonant replaced by /h/, the first vowel weakened to schwa though (usually) stressed, the following resonant glottalized, and the second vowel variable in quality, stress, and whether followed by /ʔ/ (RÁH → hǎṚǎH ~ hǎṚǎ).

The pattern is seen in two bare roots of the shape RAʔ:

*mɛʔ* ‘come off, run (as dye)’    *hámǎ* ‘be coming off’ (AG)  
*lɛʔ* ‘get hit just right’    *hǎlǎ* ‘be getting hit just right’ (AG)

With *-t* ‘transitive,’ RAʔ roots (like TAʔ roots) appear without a linking schwa:

*lɛʔt* ‘make it secure’ (CC)    *hǎlǎt* ‘be making it secure’  
*yáʔt* ‘back it up’    *hǎyǎt* (JP) *hǎyáʔt* (DK) ‘be backing it up’

They show the same pattern with the transitivizer *-x*, as in:

*mɛʔx* ‘take it off’    *hámǎʔx* (CC) *hámǎx* (JP, AG) ‘be taking it off’  
*lɛʔx* ‘put it away’    *hǎlǎʔx* (CC) *hǎlǎx* (JP, AG) ‘be putting it away’

The word *ném* ‘go’ appears, from its progressive form, to contain a root of this class; it is probably composed of *níʔ* ‘be there’ and *-əm* ‘intransitive.’

*ném* ‘go’    *hǎnǎm* ‘be going’

Its causative form also supports this inference.

*nǎʔémǎstǎx̣w* ‘take it, recite it’    *hǎnǎmǎstǎx̣w* ‘be taking it, etc.’

With *-nǎx̣w* ‘limited control,’ a RAʔ root behaves like a TAʔ root, *-nǎx̣w* appearing as *-ḥx̣w*:

*léṇx̣w* ‘manage to put it away’ (no progressive recorded).

With *-éls*, it is reduced to Rǎʔ-, as in:

*lǎʔéls* ‘put s.t. away’    *hǎḷéls* ‘be putting away’

(‘Put something away’ is used to mean to give something as an investment, expecting a return.)

With an unstressed vowel-initial suffix, a RAʔ root retains its stress but evidently may undergo a shift in vowel while the glottal stop is lost and the vowel is lengthened:

*míʔaqʷt* ‘cut his head off’                      *həmíʔaqʷt* ‘be cutting his head off’ (CC)  
*méʔaqət* ‘cut his head off’ (JP)              (no progressive recorded)  
 (cf. *méʔx* ‘remove it,’ *-qʷ* ‘head,’ *-t* ‘transitive’)

There is one possible RAh root (so far discovered), seen in the following forms with *-t* ‘transitive’ and *-əm* ‘intransitive.’

*yáʔt* ‘warn him, order from him’                      *həyáʔt* ‘be warning him, etc.’  
*yáʔm* ‘order (as a sweater from a knitter)’              *həyáʔm* ‘be ordering’

These suggest a root of the shape //yah//, meaning something like ‘alert,’ with *-t* ‘alert him’ and with *-əm* ‘alert another for one’s own sake.’

#### 7.2.4.1. Progressives of RAʔCC and RAʔəC Roots

There are a few words that either have these shapes or are composed of RAʔ roots with unidentifiable suffixes. They form their progressives like RAʔ roots.

*méʔkʷt* ‘get hurt’                      *háməkʷt* (AG), *həméʔkʷt* (CC) ‘be getting hurt’  
*yéʔət* [yéʔet] ‘vomit’                      *háyət* (JP), *həyéʔt* (DK) ‘be vomiting’  
*yéʔətt* ‘vomit on him’                      *háyətt* ‘be vomiting on him’ (AG)

#### 7.2.5. Progressives of HAH Roots

The only example so far discovered of a root that seems to be of this shape appears with *-t* and *-əm* and has a long vowel in the perfective and a glottal stop followed by schwa in the progressive.

*ʔáʔt* ‘call him’                      *áʔət* ‘be calling him’  
*ʔáʔm* ‘call’                      *ʔáʔm* ‘be calling’

#### 7.2.6. Progressives of TəT Roots

Bare roots of the shape obstruent-schwa-obstruent form their progressives by CV reduplication with the stress on the second vowel (T<sub>1</sub>əT<sub>2</sub> → T<sub>1</sub>əT<sub>1</sub>əT<sub>2</sub>), as in:

*páqʷ* ‘go broke’                      *pəpáqʷ* ‘be going broke’  
*ǰáʔ* ‘come to, sober up’                      *ǰəǰáʔ* ‘be coming to’  
*tás* ‘arrive there’                      *tətás* ‘be arriving there’  
*íʔkʷ* ‘get stuck in mud’                      *íʔíʔkʷ* ‘be getting stuck in mud’  
*íʔqʷ* ‘break’                      *íʔíʔqʷ* ‘be breaking’  
*θáʔkʷ* ‘tighten up, get straight’                      *θəθáʔkʷ* ‘be tightening up, etc.’  
*íʔəʔxʷ* ‘get washed’                      *íʔəíʔəʔxʷ* ‘be getting washed’  
*sáq* ‘get torn, get split’                      *səsáq* ‘be getting torn, etc.’

<i>čǎqʷ</i> ‘get pierced’	<i>čǎčǎqʷ</i> ‘be getting pierced’
<i>qʷǎs</i> ‘go under water’	<i>qʷǎqʷǎs</i> ‘be going under water’
<i>qʷǎt</i> ‘wash ashore’	<i>qʷǎqʷǎt</i> ‘be washing ashore’
<i>kʷǎt</i> ‘spill over, tip over’	<i>kʷǎkʷǎt</i> ‘be spilling over’

With *-t* ‘transitive,’ TǎT roots appear as TT followed by either a full vowel, /e/ or /a/, or a schwa in the perfective, and their progressives are formed by inserting a full vowel, /e/ or /a/ between the two consonants. We may thus distinguish two subclasses:

(1) With the formula TTÁ- → TÁT-, as in:

<i>sǎét</i> ‘split it’	<i>séqt</i> ‘be splitting it’
<i>kʷtét</i> ‘spill it’	<i>kʷétt</i> ‘be spilling it’
<i>íkʷát</i> ‘caulk it’	<i>tákʷt</i> ‘be caulking it’
<i>íqʷát</i> ‘cut it off’	<i>táqʷt</i> ‘be cutting it off’
<i>tʰǎt</i> ‘wash it’	<i>tʰát</i> ‘be washing it’

The vowels here seem predictable; if the second consonant is rounded, the vowel is /a/; if not, it is /e/.

(2) With the formula TTǎ- → TÁT-, as in:

<i>pǎt</i> ‘bring him to’	<i>pétt</i> ‘be bringing him to’
<i>tsǎt</i> ‘approach it’	<i>tést</i> ‘be approaching it’
<i>θkʷǎt</i> ‘stretch it’	<i>θékʷt</i> ‘be stretching it’
<i>θqʷǎt</i> ‘spear it’	<i>θéqt</i> ‘be spearing it’
<i>θǎt</i> ‘push him’	<i>θéxt</i> ‘be pushing it’
<i>ǎqʷǎt</i> ‘get him ready’	<i>ǎqʷt</i> ‘be getting him ready’
<i>čǎt</i> ‘pierce it’	<i>čát</i> ‘be piercing it’

In this set, it appears that only if the second consonant is a rounded uvular, the vowel in the progressive is /a/.

(3) There is one (so far recorded) TǎT root that, with *-t* ‘transitive’ forms its progressive with two schwas (TTÁ- → TǎTǎ-), as in:

<i>csét</i> ‘tell him to do so’	<i>čǎsǎt</i> ‘be telling him to do so’
---------------------------------	--

The pattern is like that of some of the roots with *-m* ‘intransitive’ given below.

There are a few presumptive TǎT roots that I have recorded with *-t* ‘transitive’ but never bare. These include:

<i>íqǎt</i> ‘insult him (by reference to ancestry)’	<i>íéqt</i> ‘be insulting him ...’
<i>tǎqét</i> ‘peg/nail it together temporarily’	<i>téqt</i> ‘be pegging it ...’

(I have recorded no \**íǎq* or \**tǎq*.)

With *-ǎm* ‘intransitive,’ TǎT roots fall into five subclasses, four with the stress falling on the suffix in the perfective with variations in the stressed vowel (and so resembling the subclasses with *-t* ‘transitive’) and a fifth formed by reduplication (and so resembling the progressive of the bare root).

The verb *íáq<sup>w</sup>néx<sup>w</sup>* also means ‘catch him (at s.t.)’ or ‘catch it (an event).’

With *-éls*, a TəT root appears as it does with *-t*, as TT- in the perfective and (usually) with a full vowel in the progressive, as in:

<i>ǰk<sup>w</sup>éls</i> ‘pinch’	<i>ǰák<sup>w</sup>áls</i> ‘be pinching’
(cf. <i>ǰk<sup>w</sup>át</i> ‘grab it between the fingers’)	<i>ǰák<sup>w</sup>t</i> ‘be grabbing it ...’)
<i>ǰpéls</i> ‘take up a collection’	<i>ǰépáls</i> ‘be taking up a collection’
(cf. <i>ǰpát</i> ‘put it together’)	<i>ǰépt</i> ‘be putting it together’)
<i>k<sup>w</sup>téls</i> ‘pour’	<i>k<sup>w</sup>étáls</i> ‘be pouring’ (AG)
	(but cf. <i>k<sup>w</sup>átáls</i> ‘be flowing fast’ [JP])
(cf. <i>k<sup>w</sup>tét</i> ‘spill it’)	<i>k<sup>w</sup>étt</i> ‘be spilling it’)

With lexical suffixes, a TəT root always appears unstressed in the perfective, as TT- when followed by a suffix beginning with a vowel and as TəT- when followed by one beginning with a consonant. (Because the suffix always takes the stress, we find that TəT roots take the stressed forms of suffixes that appear unstressed when following roots with full vowels.) In the progressive, the stress usually shifts to the root, which then appears as TəT, but in some words the suffix keeps the stress and the root appears as TəT- (as in ‘wash one’s feet’ below).

<i>í<sup>θ</sup>ǰáśám</i> ‘wash one’s face’	<i>í<sup>θ</sup>ǰǰáśám</i> ‘be washing one’s face’
(< <i>-ás</i> ~ <i>-əs</i> ‘face,’ <i>í<sup>θ</sup>ǰǰ<sup>w</sup></i> ‘get washed,’ <i>-ám</i> ‘intransitive,’ cf. <i>í<sup>θ</sup>ǰǰát</i> ‘wash it,’ <i>í<sup>θ</sup>ǰǰ<sup>w</sup>t</i> ‘be washing it’)	
<i>í<sup>θ</sup>ǰǰéśám</i> ‘wash one’s hands’	<i>í<sup>θ</sup>ǰǰǰéśám</i> ‘be washing one’s hands’
(< <i>-écəs</i> ~ <i>cəs</i> ‘hand’)	
<i>í<sup>θ</sup>ǰǰxénám</i> ‘wash one’s feet’	<i>í<sup>θ</sup>ǰǰxénám</i> ‘be washing ...’ (AG)
(< <i>-xén</i> ~ <i>-xən</i> ‘foot’)	
<i>í<sup>θ</sup>ǰǰálwátám</i> ‘wash clothes’	<i>í<sup>θ</sup>ǰǰálwátám</i> ‘be washing clothes’
(< <i>-álwət</i> ‘clothing’)	
<i>sǰálcəp</i> ‘split firewood’	<i>sǰálcəp</i> ‘be splitting firewood’
(< <i>-álcəp</i> ‘fire, firewood,’ <i>sǰá</i> ‘get split’; cf. <i>sǰét</i> ‘split it,’ <i>sǰét</i> ‘be splitting it’)	
<i>ík<sup>w</sup>éwət</i> ‘caulk a canoe’	<i>ík<sup>w</sup>əwət</i> ‘be caulking a canoe’
(< <i>-éwət</i> ~ <i>-wət</i> ‘vessel,’ <i>ík<sup>w</sup></i> ‘get stuck in mud’; cf. <i>ík<sup>w</sup>át</i> ‘caulk it,’ <i>ík<sup>w</sup>t</i> ‘be caulking it’)	

There are a few cases recorded where the root of the progressive has the full vowel that appears in the progressive with *-t*.

<i>x<sup>w</sup>təq<sup>n</sup>écám</i> ‘tow’	<i>x<sup>w</sup>təq<sup>n</sup>écám</i> ‘be towing’ (JP)
(< <i>-néc</i> ‘butt, base, rump’; cf. <i>tqét</i> ‘peg it together,’ <i>tqét</i> ‘be pegging it together’)	
<i>í<sup>θ</sup>ǰǰé<sup>ʔ</sup></i> ‘wash diapers’ (CC, AG)	<i>í<sup>θ</sup>ǰǰá<sup>ʔ</sup></i> (CC), <i>í<sup>θ</sup>ǰǰé<sup>ʔ</sup></i> (AG) ‘be washing diapers’
(< <i>-é<sup>ʔ</sup></i> ‘bedding’)	

In the last example, the *-a<sup>ʔ</sup>* in CC’s progressive may be a case of vowel harmony.

### 7.2.6.1. Progressives of TəTəC Roots

The few roots of this shape form their progressive as TəT roots do, by CV reduplication with the stress on the second schwa.

<i>íʔpəl</i> ‘play cards’	<i>íʔíʔpəl</i> ‘be playing cards’
<i>q̄ʔíʔəx̄</i> ‘defecate’	<i>q̄ʔq̄ʔíʔəx̄</i> ‘be defecating’
<i>ǰʔk̄ʷəní</i> ‘go out (as a fire)’	<i>ǰəǰʔk̄ʷəní</i> ‘be going out’
<i>ǰʔk̄ʷəní</i> ‘extinguish it (a fire or a hatred)’	<i>ǰəǰʔk̄ʷəní</i> ‘be extinguishing it’

AG gave these last four forms with *n̄*; I recorded *n* from JP.

The following seems to belong here, again suggesting that the full vowel followed by the glottal stop is an underlying schwa.

<i>səx̄ʷaʔ</i> ‘urinate’	<i>səsəx̄ʷaʔ</i> ‘be urinating’
--------------------------	---------------------------------

### 7.2.6.2. Progressives of TTVC Roots

There are a few words that may be roots of the shape TTAC and whose progressives are formed by inserting a stressed schwa between the first and second consonant and reducing the full vowel of the perfective to schwa (TTÁC → TəTəC). In this pattern they resemble a few TəT roots with *-t* ‘transitive,’ *-əm* ‘intransitive,’ and other suffixes.

<i>ítáq̄ʷ</i> ‘get twisted’	<i>íʔítáq̄ʷ</i> ‘be getting twisted’
<i>ctáq̄ʷ</i> ‘go through’	<i>cəítáq̄ʷ</i> ‘be going through’
<i>ǰqíl</i> ‘give birth’	<i>ǰəǰqəl</i> ‘be giving birth’
<i>x̄íék̄ʷ</i> ‘carve’	<i>x̄əíék̄ʷ</i> ‘be carving’

With *-t* these follow the same pattern.

<i>ítáq̄ʷt</i> ‘pry it off’	<i>íʔítáq̄ʷt</i> ‘be prying it off’
<i>ctáq̄ʷt</i> ‘put it through’	<i>cəítáq̄ʷt</i> ‘be putting it through’

There is at least one possible root of the shape CCəC:

*kʷtəx̄ʷ* ‘enter’ (no progressive recorded).

With *-t*, however, a full vowel appears in the progressive:

<i>kʷtétəx̄ʷt</i> ‘bring/take it in’	<i>kʷətətəx̄ʷt</i> ‘be bringing/taking it in’
--------------------------------------	---

There are other words, recorded only with transitivizers, that follow this pattern. From the examples just given, it appears that the bare roots of these may be either CCAC or CCəC in shape.

<i>t pált</i> ‘stretch it on a frame (as a hide)’	<i>təpəlt</i> ‘be stretching it ...’
<i>θqált</i> ‘honour him by giving wealth’	<i>θəqəlt</i> ‘be honouring him ...’
<i>θqénx</i> ‘stand it up in the ground’	<i>θəqənəx</i> ‘be standing it up ...’ (AG)

Some or all of these may possibly be TəT roots with petrified suffixes.

### 7.2.7. Progressives of TəR Roots

Roots of this shape form their progressives by CV reduplication with the stress on the second schwa (as TəT roots do) and with the resonant glottalized (TəR → TəTəʔ̤ R̥, as in:

<i>pə́n</i> ‘get buried’	<i>pəpə́n̥</i> ‘be getting buried’
<i>q̣ʷə́l</i> ‘get cooked’	<i>q̣ʷəq̣ʷə́l̥</i> ‘be getting cooked’
<i>kʷə́n</i> ‘become possessed’	<i>kʷəkʷə́n̥</i> ‘be going into a possessed state’
<i>xʷə́y</i> ‘wake up’	<i>xʷəxʷə́y̥</i> ‘be waking up’

With *-t* ‘transitive,’ TəR roots fall into two subclasses, with nearly all of them in the first subclass.

(1) With their progressives formed by reduplication following the pattern of the bare roots (and unlike TəT roots, which do not reduplicate with *-t*, as in:

<i>pə́nət</i> ‘bury it’	<i>pəpə́n̥ət</i> ‘be burying it’
<i>q̣ʷə́lət</i> ‘roast it’	<i>q̣ʷəq̣ʷə́lət̥</i> ‘be roasting it’
<i>kʷə́nət</i> ‘take it’	<i>kʷəkʷə́n̥ət</i> ‘be taking it’
<i>təmət</i> ‘pick it/them’	<i>tətəm̥ət</i> ‘be picking it/them’
<i>q̣ʷə́mət</i> ‘pull it out’	<i>q̣ʷəq̣ʷə́mət̥</i> ‘be pulling it out’
(< <i>q̣ʷə́m</i> ‘shed, moult’)	

(2) With their progressives formed by simply glottalizing the resonant, without reduplication.

<i>tələt</i> ‘bail it (as a canoe)’	<i>ləl̥ət</i> ‘be bailing it’
<i>qə́wət</i> ‘warm it’	<i>qəw̥ət</i> ‘be warming it’ (AG)

With *-əm* ‘intransitive,’ TəR roots form their progressives in three ways:

(1) by reduplication (with the usual glottalization of resonants)

<i>pə́nəm</i> ‘plant’	<i>pəpə́n̥əm</i> ‘be planting’
<i>tə́yəm</i> ‘stick, adhere’	<i>tətə́yəm̥</i> ‘be sticking’

(2) by strengthening the vowel (with the usual glottalization)

<i>čə́nəm</i> ‘shake (as a Shaker)’	<i>čé́n̥əm</i> ‘be shaking’
<i>qə́wəm</i> ‘howl (as a dog or wolf)’	<i>qéw̥əm</i> ‘be howling’

(3) by simply glottalizing the final resonant

<i>q̣ʷə́ləm</i> ‘bake’	<i>q̣ʷə́ləm̥</i> ‘be baking’ (AG)
------------------------	-----------------------------------

There are also at least two TəR roots that, in the perfective, combine with *-əm* with a loss of the resonant and the appearance of a long vowel /i:/. Their progressives are formed in the way just illustrated, by simply glottalizing the final /m/.

<i>tí:m</i> //lám-əm// ‘pick’	<i>tí:m̥</i> //lám-əm̥// ‘be picking’
(cf. <i>təmət</i> ‘pick them’)	<i>tətəm̥ət</i> ‘be picking them’)

*tʰ·m* // *tʰəm-əm* // ‘pick berries’    *tʰ·m̥* // *tʰəm-əm̥* // ‘be picking berries’  
(cf. *sitʰ·m* ‘berry, berries’; in the Nanaimo dialect *sitʰ·məm*)

With *-nəxʷ* ‘limited control,’ a TəR root is stressed in the perfective and the suffix is unstressed (unlike TəT roots, which appear unstressed and with *-néxʷ*). The progressive (in the one example available) is formed by strengthening the vowel and glottalizing the resonant.

*kʷənənəxʷ* ‘get it’                      *kʷánənəxʷ* (JP), *kʷénnəxʷ* (AG) ‘be getting it’

From the few examples available, it seems that with *-éls* TəR roots behave variably.

<i>təmélʷs</i> ‘chop’	<i>tətəməlʷs</i> ‘be chopping’
(cf. <i>təmət</i> ‘chop it’)	<i>tətəmət</i> ‘be chopping it’)
<i>ʃəlélʷs</i> ‘write’	<i>ʃəʃéyəlʷs</i> (CC), <i>ʃəʃíls</i> [ʃəʃí·ls ?] (JP) ‘be writing’
(cf. <i>ʃələt</i> ‘paint a design’)	<i>ʃəʃələt</i> ‘be painting a design’)
<i>kʷí·ls</i> ‘grab onto s.t.’	<i>kʷəkʷí·ls</i> ~ <i>kʷí·ls</i> [?] (AG) ‘be grabbing ...’

With lexical suffixes, TəR roots appear in the perfective stressed with unstressed suffixes and unstressed with stressed suffixes, but it is unclear when a suffix will be stressed or unstressed; cf. forms with *-íwʷs* ~ *-əwʷs* ‘body, bird’ below. The progressives are formed in ways seen with *-t* and *-əm*:

(1) by reduplication

*pánəst* ‘throw dirt in his face’    *pəpánəst* ‘be throwing ...’ (AG)  
(cf. *pánət* ‘bury it,’ *pəpánət* ‘be burying it,’ *-əs* ‘face’)  
*tələst* ‘splash water in his face’    *tətələst* ‘be splashing ...’ (JP)  
(cf. *tələt* ‘bail it,’ *tələt* ‘be bailing it,’ *-əs* ‘face’)

(2) by glottalizing the resonant

*qʷəməwʷs* ‘pluck a bird’                      *qʷəm̥əwʷs* ‘be plucking a bird’ (JP)  
(cf. *qʷəmət* ‘pull it out,’ *qʷəm̥ət* ‘be pulling it out,’ *-íwʷs* ~ *-əwʷs* ‘body, bird’)

(1) and (2) both ways

*təmítwʷst* ‘chop its trunk’    *tətəm̥ítwʷst* ~ *təmítwʷst* ‘be chopping ...’ (AG)  
(cf. *təmət* ‘chop it’                      *tətəmət* ‘be chopping it’)  
*təmítwʷst* ‘knock its branches off’    *tətəm̥ítwʷst* ~ *təmítwʷst* ‘be knocking ...’  
(cf. *təmət* ‘pick them’                      *tətəm̥ət* ‘be picking them’)

(3) by strengthening the vowel and glottalizing the resonant of the root

*ʃəən·xénəm* ‘run’                      *ʃəən̥·xénəm̥* ‘be running’  
(possibly *ʃəəm* ‘fast,’ *-xén* ~ *-xən* ‘foot,’ *-əm* ‘intr.,” i.e., “fast-foot it”)  
*təwítʰé·əm* ‘disrobe’                      *təwítʰé·m̥* ‘be disrobing’  
(< *təwítʰé·ə* ‘naked’)

This last is composed of the suffix *-iʰeʷ* ‘robe’ and a root possibly identifiable as *lélw* ‘escape, be cured,’ and *-əm* ‘intransitive.’ However, a CAC root like *lélw* ought to be reduplicated in the progressive, so if this root is indeed *lélw*, it is being treated here like a TəR root.

There is one exceptional TəR root, *θəy* ‘come into existence, get made,’ which with *-t*, *-əm*, and various lexical suffixes, behaves like a CəCT root (see §7.2.10), strengthening the vowel and glottalizing the resonant, as in:

<i>θəyt</i> ‘make it, fix it’	<i>θéỵt</i> ‘be making it, be fixing it’
<i>θəyəm</i> ‘make bread’	<i>θéỵəm</i> ‘be making bread’
<i>θəyəcən</i> ‘rewrap the dead’	<i>θéỵəcən</i> ‘be rewrapping for reburial’
(< <i>-əcən</i> ~ <i>-icən</i> ‘surface,’ <i>-əm</i> ‘intr.’)	

### 7.2.7.1. Progressives of TəRəC Roots

The few roots of this shape form their progressives, as TəR roots do, in two ways:

(1) by CV reduplication with the stress on the second schwa, as in:

<i>xʷələkʷt</i> ‘wrap it up’	<i>xʷəxʷələkʷt</i> ‘be wrapping it up’
------------------------------	--

(2) by glottalizing the medial resonant, as in:

<i>ləməxʷ</i> ‘rain’	<i>ləm̥əxʷ</i> ‘be raining’
----------------------	-----------------------------

(This may be composed of a TəR root and a suffix; cf. *stəmləm* ‘dew,’ *stém* ‘drenched with rain’.)

<i>čələxʷ</i> ‘go/come upriver’	<i>čəl̥əxʷ</i> ‘be going/coming upriver’ (AG)
<i>qəwət</i> ‘drum for him’	<i>qəw̥ət</i> ‘be drumming for him’
(cf. <i>qəwət</i> ‘drum [noun]’)	
<i>ləməxt</i> ‘braid it’	<i>ləm̥əxt</i> ‘be braiding it’
(but cf. <i>ləmχənéʔt</i> ‘braid her hair,’ <i>l̥mχənéʔt</i> ‘be braiding her hair,’ < <i>-n̥éʔ</i> ~ <i>-ən̥</i> ‘ear’)	
<i>qəwətəm</i> ‘beat a drum’	<i>qəw̥ətəm</i> ‘be beating a drum’

### 7.2.8. Progressives of RəC Roots

Roots of the shapes RəT and RəR are like RAH roots (see §7.2.4) in forming their progressives by a variety of CV reduplication in which the initial resonant is replaced by /h/.

Bare roots of the shape RəT follow the formula RəT → həRT, as in:

<i>məq̣</i> ‘get full, eat one’s fill’	<i>həm̥q̣</i> ‘be getting full’
<i>nəqʷ</i> ‘fall asleep’	<i>hən̥qʷ</i> ‘be falling asleep’
<i>ləs</i> ‘cave in, slide (as land)’	<i>həl̥s</i> ‘be falling in, etc.’
<i>ləkʷ</i> ‘break’	<i>həl̥kʷ</i> ‘be breaking’
<i>yəqʷ</i> ‘burn’	<i>həỵqʷ</i> ‘be burning, fire’
<i>wəq̣ʷ</i> ‘drift away’	<i>həw̥q̣ʷ</i> ‘be drifting away’

Bare roots of the shape RəR follow the formula RəR → h́áRə́R, as in:

*lám* ‘be folded, be doubled over’      *h́álm̄* ‘be getting folded’ (AG)

As they appear with *-t* ‘transitive,’ RəC roots fall into four subclasses, varying in the placement of the stress in the perfective and in the presence of a schwa or full vowel after the two consonants of the root (cf. the subclasses of TəT roots in §7.2.6):

(1) with the stress on the schwa of the root and with a schwa following (ŔáCə- → h́áŔCə-), as in:

<i>málət</i> ‘dip it ceremoniously’	<i>h́ám̄lət</i> ‘be dipping it’
<i>máq̄ət</i> ‘swallow it’	<i>h́ám̄q̄ət</i> ‘be swallowing it’
<i>lác̄ət</i> ‘fill it’	<i>h́ál̄c̄ət</i> ‘be filling it’
<i>yáǰ̄wət</i> ‘untie it’	<i>h́áȳǰ̄wət</i> ‘be untying it’

Two roots that take transitivizer /-x/ seem to belong here.

<i>náp̄əx</i> ‘eat it’	<i>h́án̄p̄əx</i> ‘be eating it’
<i>nəwəx</i> ‘insert it’	<i>h́án̄wəx</i> ‘be inserting it’

(2) with the stress on the schwa of the root and no schwa following (ŔáC → h́áŔC-).

<i>yáq̄w̄t</i> ‘burn it’	<i>h́áȳq̄w̄t</i> ‘be burning it’
--------------------------	-----------------------------------

(3) with the stress on a schwa following the root in the perfective but with no schwa following the root in the progressive (RəĆə- → h́əŔC-), as in:

<i>máíət</i> ‘bend it’	<i>h́ám̄íət</i> ‘be bending it’
<i>lǰ̄ǰ̄ət</i> ‘enlarge the mesh’	<i>h́ál̄ǰ̄ət</i> ‘be enlarging the mesh (of a net)’
<i>másət</i> ‘fold it up’	<i>h́ám̄st</i> ‘be folding it up’

(4) with a stressed full vowel following the root in the perfective and a schwa there in the progressive (RəĆÁ → H́áŔĆə). I have found only one example:

<i>lək̄w̄át</i> ‘break it’	<i>h́ál̄k̄w̄ət</i> ‘be breaking it’
----------------------------	-------------------------------------

With *-əm* ‘intransitive,’ RəC roots may fall into the subclasses seen with *-t* (cf. TəT roots, in §7.2.6), but only one example has been recorded. It would belong to the first subclass.

<i>náqəm</i> ‘dive’	<i>h́án̄qəm̄</i> ‘be diving’
---------------------	------------------------------

With lexical suffixes, RəT roots form their progressives with the formula seen in the bare root but with the stress varying with the suffix, as in:

<i>máḱ̄w̄əlcəp</i> ‘gather firewood’	<i>h́ám̄ḱ̄w̄əlcəp</i> ‘be gathering ...’
--------------------------------------	--

(cf. *máḱ̄w̄ət* ‘find it, pick it up,’ *-əlcəp* ‘fire, fuel’)

*máíéqət* ‘bend it down (as a branch)’ *háṁíəqət* ‘be bending ...’  
(cf. *máíə́t* ‘bend it,’ *háṁí́t* ‘be bending it,’ *-qən* [-éqən ?] ‘head, end of long object’)

*yáθəst* ‘tell him’ *háýθəst* ‘be telling him’  
(cf. *syəθ* ‘tradition, heritage,’ *syáθəs* ‘tradition, teaching,’ *-əs* ‘recipient’)  
*wəqʷíləm* ‘move downstream’ *háwqʷələm* ‘be moving downstream’  
(cf. *wáqʷ* ‘drift with the current,’ *háwqʷ* ‘be drifting,’ *-íl* ‘move toward,’ *-əm* ‘intransitive’)

There are a few exceptional RəR roots that, with *-t* and *-əm*, form their progressives like CəCT and a few TəR roots, by strengthening the vowel and glottalizing the resonant:

*yáwt* ‘praise him’ *yáwʷθət* ‘be bragging’  
*náyəm* ‘laugh’ *néýə́m* ‘be laughing’

### 7.2.9. Progressives of HəC Roots

There is no recorded example of a root of the shape həC and only one of the shape ʔəC. It forms its progressive by what may be identified as reduplication with the stress on the first vowel, which is strengthened to a full vowel.

*ʔəqʷ* ‘lose one’s hair’ *ʔáʔəqʷ* ‘be losing one’s hair’ (JP)

It has at least one derivative:

*ʔəqʷθət* ‘shed hair’ *ʔáqʷθət* ‘be shedding hair’ (JP)

(AG was not familiar with the word *ʔəqʷ* but suggested that the progressive ought to be *ʔáʔqʷ*. The next set of words would also suggest this.)

#### 7.2.9.1. Progressives of HəC(C)V(C) Roots

There are a few words that appear to be roots of these shapes, with initial glottal stop. They form their progressives by strengthening the schwa to a full vowel, not now predictable, followed by a glottal stop or glottalization of a resonant.

*ʔəxəl* ‘paddle’ *ʔíʔxəl* ‘be paddling’  
*ʔəmət* ‘sit down, sit up’ *ʔámət* ‘be sitting down, be sitting up’  
*ʔəlyə* ‘have a vision’ *ʔályə* ‘be having a vision’  
*ʔəltən* ‘eat’ *ʔíʔltən* ‘be eating’

This last word looks as though it might be composed of an HAC root \*ʔíʔ reduced to Həc- with a CVC suffix (*-tən* ‘instrument?’).

There is one word with an initial /h/ that may belong here:

*háyeʔ* (AG) ‘go away, leave’ *háýə* ‘be going away, etc.’ (AG)  
*háyeʔ* (JP) ‘go away, leave’

(As recorded from JP, this should belong in another set. Unfortunately, I did not record a progressive from JP.)

### 7.2.10. Progressives of CəCT Roots

There are a number of roots (or apparent roots) of this shape, with the first consonant of any class (including glottals), the second either an obstruent or a resonant (and, if a resonant, either unglottalized or glottalized), and the third an obstruent. (Further analysis may reveal that some or all of these are really stems composed of CV roots and petrified suffixes or stem formatives, but for now we must consider them roots.) They form their progressives by strengthening the vowel, shifting from schwa to /e/ or /a/ (CəCT → CÁCT). Generally, the vowel in the progressive is /e/ unless the third consonant is rounded, making it /a/, but there are exceptions, such as *čéýx<sup>w</sup>t* ‘be drying it,’ *q<sup>w</sup>álst* ‘be boiling it.’ If the second consonant is an unglottalized resonant, it is glottalized in the progressive, unless (it seems) the third consonant is a glottalized obstruent. The following are bare roots with their progressives:

<i>sáwq̣</i> ‘seek’	<i>séwq̣</i> ‘be seeking’
<i>ʔáwk<sup>w</sup></i> ‘get used up’	<i>ʔéwk<sup>w</sup></i> (AG), <i>ʔáwk<sup>w</sup></i> (DK) ‘be getting used up’
<i>ǰálǰ</i> ‘spark, throw out a spark’	<i>ǰélǰ</i> ‘be sparking’ (AG)

With *-t* ‘transitive,’ CəCT roots fall into two subclasses, the far greater number being in the first:

- (1) with no schwa preceding the *-t*

<i>pásk<sup>w</sup>t</i> ‘call him names’	<i>péyǰt</i> ‘be squeezing it’
<i>páyǰt</i> ‘squeeze it’	<i>mátq<sup>w</sup>t</i> ‘be dipping it’
<i>mátq<sup>w</sup>t</i> ‘dip it’	<i>séyít</i> ‘be tickling him’
<i>sáyít</i> ‘tickle him’	<i>séwq̣t</i> ‘be looking for it’
<i>sáwq̣t</i> ‘look for it’	<i>tétǰt</i> ‘be shaking it back and forth’
<i>tétǰt</i> ‘shake it back and forth’	<i>télqt</i> ‘be dipping it’
<i>təlqt</i> ‘dip it’	<i>tálq̣<sup>w</sup>t</i> ‘be snatching it off him’
<i>tálq̣<sup>w</sup>t</i> ‘snatch it off him’	<i>ǰépǰt</i> ‘be spreading it, be scattering it’
<i>ǰápǰt</i> ‘spread it, scatter it’	<i>ǰéyq̣t</i> ‘be pressing on it’
<i>ǰáyq̣t</i> ‘press on it’	<i>ǰélǰt</i> ‘be throwing sparks on it’ (AG)
<i>ǰálǰt</i> ‘throw sparks on it’	<i>čéýx<sup>w</sup>t</i> ‘be drying it’
<i>čáyx<sup>w</sup>t</i> ‘dry it’	<i>k<sup>w</sup>éýǰt</i> ‘be stirring it’
<i>k<sup>w</sup>éýǰt</i> ‘stir it’	<i>x<sup>w</sup>élp̣t</i> ‘be fanning him’
<i>x<sup>w</sup>élp̣t</i> ‘fan him’	<i>ǰélǰt</i> ‘be twisting it around’
<i>ǰálǰt</i> ‘twist it around’	<i>q<sup>w</sup>álst</i> ‘be boiling it’
<i>q<sup>w</sup>álst</i> ‘boil it (as an egg)’	<i>hánq<sup>w</sup>t</i> ‘be warming it up’
<i>hánq<sup>w</sup>t</i> ‘warm it up’	<i>háýq<sup>w</sup>t</i> ‘be recruiting him’
<i>háýq<sup>w</sup>t</i> ‘recruit him’	<i>ʔéwk<sup>w</sup>t</i> ‘be using it up’ (AG)
<i>ʔáwk<sup>w</sup>t</i> ‘use it up’	

(2) with a schwa preceding the *-t*. I have found only one example:

*čəlxət* ‘delouse him’                      *čélxət* ‘be delousing him (a child)’

With *-əm* ‘intransitive’ and *-əl* ‘move toward,’ some but perhaps not all CəCT roots appear in the perfective as CÁCəT- (the *Á* being the /e/ or /a/ that appears in the progressive of the *-t* form), and these form their progressives in ways varying slightly depending on the type of consonant in the second position.

(1) If the second consonant is an obstruent, the stressed full vowel is lengthened (for CC though not for AG) and the schwa is dropped (CÁTəT- → CÁ(·)TT-):

*mátəq<sup>w</sup>əm* ‘bubble up’              *mátq<sup>w</sup>əm* (CC), *mátq<sup>w</sup>əm̃* (AG) ‘be bubbling up’  
(cf. *mátq<sup>w</sup>t* ‘dip it’)              *mátq<sup>w</sup>t* ‘be dipping it’)

(2) If the second consonant is a resonant, this is glottalized in the progressive and the schwa following it is dropped (CÁRəT- → CÁṚT-), as in:

<i>k<sup>w</sup>eγəḥəm</i> ‘move’	<i>k<sup>w</sup>éỵḥəm̃</i> ‘be moving’
(cf. <i>k<sup>w</sup>áỵḥt</i> ‘move it’)	<i>k<sup>w</sup>éỵḥt</i> ‘be moving it’)
<i>ḥéləḥəm</i> ‘spark’	<i>ḥéḷḥəm̃</i> ‘be sparking’ (AG)
(cf. <i>ḥəḷḥ</i> ‘spark’)	<i>ḥéḷḥ</i> ‘be sparking’)
<i>hánəq<sup>w</sup>əm</i> ‘get warm’	<i>hánq<sup>w</sup>əm</i> ‘be getting warm’
(cf. <i>hánq<sup>w</sup>t</i> ‘warm it up’)	<i>hánq<sup>w</sup>t</i> ‘be warming it up’)
<i>q<sup>w</sup>áməḥ<sup>w</sup>əl</i> ‘get thin’	<i>q<sup>w</sup>áṃəḥ<sup>w</sup>əḷ</i> ‘be getting thin’
(cf. <i>cq<sup>w</sup>áṃḥ<sup>w</sup></i> ‘thin, skinny’)	

The last progressive form, ‘be getting thin,’ seems irregular in not losing its first schwa.

There are words that are composed of stems of these shapes with these suffixes and forming their progressives in these ways. Their roots have not yet been recorded bare of suffixes, but possibly they too are of the shape CəCT. These include:

<i>páləx<sup>w</sup>əm</i> ‘steam (from heat, as a pot)’	<i>pálx<sup>w</sup>əm̃</i> ‘be steaming’
(AG denied ** <i>pəl<sup>w</sup>t</i> , but cf. <i>spáləx<sup>w</sup>əm</i> ‘steam’)	
<i>pálək<sup>w</sup>əm</i> ‘boil up (as water from paddling)’	<i>pálk<sup>w</sup>əm̃</i> ‘be boiling up’
<i>tátəq<sup>w</sup>əm</i> ‘boil’	<i>tátq<sup>w</sup>əm̃</i> ‘be boiling’ (AG)
<i>tátəq<sup>w</sup>əm</i> ‘snore’	<i>táṭq<sup>w</sup>əm̃</i> ‘be snoring’ (CC)
<i>láləq<sup>w</sup>əl</i> ‘get soft (as fish in the sun)’	<i>láḷq<sup>w</sup>əḷ</i> ‘be getting soft’ (CC)
<i>k<sup>w</sup>átəx<sup>w</sup>əm</i> ‘burst into flame’	<i>k<sup>w</sup>áṭəx<sup>w</sup>əm̃</i> ‘be blazing’ (JP)
<i>x<sup>w</sup>ánək<sup>w</sup>əm</i> ‘make a blowing noise, breathe heavily’	<i>x<sup>w</sup>áṇk<sup>w</sup>əm̃</i> ‘be making a blowing noise, etc.’

With other suffixes, CəCT roots show the forms seen with *-t*, except that in the perfective the stress may be on either the root or the suffix, while in the progressive it seems to be always on the root.

<i>čəyːxːʷɛls</i> ‘dry fish’	<i>čéyːxːʷals</i> ‘be drying fish’
(cf. <i>čəyːxːʷt</i> ‘dry it,’ <i>čéyːxːʷt</i> ‘be drying it’)	
<i>ǰálčəst</i> ‘wring its neck’	<i>ǰálčəst</i> ‘be wringing its neck’
(cf. <i>ǰálčt</i> ‘twist it,’ <i>ǰélčt</i> ‘be twisting it,’ <i>-əs</i> ‘face, front end’)	
<i>səwqə́nəq</i> ‘look for a person’	<i>séwqə́nəq</i> ‘be looking for a person’
(cf. <i>səwq</i> ‘seek,’ <i>séwq</i> ‘be seeking,’ <i>-ənəq</i> ‘another person’)	
<i>təlqə́csəm</i> ‘put one’s hands into water’	<i>télqə́csəm</i> ‘be putting ...’
(cf. <i>təlqt</i> ‘dip it, launch it,’ <i>télqt</i> ‘be dipping it,’ <i>-cəs</i> ~ <i>-écəs</i> ~ <i>-ścəs</i> ‘hand,’ <i>-əm</i> ‘intransitive’)	

### 7.2.11. Unique Progressives

Three roots form their progressives in wholly irregular ways:

(1) *ǰtɛʔ* ‘do,’ *ǰǰtə* ‘be doing’ (also ‘be saying’), in which we see a unique replacement of the unglottalized /t/ in the perfective by a glottalized /t̚/ in the progressive. This root appears with *-əm* as

*ǰtɛʔəm* ‘prepare (as food or tea)’      *ǰǰtə́m* ‘be preparing’

(2) *θət* ‘say,’ *ǰǰtə* ‘be saying’ (also ‘be doing’), in which there is a (so far) unique example of the progressive of one verb also serving as the progressive of another.

(3) *kːʷəlɬəx* ‘shoot,’ *ʔɛʔkːʷəlɬəx* ‘be shooting,’ in which there is a (so far) unique prefixed progressive marker.

## 7.3. PLURALS

Many, but evidently not all, verbs have plural forms in the perfective and/or progressive aspect. (This section deals with plurals of these forms only. Plurals of duratives and resultatives are discussed under those headings.)

Depending on the transitivity of the verb, plural forms can indicate plurality in the subject, object, event, or result. The plural of an intransitive form can indicate a plural subject; thus, the plural of *ném* ‘go,’ *néləm*, can only mean ‘several go.’ However, the plural of *íśqːw* ‘break or snap (as a rope or stick),’ *íśqːwíśqːw*, can mean ‘several break’ or ‘one gets broken up into lengths,’ and the plural of *čəśqːw* ‘get pierced,’ can mean ‘get pierced all over’ or ‘get pierced many times (as by a thistle).’ The plural of a transitive form can indicate a plural object as well as a plural subject or event; thus, the plural of *íʰíqːwət* ‘hit him with the fist,’ *íʰələqːwət*, can mean ‘one hits several,’ ‘several hit one,’ or ‘one hits one several times.’ JP glossed *ləmlə́meʔt*, the plural of *ləmɛʔt* ‘kick him,’ as ‘kick a lot’ – ‘one kicks several,’ ‘several kick one,’ or ‘one kicks the hell out

of one’! Plural forms may therefore, at least with some verbs, serve to produce a kind of intensive or iterative aspect.

Plural verb forms are optional. Plurality of subject or object need not be indicated in any way. Plurality of a third person is often indicated by the particle *ʔéttən*, which may obviate the need for indicating it with the verb. Plurality of events can be indicated by adverbs such as *čəx<sup>w</sup>lé* ‘occasionally,’ *yáθ* ‘always,’ and so on. Plurals of verbs are only moderately common in my texts, and for many verbs I have been unable to elicit plural forms, especially plural progressives.

Plurals, like progressives, are formed differently according to the shape of the root.

### 7.3.1. CAC Plural Perfectives

CAC roots, bare and with *-t* and *-əm*, regularly make plurals of their perfectives with an infix *-lə-* (which occasionally appears as *-əl-*) or *-l̥ə-* (which occasionally appears as *-ʔəl-*) and, if the vowel is /i/, a lowering to /e/ or, in the presence of a rounded back velar, to /a/. The variations in the infix are not predictable at this time. Here are examples of perfectives followed by their plurals:

<i>cám</i> ‘go/come up from the shore’	<i>cáləm</i> ‘several go/come up ...’
<i>qáy</i> ‘die’	<i>qáləy</i> ‘several die’
<i>tax<sup>w</sup></i> ‘go/come down to the shore’	<i>táləx<sup>w</sup></i> ‘several go/come down ...’
<i>ták<sup>w</sup></i> ‘fly’	<i>tálək<sup>w</sup></i> ‘several fly’
<i>q<sup>w</sup>im</i> ‘disembark’	<i>q<sup>w</sup>áləm</i> ‘several disembark’
<i>i<sup>θ</sup>iqət</i> ‘step on it’	<i>i<sup>θ</sup>éləqət</i> ‘step on several, several step on it’
<i>i<sup>θ</sup>iq<sup>w</sup>ət</i> ‘punch him’	<i>i<sup>θ</sup>áləq<sup>w</sup>ət</i> ‘punch several, etc.’
<i>θícət</i> ‘stab him’	<i>θéləcət</i> ‘stab several, etc.’
<i>lípət</i> ‘cut it up’	<i>léləpət</i> ‘cut it into pieces, etc.’
<i>lícət</i> ‘cut it across’	<i>léləcət</i> ‘cut it into slices, etc.’
<i>čísəm</i> ‘grow’	<i>čéləsəm ~ čélsəm</i> ‘several grow’
<i>xéqəm</i> ‘open the mouth’	<i>xéləqəm</i> ‘open the mouths’
<i>x<sup>w</sup>ísət</i> ‘shake it up’	<i>x<sup>w</sup>éləʔəlsət</i> ‘shake them up, etc.’
<i>qík<sup>w</sup>ət</i> ‘bite him’	<i>qélək<sup>w</sup>t</i> ‘bite several, bite in several places, several bite him’

(The plural of ‘bite’ was recorded without a schwa before the *-t*. I cannot explain this apparent irregularity.)

The few irregular plural perfectives will be identified along with irregular plural progressives below.

#### 7.3.1.1. CAC Plural Progressives

CAC roots, like other types, generally base their plural progressives on the shape of the root as reflected in the simple (non-plural) progressive. As long as

the shape of the root is clearly reflected by CV reduplication in the simple progressive, the plural progressive is formed by CVC reduplication of the root with the stress on the first vowel and the second appearing as schwa, as in:

<i>kʷáqʷ</i> ‘get hit’	<i>kʷákʷəqʷ</i> (prog.)
<i>kʷáǎqʷ</i> (pl. perf.)	<i>kʷáqʷkʷəqʷ</i> (pl. prog.)
<i>kʷáqʷət</i> ‘hit/club him’	<i>kʷákʷəqʷət</i> (prog.)
<i>kʷáǎqʷət</i> (pl. perf.)	<i>kʷáqʷkʷəqʷət</i> (pl. prog.)
<i>íáxʷ</i> ‘go/come down’	<i>íáǎxʷ</i> (prog.)
<i>íáǎxʷ</i> (pl. perf.)	<i>íáxʷíáxʷ</i> (pl. prog.)
<i>tákʷ</i> ‘fly’	<i>táǎkʷ</i> (prog.)
<i>táǎkʷ</i> (pl. perf.)	<i>tákʷtáǎkʷ</i> (pl. prog.)
<i>ícəm</i> ‘swim’	<i>ííǎcəm</i> (prog.)
<i>íéǎcəm</i> (pl. perf.)	<i>íícíǎcəm</i> (pl. prog.)

In the following, the progressive is irregular but the plural progressive seems to follow the pattern of the previous set:

<i>qʷél</i> ‘speak’	<i>qʷáʔqʷəl</i> (prog.)
<i>qʷéʔəl</i> (pl. perf.)	<i>qʷáǎqʷəl</i> (pl. prog.)

In the next two examples, the shape of the root is obscured by its simple (non-plural) progressive form, and so the plural progressive is formed by reduplication of the initial CVC of this simple progressive form, and the stress may be on the second vowel, as in:

<i>cám</i> ‘go/come back up’	<i>cákʷəm</i> (prog.)
<i>cáləm</i> (pl. perf.)	<i>cəkʷcákʷəm</i> (pl. prog.)
<i>ném</i> ‘go’	<i>hánəm</i> (prog.)
<i>néləm</i> (pl. perf.)	<i>hənhánəm</i> (pl. prog.)

The irregularities of these simple progressives have been dealt with earlier (in §7.2.1).

Two CAC roots are irregular in the formation of their plural perfectives by CVC reduplication, and in one the irregularity is taken further in the plural progressive.

<i>ííləm</i> ‘sing’	<i>ííǎləm</i> (prog.)
<i>íǎííləm</i> (pl. perf.)	<i>íí’íǎləm</i> (pl. prog.)
<i>kʷéł</i> ‘hide’	<i>kʷəkʷíł</i> (prog.)
<i>kʷəlkwéł</i> (pl. perf.)	(no pl. prog. recorded)
<i>kʷéłx</i> ‘hide him’	<i>kʷékʷəlx ~ kʷéʔkʷəlx</i> (prog.)
<i>kʷəlkwéłx</i> (pl. perf.)	(no pl. prog. recorded)

Finally, JP gave an irregular plural progressive in the following set:

<i>hípaṭ</i> ‘cut it up (a carcass)’	<i>híṭəpaṭ</i> ‘be cutting it up’
<i>héləpaṭ</i> ‘cut it into pieces’	<i>héləpaṭ</i> ‘be cutting it into pieces’

Here it appears that the plural progressive is formed from the plural perfective following a pattern in which a medial resonant is simply glottalized, as if *héləpaṭ* were a simple (non-plural) perfective. AG, on the other hand, glottalized the resonant in the perfective and so could not produce such a contrast.

### 7.3.2. HAC and HACəC plurals

In the few examples recorded, HAC and HACəC roots form their plural perfectives as CAC roots do but differ in their plural progressives in the placement of the stress and appearance of glottal stops:

<i>háy</i> ‘stop’	<i>há:y</i> (prog.)
<i>háləy</i> [háli] (AG) (pl. perf.)	(no pl. prog. recorded)
<i>ʔíkʷ</i> ‘be lost, die’	<i>ʔíʔkʷ</i> ‘be getting lost’
<i>ʔéləkʷ</i> (pl. perf.)	(no pl. prog. recorded)
<i>ʔítət</i> ‘go to bed, sleep’	<i>ʔíʔtət</i> (prog.)
<i>ʔaʔəltət</i> (pl. perf.)	<i>ʔətʔíʔtət</i> (pl. prog.)
<i>ʔíməx</i> ‘walk’	<i>ʔíməx //ʔíʔməx//?</i> (prog.)
<i>ʔəmíməx</i> (pl. perf.)	<i>ʔəmíməx //ʔəmʔíʔməx//?</i> (pl. prog.)

In the last two examples, the stress in the plural progressive is on the second vowel rather than on the first. The plural progressive of *ʔítət* ‘sleep’ could more easily be identified as the product of CVC reduplication if it were *\*\*ʔətʔítət* or based on the progressive form *\*\*ʔəʔíʔtət*, but the latter is phonologically impossible. The recorded form may be a kind of compromise, as may be the plural progressive of *ʔíməx* ‘walk.’ The /a/ rather than /e/ in the plural perfective of *ʔítət* ‘sleep’ is clearly not produced by a rounded uvular, as in a number of CAC roots, and so its presence implies, I believe, that the second vowel was once \*u, that is, ‘sleep’ was *\*ʔitut* (cf. Lushootseed *ʔitut* ‘sleep’).

One HAR root resembles the irregular TAR root *ííləm* ‘sing’ in forming its plural perfective by CVC reduplication:

<i>híləm</i> ‘fall, roll’	<i>híləm</i> (prog.)
<i>həlhíləm</i> (pl. perf.)	<i>hílhíləm</i> (DK) (pl. prog.)

### 7.3.3. CAH Plurals

I have not recorded any plural forms of TAH or HAH roots. From the following examples, RAH roots appear to form plural perfectives by CV reduplication with the stress on the second vowel:

<i>méʔx</i> ‘remove it’	<i>háméʔx</i> (CC), <i>háməx</i> (AG) (prog.)
<i>máméʔx</i> (pl. perf.)	<i>hámháməx</i> (AG) (pl. prog.)
<i>léʔx</i> ~ <i>líʔx</i> ‘put it away’	<i>hálex</i> (prog.)
<i>lələʔx</i> ~ <i>ləlíʔx</i> (pl. perf.)	<i>həlhələx</i> (AG) (pl. prog.)

### 7.3.4. CəC Plural Perfectives

CəC roots seem to follow more than one pattern and, as they do in forming progressives, behave differently as bare roots and when transitivized with *-t*. As bare roots, CəC roots seem to form their plural perfectives in two ways:

(1) by reduplication of the first consonant and strengthening of the vowel to /e/ or /a/, a schwa being present only if one of the consonants is a resonant ( $C_1\acute{\epsilon}C_2 \rightarrow C_1\acute{A}C_1(\acute{\epsilon})C_2$ ), as in:

<i>nəqʷ</i> ‘fall asleep’	<i>ná·nqʷ</i> // <i>nánəqʷ</i> // ‘several fall asleep’
<i>kʷən</i> ‘become possessed’	<i>kʷékʷən</i> ‘several become possessed’
<i>xʷəy</i> ‘wake up’	<i>xʷáxʷəy</i> ‘several wake up’
<i>təs</i> ‘arrive there’	<i>téts</i> (CC) ‘several arrive there’
<i>wətəx̣</i> ‘stand up suddenly’	<i>wətéləx̣</i> ‘several stand up suddenly’ (AG)
( <i>&lt; wə-</i> ‘suddenly’)	

AG glossed *téts* as ‘arrive there in a group,’ identifying the simple progressive, *tətəs*, as ‘arrive there one by one.’ Perhaps one person cannot “be arriving” in Halkomelem, one being either there or not. I have recorded no plural progressive for this word.

(2) by CVC reduplication with stress on the second schwa ( $C_1\acute{\epsilon}C_2 \rightarrow C_1\acute{\epsilon}C_2C_1\acute{\epsilon}C_2$ ), as in:

<i>čəqʷ</i> ‘get pierced’	<i>čəqʷčəqʷ</i> ‘get pierced all over’
<i>ləkʷ</i> ‘get broken’	<i>ləkʷləkʷ</i> ‘several get broken’
<i>pən</i> ‘get buried’	<i>pənpən</i> ‘several get buried’

I have recorded only a few examples of each of these two types and must acknowledge the possibility that they are not alternatives of the same form but are actually two different forms. The only possible evidence I have for this is what may be two plurals of *kʷən*. As a bare root, *kʷən* is usually translated ‘get started,’ meaning ‘go into a trance-like state as a winter dancer does,’ and I have glossed it ‘become possessed.’ I have assumed that it is the root of *kʷənət* ‘take it,’ *kʷənnəxʷ* ‘get it,’ and so on, and it does literally mean ‘be taken.’ A plural formed by the first rule identified above, *kʷékʷən*, was given by AG and glossed ‘they get started.’ But there is another word, *kʷənəkʷən* ‘be captured’ (‘be taken by several?’), which seems to be a plural of *kʷən* formed by the second rule. Alternatively, we might consider *kʷən* ‘become possessed’ and the root *kʷən-* of *kʷənət* ‘take it’ as homophones that form their plurals by different rules.

With *-t* (also *-x* and *-əm*), CəC roots form their plural perfectives by the second of the two patterns seen with the bare root, as in:

<i>θkʷət</i> ‘pull it taut’	<i>θəkʷθəkʷt</i> ‘pull several taut’
<i>iʰxʷət</i> ‘wash it’	<i>iʰəxʷiʰəxʷt</i> ‘wash several’
<i>pənət</i> ‘bury it’	<i>pənpənət</i> ‘bury several’
<i>nəpəx</i> ‘eat it’	<i>nəpənəpəx</i> ‘eat several, chew it up’
<i>nəqəm</i> ‘dive’	<i>nəqənəqəm</i> ‘several dive’

#### 7.3.4.1. CəC Plural Progressives

Like the simple progressives, the plural progressives of CəC roots are formed differently depending on whether the initial consonant is an obstruent or a resonant.

TəT (and TəR?) roots form the plural progressives of bare roots by infixing *-əl-* between the first consonant and the first schwa of the simple progressives (C<sub>1</sub>əC<sub>1</sub>əC<sub>2</sub> → C<sub>1</sub>ələC<sub>1</sub>əC<sub>2</sub>), as in:

<i>iətətəqʷ</i> ‘be breaking’	<i>iələtətətəqʷ</i> ‘several are breaking’
<i>səsətəq</i> ‘be cracking’	<i>sələsətətəq</i> ‘several are cracking’

TəT roots form the plural progressives of their forms with *-t* by CVC reduplication of the form that appears in the simple progressive with the reduction of one (usually the second) vowel to schwa (C<sub>1</sub>ÁC<sub>2</sub>-t → C<sub>1</sub>ÁC<sub>2</sub>C<sub>1</sub>əC<sub>2</sub>-t). The pattern is seen in the following sets:

<i>iətəqʷ</i> ‘break, snap’	<i>iətətəqʷ</i> (prog.)
<i>iətəqʷiətəqʷ</i> (pl. perf.)	<i>iələtətətəqʷ</i> (pl. prog.)
<i>iətəqʷət</i> ‘cut it off’	<i>iətətəqʷt</i> (prog.)
<i>iətəqʷiətəqʷət</i> (pl. perf.)	<i>iətətəqʷiətəqʷt</i> (pl. prog.)
<i>sətəq</i> ‘crack, tear, split’	<i>səsətəq</i> (prog.)
<i>səsətəq</i> (pl. perf.)	<i>sələsətətəq</i> (pl. prog.)
<i>sətət</i> ‘split it, tear it’	<i>sətət</i> (prog.)
<i>sətəsətət</i> (pl. perf.)	<i>sətətəsətət</i> (pl. prog.)

The plural perfective of the first set might be translated ‘cut it up into lengths,’ and of the second ‘split it up,’ ‘tear it into shreds,’ or ‘tear several.’

RəC roots form their plural progressives of both bare roots and transitive forms by reduplication of the initial *həR* of the simple progressive with the first resonant unglottalized (at least in the forms recorded) and the stress on the second schwa, as in the following sets:

<i>nəqʷ</i> ‘fall asleep’	<i>hənəqʷ</i> (prog.)
<i>nənəqʷ</i> (pl. perf.)	<i>hənəhənəqʷ</i> (pl. prog.)
<i>nəwəx</i> ‘insert it’	<i>hənəwəx</i> (prog.)
<i>nəwənəwəx</i> (pl. perf.)	<i>hənəhənəwəx</i> (pl. prog.)

<i>nəqəm</i> ‘dive’	<i>hə́nqəm</i> (prog.)
<i>nəqənəqəm</i> (pl. perf.)	<i>hə́nhə́nqəm</i> (pl. prog.)
<i>wə́q̣ʷ</i> ‘drift away’	<i>hə́wq̣ʷ</i> (prog.)
<i>wə́q̣ʷwə́q̣ʷ</i> (pl. perf.)	<i>hə́whə́wq̣ʷ</i> (pl. prog.)

AG also gave a form *wə́q̣ʷwə́q̣ʷ* ‘be idling along under power,’ which appears to be formed as a transitive would be.

There is one RəR root that is irregular in every form:

<i>nə́yəm</i> ‘laugh’	<i>nə́yə́m</i> (prog.)
<i>hə́nniyəm</i> (pl. perf.)	<i>nə́ynə́yə́m</i> (pl. prog.)

### 7.3.5. CəCT Plurals

CəCT roots form their plurals by reduplication of the CəC- or CAC- of the simple (non-plural) form, as in:

<i>təl̥q̣t</i> ‘dip it, immerse it’	<i>təl̥q̣t</i> (prog.)
<i>təl̥təl̥q̣t</i> (pl. perf.)	<i>təl̥təl̥q̣t</i> (pl. prog.)

As we have seen earlier (§7.2.7), *θə́yt* ‘fix it,’ although it is a TəR root plus *-t*, behaves like a CəCT root. The following set further illustrates this:

<i>θə́yt</i> ‘fix it’	<i>θə́ỵt</i> (prog.)
<i>θə́yθə́ỵt</i> [θiθə́ỵt] (pl. perf.)	<i>θə́ỵθə́ỵt</i> [θə́ỵθiʔt] (pl. prog.)

A few words composed of CACC stems that may be expansions of CəCT roots and the suffix *-əm* have plurals formed by CVC reduplication, such as:

<i>p̣álə́ḳəm</i> ‘boil’	<i>p̣ál̥ḳəm</i> (prog.)
<i>p̣əlp̣álə́ḳəm</i> ‘sev. boil’ (pl. perf.)	(no pl. prog. recorded)
<i>ʃ̥élə́x̣əm</i> ‘spark’	<i>ʃ̥él̥x̣əm</i> ‘be sparking’
<i>ʃ̥əlʃ̥élə́x̣əm</i> ‘spark repeatedly’ (CC)	(no pl. prog. recorded)

### 7.3.6. HəC(C)V(C) Plurals

The few words of these shapes do not follow a consistent pattern. One resembles CAC roots in forming its plural perfective with a full vowel and infixed *-l-*, and it resembles specifically HACəC words in having an “extra” glottal stop in the plural:

<i>ʔə́xəl</i> ‘paddle’	<i>ʔiʔxəl</i> (prog.)
<i>ʔələ́xəl</i> (pl. perf.)	<i>ʔəxʔiʔxəl</i> (pl. prog.)

Another forms its plural perfective by CVC reduplication of the simple perfective (cf. *íiləm* ‘sing,’ above) and its plural progressive by CVC reduplication of its simple progressive:

ʔáɹmæt ‘sit down, get up’                      ʔámæt (prog.)  
 ʔə́máɹmæt (pl. perf.)                              ʔə́má·mæt (pl. prog.)

Another forms its plural perfective in a unique way and its plural progressive by CVC reduplication of the simple progressive but without the “extra” glottal stop:

ʔáɹtæn ‘eat’    ʔíʔtæn (prog.)  
 ʔéʔáttæn (pl. perf.)                                ʔə́ʔíttæn (pl. prog.)

And here may belong the following:

háyeʔ (JP), háyeʔ (AG) ‘leave’              háýə (AG) (prog.)  
 hə́ləyə́ʔ (AG) (pl. perf.)                        hə́yħə́ýə (AG) (pl. prog.)

#### 7.4. DIMINUTIVES

Verbs may have diminutive and diminutive plural forms in the progressive aspect. There are no diminutive perfective forms. Diminutive forms may indicate that the subject or the object is small, as in:

íðíʔíʔələ́m.    ‘A little thing (as a child) is singing.’  
 (dim. of ílɹəm ‘sing’)

ʔə́liʔíʔtæn.    ‘A lot of little ones are eating.’  
 (dim. pl. of ʔáɹtæn ‘eat’)

íʰə́liʔíʰə́xʷəsəm.                                      ‘They are washing their little faces.’  
 (dim. pl. of xʷíʰə́xʷəsəm ‘wash one’s face’)

čələ́ʔčə́wə́ttæn.                                      ‘The little ones are helping.’  
 (dim. pl. of čéwə́ttæn ‘help’)

ʔi cən čələ́ʔčə́wət.                                      ‘I am helping the little one.’  
 (dim. pl. of čéwət ‘help him’)

ni cən tə́litést kʷθə́ mə́líʔmə́qʷ.              ‘I was approaching the little ducks.’  
 (dim. pl. of tsət ‘approach him’ and dim. pl. of mə́ʔə́qʷ ‘duck’)

Diminutives are formed by CV reduplication of simple progressive forms. If the simple progressive is already formed by reduplication of the root, the diminutive form will thus be doubly reduplicated, and in it the first consonant of the root will appear three times. For the different types of roots, there are differences in placement of stress and quality of vowel. A glottal stop after the stressed vowel seems usual unless it is the final vowel.

For diminutives of TAT and TAR roots, the progressive C<sub>1</sub>ÁC<sub>1</sub>əC<sub>2</sub> is reduplicated as C<sub>1</sub>əC<sub>1</sub>ÁʔC<sub>1</sub>əC<sub>2</sub>, as in:

ḡéíʰ ‘sew’    ḡéḡáíʰ (prog.)                                      ḡə́ḡéʔḡáíʰ (dim.)  
 čéwət ‘help him’                                      čéčə́wət (prog.)                                      čə́čéʔčə́wət (dim.)

<i>tícəm</i> ‘swim’	<i>ítácəm</i> (prog.)	<i>íáíʔtácəm</i> (dim.)
<i>ítləm</i> ‘sing’	<i>ítələm</i> (prog.)	<i>íáíʔələm</i> (dim.)

For diminutives of other roots and perhaps of derivatives of all roots, there seems to be a general rule reduplicating the first consonant of the progressive with the vowel /i/, as in:

<i>tsát</i> ‘approach it’	<i>tést</i> (prog.)	<i>titést</i> (dim.)
<i>t̥xíləx</i> ‘stand’	<i>t̥xíləx</i> (prog.)	<i>t̥t̥xíləx</i> (dim.)
<i>q̣ʷəyíləx</i> ‘dance’	<i>q̣ʷəyələx</i> (prog.)	<i>q̣ʷi q̣ʷəyələx</i> (dim.)
<i>péls</i> ‘blow’	<i>pəpéls</i> (prog.)	<i>pippéls</i> (dim.)
<i>q̣ʷəl̥q̣ʷəl̥</i> ‘tell’	<i>q̣ʷi q̣ʷəl̥</i> (prog.)	<i>q̣ʷi q̣ʷi q̣ʷəl̥</i> (dim.)
<i>həwələm</i> ‘play’	<i>hiwələm</i> (prog.)	<i>hihiwələm</i> (dim.)
<i>ʔitət</i> ‘sleep’	<i>ʔiʔtət</i> (prog.)	<i>ʔiʔiʔtət</i> (dim.)
<i>ʔəttən</i> ‘eat’	<i>ʔiʔttən</i> (prog.)	<i>ʔiʔiʔttən</i> (dim.)

There is only one root with an initial resonant for which I have recorded a diminutive glossed as such:

<i>yáʔys</i> ‘work’	<i>yáʔyəs</i> (prog.)	<i>hiyáʔəs</i> (dim.)
---------------------	-----------------------	-----------------------

Here perhaps the initial resonant has been converted into an *h*, as in the progressives of roots with initial resonant followed by schwa.

JP gave two forms that he glossed as progressives of *mə́ḳʷəl̥cəp* ‘gather firewood,’ *həṃḳʷəl̥cəp* and *hiṃḳʷəl̥cəp* ‘be gathering firewood.’ Perhaps the second is a diminutive, ‘be gathering scraps of firewood.’

#### 7.4.1. Diminutive Plurals

Diminutive forms are made plural with an *-l-* infix. For diminutives formed from TAT and TAR roots, where the first vowel is a schwa, the infix is *-li-*, as in:

<i>p̣əp̣éʔp̣əiʰ</i> ‘be sewing (dim.)’	<i>p̣əli p̣éʔp̣əiʰ</i> (dim. pl.)
<i>íáíʔələm</i> ‘be singing (dim.)’	<i>íáliíʔələm</i> (dim. pl.)

Or the infix is simply *-l-* replacing the second consonant, as in:

<i>ćəćéʔćəwət</i> ‘be helping him (dim.)’	<i>ćələʔćəwət</i> (dim. pl.)
<i>íáíʔtácəm</i> ‘be swimming (dim.)’	<i>íáliʔtácəm</i> (dim. pl.)

For diminutives formed from roots of other types, where the first vowel is *i*, the infix is *-əl-*, as in:

<i>titést</i> ‘be approaching it (dim.)’	<i>təlitést</i> (dim. pl.)
<i>t̥t̥xíləx</i> ‘be standing (dim.)’	<i>t̥əl̥t̥xíləx</i> (dim. pl.)
<i>ʔiʔiʔtət</i> ‘be sleeping (dim.)’	<i>ʔəliʔiʔtət</i> (dim. pl.)
<i>ʔiʔiʔttən</i> ‘be eating (dim.)’	<i>ʔəliʔiʔttən</i> (dim. pl.)

A few diminutive plural forms have specific nominal meanings. The diminutive plural of *čísam* ‘grow’ is *čəlíʔsələm* ‘little ones are growing,’ also ‘grove of young trees.’ Two are used as names for arthropods, *čəlícéłəm* ‘sand fleas (amphipods)’ (from *cłám* ‘jump,’ *céłəm* ‘be jumping’) and *qəliqəwətəm* ‘clicking grasshoppers’ (from *qəwətəm* ‘beat a drum’). An introduced plant, ‘ground ivy (*Glechoma hederacea*),’ is *iʰəléʔiʰəxwəm*, the diminutive of *iʰéiʰəxwəm* ‘blue’ (showing, incidentally, that ‘blue’ is a progressive form, since only progressives have diminutives).

### 7.5. THE DURATIVE ASPECT

A number of verbs have a durative aspect, and there are a few verbs whose durative forms occur more commonly than other forms. Many verbs, however, appear not to have durative forms.<sup>3</sup>

The durative aspect indicates that an action is prolonged or a position held, as illustrated by the examples below. The durative aspect intersects with the progressive aspect; many, though not all, duratives appear in both perfective and progressive forms.

The durative is marked by the appearance of a stressed full vowel as the final vowel of the stem. Depending on the type of root, there may also be CV reduplication.

TAT, TAR, and TəT roots reduplicate the first consonant of the root with /ə/ appearing as the intervening vowel in the perfective and /i/ in the progressive. Compare the following sets of non-durative (first line) and durative (second line) forms in the perfective (left column) and progressive (right column):

<i>kʷécət</i> ‘look at it’	<i>kʷékʷəcət</i> ‘be looking at it’
<i>kʷəkʷécət</i> ‘watch it, keep your eye on it’	<i>kʷíkʷécət</i> ‘be watching it, etc.’
<i>qíkʷət</i> ‘bite it’	<i>qíqəkʷət</i> ‘be biting it’
<i>qəqkʷét</i> ‘hold it in your teeth’	<i>qíqkʷét</i> ‘keep holding it ...’
<i>iʰiqət</i> ‘step on it’	<i>iʰiʰəqət</i> ‘be stepping on it’
<i>iʰəiʰqét</i> ‘hold it down with your body’	<i>iʰiʰqét</i> ‘keep holding it down ...’
<i>kʷixət</i> ‘name him’	<i>kʷíkʷəxət</i> ‘be naming him’
<i>kʷəkʷixít</i> ‘call him by nickname’	<i>kʷíkʷixít</i> ‘be calling him by ...’
<i>θxət</i> ‘push it away’	<i>θéxt</i> ‘be pushing it away’
<i>θəθxét</i> ‘hold it away, hold it back’	<i>θiθxét</i> ‘keep holding it ...’
<i>qʷél</i> ‘speak’	<i>qʷáqʷəl</i> ‘be speaking’
<i>qʷəqʷél</i> ‘give a speech’	<i>qʷiqʷél</i> ‘be giving a speech’

3 Forms that Leslie (1979) identifies as “augmentative” (p. 44) and “stative” (p. 47) belong here, I believe.

The first five of the six sets of examples just given might suggest that the durative is marked by a suffix *-é ~ -í* that follows the second consonant of the root and is followed by the transitivizer *-t*. However, the last set seems to show that the durative is formed by a process that occurs within the word regardless of morpheme boundaries. (The form *p̣əp̣ékʷ* ‘afloat’ may also belong here, but see §7.7.6).

There are TAT and TəT roots that seem to have sets of forms that are not as complete as those just given. In the following example, the expectable progressive is missing and forms that appear to be perfective and progressive duratives (in the second line) are glossed as simple progressive.

<i>kʷécəm</i> ‘scream’	(* <i>kʷékʷəcəm</i> , not recorded)
<i>kʷəkʷcém</i> ‘be screaming’	<i>kʷikʷcém</i> ‘be screaming’

In the next two examples, there seems to be only one durative form.

<i>xéqəm</i> ‘open the mouth’	<i>xéxəqəm</i> ‘be opening the mouth’
(* <i>xəxqém</i> , not recorded)	<i>xixqém</i> ‘have your mouth open’
<i>qʷxət</i> ‘pet it’	<i>qʷéxt</i> ‘be petting it’
(* <i>qʷəqʷxít</i> , not recorded)	<i>qʷiqʷxít</i> ‘make up to it/him/her’

The object of the last form can be an animal or a human member of the opposite sex.

TAH roots with *-t* ‘transitivize’ form their duratives (as TAT roots with *-t* do) by placing the stressed vowel between the final consonant of the root (? in the examples below) and the *-t*. (In the non-durative transitives of TAT roots, this slot is occupied by schwa, but in TAH counterparts by zero; cf. *kʷécət* ‘look at it,’ *kʷeʔt* ‘drop it.’) Reduplication appears in the progressive only. Compare the following non-durative (first line) and durative (second line) forms. Both perfective and progressive duratives were given by DK; AG had only the perfective durative, which he glossed as ‘be leaving it alone.’

<i>kʷeʔt</i> ‘drop it, let it go’	<i>kʷəkʷeʔt</i> ‘be dropping it, letting it go’
<i>kʷəʔét</i> ‘leave it alone’	<i>kʷəkʷəʔét</i> ‘be leaving it alone’

The duratives in the following set were given by DK only:

<i>íʰéʔt</i> ‘chew it’	<i>íʰəíʰéʔt</i> ‘be chewing it’
<i>íʰəʔét</i> ‘continually chew it’	<i>íʰəíʰəʔét</i> ‘be continually chewing it’

The perfective durative in the following was given by DK; AG did not have it.

<i>séʔt</i> ‘raise it, lift it’	<i>səséʔt</i> ‘be raising it, be lifting it’
<i>səʔét</i> ‘keep it lifted’	

However, the following pair appear to be durative and may be derived from *séʔt* ‘raise it’ in the sense, as DK suggested, of ‘keep his/her hopes up.’

*səsəʔét* ‘flirt with him/her’

*sisəʔét* ‘be flirting with him/her’

Both DK and AG gave these forms.

TəR roots with *-t* form their duratives with a stressed full vowel between the second consonant and the *-t* but without reduplication and apparently without separate perfective and progressive forms, as in the following examples:

*kʷənət* ‘take it’

*kʷəkʷənət* ‘be taking it’

*kʷənétʔ* (JP), *kʷənét* (AG) ‘hold it, be holding it’

*kʷənəm* ‘get some, get’

*kʷəkʷənəm* ‘be getting some’

*kʷəném* ‘have some, have’

*cəmət* ‘take it in your mouth’

*cəcəmət* ‘be taking it in your mouth’

*cəmétʔ* (JP), *cəmét* (AG) ‘hold it in your mouth, be keeping it in ...’

*cəmém* ‘be having something in your mouth’

*cəmət* (JP), *cəmət* (AG) ‘pack it, load it on your back’

*cəcəmət* ‘be loading it up ...’

*cəmétʔ* (JP), *cəmét* (AG) ‘carry it on your back’

*cəməm* ‘pack something’

*cəcəməm* ‘be packing something’

*cəmém* ‘be carrying something’

One CəCT root (noted so far) has what seems to be a durative form:

*təlqt* ‘dip it, immerse it’

*təlqt* ‘be dipping it’

*ləlqit* ‘soak it’

*təlqit* ‘be soaking it’

The following TəRəT root has a durative with the last vowel stressed and a full vowel. DK gave a form with CVC reduplication:

*ʃənəq* ‘open the eyes’

(no prog. recorded)

*ʃənʃənəq* ‘keep the eyes open’

JP and AG gave the same simple form but differed in the progressive and durative:

*ʃənəqt* ‘open them (the eyes)’

*ʃəʃənəqt* (AG) ‘be opening them from time to time’

*ʃənəqt* (JP), *ʃənəqt* (AG) ‘keep the eyes open’

Another verb with a probable durative form is:

*ʔát* ‘go/come aboard’

(no prog. recorded)

*ʔəláʔat* ‘aboard’

A derivative *ʔaltáleʔct* ‘load it up’ (< *-áleʔc* ‘vessel’) implies an *l/* in the root and suggests an underlying form, *lʔaləl/*, for *ʔá-l* (cf. *lʔspaləl/* for *spá-l* ‘raven’).

What appear to be durative progressive forms occur as terms for recreational activities:

*xixkʷám* ‘be in swimming’ (cf. *xákʷəm* ‘bathe,’ *xáxʷəkʷəm* ‘be bathing’)  
*kʷikʷəlíl* ‘be playing hide-and-peek’ (cf. *kʷe-l* ‘hide,’ *kʷəkʷí-l* ‘be hiding’)  
*cicǰím* ‘be having a jumping contest’ (cf. *cǰám* ‘jump,’ *céǰəm* ‘be jumping’)  
*xixpám* ‘be whistling for amusement’ (cf. *xápəm* ‘whistle,’ *xáxəpəs* ‘be whistling at him’)

Durative stems (or what appear to be durative stems) also take the reflexive and reciprocal suffixes *-θət* ‘oneself’ and *-təl* ‘each other,’ as in:

*qiqəwáθət* ‘be sun-bathing’ (cf. *qəwət* ‘warm it,’ *qəwəθət* ‘warm oneself’)  
*θəθǰítəl* ‘push each other’ (cf. *θǰət* ‘push him away,’ *θəθǰét* ‘keep it pushed away’)  
*mimǰítəl* ‘be paying each other back, be getting even’ (cf. *máǰət* ‘repay him’)  
*qəqǰátəl* ‘insult each other’ (cf. *qǰət* ‘insult him,’ *cǰíǰ* ‘black’)  
*xixǰíθət* ‘be bragging about one’s (a male’s) sexual experiences’ (lit. ‘be keeping oneself in a state of tumescence,’ < *xáǰ* ‘get an erection’)

There are a few words that I suspect may be durative forms but cannot positively identify as such because I have not yet recorded their roots in other forms:

<i>ǰtém</i> ‘hear’	<i>ǰíǰtém</i> ‘be hearing’
<i>ǰtém</i> ‘watch’	<i>ǰíǰtém</i> ‘be watching’
<i>ləhéǰ</i> ‘play salah’	<i>líləhèǰ</i> ‘be playing salah’
<i>məyáʔt</i> ‘come down in price’	<i>həməyáʔt</i> ‘be coming down in price’
<i>ǰʷəǰʷəʔét</i> ‘imitate him, do as he does’	<i>ǰʷíǰʷəʔét</i> ‘be imitating him’
<i>ǰʷəǰʷəʔéqət</i> ‘imitate his speech, repeat his words’	<i>ǰʷíǰʷəʔéqən</i> ‘be repeating ...’
<i>qʷəqʷəném</i> ‘have one’s voice change (as a boy at puberty)’	<i>qʷíqʷəném</i> ‘be having ...’ (< <i>qʷín</i> ‘ear’?)
<i>ǰʷəyém</i> ‘tell a story’ (JP), <i>ǰʷíǰʷəyém</i> ‘be telling a story’ (JP), <i>ǰʷəǰʷəyém</i> ‘tell stories’ (CC)	
<i>ǰíǰkʷéʔt</i> ‘have the hiccups’ (progressive?)	
<i>ǰʰíǰʰít</i> ‘be barely hanging on with the teeth or fingers’ (DK) (progressive?)	

### 7.5.1. Plural Duratives

Durative forms may be pluralized and diminutivized. As with non-duratives, different root types follow different patterns in forming plurals. Duratives formed from TAT, TAH, and probably some other root types are made plural

with an /l/ infix, as in the following examples (recorded duratives on the first line, plural duratives on the second):

*k<sup>w</sup>əkw<sup>w</sup>cé<sup>m</sup>* ‘be screaming’                      *k<sup>w</sup>ik<sup>w</sup>cé<sup>m</sup>* ‘be screaming continuously’  
*k<sup>w</sup>əlak<sup>w</sup>cé<sup>m</sup>* ‘several are screaming’

(no form recorded)                                      *xixqém* ‘have your mouth open’  
*xəlakwém* ‘several have their mouths open’

*čəʔét* ‘leave it sitting’                                      (no form recorded)  
*čəlakčét* ‘leave them sitting’

(The root of the first example is  $\sqrt{k<sup>w</sup>ec}$ . AG gave *wəkw<sup>w</sup>éc* ‘scream suddenly.’ JP, DK, and AG all identified *k<sup>w</sup>écəm* as ‘scream’ and *k<sup>w</sup>əkw<sup>w</sup>cé<sup>m</sup>* as ‘be screaming,’ but the latter resembles a durative rather than a progressive. AG said there might be a \**k<sup>w</sup>ék<sup>w</sup>əcəm*, the expected progressive of *k<sup>w</sup>écəm*, but he had not heard it.)

Duratives formed from TəR roots are made plural by CVC reduplication, as in:

*k<sup>w</sup>əné<sup>t</sup>* ‘have it, hold it, be holding it’  
*k<sup>w</sup>ənk<sup>w</sup>əné<sup>t</sup>* ‘hold several, several hold it’

*čəmé<sup>t</sup>* ‘hold it in your mouth, be holding it in your mouth’  
*čəməčəmé<sup>t</sup>* ‘several are holding them in their mouths’ (DK) (probably *čəməčəmé<sup>t</sup>*)

### 7.5.2. Diminutive Duratives

Diminutives of duratives, to judge from the few examples I have, are formed like diminutives of non-durative forms, with CV reduplication with an /i/ vowel and with an /l/ infix for plural, as in:

*k<sup>w</sup>əné<sup>t</sup>* ‘have it, be holding it’ (dur.)                      *k<sup>w</sup>i<sup>?</sup>k<sup>w</sup>əné<sup>t</sup>* ‘have it ...’ (dim. dur.)  
*k<sup>w</sup>ənk<sup>w</sup>əné<sup>t</sup>* ‘have several, several have it’ (dur. pl.)                      *k<sup>w</sup>əlik<sup>w</sup>əné<sup>t</sup>* ‘have several ...’ (dim. dur. pl.)

*čəmé<sup>t</sup>* ‘hold it in one’s mouth’ (dur.)                      (no dim. dur. recorded)  
*čəməčəmé<sup>t</sup>* ‘several are holding it in their mouths’ (dur. pl.)                      *čəlicəmé<sup>t</sup>* ‘the little ones are holding it in their mouths’ (DK) (dim. dur. pl.)

Because the diminutive occurs only in the progressive aspect, the existence of diminutives of these forms shows that they do function as progressives.

## 7.6. THE DISPOSITIONAL-ITERATIVE ASPECT

A number of roots have a form that has two closely related senses. When used without suffixes, it indicates that there is an inclination or propensity toward the action of quality expressed by the root; when used with suffixes, it indicates that the action occurs repeatedly. For these forms with the first sense, the term

“dispositional” or “potential” may be useful, while for the second sense the term “iterative” seems appropriate.<sup>4</sup>

The dispositional-iterative form is produced by CVC reduplication with both vowels schwa (regardless of the vowel of the root) and the stress on the first (C<sub>1</sub>AC<sub>2</sub>, etc. → C<sub>1</sub>əC<sub>2</sub>C<sub>1</sub>əC<sub>2</sub>). For example, from *qén* ‘steal’ comes *qənqən* ‘thief, likely to steal’; from *kʷət* ‘spill, capsize’ comes *kʷətəkʷət* ‘cranky, likely to capsize.’

These forms, it should be noted, may differ from some plural forms of some roots only in where the stress falls. For example, compare *səqʷəsəqʷ* ‘easy to split, easy to tear’ and *səqʷəsəqʷət* ‘split it up, tear it into shreds, tear several,’ both from *səqʷ* ‘get split, get torn, get cracked.’

Words consisting of the bare root reduplicated in this fashion can have the meaning (someone/something) disposed/inclined/likely to do whatever the root means. Often the first gloss given is an English noun or noun phrase, but adjectives also appear, and verbs with the sense of habitual action, as in the following (a warning about an unwelcome visitor):

- (a) syá· čx<sup>w</sup> ʔə θəwʰa. wəyáθ wəckʷékʷəc. cʰkʷəkʷəc. ʰəw qənqən.  
 syá· čx<sup>w</sup> ʔə θəwʰa wə-yáθ wə-c-kʷékʷəc  
 be.alerted you OBL DEM(FP) EST-always EST-get-be.looking  
 c-kʷəkʷəc ʰə wə-qənqən  
 get-look(DISP) also EST-steal(DISP)

‘Watch out for her. She’s always peeking. She’s a snooper. She also steals.’

Here *cʰkʷékʷəc* ‘be peeking’ (from *cʰkʷéc* ‘catch sight of something’) is in the progressive aspect, while *cʰkʷəkʷəc* ‘snooper, snoopy’ and *qənqən* ‘thief, likely to steal’ are dispositional-iterative forms.

Other such forms with similar meanings include:

- qʷəlqʷəl* ‘talkative, outspoken’ (< *qʷél* ‘speak,’ but cf. *qʷəlqʷəl* ‘tell’)  
*wəlʰwəlʰ* ‘easily offended’ (< *wəlʰ* ‘become offended’)  
*nəltnəl* ‘willing, co-operative’ (cf. *nəltnəl* ‘decide it, set a time for it’)  
*ləmʰləm* ‘cautious, wary’ (cf. *ləmʰləm* ‘be wary, be suspicious’)  
*nəlcnəl* ‘changeable’ (< *nəl* ‘different,’ cf. *nəlcnəl* ‘change it’)  
*qəlqəl* ‘slippery’ (cf. *qəlqəl* ‘make it slide,’ *qəlqəl* ‘I slipped,’ lit. ‘I was slid’)  
*kʷəlqəl* ‘lascivious, someone who always wants sex’ (< *kʷəlqəl* ‘copulate’)  
*ləkʷəlqəl* ‘mud, muddy place’ (< *ləkʷəl* ‘get stuck in mud’)  
*kʷəlqəl* ‘catching, contagious’ (cf. *kʷəlqəl* ‘transfer,’ *kʷəlqəl* ‘transfer it, as from one canoe to another’)  
*məlqəl* ‘limber’ (cf. *məlqəl* ‘bend it’)

4 Earlier, I called this simply “dispositional.” It is the “potential” of Leslie (1979, 42) and the “generalizing aspect” of Thompson and Thompson’s description (1971, 279) of Clallam.

A few such dispositional forms with similar meanings seem to require a prefix – *s-* ‘nominalizer,’ *šx<sup>w</sup>-* ‘oblique nominalizer,’ or *x<sup>w</sup>s- ~ nax<sup>w</sup>s-* ‘habitual’:

*šx<sup>w</sup>šáḵ<sup>w</sup>x<sup>w</sup>šáḵ<sup>w</sup>* ‘drunkard’ (cf. *x<sup>w</sup>šáḵ<sup>w</sup>ət* ‘polish it’ and its resultative *šx<sup>w</sup>šáx<sup>w</sup>šáḵ<sup>w</sup>* ‘polished, drunk’; thus ‘someone who is inclined to get “polished”’)  
*šx<sup>w</sup>nəýnəý* ‘someone who laughs at the least little thing’ (cf. *nəýəm* ‘laugh’)  
*x<sup>w</sup>s<sup>?</sup>šánt* ‘obedient’ (< *šánt* ‘obey, agree’)

Another word that may belong here is *xs<sup>?</sup>šətət* ‘shrew’ (< *šítət* ‘sleep,’ lit. ‘inclined to sleep’ or possibly ‘cause sleep,’ probably because the animal is said to be found sleeping beside the trail and to be useful as a charm under a cradle to make a child sleep (CC). (The initial *xs-* is unique in my corpus. The *x-* may be CC’s variant form of *šx<sup>w</sup>-*. See §12.1.4.)

Other such forms seem to have specialized meanings that are not easily linked to the preceding ones, such as:

*íəx<sup>w</sup>íəx<sup>w</sup>* ‘move one’s residence down to the shore’ (< *íáx<sup>w</sup>* ‘go/come down ...’)  
*cámcam* ‘move one’s residence up away from the shore’ (< *cám* ‘go/come up ...’)  
*cák<sup>w</sup>cək<sup>w</sup>* ‘low tide’ (< *cák<sup>w</sup>* ‘far’)  
*sxə́m<sup>w</sup>xə́m* ‘low tide, low water’ (< *xém* ‘go aground’)  
*cəw<sup>w</sup>cəw* ‘out on the water, the offing’ (cf. *cécəw* ‘shore?’)  
*q<sup>w</sup>šlq<sup>w</sup>əl* ‘tell, relate’ (< *q<sup>w</sup>él* ‘speak’)  
*šášályə* ‘dream’ (< *šályə* ‘have a vision’)

The forms *q<sup>w</sup>šlq<sup>w</sup>əl* ‘talkative’ and *q<sup>w</sup>šlq<sup>w</sup>əl* ‘tell’ are the only pair contrasting dispositional and possibly iterative meaning.

Dispositional-iterative forms are also used as stems for various suffixes, generally with an iterative meaning, as in:

*íšək<sup>w</sup>íək<sup>w</sup>əl* ‘cross back and forth’ (as in *íšək<sup>w</sup>íək<sup>w</sup>əl šx<sup>w</sup>[h]šýq<sup>w</sup>ələt* ‘ferry,’ lit. ‘steamer that crosses back and forth,’ < *íək<sup>w</sup>əl* ‘cross over,’ cf. *íéíək<sup>w</sup>əl* ‘be crossing over,’ prog.)  
*yəššə́šə́šə́θət* ‘be zigzagging along’ (cf. *šéšə́t* ‘cross him, contradict him,’ *šášə́θət* ‘turn aside, swing around’)  
*í<sup>θ</sup>špí<sup>θ</sup>ə́pnəx<sup>w</sup>* ‘keep opening and shutting the eyes’ (cf. *í<sup>θ</sup>špnəx<sup>w</sup>* ‘shut one’s eyes,’ *wəl<sup>θ</sup>í<sup>θ</sup>ə́pnəx<sup>w</sup> čx<sup>w</sup> šal* ‘keep your eyes shut,’ prog.)  
*xə́q<sup>w</sup>xə́q<sup>w</sup>əm* ‘Sansum Narrows,’ lit. ‘keeps opening and shutting its mouth,’ in Symplegades fashion in a myth (cf. *xéq<sup>w</sup>əm* ‘open one’s mouth,’ *xixéq<sup>w</sup>əm* ‘have one’s mouth open,’ dur. prog.)  
*k<sup>w</sup>šcək<sup>w</sup>əcnəx<sup>w</sup>* ‘see him from time to time’ (cf. *k<sup>w</sup>šcnəx<sup>w</sup>* ‘see him,’ *k<sup>w</sup>é<sup>w</sup>əcnəx<sup>w</sup>* ‘be seeing him’)  
*čəw<sup>w</sup>čəw<sup>w</sup>ət* ‘help him from time to time’ (cf. *čéwət* ‘help him,’ *čéčəw<sup>w</sup>ət* ‘be helping him’)

*čəwčəwítəl* ‘help each other on repeated occasions’ (cf. *čəčəwítəl* ‘help each other,’ dur.)

*kʷəčckʷəčəm* ‘scream from time to time’ (cf. *kʷécəm* ‘scream,’ *kʷəkʷčém* ‘be screaming continuously,’ dur.)

*łəkʷłəkʷxən* ‘be tripping repeatedly’ (< *łəkʷxən* ‘trip,’ < *łíkʷ* ‘get snagged,’ - *xən* ‘foot’)

*qʷəlqʷələ·yθən* ‘outspoken’ (JP), ‘blabbermouth (CC) (< -*á·yθən* ‘mouth’)

### 7.6.1. Progressives of Dispositional-Iterative Forms

For most of these dispositional-iterative forms, a separate progressive or a perfective/progressive distinction would seem unnecessary. Nevertheless, it seems that a progressive dispositional-iterative form does exist, although perhaps only for those that are specialized in meaning such that they have no iterative force. One such is *qʷəlqʷəl* ‘tell, report’; *qʷəl·lqʷəl* ‘be telling, be reporting.’ This progressive dispositional form occurs fairly often nominalized in the sense of ‘what X has been telling’ or, freely translated, ‘according to X,’ as in *sqʷəl·lqʷəl·s kʷθə syəyáləx·at* ‘according to the old people.’

The only other progressive dispositional forms recorded are:

*məl·líməl·lθət* ‘be getting limber’ (< *məl·líməl·lθət* ‘get limber,’ < *məl·líməl* ‘limber’; cf. *məl·lət* ‘bend it’) (AG)

*kʷəl·čckʷəč* ‘be watching and waiting’ (which AG gave but could not give a perfective for, but cf. *čckʷəč* ‘snooper’)

Thus, it appears that the formula for producing the progressive dispositional from the perfective dispositional may be  $C_1\acute{\alpha}C_2C_1\alpha C_2 \rightarrow C_1\acute{\cdot}C_2C_1\alpha C_2$ .

### 7.6.2. Plurals of Dispositional-Iterative Forms

Dispositional forms can be made plural with an *-l-* infix. There seems to be variation in vowel and stress. Compare the following singular (left column) and plural (right column) forms:

<i>qəl·lqəl·l</i> ‘thief’	<i>nəxʷsqəl·lənqəl·l</i> (DK), <i>qəl·lənqəl·l</i> (AG) ‘thieves’
<i>qʷəl·lqʷəl·l</i> ‘tell’	<i>qʷəl·ləl·lqʷəl·l</i> ‘several tell’ (AG)
<i>qʷəl·lqʷəl·l</i> ‘be telling’	<i>qʷəl·ləl·lqʷəl·l</i> ‘several are telling’ (AG)
<i>wəl·ləl·lwəl·l<sup>θ</sup></i> ‘easily offended’	<i>wəl·ləl·l<sup>θ</sup>wəl·l<sup>θ</sup></i> ‘several easily offended ones’ (AG)
<i>məl·líməl</i> ‘limber, springy’	<i>məl·ləl·líməl</i> ‘several limber ones’ (AG)
<i>qəl·lčqəl·l</i> ‘slippery’	<i>qəl·ləl·lčqəl·l</i> ‘several slippery ones’ (AG)

### 7.6.3. Diminutives of Dispositional-Iterative Forms

The only diminutives I have recorded for dispositional forms are of *qʷəl·lqʷəl* ‘be telling’ as given by AG. They are formed as are other diminutives of verbs. The singular diminutive is *qʷəl·lqʷəl·lqʷəl* ‘the little guy is telling’ and the plural is *qʷəl·lqʷəl·lqʷəl·lqʷəl* ‘the little guys are telling.’

## 7.7. RESULTATIVE FORMS

Many verbs, though not all, have resultative forms.<sup>5</sup> These denote the result, product, or finished state of the activity denoted by the base form of the verb. Resultative forms can often be translated with English past participles or adjectives, for example, *sḗpə̀tʰ* ‘sewed’ (cf. *pétʰ* ‘sew,’ *pétʰət* ‘sew it’), *snínə̀w* ‘advised’ (cf. *níwət* ‘advise him’), *sháy* ‘finished, ready’ (cf. *háy* ‘finish’), *stətés* ‘near’ (cf. *tás* ‘arrive there,’ *tsát* ‘approach it’), *sθə̀θékʷ* ‘straight’ (cf. *θáékʷ* ‘get taut,’ *θékʷət* ‘pull it’), *stʰə̀xʷécəs* ‘with washed hands’ (cf. *tʰə̀xʷécə̀m* ‘wash one’s hands’), *sʰə̀xənáp* ‘plowed’ (cf. *ʰə̀xənə̀p* ‘plow a field’).

The word *sḗpə̀tʰ* is also used in *sḗpə̀tʰ mə̀stín* ‘sewing machine’ and *sḗpə̀tʰ xʷíləm* ‘sewing thread,’ but this does not seem to be a usual usage of resultative forms; these may be simply translations of the English terms.

Resultatives are ordinarily formed by prefixing *s*<sub>2</sub> ‘resultative’ (§12.1.2) to an internally modified form of the root or root with suffixes. The type of internal modification varies with the type of root; the resultatives of CAC and CəCC roots are modified as they are for progressives, but the resultatives of CəC roots differ from their progressives in having a full second vowel instead of a schwa. (Details appear below.)

The suffixes that may appear in resultatives include *-əm* ‘intransitive,’ *-əl* ‘move toward,’ and a number (as yet undetermined) of lexical suffixes. The transitive suffixes *-t*, *-nə̀xʷ*, and *-x*, and the reflexive and reciprocal suffixes, do not appear in resultative forms. On the other hand, resultatives may be transitivized with the suffix *-stə̀xʷ*, ‘causative’ (see §9.3).

Resultatives do not share the perfective-progressive distinction found elsewhere in the aspect system, but they do have plural, diminutive, and diminutive plural forms.

A few forms that appear to be resultatives do not take the *s*- ‘resultative’ prefix. There are also a few resultatives that appear with a suffixed *-t* ‘stative’ (§12.1.6).

### 7.7.1. Resultatives of CAC and CəCC Roots

Resultatives of roots of these shapes are regularly produced by prefixing *s*- ‘resultative’ to a form that is identical with the progressive of the bare root (or with what we may infer that form would be from the progressive of the transitive). Compare the following sets:

PERFECTIVE	PROGRESSIVE	RESULTATIVE
<i>pétʰ</i> ‘sew’	<i>pépə̀tʰ</i> ‘be sewing’	<i>sḗpə̀tʰ</i> ‘sewed’
<i>yákʷət</i> ‘smash it’	<i>yáyəkʷət</i> ‘be smashing it’	<i>syáyəkʷ</i> ‘smashed’
<i>qʷítm</i> ‘disembark’	<i>qʷítqʷəm</i> ‘be disembarking’	<i>sqʷítqʷəm</i> ‘ashore’

5 I have adopted the term used by Leslie (1979). These are the “participles” of Galloway (1977) and they correspond to the “stative” forms in the Thompsons’ description (1971) of Clallam.

<i>níwət</i> ‘advise him’	<i>nínəwət</i> ‘be advising him’	<i>snínəw</i> ‘advised’
<i>čéʔənt</i> ‘straighten it’	<i>čécənt</i> ‘be straightening it’	<i>ščécənt</i> ‘straight’
<i>xákʷət</i> ‘bathe him’	<i>xáxʷəkʷət</i> ‘be bathing him’	<i>šxáxʷəkʷ</i> ‘bathed’
<i>híqət</i> ‘put it under’	<i>híʔqət</i> ‘be putting it under’	<i>síʔq</i> ‘underneath’
<i>há:y</i> ‘finish’	<i>há:y</i> ‘be finishing’	<i>shá:y</i> ‘finished, ready’
<i>ʔáí</i> ‘stretch’	<i>ʔáʔí</i> ‘be stretching’	<i>sʔáʔí</i> ‘stretched out’
<i>íéʔt</i> ‘try it’	<i>íəíéʔt</i> ‘be trying it’	<i>stəíéʔ</i> ‘tried’
<i>séʔ</i> ‘rise’	<i>səséʔ</i> ‘be rising’	<i>ssəséʔ</i> ‘raised’
<i>čéʔ</i> ‘land atop’	<i>čəčéʔ</i> ‘be landing atop’	<i>ščəčéʔ</i> ‘atop’
<i>xʷét</i> ‘lower it’	<i>xʷəxʷét</i> ‘be lowering it’	<i>šxʷəxʷé</i> ‘down, lowered’
<i>xʷpát</i> ‘inflate it’	<i>xʷpəpáʔət</i> ‘be inflating it’	<i>šxʷpəpá</i> ‘inflated’
<i>méʔx</i> ‘remove it’	<i>há:méʔx</i> ‘be removing it’	<i>səméʔ</i> ‘off’
<i>mətqʷt</i> ‘immerse it’	<i>mətqʷt</i> ‘be immersing it’	<i>smətqʷ</i> ‘immersed’ (AG)
<i>təlqʷt</i> ‘dip it’	<i>təlqʷt</i> ‘be dipping it’	<i>stəlqʷ</i> ‘in the water’
<i>čəyʷxʷt</i> ‘dry it’	<i>čéyʷxʷt</i> ‘be drying it’	<i>ščéyʷxʷ</i> ‘dry, dried’

### 7.7.2. Resultatives of CəC Roots

Resultatives of roots of this shape are produced by prefixing *s-* ‘resultative’ to a form that resembles the progressive of the bare root (not the form with *t-* ‘transitivizer’) except that there is a full vowel between the reduplicated first consonant and the second consonant. Which full vowel will appear is not (at this stage of analysis) predictable. Compare the following sets exemplifying TəT, TəR, and RəT roots:

PERFECTIVE	PROGRESSIVE	RESULTATIVE
<i>tás</i> ‘arrive there’	<i>tətás</i> ‘be arriving there’	<i>stətés</i> ‘near’
<i>tsət</i> ‘approach it’	<i>tést</i> ‘be approaching it’	
<i>θəkʷ</i> ‘get taut’	<i>θəθəkʷ</i> ‘be getting taut’	<i>sθəθékʷ</i> ‘straight’
<i>θkʷət</i> ‘pull it’	<i>θékʷt</i> ‘be pulling it’	
<i>qʷəs</i> ‘sink’	<i>qʷəqʷəs</i> ‘be sinking’	<i>sqʷəqʷís</i> ‘sunk’
<i>qʷsət</i> ‘sink it’	<i>qʷást</i> ‘be sinking it’	
<i>íəqʷ</i> ‘break, snap’	<i>íəíəqʷ</i> ‘be breaking’	<i>stíəíqʷ</i> ‘cut off, cut up, shear’
<i>íqʷát</i> ‘cut it off’	<i>íáqʷt</i> ‘be cutting it off’	
<i>səqʷ</i> ‘split, tear’	<i>səsəqʷ</i> ‘be splitting’	<i>ssəsíqʷ</i> ‘split, torn’
<i>sqét</i> ‘split it’	<i>séqʷt</i> ‘be splitting it’	
<i>íəšxʷ</i> ‘get washed’	<i>íəíəšxʷ</i> ‘be getting washed’	<i>stíəíəíxʷ</i> ‘washed’
<i>íəxʷát</i> ‘wash it’	<i>íəšxʷt</i> ‘be washing it’	
<i>čəqʷ</i> ‘get pierced’	<i>čəčəqʷ</i> ‘be getting pierced’	<i>ščəčəqʷ</i> ‘pierced, shot’
<i>čqát</i> ‘pierce it’	<i>čáqʷt</i> ‘be piercing it’	

<i>pán</i> ‘get buried’	<i>pəpán</i> ‘be getting buried’	<i>spəpín</i> ‘buried’
<i>pánət</i> ‘bury it’	<i>pəpánət</i> ‘be burying it’	
<i>q̣ʷəl</i> ‘get cooked’	<i>q̣ʷəq̣ʷəl</i> ‘be getting cooked’	<i>sq̣ʷəq̣ʷəl</i> ‘cooked, ripe, well taught’
<i>q̣ʷələt</i> ‘roast it’	<i>q̣ʷəq̣ʷələt</i> ‘be roasting it’	
<i>kʷən</i> ‘become possessed’	<i>kʷəkʷən</i> ‘be going into a trance’	<i>skʷəkʷín</i> ‘possessed, in a trance’
<i>kʷənət</i> ‘take it’	<i>kʷəkʷənət</i> ‘be taking it’	
<i>təmət</i> ‘pick them’	<i>tətəmət</i> ‘be picking them’	<i>stətím</i> ‘picked’
<i>qəwət</i> ‘warm it’	<i>qəwət</i> ‘be warming it’	<i>sqəqíw</i> ‘heated beside the fire, exposed to the heat’ (AG)
<i>xʷəy</i> ‘wake up’	<i>xʷəxʷəy</i> ‘be waking up’	<i>šxʷəxʷəy</i> ~ <i>šxʷəxʷí</i> ? //s- xʷəxʷíy//? ‘awake’
<i>θəyt</i> ‘fix it’	<i>θéyt</i> ‘be fixing it’	<i>sθəθəy</i> ~ //s-θəθíy//? ‘right’
<i>məq̣</i> ‘get full’	<i>hámq̣</i> ‘be getting full’	<i>səmíq̣</i> ‘full’
<i>nəqʷ</i> ‘fall asleep’	<i>hənqʷ</i> ‘be falling asleep’	<i>səníqʷ</i> ‘asleep’
<i>ləkʷ</i> ‘break’	<i>hələkʷ</i> ‘be breaking’	<i>səlíkʷ</i> ‘broken’
<i>nəpəx</i> ‘eat it’	<i>hənəpəx</i> ‘be eating it’	<i>səníp</i> ‘eaten on’

### 7.7.3. Resultatives of Other Tri-Consonantal Roots

A few other words that appear to be tri-consonantal roots of shapes other than CəCC form their resultatives in a way that does not reflect the progressive form. Their resultatives have a stressed full vowel between the second and third consonant. Compare the following sets:

PERFECTIVE	PROGRESSIVE	RESULTATIVE
<i>téʔx̣t</i> ‘put it on a dish, serve it’	<i>tətéʔx̣t</i> ‘be putting it on a dish, be serving it’	<i>stəʔéx̣</i> ‘dished out, laid out on a mat, served’
<i>ḳʷíʔxət</i> ‘pitch it up’	<i>ḳʷəḳʷíʔxət</i> ‘be pitching it up’	<i>sḳʷəʔix̣w</i> ‘pitched up’
<i>šʷáít</i> ‘brace it’	<i>šʷəšʷáít</i> ‘be bracing it’	<i>sšʷəʔáít</i> ‘braced’
<i>šé-íθt</i> ‘measure it’	<i>šəšé-íθt</i> ‘be measuring it’	<i>sšəʔéíθ</i> ‘marked, evident’
<i>tpáít</i> ‘stretch it’	<i>təpáít</i> ‘be stretching it’	<i>stpáít</i> ‘stretched (as hide)’
<i>ítáq̣w</i> ‘get twisted’	<i>ítətáq̣w</i> ‘be getting twisted’	<i>sítáq̣w</i> ‘aching from a twist’ (AG)
<i>kʷtəxʷ</i> ‘enter’	(prog. not recorded)	<i>skʷtəxʷ</i> ‘inside’
<i>xʷələkʷt</i> ‘wrap it up’	<i>xʷəxʷələkʷt</i> ‘be wrapping ...’	<i>šxʷəlákʷ</i> ‘wrapped up’

### 7.7.4. Resultatives of Irregular Roots

Perhaps the only truly irregular roots are *θát* ‘say’ and *χτέ* ‘do,’ which have the same progressive form, *χάτα* ‘be saying, be doing,’ and the same resultative, *σχτέ ~ σχτέ?* ~ *σχάτέ?* ‘said that way, so-called, done that way, the same, prepared.’

### 7.7.5. Resultatives with Suffixes

There are a few words formed with the suffixes *-am* ‘intransitive’ and *-al* ‘move toward’ that have resultatives that incorporate the suffix. These resultatives resemble those of the set identified above as “other tri-consonantal roots” in that they have a stressed full vowel before the final consonant, in this case that of the suffix.

PERFECTIVE	PROGRESSIVE	RESULTATIVE
<i>ιάγam</i> ‘stick’	<i>ίίαγam</i> ‘be sticking’	<i>στάγám</i> ‘stuck’
<i>qálam</i> ‘camp’ (no perf. recorded)	(no prog. recorded)	<i>sqálím</i> ‘camped’
<i>qáχam</i> ‘bounce off, be jarred off’	<i>qaqámál</i> ‘be rising’	<i>sqámíl</i> ‘high (the tide)’
<i>náqam</i> ‘dive’	<i>qáχám</i> ‘be bouncing off, be getting jarred off’	<i>sqáχím</i> ‘off’ (AG)
	<i>hánqam</i> ‘be diving’	<i>sánqém</i> ‘submerged, under’ (AG)
<i>pám</i> ‘swell, rise’	<i>pápám</i> ‘be swelling’	<i>spáhám</i> ‘swollen’ (AG)
<i>yám</i> ‘order’	<i>háyám</i> ‘be ordering’	<i>sáyám</i> ‘ordered’ (AG)
<i>íi?al</i> ‘become lonely’	(no prog. recorded)	<i>stá?íl</i> ‘lonely’
<i>?éyal</i> ‘get out of the way, leave’	<i>?éyal</i> ‘be leaving’	<i>s?áyél</i> (CC, JP), <i>s?eyíl</i> (AG) ‘away, gone’
<i>hílám</i> ‘roll over, fall off’	<i>hílám</i> ‘be rolling over, be falling off’	<i>sáhíl</i> ‘fallen off, fallen down’
<i>hí?lt</i> ‘roll it over, push it off’	<i>hí?ált</i> ‘be rolling it over’	

Lexical suffixes are also incorporated into resultatives, which vary in form according to type of root and type of suffix. The data are too little for a full account, but it seems that the only resultatives with suffixes in which the roots have the shapes that appear in their plain (non-suffixed) resultatives are those formed from TAT and CəCT roots and unstressed suffixes. In other resultatives with suffixes the roots appear in simpler shapes. Also, it seems that a few suffixes have forms that appear only in resultatives, such as *-ánap* (otherwise *-ánap*) ‘ground.’

The following examples illustrate the variations in type of root and suffix so far recorded. (There are so many gaps in the data, such as unrecorded perfective and progressive forms, that it seems better to simply list the resultatives and add whatever relevant data there are in parentheses rather than to tabulate as in previous sections.)

## (1) TAT roots with stress on the root:

*stítəcəq<sup>w</sup>* ‘with one’s hair cut short (as traditional for mourners)’ (< -*aq<sup>w</sup>* ‘head,’ res. of *títəcəq<sup>w</sup>əm* ‘get one’s hair cut’; cf. *títəcət* ‘cut it,’ *stítəc* ‘cut’)  
*š[x<sup>w</sup>]títəcəs* ‘with bow hauled up on the shore’ (< -*əs* ‘face, forward end’; cf. *títəcət* ‘haul it up onto the shore,’ *stítəc* ‘hauled up’)  
*š[x<sup>w</sup>]títəcnəc* ‘with stern hauled up on the shore’ (< -*nəc* ‘rump, bottom, stern’)

## (2) TAT roots with stress on the suffix:

*stəcnáp* ‘disked, harrowed’ (< -*ənəp* ‘ground,’ res. of *təcənəp* ‘disk or harrow a field’; cf. *títəcət* ‘cut it’) (AG)  
*šx<sup>w</sup>tətəcéləx<sup>w</sup>θət* ‘kerfed and bent’ (< -*ələx<sup>w</sup>θət* ‘tongue,’ res. of *x<sup>w</sup>təcéləx<sup>w</sup>θət* ‘kerf it [wood for a bent-wood box]’; cf. *títəcət* ‘cut it’) (JP)

## (3) HAT roots with stress on the root:

*šx<sup>w</sup>á?əpəs* ‘with wiped face’ (< -*əs* ‘face,’ res. of *x<sup>w</sup>á?əpəsəm* ‘wipe one’s face’; cf. *əpət* ‘wipe it’) (AG)

## (4) TAH roots with stress on the suffix:

*šx<sup>w</sup>qənéc* ‘with a hole in the bottom’ (< -*nəc* ‘bottom,’ res. of *x<sup>w</sup>qənéc* ‘make a hole in the bottom of it’; cf. *qənét* ‘make a hole in it,’ *sqənəq<sup>w</sup>é* ‘with a hole in it’)  
*šx<sup>w</sup>ənéc* ‘sitting on the floor’ (< -*nəc* ‘bottom’; cf. *x<sup>w</sup>ét* ‘lower it,’ *šx<sup>w</sup>əx<sup>w</sup>é* ‘lowered, down’)

## (5) TəT, TəR, and RəT roots seem all to have the stress on the suffix:

*st<sup>i</sup>θ<sup>x<sup>w</sup></sup>*écəs ‘with clean hands’ (< -*cəs* ‘hand,’ res. of *t<sup>i</sup>θ<sup>x<sup>w</sup></sup>*écəsəm ‘wash one’s hands’; cf. *t<sup>i</sup>θ<sup>x<sup>w</sup></sup>*át ‘wash it,’ *st<sup>i</sup>θ<sup>x<sup>w</sup></sup>* ‘washed’)  
*st<sup>i</sup>θ<sup>x<sup>w</sup></sup>*əxén ‘with clean feet’ (< -*xən* ‘foot, leg,’ res. of *t<sup>i</sup>θ<sup>x<sup>w</sup></sup>*əxénəm ‘wash one’s feet’) (AG)  
*st<sup>i</sup>q<sup>w</sup>écəs* ‘missing a finger’ (< -*cəs* ‘hand’; cf. *t<sup>i</sup>q<sup>w</sup>át* ‘cut it off,’ *st<sup>i</sup>át<sup>i</sup>q<sup>w</sup>* ‘cut off, shear’)  
*st<sup>i</sup>q<sup>w</sup>xén* ‘missing a leg’ (< -*xən* ‘foot, leg’) (JP)  
*sšx<sup>w</sup>ícən* ‘covered’ (< -*cən* ‘surface,’ res. of *šx<sup>w</sup>íct* ‘cover it’; cf. *šx<sup>w</sup>át* ‘cover him,’ *sšx<sup>w</sup>éx<sup>w</sup>* ‘covered’)  
*sšx<sup>w</sup>ənáp* ‘plowed’ (AG) (< -*ənəp* ‘ground,’ res. of *šx<sup>w</sup>ənəp* ‘plow’; cf. *šx<sup>w</sup>ét* ‘open it’)  
*spənás* ‘with earth thrown in one’s face, besprinkled ritually with ochre, feathers, etc.’ (< -*əs* ‘face,’ res. of *pənəst* ‘throw earth in his face, besprinkle him with ochre, etc.’; cf. *pənət* ‘bury it,’ *spəpín* ‘buried’)  
*sq<sup>w</sup>əmənáp* ‘weeded’ (< -*ənəp* ‘ground,’ res. of *q<sup>w</sup>əmənəp* ‘pull up weeds’; cf. *q<sup>w</sup>əmət* ‘pluck it’)

*sèyqás* ‘sharpened’ (< *-əs* ‘face,’ res. of *yáqást* ‘sharpen it, grind it, file it’; cf. *háyqást* ‘be sharpening it’; cf. *yáqət* ‘grind it up’)

*salk<sup>w</sup>á?ayθən* ‘with a broken mouth’ (< *-áyəθən* ‘mouth,’ res. of *lak<sup>w</sup>á:ywən* ‘get one’s mouth broken’; cf. *lák<sup>w</sup>* ‘get broken, break,’ *hálk<sup>w</sup>* ‘be breaking,’ *lak<sup>w</sup>át* ‘break it,’ *hálk<sup>w</sup>ət* ‘be breaking it,’ *səlík<sup>w</sup>* ‘broken’)

(6) CəCT roots with stress on the root:

*stélqəlwe?s* ‘with one’s paddle in the water’ (< *-əlwe?s* ‘paddle,’ res. of *təlqəlwe?səm* ‘hold one’s paddle in the water’; cf. *təlqt* ‘dip it,’ *stélq* ‘in the water’)

*sxálčaq<sup>w</sup>* ‘silly, crazy’ (< *-aq<sup>w</sup>* ‘head’; cf. *xəlčt* ‘twist it, rotate it,’ *sxəlčélč* ‘twisted [plural]’)

*sxəlčəyəθən* ‘crooked-jawed (salmon)’ (< *-áyəθən* ‘mouth’)

### 7.7.6. Anomalous Resultative Forms

At least two roots have resultatives formed in the expected way but with the addition of the suffix *-t* ‘stative.’ Compare the following:

PERFECTIVE	PROGRESSIVE	RESULTATIVE
<i>k<sup>w</sup>élx</i> ‘hide it’	<i>k<sup>w</sup>ék<sup>w</sup>əlx</i> ‘be hiding it’	<i>sk<sup>w</sup>ék<sup>w</sup>əlt</i> ‘hidden’
<i>k<sup>w</sup>él</i> ‘hide’	<i>k<sup>w</sup>ək<sup>w</sup>íł</i> ‘be hiding’	
<i>pélt</i> ‘skim it’	<i>pépəłət</i> ‘be skimming it’	<i>spépəlt</i> ‘skimmed’

There are a few forms that seem to be resultatives without the *s-* prefix.

<i>pák<sup>w</sup></i> ‘rise to the surface’	<i>pápák<sup>w</sup></i> ‘be rising to the surface’ (AG)	<i>pápék<sup>w</sup></i> ‘floating, afloat’ (CC, JP, AG) <i>spápék<sup>w</sup></i> ‘afloat’ (CC, DK)
--	--	---

CC gave both *pápék<sup>w</sup>* and *spápék<sup>w</sup>* ‘floating, afloat.’ AG denied the form with *s-* but gave a causative, *pápék<sup>w</sup>stəx<sup>w</sup>* ‘keep it afloat,’ which supports the identification of *pápék<sup>w</sup>* as a resultative.

<i>šák<sup>w</sup>əń</i> ‘go out (as a fire)’	<i>šəšák<sup>w</sup>əń</i> ‘be going out’	<i>šék<sup>w</sup>əń</i> ‘out, extinguished’
<i>šák<sup>w</sup>əńt</i> ‘put it out’	<i>šəšák<sup>w</sup>əńt</i> ‘be putting it out’	

The form *šék<sup>w</sup>əń*, with its stress on the first vowel, does not resemble either a resultative or a durative, but semantically it seems to fit the resultative slot.

The following verb has two possible resultative forms:

<i>θqénx</i> ‘stand it up in the ground’	<i>θəqnəx</i> ‘be standing it up ...’	<i>sθqén</i> ‘held upright’
		<i>θqét</i> ‘1. be spitted upright by a fire; 2. tree, mast’

The first, *sθqén*, is more like what one might expect; the second, *θqét*, is clearly based on the same root, but hard to explain.

### 7.7.7. Plurals of Resultatives

In general, plural forms of the resultative resemble plural progressives as simple (non-plural) resultatives resemble simple progressives. (Or so it seems, but there are great gaps in the data; plural resultatives are somewhat easier to elicit than plural progressives, but for many verbs I have neither form.)

Resultatives formed from TAT and TAR roots are made plural by CVC reduplication of the root. Compare the following perfective, resultative, and plural resultative forms:

PERFECTIVE	RESULTATIVE	PLURAL RESULTATIVE
<i>q̄<sup>w</sup>ím</i> ‘disembark’	<i>sq̄<sup>w</sup>íq̄<sup>w</sup>əm</i> ‘ashore’	<i>sq̄<sup>w</sup>ímq̄<sup>w</sup>əm</i> ‘several ashore’
<i>lík<sup>w</sup>ət</i> ‘hook it’	<i>stítək<sup>w</sup></i> ‘hooked’	<i>stík<sup>w</sup>ítək<sup>w</sup></i> ‘several hooked’
<i>q̄ík<sup>w</sup></i> ‘get bitten’	<i>sq̄ík<sup>w</sup>q̄ək<sup>w</sup></i> ‘bitten (in one place)’	<i>sq̄ík<sup>w</sup>q̄ək<sup>w</sup></i> ‘bitten up, bitten in several places’
<i>páy<sup>t</sup></i> ‘bend it’	<i>spápəȳ</i> ‘bent’	<i>spáȳpəȳ</i> ‘winding’
<i>téqət</i> ‘lay it down’	<i>stéłəq̄</i> ‘lying’	<i>stéq̄łəq̄</i> ‘several lying’
<i>tícət</i> ‘haul it up’	<i>stítəc̄</i> ‘hailed up’	<i>stíctəc̄</i> ‘several hauled up’

Resultatives formed from RAH and RəC roots seem to be made plural in two ways:

(1) by reduplication of the schwa and resonant following the /s-/, probably identifiable as CVC reduplication with loss of the /h/, as in:

<i>mé?x</i> ‘remove it’	<i>səmémé?</i> ‘off’ //s-həmémé?//	<i>səməmémé?</i> ‘several off’ //s-həm həmémé?//
<i>nəp̄əx</i> ‘eat it’	<i>səníp̄</i> ‘eaten on’	<i>sənəníp̄</i> ‘eaten up’

(2) by infixing /-ə1-/ after the /s-/ (or after the lost /h/), as in:

<i>nəq<sup>w</sup></i> ‘fall asleep’	<i>səníq<sup>w</sup></i> ‘sound asleep’	<i>sələníq<sup>w</sup></i> ‘several sound asleep’
--------------------------------------	---	---

The next example could be formed by either of these methods:

<i>lé?x</i> ‘put it away’	<i>səlélé?</i> ‘put away’	<i>sələləlé?</i> ‘several put away’
---------------------------	---------------------------	-------------------------------------

Resultatives formed from TəT and TəR roots are made plural by infixing /-ə1-/ after the first root consonant of the simple resultative, as in:

<i>í<sup>θ</sup>əx̄<sup>w</sup></i> ‘get washed’	<i>sí<sup>θ</sup>ət<sup>θ</sup>íx̄<sup>w</sup></i> ‘washed’	<i>sí<sup>θ</sup>ələt<sup>θ</sup>íx̄<sup>w</sup></i> ‘several washed’
<i>q<sup>w</sup>əś</i> ‘go into the water’	<i>sq<sup>w</sup>əq<sup>w</sup>ís</i> ‘in the water’	<i>sq<sup>w</sup>ələq<sup>w</sup>ís</i> ‘several in the water’
<i>pən</i> ‘get buried’	<i>spəpín</i> ‘buried’	<i>spələpín</i> ‘several buried’

A resultative formed of a TəR root with *-əm* is made plural by CVC reduplication:

*q̣ələm* ‘camp out’      *sq̣əlím* ‘camped out’      *sq̣əlq̣əlím* ‘several  
camped out’

Resultatives formed from TAH roots are made plural by infixing /-ə1-/ after the first root consonant of the simple (non-plural) resultative, as in:

*i̯éʔt* ‘chew it’      *si̯əi̯éʔ* ‘chewed’      *si̯ə1əi̯éʔ* ‘several  
chewed up’  
*q̣wét* ‘make a hole in it’      *sq̣wəq̣wé* ‘hole’      *sq̣wə1əq̣wé* ‘full of holes’

Resultatives formed from HAC roots are made plural by full reduplication of the root as it appears in the simple resultative with the stress on the second vowel:

*háʔkʷ* ‘be used’      *sháʔkʷ* ‘used’      *shəkʷháʔkʷ* ‘several used’

### 7.7.8. Diminutives of Resultatives

The diminutive form of a resultative indicates small size in the person or thing referred to or small amount in the attribute denoted. Diminutives of resultatives are formed by further CV reduplication with stress and vowel quality depending on type of root.

Resultatives of CVC roots form their diminutives with the formula  $s-C_1\acute{A}C_1\acute{e}C_2 \rightarrow s-C_1\acute{e}C_1\acute{A}(?)C_1\acute{e}C_2$ , as in:

*spíʔpəw̄* ‘frozen’      *spəpiʔpəw̄* ‘poor little frozen thing’ (CC)  
*sq̣áq̣əȳ* ‘dead’      *sq̣əq̣áq̣əȳ* ‘little dead thing’ (DK)  
*spápəȳ* ‘bent’      *spəpáʔpəȳ* ‘slightly bent, slightly drunk’ (AG)

Resultatives of CəC, RAH, and (presumably) TAH roots (those for which the first vowel is schwa) form their diminutives with the formula  $s-C_1\acute{e}C_1\acute{A}C_2 \rightarrow s-C_1\grave{i}C_1(?)C_1\acute{A}C_2$ , as in:

*spəpín̄* ‘buried’      *spìppín̄* ‘little buried thing’ (CC)  
*si̯ə1i̯éʔi̯x̄w̄* ‘washed’      *si̯i̯éʔi̯éʔi̯éʔi̯x̄w̄* ‘little washed thing’ (CC)  
*sθəθéʔkʷ* ‘straight, taut’      *sθi̯i̯θəθéʔkʷ* ‘a bit tight’ (AG)  
*səməʔ //s-həməʔ//* ‘off, removed’      *sìməʔ //s-hìhəməʔ//* ‘small thing  
removed’ (CC)

### 7.7.9. Diminutive Plurals of Resultatives

Diminutive forms of CəC and RAH resultatives are made plural, like the resultatives themselves, by infixing /-ə1-/ after the first root consonant, as in:

*si̯éʔi̯éʔi̯x̄w̄* ‘washed’      *si̯i̯éʔi̯éʔi̯éʔi̯x̄w̄* (dim.)  
*i̯éʔ1əi̯éʔi̯x̄w̄* (pl.)      *si̯i̯éʔ1i̯éʔi̯éʔi̯x̄w̄* (dim. pl.)  
*spəpín̄* ‘buried’      *spìppín̄* (dim.)

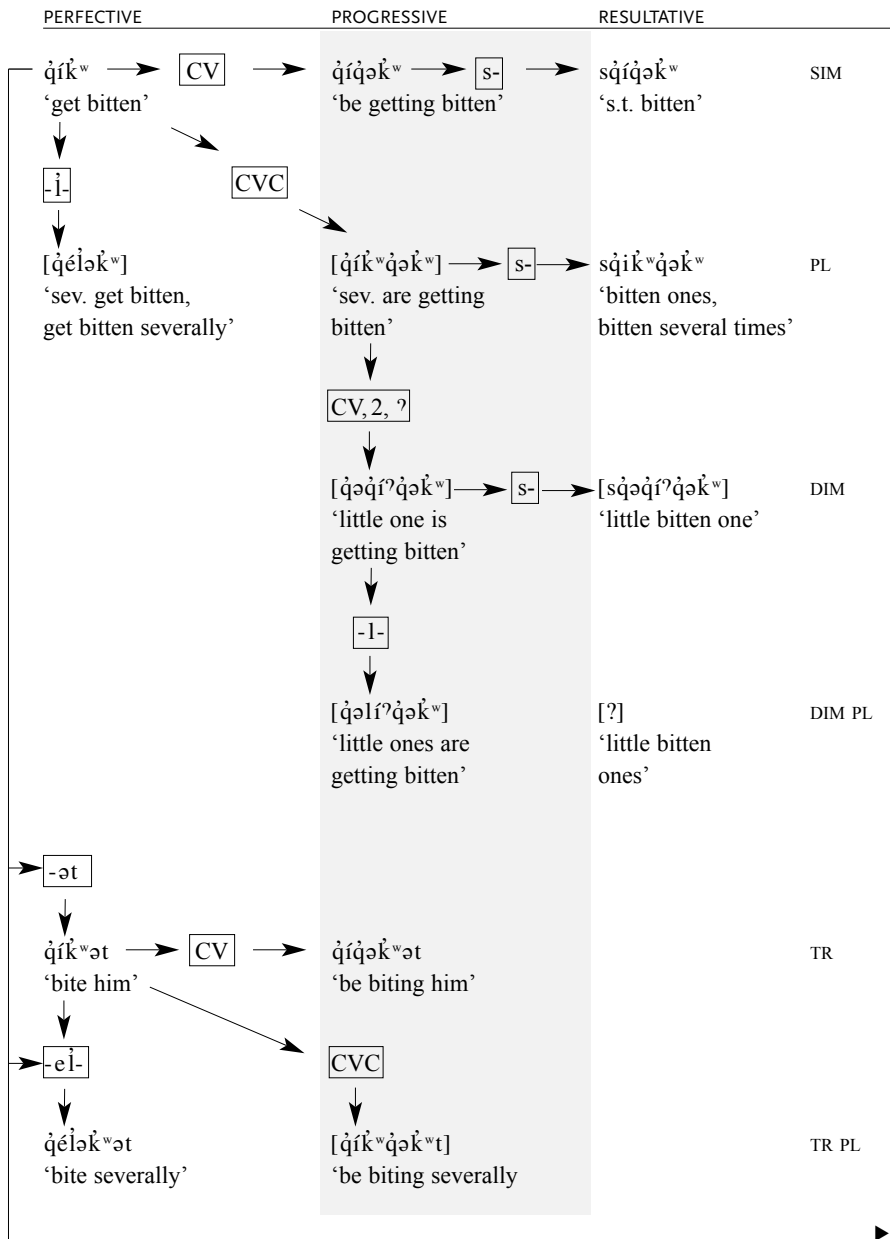

<i>spələpín</i> (pl.)	<i>spəlìppín</i> (dim. pl.)
<i>səmé?</i> ‘off’	<i>sì·mé?</i> (dim.)
<i>səməmé?</i> (pl.)	<i>səlì·mé?</i> (dim. pl.)

I have no examples of diminutive plurals of resultatives of CAC roots.

## 7.8. PARADIGMS

I have attempted to bring together some of the data presented in the preceding sections to show full paradigms of a few representative verbs in the form of flowcharts (Diagrams 1 to 3). In the diagrams, forms appearing in square brackets are inferred from analogous forms in the same paradigm or in paradigms of roots of the same shape, but these are unattested. The blocks enclose symbols for rules for modifying the shape of the root. These are:

2	move stress to second vowel
C	reduplicate as CəC
CV	reduplicate as CVCə
CV, 2	reduplicate as CəCv
CVC	reduplicate as CVCəC
ə	reduce full vowel to schwa
A	raise schwa to full vowel or reinstate full vowel
0	reduce vowel to zero
ʔ	infix glottal stop after (full) vowel
-i-	infix -i-
-il-	infix -il-
-l-	infix -əl- or -lə-
-l̥-	infix -əl̥- or -l̥ə-
s-	prefix s- ‘resultative’
C > l	change reduplicated consonant to -l-
Ṛ	glottalize resonant
Ciʔ	reduplicate with iʔ

Diagram 1. *qíkʷ* 'get bitten'

(cont.)

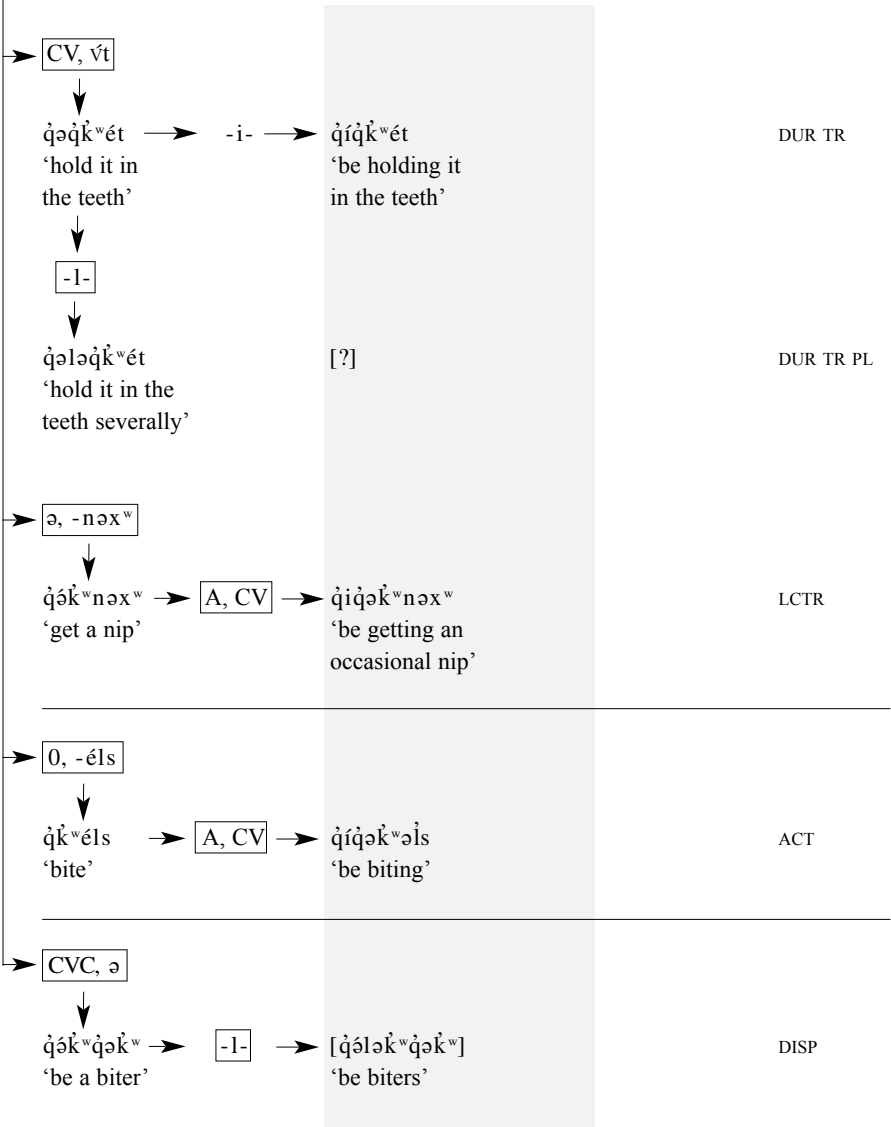

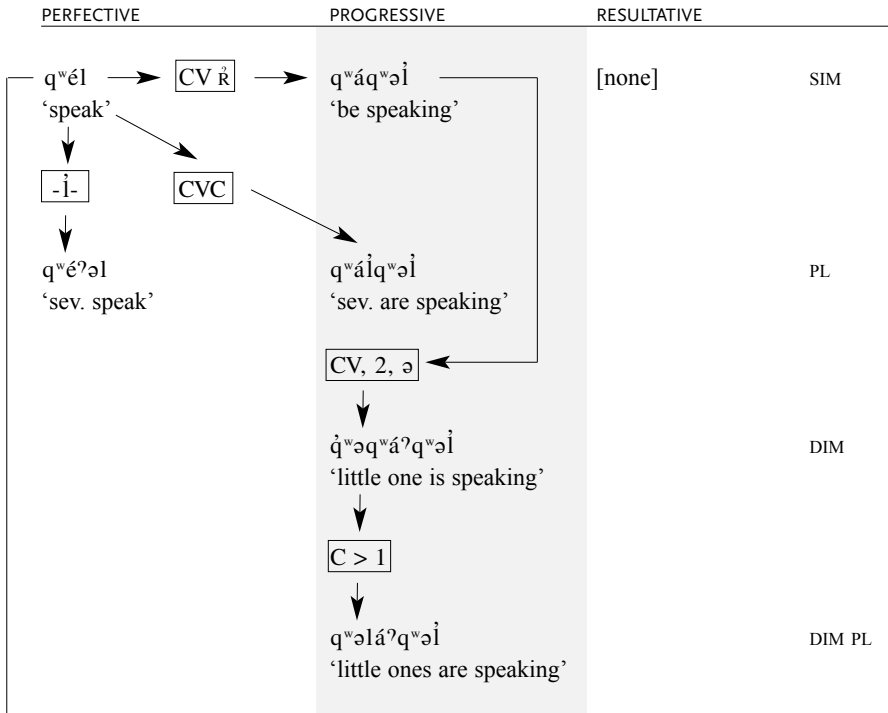

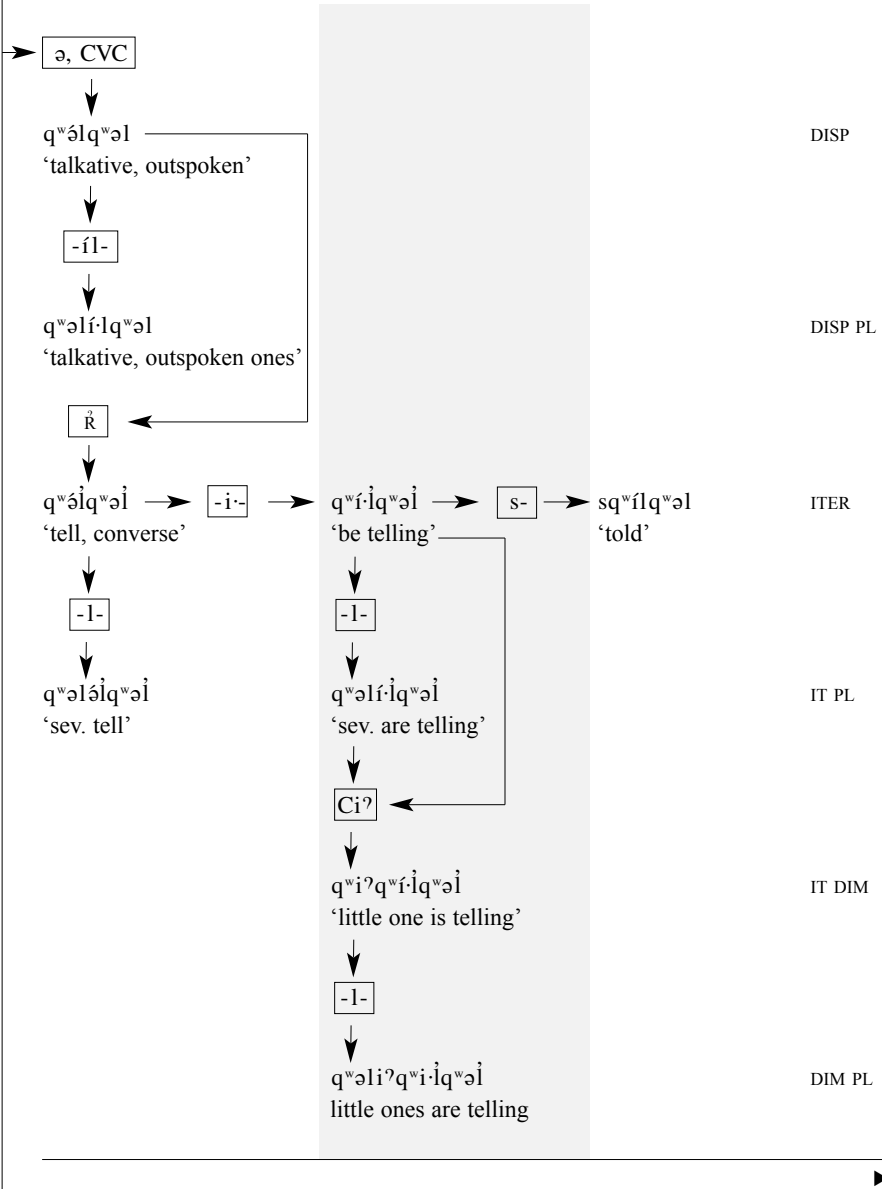

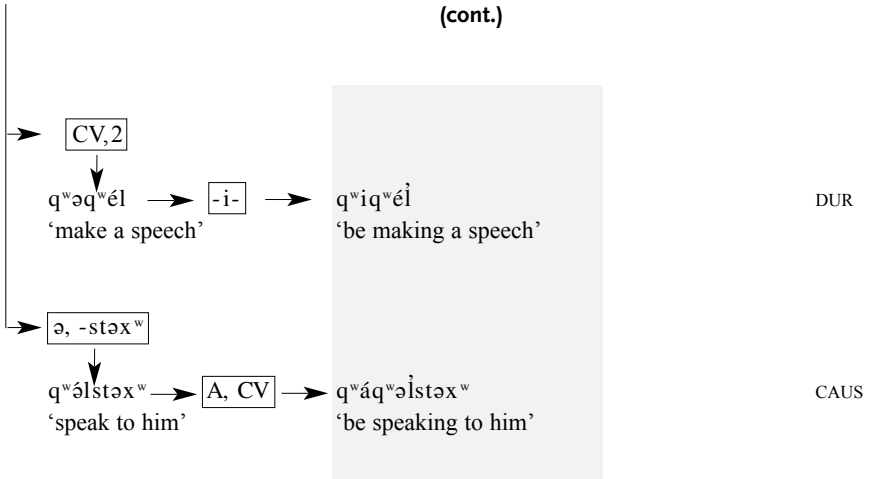

Diagram 2. *q<sup>w</sup>él* 'speak'

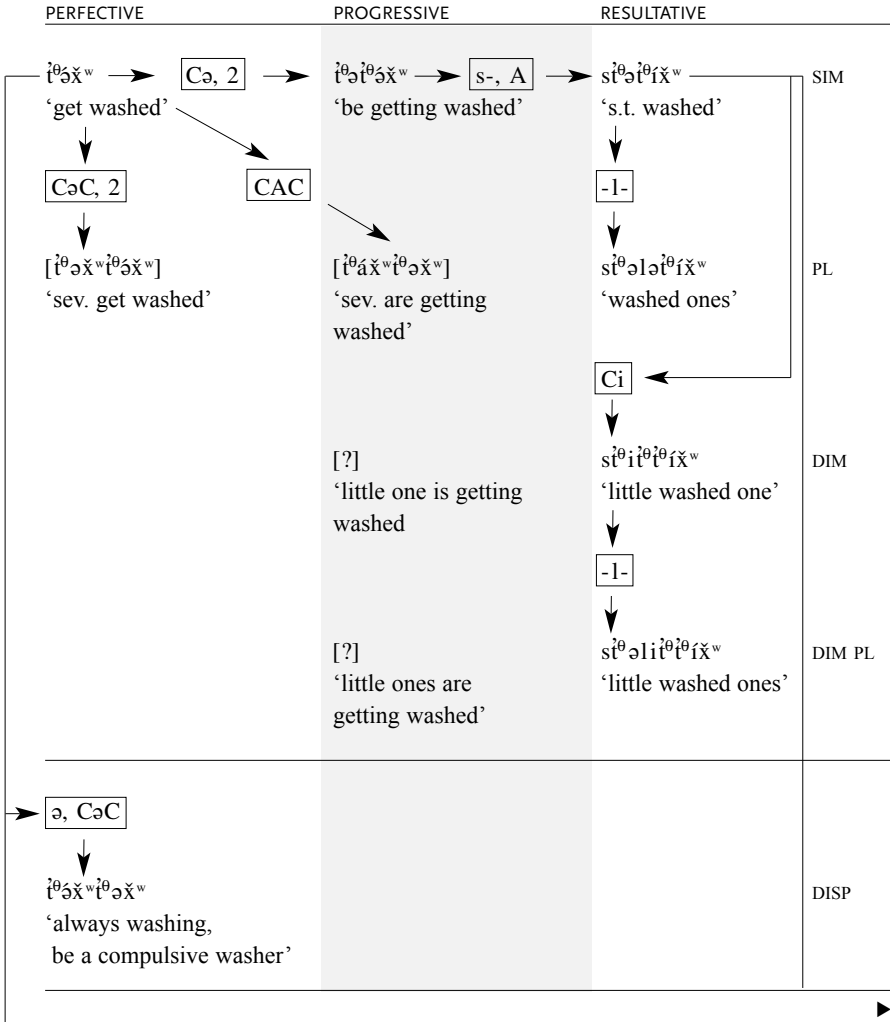

(cont.)

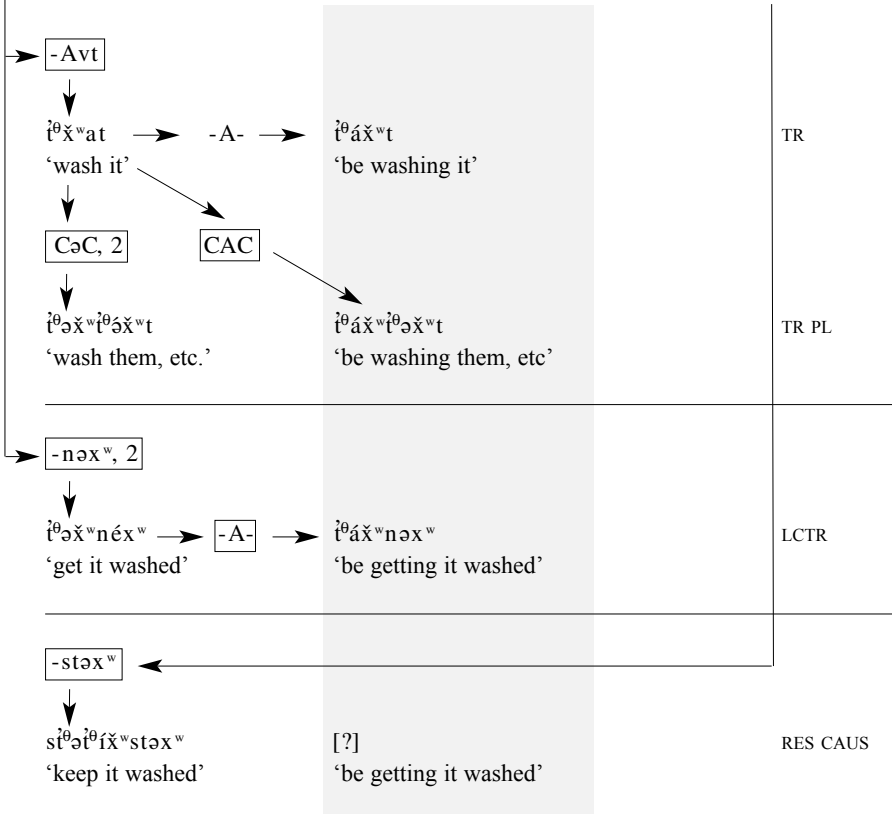

(cont.)

**Diagram 3.** *tʰə́ǎǎ́w* ‘get washed’

(cont.)

### 7.8.1. Problematic Paradigms

There are a few verbs that pose special problems in that they have forms that cannot yet be clearly identified as to aspect.

A root  $\sqrt{təx}$  ‘stand up’ has perfective forms with the prefix *wə-* ‘suddenly’: *wətəx* ‘stand up suddenly’ (AG); *wətətəx* ‘several stand up suddenly’ (AG). This root without a suffix has no known progressive forms.

However, a derivative with *-iləx* (no gloss assignable, possibly composed of *-il* ‘move toward’ and an element *-x*, cf. *ʔiməx* ‘walk,’ *qʷəyiləx* ‘dance,’ *-xən* ‘foot’) appears in two or more aspects. Its forms are:

- 1 *təxiləx* ‘stand up’ (JP, AG, DK)
- 2 *təltətəxiləx* (JP), *tətəxiləx* (AG, DK) ‘several stand up (in unison)’
- 3 *təxiləx* ‘be standing’ (JP, AG, DK)
- 4 *təxətəxiləx* ‘several are standing’ (JP, AG, DK)
- 5 *təxətəx* ‘be in the act of standing up, stand up from time to time’ (AG)
- 6 *tətəxiləx* ‘they are standing around’ (DK)
- 7 *titəxiləx* ‘the little guy is standing up’ (AG)
- 8 *təlitəxiləx* ‘the little guys are standing up’ (AG)

The first of these is the simple perfective and the usual word one elicits for ‘stand.’ Form 2 is clearly the plural perfective. Forms 3 and 4 were identified as progressive and plural progressive, although they do not exactly follow any pattern. Then AG gave form 5, which looks like a good progressive on the model *itəmɨwst* ‘chop its trunk,’ *itəməwst* (~ *itətəməwst*) ‘be chopping its trunk.’ (Note also *qʷəyiləx* ‘dance,’ *qʷəyətəx* ‘be dancing,’ although the stress in the progressive is still on the second vowel.) But if form 5 is the progressive, what then are forms 3 and 4? They may be, or once have been, duratives. Form 6 looks like a durative used for recreational activities, but it also looks like form 7, which is a diminutive (a diminutive of a durative?) with the usual diminutive /i/ appearing as /ə/. Form 8 is readily identifiable as the plural of form 7.

## 8

# Morphology of the Root 2: The Noun

Nouns contrast with verbs in that they may take the possessive affixes and are not (or not usually) inflected for the progressive aspect, while verbs (with a few exceptions) must be nominalized to take the possessives, and they are (with a few exceptions) inflected for the progressive aspect. Like verbs, nouns may have plural and diminutive forms, and a few nouns have what seem to be resultative forms. Noun roots differ also from verb roots in their usual shapes. (For verbs functioning as nouns, see §8.9).

### 8.1. TYPES

In composition, nouns fall into several types, depending on whether they are simple roots or roots with suffixes, the type of root and suffix, and whether they have the prefix *s-* nominalizer. These types are:

(1) *Simple bare nouns*. These are noun roots that are free forms, such as:

<i>tén</i> ‘mother’	<i>mónə</i> ‘child’
<i>céləx</i> ‘hand’	<i>qələm</i> ‘eye’
<i>íéləw</i> ‘arm’	<i>ʔéšx</i> ‘harbour seal’
<i>léləm</i> ‘house’	<i>íámən</i> ‘wall’
<i>qá?</i> ‘water’	<i>xét</i> ‘path’
<i>təx<sup>w</sup>ac</i> ‘bow’	<i>šcés</i> ‘island’

(2) *Simple s-nouns*. These are formed from what appear to be bound noun roots or roots with noun-like meanings, as in:

<i>sí<sup>θ</sup>ám</i> ‘bone’	<i>sšónə</i> ‘foot’
<i>swáyqe?</i> ‘male, man’	<i>sqéwθ</i> ‘potato’

<i>smé'nt</i> ‘rock, mountain’	<i>syát</i> ‘wood’
<i>scát'ǰ</i> ‘halibut’	<i>smáyəθ</i> ‘deer’
<i>stál'w</i> ‘river’	<i>syí'čəm</i> ‘sand’

These roots have not been recorded apart from these words and their derivatives. The shapes of roots of this and the preceding type are discussed below.

(3) *Derived s- nouns*. These are formed from verb roots, verb roots with grammatical affixes, or (rarely) adjectives with the prefix *s-* ‘nominalizer,’ as in:

<i>snét</i> ‘night’ (< <i>nét</i> ‘be night’)
<i>spí'w</i> ‘ice’ (cf. <i>pl'wət</i> ‘freeze it’)
<i>stáməx<sup>w</sup></i> ‘rain’ (< <i>táməx<sup>w</sup></i> ‘rain’)
<i>snás</i> ‘fat’ (< <i>nás</i> ‘fat, fatty’)
<i>syá'ys</i> ‘work’ (< <i>yá'ys</i> ‘work’)
<i>sk'íx</i> ‘name’ (cf. <i>k'íxət</i> ‘name him’)
<i>s'əłtən</i> ‘food’ (< <i>'əłtən</i> ‘eat’)
<i>s'í'əəm</i> ‘clothing’ (< <i>'í'əəm</i> ‘get dressed’)
<i>spə'héls</i> ‘wind’ (< <i>pá</i> ‘get blown,’ <i>-els</i> ‘activity’)

The semantic relationship between these nouns and the verbs they are derived from is discussed in §12.1.1.

(4) *šx<sup>w</sup>- nouns*. These are formed from verbs or adjectives with the compound prefix *šx<sup>w</sup>-* ‘oblique nominalizer (place of, time of, means of, reason for),’ as in:

<i>šx<sup>w</sup>'é'ǰəθ</i> ‘bed’ (< <i>'é'ǰəθ</i> ‘lie down’)
<i>šx<sup>w</sup>'əlí</i> ‘life’ (< <i>həlí</i> ‘alive’)
<i>šx<sup>w</sup>'k'ám'k'ə'm</i> ‘strength, power’ (< <i>k'ám'k'ə'm</i> ‘strong’)

See also §12.1.4.

(5) *Nouns with lexical suffixes*. There are a great variety of these; see §13.4.3.

## 8.2. SHAPES OF NOUN ROOTS

Noun roots differ from verb roots in their most common shapes and in having a greater variety of shapes. The most common shape of the noun root is CVCVC, while that of the verb root is CVC. Of a set of 273 noun roots pulled from my lexical file, just over half have the shape CVCVC, and if we add those of the shapes CV-RC and CV-C, which may have an underlying CVCVC shape, the total is nearly 60 percent. The next most common shapes are CVC (nearly 10 percent), CVCC (nearly 10 percent), CVCV, CVCCVC, and CCVC. There may be a few others.

Some, or even many, of the longer forms may, of course, consist of old roots and affixes no longer identifiable as such. The number of apparent CVCVC

roots ending in *-əm* and *-ən* suggest that in some instances these endings may be suffixes, perhaps *-əm* ‘intransitive’ and possibly *-ən* as a variant of *-tən* ‘instrument.’ But there are also a number of apparent CVCVC roots ending in *-eʔ*, *-aʔ*, *-ə́n̄*, *-əl̄*, *-ə́ȳ*, and *-ə́w̄*, suggesting that there may once have been some noun-forming process involving resonants or glottalized resonants at work on CVC roots.

The following are some examples of noun roots (or presumable noun roots), grouped by shape. (I am not counting the nominalizing prefix *s-*)

With the shape CVC are:

<i>spəx<sup>w</sup></i> ‘tripe’	<i>mén</i> ‘father’
<i>smək<sup>w</sup></i> ‘ball’	<i>tén</i> ‘mother’
<i>si<sup>θ</sup>ám</i> ‘bone’	<i>tín</i> ‘hummingbird’
<i>si<sup>θ</sup>ək<sup>w</sup></i> ‘bug, worm’	<i>séy</i> ‘wool, fur’
<i>xés</i> ‘sea lion’	<i>xét</i> ‘path, door’
<i>qáʔ</i> ‘water’	<i>qéq</i> ‘baby’
<i>qám</i> ‘kelp’	<i>sq<sup>w</sup>á<sup>θ</sup></i> ‘willow grouse’
<i>syát</i> ‘wood’	<i>swém</i> ‘horse clam’
<i>tél</i> ‘fathom’ (i.e., the length of the outstretched arms; cf. <i>təlét</i> ‘unfold it’)	

With the shape CVCV are:

<i>mánə</i> ‘child’ (kin term)	<i>mélə</i> ‘bait’
<i>si<sup>θ</sup>ənə</i> ‘sculpin’	<i>i<sup>θ</sup>áyə</i> ‘fur seal’
<i>səsə</i> ‘widgeon’	<i>sílə</i> ‘grandparent’
<i>sk<sup>w</sup>ámə</i> ‘ratfish’	<i>ləq<sup>w</sup>ə</i> ‘quiver, handbag’
<i>k<sup>w</sup>ələ</i> ‘belly’	<i>qəwə</i> ‘new dancer’s staff’
<i>sxənə</i> ‘foot, leg’	<i>x<sup>w</sup>íx<sup>w</sup>ə</i> ‘large red sea urchin’
<i>q<sup>w</sup>ále</i> ‘hemlock bough’	<i>swíwə</i> ‘eulachon’ (‘hooligan’)
<i>hámá</i> ‘pigeon’	<i>ʔéxə</i> ‘Canada goose’

With the shape CVCC are:

<i>smátx<sup>w</sup></i> ‘sculpin (sp.?)’	<i>méʔt</i> ‘lining of abdominal cavity of sturgeon’
<i>məlq<sup>w</sup></i> ‘uvula’	<i>íémx<sup>w</sup></i> ‘gooseberry’
<i>íáʔx<sup>w</sup></i> ‘grand fir’	<i>θík<sup>w</sup>t</i> ‘sea cucumber’
<i>i<sup>θ</sup>íqt</i> ‘flicker’	<i>i<sup>θ</sup>əl̄c</i> ‘scale (of fish or reptile)’
<i>séyq̄</i> ‘clay’	<i>sxámk<sup>w</sup></i> ‘fish-roe cheese’
<i>scátx̄</i> ‘halibut’	<i>scéxt</i> ‘stick of wood’
<i>k<sup>w</sup>ətíq̄</i> ‘frog’	<i>k<sup>w</sup>əl̄c</i> ‘dried herring’
<i>k<sup>w</sup>íʔx<sup>w</sup></i> ‘pitch’	<i>qélq</i> ‘rose hip’
<i>sqéwθ</i> ‘potato’	<i>qíw̄x̄</i> ‘steelhead’
<i>héwt</i> ‘rat’	<i>ʔéšx<sup>w</sup></i> ‘harbour seal’
<i>ʔéȳx̄</i> ‘crab’	<i>ʔéwk<sup>w</sup></i> ‘possessions’
<i>q<sup>w</sup>éxt</i> ‘root plot, garden, orchard’	

With the shape CCVC are:

*tq<sup>w</sup>ám* ‘thimbleberry’  
*ǰpét* ‘storage bag’  
*ǰléy* ‘shovelnose canoe’  
*k<sup>w</sup>síc* ‘cut-throat trout’  
*sqtán* ‘bow of canoe’

*stcé<sup>m</sup>* ‘weasel’  
*ǰsí p* ‘licorice fern root’  
*ǰcés* ‘island’  
*sk<sup>w</sup>qéq* ‘robin’

With the shape CVCVC are:

*spé<sup>?</sup>əθ* ‘black bear’  
*məθət* ‘Indian hemp’  
*másən* ‘gall’  
*smélək<sup>w</sup>* ‘hide shirt’  
*mécən* ‘black haw berry’  
*má<sup>?</sup>əq<sup>w</sup>* ‘larger bird’  
*smáq<sup>w</sup>a<sup>?</sup>* ‘great blue heron’  
*táməs* ‘sea otter, velvet’  
*té<sup>?</sup>ət* ‘harpoon head’  
*stáləw* ‘river’  
*íámən* ‘wall’  
*íéləw* ‘arm, wing’  
*íéq<sup>?</sup>* ‘salal berry’  
*θámən* ‘eyebrow’  
*sθáqəy* ‘sockeye’  
*st<sup>?</sup>ícəm* ‘hazelnut’  
*sé<sup>?</sup>əq* ‘brake-fern root’  
*stléwət* ‘herring’  
*stléwən* ‘sleeping mat’  
*ləwəx* ‘rib’  
*sčáta<sup>?</sup>* ‘leaf’  
*xéwəq* ‘carrot’  
*k<sup>w</sup>šx<sup>w</sup>əθ* ‘coho’  
*k<sup>w</sup>áləx<sup>w</sup>* ‘chum salmon’  
*k<sup>w</sup>áx<sup>w</sup>a<sup>?</sup>* ‘box’  
*sqəma<sup>?</sup>* ‘breast, milk’  
*sqéləx* ‘digging stick’  
*sqələw* ‘beaver’  
*qéməy* ‘adolescent girl’  
*ǰáca<sup>?</sup>* ‘lake’  
*sǰáyəs* ‘head’  
*sq<sup>w</sup>áméy* ‘dog’  
*sq<sup>w</sup>ələx<sup>w</sup>* ‘small bird’

*spísəc* ‘conifer cone’  
*máit<sup>?</sup>ət* ‘pus’  
*smələc* ‘horsefly’  
*mécən* ‘testicle’  
*méq<sup>?</sup>* ‘snow (on the ground)’  
*máq<sup>w</sup>əm* ‘bog’  
*smáyəθ* ‘deer, animal, meat’  
*támət* ‘red ochre’  
*stáləs* ‘spouse’  
*təx<sup>w</sup>ac* ‘bow’  
*stíwən* ‘living sibling’s child’  
*íáca<sup>?</sup>* ‘skewer for herrings’  
*stíwəq<sup>w</sup>* ‘fuller’s earth’  
*θáθən* ‘mouth’  
*t<sup>?</sup>éle<sup>?</sup>* ‘heart’  
*sák<sup>w</sup>əm* ‘whole bark’  
*sáx<sup>w</sup>əl* ‘grass’  
*sténəy* ‘woman’ (but cf. *lánət* ‘weave it’)  
*sléməθ* ‘fish club’  
*céləx* ‘hand’  
*sxəmén* ‘enemy, rival’  
*k<sup>w</sup>ásən* ‘star’  
*k<sup>w</sup>étən* ‘mouse’  
*k<sup>w</sup>ələw* ‘skin’  
*sk<sup>w</sup>šyəθ* ‘slave’  
*qələm* ‘eye’  
*qələx* ‘salmon eggs’  
*sqəməl* ‘paddle’  
*qəqí<sup>?</sup>* ‘gut’  
*xécət* ‘fireweed’  
*q<sup>w</sup>ə<sup>?</sup>áp* ‘crabapple’  
*q<sup>w</sup>ənəs* ‘whale’  
*syícəm* ‘sand’

*wénəm* ‘orphan’  
*ʔánəw* ‘tallow’  
*sʔáxʷaʔ* ‘butter clam’

*ʔíməθ* ‘grandchild’  
*sʔónəm* ‘harpoon shaft’  
*ʔéləx* ‘sibling, cousin of opposite sex’

With the shape CV·C are:

*spá:l* ‘raven’  
*slím* ‘sandhill crane’  
*qʷí:n* ‘ear’  
*hú:n* ‘pink (humpback) salmon’

*wí:l* ‘tule’  
*mí:t* ‘blue grouse’  
*kʷé:c* ‘dogfish’

Some, but not all, of these have an underlying shape //CVRVC// (see §1.5.6).

With the shape CV·RC are:

*kʷá:ní* ‘porpoise’  
*ʔé:yt* ‘lingcod’

*smé:nt* ‘stone, mountain’

These probably have an underlying shape //CVRəC// (see §1.5.3).

With the shape CVCCVC are:

*spət̚xʷəm* ‘lung’  
*məl̚xʷəl* ‘Indian plum’  
*síʔéʔqən* ‘cattail’  
*téwqəm* ‘mussel’  
*čáʔkʷaʔ* ‘skunk cabbage’  
*šáʔqən* ‘marten’  
*swíw̥ləs* ‘adolescent boy’  
*sčínkʷaʔ* ‘lightning snake’  
*skʷəlwəs* ‘co-parent-in-law, blood kin’s spouse’s blood kin’

*spét̚xən* ‘prairie, pasture’  
*méxcən* ‘louse’  
*sésqəc* ‘sasquatch’  
*láʔən* ‘dish’  
*kʷəmləxʷ* ‘root’  
*swəy̥qeʔ* ‘male, man’  
*sʔət̚qəy̥* ‘snake’  
*qíʔtaʔ* ‘swing’

With the shape CCVCC are:

*tqélč* ‘moon’  
*sθšáʔs* ‘Dolly Varden trout’

*sšxé:kʷ* ‘silverweed’

With the shape CVCVCV are:

*mášʷəyə* ‘navel’  
*sšəmálə* ‘small sea snail’

*smət̚əlí* ‘beaver-tooth dice game’  
*íʔəməkʷa* ‘kelp greenling (tommycod)’

With the shape CVCVCVC are:

*páxələqʷ* ‘yellow cedar’  
*təməqʷaʔ* ‘sole’  
*qʷəlítəq* ‘seagull’  
*yášʷələʔ* ‘eagle’

*sálaʔac* ‘house mat’  
*qəy̥íʔac* ‘elk’  
*syət̚əwaʔ* ‘wealth’

There are a few presently unanalyzable nouns of other shapes with four or more consonants, but it seems likely that these and a number of those above will eventually prove to be composed of roots and suffixes.

There are also a few nouns showing CVC reduplication with stress in the first vowel. Some of these have the *s-* prefix but most do not. A disproportionate number are names of animals and plants. Several may be imitative of sounds.

It is also possible that some of these are verb forms. The pattern  $C_1\acute{A}C_2C_1\text{ə}C_2$  is that of the plural progressive of the verb, as in *ták<sup>w</sup>ták<sup>w</sup>* ‘several are flying,’ from *ták<sup>w</sup>* ‘fly.’ Two or three of the words of this shape listed below may have this source, but three of the list definitely do not, since they are loans from Chinook Jargon (marked CJ). The pattern  $C_1\acute{\text{ə}}C_2C_1\text{ə}C_2$  is that of the dispositional form of the verb, which may be glossed as a noun, as in *qáñqáñ* ‘steal habitually, thief,’ from *qén* ‘steal.’ I have omitted identifiable dispositional forms from the list, but it may include others not identified.

With the shape  $C_1\acute{A}C_2C_1\text{ə}C_2$  are:

*músməs* ‘cow, bull’ (CJ)

*i<sup>θ</sup>ix<sup>w</sup>i<sup>θ</sup>ax<sup>w</sup>* ‘fishhawk’

*sq<sup>w</sup>ínq<sup>w</sup>əñ* ‘bead’

*xápxəp* ‘an unidentified kind of bird, said to whistle’ (cf. *xápəs* ‘whistle’)

*sx<sup>w</sup>éy<sup>w</sup>x<sup>w</sup>əy* ‘a cleansing ritual performed by masked dancers’

*tíntən* ‘bell, time o’clock’ (CJ)

*i<sup>θ</sup>íkí<sup>θ</sup>ək* ‘wagon, buggy’ (CJ)

With the shape  $C_1\acute{\text{ə}}C_2C_1\text{ə}C_2$  are:

*táq<sup>w</sup>təq<sup>w</sup>* ‘red snapper’

*šáx<sup>w</sup>šəx<sup>w</sup>* ‘oyster’

*qáx<sup>w</sup>qəx<sup>w</sup>* ‘tin’

*x<sup>w</sup>əñ<sup>w</sup>x<sup>w</sup>əñ* ‘bullroarer’

*q<sup>w</sup>əmq<sup>w</sup>əm* ‘bittern’ (probably this bird, said to be named for its call)

*i<sup>θ</sup>ax<sup>w</sup>i<sup>θ</sup>ax<sup>w</sup>* ‘stinging nettle’

*sq<sup>ə</sup>ət<sup>ə</sup>ət* ‘muskrat’

*xám<sup>w</sup>xám<sup>w</sup>* ‘flowering stalk of the horsetail’

*ʔəñəñ // ʔəñʔəñ //* ‘magpie’

### 8.3. PLURALS

Nouns referring to human beings all have plural forms, and the use of these forms seems to be obligatory. Nouns referring to body parts, a few animals, and some of the most important artifacts and other inanimate things have plurals that are commonly used. But plurals do not occur for all nouns referring to animals and inanimate things, and the use of most such plurals is optional. When asked for plural forms of names of animals, JP hesitated on several, gave forms that he said were probably correct, and added that they were seldom used. On others, he immediately said that there were no plurals. It seems also that the plural forms that are optional are more likely to be used for a group of the referent, while plural forms used regularly mean simply more than one. The plural of a few words means ‘kinds of’; for example, *máʔəq<sup>w</sup>* ‘larger bird’ (often glossed ‘duck’) has a plural *məməʔəq<sup>w</sup>* ‘different kinds of larger birds, mixed ducks’ (cf. English ‘fish, fishes’). Plurality can, of course, also be indicated by the verb.

As with verbs, plurality in nouns is marked by internal modification of the root in a variety of ways. Plurals may be marked by: (1) an infix *-l-*, with or without glottalization, and with the stress either preceding or following the infix, (2) CV reduplication, with the stress on either the first or the second vowel, (3) CVC reduplication, with the stress on either the first or the second vowel, or (4) a change in the vowel alone.

To some extent the type of plural marking in nouns is predictable from the shape of the root, but to a lesser extent than with the verbs. To some extent, too, the relationship between root shape and plural marking in the noun parallels that relationship in the verb. There are noun plural forms, however, that have no counterpart among verb plurals, although they may resemble other forms of the verb. I will point to similarities and differences in the presentation below.

There are questions that are not yet answerable. If verbs and nouns have different rules for forming plurals (as the data suggest), which rule applies to a noun derived from a verb root? If roots of different shapes follow different rules, when a full vowel appears as schwa in the presence of a lexical suffix that has this effect, is the plural based on the surface shape with schwa or on the underlying shape with the full vowel?

In the following presentation of plural forms, I have sorted by type of plural marker, merging nouns with roots of different shapes when they have similarly formed plurals.

### 8.3.1. With Infix *-l-*

These vary in where the stress falls and whether the *-l-* is glottalized. The types are:

(1) With the stress on the first vowel, the infix following it. Nearly all of the nouns that have plurals of this type have roots of the shape CAC-, that is, they have an initial consonant, a full vowel, and a second consonant, and whether there is more is not relevant. (Verbs with CAC roots also usually have plurals of this type and of similar subtypes.) There are four subtypes.

(1a) With the infix appearing as *-l̥-* unglottalized (CÁC- → CÁl̥C-)

<i>síʔám</i> ‘bone’	<i>síʔálam</i> ‘bones’
<i>síʔepáy</i> ‘snag’	<i>síʔélapáy</i> ‘snags’
<i>scéxt</i> ‘stick’	<i>scélx̥t</i> ‘sticks’
<i>sqéwθ</i> ‘potato’	<i>sqélw̥θ</i> ‘potatoes’
<i>šxʷáqʷaʔ</i> ‘sibling, cousin’	<i>šxʷálaqʷaʔ</i> ‘siblings, cousins’

If the root vowel is *i*, the plural has *e*.

<i>íʔikiʔək</i> ‘wagon’	<i>íʔéləkíʔək</i> ‘wagons’
<i>šxʷəmníkʷ</i> ‘living parent’s sibling’	<i>šxʷəmnéləkʷ</i> ‘living parent’s siblings’

(1b) With the infix as *-l̥-* (CÁC- → CÁl̥C). There seems to be nothing that distinguishes the roots of this set from the last.

*θάθən* ‘mouth’*kʷáxʷaʔ* ‘box’*qéməy* ‘teenage girl’*skʷíx* ‘name’*léctən* ‘knife’*θáləθən* ‘mouths’*kʷáłəxʷaʔ* ‘boxes’*qéləməy* ‘teenage girls’*skʷéləx* ‘names’ (AG)*łéləctən* ‘knives’

The last example is a derivative of a verb root; cf. *łícət* ‘cut it’ and its plural *łéʔəlčət* ‘cut it into slices.’

(1c) With *-l-* reordered as *-ʔəl-* (CÁC- → CÁʔəIC-. The schwa is often assimilated to the stressed vowel and sometimes, for some speakers, the glottal stop is then lost, resulting in a long vowel. In all of the roots that have plurals with this reordering, the second consonant may be identified as a coronal obstruent, but not all roots of this shape have plurals of this form; cf. *θάθən* ‘mouth’ in set (1b) above.

*sčáłtaʔ* ‘leaf’*xél* ‘path, door’*kʷásən* ‘star’*šácaʔ* ‘lake’*sʔáθəs* ‘face’*yásaqʷ* ‘hat’*mécən* ‘testicle’*pút* ‘boat’*snécəłtxʷ* ‘affine’*nécəwtxʷ* ‘house next door’*sʔəθnəc* ‘bay’*sčáʔalltaʔ* ‘leaves’*xéʔell* ‘paths, doors’*kʷáʔalsən* ‘stars’*šáʔəlcaʔ* ‘lakes’*sáʔalθəs* ~ *sáʔlθəs* ‘faces’ (JP)*yáʔalsaqʷ* ‘hats’*méʔəlcən* ‘testicles’*púʔəłt* ‘boats’*snéʔəlcəłtxʷ* ‘affines’*néʔəłcəwtxʷ* ‘houses next door’*sʔéłθnəc* ‘bays’

This last may belong here in spite of the vowel change. The root is probably  $\sqrt{ʔe\theta}$ - of unknown meaning (see §13.3), appearing with schwa before *-nəc* ‘bottom.’ (Cf. CAC verbs with *-nəxʷ* where the vowel appears as schwa in the perfective but in its full form in the progressive.)

(1d) With *-l-* following the vowel and no schwa (CVC- → CVIC-). Only the following have been noted, one with a full vowel and three with unstressed schwas:

*qéqələ* ‘baby’ (CC)*sqéqələ* ‘boy baby’ (JP)*məstəyəxʷ* ‘person’*stəqáyeʔ* ‘wolf’*šxʷməkʷəʔélə* ‘grave, family plot’*sqélqələ* ‘babies’ (JP)*məłstəyəxʷ* ‘persons’*stəłqáyeʔ* ‘wolves’*šxʷməłkʷəʔélə* ‘graveyard’

This last example may have a full vowel in the root; cf. *cmékʷeʔ* ‘participate in a funeral.’

(2) With the stress in the second vowel, following the infix. These are also mostly CAC roots but there seem to be fewer with plurals of this type. (There

are no verb roots noted with plurals of this type, but verb and noun diminutives commonly have this plural.)

(2a) With *-əl-* unglottalized (CVC- → CəIVC-)

<i>pítxən</i> ‘lizard, salamander’	<i>pəlítxən</i> ‘lizards, salamanders’
<i>músməs</i> ‘cow, bull’	<i>məlúsməs</i> ‘cows, cattle’
<i>stíqìw</i> ‘horse’	<i>stəlíqìw</i> ‘horses’
<i>sqéʔeq</i> ~ <i>sqéq</i> ‘junior sibling, cousin’	<i>sqələ́eq</i> ‘junior siblings, cousins’ (JP)
<i>máqsən</i> ‘nose’	<i>mələ́qsən</i> ‘noses’

(2b) With *-əl̥-* (CVC- → CəI̥VC-)

<i>sqéʔəq</i> ‘junior sibling, cousin’	<i>sqəl̥éʔəq</i> ‘junior siblings, cousins’ (CC)
<i>sǰ́éləqəm</i> ‘fierce being’	<i>sǰ́əl̥éləqəm</i> ‘fierce beings’

(2c) With *-əla-*, neither vowel stressed (C<sub>1</sub>əC<sub>2</sub>V̥- → C<sub>1</sub>ə<sub>1</sub>əC<sub>2</sub>V̥-). Nouns that have plurals of this form have an unstressed schwa as the first vowel, but not all nouns of this shape have plurals of this form; cf. (1d) above. (Verb forms that have this shape, e.g., some duratives and some resultatives, also have plurals of this type.)

<i>íʔəmén</i> ‘arrow [bone pointed?]’	<i>íʔələ́mən</i> ‘arrows’
<i>sxəmén</i> ‘enemy, rival’	<i>sxələ́mən</i> ‘enemies, rivals’
<i>kəpú</i> ‘coat’	<i>kələ́pú</i> ‘coats’
<i>kʷəšú</i> ‘pig’	<i>kʷələ́šú</i> ‘pigs’

The first of these probably has the root of *síʔám* ‘bone’ and the plural might be seen as a reduction of *síʔálam̥* ‘bones’; the others have roots of the shapes seen. The last two are loans from Chinook Jargon, suggesting that this plural formation is productive for words of this shape.

### 8.3.2. With CV Reduplication

These vary in stress and quality of the stressed vowel.

(1) With stress on the first vowel (C<sub>1</sub>V̇C<sub>2</sub>- → C<sub>1</sub>V̇C<sub>1</sub>əC<sub>2</sub>-). There are only a few nouns with plurals of this type. (There are no verbs recorded with plurals formed this way, but it is a common way of forming progressives.)

<i>síʔə́kʷ</i> ‘worm, bug’	<i>síʔə́síʔə́kʷ</i> ‘worms, bugs’
<i>qʷə́l̥ə</i> ‘bough (esp. hemlock)’ (JP)	<i>qʷə́sə́qʷə́l̥ə</i> ‘boughs’ (JP)
<i>qʷə́sə́qʷə́l̥ə</i> ‘hemlock’ (CC)	
<i>sə́qʷə́ləx</i> ‘small bird’	<i>sə́qʷə́sə́qʷə́ləx</i> ‘small birds’

(2) With stress on the second vowel (C<sub>1</sub>V̇C<sub>2</sub>- → C<sub>1</sub>əC<sub>1</sub>V̇C<sub>2</sub>-). There are a number of nouns with plurals of this type, falling into several subtypes. In nearly all instances, the second consonant is a resonant or a pharyngeal. (Among

verb plurals, there is a parallel in two roots with the shape RAH, but this is the common form of reduplication producing progressives of TAH roots.)

(2a) With no change in vowel. Most have the shape CAH.

<i>spéʔeθ</i> ‘black bear’	<i>spəpéʔeθ</i> ‘black bears’
<i>máʔaqʷ</i> ‘“duck” (larger bird)’	<i>mámáʔaqʷ</i> ‘several kinds of “ducks”’
<i>síʔéʔqən</i> ‘cattail’	<i>síʔəíʔéʔqən</i> ‘place where only cattails grow’
<i>láʔθən</i> ‘dish’	<i>ləláʔθən</i> ‘dishes’
<i>lá·k</i> ‘log (cut for a mill)’	<i>ləlá·k</i> ‘logs’
<i>qáʔ</i> ‘water’	<i>təmqaqáʔ</i> ‘freshet time’
<i>ká</i> ‘car’	<i>kəká·</i> ‘cars’ (JP) (DK gave <i>kəlá·</i> but JP rejected it)
<i>stíwən</i> ‘living sibling’s child’	<i>stətíwən</i> ‘living sibling’s children’
<i>sḱʷə́yəθ</i> ‘slave’	<i>sḱʷəkʷéyəθ</i> ‘slaves’ (“but seldom used” – JP)

(2b) With an initial resonant appearing initially as *h* and medially doubled, the vowel unchanged (RVC- → həRRVC-). As usual, following the prefix *s-*, the *h* is lost. (A similar appearance of R as *h* is seen in the progressives of verbs of the shapes RAH and RəC. See also [2e] below.)

<i>léləm̄</i> ‘house’	<i>həllələm̄</i> ‘houses’
<i>syá́ləxʷaʔ</i> ‘old person’	<i>səyyá́ləxʷaʔ</i> [sɪyáʔlaxʷaʔ] ‘old persons’
<i>swə́yqeʔ</i> ‘male, man’	<i>səwwə́yqeʔ</i> [suwə́yqeʔ ~ suwə́yqeʔ] ‘males, men’

(2c) With a vowel change from *ə* to *e*. Only one noun is recorded with a plural of this type: *mə́nə* ‘child, offspring,’ *mémə́nə* ‘children, offspring.’ (There is a parallel in the plurals of some verbs of the shape TəT.)

(2d) With a vowel change from *ə* to *i* (C<sub>1</sub>əC<sub>2</sub>- → C<sub>1</sub>əC<sub>1</sub>iC<sub>2</sub>-). Nearly all have the shape TəR- (obstruent-schwa-resonant). (No verbs are known to have plurals of this type, but verb roots with schwa may have resultatives with similar forms.)

<i>təməxʷ</i> ‘land, earth’	<i>tətíməxʷ</i> ‘countries, pieces of land’
<i>tənəqsən</i> ‘mallard’	<i>tətínəqsən</i> ‘mallards’
<i>kʷə́mləxʷ</i> ‘root’	<i>kʷəkʷímləxʷ</i> ‘bunch of roots’
<i>sḱʷəlwəs</i> ‘co-parent-in-law, blood relative’s affine’	<i>sḱʷəkʷílwəs</i> (once recorded <i>sḱʷəlḱʷílwəs</i> ) ‘co-parents-in-law, secondary affines’
<i>qələm</i> ‘eye’	<i>qəqíləm</i> ‘eyes’
<i>sqə́məl</i> ‘paddle’	<i>sqəqíməl</i> ‘paddles’
<i>sḱə́nə</i> ‘foot, leg’	<i>sḱəḱínə</i> ‘feet, legs’
<i>qʷə́qtén</i> ‘shoulder’	<i>qʷəqʷíqtən</i> ‘shoulders’
<i>θqét</i> ‘tree’	<i>θəθíqət</i> (JP), <i>θəqə́θqət</i> (CC) ‘trees’

The last two examples have roots of shapes different from those preceding, and are probably not simple nouns;  $q^wə́qtén$  may be composed of a root plus the suffix  $-tən \sim -tén$  ‘instrument,’ and  $θqét$  may be a verb form (see §7.7.6).

(2e) With an initial resonant appearing as  $h$  initially in the plural and with a change of the vowel from  $ə$  to  $i$  ( $Rə́C- \rightarrow hə́RíC-$ ). Again, following  $s-$  the  $h$  is lost. (There is one wholly irregular verb,  $nə́yəm$  ‘laugh,’ that has the plural resembling this type.)

$yə́x^wə́lə$ ‘eagle’	$hə́yíx^wlə$ ‘eagles’
$smə́yəθ$ ‘deer, animal, meat’	$sə́míyəθ$ ‘deer (pl.)’
$smə́q^wə́$ ‘great blue heron’	$sə́míq^wə́$ ‘great blue herons’
$snə́x^wə́l$ ‘canoe’	$sə́níc^wə́l$ ‘canoes’
$swə́q^wə́l$ (JP), $swə́w^wə́l$ (CC) ‘mountain-goat wool blanket’	$sə́wíc^wə́l$ ‘mountain-goat wool blankets’ (AG)
$syə́wən$ ‘possessing song’	$sə́yíwən$ [siʔyíwən] ‘different kinds of possessing songs’

(3) In a word beginning with two consonants, reduplication of the first separated by an unstressed schwa ( $C_1C_2\acute{V}- \rightarrow C_1ə́C_1C_2\acute{V}-$ ). Only one example has been recorded:  $tə́cəl̩mə́x^w$  ‘wild animal,’  $tətə́cəl̩mə́x^w$  ‘all kinds of wild animals’ (CC).

### 8.3.3. With CVC Reduplication

These vary with stress and vowel quality.

(1) With stress on the first vowel ( $C_1\acute{V}C_2- \rightarrow C_1\acute{V}C_2C_1ə́C_2-$ ). Only one example has been recorded:  $sə́pə́q$  ‘white patch’ (on the skin; cf.  $pə́q$  ‘white’),  $sə́pə́qə́pə́q$  ‘white patches.’ (Verbs of the shape CAC have plural progressives of the shape  $C_1\acute{A}C_2C_1ə́C_2$  and dispositional-iteratives of the shape  $C_1ə́C_2C_1ə́C_2$ .)

(2) With the stress in the second vowel ( $C_1VC_2- \rightarrow C_1ə́C_2C_1\acute{V}C_2-$ ). There are a number of nouns with plurals of this type, all so far recorded having a resonant as second consonant and all but one with a full vowel. Not all nouns of this shape have plurals of this type, however. (Two CAR verbs and a number of  $Cə́C$  verbs have plural perfectives formed this way.)

$stámə́x$ ‘warrior’	$stə́mtámə́x$ ‘warriors’
$stáləs$ ‘spouse’	$stə́ltáləs$ ‘spouses’
$stáləw$ ‘river’	$stə́ltáləw$ ‘rivers’
$íələw$ ‘arm, wing’	$íə́líələw$ ‘arms, wings’
$íámən$ ‘wall (of house)’	$íə́míámən$ ‘walls’
$sílə$ ‘grandparent, etc.’	$sə́lsílə$ ‘grandparents, etc.’
$θámən$ ‘eyebrow’	$θə́mθámən$ ‘eyebrows’
$sténəy$ ‘female, woman’	$stə́nténəy$ ‘females, women’
$ǰímən$ ‘tendon’	$ǰə́mǰímən$ ‘tendons’
$cələx$ ‘hand’	$cə́lcələx$ ‘hands’

<i>šx<sup>w</sup>šmācən</i> ‘fisher (the animal)’	<i>šx<sup>w</sup>əmx<sup>w</sup>šmācən</i> ‘fishers’
<i>šéləw</i> ‘spoon’	<i>šəlšéləw</i> ‘spoons’
<i>wénəm</i> ‘orphan’	<i>wənwénəm</i> ‘orphans’
<i>?íməθ</i> ‘grandchild, etc.’	<i>?əmíməθ</i> ‘grandchildren, etc.’
<i>?éləx</i> ‘sibling of opposite sex’	<i>?əléləx</i> ‘siblings of opposite sex’

The following nouns with long vowels have underlying CAR shapes and have plurals of this type with the long vowel retained in the plural.

<i>spá:l //spáləl//</i> ‘raven’	<i>spəl pá:l</i> ‘ravens’
<i>smént //sménət//</i> ‘stone, mountain’	<i>smən mént</i> ‘stones, mountains’

The following probably have underlying CəRəR shapes (see §1.5.6), but their plurals are of the same type.

<i>q<sup>w</sup>í:n</i> ‘ear’	<i>q<sup>w</sup>ənq<sup>w</sup>í:n</i> ‘ears’
<i>wí:l</i> ‘tule’	<i>x<sup>w</sup>wəlwí:lətəp</i> ‘place where only tules grow’

(3) With stress on a later vowel

<i>spəlq<sup>w</sup>í<sup>θ</sup>e?</i> ‘dead person’	<i>spəl pəlq<sup>w</sup>í<sup>θ</sup>e?</i> ‘dead persons’
<i>səmáye?</i> ‘bee, wasp’	<i>səmsəmáyə?élə</i> ‘bees’ or wasps’ nest’
<i>sq<sup>w</sup>áméy</i> ‘dog’	<i>sq<sup>w</sup>əmq<sup>w</sup>áméy</i> ‘dogs’

### 8.3.4. With Vowel Change Only

There are a few nouns with plurals of this type. They are not necessarily the products of the same process and are better examined one by one.

(1) The plural of *syéye* (also recorded *syéye?*) ‘friend, relative’ (from *yéyá* ~ *yéye?* ‘tightly bound, secure,’ that is, ‘someone to whom one is bound’) is phonetically [siyéyə], which is probably /syəyéyə/, formed by CV reduplication.

(2) The plural of [si<sup>?</sup>ém] ‘rich person, leader, lord, lady, Sir, Ma’am’ is [si<sup>?</sup>ém]. These are probably /səyéém/ and /səyəyéém/, the plural again formed by CV reduplication. The word looks as though it might be the resultative form of an unrecorded root \*yəm or \*ye? with the suffix -əm. Compare /səyéém/ and the plural /səyəyéém/ with *səmé?* ‘removed’ and its plural *səmémé?*, the resultatives of the root of *mé?x* ‘remove it’ (see §7.7.2). However, the word exists as a cognate or loan in several other languages in the region, namely Squamish *si<sup>?</sup>ám?*, Northern Straits *si<sup>?</sup>ém*, Lushootseed *si<sup>?</sup>áb*. Kuipers (1967, 374) suggests that the Squamish *si<sup>?</sup>ám?* is from *hi<sup>?</sup>ám?* ‘return home’ from the root  $\sqrt{ham}$ , *həm?* ‘be covered, come home’ (cognate of Musqueam *?ámí* ‘come’), inviting comparison with Latin *dominus*. Bates et al. (1994, 14) identify the Lushootseed *si<sup>?</sup>áb* as a nominalization of *?i<sup>?</sup>áb* glossed ‘wealth’ and as “an endearing term of address to a little boy,” but they give no example of the usage of *?i<sup>?</sup>áb* with the meaning ‘wealth,’ their evidence for this gloss evidently being

simply a verb *ʔiʔabil* ‘become wealthy’ (cf. Musqueam *səyámθat* ‘get rich, become a rich person’).

(3) The plural of *spəl̥x̥ən* ‘prairie, pasture’ is *spé̌l̥x̥ən* ‘prairies, pastures.’ It seems possible that the long vowel in the plural is the result of the loss of an infix *-l-*, the underlying form being *//spəl̥l̥x̥ən//*. If so, the pattern does not exactly match any of those recorded.

(4) The plural of *swíw̥l̥əs* ‘teen-age boy, young man’ is *swáw̥l̥əs*. The singular may be in origin the diminutive of a form *\*swál̥əs*, compare Lushootseed *swəlús* ‘young man of noble parentage’ (Bates et al. 1994, 247). Following the pattern of *snəx̥w̥ət* ‘canoe’ and *snín̥x̥w̥ət* ‘little canoe’ (see §8.4.2. below), we get *swíw̥l̥əs*. The plural is formed as in *snə́n̥n̥əx̥w̥ət* ‘little canoes,’ being *//swə́w̥l̥əs//* with the usual metathesis of the resonant and schwa and the two adjacent schwas producing a long full vowel.

(5) The plural of *scəwtét* ‘man’s sister’s husband, man or woman’s child’s spouse’ is *sciwtét*. I cannot explain this apparent irregularity.

### 8.3.5. Suppletion

There is one instance of this, in which the plural has another plural form: *sʔíʔqət* ‘child,’ *stéʔex̥w̥ət* ‘children,’ *stəwíx̥w̥ət* ‘bunch of children, many children.’ The form of the singular suggests that it is the diminutive of an unrecorded *\*sʔəqət* (see §8.4.2.), probably from the root of *ʔəqíl* ‘give birth.’ The plural is clearly from a different root. The third form is hard to explain. It may be a unique example of a different kind of plural. The terms denote ‘child’ and ‘children’ referring to life status, not to kinship (see §21.1.1).

## 8.4. DIMINUTIVES

Like plurals, diminutive forms are not available for all nouns. Those for which diminutives have been recorded include terms for persons, body parts, animals, artifacts, and natural features, but the list is not long. Again, as with plurality, a diminutive sense can also be expressed in the verb.

It seems likely that speakers vary in their use of diminutive forms. CC and DK produced them in elicitation more freely than JP and, I believe, used them more often. This may reflect a sex difference; women may use diminutives more than men do. Diminutive forms not only express the sense of smallness but can also convey a sense of endearment. They are used when speaking about and to children. A little girl may be called *tétən̥* ‘little mother’ (DK’s father called her this) and a little boy *mémən̥* ‘little father.’ Persons feeling close use diminutives to one another. In response to a diminutive used to her, DK used the diminutive of *swétə* ‘sweater’:

- (a) ʔi      cən      wəl̥-yə-hám̥əx                      θə      nə-swéwtə. (DK)  
 AUX    I            already-along-be.removing    ART    my-sweater(DIM)  
 ‘I am already taking off my little sweater.’

And they are used in speaking of little animals. Someone, DK remembered, after looking into a nest of baby mice, said:

- (b) ḫéwqəm tə qəqəlám̄s i səséʔstxʷəs tə məlímqsəns. (DK)  
 ḫéwqəm tə qəqəlám̄-s ʔəȳ səséʔ-stəxʷ-əs tə  
 be.glittering ART eye(DIM.PL)-3POS and be.rising-CAUS-3TR ART  
 məlímqsən-s  
 nose(DIM.PL)-3POS

‘Their little eyes were glittering and they were lifting up their little noses.’

Probably English with ‘little eyes’ and ‘little noses’ does not convey the feeling of the Halkomelem diminutives.

When CC could not produce a diminutive for snake, she suggested it was because snakes are not “cute.” Anyway, one can refer to the young of an animal simply by suffixing *-aʔl* ‘young’ to the uninflected form of the name. Occasionally this suffix occurs with diminutive forms.

Diminutives can also belittle. In relating a bit of gossip, a speaker referred, a bit sarcastically, to a married woman’s secret lover as her *stáʔtləs* ‘little husband.’

Used in speaking of oneself, diminutives can express humility – real or required by etiquette. About 1917, Herman Guerin was instructed to begin a speech at a potlatch-like event with (c).

- (c) qʷəl-st-ámə cən ceʔ tə́nə ʔé-nθə sisləwəʔ ʔəθkʷəkʷəyəθ. (HG)  
 qʷəl-st-ámə cən ceʔ tə́nə ʔé-nθə sisləwəʔ  
 speak-COM-you(PL) I FUT this I poor(DIM)  
 ʔəT-skʷəkʷəyəθ  
 your-slave(DIM)

‘I, your poor little slave, will speak to you.’

Diminutives are formed in far fewer ways than are plurals. They are nearly all produced by reduplication of the first consonant. A schwa in the root generally becomes *i* in the diminutive, a repeated resonant is often glottalized, and a glottal stop may follow a full vowel.

#### 8.4.1. With C<sub>1</sub> Reduplication and No Vowel Change

The nouns that follow this rule all have a full vowel in the root or base form. All but a few of this shape follow this rule.

(1) With no glottal stop (C<sub>1</sub>ÁC<sub>2</sub>- → C<sub>1</sub>ÁC<sub>1</sub>C<sub>2</sub>-). A resonant may be glottalized in the diminutive.

*pút* ‘boat’  
*spún* ‘spoon’  
*pús* ‘cat’  
*mén* ‘father’

*púpt* ‘little boat’  
*spúpə́n* ‘little spoon’  
*púps* ‘little cat, kitten’  
*mémə́n* ‘little father’

*smé'nt* //sménət// ‘stone’  
*máqʷəm* ‘bog’  
*tén* ‘mother’  
*síʰám* ‘bone’  
*céləx* ‘hand’  
*skʷáyeʔ* ‘squirrel’  
*kʷéitən* ‘mouse’  
*kʷáxʷaʔ* ‘box’  
*swétə* ‘sweater’

*smé'nnət* ‘little stone’  
*mámqʷəm* ‘little bog’  
*tétən* ‘little mother’  
*síʰáíʰəm* ‘little bone’  
*cécləx* ‘little hand’  
*skʷákʷyeʔ* ‘little squirrel’  
*kʷékʷitən* ‘little mouse’  
*kʷákʷxʷaʔ* ‘little box’  
*swéwtə* ‘little sweater’

(2) With a glottal stop after the vowel (C<sub>1</sub>A- → C<sub>1</sub>AʔC<sub>1</sub>-)

*scá'taʔ* ‘leaf’  
*xét* ‘path, road, door’  
*ǰácaʔ* ‘lake’  
*íʰíkiʰik* ‘wagon, etc.’  
*stáləw* ‘river’

*scáʔ'c'taʔ* ‘little leaf’  
*xéʔxt* ‘little path’  
*ǰáʔ'ǰcaʔ* ‘little lake’  
*íʰíʔíʰíkiʰik* ‘baby buggy’ (JP)  
*stáʔ'tləw* (JP), *státələw* (CC) ‘creek’

In the following, after the glottal stop, the expected sequence of two identical consonants is reduced to one: *θáʔθən* ‘mouth,’ *θáʔθən* ‘little mouth.’

#### 8.4.2. With C<sub>1</sub> Reduplication and Vowel Change

(1) Without glottalization (C<sub>1</sub>ə-, C<sub>1</sub>- → C<sub>1</sub>iC<sub>1</sub>-)

*páwəy* ‘flounder’  
*máqsən* ‘nose’  
*smáqʷaʔ* ‘heron’  
*smáyəθ* ‘deer’  
*táməxʷ* ‘earth, land’  
*tánəqsən* ‘mallard’  
*táxʷθəl* ‘tongue’  
*snəxʷəl* ‘canoe’  
*ləmətú* ‘sheep’

*pí'pəwəy* ‘little flounder’  
*mímqsən* ‘little nose’  
*smímqʷaʔ* ‘little heron’  
*smímáyəθ* ‘fawn, little deer’  
*títməxʷ* ‘little piece of land’  
*títnəqsən* ‘little mallard’  
*títxʷθəl* ‘little tongue’  
*snínxʷəl* ‘little canoe’  
*lílmətú* ‘little sheep’

In the next two examples, a final *-nə* in the simple form becomes *-neʔ* in the diminutive, perhaps reflecting a historically earlier form of the word; cf. *NStr ǰánəʔ* ‘child’).

*mánə* ‘child (kin term)’  
*sǰánə* ‘foot’

*mímneʔ* ‘little child’  
*sǰí'ǰneʔ* ‘little foot’

The following have a shift in stress from the second vowel in the simple form to the first in the diminutive:

*sqʷəméy* ‘dog’  
*θqét* ‘tree’

*sqʷ'íqʷmeý* ‘little dog, puppy’  
*θíθqət* ‘little tree’

*ǰcés* ‘island’  
*sí<sup>θ</sup>ǰám* ‘drop’

*ǰíǰcəs* ‘little island’  
*sí<sup>θ</sup>í<sup>θ</sup>ǰəm* ‘little drip’ (AG)

(2) With a glottal stop after the *i* ( $C_1ə- \rightarrow C_1i^?C_1-$ )

*sθǰqǰy* ‘sockeye’  
*sí<sup>θ</sup>ǰk<sup>w</sup>* ‘bug, worm’  
*čsély* ‘Douglas-fir’

*sθí<sup>?</sup>θqǰy* ‘little sockeye’  
*sí<sup>θ</sup>í<sup>?</sup>í<sup>θ</sup>k<sup>w</sup>* ‘little bug, little worm’  
*čí<sup>?</sup>čsǰy* ‘little Douglas-fir’ (CC)

### 8.4.3. With CV Reduplication

There are a few words in which  $C_1Á-$  is reduplicated  $C_1ÁC_1ə-$ :

*sčéxt* ‘stick’  
*sílǰ* ‘grandparent, etc.’  
*yásaq<sup>w</sup>* ‘hat’

*sčéčǰxt* ‘little stick’  
*sísǰǰ* ‘grandpa, grandma (address)’  
*yá·y<sup>a</sup>saq<sup>w</sup> // yá·y<sup>a</sup>saq<sup>w</sup>//* ‘little hat’

There are a few words in which an unstressed schwa is reduplicated along with the first consonant:

*səmáýe?* ‘bee, wasp’  
*spǰlq<sup>w</sup>í<sup>θ</sup>e?* ‘dead person’  
*x<sup>w</sup>ənítəm* ‘White person’

*səsəmáýe?* ‘little bee, little wasp’  
*spǰpǰǰlq<sup>w</sup>í<sup>θ</sup>e?* ‘screech owl’  
*x<sup>w</sup>ǰx<sup>w</sup>ənítəm* ‘White child’

There are a few words in which a stressed schwa is replaced by *i* or *i?*:

*k<sup>w</sup>ǰlǰw* ‘skin’  
*s<sup>k</sup><sup>w</sup>ǰyǰθ* ‘slave’

*k<sup>w</sup>í<sup>k</sup><sup>w</sup>ǰlǰw* ‘little skin’  
*s<sup>k</sup><sup>w</sup>í<sup>k</sup><sup>w</sup>ǰyǰθ* (JP), *s<sup>k</sup><sup>w</sup>ǰk<sup>w</sup>ǰyǰθ* (AG, HG)  
 ‘little slave, small pet animal’

*x<sup>w</sup>ǰlmǰx<sup>w</sup>* ‘Indian, tribe’

*x<sup>w</sup>í<sup>x</sup><sup>w</sup>ǰlmǰx<sup>w</sup>* ‘little Indian’

There are also a few diminutives formed in unique ways. It will be better to consider these after the diminutive plurals.

## 8.5. DIMINUTIVE PLURALS

Diminutives of nouns are pluralized either with an infix *-l-* or with a vowel change.

### 8.5.1. With Infix *-l-*

Most nouns with diminutives of type 1 (those with an original full vowel) and some nouns of type 2 (those with schwa replaced by *i*) have diminutive plurals with *-ǰl-* preceding the vowel:  $C_1ÁC_1- \rightarrow C_1ǰlÁC_1-$ . I will list base forms (left column), as well as diminutives (middle column) and diminutive plurals (right column), but give glosses for the uninflected forms only.

*pús* ‘cat’  
*smé<sup>n</sup>t* ‘rock’  
*célǰx* ‘hand’

*púps*  
*smé<sup>n</sup>nǰt*  
*céclǰx*

*pǰlúps*  
*smǰlé<sup>n</sup>nǰt*  
*cǰléclǰx*

<i>sk<sup>w</sup>áye?</i> ‘squirrel’	<i>sk<sup>w</sup>ák<sup>w</sup>ye?</i>	<i>sk<sup>w</sup>alák<sup>w</sup>ye?</i>
<i>páwəy</i> ‘flounder’	<i>pí páwəy</i>	<i>pəli páwəy</i>
<i>máqsən</i> ‘nose’	<i>mímqsən</i>	<i>məlimqsən</i>
<i>táməx<sup>w</sup></i> ‘land’	<i>títməx<sup>w</sup></i>	<i>təlitməx<sup>w</sup></i>

In the next, English provided the base form:

skiff	<i>skík f</i> ‘skiff’	<i>skəlík f</i> ‘skiffs’
-------	-----------------------	--------------------------

In the next, no diminutive singular has been recorded:

<i>sk<sup>w</sup>téy</i> (JP), <i>sk<sup>w</sup>téy</i> (CC) ‘little-neck clam’	—	<i>sk<sup>w</sup>alík<sup>w</sup>téy</i> ‘small little-neck clams’
--	---	---

In the next, the *-l-* of the plural is glottalized:

<i>k<sup>w</sup>éiə́n</i> ‘mouse’	<i>k<sup>w</sup>é́k<sup>w</sup>iə́n</i> ‘little mouse’	<i>k<sup>w</sup>ə́lé́k<sup>w</sup>iə́n</i> ‘little mice’
-----------------------------------	--	--

If a glottal stop appears in the diminutive, it also appears in the diminutive plural:

<i>scáta?</i> ‘leaf’	<i>scá’c̣ta?</i> (dim.)	<i>scələ’c̣ta?</i> (dim. pl.)
<i>xét</i> ‘road’	<i>xé’xt</i> (dim.)	<i>xələ’xt</i> (dim. pl.)

In the next three, a glottal stop appears in the plural although there is none in the singular:

<i>scéxt</i> ‘stick’	<i>scé’c̣xt</i> (dim.)	<i>scələ’c̣xt</i> (dim. pl.)
<i>θqét</i> ‘tree’	<i>θíθqət</i> (dim.)	<i>θəli’θqət</i> (dim. pl.)
<i>íewət</i> ‘shell’	<i>íé’əwət</i> (dim.)	<i>íələ’íwət</i> (dim. pl.)

### 8.5.2. With Vowel Change

Some nouns that have schwa in the base form replaced by *i* in the diminutive have a diminutive plural in which the *i* is replaced by schwa. There may also be another schwa before  $C_2$ . The rule is  $C_1iC_1C_2- \rightarrow C_1əC_1(ə)C_2-$ .

<i>ǰcəs</i> ‘island’	<i>ǰíǰcəs</i> ‘islet’	<i>ǰəǰəcəc</i> ‘islets’
<i>sq<sup>w</sup>əméy</i> ‘dog’	<i>sq<sup>w</sup>íq<sup>w</sup>məy</i> ‘little dog’	<i>sq<sup>w</sup>əq<sup>w</sup>əməyəl</i> ‘puppies’
<i>q<sup>w</sup>téy</i> ‘driftwood log’	—	<i>q<sup>w</sup>əq<sup>w</sup>téy</i> ‘scraps of driftwood’

If  $C_1$  is a resonant, it may be doubled after the stress:

<i>sməyəθ</i> ‘deer’	<i>smíməyəθ</i> (dim.)	<i>sməmməyəθ</i> (dim. pl.)
<i>snəx<sup>w</sup>ət</i> ‘canoe’	<i>snínx<sup>w</sup>ət</i> (dim.)	<i>snənnəx<sup>w</sup>ət</i> (dim. pl.)

### 8.6. PROBLEMATIC DIMINUTIVES

There are a dozen or so nouns that have diminutive or diminutive plural forms that are irregular enough to call for special comment and, in several instances,

to suggest a reinterpretation of the base form. I list these here followed by their plural, diminutive, and diminutive plural forms, with a dash where no form has been recorded.

(1) *síʰám* ‘bone,’ *síʰálám* (pl.), *síʰátʰám* (dim.), *íʰíʰálám* (CC) (dim. pl.). The diminutive plural may be a diminutivized plural rather than the usual pluralized diminutive. The final full vowel and missing *s-* are not explainable.

(2) *qálám* ‘eye,’ *qəqílám* (pl.), —, *qəqálám* (DK) (dim. pl.). The diminutive plural is similar to (1) in the final vowel.

(3) *máʔəq* ‘duck,’ *məməʔəq* (pl.), *míʔəq* (dim.), *məlíməq* (dim. pl.). The diminutive suggests that the base may be //máʔəq//. The diminutive plural is regularly formed from the diminutive.

(4) *lélám* ‘house,’ *həllélám* (pl.), *lílám* (dim.), *həlíləm* (CC), *hələlíləm* (JP) (dim. pl.). The plural implies a base //lélám//, but the diminutive implies a base //lím//. The diminutive plural could have the same base as the plural and the stress and/or vowel pattern of (1) and (2).

(5) *sʰéləqəm* ‘fierce thing,’ *sʰəléləqəm* (pl.), *sʰíʔʰələqəm* (dim.), *sʰəʰəléləqəm* (dim. pl.). CC identified the Chilliwack as *sʰéʔéləqəm*, probably //sʰəʔéləqəm//. Such a base would account for the Musqueam diminutive and diminutive plural forms.

(6) *sʔáθəs* ‘face,’ *sʔáʔəlθəs* (pl.), *sʔáθás* (JP), *sʔáʔθəs* (DK) (dim.). The diminutive form given by JP seems to be the product of nothing but a shift in stress. It has no parallel, unless it is in (7). A diminutive plural was not recorded.

(7) *spáí* ‘raven,’ *spəl páí* (pl.), *spəlál* (dim.) ‘crow,’ *spəlápəlí* (dim. pl.) ‘crows.’ The long vowel in ‘raven’ is probably the result of the loss of the first of two identical resonants (see §1.5.6). This is nicely reflected in the diminutive plural; *spəlápəlí* implies a diminutive *\*spápəlí*, which in turn implies a base *\*spáləl*, which is what, with the loss of the medial resonant, became *spáí*. The word *spəlál* ‘crow,’ however, does not fit into this sequence. As a diminutive of ‘raven,’ if it is, it must be the product of the same rule that produced JP’s diminutive of ‘face’ (6).

(8) *qʷíʔn* ‘ear,’ *qʷənqʷíʔn* (pl.), *qʷíqʷíʔn* (CC), *qʷíqʷnən* (JP) (dim.), *qʷəlíqʷíʔn* (CC) (dim. pl.). CC’s diminutive is the product of CV reduplication but with the stress on the second vowel, which is not usual. JP gave his diminutive during elicitation, saying he had never heard the word used but it would be *qʷíqʷnən*. This form, if produced by the usual rule, implies a base *\*qʷnən*, which is in fact ‘ear’ in the Nanaimo dialect and no doubt what became, through loss of the medial resonant, the Musqueam *qʷíʔn*.

(9) *spəlʔən* ‘prairie,’ *spéʔʔən* (pl.), *spéptʔən* (dim.), *spələptʔən* (dim. pl.). As indicated under plurals, the long vowel in the plural may be the product of the loss of an infix *-l-*. On the other hand, the diminutive form implies a short full vowel in the base.

## 8.7. RESULTATIVE FORMS

There are several words formed from nouns with a prefix *s-* and meaning ‘possessing’ or having a meaning similar to that of an English past participle used adjectivally; for example, from *télə* ‘money’ we have *stétələ* ‘having money, monied.’ Some, though not all, of these resemble the resultative forms of verbs and so I am tentatively identifying them as resultative forms of nouns and the prefix as *s*<sub>2</sub> ‘resultative.’

A small set (of four so far) are formed from nouns that have not undergone any internal modification. The nouns appear below on the left and their resultative forms on the right.

<i>méxcə́n</i> ‘louse’	<i>sméxcə́n</i> ‘lousy’
<i>k<sup>w</sup>ǰlǎ</i> ‘belly’	<i>sk<sup>w</sup>ǰlǎ</i> ‘pot-bellied’
<i>qǎnəx<sup>w</sup></i> ‘gullet’	<i>sqǎnəx<sup>w</sup></i> ‘greedy’
<i>i<sup>θ</sup>ǰystən</i> ‘antler’	<i>si<sup>θ</sup>ǰystən</i> ‘buck with antlers’

These might, without too great a stretch, be glossed ‘loused,’ ‘bellied,’ ‘gulletted,’ and ‘antlered.’ The first of these has a diminutive, *smímxcə́n* ‘lousy little thing,’ from *mímxcə́n* ‘little louse.’

In the others recorded, the noun undergoes internal changes (reduplication, stress shift, etc.) resembling those we see in the resultative forms of verbs (see §7.7).

<i>smélǎk<sup>w</sup></i> ‘warrior’s hide shirt’	<i>smémǎlǎk<sup>w</sup></i> ‘wearing a warrior’s shirt’
<i>méqe?</i> ‘fallen snow’	<i>sméməqe?</i> ‘all snowy’
<i>télə</i> ‘money’	<i>stétələ</i> ‘having money’ (DK)
<i>téctən</i> ‘knife’	<i>stétəctən</i> ‘armed with a knife’ (AG)
<i>ǰímən</i> ‘tendon’	<i>sǰíǰəmən</i> ‘powerful, muscular’
<i>k<sup>w</sup>áx<sup>w</sup>a?</i> ‘box’	<i>sk<sup>w</sup>áx<sup>w</sup>k<sup>w</sup>ax<sup>w</sup>a?</i> ‘boxed (pl.)’ <sup>1</sup>
<i>qá?</i> ‘water’	<i>sqəqá?</i> ‘watery, thin (as soup)’
<i>tǎməx<sup>w</sup></i> ‘earth’	<i>stəmíx<sup>w</sup></i> ‘dirty (as clothes)’
<i>mǎ́nǎ</i> ‘child’	<i>sǎ́mné?</i> ‘having a child, one who has a child’
<i>snǎx<sup>w</sup>ǎt</i> ‘canoe’	<i>sǎ́nx<sup>w</sup>é́t</i> ‘one who has a canoe’
<i>sk<sup>w</sup>ǰyǎθ</i> ‘slave’	<i>sk<sup>w</sup>ǰyǎθ</i> ‘one who has a slave’

There is also a jokingly produced hybrid form: *skík f* ‘skiff,’ *skík ft* ‘skiffed, having a skiff’ (DK). Here the final *-t* may be *-t* ‘stative’ or may be the English *-ed*.

The following have been recorded as verbs only, the first formed with *x<sup>w</sup>ǎ* ‘become’ and the second with *-stəx<sup>w</sup>*, ‘causative,’ both affixes that are commonly used with resultatives of verbs:

1 So recorded, the second vowel may be a schwa echoing the others.

*kʷɪʔxʷ* ‘pitch’                      *xʷəs kʷəʔɪxʷ* ‘become pitched up’  
*ləsék* ‘bag, sack’                      *sliləsékstəxʷ* ‘have it bagged’

There are perhaps semantic limits only on what nouns can have resultative forms. Not enough examples have yet been collected to determine whether they are formed in ways altogether parallel to the formation of resultatives of verbs.

### 8.8. THE INFLECTION OF VERBS DERIVED FROM NOUNS

Nouns may be used to produce verbs by means of several prefixes, among them *c-* ‘get, make, do,’ *t-* ‘partake,’ *txʷ-* ‘buy.’ These verbalized nouns may have progressive forms, as in:

- (a) *ʔi cən txʷ-ɬéʔɬəçtən.* (AG)  
 AUX I buy-knife(PROG)  
 ‘I am buying a knife.’ (cf. *ɬéçtən* ‘knife’)
- (b) *ʔi cən txʷ-séʔpləl.* (AG)  
 AUX I buy-bread(PROG)  
 ‘I am buying bread.’ (cf. *səplil* ‘bread’)
- (c) *ni txʷ-kəká· kʷθə John.* (AG)  
 AUX buy-car(PROG) ART John  
 ‘John is buying a car.’ (cf. *ká·* ‘car’)

Again, however, not enough examples have yet been collected to determine whether these progressives are formed in ways altogether parallel to the formation of progressives of verbs, or whether there are fuller paradigms.

### 8.9. VERBS THAT ACT AS NOUNS

There are some verb forms that can be glossed as nouns. As indicated in §7.4.1, *cəlicéχəm*, the diminutive plural of *céχəm* ‘be jumping,’ literally, ‘little ones are jumping’ means ‘sand fleas’; in §7.6, *qəñqəñ*, the dispositional-iterative of *qén* ‘steal,’ means both ‘likely to steal’ and ‘thief’; and in §7.7.6, the possible resultative *θqét* means both ‘standing upright (as a spit by the fire)’ and ‘tree.’ Of course, any verb form can be preceded by an article and serve as a relative clause, so perhaps that is what these forms are when functioning as nouns.

In general, the capacity to take the possessive affixes seems to distinguish nouns from verbs. However, there are verb forms that function as nouns and do take possessives, such as *həyqʷ* ‘be burning (from *yəqʷ* ‘burn’), fire’; *həlkw* ‘be breaking (from *ləkʷ* ‘break’), pocketknife’; and *ʔa·i* ‘stretch, slingshot.’ I cannot say how many such verb forms there are.

# 9

## Morphology of the Root 3: Adjectives and Adjective-like Words

Adjectives proper constitute a small class of words that are distinct from both verbs and nouns. Morphologically, adjectives are like verbs and unlike nouns in that they do not take possessives directly; they must first be nominalized with *s-* ‘nominalizer.’ They are like nouns and unlike verbs, however, in not having progressive forms. Like both verbs and nouns, they have plural and diminutive forms. However, verbs have diminutives of progressive forms only, while nouns and adjectives have diminutives based on otherwise uninflected forms. Syntactically, adjectives differ from verbs in that they can appear before nouns in predicates (see §3.7.3). Numerals form a class of adjective but will be dealt with in §19.

Adjectives proper are simple and complex. Simple adjectives are mainly bare roots (with or without internal modification for plurality or diminutiveness), while complex adjectives are formed from adjective roots and lexical suffixes.

As indicated in §3.8.3.4, in addition to adjectives proper there are a number of words that can be described as adjective-like.

### 9.1. SHAPES OF ADJECTIVE ROOTS

Adjective roots appear in the common shapes of verb roots, that is, CVC and CVRC, but also in a few others. The examples that follow include most of the adjective roots so identified.

With the shape CV there is only *θí* ‘big’ (possibly //θíh// and so CVC; see §1.5.8).

With the shape CVC are the following:

*páq* ‘white’

*nás* ‘fat’

*láq<sup>w</sup>* ‘wet’

*cák<sup>w</sup>* ‘far’

*qál* ‘bad’

*qáx̣* ‘many, much’

*ʔáy* ‘good’

*máq<sup>w</sup>* ‘thick (around, as a rope)’

*t<sup>θ</sup>ác* ‘stiff’

*ǰáp* ‘deep’

*ǰáx̣<sup>w</sup>* ‘hard, solid, difficult’

*ǰítʔ* ‘expensive, important, difficult’

*x̣<sup>w</sup>ám* ‘fast’

*x̣ít<sup>θ</sup>* ‘not fully cooked, not ripe’

Formed by CVC reduplication is *kʷámkʷəm* ‘strong.’

## 9.2. PLURALS

Plural forms of adjectives are used in predicates, such as the plural of *páq* ‘white’ in (a).

- (a) wəmákʷ pəpəq. (CC)  
 wə-mákʷ pəpəq  
 EST-all white(PL)  
 ‘They are all white.’

And they are used to modify plural nouns, as in (b).

- (b) ʔéləy məlstáyəxʷ. ʔəwəteʔ šxs kʷéys kʷeθ nem sǫǫámət. (JP)  
 ʔéləy məlstáyəxʷ. ʔəwəteʔ šxʷ-s kʷéy-s kʷə  
 good(PL) person(PL) none OBLNOM-impossible-3POS ART  
 ʔəT-s-nem sǫǫámət  
 your-NOM-go being.joined

‘They are good people. There is no reason why you can’t mix with them.’

In (b), both *ʔáq* ‘good’ and *məstáyəxʷ* ‘person’ are pluralized. However, a plural adjective may be enough to show plurality; in (c), the adjectives are plural forms but the noun is singular.

- (c) šíʔs kʷs mís ʔéləy məstáyəxʷ, kʷáləm kʷəm məstáyəxʷ. (JP 1)  
 [s-c-]šíʔ-s kʷ s-mí-s ʔéləy məstáyəxʷ  
 [NOM-get-]value-3POS ART NOM-come-3POS good(PL) person  
 kʷáləm kʷəm məstáyəxʷ  
 strong(PL) person

‘They wanted them to become good people, strong people.’

Plurals are marked in adjectives in ways similar to those marking plurals in verbs and nouns, with an infix *-l-*, CV reduplication, or CVC reduplication.

Most roots with full vowels form plurals with infix *-l-*. The stress is on the vowel preceding the *-l-*, and there is no glottalization in the following (the plural form follows the singular):

<i>šéwʷs</i> ‘new’	<i>šéləwʷs</i>
<i>šéqt</i> ‘long’	<i>šéləqt</i>
<i>kʷámkʷəm</i> ‘strong’	<i>kʷáləm kʷəm</i>

The *-l-* is glottalized in:

<i>nás</i> ‘fat’	<i>nálʔs</i>
------------------	--------------

The *-l-* and glottal stop are metathesized in:

<i>sméʔən</i> ‘proud’	<i>sméʔəlʔən</i>
-----------------------	------------------

There is one instance of triplication of the initial consonant: *θí* ‘big,’ *θíθəθí* ‘a little bigger.’

#### 9.4. DIMINUTIVE PLURALS

Diminutive plurals are formed either from the diminutive by an infix *-l-* or from the base form by CV reduplication and schwa replacing a full vowel.

base	plural	diminutive	diminutive plural
<i>p̄sáq̄</i> ‘white’	<i>p̄é p̄q̄</i>	<i>p̄í p̄q̄ ~ p̄íʔ p̄q̄</i>	<i>p̄əlí p̄q̄ ~ p̄əlíʔ p̄q̄ ~ p̄s̄ p̄əq̄</i>
<i>tsás</i> ‘poor’	<i>təstəsás</i>	<i>títsəs</i>	<i>təlítsəs</i>
<i>nás</i> ‘fat’	<i>náləs</i>	<i>nán̄s</i>	<i>nán̄nəs</i>
<i>θí</i> ‘big’	<i>θíθə</i>	<i>θíθəθí</i>	<i>θəlíθəθí ~ θəlíʔθəθí</i> ‘become a little bigger’
<i>sələweʔ</i> ‘pitiful’	<i>səlsələweʔ</i>	<i>sísləweʔ</i>	<i>səlísələweʔ</i>

#### 9.5. VERBS FORMED FROM ADJECTIVE ROOTS

Adjective roots can take the prefix *xʷə-* ‘become’ or the reflexive suffix *-θət ~ -θát* with the sense ‘become’ (see §10.5.1), as in:

<i>xʷəθí</i> ‘get big’ (< <i>θí</i> ‘big’)
<i>xəʷəθíθə</i> ‘get big, get bigger’
<i>násθət</i> ‘get fat’ (< <i>nás</i> ‘fat’)
<i>ʔəȳθát</i> ‘get better’ (< <i>ʔáȳ</i> ‘good’)
<i>kʷámkʷəmθət</i> ‘get stronger’ (< <i>kʷámkʷəm</i> ‘strong’)

Adjectives can also take the suffix *-stəxʷ* ‘causative’ (see §10.3), as in:

<i>kʷámkʷəmstəxʷ</i> ‘strengthen’ (< <i>kʷámkʷəm</i> ‘strong’)
<i>ǰéʔǰəstəxʷ</i> ‘believe to be sacred’ (< <i>ǰéʔǰeʔ</i> ‘holy’)

#### 9.6. COMPLEX ADJECTIVES

These are adjective-like words composed of adjective roots and lexical suffixes, in which the root denotes some quality and the suffix a class of phenomena. They can often be literally translated with an English compound ending in *-ed*, as in:

COMPOUND	ROOT	SUFFIX
<i>θíqsən</i> ‘big-nosed’	<i>θí</i> ‘big’	<i>-əqsən</i> ‘nose’
<i>ʔəȳáθ</i> ‘sharp’	<i>ʔáȳ</i> ‘good’	<i>-aʔθ</i> ‘edge(lip, mouth)’
<i>qəláʔθ</i> ‘dull’	<i>qəl</i> ‘bad’	<i>-aʔθ</i> ‘edge (lip, mouth)’
<i>íʰc íʰeʔ</i> ‘stiff-textured’	<i>íʰc</i> ‘stiff’	<i>-íʰeʔ</i> ‘blanket’
<i>xʷθíqən</i> ‘loud’	<i>θí</i> ‘big’	<i>-qən</i> ‘throat’
<i>pəltá:yθən</i> ‘thick-lipped’	<i>płát</i> ‘thick’	<i>-a:yθən</i> ‘mouth’
<i>łcítws</i> ‘tired’	<i>łác</i> ‘become possessed, out of control’?	<i>-íw̄s</i> ‘body’

See §13 for other examples.

Complex adjectives may have plural forms. Compare (a) with (b) and (c) with (d):

- (a)  $\theta\acute{i}x\grave{a}n\ t\grave{a}\ s\acute{t}^{\theta}\acute{q}\acute{a}m$ . (AG)  
 $\theta\acute{i}-x\grave{a}n\ t\grave{a}\ s\acute{t}^{\theta}\acute{q}\acute{a}m$   
 big-foot ART drop  
 ‘There’s a big drop.’
- (b)  $\theta\acute{i}\theta\grave{a}x\grave{a}n\ t\grave{a}\ s\acute{t}^{\theta}m\grave{a}x^w$ . (AG)  
 $\theta\acute{i}\theta\grave{a}-x\grave{a}n\ t\grave{a}\ s\acute{t}^{\theta}m\grave{a}x^w$   
 big(PL)-foot ART rain  
 ‘The rain is in big drops.’
- (c)  $x^w\acute{\lambda}\acute{e}q\acute{t}i\grave{w}\acute{a}n\ t\theta\acute{e}^{\theta}\ \theta q\acute{e}t$ . (JP)  
 $x^w-\acute{\lambda}\acute{e}q\acute{t}-i\grave{w}\acute{a}n\ t\theta\acute{e}^{\theta}\ \theta q\acute{e}t$   
 inside-long-rump that tree  
 ‘That tree is tall.’
- (d)  $x^w\acute{\lambda}\acute{e}lq\acute{t}i\grave{w}\acute{a}n\ t\grave{a}\ \theta\acute{a}q\theta\acute{a}q\acute{a}t$ . (JP)  
 tall(PL) ART trees  
 ‘The trees are tall.’

Of course, adjective roots with lexical suffixes also form words that are clearly nouns, such as  $\acute{p}\acute{q}\acute{a}lq\grave{a}n$  ‘mountain goat’ (<  $\acute{p}\acute{q}\acute{a}$  ‘white,’  $-alq\grave{a}n$  ‘animal fur, hair’).

### 9.7. ADJECTIVE-LIKE WORDS

As indicated in §3.8.3.4, adjective-like words and phrases are produced by enclosing a noun, adverb, or interrogative word with  $w\grave{a}-$  ...  $a\acute{l}$  or a noun with  $s-$  ...  $-a^{\theta}t$ .

Resultative forms of verbs (§7.7) and (in the few cases where they exist) of nouns (§ 8.7) can also modify nouns. A few examples are:

$st\acute{a}t\acute{e}s$  ‘near’ (<  $t\acute{a}s$  ‘arrive there’; cf.  $ts\acute{a}t$  ‘approach’)

$s\theta\acute{a}\theta\acute{e}k^w$  ‘straight’ (<  $\theta\acute{a}k^w$  ‘get taut’; cf.  $\theta k^w\acute{s}t$  ‘pull’)

$st\acute{e}t\acute{a}w$  ‘bright’ (<  $\sqrt{tew}$ ; cf.  $t\acute{e}w\acute{a}l$  ‘light up’)

$st\acute{a}m\acute{i}x^w$  ‘dirty’ (<  $t\acute{a}m\acute{a}x^w$  ‘earth’)

$sq\acute{a}q\acute{a}^{\theta}$  ‘thin, watery (as soup)’ (<  $q\acute{a}^{\theta}$  ‘water’)

$s\acute{a}n\acute{x}^w\acute{e}l$  ‘having a canoe’ (<  $sn\acute{a}x^w\acute{a}l$  ‘canoe’)

$s\acute{i}\acute{a}^{\theta}\acute{i}l$  ‘lonely’ (<  $\acute{i}^{\theta}\acute{a}l$  ‘become lonely’)

$s\acute{a}l\acute{q}^w$  ‘lonely’ (< ?)

$s\acute{a}ll\acute{a}s$  ‘half drunk’ (< ?)

$\acute{s}x^w\acute{i}x^w\acute{a}q$  ‘lively, cheerful’ (< ?)

Other adjective-like words with initial *s-* are:

*sʔámət* ‘lazy’ (< *ʔámət* ‘sit’)  
*sqónax<sup>w</sup>* ‘greedy’ (< *qónax<sup>w</sup>* ‘gullet’)  
*sk<sup>w</sup>áǎ* ‘pot-bellied’ (< *k<sup>w</sup>áǎ* ‘belly’)

Two other verb forms can have adjectival meanings. They appear in predicates but I have not recorded them as modifiers. These are:

(1) Dispositional-iterative forms of verbs (§7.6), such as:

*máǎmáǎ* ‘limber’ (√*máǎ-*; cf. *máǎt* ‘bend’)  
*k<sup>w</sup>áǎk<sup>w</sup>áǎt* ‘cranky (likely to capsize)’ (< *k<sup>w</sup>áǎt* ‘spill’)  
*q<sup>w</sup>áǎlq<sup>w</sup>áǎl* ‘talkative’ (< *q<sup>w</sup>éǎl* ‘speak’)

(2) Perfective and/or progressive forms with *-əm* ‘intransitive’ (§10.2.1), such as:

<i>qétəm</i> ‘sweet’	<i>níq<sup>w</sup>əm</i> ‘soft, flexible’
<i>i<sup>θ</sup>éi<sup>θ</sup>əx<sup>w</sup>əm</i> ‘blue’	<i>títəx<sup>w</sup>əm</i> ‘slimy’
<i>séǎəm</i> ‘sour’	<i>ǎéǎǎtəm</i> ‘salty’ (< √ <i>éǎtəm</i> ‘salt’)
<i>i<sup>θ</sup>áq<sup>w</sup>əm, i<sup>θ</sup>áǎq<sup>w</sup>əm</i> ‘rotten’	

For more examples of these two forms, see §7.6. and §10.2.1.

A few other adjective-like words are formed with *-əm* ~ *-əm* ~ *-ém* suffixed to adjectives or verbs, such as:

*ʔáǎm* ‘strong’ (< *ʔáǎ* ‘good’)  
*qáǎm* (JP), *qəqáǎm* (CC) ‘weak’ (< *qáǎ* ‘bad’)  
*x<sup>w</sup>ʔáǎəm* ‘clear (water)’ (< *ʔáǎ* ‘good’)  
*x<sup>w</sup>qáǎəm* ‘murky (water)’ (< *qáǎ* ‘bad’)  
*ǎ<sup>w</sup>í<sup>w</sup>m* (//ǎ<sup>w</sup>ím-əm// ‘fast (water)’ (< *ǎ<sup>w</sup>ím* ‘fast’)  
*qáǎəm* ‘watery’ (as potatoes, cf. *sqəqáǎ?* ‘watery, as of soup, < *qáǎ?* ‘water’)  
*ʔiʔtətəm* ‘sleepy’ (< *ʔiʔtət* ‘be sleeping’)

# 10

## Non-Personal Affixes 1: Voice

A number of verb suffixes show how the participants in an event relate to it. These include the transitive, intransitive, causative, applicative, reflexive, reciprocal, permissive, and subordinate passive suffixes.

### 10.1. TRANSITIVE SUFFIXES

The suffixes *-t*, *-nəx<sup>w</sup>*, and *-x* mark forms as simple transitive, that is, they indicate that both a subject and an object are involved in the event, they provide the necessary base for the object person markers and the third-person transitive subject marker, and they make it possible for a verb to have an object as a direct adjunct. The transitivity suffixes *-t*, *-nəx<sup>w</sup>*, and *-stəx<sup>w</sup>*, are productive, but *-x* occurs in a only small number of words. Semantically, the differences among them involve the categories of control and perhaps others.

A transitivity suffix can be suffixed to a verb root (which may, depending on the transitivity suffix, take a different shape from the one it assumes when appearing bare of affixes) or to a stem composed of a verb root and one or more lexical or grammatical affixes (other than the person markers and a few others that normally follow transitivity suffixes). A transitivity suffix can appear in any aspect of the verb but the dispositional-iterative and resultative. (See §7 for the forms of roots with these suffixes and §14.2.5 for the object person markers.)

#### 10.1.1. *-t* ‘transitive’ (TR)

This is the general or unmarked transitive suffix. It appears as *-(V)t* except when followed by *-S* ‘first/second-person singular object,’ with which it coalesces as *(V)θ*. The presence or type of vowel depends on the form of the root or stem to which the *-t* is suffixed.

### 10.1.2. *-nəx<sup>w</sup>* ‘limited control transitive’ (LCTR)

This indicates that the subject is acting unintentionally, with difficulty, or with the possibility of failure.<sup>1</sup> It appears as *-nəx<sup>w</sup>* (or *-nəx<sup>w</sup>* with TəT roots) when not followed by a first- or second-person object marker, otherwise as *-n-*. Allomorphs *-ləx<sup>w</sup>* ~ *-l-* appear with a few roots ending in /l/.<sup>2</sup>

Differences in meaning between *-t* and *-nəx<sup>w</sup>* may be seen in the following sets of roots, *-t* form and *-nəx<sup>w</sup>* form:

<i>k<sup>w</sup>éc</i> ‘see’	<i>k<sup>w</sup>écət</i> ‘look at it’	<i>k<sup>w</sup>əcnəx<sup>w</sup></i> ‘see it’
<i>k<sup>w</sup>ə́n</i> ‘get taken’	<i>k<sup>w</sup>ə́nət</i> ‘take it’	<i>k<sup>w</sup>ə́nnəx<sup>w</sup></i> ‘get it’
<i>ʔik<sup>w</sup></i> ‘be lost’	<i>ʔik<sup>w</sup>ət</i> ‘throw it away’	<i>ʔək<sup>w</sup>nəx<sup>w</sup></i> ‘lose it’
<i>tíq<sup>w</sup></i> ‘bump’	<i>tíq<sup>w</sup>ət</i> ‘bump it (on purpose)’	<i>tə́q<sup>w</sup>nəx<sup>w</sup></i> ‘bump him (accidentally)’
<i>tə́q<sup>w</sup></i> ‘break, be cut off, be cut in two’	<i>tə́q<sup>w</sup>ət</i> ‘cut it off, cut it in two’	<i>tə́q<sup>w</sup>nəx<sup>w</sup></i> ‘accidentally cut it off, manage to cut it off’
<i>čə́q<sup>w</sup></i> ‘get pierced, get shot’	<i>čə́q<sup>w</sup>ət</i> ‘pierce it, poke it, shoot it’	<i>čə́q<sup>w</sup>nəx<sup>w</sup></i> ‘manage to shoot it’
<i>k<sup>w</sup>ə́q<sup>w</sup></i> ‘get hit’	<i>k<sup>w</sup>ə́q<sup>w</sup>ət</i> ‘hit it, club him’	<i>k<sup>w</sup>ə́q<sup>w</sup>nəx<sup>w</sup></i> ‘hit it accidentally, hit it (as a baseball)’

As these sets show, a *-nəx<sup>w</sup>* form may be glossed like the corresponding *-t* form but with the addition of ‘accidentally’ or ‘manage to’ (i.e., ‘do after some effort’) or because of the semantics of English, it may be glossed with a different word. In each case, the *-nəx<sup>w</sup>* form indicates that the agent is not fully in control of the situation or is playing a less active part in it, ‘seeing’ rather than ‘looking at,’ ‘getting’ rather than ‘taking,’ ‘losing’ rather than ‘throwing away.’ The form *k<sup>w</sup>ə́q<sup>w</sup>nəx<sup>w</sup>* is ‘hit it’ when ‘it’ is a baseball, AG explained, “because there is a chance of missing it.”

The allomorph *-ləx<sup>w</sup>* occurs in:

<i>tə́qə́lləx<sup>w</sup></i> ‘know it, understand it’ (root otherwise unrecorded)
<i>cə́lləx<sup>w</sup></i> ‘catch up with him’ (cf. <i>célt</i> ‘follow him’)
<i>tə́lləx<sup>w</sup></i> (JP), <i>tə́llnəx<sup>w</sup></i> (CC) ‘understand it, learn about it’ (cf. <i>tə́l</i> ‘be understood, be settled’; <i>tə́lət</i> ‘learn it’)

### 10.1.3. *-x* ‘transitive’ (TR)

This seems to be similar to *-t* in meaning and function. It occurs in fewer than twenty words (so far recorded), most of them expressing movement. It carries no implication of limited control. Leslie (1979) noted that his Cowichan

- 
- 1 Thompson (1979) discusses control as a major category in Salishan. Arnold Guerin pointed out the “possibility of failure” as a component in the meaning of limited control.
  - 2 Galloway (1977) identifies the *-əx<sup>w</sup>* of *-nəx<sup>w</sup>* and *-stəx<sup>w</sup>* as a third-person object marker following *-n-* and *-st-*, the counterpart of  $\emptyset$  following *-t* and *-x*, but it seems simpler to treat *-nəx<sup>w</sup>* and *-stəx<sup>w</sup>* as simply allomorphs of *-n-* and *-st-*.

consultants shifted or corrected from *-š* (the Cowichan equivalent of the Musqueam *-x*) to *-t*, and he therefore supposed that *-š* is simply an allomorph of *-t*. At Musqueam, CC and JP did not do this, and I am inclined to give *-x* separate status. But the evidence is slight. I have only two possible cases of *-x* contrasting with *-t*:

(1) CC gave *léʔx* as ‘put it away’ and *léʔt* as ‘make it secure’; however, JP regarded *léʔt* as the Cowichan equivalent of his *liʔx* (and CC’s *léʔx*) ‘put it away.’

(2) In Text 22, JP first used *šélit* ‘apply it’ when a ritualist applies powerful words to the sea lion he has carved of cedar, while later he used *šélx* ‘apply it’ when the ritualist applies ochre, oil, and the eyes of a real sea lion. If *-x* has any meaning other than that of *-t*, it may be to indicate physical movement.

This suffix appears in the following:

*méʔx* ‘take it off, remove it’ (< *méʔ* ‘come off, run (as a dye)’; cf. *xʷméʔx* ‘open it’)

*télx* (JP), *xʷtélx* (CC) ‘follow it (as a trail), notice it’ (cf. *tél* (JP), *té:l* (CC) ‘copy, follow suit’)

*téyqx* ‘move it (as something from one room to another)’ (cf. *téyqəl* ‘move, change residence’)

*náwəx* ‘put it in, insert it’ (cf. *səhíw* ‘inside’)

*télx* ‘move it back from the centre of the fire, take it off the stove’ (cf. *té:l* ‘move shoreward,’ *təliləm* ‘move back from the fire, move back into the crowd away from the centre of the big house’)

*špílx* ‘sink it’ (< *špíl* ‘go under’; cf. *špílastəxʷ* ‘sink it’)

*kʷélx* ‘hide him’ (cf. *kʷé:l //kʷél-əl//* ‘hide’)

*yálewx* ‘pass him’ (< *yálew* ‘past’; cf. *yálewəl* ‘get past’)

*wélx* ‘throw it’ (cf. *wé:ls //wél-élsl//* ‘throw wealth at a potlatch, have a “scramble”’)

*háʔkʷəx* ‘use it’ (< *háʔkʷ* ‘be used’)

*híwx* ‘bring it out into the centre of the house, bring him forward’ (cf. *híwəl* ‘move toward the fire’)

*xʷíwx //xʷhíwx//* ‘move it to the centre of the fire’ (cf. *xʷíwəl* ‘move upstream,’ *ʔəhíw* ‘upstream’)

*ʔíʔəx* ‘put it on, wear it’ (cf. *ʔíʔəm* ‘get dressed,’ lexical suffix *-íʔeʔ* ‘blanket, robe’)

*θqénx* ‘stand it upright (as a mast)’ (< *sθqén* ‘be held upright’; cf. *θqét* 1. ‘be standing upright as a spit by a fire,’ 2. ‘tree’)

The progressive of the passive of the last appears in (a).

(a) *yəθəqənəxəm tə swéʔs tə číkmən.* (JP)

<i>yə-θəqén-x-əm</i>	<i>tə</i>	<i>s-wéʔ-s tə</i>	<i>číkmən</i>
along-be.held.upright(PROG)-TR-INTR	ART	NOM-OWN-3POS	ART iron

‘The telephone poles are being stood up [set in their holes by the telephone company].’

## 10.2. INTRANSITIVE SUFFIXES

These are *-əm* ‘intransitive,’ *-éls* ‘activity,’ *-ənaq* ‘someone,’ and *-əltən* ‘someone.’<sup>3</sup> Verbs with these suffixes are grammatically intransitive, that is, they cannot take the first- and second-person object suffixes or the third-person transitive subject suffix, nor can they have an object as a direct adjunct. However, they are active or agent-oriented, and many with *-əm* and perhaps all with the other three suffixes are transitive in sense. Some of these with *-əm* and *-éls* can have objects in oblique phrases (see §3.4).

The suffixes *-əm* and *-éls* generally do not occur with the same root, but there are at least two exceptions. These will illustrate the differences between root, transitive, and these two intransitive forms.

ROOT	TRANSITIVE	INTRANSITIVE	ACTIVITY
<i>pə́n</i> ‘get buried’	<i>pə́nət</i> ‘bury it’	<i>pə́nəm</i> ‘plant’	<i>pənéls</i> ‘bury something’
<i>kʷə́n</i> ‘get taken’	<i>kʷə́nət</i> ‘take it’	<i>kʷə́nəm</i> ‘get’	<i>kʷíls</i> ‘grab hold’

The suffixes *-ənaq* and *-əltən* have each been recorded with only a small number of roots, and neither suffix with roots that take *-éls*.

### 10.2.1. *-əm* ‘intransitive’ (INTR)

Verbs bearing this suffix are subject-centred, that is, they indicate that the condition exists in the subject, or the action is performed by the subject, or that the action has consequences for the subject. This suffix appears as *-əm* or *-ém* with TəT roots in the perfective (see §7.2.6), as *-ém* in the durative (see §7.5) aspect, and otherwise as *-əm*. It occurs in several sorts of words:

(1) Adjective-like verbs formed from non-active roots (many occurring only with this suffix) that denote conditions or qualities. Several of these evidently usually appear in the progressive aspect and a few (like ‘blue’) seem to appear only in the progressive. Words of this sort include:

- qé́təm*, *qé́qətəm* ‘(taste) sweet’ (cf. *sqé́qətəm* ‘something sweetened’)  
*íéíə́m*, *íéíə́m* ‘sour, bitter’ (cf. *ííə́mθət* ‘become sour,’ *íə́l’éíə́m* ‘sorrel,’ *Rumex acetosella* L.)  
*kʷé́kʷətəm* ‘taste brackish’  
*sé́xəm* ‘taste not sweet, sour’  
*ǰé́ləm* ‘salt, salty, salt salmon,’ *ǰé́ǰətəm* ‘taste salty’  
*íéíə́qəm* ‘be smelling of sweat’ (CC)  
*mé́xəm*, *mé́mǰəm* ‘smell like burning rags’ (CC)  
*xʷé́xʷəsəm* ‘smell of urine’  
*sé́yəm* ‘be sore, sting, taste strong’ (cf. *sáyəmθət* ‘ache’)  
*tííə́xəm* ‘slimy’ (cf. *stíxəm* ‘slime’)  
*íé́l’é́m* ‘smell faintly of burning rushes or ferns’ (CC)

3 These last two might better go with the lexical suffixes (§13).

*x<sup>w</sup>éx<sup>w</sup>əqəm* ‘smell or taste of rotten meat or fish’  
*i<sup>θ</sup>éyəm* ‘sticky, tacky, get stuck (as a cross-cut saw in a log)’  
*niq<sup>w</sup>əm* ‘soft, flexible’  
*i<sup>θ</sup>átəm* ‘get cold (the body),’ *i<sup>θ</sup>á<sup>w</sup>i<sup>θ</sup>ətəm* ‘be feeling cold’ (cf. *si<sup>θ</sup>átəm* ‘cold [the illness], *i<sup>θ</sup>ét* ‘cool off [the day],’ *i<sup>θ</sup>éi<sup>θ</sup>ət* ‘cool, shady, soothing, nourishing’)  
*i<sup>θ</sup>éi<sup>θ</sup>əx<sup>w</sup>əm* ‘blue’  
*šx<sup>w</sup>k<sup>w</sup>ítəm* ‘noisy’

(2) Intransitive verbs formed from non-active roots that name processes or actions that are inherently intransitive. In their relations with forms with other affixes, they fall into several subclasses:

(2.1) Those that have no (known) transitive counterparts with *-t* ‘transitive.’ Most of these also seem to have bound roots.

<i>pám</i> ‘swell, rise’	<i>qəwəm</i> ‘howl’
<i>čísəm</i> ‘grow’	<i>iéyəm</i> ‘stick, adhere’
<i>qéwəm</i> ‘rest’	<i>qǎšəm</i> ‘bounce off, shake loose’
<i>héi<sup>θ</sup>əm</i> ‘breathe’	<i>čənəm</i> ‘shake (as a Shaker)’
<i>hésəm</i> ‘sneeze’	<i>čtém</i> ‘creep’
<i>íáq<sup>w</sup>əm</i> ‘cough’	<i>xtém</i> ‘swim under water (as a fish)’
<i>θx<sup>w</sup>ám</i> ‘bleed’	<i>méqəm</i> ‘jump (as a fish)’
<i>šém</i> ‘cry, weep’	<i>péqəm</i> ‘bloom’ (cf. <i>páq</i> ‘white’)

(2.2) Those with transitive counterparts with *-t* contrasting with *-əm* that are causative in meaning. Compare the intransitive (left column) and its transitive counterpart (right column):

<i>píləm</i> ‘overflow’	<i>pí·lt</i> ‘let it overflow’
<i>híləm</i> ‘roll, fall off’	<i>hí·lt</i> ‘roll it, push it off’
<i>p<sup>k</sup>wšəm</i> ‘splash, billow out’	<i>p<sup>k</sup>wšt</i> ‘scatter it around’
<i>k<sup>w</sup>éyəšəm</i> ‘move’	<i>k<sup>w</sup>šyšt</i> ‘move it’
<i>hánəq<sup>w</sup>əm</i> ‘get warm’	<i>hánq<sup>w</sup>t</i> ‘warm it up’
<i>mátəq<sup>w</sup>əm</i> ‘bubble up’	<i>mátq<sup>w</sup>t</i> ‘dip it in water’

(2.3) Those that can be transitivity by suffixing *-t* ‘transitive’ after the *-əm* ‘intransitive.’ The two suffixes form a transitive the object of which is the goal of the action. (Or, alternatively, we might suppose that the root takes a redirective suffix *-mət*. See §10.4.5.) In some of these there is a shift in stress. Compare the intransitives (left column) with their transitive counterparts (right column):

<i>ícəm</i> ‘swim on the surface’	<i>ícəmət</i> ‘swim for it’
<i>nəqəm</i> ‘dive’	<i>nəqəmət</i> ‘dive for it’
<i>síš<sup>w</sup>əm</i> ‘wade’	<i>sš<sup>w</sup>ímət</i> ‘wade for it’
<i>číləm</i> ‘climb’	<i>číləmət</i> ‘climb onto it’
<i>cǎšəm</i> ‘jump’	<i>cǎšmət</i> ‘jump for it, jump him’

(2.4) Those formed from non-active roots plus *-il* ‘move toward, become.’ Among these are (on the right):

<i>wáq<sup>w</sup></i> ‘drift, flow downstream’	<i>wáq<sup>w</sup>ilám</i> ‘move downstream’
<i>?áý</i> ‘good’	<i>?áýilám</i> ‘become clear (the day)’

For others, see the suffix *-il* (§12.3.1).

(3) Grammatically intransitive verbs formed from roots that are logically transitive, that is, name actions that have patients. Some of these roots are active, such as *sáwq* ‘seek,’ while others (probably the majority) are non-active, such as *pán* ‘get buried.’ In either case, the form with *-əm* is active, such as *sáwqəm* ‘seek’ and *pánəm* ‘plant.’ We may distinguish two subclasses.

(3.1) Those with *-əm* suffixed to roots alone, that is, without lexical suffixes. Many or perhaps all of these can have objects in oblique phrases. A few do not seem to have transitive counterparts with *-t*. Three such are: *i<sup>θ</sup>ím* ‘pick berries’ (cf. *si<sup>θ</sup>ím* ‘berries’), *si<sup>?</sup>xəm* ‘duck, dodge,’ and *x<sup>t</sup>é<sup>?</sup>əm* ‘prepare’ (< *x<sup>t</sup>é<sup>?</sup>* ‘do’).

However, most have transitive counterparts with the transitive suffix *-t* or *-x* in place of *-əm*, although the meaning may differ somewhat. Compare the intransitive forms (left column) with their transitive counterparts (right column):

<i>i<sup>θ</sup>əm</i> ‘chew’	<i>i<sup>θ</sup>é<sup>?</sup>t</i> ‘chew [it]’
<i>k<sup>w</sup>xém</i> ‘count’	<i>k<sup>w</sup>xét</i> ‘count [them]’
<i>?ám</i> ‘call’	<i>?át</i> ‘call [him]’
<i>?i<sup>θ</sup>əm</i> ‘get dressed’	<i>?i<sup>θ</sup>əx</i> ‘put [it] on, wear [it]’
<i>pánəm</i> ‘plant’	<i>pánət</i> ‘bury [it, him]’
<i>k<sup>w</sup>ánəm</i> ‘get’	<i>k<sup>w</sup>ánət</i> ‘get [it], take [it]’
<i>sáləm</i> ‘spin wool’	<i>sálət</i> ‘spin [it]’
<i>q<sup>w</sup>áləm</i> ‘bake’	<i>q<sup>w</sup>álət</i> ‘roast [it]’
<i>láiəm</i> ‘rake herring or eulachon’	<i>lái<sup>t</sup></i> ‘flick [it], hit with a swiping motion’
<i>lí<sup>m</sup></i> ‘pick (as fruit)’	<i>lí<sup>m</sup>ət</i> ‘pick [them]’
<i>θáyəm</i> ‘bake bread’	<i>θáy<sup>t</sup></i> ‘fix [it]’
<i>náyəm</i> ‘laugh’	<i>náy<sup>t</sup></i> ‘laugh at [him]’
<i>yám</i> ‘place an order’	<i>yáy<sup>t</sup></i> ‘warn [him]’

(3.2) Those in which *-əm* is suffixed to a stem composed of a root and a lexical suffix related as verb and object. In these words, if the suffix names a body part, the *-əm* indicates that the action is undergone by the subject. In contrast, the *-t* in a transitive counterpart indicates that the action is undergone by another. Compare:

<i>x<sup>w</sup>i<sup>θ</sup>x<sup>w</sup>ásəm</i> ‘wash one’s face’	<i>x<sup>w</sup>i<sup>θ</sup>x<sup>w</sup>ást</i> ‘wash his face’
<i>pé<sup>?</sup>əq<sup>w</sup>əm</i> ‘straighten one’s hair’	<i>pé<sup>?</sup>əq<sup>w</sup>t</i> ‘stroke his head/hair’

(4) Verbs formed from nouns. I have not recorded many of these. The process may not be productive.

*patənəm* ‘hoist sail’ (< *pástən* ‘sail’; cf. *pát-t* ‘blow on it,’ *-tən* ‘instrument’)  
*qáwətəm* ‘drum (v.)’ (< *qáwət* ‘drum (n.)’; cf. *qáwətt* ‘drum for him’)

One such group of words requires the prefix *c-* ‘get, do,’ as in:

*cténəm* ‘call (someone) “mother”’ (< *tén* ‘mother’)  
*cménəm* ‘call (someone) “father”’ (< *mén* ‘father’)  
*csìlé-m* ‘call (someone) “grandparent”’ (< *sílə* ‘grandparent’)

(5) Co-ordinate passive forms (see §14.2.6)

(6) A few nouns that may simply be nominalized verbs the roots of which have not been recorded, such as *sí<sup>θ</sup>ícəm* ‘nut, hazelnut,’ *sák<sup>w</sup>əm* ‘whole bark,’ *sθéyəm* ‘guest,’ *síéxəm* ‘lower-class person or group of slave descent.’

### 10.2.2. *-éls* ‘activity’ (ACT)

This suffix appears as *-éls* in all perfective forms except for a very few (as yet unpredictable) perfectives in which it is *-əls*. In progressives it appears as *-əls* or, suffixed to stems with lexical suffixes, as *-i:ls*. (See §7 for the forms of stems appearing with *-éls*.)

Many verbs with *-éls* are glossed as transitive verbs without objects or with ‘something’ object. Compare the following activity forms (left column) with their counterparts with the transitivizers *-t* or *-x*:

<i>pəθéls</i> ‘spread something’	<i>péθət</i> ‘spread it’
<i>pánəls</i> ‘bury something’	<i>pánət</i> ‘bury it’
<i>íəméls</i> ‘chop’	<i>íəmət</i> ‘chop it’
<i>nəwéls</i> ‘insert something’	<i>nəwəx</i> ‘insert it’
<i>í<sup>θ</sup>q<sup>w</sup>éls</i> ‘hit’	<i>í<sup>θ</sup>q<sup>w</sup>ət</i> ‘hit it’
<i>ǰk<sup>w</sup>éls</i> ‘pinch’	<i>ǰk<sup>w</sup>át</i> ‘pick it up with the fingertips’

But often the *-éls* form is given a restricted meaning referring to some habitual or ritual activity, as in:

<i>p<sup>k</sup>wéls</i> ‘smoke fish’	<i>pék<sup>w</sup>ət</i> ‘warm it up’
<i>pǰéls</i> ‘harpoon sturgeon’	<i>péǰlt</i> ‘feel for it’
<i>ǰáyq<sup>w</sup>éls</i> ‘knead bread’	<i>ǰáyq<sup>w</sup>t</i> ‘press down on it’
<i>θáyq<sup>w</sup>éls</i> ‘dig a grave’	<i>θéyq<sup>w</sup>ət</i> ‘dig it’
<i>q<sup>w</sup>péls</i> ‘collect money’	<i>q<sup>w</sup>pət</i> ‘put them together’
<i>k<sup>w</sup>ət.x<sup>w</sup>éls</i> ‘bring something in’	<i>k<sup>w</sup>téx<sup>w</sup>t</i> ‘bring/take it in’
<i>ʔaxí:ls</i> ‘tow something’	<i>ʔáxəl</i> ‘paddle’

The term *pǰéls* is literally ‘feel for something,’ as a harpooner must do with his vertically held harpoon, and *k<sup>w</sup>ət.x<sup>w</sup>éls* refers especially to bringing a picture of

a deceased person to display it in the big house. The long vowel of *ʔaxí:ls* is the result of the loss the first of a pair of resonants.

The *-éls* form may also have a subject-centred or intransitive meaning comparable to that of *-əm* with the sense of (3.2) above. Compare these *-éls* forms and the transitives with *-t*:

<i>łaxéls</i> ‘help yourself (to food)’	<i>łéʔxt</i> ‘put it in a dish’
<i>pəhéls</i> ~ <i>péls</i> ‘blow (as the wind)’	<i>pát</i> ‘blow on it, blow it out’
<i>pəwéls</i> ‘freeze (INTR)’	<i>píwət</i> ‘freeze it’
<i>pəxwéls</i> ‘blow (as a whale or a shaman through his hands)’	<i>páxwət</i> ‘blow on it (as a shaman), expelling chewed medicine on it’

A number of words for recently introduced tools and utensils consist of progressive *-éls* forms, usually but not always with the compound prefix *šxw-* ‘means of’ (§12.1.4), as in:

<i>šxwłłłčəłs</i> ‘saw’ (cf. <i>łłčət</i> ‘cut it,’ <i>łłłčət</i> ‘be cutting it’)
<i>šxwčáqwəłs</i> ‘fork (table or pitch)’ (cf. <i>čqʷət</i> ‘pierce it,’ <i>čáqʷt</i> ‘be piercing it’)
<i>šxw pépəkʷnəçìłs</i> ‘tea kettle’ (cf. <i>pəkʷnəçt</i> ‘put a pot on the fire’)
<i>pí pátʰəłs</i> ‘wringer on washing machine’ (cf. <i>píʰət</i> ‘squeeze it, wring it out’)

### 10.2.3. *-ənaq* ‘someone else, another person’

Verbs formed with this and the next suffix, like verbs formed with *-əm* and *-éls*, are intransitive and active. However, while verbs with *-əm* may have a reflexive sense and those with *-éls* have implied objects that are not human, the implied objects of verbs with *-ənaq* and *-əłtən* are other persons. Some verbs with *-ənaq* are:

<i>səwqənaq</i> ‘look for a person, engage in a search’ (cf. <i>səwq</i> ‘seek,’ <i>səwqəm</i> ‘seek,’ <i>səwqt</i> ‘look for him’)
<i>łəwənaq</i> ‘perform a cure’ (cf. <i>łəwət</i> ‘treat him, heal him’)
<i>šxwənaq</i> ‘win, win a contest’ (cf. <i>šxwət</i> ‘beat him, as in a game’)
<i>cəłtənənaq</i> ‘rent out (as a landlord), make a loan’ (cf. <i>cəłtən</i> ‘borrow, rent (as a tenant),’ <i>cəłtənt</i> ‘lend it’)
<i>nəwəyətənaq</i> ‘advise someone else’s child’ (cf. <i>níwət</i> ‘advise him,’ <i>nəwəyət</i> ‘advise a child,’ <i>sníw</i> ‘advice’)
<i>šənaq</i> ‘potlatch (v.),’ <i>sšənaq</i> ‘potlatch (n.)’ (cf. <i>šəʔt</i> ‘go get him, pick them up, invite him/them’; <i>šéxən</i> ‘invite,’ < <i>-xən</i> ‘foot,’ <i>sšéxən</i> ‘feast, local gathering.’ The term <i>sšənaq</i> may literally mean ‘a gathering of people invited from elsewhere.’)

This suffix can follow *-əs* ‘recipient’ and *-łc-* ‘benefactive’ (see §10.4.3 and 10.4.4 below). An example with *-əs* is *ʔíwəsənaq* ‘give directions’ (< *ʔíwəs* ‘give directions,’ composed of  $\sqrt{ʔíw}$ - ‘instruct’ + *-əs* ‘recipient’; cf. *ʔíwəst* ‘show him, guide him’). For examples with *-łc-*, see §10.4.4.

### 10.2.4. *-əttən ~ -əttin* ‘someone, another’

This is probably related to the particle *ʔəttən* ‘third-person plural.’ It seems similar or identical in meaning to *-ənəq* ‘another.’ It has been recorded in fewer words.

*ćəwəttən* ‘help, give help’ (cf. *ćəwət* ‘help him’)

*q̣əwəttən* ‘pay, make payment’ (cf. *q̣əwət* ‘pay him’)

*ǰiwəttən* ‘restrain (as someone else’s child from causing a disturbance)’ (cf.

*ǰiwət* ‘restrain him, stop him’)

*həyq̣əttən* ‘recruit’ (cf. *həyq̣ət* ‘recruit him’)

### 10.3. THE CAUSATIVE SUFFIX *-stəx<sup>w</sup><sub>1</sub>*

The suffix *-stəx<sup>w</sup><sub>1</sub>* ‘causative’ (CAUS) indicates that the subject makes the object do, causes the object to be, or puts the object in whatever act, quality, or state that is named by the root or stem. This suffix also serves as or is homophonous with *-stəx<sup>w</sup><sub>2</sub>* ‘comitative’ (see §10.4.1 below). Historically it may be composed of *-s* ‘permissive’ (see §10.7 below) plus *-t* ‘transitive.’

This suffix has several allomorphs. When final in a word, it appears as *-stəx<sup>w</sup>*, except when preceded by a TəT root, in which case it bears the stress and appears as *-stéx<sup>w</sup>*, or when preceded by a suffix ending in a resonant, in which case it appears as *-stəx<sup>w</sup>*. When followed by *-əs* ‘third-person (transitive or subordinate) subject,’ the unstressed *-stəx<sup>w</sup>* may be reduced to *-stx<sup>w</sup>-*. When followed by one of the object person markers, it appears as *-st-*, which, unlike *-t* ‘transitive,’ does not coalesce with the first- and second-person singular object markers.

The suffix *-stəx<sup>w</sup><sub>1</sub>* has two senses: (1) ‘cause to be’ and (2) ‘cause to do.’ It has the first sense when suffixed to non-active verbs (see §10.3.1 for “active” versus “non-active”), resultative forms of verbs, verbs bearing intransitive suffixes, reflexive and reciprocal suffixes, adjectives, and verbs formed from nouns. It has the second sense when suffixed to active verbs.

#### 10.3.1. In the sense ‘cause to be’

With many non-active verbs, the transitive suffixes are causative in sense. Compare the following roots (left column) and transitives formed with *-t*, *-nəx<sup>w</sup>*, and *-x*:

*ćéʔ* ‘land atop’

*q<sup>w</sup>śs* ‘go into the water’

*ǰśt* ‘hurt’

*q̣áy* ‘die’

*méʔ* ‘come off’

*p̣íləm* ‘overflow’

*p̣ḳ<sup>w</sup>śm* ‘splash, billow out’

*k<sup>w</sup>éyǰǰəm* ‘move’

*ćéʔt* ‘put it on top’

*q<sup>w</sup>śśt* ‘put it into the water’

*ǰtśt* ‘hurt him’

*q̣áyənəx<sup>w</sup>* ‘manage to kill him’

*méʔx* ‘take it off, remove it’

*p̣í:lt* ‘let it overflow’

*p̣ḳ<sup>w</sup>śt* ‘scatter it about’

*k<sup>w</sup>śyxt* ‘move it’

These transitives might also be glossed ‘cause it to land atop,’ ‘cause it to go into the water,’ ‘cause him to hurt,’ ‘manage to cause him to die,’ and so on.

For many non-active verbs, however, *-stəx<sup>w</sup>*, has the same effect. Compare the following roots and their causative forms:

<i>ní?</i> ‘be there’	<i>ní?stəx<sup>w</sup></i> ‘have it there’
<i>íáḱ<sup>w</sup></i> ‘go home’	<i>íáḱ<sup>w</sup>stəx<sup>w</sup></i> ‘take/bring him home’
<i>íáx<sup>w</sup></i> ‘go/come shoreward’	<i>íáḱ<sup>w</sup>stəx<sup>w</sup></i> ‘take/bring him to the shore’
<i>cám</i> ‘go/come inland’	<i>cámstəx<sup>w</sup></i> ‘take/bring him inland’
<i>háye?</i> ‘go away’	<i>háye?stəx<sup>w</sup></i> ‘take him away’
<i>yáwé?</i> ‘go along’	<i>yáwé?stəx<sup>w</sup></i> ‘take him along’
<i>?ámí</i> ‘come’	<i>?ámístəx<sup>w</sup></i> ‘bring it here’
<i>?íməx</i> ‘walk’	<i>?íməxstəx<sup>w</sup></i> ‘make him walk’
<i>sí?si?</i> ‘fear’	<i>sí?si?stəx<sup>w</sup></i> ‘frighten him’

These might also be glossed ‘cause it to be there,’ ‘cause him to be home,’ ‘cause him to be down on the shore,’ and so on.

So far I have discovered only one instance of a non-active root or stem taking both *-stəx<sup>w</sup>*, and one of the transitivizers, apparently with the same meaning: *ḱpíl<sup>x</sup>* ‘sink it’ and *ḱpílastəx<sup>w</sup>* ‘sink it.’ These are based on *ḱpíl* ‘go under’ (< *ḱáp* ‘deep,’ *-il* ‘move toward’) and are glossed identically. Something close to a contrasting pair is seen in *tél<sup>x</sup>* ‘move it back from the centre of the fire’ and *téləstəx<sup>w</sup>* ‘move it toward the shore.’ But the *-x* form is based on the root *tél*, seen also in *təlíləm* ‘move back from the fire (INTR),’ while the *-stəx<sup>w</sup>* form is based on a derivative, probably the root *tél* with the suffix *-əl* ~ *-il* ‘move toward.’

Very commonly, *-stəx<sup>w</sup>*, follows resultatives (see §7.7). Compare the following perfectives (left), resultatives (centre), and transitivized resultatives (right):

<i>háy</i> ‘finish’	<i>shá:y</i> ‘finished’	<i>shá:ystəx<sup>w</sup></i> ‘have it finished’
<i>θáy<sup>t</sup></i> ‘fix it’	<i>sθəθáy</i> ‘right’	<i>sθəθáystəx<sup>w</sup></i> ‘keep it on course’
<i>q<sup>w</sup>ét</i> ‘perforate it’	<i>sq<sup>w</sup>əq<sup>w</sup>é</i> ‘perforated’	<i>sq<sup>w</sup>əq<sup>w</sup>éstəx<sup>w</sup></i> ‘leave a hole in it’
<i>təlqt</i> ‘dip it’	<i>stélq</i> ‘in the water’	<i>stélqstəx<sup>w</sup></i> ‘keep it in the water’
<i>wíl</i> ‘appear’	<i>swíwəl</i> ‘visible’	<i>swíwəlstəx<sup>w</sup></i> ‘keep it in sight’
<i>ḱéí<sup>θ</sup></i> ‘measure it’	<i>sḱé<sup>éí<sup>θ</sup></sup></i> ‘measured, marked, distinguished’	<i>sḱé<sup>éí<sup>θ</sup></sup>stəx<sup>w</sup></i> ‘blaze (as a trail), designate (as a time), keep track of it’

The suffix *-stəx<sup>w</sup>*, ‘causative’ can follow the intransitive suffix *-əm*, with a shift in stress to the *-əm*:

<i>?áí<sup>θ</sup>éməstəx<sup>w</sup></i> ‘dress him’ (> <i>?íí<sup>θ</sup>əm</i> ‘get dressed, dress oneself’)
<i>čà:ləčáməstəx<sup>w</sup></i> ‘take it over to the other side’ (< <i>čá:ləč</i> ‘cross over’)
<i>nə<sup>θ</sup>éməstəx<sup>w</sup></i> ‘take it there, recite it’ (< <i>ném</i> // <i>ní?</i> -əm// ‘go’)

It can follow *-ənəq* ‘someone else’ and *-əltən* ‘other’:

*nəwəyətánəqstəx<sup>w</sup>* ‘get him to give advice to someone else’s child’ (< *√niw* ‘advise,’ -*éyət* ‘child’)

*k<sup>w</sup>ənəwəsánəqstəx<sup>w</sup>* ‘get him to work contagious magic on others’ (< *k<sup>w</sup>ənəwəsánəq* ‘work contagious magic on others,’ < *k<sup>w</sup>ənəwəs* ‘work contagious magic,’ composed of *k<sup>w</sup>ən* ‘get taken,’ -*əwəs* ‘body’)

*qəwəttínəstəx<sup>w</sup>* ‘punish him,’ lit. ‘make him pay’

It can follow the reflexive -*θət* (§10.5 below):

- (a) *siʔámθətstámx* *ɪə ʔal*. (AG)  
*siʔém-θət-st-ámx*      *ɪə ʔal*  
 rich.person-self-CAUS-me    PER    just  
 ‘I hope that I get wealthy.’

It can follow -*təl* ‘reciprocal’ (§10.6 below). Compare the reciprocal forms (left column) and their causatives (right column):

<i>θələqtəl</i> ‘separate from one another’	<i>θələqtáləstəx<sup>w</sup></i> ‘separate them, divide it’
<i>səlśəlqítəl</i> ‘even with one another’	<i>səlśəlqítáləstəx<sup>w</sup></i> ‘divide it equally’
<i>k<sup>w</sup>iʔáʔtəl</i> ‘keep away from one another’	<i>k<sup>w</sup>itáləstəx<sup>w</sup></i> ‘move them apart’

In the next two examples, -*stəx<sup>w</sup>*, follows an adverb and a personal word:

*qəlétstəx<sup>w</sup>* ‘do it to him again’ (< *qəlét* ‘again’) (AG)  
*ǰástəx<sup>w</sup>* ‘make it so, go ahead with it’ (< *ǰa* ‘be third person’) (AC)

Adjectives (left below) can take -*stəx<sup>w</sup>*, to form causatives (right):

<i>k<sup>w</sup>ámk<sup>w</sup>əm</i> ‘strong’	<i>k<sup>w</sup>ámk<sup>w</sup>əmstəx<sup>w</sup></i> ‘strengthen it’
<i>ǰəm</i> ‘fast’	<i>ǰəmstəx<sup>w</sup></i> ‘speed it up’
<i>cícət</i> ‘high’	<i>cícəstəx<sup>w</sup></i> ‘pile them high’
<i>ǰéʔǰe</i> ‘sacred’	<i>ǰéʔǰestəx<sup>w</sup></i> ‘believe it sacred’

Verbs formed from nouns can take -*stəx<sup>w</sup>*, to form causatives. Compare the noun (left), noun stem with verbalizing prefix (centre), and causative (right):

<i>swəyqəʔ</i> ‘man’	<i>x<sup>w</sup>əswəyqəʔ</i> ‘become a man’	<i>x<sup>w</sup>əswəyqəʔstəx<sup>w</sup></i> ‘make a man of him’
----------------------	---	--

### 10.3.2. In the sense ‘cause to do’

Finally, -*stəx<sup>w</sup>*, can be suffixed to active (but intransitive) verbs to produce causative forms with the sense ‘cause to do.’ These verbs include some active roots, like *k<sup>w</sup>éc* ‘see,’ and some inactive roots with -*əm* ‘intransitive’ and -*éls* ‘activity.’ With such verbs there is a clear contrast between forms with the transitivizers -*t*, -*x*, and -*nəx<sup>w</sup>* and those with -*stəx<sup>w</sup>*. Compare the following active but intransitive, transitive, and causative forms:

<i>kʷéc</i> ‘see’	<i>kʷécət</i> ‘look at it’	<i>kʷəcstəxʷ</i> ‘show it to him, make him see it’
	<i>kʷəcnaʰxʷ</i> ‘see it’	
<i>ʔitʰəm</i> ‘dress’	<i>ʔitʰəx</i> ‘wear it’	<i>ʔətʰəməstəxʷ</i> ‘dress him, put it on him’
<i>iʰxʷéls</i> ‘wash’	<i>iʰxʷát</i> ‘wash it’	<i>iʰxʷélsstəxʷ</i> ‘have him wash it’
<i>√pit</i>	<i>pətnəxʷ</i> ‘recognize it’	<i>pəttəxʷ</i> ‘make him identify it’
<i>qáʔqaʔ</i> ‘drink’	<i>qáʔqət</i> ‘drink it’	<i>qáʔqəstəxʷ</i> ‘give it to him to drink’
<i>√nəp</i> ‘eat’	<i>nəpəx</i> ‘eat it’	<i>nəpəməstəxʷ</i> ‘make him eat it’
<i>ʔəttən</i> ‘eat’	—	<i>ʔəttənstəxʷ</i> ‘feed him’

In these cases, the forms with *-t*, *-x*, and *-nəxʷ* are purely transitive with no causative sense, while the forms with *-stəxʷ*<sub>i</sub> are transitive and causative in that their objects are caused to do whatever is expressed by the verb. Or to put it differently, their objects are agents in implied (embedded) clauses. A couple of sentences will illustrate these syntactic relations:

- (a) *ném kʷəcstəxʷ tə John ʔə kʷəθə xéwəs ʔən pút.* (AG)  
*ném kʷéc-stəxʷ tə John ʔə kʷəθə xéwəs ʔən-pút*  
 go see-CAUS ART John OBL ART new your-boat  
 ‘Go show John your new boat.’

In (a), ‘John’ is the grammatical object of the causativized verb and ‘your boat’ is in an oblique phrase. But in the implied (embedded) clause, ‘John’ is subject and ‘your boat’ is object.

- (b) *iʰxʷélsstəxʷ čxʷ kʷəθə ʔiməθ ʔə tə šxʷʔiʔtən.* (AG)  
*iʰəxʷ-éls-stəxʷ čxʷ kʷəθə ʔən ʔiməθ ʔə tə*  
 get.washed-ACT-CAUS you ART your grandchild OBL ART  
*šxʷʔiʔtən*  
 dishes  
 ‘Have your grandson wash the dishes.’

In (b), ‘your grandson’ is the grammatical object of the causativized verb and ‘the dishes’ is in an oblique phrase, while in the implied clause ‘your grandchild’ is subject and ‘the dishes’ is object.<sup>4</sup>

#### 10.4. APPLICATIVES

The applicative or “redirective” suffixes “redirect” the verb so that what would otherwise have to be in an oblique relationship to it can be its grammatical object. They function as the English prefix *be-* might function if used consistently, as in the second of the following two sentences:

4 I am indebted to Donna Gerdts for my understanding of this, among many features of the language.

- (1) *I sprinkled water (object) on him (oblique).*  
 (2) *I besprinkled him (object) with water (oblique).*

Or the suffix *-t* (of “gift” from “give”) in the second of the following two:

- (1) *I gave a book (object) to him (oblique).*  
 (2) *I gifted him (object) with a book (oblique).*

And as in these examples, the Halkomelem applicatives generally make it possible for a person rather than a thing to occupy the position of object.<sup>5</sup>

There are five applicatives: *-stəx<sup>w</sup><sub>2</sub>* ‘comitative’ (COM), *-nəs* ‘goal’ (GOAL), *-mət* ‘concern’ (CON), *-əs* ‘recipient’ (RECIP), and *-tə-* ‘benefactive’ (BEN). Each of these has a range of meanings, expressed by various English prepositions, and the ranges overlap, so that it is difficult to label them in any very useful way. I have tried to give labels according to what seems to be most distinctive about each, but these labels should be interpreted loosely. The label ‘comitative,’ for example, is meant to reflect the need for an English ‘with’ in glossing a number of forms with *-stəx<sup>w</sup><sub>2</sub>*, but some forms with this suffix require ‘to’ and some ‘for.’ Where *-stəx<sup>w</sup><sub>2</sub>* requires ‘for,’ it overlaps in meaning with *-tə-*, which, following established practice, I have labelled ‘benefactive.’ But, as Galloway (1977, 251) says of the Upriver *-tə-*, it can also be “malefactive.” What is listed here as *-mət* presents particular difficulties that require further work. All but *-əs* ‘recipient’ and *-tə-* ‘benefactive’ are also transitivizers. The suffix *-əs* can be followed by a transitivizer but need not be, while *-tə-* must be followed by a transitivizer.

The grammatical function of the applicatives seems similar to that performed by many of the lexical suffixes (see §13.4.1) in verbs. For example, the lexical suffix *-aq<sup>w</sup>* ‘head’ in the verb *méəq<sup>w</sup>t* ‘decapitate him’ (< *mé<sup>?</sup>* ‘be removed’; cf. *mé<sup>?</sup>x* ‘remove it’) provides an object incorporated within the verb and so redirects the verb so that the owner of the head can be its grammatical object. Indeed, the redirective *-əs* ‘recipient’ may be identical with or a development of the lexical suffix *-əs* ~ *-ás* ‘face.’

#### 10.4.1. *-stəx<sup>w</sup><sub>2</sub>* ‘comitative’ (COM)

This is identical in its forms with *-stəx<sup>w</sup><sub>1</sub>* ‘causative,’ with which it may be historically identical. It expresses relationships between verb stems and grammatical objects of the sorts commonly expressed in English by *with*, *for*, *to*, and perhaps *about*.

The status of *-stəx<sup>w</sup><sub>2</sub>* as something other than a causative can be seen in the following examples. First, compare roots (left), *-t* forms (centre), and *-stəx<sup>w</sup><sub>2</sub>* forms (right) with glosses constructed to show systemic relations (in square brackets):

<sup>5</sup> See Gerdtz 1988 on the syntactic functions of applicatives.

<i>háy</i> ‘finish’ [‘be finished’]	<i>háyt</i> ‘finish it’ [‘make it finished’]	<i>háystax<sup>w</sup></i> ‘get rid of it’ [‘be finished with it’]
<i>ǰáł</i> ‘hurt’ [‘feel pain’]	<i>ǰłáłt</i> ‘hurt him’ [‘make him feel pain’]	<i>ǰáłstax<sup>w</sup></i> ‘pity him’ [‘feel pain with/for him’]

Because these roots are non-active, the forms with *-t* are causative in sense, and the forms with *-stax<sup>w</sup>*<sub>2</sub> express a different kind of relationship.

Second, consider the two meanings of an active verb based on the root of *ǰéwət* ‘pay him (for labour)’ and their forms with *-stax<sup>w</sup>*<sub>1</sub> ‘causative’ and *-stax<sup>w</sup>*<sub>2</sub> ‘comitative’:

<i>ǰéwəttən</i> ‘pay penance for sins’	<i>ǰéwəttínəstax<sup>w</sup></i> <sub>1</sub> ‘punish him’ [‘make him pay’]
<i>ǰéwəttən</i> ‘pay people’	<i>ǰéwəttínəstax<sup>w</sup></i> <sub>2</sub> ‘pay his way’ [‘pay for him’]

Other forms with *-stax<sup>w</sup>*<sub>2</sub> illustrate the variety of English prepositions required in translation:

<i>téw</i> ‘run away’	<i>téwstax<sup>w</sup></i> ‘run away with him/her’
<i>xtém</i> ‘swim’	<i>xtéməstax<sup>w</sup></i> ‘swim away with him’
<i>q<sup>w</sup>él</i> ‘speak’	<i>q<sup>w</sup>əlstax<sup>w</sup></i> ‘speak to him’
<i>θát</i> ‘say’	<i>θátstax<sup>w</sup></i> ‘tell him’ [‘say to him’]
<i>x<sup>w</sup>əʔínt</i> ‘say what’	<i>x<sup>w</sup>əʔíntstax<sup>w</sup></i> ‘say what to him’
<i>ǰtéʔ</i> ‘do’	<i>ǰtéʔstax<sup>w</sup></i> ‘do to him’
<i>qəlét</i> ‘do again’	<i>qəlétstax<sup>w</sup></i> ‘do to him again’
<i>√cə-</i> ‘do what’	<i>cástax<sup>w</sup></i> ‘do what with him’
<i>swéʔ</i> ‘one’s own’	<i>swéʔstax<sup>w</sup></i> ‘keep it for him’
<i>ʔáý</i> ‘good’	<i>ʔáýstax<sup>w</sup></i> ‘like it’ [‘feel good about it’?]
<i>qál</i> ‘bad’	<i>qálstax<sup>w</sup></i> ‘dislike it’ [‘feel bad about it’?]

These last two might also be interpreted as formed with *-stax<sup>w</sup>*<sub>1</sub> ‘causative,’ that is, ‘make it good’ and ‘make it bad.’ Such ambiguities suggest that *-stax<sup>w</sup>*<sub>2</sub> ‘comitative’ may have developed out of *-stax<sup>w</sup>*<sub>1</sub> ‘causative.’

#### 10.4.2. *-nəs* ‘goal’ (GOAL)

This appears in a few words where the object is a goal that might otherwise be expressed by an oblique adjunct. Like *-x* ‘movement transitive,’ it carries no implication of limited control. It appears as *-nəs* after a stressed vowel and otherwise as *-nəs*, except for one word so far recorded in which it appears as *-ləs*.

The following are all of the words so far recorded with *-nəs* (the intransitive bases are on the left and forms transitivized with *-nəs* are on the right):

<i>ʔəmí</i> ‘come’	<i>ʔəmíns</i> ‘come after him, come for him’
<i>ném</i> ‘go’	<i>nəʔémnəs</i> ‘go after him’

<i>x<sup>w</sup>əʔí</i> ‘reach here’	<i>x<sup>w</sup>əʔíns</i> ‘reach it here’
* <i>x<sup>w</sup>əníʔ</i>	<i>x<sup>w</sup>əníns</i> ‘reach it there’
<i>ʔámət</i> ‘sit’	<i>ʔámətnəs</i> ‘sit for her (as a suitor)’
<i>hék<sup>w</sup></i> ‘remember’	<i>hák<sup>w</sup>nəs</i> ‘remember it’
<i>mélq</i> ‘forget’	<i>məlqnəs</i> ‘forget it, have it slip one’s mind’

(The stem \**x<sup>w</sup>əníʔ* has not been recorded, but it must be composed of *x<sup>w</sup>ə-* ‘become’ and *níʔ* ‘be there’ and the counterpart of *x<sup>w</sup>əʔí*.)

The allomorph *-ləs* appears in *ʔéyələs* ‘leave him.’ The root  $\sqrt{ʔey}$  is implied by *ʔéyəl* ‘get out of the way’ (with *-əl* ‘move toward’) and by *sʔáy<sup>n</sup>éc* ‘out of the road’ (with *-nəc* ‘base, butt’). See §14.2.5 for a paradigm with the object person markers.

### 10.4.3. *-əs* ‘recipient’ (RECIP)

This indicates the presence of a recipient. As suggested above, it may be historically identical with *-əs* ~ *-ás* ‘face, round object, forward end’; it has the same umlauting effect of converting an /e/ in the stem into an /a/. It is not a transitivizer and is therefore probably not relatable to *-nəs* ‘directional,’ which is. It can occur finally or followed by a *-t* ‘transitivizer,’ which allows the recipient to be the grammatical object.

This suffix is not positively identifiable in very many words. Examples of which we can be certain include two with final *-əs*:

*ʔíwəs* ‘show, guide’ (<  $\sqrt{ʔíw}$  ‘instruct’)  
*syəθəs* ‘tradition’ (< *yəθ* ‘tell’)

Examples with *-t* transitivizer include the following:

*ʔíwəst* ‘show him how’ (<  $\sqrt{ʔíw}$  ‘instruct’)  
*yəθəst* ‘tell him’ (< *yəθ* ‘tell’)  
*ʔáməst* ‘give to him’ ( $\sqrt{ʔem}$  ‘give’)  
*ʔáx<sup>w</sup>əst* ‘give to him’ (<  $\sqrt{ʔe\check{x}^w}$  ‘give’)

The root *ʔíw* ‘instruct’ is implied by *x<sup>w</sup>əʔáw<sup>c</sup>əs* ‘instruct manually’ (with *-cəs* ‘hand’), *ʔem* ‘give’ by *ʔéʔəm* ‘give,’ *ʔé<sup>m</sup>məm* ‘be giving,’ *ʔámnəct* ‘put money down on it’ (with *-nəc* ‘base’), and *ʔe\check{x}^w* by *x<sup>w</sup>əʔáx<sup>w</sup>mət* ‘covet it.’

The difficulties we encounter in trying to identify this suffix may be illustrated by the following two pairs of words:

*k<sup>w</sup>lét* ‘spill it’    *k<sup>w</sup>lást* ‘pour water on it’  
*k<sup>w</sup>éʔt* ‘let it go’    *k<sup>w</sup>áʔast* ‘turn it loose (as a horse), cast him off (as a lover)’

In the first of these, it seems reasonable to identify the suffix as ‘face’ and interpret the word as ‘pour on the face/front of it.’ In the second, however, it would be stretching the meaning of ‘face’ a bit far, and it seems more reasonable to identify the suffix as simply indicating a recipient.

#### 10.4.4. *-tc-* ‘benefactive’ (BEN)

Like *-t* ‘transitive,’ this may appear with a vowel, as *-(V)tc-*, the presence or type of vowel depending on the preceding root or stem. In function *-tc-* relates an active verb and its patient to a “beneficiary,” someone who is affected (not necessarily beneficially) by or has an interest in the act. With a benefactive form, a patient must appear in an oblique phrase. If *-t* ‘transitive’ follows the *-tc-*, the beneficiary is the grammatical object. Compare (a) and (b):

- (a) ni cən yǎǎwət tə ǎwíəm.  
 ni cən yǎǎw-ət tə ǎwíəm  
 AUX I free-TR ART rope  
 ‘I untied the rope.’
- (b) ni cən yǎǎwətət tə Tom ʔə tə ǎwíəm.  
 niʔ cən yǎǎw-ətət tə Tom ʔə tə ǎwíəm  
 AUX I free-BEN-TR ART Tom OBL ART rope  
 ‘I untied the rope for Tom.’

The suffix *-tc-* may be followed by *-t* ‘transitive,’ *-əm* ‘intransitive,’ and *-ənəq* ‘another.’ It has not been recorded in word final position or with a transitivizer other than *-t*. In the following, the transitivizer *-x* is replaced by *-t* following *-tc-*: *nǎpǎx* ‘eat it,’ *nǎpǎtcət* ‘eat it for him.’

It appears that any active verb may have a benefactive counterpart. Some benefactives, however, are interpreted idiomatically. Compare the following:

<i>kʷáqwət</i> ‘strike it’	<i>kʷáqwətət</i> ‘strike it for him’
<i>ǎtéləm</i> ‘make’	<i>ǎtélətət</i> ‘make it for him’
<i>kʷécət</i> ‘look at it’	<i>kʷécətət</i> ‘read it to him’
<i>ǎǎlət</i> ‘paint it, write it’	<i>ǎǎlətət</i> ‘write for him/to him’
<i>kʷənét</i> ‘hold it’	<i>kʷənétət</i> ‘owe him’ (lit. ‘hold it for him?’)
<i>kʷəyét</i> ‘stop him’	<i>kʷətétət</i> ‘refuse something to him, deny him something’
<i>kʷəʔét</i> ‘leave it alone’	<i>kʷəʔétət</i> ‘leave it be for him, respect his right to it’

A benefactive can be the counterpart of either a transitive or an intransitive active form with *-əm* ‘intransitive’ or *-éls* ‘activity,’ thus: *kʷlét* ‘spill it,’ *kʷlél* ‘pour,’ *kʷlétət* ‘pour it for him, spill it for him.’

Context may show the difference. Compare (c) and (d):

- (c) ni cən kʷǎtcət ʔə kʷθə tí.  
 niʔ cən kʷǎt-tc-t ʔə kʷθə tí  
 AUX I spill-BEN-TR OBL ART tea  
 ‘I poured tea for him.’

- (d) ni cən kʷlɔ́tɕət ʔə kʷθə tís. (AG)  
 niʔ cən kʷəl-t-ɕ-t ʔə kʷθə tí-s  
 AUX I spill-BEN-TR OBL ART tea-3POS  
 ‘I spilled his tea for him.’

Evidently if it is *his* tea, as in (d), it has already been poured, and so it must be spilled.

Followed by *-əm* ‘intransitive,’ *-ɕ-* indicates that the act is performed for someone but without specifying the person, as in *méʔɕəm* ‘remove something for someone’ (cf. *méʔx* ‘remove it’), *kʷənɛ́ɕəm* ‘carry something for someone’ (cf. *kʷənɛ́t* ‘hold it’). But context can indicate for whose benefit the act is performed, as in (e).

- (e) ʔi cən xʷtʰqáləs. ʔəwe. yəxʷ ɕxʷ íéʔtəxʷ méʔɕəm.  
 ʔi cən xʷ-tʰəq-áləs ʔəwə ʔə yəxʷ ɕxʷ íéʔ-t-əxʷ  
 AUX I in-press-eye not ROG INF you try-TR-you  
 méʔ-ɕɕ-əm  
 come.off-BEN-INTR  
 ‘I got something in my eye. Would you like to try to get it out for me?’

The only other suffix recorded after *-ɕ-* is *-ənəq* ‘another,’ which appears in:

- kʷənɛ́ɕənəq* ‘owe people’ (lit. ‘hold for people’)  
*šxʷɛ́ɕənəq* ‘potlatch gift for a designated person’ (cf. *xʷéɕət* ‘throw down a gift,’ < *xʷét* ‘lower it’) (JP)  
*syeqəɕənəq* ‘replacement for a person (as one slave given for another)’ (JP)  
 (cf. *ʔəyéqt* ‘exchange it’)

#### 10.4.5. *-mət* ‘concern’ (CON)

This suffix can appear variously (*-ámət ~ -əmət ~ -mət ~ -mít ~ -méʔt*). It may be that the first element is in origin simply *-əm* ‘intransitive,’ with a stressed vowel when in the durative aspect, and the final is *-t* ‘transitive.’ If so, however, the combination seems to have come to lead a life of its own. It transitivizes verbs that are (with a few exceptions) non-active. If the verb denotes a physical activity, the grammatical object is usually its goal; if a mental activity, its target and/or cause. English translations can require the prepositions *after*, *for*, *to*, *at*, *by*, or simply *concerning*, hence the admittedly tentative label.

The development of a new suffix out of a combination seems traceable. First, as indicated above (§10.2 [2.2]), several verbs ending in *-əm* can take *-t* to produce transitives the objects of which are goals, as in:

- číləmət* ‘climb up it’ (< *číləm* ‘climb up’)  
*nəqémət* ‘dive for it’ (< *nəqəm* ‘dive’) (AG)

There are also a few verbs that do not appear with *-əm* that take *-əmət* with the same effect, such as:

*yá·ysámət* ‘work on it/at it’ (< *yá·ys* // *yáyəs*// ‘work’)  
*q̇átínəmət* ‘go along (as through a village) inviting them’ (cf. *q̇átáθən* ‘go along’)  
*q̇əpsámət* ‘get together and go after him’ (< *q̇pást* ‘call them together’)

There are verbs with *-əm* of less concrete meaning that take *-t*, such as:

*yáḥcəmət* ‘ask for it’ (< *yáḥcəm* ‘make a request’)  
*xá·təmət* ‘accept him (as suitor), take care of him’ (< *xá·təm* ‘agree, give assent’)  
*i<sup>θ</sup>x<sup>w</sup>ímət* ~ *i<sup>θ</sup>áx<sup>w</sup>mət* ‘pity him, be merciful to him’ (< *i<sup>θ</sup>x<sup>w</sup>əm* ‘pity, be merciful’)

Other verbs without *-əm* can take *-mət* ~ *-mét* ~ *-méʔt* ~ *-mít* with the range of meanings indicated above:

*yáḥ<sup>w</sup>mət* ‘hire him’ (< *yéḥ<sup>w</sup>* ‘hire’)  
*q<sup>w</sup>əl<sup>w</sup>mət* ‘scold him’ (< *q<sup>w</sup>él* ‘speak’)  
*ʔəlyámət* ‘dream about him’ (< *ʔəl<sup>w</sup>yə* ‘have a vision’)  
*hál<sup>w</sup>mət* (JP), *hál<sup>w</sup>meʔt* (AG, DK) ‘come to remember him’ (< *héḥ<sup>w</sup>* ‘remember’)  
*tčíwsmət* ‘get tired of him’ (< *tčíws* ‘get tired’)  
*síwəl<sup>w</sup>mət* ‘be aware of him’ (AG) (< *síwəl* ‘be aware’)  
*číwəl<sup>w</sup>meʔt* ‘get annoyed with him’ (AG) (< *číwəl* ‘get annoyed’)  
*ḥíʔmət* ‘prefer it, want it’ (< *ḥíʔ* ‘valuable’)  
*híl<sup>w</sup>ək<sup>w</sup>mət* ‘welcome it’ (< *híl<sup>w</sup>ək<sup>w</sup>* ‘happy’)  
*qḥél<sup>w</sup>mít* ‘gang up on him’ (< *qḥél<sup>w</sup>ac* ‘many persons’)  
*k<sup>w</sup>í·c<sup>w</sup>ək<sup>w</sup>mət* ‘watch something for him’ (< *k<sup>w</sup>éc* ‘see’)  
*máq<sup>w</sup>mít* ‘get full of it’ (ES/AG) (< *máq<sup>w</sup>* ‘get full’)  
*íéyáq<sup>w</sup>meʔt* ‘get angry with him’ (< *íéyáq<sup>w</sup>* ‘get angry’)

The last was AG’s term, but he accepted a passive *ííq̇ámətəm*, used by CC, which implies a differently shaped active.

The above is not an exhaustive list. This suffix or combination of suffixes may be productive. Moreover, AG gave a form *stčíwsméʔt* ‘tired of him,’ composed of *stčíwś* ‘tired,’ which appears to be a resultative form, suggesting that, like *-stəx<sup>w</sup>* ‘causative,’ *meʔt* may be suffixed to resultatives.<sup>6</sup>

### 10.5. REFLEXIVES

These are *-θət*, *-námət*, and *-stənámət*. Undoubtedly they are composed of the transitivizers *-t*, *-nəx<sup>w</sup>*, and the causative *-stəx<sup>w</sup>*, respectively, plus one or more other suffixes. But they occur more widely than the transitivizers and causative

6 Gerds (1999, 85-86) identifies a Cowichan applicative *-meʔ* (which is followed by *-t* ‘transitive’) as a benefactive, the counterpart of *-tc-*, used with intransitive verbs.

do alone or with the person markers, and are more conveniently treated as separate entities.

### 10.5.1. *-θət* ‘oneself’

This produces a large number of reflexive forms that include the counterparts not only of English *raise oneself* and *shake oneself* but also of many English intransitive forms like *spread out* and *get fat*. It is no doubt composed of *-t* ‘transitive’ and a suffix *//-Sat//* ‘self.’ It appears as *-θát* following a CəC root in its CəC form, otherwise it appears as *-θət*. Like some other suffixes with an /a/ vowel, it converts an /e/ in the stem to /a/. It seems to be fully productive with roots that take *-t*, it joins them in the same fashion as *-t*, and progressives are formed by the same rules, all of this giving good evidence that it is nothing other than *-t* plus a *//-Sat//*. Forms with *-θət* paralleling forms with *-t* include:

<i>séʔt</i> ‘raise it’	<i>sáʔθət</i> ‘raise oneself’
<i>péθət</i> ‘spread it out’	<i>páθəθət</i> ‘spread out (INTR)’
<i>ǰáʔt</i> ‘comfort him’	<i>ǰáʔθət</i> ‘calm down’
<i>hí-lt</i> ‘roll it off’	<i>hí-lθət</i> ‘let oneself fall’ (cf. <i>híləm</i> ‘fall off, roll’)
<i>tsát</i> ‘approach it, bring it close’	<i>tsəθət</i> ‘approach’ (cf. <i>tás</i> ‘arrive there’)
<i>kʷtét</i> ‘tip it over, spill it’	<i>kʷtəθət</i> ‘capsize’
<i>kʷsɣxt</i> ‘move it, shake it’	<i>kʷsɣxθət</i> ‘move, act’ (cf. <i>kʷéɣəxəm</i> ‘shake’)

The reflexive *-θət* also follows roots that do not take or are not prepared to take *-t*, providing an inchoative meaning, ‘get oneself, make oneself, become,’ as in:

<i>nás</i> ‘fat’	<i>násθət</i> ‘get fat’
<i>kʷés</i> ‘get scorched’	<i>kʷəsθət</i> ‘become hot (weather)’
<i>təqʷ</i> ‘wet’	<i>təqʷθát</i> ‘get all wet’
<i>kʷən</i> ‘become possessed’	<i>kʷənθát</i> ‘“get started” (become possessed)’
<i>ʔsɣ</i> ‘good’	<i>ʔsɣθát</i> ‘get better’
<i>θí</i> ‘big’	<i>θíθát</i> ‘get bigger’
<i>siʔém</i> ‘rich person’	<i>siʔəmθət</i> ‘become rich’

Here too belong words in which *-θət* follows *-əm* ‘intransitive,’ with a shift of stress to that suffix, as in:

<i>iʔáqʷəm</i> ‘be rotten’	<i>iʔáqʷámθət</i> ‘become rotten’
<i>háqʷəm</i> ‘stink’	<i>háqʷámθət</i> ‘stink’ [‘become stinky’?]

And possibly formed with *-əm* are:

<i>sǰéləqəm</i> ‘fierce (being)’	<i>ǰəlqəmθət</i> ‘be exceptionally bad’
<i>šxʷnéʔəm</i> ‘shaman’	<i>xʷənəʔəmθət</i> ‘train to become a shaman’

I have recorded one example of the reflexive and inchoative senses in contrast; AG gave *lq<sup>w</sup>əθət* ‘wet one’s pants’ and *ləq<sup>w</sup>θát* ‘get wet’ (< *ləq<sup>w</sup>* ‘be wet’).

### 10.5.2. *-námət* ‘oneself (limited control)’

This is the reflexive of *-nəx<sup>w</sup>* ‘transitive (limited control).’ It can mean ‘do to oneself unintentionally,’ ‘do to oneself in spite of difficulties,’ or ‘be able to do (get started doing) in spite of difficulties.’ It is no doubt composed of *-nəx<sup>w</sup>* (probably the *-na-*) plus *-ət* ‘self,’ perhaps linked with *-əm* ‘intransitive.’ It appears as *-lámət* following a final *-l* in a stem, otherwise as *-námət*.

That *-námət* is to *-nəx<sup>w</sup>* as *-θət* is to *-t* is shown by the following set:

<i>k<sup>w</sup>əłəxt</i> ~ <i>k<sup>w</sup>əlləxt</i> ‘shoot him intentionally’	<i>k<sup>w</sup>əlləxθət</i> ‘shoot oneself intentionally’ (CC)
<i>k<sup>w</sup>əlləxnəx<sup>w</sup></i> ‘shoot him accidentally’	<i>k<sup>w</sup>əlləxnámət</i> ‘shoot oneself accidentally’ (CC)

Like *-θət*, *-námət* can be suffixed to both forms that ordinarily take transitive suffixes and forms that do not. In the following, *-námət* is suffixed to a root that usually takes the transitivizer *-nəx<sup>w</sup>*:

- təq<sup>w</sup>námət* ‘bump oneself accidentally’ (cf. *təq<sup>w</sup>nəx<sup>w</sup>* ‘bump him accidentally,’ *tíq<sup>w</sup>ət* ‘bump him on purpose’)
- k<sup>w</sup>əq<sup>w</sup>námət* ‘hit/chop oneself accidentally’ (cf. *k<sup>w</sup>əq<sup>w</sup>nəx<sup>w</sup>* ‘hit/chop him accidentally,’ *k<sup>w</sup>əq<sup>w</sup>ət* ‘hit him on purpose’)
- k<sup>w</sup>əcnámət* ‘see oneself (as when walking past a mirror or in a dream)’ (cf. *k<sup>w</sup>əcnəx<sup>w</sup>* ‘see him,’ *k<sup>w</sup>écət* ‘look at him,’ *k<sup>w</sup>ək<sup>w</sup>cásəm* ‘be looking at oneself in a mirror,’ < *k<sup>w</sup>éc* ‘see,’ *-ás* ‘face,’ *-əm* ‘intransitive’)
- se<sup>w</sup>námət* ‘manage to raise oneself (raise oneself but only after difficulty)’ (cf. *sá<sup>w</sup>θət* ‘raise oneself,’ *sé<sup>w</sup>t* ‘raise him, lift it’)

In the following, *-námət* is suffixed to intransitive forms, including some with *-əm* ‘intransitive’ and *-éls* ‘activity.’ Here *-námət* can have the sense ‘do in spite of oneself’ as well as ‘do in spite of difficulties,’ as in:

- nəyəmnámət* ‘get to laughing in spite of oneself’ (< *nəyəm* ‘laugh’)
- íeyəq<sup>w</sup>námət* ‘get mad against one’s intention’ (< *íeyəq<sup>w</sup>* ‘get angry’)
- nəq<sup>w</sup>námət* ‘oversleep (i.e., sleep beyond one’s intentions), get to sleep in spite of difficulties’ (< *nəq<sup>w</sup>* ‘fall asleep’)
- k<sup>w</sup>ə<sup>w</sup>əlsnámət* ‘lose one’s grip, let go unintentionally’ (< *k<sup>w</sup>ə<sup>w</sup>éls* ‘let go’; cf. *k<sup>w</sup>é<sup>w</sup>t* ‘let it go, drop it’)
- íləmnámət* ‘get to singing’ (< *íləm* ‘sing’)
- ʔíməxnámət* ‘be able to walk’ (< *ʔíməx* ‘walk’)
- k<sup>w</sup>éllámət* ‘manage to get a hideout’ (< *k<sup>w</sup>é<sup>w</sup>l* ‘hide’; cf. *k<sup>w</sup>élx* ‘hide him’)
- θínámət* ‘improve, get lucky, recover strength’ (< *θí* ‘big’)
- ʔəy<sup>w</sup>námət* ‘good to watch, good to see’ (< *ʔəy<sup>w</sup>* ‘good’; cf. *ʔəy<sup>w</sup>θát* ‘get better’)

Perhaps *-námət* in this last implies good in the eyes of others, regardless of the subject's own intentions.

### 10.5.3. *-stánámət* 'oneself (causative)'

This is the reflexive of *-stəx<sup>w</sup>* 'causative' and is probably composed of this suffix plus *-námət* 'oneself (limited control).' Its basic meaning is 'make oneself,' but it may be translated as 'feel' or 'pretend to.' The allomorph *-stánəmət*, reducible to *-stánmət*, appears after an unstressed stem, while *-stánámət* appears after a stem that bears a stress. Some examples are:

*yè<sup>?</sup>etstánámət* 'make oneself vomit' (cf. *yé<sup>?</sup>etstəx<sup>w</sup>* 'make him vomit')  
*ǰətstánámət* 'feel sorry for oneself' (cf. *ǰətstəx<sup>w</sup>* 'feel sorry for him')  
*təy<sup>?</sup>stánmət* 'feel cheap' (cf. *té<sup>?</sup>it //léy<sup>?</sup>ət//* 'insult him')  
*ǰàǰəy<sup>?</sup>stánámət* 'pretend one is sick' (< *ǰáǰəy<sup>?</sup>* 'sick')  
*šx<sup>w</sup>əx<sup>w</sup>ək<sup>w</sup>stánámət* 'pretend one is drunk' (< *šx<sup>w</sup>áx<sup>w</sup>ək<sup>w</sup>* 'drunk')

### 10.6. THE RECIPROCAL *-təl* 'EACH OTHER'

The only reciprocal suffix that has been recorded is *-təl* 'each other,' which appears as *-tál* in a few words that may be durative or resultative forms and when it is followed by *-stəx<sup>w</sup>* 'causative.' The distinction between full and limited control seen in the transitives seems to be lacking in the reciprocal. The suffix *-təl* may be composed of *-t* 'transitive' plus an element *-əl*. However, it differs from *-t* 'transitive' in that it may appear without the schwa that normally precedes the *-t* with a CAC root, as in:

*tástəl* 'collide' (< *tás* 'get hit'; cf. *tásət* 'hit it')  
*tíq<sup>w</sup>təl* 'collide' (*tíq<sup>w</sup>* 'bump'; cf. *tíq<sup>w</sup>ət* 'bump it')

Like *-θət*, it converts an /e/ in the stem to /a/ (as in a few examples given below). Its reciprocal sense may be illustrated by the following:

*ləǰáttəl* 'jibe, be properly aligned' (< *ləǰét* 'be on the mark, be just right'; cf. *ləǰét* 'put it right,' *ləǰátθət* 'get in line')  
*ǰəyáqtəl* 'exchange with each other' (cf. *ǰəyéqt* 'exchange it, replace it')  
*xəməntəl* 'be enemies, be rivals' (< *xəmén* 'enemy, rival'; cf. *xəmént* 'play against him')  
*x<sup>w</sup>cəməstəl* 'meet one another' (< *x<sup>w</sup>cəməs* 'meet'; cf. *x<sup>w</sup>cəməst* 'meet him')  
*cǰámətəl* 'jump and grab one another' (< *cǰám* 'jump'; cf. *cǰámət* 'jump at him')  
*íáǰətəl* 'distribute game/catch' (cf. *íǰəθət* 'divide, branch out,' *íáǰəst* 'give him his share')  
*íéyamtəl* 'stick together' (< *íéyəm* 'stick, adhere')

Some words with *-təl* have been recorded in what appears to be the progressive only, such as:

*kʷəkʷáʔtəl* ‘separate, divorce’ (cf. *kʷéʔt* ‘let it go, drop it,’ *kʷəkʷéʔt* ‘be letting it go’)  
*qáqáʔtəl* ‘happen to meet unexpectedly’ (cf. *qáʔt* ‘put it together,’ *qáʔθət* ‘join’)  
*ǰǰǰʔtəl* ‘like each other’ (< *ǰǰʔ* ‘dear, important, difficult’; cf. *sǰǰʔ* ‘something wanted, liked’)

Other words with *-təl* occur in what appears to be the durative aspect, such as:

*θəθǰʔtəl* ‘push each other’ (cf. *θəθǰét* ‘keep pushing (dur.),’ *θǰət* ‘push it,’ < *θǰǰ* ‘move under pressure’)  
*ćəćwítəl* ‘help each other’ (cf. *ćéwət* ‘help him’)  
*qáqǰátəl* ‘insult each other’ (cf. *qǰǰət* ‘insult him,’ *cqǰǰ* ‘black’)  
*pəptítəl* ‘challenge each other’ (cf. *ptém* ‘ask’)

Others are glossed in a way that suggests they are in a progressive durative form, such as:

*mimǰítəl* ‘be paying each other back (as in a feud)’ (cf. *máǰət* ‘repay him,’ *máməǰət* ‘be repaying him’)  
*qʷiqʷəmcástəl* ‘be having their arms around each others necks’ (cf. *qʷəmcəst* ‘hug him, put one’s arms around his neck’)

Forms produced by still other internal modification of the root are:

*nəćnáćtəl* ‘differ from one another’ (< *néć* ‘be different’)  
*cáckʷtəl* ‘be far apart’ (< *cákʷ* ‘far’)  
*qʷǰiqʷǰtəl* ‘talk together’ (< *qʷǰiqʷǰ* dispositional of *qʷél* ‘speak’)  
*sálsəlq̄təl* ‘even with one another’ (< *sǰǰq̄* ‘even, equal,’ the resultative of *lǰq̄ét* ‘make it even’)

The suffix *-təl* can be followed by *-stəxʷ* ‘causative,’ as in:

*qáʔtáləstəxʷ* ‘put them together’ (< *qáʔt* ‘put it together’)  
*θəlǰqtáləstəxʷ* ‘separate it, divide it’ (< *θəlǰqtəl* ‘separate from one another’)  
*sálsəlq̄táləstəxʷ* ‘divide evenly’ (< *sálsəlq̄təl* ‘even with one another’)

## 10.7. THE PERMISSIVE -s

The suffix *-s* ‘permissive’ (PERM) occurs in imperative constructions with the sense “let” as in “Let him go,” or “Let it be” as in “Let it be you.” It may be suffixed to transitive and intransitive verbs and to personal words. Historically, it may be the *-s* of *-stəxʷ* ‘causative,’ but that suffix is itself a transitivity marker and never follows one, while *-s* ‘permissive’ has much greater freedom in what it can follow, as illustrated in the following:

- (a) kʷənəts čxʷ.  
 kʷən-ət-s            čxʷ.  
 be.taken-TR-PERM    you  
 ‘Let him have it.’
- (b) hɪləms ɬe ʔaɪ.  
 hɪləm-s    ɬe    ʔaɪ.  
 fall-PERM    PER    just  
 ‘Just let it fall.’
- (c) ʒás ɬe ném.  
 ʒá-s            ɬe            ném  
 BE3P-PERM    PER            go  
 ‘Let *him* go.’
- (d) nəwəs ɬe ném.  
 nəwə-s            ɬe            ném  
 be.you-PERM    PER            go  
 ‘*You* be the one to go.’
- (e) táxʷs čxʷ ʔəsχtéʔstəxʷ.  
 táxʷ-s            čxʷ            ʔə-s-χtéʔ-stəxʷ  
 later-PERM    you            your-NOM-do-CAUS  
 ‘Do it later.’
- (f) spépəkʷs čxʷ ʔaɪ.  
 s-pépəkʷ-s            čxʷ            ʔaɪ  
 RES-warm-PERM    you            just  
 ‘Leave it warming.’
- (g) ʔéliʔs čxʷ. (AG)  
 éləý-s            čxʷ  
 good(PL)-PERM    you  
 ‘Make them good.’ (said when ordering shoes)
- (h) ʔəwəs téʔs čxʷ kʷə wét stáɪkʷɪ háýθəstèʔep. (CC 10)  
 ʔəwə-s    téʔ-s            čxʷ    kʷə    wét    stáɪkʷɪ  
 not-PERM    appear-PERM    you    ART    who    non-dancer  
 háýθəs-t-èʔep  
 be.telling-TR-you(PL)  
 ‘You will not tell any non-dancer.’ (lit. ‘Let it be none [ʔəwəteʔ] the  
 [hypothetical] non-dancer whom you [plural] tell.’)

- (i) *mèsí, nəšxʷʔáqʷaʔ. háystəxʷ čxʷ tə tsás ʔəššqʷéləwən. ʔás čxʷ kʷə*  
*cícəł siʔém héʔkʷənəsəxʷ. (CC)*

### 10.8. THE SUBORDINATE PASSIVE *-ət*

The suffix *-ət* ‘subordinate passive’ (SUBPAS) follows the passive personal suffixes in subordinate passive forms (see §14.2.6). It may be identical with *-t* ‘stative’ (§12.1.6).

# 11

## Non-Personal Affixes 2: Aspectual and Modal Affixes

These are two sets of elements that appear first and last in the predicate head. They are tentatively grouped together here simply because they stand apart from the derivational affixes and the inflectional affixes of the voice and personal systems. Further analysis may suggest a different grouping.

### 11.1. ASPECTUAL PREFIXES

These are some nine elements that express distinctions mainly of a temporal sort that might be called aspectual. They are:  $w\partial_2$  ‘established,’  $w\partial t$ - ‘already,’  $x^w\partial n$ - ‘still,’  $y\partial_1$  ‘along,’  $w\partial_3$  ‘suddenly,’  $y\partial_2$  ‘first,’  $n\partial x^w s$ - ‘habitually,’  $x^w\partial$ - ‘become,’  $t\partial w$ - ‘somewhat.’ These appear in the predicate and, with the exception of  $w\partial_2$  and  $w\partial t$ -, invariably before the head. These two,  $w\partial_2$  and  $w\partial t$ -, can also appear before a directional auxiliary, while  $w\partial_2$  can also appear before an adverb. Because the head of a predicate can be any kind of word, these elements may precede  $s_1$  ‘(word) nominalizer’ (see §12.1.1) and the possessives  $n\partial$ - ‘my’ and  $?\partial n \sim ?\partial T$ - ‘your’ or  $s_2$  ‘resultative.’

The two,  $w\partial_2$  ‘established’ and  $w\partial t$ - ‘already,’ are also particle-like in that they may become attached to a preceding particle, auxiliary, or adverb. Because of these features, they were identified in §2.6 as “ambivalent affixes.” They are not particles as defined in §2.5 in that they seem (with the possible exception of  $w\partial_2$  in some usages) grammatically related simply to the following word rather than to some larger construction. They are also neither mobile, as the predicate particles are, nor separable from their head words as the articles may be separated from their noun heads by various modifiers.

Some of these prefixes can co-occur. Table 11.1 shows in Roman numerals the relative positions in which they have been recorded and in Arabic numerals the order in which they are described below. The suffixes in the same column seem to occupy the same position and not to co-occur.

Table 11.1

Aspectual Prefixes			
I	II	III	IV
1. $w\partial_2$ 'established'	4. $x^w\partial n-$ 'still'	5. $y\partial_1$ 'along'	6. $x^w\partial-$ 'become'
2. $w\partial t-$ 'already'			7. $w\partial_3$ 'suddenly'
3. $t\partial w-$ 'somewhat'			8. $y\partial_2$ 'first'
			9. $nax^ws-$ 'habitually'

Examples are too few for absolute certainty, but there are instances of  $w\partial_2$  before  $x^w\partial n-$ ,  $y\partial_1$ , and  $x^w\partial-$ ; of  $w\partial t-$  before  $y\partial_1$ ,  $x^w\partial-$ , and  $w\partial_3$ ; of  $t\partial w-$  before  $x^w\partial n-$  and  $y\partial_2$ ; and of  $x^w\partial n-$  before  $y\partial_1$ . In the materials dictated by CC and JP, I have noted only one instance of  $w\partial_2$  and  $w\partial t-$  co-occurring, with  $w\partial t-$  preceding  $w\partial_2$ . On the other hand, AG used  $\text{?}u\text{?}$  (corresponding to  $w\partial_2$ ) before  $w\partial t-$  (see §4.3.1, following example [k]). More work is needed, especially on the various uses and privileges of occurrence of  $w\partial_2$ .

### 11.1.1. $w\partial_2$ 'established' (EST)

This is used often and in a variety of ways with functions and meanings that are not yet clear. The gloss 'established' is an approximation of one apparent meaning but perhaps misses others. In some constructions, it seems simply to link one element with another. It is possible that two or more homophonous elements have been identified here as  $w\partial_2$ .

As used by older people (AC, CC, JP),  $w\partial_2$  appears in slower, more deliberate speech as  $w\partial-$  but in more rapid or informal speech, it may become attached to a preceding element (a particle, auxiliary, or adverb) as  $-aw$  or  $-w$ , as in  $s-$  +  $w\partial-$  can become  $saw$ ,  $ni\text{?}-$  +  $w\partial-$  can become  $niw$  or  $naw$ ,  $\text{?}e+$  +  $w\partial-$  can become  $\text{?}aw$ . Most younger speakers, however, are said not to use the  $w\partial-$  form but to say  $\text{?}aw$  or  $\text{?}aw$  ( $\text{?}u$  or  $\text{?}u\text{?}$ ) in the Cowichan manner, as did DK and AG.

$w\partial_2$  is clearly distinct from the subordinating particle  $w\partial_1$  'if, when, that,' which is always accompanied by a subordinate subject marker and which, in the speech of CC and JP, is invariably  $w\partial-$  (see §4.2, "Subordinate Clauses"). It is also distinct from  $w\partial_3$  'suddenly' (see below).

$w\partial_2$  commonly appears preceding a predicate head that is itself preceded by an auxiliary or some other word, and it usually seems to add so little lexical meaning to the construction that one is tempted to suppose that it simply serves some grammatical function, perhaps to link the predicate head more clearly to

whatever precedes it. However, the following pair of sentences contrasting the absence and presence of  $wə_2$  (unfortunately, the only such pair available) shows that it can indicate an established or continuing state or an established fact:

- (a) ʔi cən c-nəx wə́.  
 AUX I get-canoe  
 ‘I have a canoe. I have obtained a canoe.’
- (b) ʔi cən wə-c-nəx wə́.  
 AUX I EST-get-canoe  
 ‘I own a canoe. I do have a canoe.’

Other examples are not incompatible with this interpretation:

- (c) ʔí-ɬ cən wəcnəx wə́.  
 ʔí-ə́ɬ cən wə-c-nəx wə́  
 AUX-past I EST-get-canoe  
 ‘I had a canoe.’
- (d) ʔi wə-ʔí k wə́θə nə-mə́nə. (CC)  
 AUX EST-be.here ART my-child  
 ‘My son is here.’
- (e) ni ʔəw ʔə́y. niw ʔə́y.  
 niʔ ʔə wə-ʔə́y niʔ wə-ʔə́y  
 AUX ROG EST-good AUX EST-good  
 ‘Is it good? It’s good.’
- (f) ʔá məw híwəq.  
 ʔá mə wə-híwəq  
 BE3P CERT EST-head  
 ‘He’s the head.’

However, in the following, the  $wə_2$  is prefixed to a verb complement referring to an activity that has not yet begun:

- (g) k wənθát cən wək wətəx wə́ɬcəp. (CC)  
 k wən-θát cən wə-k wətəx wə́-ɬcəp  
 be.taken-self I EST-be.entering-firewood  
 ‘I’m going to start packing in wood.’

With a few adverbs, such as *háan* ‘too, very,’ *yáθ* ‘always,’ *mə́k* ‘all,’ and *íát* ‘long before,’  $wə_2$  usually, if not always, appears prefixed to both the adverb and the predicate head, as in:

- (h) wəńán wəqǎǎ. ~ wəńánəw qǎǎ.  
wə-ńán wə-qǎǎ  
EST-too EST-many  
'It's too much. There are too many.'
- (i) wəyáθ cən wəćéćəwət.  
wə-yáθ cən wə-ćéćəw-ət  
EST-always I EST-be.helping-TR  
'I'm always helping him.'
- (j) wəmǎk<sup>w</sup> wəpépǎ.  
wə-mǎk<sup>w</sup> wə-pépǎ  
EST-all EST-white(PL)  
'They're all white.'
- (k) wətát wəšx<sup>w</sup>né'em.  
wə-tát wə-šx<sup>w</sup>né'em  
EST-earlier EST-shaman  
'She had previously been a shaman.'
- (l) wəńán čx<sup>w</sup> wənəsǎí?  
wə-ńán čx<sup>w</sup> wə-nə-s-c-ǎí?  
EST-very you EST-my-NOM-do-value  
'I really love you. I love you very much.' (lit. 'You are very much what I want.')
- (m) ʔi ct wəłwəńánəw mi x<sup>w</sup>cák<sup>w</sup>. (JP 22)  
ʔi ct wəł-wə-ńán wə-ʔəmí x<sup>w</sup>-cák<sup>w</sup>  
AUX we already-EST-very EST-come move.toward-far  
'We've come too far.'

Following *sćéćəń* 'really,' *wə*<sub>2</sub> appears before the head only, as in:

- (n) sćéćəń wəʔǎy.  
really EST-good  
'It's really good.'
- (o) sćéćəń wə-θá.q<sup>w</sup>.  
really EST-big.headed  
'He's really got a big head.'

A prefix *wə*- commonly occurs with the particle *ʔal* 'just' (see §16.2.8). The combination *wə*- ... *ʔal* can have the sense 'just, only' given by *ʔal* alone, or it can simply identify what it encloses as an adjective-like form. I tentatively identify the prefix in this construction as *wə*<sub>2</sub> but must point out that it can be ordered differently, as in:

- (p)  $\dot{x}\acute{e}m$   $i$   $ni$   $x^w\acute{a}w\acute{a}q\acute{a}q\acute{a}y\acute{y}$   $ʔal$ .  
 $\dot{x}\acute{e}m$   $ʔ\acute{a}y$   $niʔ$   $x^w\acute{a}-w\acute{a}-q\acute{a}q\acute{a}y\acute{y}$   $ʔal$   
 cry and AUX become-EST-sick just  
 ‘It [a baby] cried itself sick.’

Here  $w\acute{a}_2$  follows rather than precedes  $x^w\acute{a}$ - ‘become,’ but perhaps the  $x^w\acute{a}$ - is prefixed to the whole construction  $w\acute{a}q\acute{a}q\acute{a}y\acute{y}ʔal$  ‘sick.’ (Other examples of constructions with  $w\acute{a}_2$  ...  $ʔal$  appear in §3.8.3.4).

Like any other aspectual prefix,  $w\acute{a}_2$  can be preceded by  $s$ - ‘clause nominalizer.’ In (q),  $w\acute{a}_2$  appears before an adverb in a nominalized clause:

- (q)  $n\acute{a}s\acute{x}\acute{i}ʔ$   $k^w\acute{a}$   $ʔ\acute{a}s w\acute{a}m\acute{a}k^w\acute{a}l\acute{a}p$   $ʔ\acute{e}ʔ\acute{a}m$ . (CC)  
 $n\acute{a}-s-\acute{x}\acute{i}ʔ$   $k^w\acute{a}$   $ʔ\acute{a}-s-w\acute{a}-m\acute{a}k^w\acute{a}l\acute{a}p$   $ʔ\acute{e}ʔ\acute{a}m$   
 my-NOM-want ART your-NOM-EST-all-you(PL) give  
 ‘I want you all to give.’

In (r),  $w\acute{a}_2$  appears twice, evidently linking the adverb that is the predicate of the main clause and the resultative form that is the predicate of the embedded nominalized clause:

- (r)  $w\acute{a}y\acute{a}\theta$   $k^w s$   $w\acute{a}st\acute{a}ʔ\acute{e}s$   $k^w\acute{a}$  ...  
 $w\acute{a}-y\acute{a}\theta$   $k^w$   $s-w\acute{a}-st\acute{a}ʔ\acute{e}-s$   $k^w\acute{a}$   
 EST-always ART NOM-EST-like-3POS ART  
 ‘It was always as though ... It seemed that always ...’ (JP 20)

$w\acute{a}_2$  also appears following  $s$ - ‘clause nominalizer’ in nominalized clauses that stand as sentences in narratives (see §4.3.4, “Nominalized Narrative Sentences”).

$w\acute{a}_2$  is probably also what appears as  $-\acute{a}w-$  in the demonstrative set  $\theta\acute{a}w\acute{x}\acute{i}\acute{a}$  ‘she,’  $t\acute{a}w\acute{x}\acute{i}\acute{a}$  ‘he,’ and so on (see §15.2.2.2).

### 11.1.2. $w\acute{a}l$ - ‘already’

This appears commonly before a predicate head but, like  $w\acute{a}_2$  ‘established,’ it can also appear before a directional auxiliary. Like  $w\acute{a}_2$  too, it can appear in two different shapes. When attached to some preceding element, it can appear as  $-\acute{a}w\acute{l}$ , but more often it appears as  $w\acute{a}l$ . It usually has the sense ‘already’ or forms what corresponds to an English present perfect tense, as in:

- (a)  $niʔ$   $c\acute{a}n$   $w\acute{a}l-s\acute{x}\acute{a}l\acute{i}q^w$ . (CC)  
 AUX I already-bundled  
 ‘I’m already bundled up.’
- (b)  $ni$   $w\acute{a}l-n\acute{e}m$   $t\acute{a}n n\acute{a}c$   $t\acute{a}$   $lq\acute{e}l\acute{c}$ . (CC)  
 AUX already-AUX(go) set ART moon  
 ‘The moon has just gone down.’

It may have the sense ‘still,’ as in:

- (c) ʒəwəʔ tawən. (AC)  
 also already-town  
 ‘It’s more town.’ (i.e., ‘It’s still town all the way out there.’)

With a progressive form, it may have the sense ‘be starting to,’ as in:

- (d) ni mə wəʔyəhəhəmə. (CC)  
 ni? mə wəʔ-yə-həhəmə  
 AUX CERT already-along-be.going  
 ‘He’s starting to go.’

With a negative, *wəʔ-* may be translated ‘no longer, not anymore,’ as in:

- (e) ni čx<sup>w</sup> wəʔčísəm. wəʔʔəwə čx<sup>w</sup> niʔəx<sup>w</sup> sʒíʒqəʔ. (JP)  
 ni? čx<sup>w</sup> wəʔ-čísəm. wəʔ-ʔəwə čx<sup>w</sup> niʔ-əx<sup>w</sup> sʒíʒqəʔ  
 AUX you already-grow already-not you AUX-you child  
 ‘You have grown up. You’re not a child anymore.’

What appears to be *wəʔ-* occurs in a few words that must be listed in the lexicon:

*wəʔyéʒsələ* ‘two animals’ (< *yéʒsələ* ‘two persons’ < *yəsələ* ‘two’)  
*wəʔθíθə* ‘ritualist,’ i.e., a person who uses spells (*syəwín*) professionally  
 (possibly < *θí* ‘great’)

### 11.1.3. *təw-* ‘like, somewhat, a bit, sort of (like)’

This is possibly composed of a root *téʔ* ‘resemble, appear,’ which can be inferred from *təʔéməx* ‘resemble,’ *stəʔé* ‘like,’ and possibly *ʔəwəteʔ* ‘none,’ and *wə-<sub>2</sub>* ‘established.’ The sense ‘like, resembling’ is seen in:

- (a) təw-x<sup>w</sup>ənítəm. (AC)  
 like-White.person  
 ‘They’re like White people.’
- (b) təwʔíʔtət ʔaʔ tən həʔyq<sup>w</sup>. (DK)  
 təw-ʔíʔtət ʔaʔ tən ʔən-həʔyq<sup>w</sup>  
 like-be.sleeping just ART your-be.burning  
 ‘Your fire is just like it’s sleeping.’
- (c) smətəqsən təw-táki (AC)  
 snotty like-turkey  
 ‘snotty like a turkey’

- (d) *təwspəlq<sup>w</sup>it<sup>θ</sup>e<sup>ʔ</sup> ʔámət ni ʔə tə s<sup>ʔ</sup>éłq i wəθé<sup>ʔ</sup>t* (DK)  
*təw-spəlq<sup>w</sup>it<sup>θ</sup>e<sup>ʔ</sup> ʔámət ni ʔə tə s<sup>ʔ</sup>éłq ʔəy*  
 like-owl be.sitting be.there OBL ART outside and  
*wəθ-θé<sup>ʔ</sup>t*  
 already-dark  
 ‘She’s like an owl sitting outside in the dark.’ (said by a man of his sulking wife)

This sense is stronger with the addition of *stə<sup>ʔ</sup>é* ‘like’ or the suffix *-aməx* ‘resemble,’ and such constructions are said to be more usual, as in (e) and (f).

- (e) *təw-x<sup>w</sup>ənítəm-àməx*.  
 like-White.person-appear  
 ‘They look like White people.’
- (f) *təwste<sup>ʔ</sup>é k<sup>w</sup> ləpláš*. (DK)  
*təw-ste<sup>ʔ</sup>é ʔə k<sup>w</sup> ləpláš*  
 somewhat-like OBL ART plank  
 ‘It’s like a plank.’ (a lady says of her own cake comparing it with her friend’s)

The sense ‘somewhat, a bit’ appears to be more common, as in:

- (g) *təwcəłánəp tətíməx<sup>w</sup>* (JP 19)  
*təw-cicəł-ánəp tətíməx<sup>w</sup>*  
 somewhat-high-ground lands  
 ‘somewhat higher ground’
- (h) *mí ce·p təwłtí*. (DK)  
*ʔəmí ce·p təw-ł-tí*  
 come you(PL) somewhat-partake-tea  
 ‘Come and have some tea.’
- (i) *mí łə təwqík<sup>w</sup>əm*. (AG)  
*mí łə təw-qík<sup>w</sup>-əm*  
 come PER somewhat-bite-INTR  
 ‘Give me a bite.’
- (j) *təw-ʔí čx<sup>w</sup> ʔał*. (JP)  
 somewhat-be.here you just  
 ‘Stay a while. Stay a while.’
- (k) *ʔi cən təwk<sup>w</sup>ámk<sup>w</sup>əmθət k<sup>w</sup>ən sni łtí*. (JP)  
*ʔi cən təw-k<sup>w</sup>ámk<sup>w</sup>əm-θət k<sup>w</sup>ə nə-s-ni<sup>ʔ</sup> ł-tí*  
 AUX I somewhat-strong-self ART my-NOM-AUX partake-tea  
 ‘I became a little stronger when I drank tea.’

- (l)  $təwx^w nəyəməs \dot{l}qə, si^?é\dot{m}.$   
 $təw-x^w-nəyəm-əs \quad \dot{l}ə \quad \dot{q}ə, \quad si^?é\dot{m}$   
 like-inside-laugh-face PER EMPH sir  
 ‘Smile once in a while, Mister.’ (said by an older relative to a sullen adolescent)

- (m)  $səctəw háyə^? i ct təwx^w ənyə^?é:ý yə^?əx^?íxəl i \dots$  (CC 4)  
 $s-ni^? \quad ct \quad wə-háyə^? \quad ^?əý \quad [ni^?] \quad ct$   
 NOM-AUX we EST-leave and AUX we  
 $təw-x^w ən-yə-^?é:ý \quad yə-^?əx^?íxəl \quad ^?əý$   
 like-still-along-continue along-be.paddling(PL) and  
 ‘Then we left and we sort of continued paddling [leisurely] along when ...’

From the sense ‘somewhat’ may come the use of  $təw-$  to form a weak imperative, as in:

- (n)  $təw-ǰəl-ət \quad \dot{l}e.$  (DK)  
 like-write-TR PER  
 ‘Write it down.’

(Perhaps ‘Write it down, eh?’ or ‘You might write it down,’ said to be more polite than a simple  $\dot{x}ə\dot{l}ət \dot{l}e$  ‘Write it down.’)

Prefixed to derivatives of  $k^wín$  ‘how many’ (§17.20),  $təw-$  gives the sense ‘several,’ as in:

- (o)  $təwk^w í:lə sté^?ex^w ə\dot{t}$   
 $təw-k^w in-ələ \quad sté^?ex^w ə\dot{t}$   
 somewhat-how.many-person children  
 ‘several children’
- (p)  $k^w\thetaə təwk^w ənmət wəqəl ^?əl$  (JP 22)  
 $k^w\thetaə \quad təw-k^w in-mat \quad wə-qəl \quad ^?əl$   
 ART somewhat-how.many-kind EST-bad just  
 ‘several bad things’

#### 11.1.4. $x^wən-$ ‘still, soon’

This has been recorded most often with the meaning ‘still’:

- (a)  $x^wən-yə-^?í^?tət.$  (DK)  
 still-along-be.sleeping  
 ‘He’s still sleeping.’
- (b)  $k^w\thetaə ^?əx^w í\dot{n} s\dot{x}í\dot{x}qə\dot{t} nə x^wəns^?é\dot{x}q$  (JP 2)  
 $k^w\thetaə \quad ^?əx^w í\dot{n} \quad s\dot{x}í\dot{x}qə\dot{t} \quad ni^? \quad x^wən-s^?é\dot{x}q$   
 ART little child AUX still-outside  
 ‘a little child who was still outside’

- (c) kʷəns xʷənsʰíʰqəʃ  
 kʷə nə-s-xʷən-sʰíʰqəʃ  
 ART my-NOM-still-child  
 ‘when I was still a child’
- (d) xʷənnétəʃ i wəʃʰəmət tə T. (CC 6)  
 xʷən-nétəʃ ʔəy wəʃʰəmət tə T  
 still-morning and already-get.up ART T  
 ‘It was early morning when T got up.’

But in some contexts, perhaps only with verbs of motion, the gloss is ‘soon’:

- (e) sčéčən wə-ʔəy wə-xʷən-həyeʔ-əs. (CC 13)  
 really EST-good if-soon-leave-3SUB  
 ‘It would be really good if she left soon.’

The word *xʷəntécəl* (< *técəl* ‘arrive here’) appears to be an idiom meaning ‘early’:

- (f) ʔəmí cən xʷən-técəl.  
 come I soon-arrive.here  
 ‘I’ll come early.’

### 11.1.5. *yə-*, ‘along’

This has the sense ‘while moving’ or ‘simultaneously.’ It occurs commonly with progressive forms. It can indicate action progressing while the actor is moving or, perhaps, while other events are occurring. Compare (a) and (b):

- (a) ʔi cən yə-həmʰeʔ-x.  
 AUX I along-be.removing-TR  
 ‘I’m removing them (while moving along).’
- (b) ʔi cən həməʔ-x. (CC)  
 AUX I be.removing-TR  
 ‘I’m removing them (but standing still).’

In (c), (d), and (e), *yə-* is also prefixed to progressive forms:

- (c) yə-íʰtəʃəm. (DK)  
 along-be.singing  
 ‘He’s singing away [as a child might while playing].’
- (d) səsəw ʔəʰqəl θəwʰa yəchəyʷən. (CC 11)  
 s-ni-s wə-ʔəʰqəl θəwʰa yə-c-həyʷən  
 NOM-AUX-3POS EST-go.out she along-do-singing.possessed  
 ‘Then she went out singing her possessing song (*syəwən*).’

- (e) ni yə-há:y. (AG)  
 AUX along-be.stopping  
 ‘It’s stopping. It is coming to a stop.’

In (f), it is prefixed to a durative form:

- (f) haʔ čxʷ kʷə neṁ qíq̄əθàmx i neṁ cən yəkʷənét tən láysəns. (CC 21)  
 haʔ čxʷ kʷə neṁ qíq̄-ət-Samx ʔəȳ neṁ cən  
 if you then AUX(go) be.bound-TR-me and AUX(go) I  
 yə-kʷən-é-t tə nə-láysəns  
 along-be.taken-DUR-TR ART my-license  
 ‘If you have me arrested, I’ll take along my [Shaker minister’s] licence.’

In (g), it is prefixed to a resultative form:

- (g) səw háyeʔ θə skʷáye kʷíʔ yəšxʷčxʷəčxʷq̄wíwən tə sqáyəs sʰpélqən.  
 (JP 19)  
 s-wə-háyeʔ[-s] θə skʷáyeʔ kʷíʔ  
 NOM-EST-leave-3POS ART squirrel ascend  
 yə-šxʷčxʷəčxʷq̄wíwən [ʔə] tə sqáyəs sʰpélqən  
 along-bound.around.middle OBL ART down feather  
 ‘Then away climbed the squirrel, the downy feathers tied around its waist.’

In (h), it is prefixed to the nominalized head of a relative clause with an extracted instrument:

- (h) ʎa mə niʔ yə-šxʷ-kʷákʷəqʷ-əłs ʔé-Itən. (CC)  
 BE3P CERT AUX along-OBLNOM-be.getting.hit-ACT 3PL  
 ‘That’s what they were hitting with.’

It is prefixed to a few forms indicating location to produce forms indicating direction of motion. Compare (i) with (j) and (k) with (l):

- (i) niʔ síʔq tə šxʷʔámət.  
 AUX under ART bed  
 ‘It’s under the bed.’
- (j) neṁ cən ceʔ yə-síʔq.  
 go I FUT along-under  
 ‘I’m going under.’
- (k) niʔ sclálwət.  
 AUX above  
 ‘It’s above.’

- (l) wélx yəscłálwəł tə léləmə.  
 wél-x yə-scłálwəł [ʔə] tə léləmə  
 throw-TR along-above OBL ART house  
 ‘Throw it over the house.’

It is also prefixed to some of the numerals to produce forms used in counting canoes, cars, and so on. (For those recorded, see §19.2.)

### 11.1.6. $yə_{-2}$ (~ *i-*) ‘first, before doing anything else, above all (first)’

This seems to appear with perfective forms only, in contrast to  $yə_{-1}$ , which usually appears with progressive forms. Most recorded instances have been in direct or implied commands or requests, as in (a) to (d) but not (e).

- (a)  $yəʔəłtən$  ce·p yél ʔəsném ʔéyələsàłx<sup>w</sup>. (CC)  
 $yə$ -ʔəłtən ce·p yél ʔə-s-ném ʔéy-ləs-àłx<sup>w</sup>  
 first-eat you then your NOM-go.away-TR-us  
 ‘Eat before you leave us.’
- (b) ʔəý k<sup>w</sup>syələlé-lct, qəłét hiθínəmə. (JP 12)  
 ʔəý k<sup>w</sup> s-yə-lé-l-ct, qəłét həyθínəmə  
 good ART NOM-first-go.shoreward-our again finish.eating  
 ‘We’d better go ashore first and again have something to eat.’
- (c) ʔəwə ce·p yək<sup>w</sup>əcnà·lt. (JP)  
 ʔəwə ce·p yə-k<sup>w</sup>ec-n-àl-ət  
 not you first-see-TR-you-SUBPAS  
 ‘Don’t let yourselves be seen.’
- (d) ʔəwə ce·p isxəñcəʔe·p. (JP 13)  
 ʔəwə ce·p yə-sxəñcəʔ-e·p  
 not you first-be.prey-you  
 ‘Don’t let it catch you.’
- (e) ʔəwə ni·s yəqíʔəət i niʔ cən wəłx<sup>w</sup>əníns. (JP)  
 ʔəwə niʔ-əs yə-qíʔəət ʔəý niʔ cən  
 not AUX-3SUB first-react and AUX I  
 wəł-x<sup>w</sup>ə-níʔ-nəs  
 already-become-be.there-TR  
 ‘He did not react in time, and I went up to him.’ (i.e., ‘I caught him by surprise.’)

### 11.1.7. $nəx^{ws}$ - (~ $x^{ws}$ -) ‘habitually’ (HAB)

It is possible that this is a compound prefix, but there is no evidence for it at present. It appears prefixed to perfective forms of verbs, as in (a) to (c).

- (a)  $nəx^wshəwɪ^{\theta}é^{\theta}əs$ . (JP)  
 $nəx^ws-həwɪ^{\theta}é^{\theta}-t-S-əs$   
 HAB-tease-TR-me-3TR  
 ‘He has the habit of teasing me.’
- (b)  $nəx^wslək^wxən cən \text{ } \text{?}ə\text{?}iməx-èn$ . (JP)  
 $nəx^ws-lək^wxən cən \text{ } \text{?}ə\text{?}iməx-èn$   
 HAB-trip I whenever-walk-I  
 ‘I’m always tripping whenever I walk.’
- (c)  $nəx^wscéwətən k^wəna$  Tom. (JP)  
 $nəx^ws-céw-ətən k^wəna$  Tom  
 HAB-help-others that Tom  
 ‘Tom is always helping.’

(This last sentence was JP’s comment after I had elicited a set of active and passive forms beginning with “Tom helps George.”)

This prefix appears in terms for persons engaged in activities habitually or professionally, as in:

- $nəx^ws^{\theta}əhé^wə$  (CC),  $nəx^wshé^wə$  (JP) ‘deer hunter, inland hunter’ (<  $\text{?}əhé^wə$ ,  $hé^wə$  ‘hunt deer’)  
 $nəx^wspəyətət$  ‘duck hunter’ (<  $pəyətət$  ‘hunt ducks’)  
 $nəx^wsk^wəy\check{x}ə\thetaət$  ‘good provider’ (<  $k^wəy\check{x}ə\thetaət$  ‘act, move oneself’)  
 $nəx^ws\check{x}ənəq$  ‘potlatcher’ (<  $\check{x}ənəq$  ‘give a potlatch’)

However, as the earlier examples show, this is an aspect marker, not simply an agent marker equivalent to the English *-er*:

The form  $x^ws-$  has been recorded in the following words only:

- $x^wsləhé\ell$  ‘good bone-game player’ (<  $ləhé\ell$  ‘play the bone game’) (JP)  
 $x^wstəlé\ell^{\theta}$  ‘person who always makes fun of others’ (cf.  $ləlé\ell^{\theta}$  ‘make fun of him’)  
 $x^wstpá\check{x}əm$  “‘real’ (confirmed) smoker” (<  $tpá\check{x}əm$  ‘smoke tobacco’) (DK)

## 11.2. MODAL SUFFIXES

Only two of these have been identified. They differ from the derivational suffixes in that they follow suffixes of the voice system, for example,  $-əm$  ‘intransitive,’  $-nəx^w$  ‘transitive limited control,’  $-ə\thetaət$  ‘reflexive.’ They may be followed by the third-person transitive subject marker.

### 11.2.1. $-ə\ell mən$ ‘want to, intend to, seem about to’

This is suffixed to verbs in both perfective and progressive aspects. It may appear as  $-ə\ell mən$  in the progressive.

- (a) ʔi cənəwł ʔitətəl mən. (DK)  
 ʔi cən wəł-ʔitət-əl mən  
 AUX I already-sleep-want  
 ‘I want to sleep now.’
- (b) ʔi cən həmǰələl mən. (CC)  
 ʔi cən həmǰél-əl mən  
 AUX I be.fainting-want  
 ‘I’m about to faint.’
- (c) kʷθəw stém ʔal ni qáqəynəx ʷəl mənəs (JP 22)

 ‘whatever they wanted to kill’
- (d) ǰa sǰíʔs kʷs kʷàn nəx ʷəl mənəs təwǰa ǰəte e tθe qəl məstəyəx ʷ.  
 (JP 25)  
 ǰa s-cǰíʔ-s kʷ s-kʷàn-nəx ʷ-əl mən-s  
 BE3P NOM-want-3POS ART NOM-being.taken-TR-want-3POS  
 təwǰa ǰəte ʔə tθe qəl məstəyəx ʷ  
 that be.doing OBL that bad person  
 ‘That is what that bad person who was doing that intended.’

**11.2.2. -i-t ~ -iət (//-əyət//) ‘arrange to, seek to (arrange)’**

The meaning of this suffix is not entirely clear. Examples of its use suggest that it indicates that an activity occurs outside the normal social group through a contractual arrangement. It appears as *-iʔət (//-əyət//)* in the progressive.

- (a) niʔ ct néǰ ʔəltən-i-t. (DK)  
 AUX we go eat-arrange  
 ‘We invited ourselves to eat there [at a restaurant].’
- (b) niʔ ct néǰ ʔitət-i-t. (DK)  
 AUX we go sleep-arrange  
 ‘We went to a hotel.’
- (c) ʔi ʔiʔiltən-iʔət. (AG)  
 AUX be.eating-arrange  
 ‘He’s eating in a restaurant.’
- (d) néǰ le θáyəmθət-i-t neǰ [ʔə] yəθéʔ. (JP)  
 go PER stay.with-arrange go OBL them  
 ‘Go and ask permission to stay with them.’

(e) niʔ θəθə̀y̌cəm-íʔə́ł.

AUX be.sleeping.together-arrange

‘She/he is looking for someone to sleep with [have sex with].’

It also appears in ʔə̀mətíʔ ( < ʔə̀mət ‘sit,’ used for ‘go to the bathroom’ in some families).

## 12

# Non-Personal Affixes 3: Derivational Affixes

We will consider here all of the derivational affixes except the lexical suffixes, which will be presented in §13. Included here are the derivational affixes with purely grammatical meaning, the verbalizing prefixes, the verbal suffixes, and miscellaneous lexical prefixes.

### 12.1. PURELY GRAMMATICAL DERIVATIONAL AFFIXES

There are only three, or possibly four, simple prefixes, one compound prefix, and a suffix that belong here.

#### 12.1.1. *s-*, ‘word nominalizer’ (NOM)

This prefix, perhaps the most commonly used in the language, appears in three kinds of words:

(1) Simple *s-* nouns (see §8.1 [2]), that is, nouns with bound roots (reduplicated forms showing *s-* to be a prefix), as in:

*sʔáʔnə* ‘foot’ (cf. *sʔəʔíʔnə* ‘feet’)

*sqʷəméy* ‘dog’ (cf. *sqʷəmqʷəméy* ‘dogs’)

*smént* ‘rock, mountain’ (cf. *smənmént* ‘rocks, mountains’)

(2) Derived *s-* nouns (see §8.1 [3]), that is, nouns formed from verb roots. These may name the object of the action designated by the verb, as in:

*sʔáʔtən* ‘food’ (< *ʔáʔtən* ‘eat,’ i.e., that which is eaten)

*sʔíʔəm* ‘clothing’ (< *ʔíʔəm* ‘get dressed,’ i.e., that which is put on)

*spíw* ‘ice’ (cf. *píwət* ‘freeze it,’ i.e., that which is frozen)

*sʔíékʷ* ‘carving’ (< *ʔíékʷ* ‘carve,’ i.e., that which is carved)

*skʷíx* ‘name’ (cf. *kʷíxət* ‘name it,’ i.e., that which is given as a name)

*sʔəyéṁ* ‘story, myth’ (< *ʔəyéṁ* ‘tell a story, recite a myth’)<sup>1</sup>

*syáθəs* ‘story, account’ (cf. *yáθəst* ‘tell him’)

---

1 Some use the word *sʔəyéṁ* for any narrative, as JP did at times, but he also used it to refer to events involving *ʔéʔs* and to the world before *ʔéʔs* came (see §18.4.9, example [m]). I think

Or they may name the activities themselves, as in:

*syá:ys* ‘work’ (< *yá:ys* ‘work’)  
*sʰáʰnəq* ‘potlatch’ (< *ʰáʰnəq* ‘give a potlatch’)

In one instance, the noun designates the substance the presence of which is indicated by an adjective: *snás* ‘fat, grease’ (< *nás* ‘fat’ as person, ‘fatty’ as food).

(3) Nominalizations of predicate heads in relative clauses with extracted oblique adjuncts (cf. §4.1.1.2), as in:

- (a) *tə sʰáʰtən* [*ni·n sʰtəʰem*] (DK)  
*tə sʰáʰtən niʰ nə-s-ʰtəʰem*  
 ART food AUX my-NOM-prepare  
 ‘the food that I prepared’

In this relative clause (bracketed), the head verb (*ʰtəʰem* ‘prepare’) is nominalized because the extracted word that the relative clause modifies (*sʰáʰtən* ‘food’) is the oblique object of this verb in a corresponding simple clause, such as:

- (b) *ném θəʰ ʰtəʰem kʷ sʰáʰtən*. (DK)  
*ném θəʰ ʰtəʰem [ʰə] kʷ sʰáʰtən*  
 go ADV prepare OBL ART food  
 ‘Go now and make dinner.’ (‘Go anyway and prepare some food.’)

(Here the object must be identified as oblique even with the particle *ʰə* missing, because the verb is intransitive.)

Nominalizations of this kind seem analogous to at least some of those of the second kind – see (2) above – in their semantic relationship to the verbs from which they are derived; for example, *nəsʰtəʰem* ‘what I prepared’ is to *ʰtəʰem cən* ‘I prepare’ as *nəsʰáʰtən* ‘my food (what I eat)’ is to *ʰáʰtən cən* ‘I eat.’ It seems likely that these two kinds of words are historically related. However, the nominalizations in relative clauses must have possessives, while nouns like *sʰáʰtən* ‘food’ need not, and so nouns like *sʰáʰtən* cannot simply be identified as relative clauses.

It seems useful to distinguish *s-* ‘word nominalizer’ and *s-* ‘clause nominalizer,’ although they are no doubt historically identical. The latter can be identified as a particle in the sense of an element that relates to a construction larger than a word. (See §2.7.)

### 12.1.2. *s-*<sub>2</sub> ‘resultative’ (RES)

This prefix occurs with nearly all resultative forms of the verb (see §7.7). It also

---

that in more traditional usage, a story involving animal characters or the work of *ʰé:ls* was a *sʰəyém* and an account of an historical event or traditional practice was a *syáθəs*.

occurs with some forms of the noun that may be identified as resultative (see §8.7).

It is distinct from  $s_{-7}$  ‘nominalizer’ in that resultative forms do not take possessives (and so are verbs, not nouns, morphologically defined), while the principal function of  $s_{-}$  ‘nominalizer’ is precisely to convert a verb into a form that may take a possessive, that is, to make a noun (morphologically defined) of it.

The identify in sound of  $s_{-2}$  ‘resultative’ and  $s_{-7}$  ‘nominalizer’ may be a recent development in Halkomelem. In neighbouring Salish languages, the counterpart of Halkomelem  $s_{-2}$  ‘resultative’ has an initial glottal stop and schwa, as in Squamish  $ʔəS-$  (Kuipers 1967, 111).

### 12.1.3. $x^w_{-7}$ ‘oblique relater’ (OBREL)

This is a tentative identification. In a few instances, it appears that  $x^w_{-7}$  may relate a root and a lexical suffix as verb and instrument rather than verb and object, as in:

$x^wʔəwʔcəst$  ‘show him with the hands’ (<  $ʔíw-$  ‘show,’  $-cəS$  ‘hand,’  $-t$  ‘transitive’)  
 $x^wk^wəʔcəS$  ‘drop from the hands’ (cf.  $k^wəʔt$  ‘drop it, let it go’)

in contrast to  $k^wəʔnəcəst$  ‘take his hand’ (cf.  $k^wəʔnət$  ‘take it’), which has no prefix  $x^w-$  and in which the root and lexical suffix are related as verb and object.

In some of the words where  $x^w_{-7}$  seems to have a locative sense, it may also mark an oblique relationship between root and suffix. Or, it may be that this function has developed from the locative sense of  $x^w_{-3}$  (cf. §12.4.8).

This interpretation of  $x^w_{-7}$  as an ‘oblique relater,’ although based on only a few examples, casts  $x^w_{-7}$  here in a role similar to the one it plays in the ‘oblique nominalizer’  $šx^w-$ .

### 12.1.4. $šx^w-$ ‘oblique word nominalizer’ (OBLNOM)

This is a compound of  $s_{-7}$  ‘word nominalizer’ and  $x^w_{-7}$  ‘oblique relater.’ The usual Musqueam form is  $šx^w-$  but both CC and JP occasionally used  $š-$ , which is the usual Cowichan form, often correcting afterwards to  $šx^w-$ . In a few words and nominalized clauses, CC used  $x-$  in place of  $šx^w-$ . I cannot account for this variation. In JP’s Musqueam, the sequence  $ʔəT-$  ‘your’ followed by  $šx^w-$  is realized as  $ʔəθx^w-$ . This compound prefix appears in four kinds of words:

(1) Nominalizations of predicate heads in relative clauses with extracted oblique nominal adjuncts other than objects. The extracted nominal adjuncts are loci, goals, and instruments (see §4.1.1.2) and the  $šx^w-$  can be glossed ‘at which, to which, by which,’ as in:

- (a)  $ʔa mə tiʔí sk^wəlɛx [ni nəšš^wk^wəlɛxt]$ . (JP)  
 $ʔa mə tiʔí sk^wəlɛx niʔ nə-šš^w-k^wəlɛx-t$   
 BE3P CERT this gun AUX my-OBNOM-shoot-TR  
 ‘This gun is the one that I shot it with.’

In the relative clause (bracketed), the head verb *kʷəlaxt* ‘shoot it’ is nominalized with *šxʷ*- because the extracted *skʷələx* ‘gun’ is the instrument of a corresponding simple clause:

- (b) ni      cən      kʷəlax-t      ʔə      tiʔi      skʷələx.  
 AUX    I          shoot-TR    OBL    this    gun  
 ‘I shot it with this gun.’

(2) Words that refer to instruments. These may be formed from verbs in the perfective or progressive aspects, without or with suffixes. The prefix has the sense ‘means by which’ and the root or stem designates the activity, as in:

- šxʷʔéxəθ* ‘bed’ (< *ʔéxəθ* ‘lie down’)  
*šxʷ(h)əli* ‘life’ (‘the “soul” that leaves the body at death,’ < *həli* ‘alive’)  
*šxʷʔəyám* ‘power, strength’ (< *ʔəyám* ‘strong’)  
*šxʷyá:yəs* ‘tools’ (< *yá:yəs* ‘be working’)  
*šxʷšəxənəp* ‘plow’ (< *šəxənəp*; cf. *šxət* ‘open it up,’ *-ənəp* ‘ground’)  
*šxʷcícəxəls* ‘froe’ (cf. *cəxət* ‘split it with a froe,’ *-els* ‘activity’)

A few such words have the suffix *-tən* ‘instrument,’ which seems redundant:

- šxʷkʷiʔtən* ‘ladder’ (< *kʷiʔ* ‘ascend’)  
*šxʷqáʔqatən* ‘drinking tube’ (< *qáʔqaʔ* ‘drink’)

Words of this kind seem to be related to those of the previous set (the predicate heads nominalized with *šxʷ*-) in a way parallel to the relationship between the second and third set of words formed with *s*- (§12.1.1 above).

(3) Terms for persons. These include several kinship terms, which are given in §21. One of these is *šxʷsílə* ‘grandparent’s spouse, spouse’s grandparent, grandparent’s sibling’s spouse’ (< *sílə* ‘grandparent, grandparent’s sibling’). This word and others might suggest that the prefix *šxʷ*- may be simply glossed ‘in-law,’ but a more accurate gloss might still be ‘locus’ or ‘means,’ *šxʷsílə* being literally ‘one who is in the place of grandparent’ or ‘one who functions as grandparent.’

Other terms for persons include:

- šxʷswéʔ* ‘master, owner’ (< *swéʔ* ‘property,’ < *wéʔ* ‘own’)  
*šxʷsiʔém* ‘boss, leader’ (< *siʔém* ‘rich person, upper-class person’)  
*šxʷnəʔəm* ‘shaman’ (cf. *snəʔəm* ‘shaman’s tutelary, “Indian doctor’s power”’)

In these too, ‘locus’ or ‘means’ may be implied. The *šxʷnəʔəm* is both the possessor of and is possessed by his or her *snəʔəm*.

(4) Words in which a root and suffix are related obliquely. In words like the following, the *šxʷ*- cannot be interpreted as ‘by which’ or ‘at which.’ It seems rather that the *xʷ*- may serve to relate the root and suffix obliquely (cf. §12.1.3 above), and the *s*- then nominalizes this construction.

šx<sup>w</sup>mùsməṣəl̥əc ‘cow manure’ (< músməṣ ‘cow,’ -əl̥əc ‘dung’)

šx<sup>w</sup>čikənəl̥əc ‘chicken manure’ (< čikən ‘chicken’)

šx<sup>w</sup>ləmélə ‘bottle’ (< ləm ‘rum, liquor,’ -élə ‘place for, container for’)

šx<sup>w</sup>pàtənélə ‘mast’ (< pàtən ‘sail’)

As with *s-* ‘nominalizer,’ we may distinguish šx<sup>w</sup>- as ‘oblique word nominalizer’ and as ‘oblique clause nominalizer’ (see §4.3.3).

### 12.1.5. -aʔt ‘attributive’ (ATT)

As mentioned in §3.8.3.4, when this is accompanied by *s-*<sub>7</sub> ‘nominalizer’ and sometimes internal change in the stem, it produces attributive or adjectival forms (§9.7).<sup>2</sup> Internal changes include the umlauting of /e/ to /a/ seen with several other suffixes but also a shift in stress. The latter appears in only two Musqueam forms given by JP and three Katzie forms given by SP. While the full form of the suffix is -aʔt, it is often heard as -at or -ət. Some phrases with attributives formed by this combination of prefix and suffix are:

šx<sup>w</sup>əlməx<sup>w</sup>aʔt təməx<sup>w</sup> ‘Indian land’ (< x<sup>w</sup>əlməx<sup>w</sup> ‘Indian’)

šx<sup>w</sup>ənítəmaʔt sɔ́wəyíləx ‘White-style dance’ (< x<sup>w</sup>ənítəm ‘White’)

smílkaʔt šx<sup>w</sup>ləmélə ‘milk bottle’ (< E. ‘milk’)

syəwáhəʔt šx<sup>w</sup>q<sup>w</sup>éləwəən ‘old people’s ways of thinking’ (< syəwéh<sup>n</sup> ‘forebears,’ < yəwéh<sup>n</sup> ‘before’)

snácaʔt q<sup>w</sup>éx̣t ‘someone else’s “claim” (e.g., wapato pond)’ (< néc ‘different’)

scítaʔt məmáʔaq<sup>w</sup> ‘birds of the heights (high-flying birds, such as eagles, buzzards, etc.)’ (cf. cícat ‘above,’ JP)

stənəyáʔt šx<sup>w</sup>q<sup>w</sup>əltən ‘woman’s word, women’s language’ (< sténəy<sup>n</sup> ‘woman,’ JP)

sté<sup>n</sup>ex<sup>w</sup>ətəʔt šx<sup>w</sup>q<sup>w</sup>əltən ‘baby talk’ (as using /k/ for /q/, < sté<sup>n</sup>ex<sup>w</sup>ət ‘children,’ JP)

scəwəcəwət stéwət ‘pilchard’ (lit. ‘deep-sea herring,’ < cəwəcəw<sup>n</sup> ‘offing,’ CC)

scəwəcəwət q<sup>w</sup>əlítəq ‘offshore seagull’ (a tern?) (JP)

scəwəcəwət q<sup>w</sup>əx̣əqs ‘q<sup>w</sup>əx̣əqs (a type of syəwəən) from the sea’ (SP)

sk<sup>w</sup>ṣ̌əmət (ṣ̌əcaʔ) ‘Coquitlam Lake’ (< k<sup>w</sup>ík<sup>w</sup>əṣ̌əm ‘Coquitlam’) (JP)

sɔ́wə<sup>n</sup>ṣ̌ílət stáləw<sup>n</sup> ‘Fraser River’ (< q<sup>w</sup>á<sup>n</sup>ṣ̌əl, q<sup>w</sup>á<sup>n</sup>ṣ̌əl ‘Kwantlen, i.e., river of the Kwantlen,’ perhaps referring to the Fraser as it runs through Kwantlen territory only) (SP)

šx<sup>w</sup>məθk<sup>w</sup>əyəmət syəθ ‘Musqueam tradition, Musqueam inheritance’ (SP)

A few attributive forms with *s-* ... -aʔt have become established in special senses, such as:

<sup>2</sup> I assume that the prefix *s-* is *s-*<sub>7</sub> ‘nominalizer’ rather than *s-*<sub>2</sub> ‘resultative’ because the Squamish counterpart -ut takes the Squamish nominalizer *s-*, not ʔəs-, the Squamish counterpart of *s-*<sub>2</sub> (Kuipers 1967, 128).

*syíxaʔt* ‘southern or Puget Sound canoe type’ (< *yíx* ‘Puget Sound,’ JP)  
*sqʷx̣wáməxaʔt* ‘Squamish canoe type’ (< *sqʷx̣wáməx* ‘Squamish,’ JP; DK  
 gave *sqx̣wáməx*)

### 12.1.6. -t ‘stative’ (STAT)

This is a rare suffix. It appears in a few adjectives and nouns:

*lqét* ‘wide’ (cf. *lq-* ‘across, other side,’ *lqəməx* ‘flat country,’ *lqécəs* ‘five,’  
*lqəət* ‘lay it down’)

*płét* ‘thick’ (cf. Squamish *pəlc* ‘thick-lipped’ and comparative data in  
 Kuipers [1967, 248])

*ǰeqt* ‘long’

*θqét* ‘standing upright, tree’ (cf. *θqén* ‘be held upright,’ *θqénx* ‘stand it up’)

*táyət* ‘upstream’ (cf. Cowichan *táyəl* ‘go/come upstream’)

*táywət* ‘the “North” (i.e., Johnstone Strait and beyond)’ (cf. *xʷtáyəwəl* ‘the  
 “Northern” tribes,’ probably related to the last; the northern end of the  
 Strait of Georgia begins “upstream”)

*sǰələcət* ‘place where strong currents meet’ (cf. *sǰələc* ‘current,’ *ǰələt* ‘turn it’)

It also appears in two anomalous resultative forms:

*skʷékʷəlt* ‘hidden’ (cf. *kʷélx* ‘hide it,’ *kʷékʷəlx* ‘be hiding it,’ *kʷél* ‘hide,’  
*kʷəkʷət* ‘be hiding’)

*spépəlt* ‘skimmed’ (cf. *pélt* ‘skim it,’ *pépələt* ‘be skimming it’)

It may also be identical with -t ‘subordinate passive’ (§10.8).

## 12.2. VERBALIZING PREFIXES

There are seven prefixes that have lexical meanings and also serve to make verbs of nominal or adjectival roots or stems. They are: *c-* ‘get, have, make, do,’ *xʷə-* ‘become,’ *txʷ-* ‘buy,’ *t-* ‘partake,’ *ǰ-* ‘go to,’ *ct-* ‘die of,’ and *xʷ-<sub>2</sub>* ‘move toward.’ Of these, only *c-* and *xʷə-* require any discussion. For the others I have simply listed a few examples.

### 12.2.1. *c-* ‘get, have, make, do’

This is a kind of all-purpose verbalizer that converts the root or stem to which it is prefixed into an incorporated object. It is probably what remains of an old root, as suggested by the reduplicated form *cəkʷ-*, given below. It may also be the initial element in the first- and second-person subject particles (§14.2.1), perhaps once serving as an auxiliary to which the pronominal forms now serving as subordinate subjects were added.

Prefixed to nouns, *c-* provides the most usual way of expressing ‘get’ or ‘have,’ and in this sense it seems fully productive. Alone, it has a perfective sense and is usually translatable as ‘get.’ With an auxiliary and *wə-<sub>2</sub>* ‘established,’ it has an imperfective sense and is usually ‘have,’ as in (a) to (c).

- (a) *c-wáč cən ce?*  
 get-watch I FUT  
 ‘I’m going to get a watch.’
- (b) *ʔí ʔə čx<sup>w</sup> wə-c-wáč.*  
 here ROG you EST-get-watch  
 ‘Do you have a watch?’
- (c) *ʔí-ł cən wəcwáč.*  
*ʔí-əł cən wə-c-wáč*  
 here-past I EST-get-watch  
 ‘I used to have a watch.’

With bound roots or stems requiring *s-* (*s-* nouns), *c-* replaces the *s-*, as in:

- (d) *ʔí cən cnəx<sup>w</sup>əł.*  
 ‘I have a canoe. I got a canoe.’ (cf. *snəx<sup>w</sup>əł* ‘canoe’)
- (e) *ʔí cən x<sup>w</sup>əcq<sup>w</sup>əməý.*  
 ‘I have become the owner of a dog.’ (cf. *sq<sup>w</sup>əməý* ‘dog’)

The sense of ‘make’ or ‘do’ may be restricted to contexts where this interpretation is more likely than ‘have’ or ‘get.’ Compare *cnəx<sup>w</sup>əł* ‘have a canoe’ in (d) with (f).

- (f) *scəwét k<sup>w</sup>scnəx<sup>w</sup>əłs.*  
*scəwét k<sup>w</sup> s-c-nəx<sup>w</sup>əł-s*  
 clever ART NOM-make-canoe-3POS  
 ‘He is a good canoe-maker.’ (lit. ‘He is clever at his making a canoe.’)

Other examples are:

*cməńə* ‘have a baby’ (< *məńə* ‘child, offspring’)  
*cpé?əθ* ‘hunt black bear’ (< *spé?əθ* ‘black bear’)  
*ctáktə* ‘get a doctor’ (< *táktə* ‘medical doctor’)  
*ctétəm* ‘be doing what’ (< *stém* ‘what’)  
*cléwən* ‘make mats’ (< *stéwən* ‘mat’)  
*cpátən* ‘sail (v.)’ (< *pátən* ‘sail [n.]’)  
*cqílə* ‘make dried fish’ (< *sqílə* ‘winter supplies, especially of dried salmon’)  
*cyəwən* ‘sing a winter dance song’ (< *syəwən* ‘winter dance song’)  
*cyəwín* ‘recite a spell’ (< *syəwín* ‘spell’)

With kinship terms, the prefix *c-* and the suffix *-əm* ‘intransitive’ give the sense ‘call, address as,’ as in:

*cménəm* ‘call “father”’ (< *mén* ‘father’)  
*csilé-m* ‘call “grandparent”’ (< *sílə* ‘grandparent’)

There are two interrogative verbs formed with *c-*:

*ctétəm* ‘be doing what’

*ctámət* ‘do what, experience what, suffer what’

The first is formed with the root of *stém* ‘what.’ It seems to appear in the progressive only. The second is probably also formed with the same root and a suffix that causes a change from /e/ to /a/, possibly the final *-ət* of the reflexive *-θət*, which has the same effect; the term might more literally be interpreted ‘what happens to oneself.’

The verb *ctámət* is perfective as given and has an anomalous progressive: *cək<sup>w</sup>stámət* ‘be doing what, etc.’ This form is interesting for two reasons. It shows *c-* undergoing reduplication (see §1.5.10 for /c/ and /k<sup>w</sup>/ in reduplicated forms), and thus it must be functioning as a root. And it shows that the underlying form of the perfective is //c-stamət//. This raises the question whether words like *cnəx<sup>w</sup>ət* ‘have a canoe, make a canoe,’ *cpé<sup>?</sup>əθ* ‘hunt black bear,’ etc., are formed by prefixing *c-* to *-nəx<sup>w</sup>ət*, *-pé<sup>?</sup>əθ*, etc., or by prefixing *c-* to *snəx<sup>w</sup>ət*, *spé<sup>?</sup>əθ*, etc., and then deleting the *s*.

The prefix *c-* may also be identifiable with the initial element in the interrogative words *cəstəx<sup>w</sup>* ‘do what with it’ and *x<sup>w</sup>cél* ‘go where.’ (See §17.7 and 17.9.)

Verbs formed with *c-* prefixed to roots of other sorts (verbal, adjectival, and even adverbial) are active but intransitive. It is not clear how productive the prefix is with such roots, but the following have been recorded:

*ck<sup>w</sup>éc* ‘get a look, see anything, happen to see’ (< *k<sup>w</sup>éc* ‘look’; cf. *k<sup>w</sup>écət* ‘look at it,’ *k<sup>w</sup>əcnəx<sup>w</sup>* ‘see it’)

*ck<sup>w</sup>ən* ‘get a hold, get anything’ (< *k<sup>w</sup>ən* ‘get taken’; cf. *k<sup>w</sup>ənət* ‘take it’)

*cháq<sup>w</sup>* ‘catch a smell of something, get a whiff’ (cf. *háq<sup>w</sup>ət* ‘smell it’)

*cmək<sup>w</sup>* ‘find something, salvage something’ (cf. *mək<sup>w</sup>ət* ‘find it, salvage it’)

*cpít* ‘realize who someone is’ (cf. *pətnəx<sup>w</sup>* ‘recognize him’)

*cqəḥ* ‘have much, have lots of something’ (< *qəḥ* ‘much, many’)

*cḥí<sup>?</sup>* ‘want something’ (< *ḥí<sup>?</sup>* ‘expensive, important’)

*cḥé<sup>?</sup>* ‘do something again, resume’ (< *ḥé<sup>?</sup>* ‘again, also’)

*cwé<sup>?</sup>* ‘own’ (< *√wé<sup>?</sup>* ‘own’)

Verbs formed with *c-* and verbal or adjectival roots present a problem in the way some relative clauses are formed. Because these verbs are active but intransitive, they can have oblique objects, as in (g).

- (g) *cḥí<sup>?</sup>* *cən* *ʔə* *k<sup>w</sup>ə* *nəḥx<sup>w</sup>sé<sup>?</sup>t* *tə* *nəká:* (AG)  
*c-ḥí<sup>?</sup>*                      *cən*    *ʔə*            *k<sup>w</sup>ə*    *nə-ḥx<sup>w</sup>-sé<sup>?</sup>-t*                      *tə*    *nə-ká:*  
 make-valuable    I            OBL    ART    my-OBLNOM-rise-TR                      ART    my-car  
 ‘I want something to lift my car with.’

In a relative clause formed through the extraction of an oblique object, the predicate head is nominalized with *s-* (see §4.1.2). However, for two of these verbs with *c-*, it appears that in relative clauses the *c-* is deleted. This, at any rate, seems the simplest interpretation of forms like the following:

- (h)  $n\acute{a}sm\acute{a}k^w$ . (JP)  
 $n\acute{a}$ -*s*-[*c-*] $m\acute{a}k^w$   
 my-NOM-make-find  
 ‘I found it.’ (lit. ‘It is what I found.’)
- (i)  $n\acute{a}s\acute{x}i^? k^w s\acute{a}pl\acute{i}l$ . (AG)  
 $n\acute{a}$ -*s*-[*c-*] $\acute{x}i^?$   $k^w$   $s\acute{a}pl\acute{i}l$   
 my-NOM-make-valuable ART bread  
 ‘I want some bread.’ (lit. ‘Bread is what I want.’)
- (j)  $niw sm\acute{a}k^w s \text{ ?}a\acute{i} k^w\theta\acute{a} ni^? h\acute{a}^?k^w\acute{x}\acute{a}s$ . (JP)  
 $ni^?$   $w\acute{a}$ -*s*-[*c-*] $m\acute{a}k^w$ -*s*  $\text{?}a\acute{i}$   $k^w\theta\acute{a}$   $ni^?$   $h\acute{a}^?k^w\acute{x}\acute{a}s$   
 AUX EST-NOM-make-find-3POS just ART AUX be.using-TR-3SUB  
 ‘He just picked up what he is using.’ (‘What he is using is just what he picked up.’)
- (k)  $\acute{x}a k^w\theta\acute{a} \acute{i}^{\theta}\acute{e}l\acute{a}s n\acute{a}s\acute{x}i^?$ . (JP 22)  
 $\acute{x}a$   $k^w\theta\acute{a}$   $\acute{i}^{\theta}\acute{e}l\acute{a}$ -*s*  $n\acute{a}$ -*s*-[*c-*] $\acute{x}i^?$   
 BE3P ART heart-3POS my-NOM-make-valuable  
 ‘It is its heart that I want.’

On the other hand, verbs formed with *c-* in the sense ‘get’ or ‘have’ prefixed to noun roots can be nominalized with *s-* without the loss of the *c-*, as in:

- (l)  $\theta\acute{a}yt c\acute{a}n ce^? t\acute{a} s\acute{a}la^?ac scl\acute{e}l\acute{a}mct$ . (CC)  
 $\theta\acute{a}y$ -*t*  $c\acute{a}n$   $ce^?$   $t\acute{a}$   $s\acute{a}la^?ac$   $s$ -*c*- $l\acute{e}l\acute{a}m$ -*ct*  
 be.made-TR I FUT ART mat NOM-have-house-our  
 ‘I’ll fix the mats for our house.’ (lit. ‘I will fix the mats that will be what we will have as a house.’)
- (m)  $ni c\acute{a}n cm\acute{a}k^w k^w\theta\acute{a} \acute{i}^{\theta}w\acute{a}l n\acute{a}sc\acute{l}a^? \theta\acute{a}n$ . (CC)  
 $ni^?$   $c\acute{a}n$   $c$ - $m\acute{a}k^w$  [ $\text{?}a$ ]  $k^w\theta\acute{a}$   $\acute{i}^{\theta}w\acute{a}l$   
 AUX I make-find OBL ART clam.shell  
 $n\acute{a}$ -*s*-*c*- $l\acute{a}^? \theta\acute{a}n$   
 my-NOM-have-plate  
 ‘I found a clamshell for my plate.’ (lit. ‘I found a clamshell that will be what I have as a plate.’)

Prefixed to verbs with intransitive suffixes, *c-* gives a causative sense, as in:

- $ck^w\acute{a}y\acute{x}\theta\acute{a}t$  ‘cause something’ (<  $k^w\acute{a}y\acute{x}\theta\acute{a}t$  ‘act, move oneself’)  
 $cq\acute{e}l\acute{a}m$  ‘convince oneself’ (<  $q\acute{e}l$  ‘believe,’  $-\acute{a}m$  ‘intransitive’)  
 $c^?a\acute{y}il\acute{a}m$  ‘make good weather (magically)’ (<  $\text{?}a\acute{y}il\acute{a}m$  ‘become clear’)

Several terms for colours occur with *c-*. These are:

*ck<sup>w</sup>im* ‘red’ (cf. *sk<sup>w</sup>im* ‘red,’ *sk<sup>w</sup>ik<sup>w</sup>əm* ‘reddish’)  
*cq<sup>i</sup>ł̄x̄* ‘black’ (cf. *q<sup>i</sup>ł̄x̄əyə* ‘Negro’)  
*cq<sup>w</sup>áy* ‘green’ (CC), ‘yellow or green’ (JP), ‘pale’ (cf. *q<sup>w</sup>áyəl* ‘turn pale’)  
*cx<sup>w</sup>ik<sup>w</sup>* (JP), *čx<sup>w</sup>iq<sup>w</sup>* (CC) ‘grey’  
*cpəx<sup>w</sup>* ‘blond’ (cf. *spəx<sup>w</sup>* ‘tripe’)

Here *c-* is the counterpart of the separate prefixes for colour terms in closely related Salishan languages, such as *nə-* in Northern Straits. One colour term, *pəq̄* ‘white,’ occurs without *c-*. There is a parallel to ‘pale/turn pale’ above in *cq<sup>w</sup>áməx̄<sup>w</sup>* ‘thin, skinny’ (cf. *q<sup>w</sup>áməx̄<sup>w</sup>əl* ‘become thin, get skinny’).

### 12.2.2. *x<sup>w</sup>ə- ~ x<sup>w</sup>i-* ‘become’

This provides the most common way of expressing ‘become, come to be’ (but cf. also the reflexive *-θət* in §10.5.1 and the verbal suffix *-əl ~ -il* in §12.3.1). It appears as *x<sup>w</sup>ə-* in most contexts. In (a) it is prefixed to both an adjective and a verb:

- (a) *niw nem̄ ʔał̄ x<sup>w</sup>ək̄<sup>w</sup>ámk̄<sup>w</sup>əm̄ k<sup>w</sup>snis x<sup>w</sup>ək<sup>w</sup>ənétəs ni ʔə k̄<sup>w</sup>i sməstáyəx<sup>w</sup>.* (JP 28)
- |           |   |             |   |                      |   |
|-----------|---|-------------|---|----------------------|---|
| <i>ni</i> | <i>wə-nem̄</i>                              | <i>ʔał̄</i> | <i>x<sup>w</sup>ə-k̄<sup>w</sup>ámk̄<sup>w</sup>əm̄</i> | <i>k<sup>w</sup></i> | <i>s-ni-s</i>                                 |
| AUX       | EST-go                                      | just        | become-strong   | ART                  | NOM-AUX-3POS                                  |
|           | <i>x<sup>w</sup>ə-k<sup>w</sup>əné-t-əs</i> |             | <i>ni</i>   | <i>ʔə</i>            | <i>k̄<sup>w</sup>i s-məstáyəx<sup>w</sup></i> |
|           | become-be.taken(DUR)-TR-3TR                 | be.there    | OBL   | DEM                  | NOM-person                                    |
- ‘It [his vision] just gets so strong that he comes to have it in his “system.”’

In (b), it is prefixed to a resultative form:

- (b) *ni x<sup>w</sup>əsəm̄n̄éʔ.* (DK)
- |           |                              |
|-----------|------------------------------|

 ‘What’s next?’

### 12.2.3. *tx<sup>w</sup>-*, ‘buy’

- (a) nem̄ čx<sup>w</sup> tx<sup>w</sup>sǝplíl.  
 nem̄ čx<sup>w</sup> tx<sup>w</sup>-sǝplíl  
 go you buy-bread  
 ‘Go buy bread.’
- (b) tx<sup>w</sup>wéč cǝn ce<sup>?</sup>.  
 tx<sup>w</sup>-wéč cǝn ce<sup>?</sup>  
 buy-watch I FUT  
 ‘I’ll buy a watch.’
- (c) ni cǝn tx<sup>w</sup>ká:  
 ni cǝn tx<sup>w</sup>-ká.  
 AUX I buy-car  
 ‘I bought a car.’

### 12.2.4. *ǫ́-*, ‘partake, experience’

- ǫ́qǫ́* ‘drink water’ (< *qǫ́* ‘water’; cf. *qǫ́qǫ́* ‘drink’)  
*ǫ́tí* ‘drink tea’ (< *tí* ‘tea’)  
*ǫ́čém* ‘eat “jam”’ (< *čém* ‘jam, any canned fruit’)

*tčémt* ‘make it into “jam”’ (DK)

*t pááǰəm* ‘smoke (v.)’ (cf. *s pááǰəm* ‘smoke [n.]’)

*tk<sup>w</sup>ək<sup>w</sup>f<sup>?</sup>x<sup>w</sup>* ‘be chewing gum’ (< *k<sup>w</sup>f<sup>?</sup>x<sup>w</sup>* ‘pitch’)

*tk<sup>w</sup>əl<sup>w</sup>áǰə* ‘be having a bellyache’ (< *k<sup>w</sup>áǰə* ‘belly’)

*tqáǰqáǰə ~ ctqáǰə ~ ctqá<sup>?</sup>qáǰə* ‘thirsty’ (cf. *qá<sup>?</sup>* ‘water’)

*tš<sup>w</sup>áš<sup>w</sup>əsəm* ‘eat whipped soapberries’ (cf. *sš<sup>w</sup>ésəm* ‘soapberries’)

The last may be a progressive in the pattern of *q<sup>w</sup>él* ‘speak,’ *q<sup>w</sup>áq<sup>w</sup>áǰ* ‘be speaking.’

### 12.2.5. *ǰ*- ‘go to’

*ǰtáwən* ‘go to town’ (< *táwən* ‘town’)

*ǰnécəwt<sup>w</sup>* ‘visit, call on a neighbour’ (< *nécəwt<sup>w</sup>* ‘next door, next room’)

### 12.2.6. *ct-* ‘die of’

*ctlém* ‘die of drink’ (< *lém* ‘liquor,’ < E. ‘rum’)

*ctqən<sup>w</sup>íləm* ‘die of overeating’ (< *qánəx<sup>w</sup>* ‘gullet,’ *-íləm* ‘move toward’;  
cf. *sqánəx<sup>w</sup>* ‘greedy’)

*ct<sup>θ</sup>áštən* ‘die of poison’ (< *t<sup>θ</sup>áštən* ‘poison’)

### 12.2.7. *x<sup>w</sup>-<sub>2</sub>* ‘move toward’

With stems referring to location, *x<sup>w</sup>-<sub>2</sub>* seems to function as a verbalizer implying motion toward, as in:

*x<sup>w</sup>cák<sup>w</sup>* ‘go far’ (< *cák<sup>w</sup>* ‘far’)

*x<sup>w</sup>cáləq<sup>w</sup>* ‘go up into the woods’ (< *cáləq<sup>w</sup>* ‘the woods, back country’)

*x<sup>w</sup>cícəǰ* ‘go high’ (< *cícəǰ* ‘above’)

*x<sup>w</sup>cáwəcəw* ‘go out from shore’ (< *cáwəcəw* ‘the offing’)

It may co-occur with the suffix *-əǰ ~ -íl ~ -íləm* (§12.3.1), which has a similar function, as in:

*x<sup>w</sup>ǰpíl* ‘go straight down into the ground’ (< *ǰpíl* ‘go downward’)

*x<sup>w</sup>íwəǰ* ‘move upstream, move toward the middle of the house’ (< *híwəǰ*  
‘move closer to the fire’)

*x<sup>w</sup>cél* ‘go where’ (< *√cə-*, cf. *cástəx<sup>w</sup>* ‘do what with it’)

## 12.3. VERBAL SUFFIXES

There are four of these. The first is not always verbalizing since the root may itself be verbal.

### 12.3.1. *-əǰ ~ -íl* ‘move toward, turn to, become’

This is very productive and can be followed by transitive and intransitive suffixes.

*ʔəʃqəl* ‘go/come out’ (cf. *sʔéʃq* ‘outside’)  
*ʔəʃqílt* ‘kick out (a sponger, spouse, etc.)’ (cf. *ʔəʃqəl*)  
*híwəl* ‘move toward the fire’ (cf. *híwx* ‘bring forward’)  
*xʷíwəl* ‘go/come upstream’ (probably //xʷ-híwəl//, cf. *ʔəhíw* ‘upstream’)  
*yəl'éwəl* ‘get past’ (cf. *yəl'éw* ‘past, passed,’ *yəl'éwɨx* ‘pass him’)  
*ʃpíl* ‘move downward, sink, go/come downstairs’ (prog. *ʃpəl*, < *ʃəp* ‘deep’; cf. *ʃíʃəp* ‘down’)  
*ʃpílɨx* ‘sink it’ (cf. *ʃpíl*, also *ʃpílastəxʷ* ‘sink it, abandon it’)  
*qʷáyəl* ‘turn pale’ (cf. *cqʷáy* ‘yellow, green, pale’)  
*qəlqí·l* ‘be ruined’ (< *qəl* ‘bad,’ probably //qəlqələl//)  
*qəlqí·lt* ‘ruin it’ (cf. *qəlqí·l*)  
*téwəl* ‘get light, dawn’ (cf. *téwət* ‘light it, throw a light on it’)

The compound suffix *-íləm* is *-il* plus *-əm* ‘intransitive’:

*həqíləm* ‘go under (a bed, house, etc.)’ (cf. *síʔq* ‘underneath,’ *híqət* ‘put it under’)  
*wəqʷíləm* ‘go/come downstream’ (< *wəqʷ* ‘drift, float with the current’)  
*təlíləm* ‘move back from the fire, away from the centre of the house’ (cf. *télx* ‘move it back from the fire, move it from the centre of the house’)  
*xʷckʷíləm* ‘go far away’ (< *cákʷ* ‘far’)  
*xcíləm* ‘go into the woods’ (cf. *xícət* ‘put it into the woods, thrust it in,’ *sxíxəc* ‘the woods, the bush’)  
*kʷətɨxʷíləm* ‘go/come inside’ (cf. *kʷtəxʷ* ‘get inside’)  
*qʷəhíləm* ‘go through’ (cf. *qʷé* ‘get through’)  
*ʔəyíləm* ‘become clear (the weather)’ (< *ʔəy* ‘good’)  
*ʃəxʷlaʔasíləm* ‘go to nothing, become worthless’ (< *ʃəxʷláʔas* ‘of no value’)  
*qaʔqəʔíləm* ‘get the drinking habit’ (< *qáʔqaʔ* ‘drink’)

### 12.3.2. *-í·m* ‘die from’

This is possibly composed of some element of the shape //əR-// and the suffix *-əm* ‘intransitive.’ It has not been recorded in many words. It may require a prefix *c-* or *s-*.

- (a) *niʔ cíʰáyəʔí·m*. (CC)  
*niʔ c-íʰáyə-í·m*  
 AUX get-fur.seal-die.from  
 ‘They died hunting fur seals.’
- (b) *niʔ sʃqíí·m*. (CC)  
*niʔ s-ʃqíí-í·m*  
 AUX NOM[?]-give.birth-die.from  
 ‘She died in childbirth.’

- (c) cǰənǰí·m. (JP 4)  
 c-ǰíłǰǰ-í·m  
 get[?]-make.war-die.from  
 “‘fallen in battle’”

The last example is something Raven says in a myth. Presumably the /n/ for /l/ is old-fashioned Musqueam.

### 12.3.3. -á·t ‘travel by’

There is a word *ʔá·t* ‘go aboard,’ and so words in which *-á·t* appears as the second element might be considered compounds. However, compounds are rare or non-existent (in the present analysis) and besides, the meaning of *-á·t* is not identical with that of *ʔá·t*. Therefore *-á·t* is listed here as a suffix. There is also a possible lexical suffix *-a·t* ‘canoe, vehicle’ (§13.6, 32), for which I have only two clear attestations. In the sense ‘travel by,’ *-a·t* appears to be fully productive.

- (a) ném̄ ct wékən-à·t. (CC 7)  
 go we wagon-travel.by  
 ‘We’ll go by wagon.’
- (b) ni ct ném̄ t̚íkt̚ík-à·t. (JP)  
 AUX we go wagon-travel.by  
 ‘We went by wagon.’
- (c) báysikl-à·t čx<sup>w</sup> (JP)  
 bicycle-travel.by you  
 ‘Use your bike.’

In (a), AC used a term for ‘wagon’ borrowed from English, while in (b), JP used one from Chinook Jargon.

*snəxəw̄t̚à·t* ‘go by canoe’ (JP)  
*lilút̚à·t* ‘go by train’ (JP) (> *lilút* > ‘railroad’)

### 12.3.4. -áməx ~ -á·m əx ‘look, appear’

The form *-áməx* is usual, as in:

*scək̄w̄láməx* ‘how does it look?’ (< *scék̄w̄əl* ‘how?’)  
*ʔəyáməx* ‘pretty, handsome’ (< *ʔəy* ‘good’)  
*qəláməx* ‘ugly’ (< *qəl* ‘bad’)  
*nəčáməx* ‘look different’ (< *nəc* ‘different’)

The form *-á·m əx* was recorded in one word: *təʔáməx* ‘resemble’ (< *teʔ-* ‘be like’; cf. *steʔé* ‘like’). But perhaps the long vowel is a product of the root having a form *teʔe*. This word is used as in (a), (b), and (c).

*tənmítə* ~ *təmmítə* ‘winter dancing season’ (< *mítə* ‘dance possessed with one’s “song” [syəwən]’) (CC)

*təñqʷətqʷətɬən* ‘period of continuous fog’ (cf. *sqʷətɬən* ‘fog,’ *qʷiqʷtímɬən* ‘drizzle’) (JP)

For others, see §22.2.7.

### 12.4.3. *tən-* ‘from’

*tənyíx* ‘a wet south wind’ (<  $\sqrt{y}íx$  ‘Puget Sound’; cf. *xʷəyíxəl* ‘Lushootseed speakers,’ *šxʷəyíxələʔt* ‘southern, of Puget Sound’)

*təncáləqʷ* ‘a squally west wind, “bush wind” from over Vancouver Island’ (< *cáləqʷ* ‘inland, “the bush”’)

*tənsxém* ‘a kind of “song” [syəwən] that comes from crying’ (< *xém* ‘cry,’ *s-* ‘nominalizer’)

*tənsiʔém* ‘upper-class, from high-class people’ (< *siʔém* ‘rich, upper-class person’)

*tənsíxəm* ‘of lower-class origin’ (< *síxəm* ‘lower-class group’)

*tənsčələxʷ* ‘people from *ščələxʷ* ‘p.n., the upper end of the Musqueam village’

*tənsʔəǰqálwət* ‘outsider, someone from outside the family’ (< *sʔəǰqálwət* ‘outside’)

The prefix *təl-*, a variant of the last, is so far identified in the following words only. It may appear only before a glottal stop.

*təlšənəç* ‘from where?’ (< *ʔənəç* ‘where?’)

*təlí* (JP), *təlíʔ* (CC) ‘from’ (< *ʔí* ‘be here’)

*tələθnəç* ‘a rainy southeast wind’ (< *sʔəθnəç* ‘bay’)

*šxʷtəláʷməxʷ* ‘where one is from’ (< *šxʷ-* ‘where/why,’ *-aʷ-* ‘connector,’ *-məxʷ* ‘place, people’)

### 12.4.4. *txʷ-* ‘(something) belonging to’

This seems to be used only with *wét* ‘who’ and with personal names.

(a) *txʷ-wét*                      *tiʔí.*  
belonging.to-who      this  
‘Whose is this?’

(b) *txʷ-John*                      *tθeʔ.*  
belonging.to-John      that  
‘That’s John’s.’

(c) *ǰa*      *čə*      *kʷθə*      *txʷ-Arnold.* (AG)  
BE3P      QUOT      that      belonging.to-Arnold  
‘It’s said to be the one that’s Arnold’s.’

Compare (c) with (d):

- (d) ǰa      čə      sweʔ      ə      ǰ      Arnold. (AG)  
 BE3P    QUOT    property    OBL    ART    Arnold  
 ‘It is said to be Arnold’s.’

#### 12.4.5. *tx<sup>w</sup>-* ‘remaining, only’

- tx<sup>w</sup>k<sup>w</sup>ín* ‘how many more?’ (< *k<sup>w</sup>ín* ‘how many?’)  
*tx<sup>w</sup>náčáʔ* ‘one more’ (< *náčáʔ* ‘one’)  
*tx<sup>w</sup>áy* ‘be only, be an exception, except for’ (< *háý* ‘be stipulated’)  
*wətx<sup>w</sup>st<sup>h</sup>ám ?al* ‘nothing but bones, skinny’ (< *st<sup>h</sup>ám* ‘bone,’ *wə- ... ?al* ‘only’)

#### 12.4.6. *t<sub>2</sub>* ‘portion’

- t<sup>h</sup>áləq* ‘some, a part’ (cf. *θáləqθət* ‘separate’)  
*tsəq* ‘half (portion of meat, a dollar, etc.)’ (< *səq* ‘be split, be torn’)  
*t<sup>h</sup>áq<sup>w</sup>* ‘half (a stick, bone, etc.)’ (< *t<sup>h</sup>áq<sup>w</sup>* ‘break’)  
*tspéləw* ‘members of the Sparrow [surname] family’

#### 12.4.7. *čt-* ‘fellow, co-’

This can be prefixed to nouns and a variety of verb forms.

- čtx<sup>w</sup>šlməx<sup>w</sup>* ‘fellow villagers, fellow Indians’ (< *x<sup>w</sup>šlməx<sup>w</sup>* ‘village, tribe, Indian’)  
*čtšém* ‘deceased child’s spouse’s parent, child’s deceased spouse’s parent’ (i.e., ‘co-parent-in-law after the death of a linking child,’ lit. ‘co-weeper,’ < *šém* ‘cry’)  
*čt<sup>h</sup>əq<sup>w</sup>i<sup>h</sup>təl* ‘siblings and cousins’ (< *?əq<sup>w</sup>i<sup>h</sup>təl* ‘be related as siblings or cousins’)  
*čtk<sup>w</sup>íntəl* ‘opponent in a fight’ (< *k<sup>w</sup>íntəl* ‘fight’)  
*čtst<sup>h</sup>əx<sup>w</sup>ət* ‘the other children’ (lit. ‘co-kids,’ < *st<sup>h</sup>əx<sup>w</sup>ət* ‘children’)  
*čtwét* ‘someone you share with’ (lit. ‘co-owner,’ < *wéʔ* ‘own’ or *wét* ‘who?’)  
*čtmántəl* ‘half-sibling with the same father’ (< *mén* ‘father,’ *-təl* ‘mutual’)  
*tə si<sup>h</sup>ém ni čtq<sup>w</sup>i<sup>h</sup>əltəls* ‘the big man he was talking with’ (< *q<sup>w</sup>i<sup>h</sup>əltəl* ‘be talking together,’ *-s* ‘his’; lit. ‘the rich man who was his interlocutor’) (JP 3)

#### 12.4.8. *x<sup>w</sup>-* ‘inward’

A prefixed *x<sup>w</sup>-* occurs in a large number of words. In many, its meaning and functions are, as yet, quite unclear. The label ‘inward’ is meant as a catch-all for occurrences of *x<sup>w</sup>-* that have not been segregated under the labels ‘move toward’ and ‘oblique relater.’ I am assuming that all occurrences can ultimately be placed in one of these three categories. It may be that there are more than

three homophonous prefixes, or, on the other hand, there may be only one that has developed a wide range of meaning and function.

The notions inward, inhering, possessing seem to be conveyed by  $x^w$ - in a number of sorts of words. Some of these are:

(1) Active verbs, such as:

$x^w c\acute{o}l\acute{o}w\acute{t}$  ‘turn it inside out’ (<  $c\acute{o}l\acute{o}w\acute{t}$  ‘turn it over, as a featherbed’)

$x^w \acute{x}é\acute{x}at$  ‘cut it open, break it open’ (<  $\acute{x}ét$  ‘open it, as a can,’ - $é\acute{x}an$  ‘side’)

(2) With lexical suffixes. The prefix  $x^w$ - occurs often, though not always, with  $-íw\acute{a}n$  ‘behind/inside,’  $-q\acute{a}n$  ‘throat/voice/speech,’ and  $-lél-$  ‘food’; it occurs fairly often with  $-as$  in the sense ‘face,’ but not ‘moon, dollar’; and it occurs occasionally with others.

It is possible that some of these suffixes simply attract or require an accompanying  $x^w$ -, but it seems also possible to identify this  $x^w$ - with a locative ‘in’ or ‘on’ or a possessive ‘with’ or ‘having,’ although it is not possible to say why it should occur in one word and not in another. Compare the following with  $x^w$ -:

$x^w \theta\acute{a}\acute{s}$  ‘with a big face’

$x^w \theta\acute{a}híw\acute{a}n$  ‘with a big behind’

$x^w \thetaíq\acute{a}n$  ‘loud’ (lit. ‘big-voiced’)

$x^w \theta\acute{e}q$  ‘with a big penis’

$x^w \acute{c}q^w íw\acute{a}n$  ‘get pricked in the behind’

$x^w ma\acute{x}lél\acute{a}m$  ‘repay food’

with the following without  $x^w$ -:

$\theta\acute{a}q^w$  ‘big headed’

$\thetaíqs\acute{a}n$  ‘with a big nose’

$\theta\acute{a}h\acute{a}y\acute{a}\theta\acute{a}n$  ‘with a big mouth’

$\thetaí\acute{a}l\acute{a}s$  ‘with big eyes’

$\theta\acute{e}q$  ‘with a big penis’ (JP)

$\acute{c}q^w \acute{a}l\acute{c}\acute{a}$  ‘get pricked in the belly’

$\acute{c}q^w ín\acute{a}s$  ‘get pricked in the chest’

$ma\acute{x}lélí\theta\acute{e}$  ‘repay wealth’

(3) In words concerned with opening and shutting, such as:

$x^w t\acute{a}q$  ‘shut (intr., as a door does)’ (<  $t\acute{á}q$  ‘be cut off, be taken by surprise’)

$x^w t\acute{a}q\acute{e}t$  (CC),  $t\acute{á}q\acute{e}t$  (JP) ‘shut it (anything vertical, as a door)’

$x^w w\acute{e}l\acute{b}t$  ‘lock it’ (<  $w\acute{e}l\acute{b}t$  ‘pry it’)

$x^w l\acute{a}klít$  ‘lock it’ (<  $l\acute{a}klí$  ‘key’ [F. *le clef* via CJ])

$x^w m\acute{e}^?x$  ‘unlock it’ (<  $m\acute{e}^?x$  ‘take it off, remove it’)

$x^w y\acute{á}\acute{x}^w\acute{a}t$  ‘unlock it’ (<  $y\acute{á}\acute{x}^w\acute{a}t$  ‘untie it, free it’)

(4) In words referring to mental states, such as:

$x^w\acute{x}i?$  ‘stingy with money’ (<  $\acute{x}i?$  ‘expensive, difficult’)  
 $x^wli\acute{l}\acute{a}q$  ‘generous’ (<  $li\acute{l}\acute{a}q$  ‘cheap, easy’)  
 $x^wsí?si?$  ‘afraid, cowardly’ (<  $sí?si?$  ‘fear’)  
 $x^wq\acute{a}lw\acute{a}t$  ‘mean, tough person’ (<  $q\acute{a}l$  ‘bad,’  $-w\acute{a}t$  ‘vessel’)

(5) In place names.  $x^w$ - occurs in a number of place names and in a few words for kinds of places, all formed from the names of plants or animals and often with the suffix  $-əm$  ‘intransitive.’ The sense of  $x^w$ - here seems to be ‘where there is/are –’ or ‘having –.’ For example:

$x^wm\acute{a}\theta k^w\acute{a}y\acute{a}m$  ‘p.n., Musqueam’ (<  $m\acute{a}\theta k^w\acute{a}y$  ‘a species of plant’)  
 $x^wqim\acute{a}k^w\acute{a}m$  ‘p.n., a spring at Musqueam’ (<  $sqim\acute{a}k^w$  ‘octopus,’ once there in a legend)  
 $x^ws\acute{a}q^w$  ‘p.n., a stream near Pitt Lake’ (<  $s\acute{a}q^w$  ‘cow parsnip’)  
 $x^wm\acute{e}c\acute{a}n\acute{a}t p$  ‘p.n., a site near St. Mungo’s Cannery’ (<  $m\acute{e}c\acute{a}n\acute{a}t p$  ‘black haw’)  
 $x^w\acute{c}\acute{a}l\acute{a}k^w\acute{a}?\acute{a}m$  ‘a place where many skunk cabbages ( $\acute{c}\acute{a}?\acute{k}^w\acute{a}?$ ) grow’  
 $x^w\acute{w}\acute{a}lw\acute{i}:\acute{l}\acute{a}t p$  ‘a place where nothing but tules ( $w\acute{i}:\acute{l}$ ) grow’

(6) In words for states of water or weather. These are formed, like those of the last set, with  $-əm$ .

$x^w?\acute{a}y\acute{a}m$  ‘clear (water)’ (<  $?\acute{a}y$  ‘good’)  
 $x^wq\acute{a}l\acute{a}m$  ‘murky’ (<  $q\acute{a}l$  ‘bad’)  
 $x^w\acute{x}i?m$  ‘be flowing fast’ (<  $\acute{x}i?m$  //  $x^w-\acute{x}i?m-əm$  // ‘fast’)  
 $x^w?\acute{a}n\acute{a}x^w\acute{a}m$  ‘be slack water’ (<  $?\acute{a}n\acute{a}x^w$  ‘stop’)  
 $x^w?\acute{a}\theta t\grave{e}n\acute{a}m$  ‘become cloudy’ (cf.  $\acute{s}x^w?\acute{e}\theta t\acute{a}n$  ‘cloud’)

(7) With the meaning ‘vulva.’ This appears to be the only instance of a body-part prefix, the counterpart of the various suffixes referring to body parts. It occurs in:

$x^w\theta i$  ‘big vulva’ (<  $\theta i$  ‘big’)  
 $x^w?\acute{a}y$  ‘clean vulva’ (<  $?\acute{a}y$  ‘good, clean’)  
 $x^wk^w\acute{a}n\acute{e}t$  ‘put one’s hand on a woman’s vulva’  
 $\acute{s}x^wq^w\acute{i}n$  ‘woman’s pubic hair’ (cf.  $q^w\acute{i}n\acute{a}ws$  ‘body hair,’  $q^w\acute{i}n\acute{e}q$  ‘male pubic hair’)

and possibly in  $x^wm\acute{a}q^w$  ‘miscarry’ (<  $m\acute{a}q^w$  ‘burst’).

In this set of words, does  $x^w$ - have a meaning such as ‘inward’ used euphemistically or is there a missing lexical suffix that was deleted euphemistically?

(8) A prefix  $n\acute{a}x^w$ - apparently identical with  $x^w$ - ‘inward’ has been recorded in one word only:  $n\acute{a}x^wm\acute{a}\theta k^w\acute{a}y\acute{a}m\acute{i}w\acute{s}$  ‘a person originally from Musqueam but now living somewhere else’ (<  $x^wm\acute{a}\theta k^w\acute{a}y\acute{a}m$  ‘Musqueam,’  $-i\acute{w}\acute{s}$  ‘body’).

**12.4.9. *wə-<sub>3</sub>* ‘suddenly, with a burst’**

Perhaps this should be classed with the aspectual prefixes. (For AG and perhaps others for whom *wə-<sub>2</sub>* is *ʔu-* or *ʔuʔ-* this is still *wə-*.) Its use is illustrated in (a) to (e).

(a) *nəwł wəpákw̥ tə spáǰəm̥s.* (CC)

<i>ni</i>	<i>wəł</i>	<i>wə-pákw̥</i>	<i>tə</i>
AUX	already	suddenly-burst.forth.in.small.particles	ART
	<i>spáǰəm̥-s</i>		
	smoke-3POS		

‘His smoke has appeared. His smoke has suddenly burst out.’

(b) *ni wəpákw̥ k<sup>w</sup>θə pá·k<sup>w</sup>.* (AG)

<i>ni</i>	<i>wə-pákw̥</i>	<i>k<sup>w</sup>θə</i>
AUX	suddenly-burst.forth.in.small.particles	ART
	<i>pá·k<sup>w</sup></i>	
	mature.Chinook.salmon	

‘The big old spring salmon splashed.’

The root  $\sqrt{pákw̥}$ , which appears in the last two examples, has not been recorded as such, but it appears in *pákw̥əm̥* ‘billow forth, splash forth,’ *pákw̥ət* ‘scatter it about (fine stuff like down),’ *spákw̥əm̥* ‘dust,’ and *spákw̥* ‘flour.’

(c) *ni cən cəq̣ k<sup>w</sup>sis wək<sup>w</sup>təx<sup>w</sup>.* (DK)

<i>ni</i>	<i>cən</i>	<i>cəq̣</i>	<i>k<sup>w</sup></i>	<i>s-ni-s</i>	<i>wə-k<sup>w</sup>təx<sup>w</sup></i>
AUX	I	be.surprised	ART	NOM-AUX-3POS	suddenly-enter

‘I was surprised when she walked in [suddenly entered].’

(d) *x<sup>w</sup>ənsnét i niwəł wəhíq.* (AG)

<i>x<sup>w</sup>ən-snét</i>	<i>ʔəy̆</i>	<i>ni</i>	<i>wəł-wə-híq</i>
still-night	and	AUX	already-suddenly-shove.off

‘It was still night when he shoved off [suddenly launched his canoe].’

(e) *ni wək<sup>w</sup>éc k<sup>w</sup>θə ni·k<sup>w</sup>í.* (AG)

<i>ni</i>	<i>wə-k<sup>w</sup>éc</i>	<i>k<sup>w</sup>θə</i>	<i>ni</i>	<i>ʔə</i>	<i>k<sup>w</sup>í</i>
AUX	suddenly-scream	ART	be.there	OBL	there

‘There was a sudden scream over there.’ (lit. ‘An invisible one who is over there suddenly screamed.’)

**12.4.10. *həñ-* ~ *həṁ-* ~ *ʔəṁ-* ~ *hən-* ‘come’**

This has been recorded with only a few roots. The variation does not seem to be significant. (CC used *həñ-*. JP recognized that some people say *həñ-* but he generally said *həṁ-* or *ʔəṁ-*. AG used *hən-*.)

*hə́ncéw* ‘come down to the shore’ (pl. *hə́ncéləw*, cf. *cécəw* ‘shore’) (also figuratively ‘return from the dead’)

*hə́ncáwəyəs* ‘come back to life’ (cf. < *cécəw* ‘shore,’ -əs ‘face’?)

*hə́ncáłəq<sup>w</sup>* ‘get up to the house from the shore’ (< *cáłəq<sup>w</sup>* ‘inland’) (AG)

*hə́námət* ‘get home’ (< ?*ámət* ‘sit,’ *x<sup>w</sup>ámət* ‘be home’) (AG)

*hənx<sup>w</sup>é* ‘get down (as from up in a tree)’ (cf. *x<sup>w</sup>ét* ‘lower it’) (AG)

## 13

# Non-Personal Affixes 4: Lexical Suffixes

It is possible to isolate nearly 150 elements that may be lexical suffixes or connectives plus lexical suffixes. About 100 occur in enough words to be clearly identifiable in meaning. A good many of these are very productive. Others have been recorded in only one or two words each and so are less easily glossed. Some can be identified only as possible lexical suffixes.

### 13.1. FORMS

The lexical suffixes themselves (disregarding the connectives) have a variety of forms: *-C*, *-VC*, *-VCC*, *-CVC*, *-VCVC*, *-VCCC*. Glottalized obstruents occur but seem less common in lexical suffixes than in roots.

The lexical suffixes are often joined to the root by a connective element that consists of a vowel – /ə/, /e/, or /a/ – plus a resonant – /l/, /w/, or /y/, with or without glottalization. With some lexical suffixes, the connective seems to add little or nothing to the meaning; for example, *-tx<sup>w</sup>*, *-əltx<sup>w</sup>*, *-əwtx<sup>w</sup>*, and *-éwtx<sup>w</sup>* all seem to mean ‘house.’ But with others the connective appears to give a more restricted meaning, for example, *-éḡən* ‘side, perimeter’ and *-əléḡən* ‘arm.’

Several lexical suffixes have alternate forms with a final *-ən*, such as *-aθ*, *-aθən*, etc., ‘mouth,’ etc.; *-ic*, *-icən*, etc. ‘back,’ etc.; and *-əqs*, *-əqsən*, etc. ‘nose,’ etc.

A few have long vowels, which are probably the result of the loss of the first of two identical resonants (see §1.5.6); thus, *-é<sup>h</sup>n* ‘side’ may be *-ən* ‘ear’ plus a final *-ən*.

Most lexical suffixes (without or with connectives) have unstressed and stressed variants, often with vowels of different quality. Where the stress falls can depend on the nature of the root, the presence of other suffixes, or the inflection of the whole word for plural, progressive, resultative, and so on (see §7). For a few lexical suffixes, a final /l/ appears as /l/ before *-t* ‘transitive,’ an alternation not observed elsewhere in the language, and for a few others a final /n/ is lost before *-t* ‘transitive.’

These variations have been an obstacle to identifying some lexical suffixes. The problem is further complicated by several cases of complete or partial homophony, where two or three suffixes are homophones in all or some of their variant forms.

The lexical suffixes usually follow bare roots or roots with *s*<sub>1</sub> ‘nominalizer.’ Instances of a lexical suffix following a grammatical suffix exist but are rare. Instances of one lexical suffix following another are more common (see below). Roots to which lexical suffixes are added appear with different vowel grades, depending in the shape of the root and the type of suffix (see §7). Moreover, with certain suffixes, such as *-as* ‘face,’ and *-aq*<sup>w</sup> ‘head,’ an /e/ vowel in the root will appear as /a/ (see §1.5.12).

Some lexical suffixes, when used to refer to body parts and food, require (varying with the speaker) the prefix *x*<sup>w-3</sup> ‘inward’ (§12.4.8) before the root.

### 13.2. MEANINGS

The lexical suffixes that can be clearly identified as to meaning denote body parts (head, hand, foot, etc.), some artifacts (house, canoe, paddle), some natural phenomena (vegetation, water, fish), a few statuses of persons (child, spouse), a few shapes (round object, long object, container) and parts (surface, edge, end, base), and a few other things less easily categorized.

The “somatic” suffixes (Kuipers 1967, 120), that is, those denoting body parts, form the largest and perhaps most complete set. But there seems to be no basis for setting them off from the others or giving them any kind of primacy. Some of the somatic suffixes can also have non-somatic reference, such as *-əqsən* ‘nose, point of land’; *-as* ‘face, round object, moon, dollar’; *-qən* ‘throat, speech, meal, opening facing upward’; *-ələs* ‘eye, net mesh.’ In each of these, the somatic meaning may be historically and conceptually primary, but this is conjecture. Other somatic suffixes seem to be formed from suffixes of more general meaning by connectives that restrict to narrower, somatic meaning, as in *-əlěxən* ‘arm’ from *-éxən* ‘side,’ *-áyəθən* ‘mouth’ from *-áθən* ‘margin,’ and possibly *-əlməx*<sup>w</sup> ‘breast, milk’ from *-məx*<sup>w</sup> ‘land, people.’ Therefore it seems better not to prejudge the lexical suffixes as to primary meaning.<sup>1</sup>

A number of lexical suffixes appear commonly with numeral roots as numerical classifiers (see §19.2), but these too do not form an exclusive set. Most of them occur with other roots or stems. Nor does it seem possible to subcategorize the lexical suffixes on the basis of what grammatical affixes they may take. Some have not been recorded with *-t* ‘transitive’ or *-əm* ‘intransitive,’ but the

---

1 Hinkson (1999) has provided strong circumstantial evidence for the primacy of the body-part meanings of three lexical suffixes and their semantic extensions each in several directions.

reason may lie simply in the nature of things rather than in grammar.<sup>2</sup> Accordingly, I have not tried to sort out the lexical suffixes into types but treat them as a single set.

Many lexical suffixes are broad or abstract in meaning and without synonymous words in the lexicon. For example, there is no single word corresponding in meaning to *-mat* ‘kind, part’; *-mən* ‘residue’; *-əs* ‘round object, face, moon, dollar’; *-ét* ‘times’; *-qən* ‘throat, voice, speech, meal, opening facing upward’; *-wəl* ‘canoe, vessel, container’; or *-əlp* ‘plant, tree, vegetation.’

Other lexical suffixes, however, are matched by words with the same or closely similar meanings. Compare the suffixes in the left column with the words on the right:

<i>-aqʷ</i> ‘head’	<i>sʰáʔəs</i> ‘head’
<i>-cəs</i> ‘hand, bough’	<i>céləx</i> ‘hand’
<i>-xən</i> ‘foot, leg’	<i>sʰáʔə</i> ‘foot, leg’
<i>-éwtxʷ</i> ‘house’	<i>léləm</i> ‘house’
<i>-əlweʔs</i> ‘paddle’	<i>sqáməl</i> ‘paddle’

### 13.3. LEXICAL SUFFIXES AND RELATED WORDS

There are also a few instances where the lexical suffix and the word with the same meaning are clearly related. In one instance, the word seems to be no more than the suffix with an initial glottal stop and the prefix *s-*, ‘nominalizer’:

<i>-ínəs</i> ‘chest, beach’	<i>sʔínəs</i> (CC), <i>sʔínəs</i> (JP) ‘chest’
-----------------------------	--

In another, a verb root consists of the lexical suffix with the addition of an initial glottal stop and the loss of a final glottal stop. Compare:

<i>-íʔeʔ</i> ‘robe, clothing’	<i>ʔíʔəm</i> ‘get dressed’
	<i>ʔíʔəx</i> ‘put it on’
	<i>sʔíʔəm</i> ‘blanket, clothes’

In a few words, the suffix appears on a single consonant, *m-*, *t-*, *y-*, *θ-*:

<i>-áqsən</i> ‘nose, point’	<i>máqsən</i> ‘nose’
<i>-ələcən</i> ‘testicles’	<i>mécən</i> ‘testicle’
<i>-ápsəm</i> ‘neck, nape’	<i>tápsəm</i> ‘neck, nape’

2 Leslie (1979, 68-85) separates what I am calling “lexical suffixes” into two groups, “non-inflective suffixes” and “lexical suffixes,” asserting that the first group cannot take suffixes of the voice system while the second can. He further divides the second group according to whether they take *-əm* only, *-t*, *-təl*, and *-nəx* only, or all four. However, I have some counter-examples, which I have tried to include in the data presented, and I believe that it is too soon to make any claims of this sort, for Musqueam at any rate.

- <i>élax<sup>w</sup>θəl</i> ‘tongue’	<i>təx<sup>w</sup>θəl</i> ‘tongue’
- <i>məx<sup>w</sup></i> ‘land, people’	<i>təməx<sup>w</sup></i> ‘land, earth’
- <i>ánas</i> ‘tooth’	<i>yánas</i> ‘tooth’
- <i>aθən</i> ‘margin’	<i>θáθən</i> ‘mouth’

I have assumed that the initial consonant of the word was simply a dummy root that serves no purpose other than to provide a base for the suffix. However, Kinkade (1998) has argued that these words, *məqsən*, etc., may be the sources of the suffixes. That is, the suffixes were historically produced by lopping off the initial consonant of the free form. A possible example of this process can be seen in *təmxcən* ‘fine-tooth comb,’ which may be composed of the root of *təmət* ‘pick it/them’ and *məxcən* ‘louse’ minus the initial part.

In a few more words, there is a root, *ʔəθ ~ ʔeθ-* or *ʔəl- ~ ʔel-*, with or without *s-* ‘nominalizer,’ that seems to limit the suffix to a somatic or spatial reference.

- <i>əs</i> ‘round object, etc.’	<i>sʔáθəs</i> ‘face’
- <i>nəc</i> ‘butt, bay’	<i>sʔáθnəc</i> ‘bay’
- <i>qən</i> ‘throat, etc.’	<i>šx<sup>w</sup>ʔáθəqən</i> ‘inside of throat’
- <i>qən</i> ‘front, etc.’	<i>ʔéθəqən</i> ‘front’
- <i>əqsən</i> ‘nose, point’	<i>sʔáłqsən</i> ‘point of land’
- <i>éxən</i> ‘side’	<i>ʔíləxən</i> ‘end of house, road, etc.’

In these words, it seems to me that the initial element is more likely a root with some (now unclear) semantic content.

Another possible example of the last type is *sʔiːtqəy̆* ‘two-headed serpent’ (which probably has the underlying form *//sʔilətqəy̆//*; cf. Cowichan and Northern Straits *sʔinətqəy̆*), which seems to be composed of an element *ʔil-* of unknown meaning and *ʔətqəy̆* ‘snake.’

The word *sšəšətnet* ‘Sunday, week’ (< *šéʔxeʔ* ‘holy’) and a few others are formed with a linking element *-t-*, which may be a reduction of *-aʔt* ‘attributive,’ and *nét* ‘become night.’ These terms, which are clearly of modern origin, might be identified as compounds (Gerdts and Hinkson 1996, 3) or as containing a new lexical suffix. I have listed them as containing a lexical suffix, number 34 in §13.6 (see also §22.2.3).

#### 13.4. RELATIONS BETWEEN SUFFIX AND ROOT

Roots and lexical suffixes can be combined to relate to each other in different ways (roots and suffixes playing different grammatical roles) and to produce words that have different grammatical functions (as verbs, adjectives, or nouns). We can categorize these complex words by their type of root, the grammatical relation between root and suffix, and the grammatical functions that they have.

### 13.4.1. With Verbal Roots

A lexical suffix can be related to a verbal root as patient, locus, or instrument, that is, in a role played in syntax by an adjunct, or as head with the root as modifier.

#### 13.4.1.1. Root and Suffix Related as Verb and Patient, Locus, or Instrument

This is probably the largest class of words with lexical suffixes. They are all verbs.

Words of this type may occur without any additional suffixes, being then necessarily intransitive:

*lǎcǎs* ‘get one’s hand cut, cut one’s hand (accidentally)’ (< *lǎc-* ‘cut,’ *-cǎs* ‘hand’)

*lǎk<sup>w</sup>á:yθǎn* ‘get one’s mouth broken’ (< *lǎk<sup>w</sup>* ‘get broken,’ *-á:yθǎn* ‘mouth’)

*cǎlcǎs* ‘switch sides when paddling’ (< *cǎl-* ‘switch,’ *-cǎs* ‘hand’)

*sǎwǎqǎnǎp* ‘seek land to settle on’ (< *sǎwǎq* ‘seek,’ *-ǎnǎp* ‘land’)

*ǎx<sup>w</sup>ǎlcǎp* ‘bring down firewood’ (< *ǎx<sup>w</sup>* ‘move down to shore,’ *-ǎlcǎp* ‘fire, firewood’)

Words of this type can also appear with suffixes of the voice system (see §10), except for the reflexive suffixes *-θǎt* and so on.

*lǎcǎcǎst* ‘cut his hand’ (< *lǎc-* ‘cut,’ *-cǎs* ‘hand,’ *-t* ‘tr.’)

*lǎcǎcǎsnǎx<sup>w</sup>* ‘cut him on the hand (accidentally)’ (< *-nǎx<sup>w</sup>* ‘tr. limited control’)

*k<sup>w</sup>ǎk<sup>w</sup>ǎnǎcǎstǎl* ‘be shaking hands’ (cf. *k<sup>w</sup>ǎnǎt* ‘take it,’ *k<sup>w</sup>ǎnǎcǎs* ‘take his hand,’ *-tǎl* ‘reciprocal’)

Following lexical suffixes, a reflexive (or middle voice) sense is conveyed by *-ǎm* ‘intransitive.’ Compare the following pairs:

*x<sup>w</sup>ǎ<sup>θ</sup>ǎst* ‘wash his [another’s] face’ (< *x<sup>w</sup>-* ‘inward,’ *ǎ<sup>θ</sup>ǎst* ‘get washed,’ *-ǎs* ‘face’)

*x<sup>w</sup>ǎ<sup>θ</sup>ǎsǎm* ‘wash one’s [own] face’

*lǎcǎq<sup>w</sup>t* ‘cut one’s hair’ (< *lǎc-* ‘cut,’ *-aq<sup>w</sup>* ‘head’)

*lǎcǎq<sup>w</sup>ǎm* ‘get a haircut’

*θǎyǎ<sup>l</sup>t* ‘make his bed’ (cf. *θǎyt* ‘fix it,’ *-ǎ<sup>l</sup>t* ‘bedding’)

*θǎyǎ<sup>l</sup>ǎm* ‘make one’s bed’

*x<sup>w</sup>ǎ<sup>l</sup>ǎ<sup>l</sup>ǎ<sup>l</sup>t* ‘go get food for him’ (cf. *ǎ<sup>l</sup>ǎ<sup>l</sup>ǎ<sup>l</sup>t* ‘go get it,’ *-ǎ<sup>l</sup>ǎ<sup>l</sup>-* ‘food’)

*x<sup>w</sup>ǎ<sup>l</sup>ǎ<sup>l</sup>ǎ<sup>l</sup>ǎm* ‘go get food for oneself’

There are also forms with *-ǎm* ‘intransitive’ where this suffix does not appear to have a reflexive meaning, as in *xǎ<sup>l</sup>ǎmǎy<sup>l</sup>ǎm* ‘take care of a [anyone’s] child’ (cf. *xǎ<sup>l</sup>ǎmǎt* ‘look after him, take care of it,’ *-ǎy<sup>l</sup>ǎt* ‘child’).

In most words of this type, the lexical suffix probably relates to the verb as patient. In a word like *x<sup>w</sup>ʔalx̣tél-t* ‘go get food for him,’ there seems to be no question that the suffix denotes a patient and also functions as an applicative (see §10.4), allowing the recipient to appear as the grammatical object.

In words containing a suffix referring to a body part, this suffix might be seen as locative, for example, in *x<sup>w</sup>i<sup>θ</sup>x̣wát* as literally ‘wash him on the face,’ *lác̣c̣as* as literally ‘get cut on the hand.’ Gerds (1981) has argued, however, that these body-part suffixes denote patients and allow their possessors to appear as grammatical objects.

In the following word, it seems that the suffix denotes a patient and allows the instrument to appear as the grammatical object: *x<sup>w</sup>láṃtél-t* ‘throw it into the fire’ (< *láṃ* ‘get hit by something thrown’; cf. *láṃət* ‘hit him with something thrown,’ *-lél-* ‘fire’).

On the other hand, the suffix pretty clearly denotes a locus rather than a patient in the following:

*ʔəltənáθən* ‘eat along the way’ (< *ʔəltən* ‘eat,’ *-áθən* ‘margin, edge’)  
*x<sup>w</sup>q̣əwílt* ‘go with him in a canoe’ (< *x<sup>w</sup>-* ‘inward,’ *q̣áʔ* ‘accompany,’ *-wílt- ~ -wət* ‘canoe’)  
*k<sup>w</sup>éʔc̣as* ‘drop it from the hand’ (cf. *k<sup>w</sup>éʔt* ‘drop it, let it go,’ *-c̣as* ‘hand’)

And the suffix denotes an instrument in the following examples:

*k<sup>w</sup>c̣áləs* ‘see with one’s own eyes’ (< *k<sup>w</sup>éc̣* ‘see,’ *-áləs* ‘eye’)  
*x<sup>w</sup>ʔəẉc̣əst* ‘show him with the hands how something is done’ (< *x<sup>w</sup>-* ‘oblique,’ *ʔíẉ-* ‘understand’; cf. *ʔíẉəs* ‘show, guide,’ *-c̣əs* ‘hand’)  
*k<sup>w</sup>əx<sup>w</sup>qṣə́nəm* ‘peck (as a woodpecker)’ (cf. *k<sup>w</sup>áx<sup>w</sup>ət* ‘knock on it,’ *-əqṣən* ‘nose’)  
*yəp̣əp̣əx̣é́nəm* ‘be feeling along with the feet (in shallow water looking for cockles)’ (< *yə-* ‘along,’ *p̣éx̣-* ‘feel,’ *-xən* ‘foot’)

#### 13.4.1.2. Root and Suffix Related as Modifier and Head

These are words that function as nouns, the root specifying the kind, by function or source, and the suffix designating the class (cf. §13.3.3.2 below):

*ʔitətéwt<sup>w</sup>* ‘hotel’ (< *ʔitət* ‘sleep,’ *-éwt<sup>w</sup>* ‘house’)  
*qíq̣éwt<sup>w</sup>* ‘jail’ (< *qíq̣* ‘be bound, be put to jail’)  
*téyawət* ‘racing canoe’ (< *téy* ‘race,’ *-awət* ‘canoe, vessel’)  
*x̣íləx̣áwət* ‘battleship’ (< *x̣íləx̣* ‘make war’)  
*látəḳẉəwət* ‘flying machine, airplane’ (< *látəḳ<sup>w</sup>* ‘be flying’)  
*ḳẉəyəḳẉəḷxən* ‘trolling line’ (< *ḳẉúyəḳ<sup>w</sup>* ‘troll,’ *-əḷxən* ‘line’)

This interpretation also seems possible for words with three other suffixes:

(1) The large number of words for instruments formed with the suffix *-tən* ~ *-təñ* ~ *-tén*, such as:

*p̄áí<sup>θ</sup>tən* ‘needle’ (< *p̄éí<sup>θ</sup>* ‘sew’)  
*tá<sup>k</sup>wətən* ‘gaff hook’ (cf. *tík<sup>w</sup>ət* ‘hook it’)  
*sálsáltən* ‘spindle’ (cf. *sálət* ‘spin it’)  
*q̄<sup>w</sup>é<sup>?</sup>tən* ‘broom’ (cf. *q̄<sup>w</sup>é<sup>?</sup>t* ‘sweep it’)  
*šáš<sup>w</sup>tén* ‘blanket’ (< *šáš<sup>w</sup>* ‘get covered’)  
*í<sup>θ</sup>áš<sup>w</sup>tén* ‘cleansing rite’ (< *í<sup>θ</sup>áš<sup>w</sup>* ‘get washed’)

(2) Words formed with the suffix *-mən* ~ *-məñ* ‘instrument’ (probably not productive):

*k̄<sup>w</sup>á<sup>w</sup>mən* ‘ax’ (< *k̄<sup>w</sup>á<sup>w</sup>* ‘get hit with a clubbing motion’)  
*táí<sup>?</sup>məñ* ‘herring rake’ (cf. *tíét* ‘flick it,’ *táí<sup>?</sup>m* ‘catch herring with a rake’)

(3) Words formed with the suffix *-mən* ~ *-emən* ‘residue’:

*lák<sup>w</sup>émən* ‘something broken (as the broken end of a stick)’ (< *lák<sup>w</sup>* ‘break, get broken’)  
*tá<sup>c</sup>mən* ‘sawdust’ (< *tíc-* ‘cut’)

### 13.4.2. With Adjective Roots

It seems that an adjective root and a lexical suffix can be related only as modifier and head, as in:

*θíqsən* ‘big-nosed’ (< *θí* ‘big,’ *-əqsən* ‘nose’)  
*šáqatápsəm* ‘long-necked’ (< *šéqt* ‘long,’ *-ápsəm* ‘neck’)  
*šáqtélc* ‘long-haired’ (< *šéqt* ‘long,’ *-élc* ‘hair, line’)  
*p̄qá<sup>?</sup>lqən* ‘mountain goat’ (< *p̄áq* ‘white,’ *-á<sup>?</sup>lqən* ‘pelt’)  
*šé<sup>?</sup>šé<sup>?</sup>šyət* ‘abnormal baby’ (< *šé<sup>?</sup>šé<sup>?</sup>* ‘holy, forbidden,’ *-əyət* ‘child’)

Some of these words, like the last two above, are nominal in meaning, but most words of this type are adjectival in meaning. For example, *θíqsən* must be glossed ‘big-nosed’ or ‘having a big nose’ rather than simply ‘big nose.’ Compare (a) and (b):

(a) *θíqsən tθe<sup>?</sup>*. (AG)  
 θi-əqsən tθe<sup>?</sup>  
 big-nose that  
 ‘He has a big nose.’

(b) *θí máqsən tθe<sup>?</sup>*. (AG)  
 big nose that  
 ‘That’s a big nose.’

These words may be used predicatively, as is *θíqsən* above, or attributively, as in (c) and (d).

- (c) k<sup>w</sup>θə θíqsən sq<sup>w</sup>əméy̆ (AG)  
 k<sup>w</sup>θə θi-əqsən sq<sup>w</sup>əméy̆  
 ART big-nose dog  
 ‘the big-nosed dog’
- (d) θə ʒəqtéíç qéməy̆ (AG)  
 θə ʒéqt-éíç qéməy̆  
 ART long-hair girl  
 ‘the long-haired girl’

Some lexical suffixes can form adjectives that can modify nouns of similar but narrower meaning, as in (e) to (g).

- (e) k<sup>w</sup>θə p̄qáls smé·nt (JP, AG)  
 k<sup>w</sup>θə p̄əq̄-als smé·nt  
 ART white-spherical.object rock  
 ‘the white rock’
- (f) tə sθé·ɫp θqét (AG)  
 tə s-θi-əɫp θqét  
 ART NOM-big-vegetation tree  
 ‘the big tree’
- (g) ʔəx<sup>w</sup>ínəws číkən (JP)  
 ʔəx<sup>w</sup>ín-iws číkən  
 small-body/bird chicken  
 ‘small chicken’

Words formed from numeral roots (see §19) have the same relationship to the nouns they modify, as in (h) and (i).

- (h) tə nəçəqən sítən (JP 4)  
 tə nəçə?-əqəñ sítən  
 ART one-container basket  
 ‘one basket’
- (i) tə íxám-əɫə slənɫénəy̆ (JP 4)  
 ART six-person women  
 ‘six women’

However, it seems that a suffix cannot appear with a noun of closely similar meaning; for example, one cannot say \*\**tə ʒəqtéíç méqən* ‘long(-haired) hair.’ These restrictions need to be explored.

### 13.4.3. With Noun Roots

A noun root or stem (as a root with *s-* ‘nominalizer’) and a lexical suffix can be related in one of two opposite ways, as head and modifier (the root or

stem designating the genus and the suffix the species) or as modifier and head (vice versa).

### 13.4.3.1. Related as Head and Modifier

When a suffix denoting a body part follows a noun root or stem, it can have the sense of a noun possessor or the first member of an English compound, as in:

*sí<sup>θ</sup>ámáq<sup>w</sup>* ‘skull’ (< *sí<sup>θ</sup>ám* ‘bone,’ -*aq<sup>w</sup>* ‘head,’ i.e., ‘head-bones’)  
*sí<sup>θ</sup>ámčas* ‘bones of the hand, hand-bones’ (< -*čas* ‘hand’)  
*q<sup>w</sup>ínayəθəñ* ‘beard’ (< *q<sup>w</sup>ín* ‘hair of face and body,’ -*ayəθəñ* ‘mouth’)  
*stəq<sup>w</sup>ələs* ‘gums’ (< *stíq<sup>w</sup>* ‘flesh,’ -*ələs* ‘tooth’)  
*snəsálməx<sup>w</sup>* ‘butter’ (< *snás* ‘fat, grease,’ -*álməx<sup>w</sup>* ‘breast, milk,’ i.e., ‘milk-grease’)

### 13.4.3.2. Related as Modifier and Head

In the great majority of words with noun roots or stems, however, including some in which body-part suffixes are used in non-somatic senses, the root or stem is the modifier, specifying the kind, and the suffix is the head, identifying the class.

The root may identify the source or material, as it does in:

*í<sup>θ</sup>íwəqáq<sup>w</sup>* ‘elder-head, i.e., an arrow with a blunt head of elderberry wood’  
 (< *í<sup>θ</sup>íwəq* ‘red elderberry,’ -*aq<sup>w</sup>* ‘head’)  
*íá<sup>?</sup>x<sup>w</sup>čas* ‘grand fir bough’ (< *íá<sup>?</sup>x<sup>w</sup>* ‘grand fir,’ -*čas* ‘hand, twig’)  
*musməsálməx<sup>w</sup>* ‘cow’s milk’ (< *músməs* ‘cow,’ -*álməx<sup>w</sup>* ‘breast, milk’)  
*sala<sup>?</sup>acéwtx<sup>w</sup>* ‘mat house’ (< *sála<sup>?</sup>ac* ‘house-mat,’ -*éwtx<sup>w</sup>* ‘house’)  
*ʔéšx<sup>w</sup>éməñ* ‘seal-oil’ (< *ʔéšx<sup>w</sup>* ‘seal,’ -*éməñ* ‘liquid’)  
*wí<sup>l</sup>é<sup>?</sup>ł* ‘tule mat’ (< *wí<sup>l</sup>* ‘tule,’ -*é<sup>?</sup>ł* ‘bedding’)

Or the root may identify the purpose or end to which the head is dedicated:

*sa<sup>x<sup>w</sup></sup>ələwtx<sup>w</sup>* ‘barn’ (< *sá<sup>x<sup>w</sup></sup>əl* ‘grass, hay,’ -*éwtx<sup>w</sup>* ‘house’)  
*qewθéwtx<sup>w</sup>* ‘potato cellar’ (< *sqéwθ* ‘potato,’ -*éwtx<sup>w</sup>* ‘house’)  
*sθeθəyənélə* ‘blood vessel’ (< *sθéθəyən* ‘blood,’ -*élə* ‘place for, container’)  
*putélwe<sup>?</sup>s* ‘oar’ (< *pút* ‘boat,’ -*élwe<sup>?</sup>s* ‘paddle’)

All the examples given so far in this section are words that function as nouns. However, there may also be words of this type that function as adjectives. The proper way of saying porpoise harpoon, JP said, is (or once was) *k<sup>w</sup>áni<sup>l</sup>əcə s<sup>?</sup>əñəm*, lit. ‘porpoise (*k<sup>w</sup>áni<sup>l</sup>*)-water (-*əcə*) shaft (*s<sup>?</sup>əñəm*).’ This example, although isolated in the present data, suggests the possibility that some of the lexical suffixes can (or once could) be used to produce modifying forms of nouns. I have not recorded any lexical suffix for ‘harpoon’ or ‘spear,’ and I believe that in traditional usage a simple noun could not modify another noun as in English “porpoise harpoon,” although some present-day speakers use such

constructions. As others have suggested (e.g., T. Thompson in Haeberlin 1974, 220), the capacity to create forms with lexical suffixes is one that diminished early in the decline in fluency in the Coast Salish languages, and I suspect that this is one basis for statements we hear about how in previous generations people spoke “the old language.”

### 13.5. COMPOUNDING OF SUFFIXES

Lexical suffixes can appear following other lexical suffixes, as in:

*i<sup>θ</sup>á?cəpmən* ‘residue of a fire’ (< *i<sup>θ</sup>ǰ* ‘be burnt up,’ *-cəp* ‘fire,’ *-mən* ‘residue’)  
*?əǰǰqənǰlwət* ‘buckskin shirt’ (< *?əǰǰqən* ‘buckskin,’ composed of *?iǰ-* ‘scrape’ and *-ǰlwət* ‘hide,’ plus *-ǰlwət* ‘garment’)  
*nəwáq<sup>w</sup>cəstən* ‘thimble’ (< *nəw-* ‘enter,’ *-aq<sup>w</sup>* ‘head,’ *-cəs* ‘hand,’ *-tən* ‘instrument,’ lit. ‘instrument for inserting the head of the hand’)  
*sk<sup>w</sup>əcástənǰlás* ‘eyeglasses’ (< *sk<sup>w</sup>əcástən* ‘mirror, window,’ composed of *s-* ‘nominalizer,’ *k<sup>w</sup>éc* ‘look,’ *-as* ‘face,’ *-tən* ‘instrument,’ thus lit. ‘instrument for seeing the face,’ plus *-ǰlás* ‘eye’)

Two words, unusual in that lexical suffixes follow grammatical suffixes, are:

*s<sup>?</sup>ǰ<sup>θ</sup>áməs* ‘shawl’ (< *s<sup>?</sup>i<sup>θ</sup>əm* ‘clothing,’ composed of *s-* ‘nominalizer,’ the lexical suffix *i<sup>θ</sup>e* ‘clothing, blanket,’ and *-əm* ‘intransitive’ plus *-əs* ‘face’)  
*qəqəma<sup>?</sup>stéyət* ‘be nursing a child’ (< *qəma<sup>?</sup>stəx<sup>w</sup>* ‘nurse it,’ composed of the root of *sqəma<sup>?</sup>* ‘breast, milk’ and *-stəx<sup>w</sup>* ‘causative’ plus *-əyət* ‘child’)

### 13.6. THE INVENTORY

What follows is a list of well-identified lexical suffixes, each with illustrative words, followed by a second list of possible lexical suffixes, each with what appears to be evidence for its status. I have not included the suffixes that appear in personal names for reasons discussed at the end of this section.

The suffixes are ordered by initial consonant, without consideration of the vowels. The order is: *p*, *p̣*, *m*, *t*, *ṭ*, *n*, *θ*, *i<sup>θ</sup>*, *s*, *l*, *ǰ*, *l*, *c*, *č*, *x*, *k<sup>w</sup>*, *k<sup>w</sup>*, *x<sup>w</sup>*, *q*, *q̣*, *ǰ*, *ǰ<sup>w</sup>*, *q̣<sup>w</sup>*, *ǰ<sup>w</sup>*, *y*, *w*, *h*. Connective elements are ignored; for example, *-əlməx<sup>w</sup>* as a variant of *-məx<sup>w</sup>* is listed with *-məx<sup>w</sup>*, and *-əlməx<sup>w</sup>* as a separate suffix follows *-məx<sup>w</sup>*.

- 1 *-ép* ~ *-əp* ‘base, bottom’? (cf. Haeberlin 1974, 230, 4.28 ‘bottom, back part’) only in:

*tqép* ‘tidal pound’ (< *təq* ‘be closed off’)  
*yəq<sup>w</sup>əp* ‘fell a tree by burning’ (< *yəq<sup>w</sup>* ‘burn’)  
*sq<sup>w</sup>éqəp* ‘shuttlecock cod lure’ (< ?)

- 2 *-ép* ~ *-əp* ‘hair’? (cf. Haeberlin 1974, 232, 11.3 Kal. ‘rope, hair’) only in:

*sq̣<sup>?</sup>i<sup>θ</sup>ép* (CC), *sq̣<sup>?</sup>ǰ<sup>θ</sup>ép* (JP) ‘hair knot on top of head’ (< ?)  
*sk<sup>w</sup>ǰysəp* ‘hair knot at back’ (< ?)

- 3 -*ápsəm* ~ -*ápsém*- ‘neck, nape’  
*tápsəm* ‘nape’ (< *tə*- dummy root?)  
*ǰəqtápsəm* ‘long-necked’ (< *ǰéqt* ‘long’)  
*təmálápsəm* ‘pileated woodpecker’ (< *támət* ‘red ochre’)  
*lák<sup>w</sup>ápsəm* ‘break one’s neck’ (< *lák<sup>w</sup>* ‘get broken’)  
*ǰák<sup>w</sup>ápsémət* ‘grab him by the neck’ (cf. *ǰk<sup>w</sup>át* ‘grab it’)
- 4 -*mət* ‘appearance’?  
*ʔáyáymət* (JP), *ʔiʔáymat* (AG) ‘pretty’ (< *ʔáy* ‘good’)  
*qəlqámət* ‘ugly’ (< *qəl* ‘bad’)  
*ʔáyámət* ‘easy, easy-going, cheap’ (JP) (< *ʔáy* ‘good’ + ?)
- 5 -*mat* ‘kind, piece, part’  
*qəǰxmat* ‘many kinds’ (< *qəǰx* ‘many’)  
*lǰx<sup>w</sup>mat* ‘three pieces’ (< *lǰx<sup>w</sup>* ‘three’)  
*θímat*, *θíθəmat* ‘greater part, greater’ (< *θí* ‘big’)  
*ʔəx<sup>w</sup>ínmət* ‘smaller part, smaller portion’
- 6 -*mən* ~ -*ámən* ~ -*əmən* ~ -*mín* ‘instrument’  
*nǰlmən* ‘plan’ (cf. *nǰlət* ‘set a time’)  
*k<sup>w</sup>q<sup>w</sup>ámən* ‘axe’ (cf. *k<sup>w</sup>áq<sup>w</sup>ət* ‘hit it, as with a club’)  
*lǰámən* ‘herring rake’ (< *lǰám* ‘rake herring’; cf. *lǰet* ‘flick it’)  
*k<sup>w</sup>əcmín* ‘deer-hoof rattle’ (cf. *k<sup>w</sup>écəm* ‘scream’)
- 7 -*mən* ~ -*mín* ~ -*mí:n* ‘location, position’  
*yəwénmən* ‘area in front of house’ (< *yəwéń* ‘before, first’)  
*ʔəncémən* ‘all parts of the body’ (< *ʔəncə* ‘where’)  
*təsmín* ‘next younger sibling’ (< *təs* ‘arrive there’)  
*tətésmən* ‘one closest’ (< *stətés* ‘near’)  
*sənǰeʔmín* ‘next older sibling’ (< *sənǰeʔ* ‘senior sibling/cousin’)
- 8 -*mən* ~ -*émən* ~ -*mín* ‘residue’ (an extension of 7?)  
*í<sup>θ</sup>ǰnmən* ‘small bones left over after a meal’ (< *sí<sup>θ</sup>ám* ‘bone’)  
*lák<sup>w</sup>émən* ‘something broken, as the broken end of a stick’ (< *lák<sup>w</sup>* ‘get broken’)  
*í<sup>θ</sup>ǰmín* ‘junk, worthless stuff’ (< *í<sup>θ</sup>ǰx* ‘get used up’; cf. *í<sup>θ</sup>éx* ‘sell cheap, pawn’)  
*sʔəlqǰnmən* ‘top of tree left after felling and sawing’ (< ?)  
*x<sup>w</sup>ǰx<sup>w</sup>tálǰwémən* ‘become the track of a river’ (< *stálǰw* ‘river,’ JP 13)

9 -*émən* ‘extracted liquid’ (an extension of 8?)

*ʔešx<sup>w</sup>émən* ‘seal oil’ (< *ʔéšx<sup>w</sup>* ‘harbour seal’)

*k<sup>w</sup>anitémən* ‘porpoise oil’ (< *k<sup>w</sup>á:ní* ‘porpoise’)

*sq<sup>w</sup>i:lməx<sup>w</sup>émən* ‘blackberry juice’ (< *sq<sup>w</sup>i:lməx<sup>w</sup>* ‘blackberries’)

*ck<sup>w</sup>imémən* ‘red liquid’ (< *ck<sup>w</sup>ím* ‘red’)

10 -*əməi<sup>θ</sup>* ~ -*éməi<sup>θ</sup>* long object’

*sk<sup>w</sup>ínəməi<sup>θ</sup>* ‘how many (poles, etc.)?’ (< *k<sup>w</sup>ín* ‘how many?’)

*nəcéməi<sup>θ</sup>* ‘one (long object)’ (< *nəcəa<sup>?</sup>* ‘one’)

*šəqtéməi<sup>θ</sup>* ‘tall (person)’ (< *šéqt* ‘long’)

*cəcí:šəməi<sup>θ</sup>* ‘short (person)’ (< *cəcí:š* ‘short’)

11 -*məx* ~ -*áməx* ~ -*áməx* ‘country, person’ (cf. 12)

*téqəməx* ‘flats, flat country (as the Fraser delta)’ (cf. *tqét* ‘wide’)

*stáməx* ‘warrior’ (dummy root *t-*?)

*qələməx* ‘Bud, Pal’ (cf. *qéqələ* ‘baby,’ also Shuswap *qəlmux<sup>w</sup>* ‘person,’ Kuipers 1974, 236)

*sqš<sup>w</sup>áməx* (also recorded *sq<sup>w</sup>šáməx*) ‘Squamish’ (people and country up Howe Sound) (< ?)

12 -*məx<sup>w</sup>* ~ -*éməx<sup>w</sup>* ~ -*əlməx<sup>w</sup>* ~ *əwməx<sup>w</sup>* ~ -*əw<sup>w</sup>məx<sup>w</sup>* ‘place, people (cluster?)’

*táməx<sup>w</sup>* ‘earth, land, soil’ (< *t-* dummy root?)

*x<sup>w</sup>əlməx<sup>w</sup>* ‘village, Indian’ (< ?)

*šx<sup>w</sup>tələməx<sup>w</sup>* ‘sea hunter-fisher’ (*šx<sup>w</sup>-* ‘oblique nominalizer’; cf. *tél* ‘go shoreward’)

*sq<sup>w</sup>i:lməx<sup>w</sup>* ‘blackberries’ (*//s-ǰ<sup>w</sup>əl-əlməx<sup>w</sup>//*, < *ǰ<sup>w</sup>əl* ‘be cooked, ripe’)

*ʔəw<sup>w</sup>k<sup>w</sup>əlməx<sup>w</sup>* ‘all different kinds of Indians’ (< *ʔəw<sup>w</sup>k<sup>w</sup>* ‘be used up’)

*nəcəwməx<sup>w</sup>* ‘one people (“tribe”)’ (< *nəcəa<sup>?</sup>* ‘one’)

*nəcəwməx<sup>w</sup>* ‘different people’ (< *néc* ‘different,’ the root is different from the last, but the derivatives are homophonous)

*sk<sup>w</sup>xəw<sup>w</sup>məx<sup>w</sup>* ‘place name, name of a country’ (< *sk<sup>w</sup>íx* ‘name’)

*qšəw<sup>w</sup>məx<sup>w</sup>* ‘many different kinds of people’ (< *qšə* ‘many’)

*šx<sup>w</sup>tələw<sup>w</sup>məx<sup>w</sup>* ‘where one belongs (native place)’ (< *təl-* ‘from’)

13 -*əlməx<sup>w</sup>* ‘breast, milk, spring (of water)’ (an extension of 12?)

*θiθəlməx<sup>w</sup>* ‘big-breasted’

*qətəlməx<sup>w</sup>əm* ‘bind one’s breasts’ (cf. *qítət* ‘bind it’)

*pí<sup>θ</sup>əlməx<sup>w</sup>* ‘milk a cow’ (cf. *páí<sup>θ</sup>ət* ‘wring it out’)

*musməsəlməx<sup>w</sup>* ‘cow’s milk’ (< *músməs* ‘cow’)

*snəsəlməx<sup>w</sup>* ‘butter’ (< *snás* ‘fat, oil’)

*sqímək<sup>w</sup>əlməx<sup>w</sup>* ‘p.n., Devilfish Spring’ (< *sqímək<sup>w</sup>* ‘octopus’)

## 14 -ama? ‘body’

*θaháma?* ‘big-bodied’ (< *θí* ‘big’)

*k<sup>w</sup>ámk<sup>w</sup>ámáma?* ‘strong-bodied’ (< *k<sup>w</sup>ámk<sup>w</sup>ám* ‘strong’)

*q<sup>w</sup>áí·yáq<sup>w</sup>sàma?* ‘thin person’ (< *q<sup>w</sup>áí·yáq<sup>w</sup>s* ‘thin’ [CC])

## 15 -í·ma? (perhaps // -əy-əma?//, a connective -əy- with 14, -ama? ‘body’)

*?áí·ma?* ‘clean (person, house)’ (< *?áí* ‘good’)

*qálí·ma?* ‘dirty (person, house)’ (< *qál* ‘bad’)

## 16 -tən ~ -tən̄ ~ -tén ~ -tén̄ ‘instrument’

*páí<sup>θ</sup>tən* ‘needle’ (< *pá<sup>θ</sup>* ‘sew’)

*?áx̄tən* ‘hide scraper’ (cf. *?íx̄ət* ‘scrape it’)

*téc̄tən* ‘knife, fish knife’ (cf. *tíc̄ət* ‘cut it’)

*ǰáx<sup>w</sup>tén* ‘blanket’ (< *ǰáx<sup>w</sup>* ‘get covered’; cf. *ǰáx<sup>w</sup>át* ‘cover it’)

*í<sup>θ</sup>áx<sup>w</sup>tén* ‘cleansing rite’ (< *í<sup>θ</sup>áx<sup>w</sup>* ‘get washed’; cf. *í<sup>θ</sup>áx<sup>w</sup>át* ‘wash it’)

*q<sup>w</sup>é<sup>?</sup>tən* ‘broom’ (cf. *q<sup>w</sup>é<sup>?</sup>t* ‘sweep it’)

## 17 -tən̄ ~ -tən̄̄ ‘person’ (an extension of 16?)

*c̄áw̄tən̄* ‘helper’ (cf. *c̄éwət* ‘help him’)

*syé<sup>?</sup>tən̄* ‘widow, widower’ (< ?)

*smétax<sup>w</sup>tən̄* ‘sibling-in-law of the opposite sex’ (< ?)

18 -tx<sup>w</sup> ~ -áw̄tx<sup>w</sup> ~ -éw̄tx<sup>w</sup> ~ -əltax<sup>w</sup> ‘house’

*θám̄tx<sup>w</sup>* ‘two houses’ (< *θám-* ~ *θém-* ‘two’)

*t<sup>w</sup>áw̄tx<sup>w</sup>* ‘three houses’ (< *tíx<sup>w</sup>* ‘three’)

*nećáw̄tx<sup>w</sup>* ‘one house’ (< *náćá?* ‘one’)

*nećáw̄tx<sup>w</sup>* ‘next door, next room’ (< *neć* ‘different’)

*sála<sup>?</sup>acéw̄tx<sup>w</sup>* ‘mat house’ (< *sála<sup>?</sup>ac* ‘house mat’)

*sθéw̄tx<sup>w</sup>* ‘big house (large, old-style house)’ (< *θí* ‘big’)

*t̄iwáýáéw̄tx<sup>w</sup>* ‘church’ (< *t̄íwáýáé* ‘worship’)

*siléw̄tx<sup>w</sup>* ‘tent’ (< *síl* ‘cloth, cotton, < E. ‘sail’)

*sclé<sup>?</sup>eltax<sup>w</sup>* ‘roof, upper storey’ (cf. *cícət* ‘above’)

18.1 -éltax<sup>w</sup> ‘spouse’ (an extension of 18, perhaps // -ələltax<sup>w</sup>//, a double connective)

*x<sup>w</sup>?áyséltax<sup>w</sup>* ‘have two wives’ (< *yáséłə* ~ *?iséłə* ‘two’)

*x<sup>w</sup>t<sup>w</sup>éltax<sup>w</sup>* ‘have three wives’ (< *tíx<sup>w</sup>* ‘three’)

*x<sup>w</sup>c̄ələéltax<sup>w</sup>* ‘make off with someone’s spouse’ (cf. *c̄ílt* ‘grab something away from him’)

18.2 -əttx<sup>w</sup> (perhaps -ət- is a connective plus -tx<sup>w</sup> ‘house’)

*snéc’əttx<sup>w</sup>* ‘affines, “opposite friends”’ (= *sk<sup>w</sup>əlwəs*) (< *néc* ‘other, different’) (JP)

## 19 -əná ~ -əne? ‘ear, side’

*ǰəlqitánə* ‘long-eared, deer’ (cf. *ǰéqt* ‘long,’ *ǰéləqt* ‘long pl.’)

*í<sup>θ</sup>q’ənáət* ‘hit him on the ear’ (cf. *í<sup>θ</sup>q’ət* ‘hit, punch’)

*q<sup>w</sup>éne?t* ‘pierce his ears’ (cf. *q<sup>w</sup>é’t* ‘make a hole in it’)

*x<sup>w</sup>ə?əy’əné?* ‘listen’ (< *x<sup>w</sup>-* ‘locative,’ *?əy* ‘good’)

*tqánəm* ‘tie up (a boat), drop anchor’ (cf. *tqét* ‘peg together, i.e., hold from the side’?)

*q<sup>w</sup>sánəm* ‘drop anchor’ (< *q<sup>w</sup>əs* ‘go into the water’)

*q<sup>w</sup>sánətən* ‘anchor’ (last plus *-tən* ‘instrument’)

*míq’ənáətən* ‘pot-hook’ (cf. *míq’ət* ‘stick into the ground’)

*šx<sup>w</sup>θéyənətən* ‘dessert’ (cf. *θəyt* ‘fix it,’ i.e., something fixed on the side?)

*?iməxné?tən* ‘visitor’ (< *?iməx* ‘walk,’ *-tən* ‘person’?)

*qíxəné?tən, qəqi?xəné?tən* ‘shadow’ (< cf. *qíxət* ‘slide it,’ *-tən* ‘person’?)

## 19.1 -én (// -ənən//?) ‘side, component, tip, feather’ (cf. 19)

*stitén* ‘upper end (of house or village)’ (< *təyt* ‘upstream’)

*stənəyé’n* ‘female component (as flat leaf of cattail)’ (< *sténəy* ‘female, woman’)

*wəy’qə?én* ‘male component (as flowering stalk of cattail)’ (< *wəy’qə?* ‘male, man’)

*sá?saq<sup>w</sup>tén* ‘most junior sibling/cousin’ (< *sá?saq<sup>w</sup>t* ‘junior sibling/cousin’)

*syáləx<sup>w</sup>a?én* ‘oldest person’ (< *syáləx<sup>w</sup>a?* ‘old person’)

*yəq<sup>w</sup>énəm* ‘light up (the end of a cigarette)’ (< *yəq<sup>w</sup>* ‘burn,’ *-əm* ‘intr.’)

*məq<sup>w</sup>a?én* ‘heron feather (used to induce vomiting)’ (< *sməq<sup>w</sup>a?* ‘great blue heron’)

*í<sup>θ</sup>iq<sup>w</sup>tén* ‘flicker feather (worn by a shaman)’ (< *í<sup>θ</sup>iq<sup>w</sup>t* ‘flicker’)

*k<sup>w</sup>əy’x’θ’è’n* ‘style’ (< *k<sup>w</sup>əy’x’θət* ‘act,’ lit. ‘move oneself’)

## 19.2 -ín (a variant of 19.1? in this word only?)

*həy’q<sup>w</sup>ín* ‘lantern, lamp, candle, light’ (< *həy’q<sup>w</sup>* ‘be burning, fire’)

## 20 -ən ~ -əń ‘instrument’? (perhaps in loans from Northern Straits)

*k<sup>w</sup>áx<sup>w</sup>ən* ‘long pole used by *q<sup>w</sup>əšx<sup>w</sup>əqs* dancer to strike roof planks’ (cf. *k<sup>w</sup>áx<sup>w</sup>ət* ‘knock on it’)

*xəməń* ‘trawl net (used upriver)’ (cf. Northern Straits *šəməń*)

*píʔkʷən* ‘splint for cooking fish’ (<?)  
*íʔcən* ‘deadfall’ (<?)  
*snáwən* ‘keepsake’ (<?)

21 *-ənəp ~ -ənáp* (in resultative forms) ‘ground’

*cəctánəp* ‘high ground’ (< *cícət* ‘high, above’)  
*ʃpánəp* ‘low ground’ (< *ʃáp* ‘low’)  
*səwqánəp* ‘look for ground to settle on’ (< *səwq* ‘seek’)  
*qʷəmənəp* ‘pull up weeds’ (cf. *qʷəmət* ‘pull it out’)  
*stəxənəptən* ‘floor’ (< *s-* ‘nominalizer,’ *təx* ‘stand,’ *-tən* ‘instrument’)  
*stəxənáp* ‘floored, floored house’ (< *s-* ‘res.,’ *təx* ‘stand’)  
*stəcənáp* ‘disked (as a field)’ (cf. *tícət* ‘cut it, slice it’)  
*təqánəp* ‘daybreak’ (<?)

22 *-ínəs ~ -íləs ~ -ənəs* ‘chest, beach’

*sʔínəs* (JP), *sʔíləs* (CC) ‘chest’ (*s-* ‘nominalizer’ with suffix?)  
*təqínəs* ‘broad-chested’ (< *tqét* ‘wide’)  
*xʔínəs* ‘have an aching chest’ (< *xət* ‘hurt’)  
*həyqʷənəs* ‘have heartburn’ (< *həyqʷ* ‘be burning’)  
*íʔqʷínəst* ‘hit him in the chest’ (cf. *íʔqʷət* ‘hit him’)  
*ʃəqətínəs* ‘p.n., on Lulu Island above Steveston,’ lit. ‘long beach’  
 (< *ʃéqt* ‘long’)

23 *-ənəs ~ -ələs ~ -nís* ‘tooth’

*yánəs* ‘tooth’ (< *y-* dummy root?)  
*θiθələs* ‘big-toothed’ (< *θiθə* ‘big pl.’)  
*stəqʷéləs* ‘gums’ (< *stíqʷ* ‘flesh’)  
*sxəxkʷnís* ‘something jammed into the teeth’ (< *s-* ‘resultative,’ *xəkʷ* ‘be wedged in’)

24 *-nəc ~ -ləc ~ -néc ~ -əlləc* ‘butt, tail, base, bay, price, suffix(?)’

*sʔəmənəc* ‘hip bones’ (< *sʔám* ‘bone’)  
*xʷcénəcəm* ‘sit on chair, perch’ (< *xʷ-* ‘locative,’ *céʔ* ‘alight, be set’)  
*xʷʔəpələcəm* ‘wipe one’s bottom’ (cf. *ʔəpət* ‘wipe it’)  
*xʷíəqʷəlləcət* ‘cut its tail off’ (cf. *íqʷət* ‘cut it off’)  
*pəkʷnəct* ‘put it (a pot) on the fire’ (cf. *pəkʷət* ‘warm it over a fire’)  
*yəpənéc* ‘going with the wind’ (< *pah* ‘blow’)  
*qʷəmənəct* ‘pull it out by the roots’ (cf. *qʷəmət* ‘pull it out’)  
*təcənəcéləs* ‘mow (a field)’ (< root of *tícət* ‘cut it’ plus *-éləs* ‘activity’)  
*stítəcənəc* ‘mowed’ (*s-* ‘resultative’)  
*ʃxʷtítəcənəcíləs* ‘mowing machine’ (*ʃxʷ-* ‘oblique nominalizer,’ *-íləs* ‘prog. of act.’)

*sʔáθnəc* ‘bay’ (< *s-* ‘nominalizer,’ *ʔeθ-* restrictive dummy root?)  
*q̇átnéc* ‘go around (as the end of a lake)’ (cf. *q̇átáθən* ‘go along the edge’)

*kʷáxnəct* ‘name its price’ (cf. *kʷíxət* ‘name it’)

*ʔámnəct* ‘put money down on it’ (cf. *ʔéʔəm* ‘give’)

*xʷlénəýnəct* ‘make a woman’s name of it (a man’s name)’ (< *slénəý* ‘woman’) (AG)

25 *-énxʷ* ~ *-énəxʷ* ~ *énəxʷ* ‘fish, food, fish run, season, (bad) weather’ (?)

*pḱʷénxʷ* ‘smoke fish (as salmon)’ (cf. *pḱʷət* ‘warm it’)

*čəýxʷénəxʷ* ‘smoke little fish (herring, etc.)’ (< *čəýxʷ* ‘dry’)

*qǎ́énxʷ* ‘big run of fish, good year’ (< *qǎ́x* ‘many’)

*təḿhúːn̄ənxʷ* ‘humpback year’ (< *təm-* ‘time,’ *húːn̄* ‘humpback [pink salmon]’)

*ǎ́t̄́énəxʷ* ‘p.n., Mt. Baker’ (cf. *ǎ́t̄́* ‘measure it,’ lit. ‘measures the fish run or measures the season’?)

*spénxʷ* ‘camas’ (*//pən-énəxʷ//*, < *pán* ‘be buried’)

*ʔəýyénxʷ* ‘good year, good run of salmon’ (JP)

*ʔəýénəxʷ* ‘seaworthy (boat) (JP, contrasted with last)

*cqʷiqʷénəxʷ* ‘bring a storm’ (√?, ‘an old word’ [JP])

25.1 *-əlénəxʷ* ~ *-lénəxʷ* ‘season’

*xʷəsəlénəxʷ* ‘a month in the fall when leaves fall’ (cf. *xʷísət* ‘shake it’)

*həylénəxʷ* ‘a month in the fall after the last named’ (< *háý* ‘stop, be finished’)

25.2 *-ínxʷ* ~ *-wínxʷ* ‘year’

*θəmínxʷ* ‘two years’ (cf. *θem-* ~ *θəm-* ‘two’)

*kʷənəwínxʷ* ‘how many years?’ (< *kʷín* ‘how many?’)

*kʷxəwínxʷ* ‘age (of someone or something)’ (cf. *kʷxét* ‘count them’)

26 *-aθən* ~ *-əθ* ~ *-aʔθ* ~ *-áʔθ* ~ *-θən* ~ *-áýθən* (*//-áyəθən//*) ~ *-áýθə-* (before *-t* ‘transitive’) ~ *-əýəθín-* ~ *-θín* (before *-əm* ‘intransitive’) ‘mouth, lip, margin, edge’

*θáθən* ‘mouth’ (*θ-* dummy root?)

*mə́qáʔθ* ‘gift of food to take home after feast’ (< *mə́q* ‘full, as from eating’)

*háýθən* ‘finish eating’ (< *háý* ‘finish’)

*ləkʷáýθən* ‘get one’s mouth broken’ (< *ləkʷ* ‘get broken’)

*qə́áýθən* ‘saliva’ (< *qáʔ* ‘water’)

*θə́háýθən* ‘big-mouthed’ (< *θí* ‘big’)

*íʔqʷáýθət* ‘punch him in the mouth’ (cf. *íʔqʷət* ‘punch him’)

*qələýəθínəm* ‘curse’ (< *qəl* ‘bad’)

*sʔi-lθ* ‘outlet of lake’ (//s-ʔil-əθ//, *s-* ‘nominalizer,’ ʔil- ‘side’?)  
*ʔəʃqəʔθ* ‘go out into the open’ (cf. *ʔəʃqəl* ‘go out’)  
*ʔəyáʔθ* ‘sharp (blade)’ (< ʔəy ‘good’)  
*qəláθ* ‘dull’ (< *qəl* ‘bad’)  
*snəʔáθən* ‘far side (of stream, etc.)’ (< *s-* ‘nominalizer,’ *ni* ‘be there’)  
*qətáθən* ‘walk along (a shore, etc.)’ (cf. *qətnéc* ‘walk around’)  
*qətθinəmət* ‘go along through the village inviting people’ (the last  
 plus *-əm* ‘intransitive’ and *-ət* ‘transitive’)  
*ʔəttənáθən* ‘eat along the way (as berries off the bush)’ (< ʔəttən ‘eat’)

26.1 *-ayaθ ~ -áyaʔθ* ‘head of weapon’? (connective plus *-aʔθ* ‘edge’?)

*qəθxʷáyaθ* ‘prong of multi-pronged spear, foreshaft of double-  
 foreshafted harpoon’ (cf. *qéθətp* ‘ocean spray’)  
*xpáyaʔθ* ‘arrow of hazel shoot with no head’ (< *xap-* ‘whistle’?)

27 *-íʔeʔ ~ -é·líʔeʔ* ‘blanket, wealth’

*íʔcítʔeʔ* ‘stiff (cloth)’ (< *íʔəc* ‘stiff’)  
*təwítʔeʔ* ‘naked’ (< *téw* ‘escape’)  
*sʃpítʔeʔ* ‘slip, undergarment’ (*s-* ‘nominalizer,’ *ʃəp* ‘deep’)  
*məʃé·líʔeʔ* ‘return wealth’ (cf. *máʃət* ‘return it’)  
*ʔíʔəm* ‘get dressed’ (?- dummy root? plus *-əm* ‘intransitive’)  
*sʔíʔəm* ‘clothing, blanket’ (< *s-* ‘nominalizer’ plus last)

28 *-əs ~ -ás* ‘face, round object, moon, dollar, bow of canoe, bank’

*sʔáθəs* ‘face’ (*s-* ‘nominalizer,’ ʔéθ- restrictive root?)  
*ʃxʷkʷəśəs* ‘with face painted black’ (< *kʷəs* ‘get scorched’)  
*síʔáməs* ‘cheek bones’ (< *síʔám* ‘bone’)  
*xʷʃáqtəs* ‘long-faced’ (< *ʃəqt* ‘long’)  
*xʷtqátəs* ‘with flattened head’ (< *tqét* ‘wide’)  
*ʃxʷkʷəmʃəs* ‘with unflattened head (cf. *skʷəmʃ* ‘bump’)  
*yəqəst* ‘sharpen it’ (cf. *yəqət* ‘grind it up’)  
*səyqás* ‘sharpened’ (res. of last)  
*tíʔtás* ‘facing upstream’ (< *təyt* ‘upstream’)  
*ʔisáləs* ‘two dollars, two months’ (< *yəsélə* ‘two’)  
*lí·məs* ‘a month name’ (< *slí·m* ‘sandhill crane’)  
*ʃxʷítətəśəs* ‘drawn up with bow on bank’ (< *s-* ‘resultative,’ *xʷ-* ‘inward,’  
 √ of *tíət* ‘draw it up with the bow on the bank’)  
*cítəs* ‘steep bank’ (cf. *cícət* ‘high’)

29 *-ét* ‘times’

*kʷənét* ‘how many times?’ (< *kʷín* ‘how many?’)  
*tʰxʷét* ‘three times’ (< *tíxʷ* ‘three’)  
*qəxét* ‘often’ (< *qəx* ‘many’)

30 -*éʔt* ‘bed, bedding’

*wi:léʔt* ‘tule mat’ (< *wíl* ‘tule’)  
*i<sup>θ</sup>x<sup>w</sup>éʔt* ‘wash diapers’ (cf. *i<sup>θ</sup>x<sup>w</sup>át* ‘wash it’)  
*θayéʔtəm* ‘make one’s bed’ (cf. *θáyt* ‘fix it’)  
*θayéʔt* ‘make his (another’s) bed’

31 -*eʔt*, -*étət*, -*tət* ~ -*ətət* ~ *tél-* (before -*t* ‘transitive’ and -*əm* ‘intransitive’) ‘throat, breath, wind, food’

*ʔətət* ‘throat’ (< *ʔal-*?)  
*məq<sup>w</sup>ətət* ‘thick-necked’ (< *məq<sup>w</sup>* ‘thick’)  
*tíq<sup>w</sup>tél-t* ‘choke him’ (cf. *tq<sup>w</sup>át* ‘cut it off’)  
*ʔéqeʔt* ‘get a bone in one’s throat’ (< ?)  
*číčk<sup>w</sup>èʔt* ‘have the hiccups’ (< ?)  
*tqéʔt* ‘have one’s breath blocked’ (cf. *x<sup>w</sup>təq* ‘be shut’)  
*həw<sup>q</sup>étət* ‘wind from upriver’ (< *həw<sup>q</sup>* ‘progressive of *wəq<sup>w</sup>* ‘drift downstream’)  
*x<sup>w</sup>šəmətət* ‘eat enough’ (< *šám* ‘be enough’)  
*x<sup>w</sup>məštéləm* ‘return food’ (cf. *mášət* ‘repay it’)  
*x<sup>w</sup>əmqtél-t* ‘take food to them’ (cf. *ʔéməqt* ‘take something to him’)  
*x<sup>w</sup>nəw<sup>n</sup>əctéləm* ‘pay back what one has eaten’ (< *nəw-* ‘insert,’ *-nəc* ‘price’)

32 -*aʔt* ‘canoe, vehicle’ (cf. -*aʔt* ‘travel by means of’ §12.3.3), also -*ətət* ?

*mək<sup>w</sup>taʔt* ‘have one’s car break down’ (< *méʔk<sup>w</sup>t* ‘be injured’) (AG)  
*sqaʔát* ‘companion boat’ (< *qáʔ* ‘accompany’) (AG)  
*wəq<sup>w</sup>át* ‘lose a canoe by having it drift away’ (< *wəq<sup>w</sup>* ‘drift’)  
*pəlq<sup>w</sup>átəm* ‘have the last dance of the season’ (lit. ‘smash canoes’)  
 (< *pəq<sup>w</sup>* ‘break, go broke’)  
*ʔéy<sup>š</sup>àt* ‘western painted turtle’ (< *ʔéy<sup>š</sup>* ‘crab’?)  
*x<sup>w</sup>əy<sup>q</sup>ətət* ‘steamship’ (< *x<sup>w</sup>*- ‘inside,’ *həy<sup>q</sup>* ‘be burning, fire’?)

33 -*ətp* ‘plant, bush, tree, vegetation’

*snəcət p* ‘one (tree, etc.)’ (< *nəcáʔ* ‘one’)  
*sθét p* ‘big (tree)’ (< *θí* ‘big’)  
*iq<sup>w</sup>əmət p* ‘thimbleberry bush’ (< *iq<sup>w</sup>əm* ‘thimbleberry’)  
*təš<sup>w</sup>acət p* ‘yew tree’ (< *təš<sup>w</sup>ac* ‘bow’)  
*ʔépəlsət p* ‘apple tree’ (< *ʔépəls* ‘apple’)

34 -*tnet* ~ -*tneʔ* ‘day of the week, week, day’ (composed of -*aʔt* ‘attributive’ and *nét* ‘be night’?)

*sšəšətnet* ‘Sunday, week’ (< *šéʔšəʔ* ‘holy’)  
*syələwətnet* ‘Monday’ (< *yələw* ‘come after’)

- təx<sup>w</sup>ətnet* ‘three days’ (< *tix<sup>w</sup>* ‘three’)  
*s<sup>k</sup>wəntnet* ‘what day is it?’ (< *k<sup>w</sup>ín* ‘how many?’)  
*k<sup>w</sup>əna təwətné?* ‘the day before yesterday’ (< *k<sup>w</sup>əna* ‘this absent,’ *téw* ‘escape’)
- 35 *-tsxé* (CC), *-tcyé* (JP) ‘tens’  
*təx<sup>w</sup>ətsxé* ‘thirty’ (< *tix<sup>w</sup>* ‘three’)  
*t<sup>š</sup>əmətsxé* ‘sixty’ (< *t<sup>š</sup>ám* ‘six’)
- 36 *-tél-* ‘fire’  
*x<sup>w</sup>θəyətél* ‘stir up the fire’ (cf. *x<sup>w</sup>θeýšxənáəm* ‘shaking the feet’)  
*x<sup>w</sup>ləm<sup>t</sup>él* ‘throw it into the fire’ (cf. *lámət* ‘hit by throwing’)  
*šx<sup>w</sup>yəq<sup>w</sup>téltnə* ‘dry kindling wood’ (< *yəq<sup>w</sup>* ‘burn,’ *-tnə* ‘instrument’)
- 37 *-ətca* ‘water’  
*tš<sup>w</sup>ətca* ‘spit (v.)’ (cf. *tš<sup>w</sup>át* ‘spit it out’)  
*tqəlcətca* ‘moonlit low tide’ (< *tqélc* ‘moon’)  
*θá?tətca* ‘low tide on a moonless night’ (< *θé?t* ‘dark’)
- 38 *-əlatca* ~ *-átca* ~ *-əlct* ~ *-élct* ‘belly, mind’  
*šətəlatca* ‘have a stomach-ache’ (< *šət* ‘hurt’)  
*c<sup>q</sup>wátca* ‘get pricked in the belly’ (< *c<sup>q</sup>w* ‘get pierced’)  
*sšəlqátca* ‘have a striped belly’ (< *sšélq* ‘stripe’)  
*šətəlct* ‘regret, be sorry’ (< *šət* ‘hurt’) (CC)  
*?šyəlct* ‘feel good, “have a good mind” [feel well disposed]’ (< *?šy* ‘good’)  
*səmk<sup>w</sup>élct* ‘worried’ (< *smək<sup>w</sup>* ‘ball, lump,’ lit. ‘lump in belly’) (JP)
- 39 *-əlatca* ~ *-átca* ‘giant’  
*šáməlatca* (JP), *šəháməlatca* (CC) ‘a giant frog that cries like a baby’ (< *šém* ‘cry’)  
*k<sup>w</sup>écátca* (CC), *k<sup>w</sup>əcátca* (AG) ‘shark’ (< *k<sup>w</sup>éc* ‘dogfish’)  
*i<sup>θ</sup>əštátca* ‘a giant clam’ (< *i<sup>θ</sup>šə* ‘gravel’?)
- 40 *-élə* ~ *-ələ* ‘place for, container for’ (with *šx<sup>w</sup>-* if an internal organ or an artifact)  
*sθeθəyənélə* ‘blood vessel’ (< *sθeθəyən* ‘blood’)  
*səmsəməyə<sup>?</sup>élə* ‘hornet’s nest’ (< *səmsəməyə* ‘hornet’)  
*šx<sup>w</sup>i<sup>θ</sup>ələ<sup>?</sup>élə* ‘solar plexus’ (< *i<sup>θ</sup>ələ* ‘heart’)  
*šx<sup>w</sup>həyq<sup>w</sup>élə* ‘hearth’ (< *həyq<sup>w</sup>* ‘burning, fire’)  
*šx<sup>w</sup>ləmélə* ‘bottle’ (< *lém* ‘liquor, rum’)  
*šx<sup>w</sup>ləθi<sup>?</sup>lə* ‘cupboard’ (//šx<sup>w</sup>-ləθən-elə//, < *láθən* ‘dish’)

41 -*élə* ~ -*ələ* ‘person’

*təx<sup>w</sup>élə* ‘three persons’ (< *tíx<sup>w</sup>* ‘three’)

*k<sup>w</sup>í:lə* ‘how many persons?’ (//*k<sup>w</sup>ín-ələ*//, < *k<sup>w</sup>ín* ‘how many?’)

*sqéqələ* ‘baby’ (cf. *sqé<sup>?</sup>eq* ‘younger sibling, junior cousin’)

42 -*əle?* ~ -*ələ* ~ -*əlí* ~ *əyí* ‘game, sport’?

*θá<sup>?</sup>k<sup>w</sup>ələ?* ‘tug-of-war’ (cf. *θk<sup>w</sup>ət* ‘pull it’)

*sćáq<sup>w</sup>ələ?* ‘a ball game like shinny’ (< ?)

*θáq<sup>w</sup>ələ* (CC), *θáq<sup>w</sup>ələ* (JP) ‘bet’ (cf. *θáq<sup>w</sup>ət* ‘report on him?’)

*smətəlí* ‘a game played by women with dice of beaver teeth’ (< ?)

*sək<sup>w</sup>əyí* ‘shuttlecock used in girl’s game’ (< ?)

43 -*áləs* ~ -*ələs* ~ -*áləs* ‘eye, mesh (of net), star, appearance, tendency(?)’

*θíθáləs* ‘big eyes, big mesh in net, big holes in knitting’ (< *θíθə* ‘big plural’)

*x<sup>w</sup>máq<sup>w</sup>áləst* ‘poke him in the eye’ (< *máq<sup>w</sup>* ‘burst,’ -*t* ‘transitive’)

*k<sup>w</sup>cáləs* ‘see with one’s own eyes’ (< *k<sup>w</sup>éc* ‘see’)

*k<sup>w</sup>ənłcyə<sup>?</sup>áləs* ‘how many tens of mesh? (the measure of the depth of a net)’ (< *k<sup>w</sup>ín* ‘how many?’ -*łcyə* ‘times ten’)

*šx<sup>w</sup>k<sup>w</sup>iláləs* ‘morning star’ (< Cowichan *k<sup>w</sup>éyəl* ‘become day’)

*sk<sup>w</sup>ik<sup>w</sup>əmáləs* ‘salmon pink, reddish’ (< *ck<sup>w</sup>ím* ‘red’)

*šx<sup>w</sup>ix<sup>w</sup>k<sup>w</sup>áləs* ‘greyish’ (< *cx<sup>w</sup>ík<sup>w</sup>* ‘grey’)

*cictáləs* ‘steep slope’ (< *cícət* ‘above’)

*íq<sup>w</sup>áləs* ‘maple dish’ (? < *íśq<sup>w</sup>* ‘be cut off’)

*sš<sup>w</sup>k<sup>w</sup>áləs* ‘salmon backbone’ (? < *šśk<sup>w</sup>* ‘be stuck between’)

44 -*áls* ‘rock, spherical object, round berry’

*təmtáls* ‘reddish (rock)’ (< *támət* ‘red ochre’)

*k<sup>w</sup>əníáls* ‘a kind of hard black rock’ (< *k<sup>w</sup>á<sup>n</sup>í* ‘porpoise’)

*k<sup>w</sup>ək<sup>w</sup>q<sup>w</sup>í<sup>?</sup>áls* ‘shinny’ (< *k<sup>w</sup>aq<sup>w</sup>* ‘get hit [durative form?]’)

*q<sup>w</sup>əmcá<sup>?</sup>áls* ‘cranberry’ (< ?)

45 -*əls* ‘weapon’

*θəyálsəm* ‘prepare for hunting’ (cf. *θəy<sup>t</sup>* ‘fix it,’ -*əm* ‘intransitive?’)

*k<sup>w</sup>í<sup>?</sup>lsəm* ‘pick up something as a weapon’ (//*k<sup>w</sup>ən-əls-əm*//, cf. *k<sup>w</sup>ə<sup>n</sup>ət* ‘take it,’ -*əm* ‘intransitive’)

*k<sup>w</sup>í<sup>?</sup>lsəmət* ‘pick it up as a weapon’ (-*ət* ‘transitive’)

*k<sup>w</sup>ənél<sup>?</sup>səm* ‘have something as a weapon’ (cf. *k<sup>w</sup>ə<sup>n</sup>ét* ‘hold it’)

46 -*ələt* ~ -*əlíl-* (before -*əm* ‘intransitive’) ‘crotch, between the legs’

*šx<sup>w</sup>í<sup>?</sup>lət* ‘crotch’ (//*šx<sup>w</sup>-<sup>?</sup>íl-ələ<sup>t</sup>*//, < *í<sup>?</sup>l-*?)

*x<sup>w</sup>sisi<sup>?</sup>ələt<sup>t</sup>* ‘tickle her between the legs’ (cf. *sáyít* ‘tickle him/her’)

*məsəlíləm* ‘close one’s legs’ (cf. *məsət* ‘fold it up’)

- 47 -*ált* ~ *ált* ‘young’  
*stənáyált* ‘girl’ (< *sténáy* ‘woman’)  
*swáyqe’ált* ‘boy’ (< *swáyqe* ‘man’)  
*swiwlásált* ‘boy’ (< *swiwlás* ‘young man’)  
*spe’eθált* ‘black-bear cub’ (< *spe’eθ* ‘black bear’)  
*məmənált* ‘young (pl.) of an animal’ (cf. *ʔəməmən* ‘little [pl.]’)
- 48 -*élac* ‘person’ (cf. 41)  
*qǎélac* ‘many people’ (< *qǎǎ* ‘many’)  
*šx<sup>w</sup>te’élac* ‘each person, whatever person’ (cf. *šx<sup>w</sup>te’é* ‘just as,’ *ste’é* ‘like’)
- 49 -*ǎlǎc* ‘dung’  
*šx<sup>w</sup>musmǎsǎlǎc* ‘cow manure’ (< *músmǎs* ‘cow’)  
*šx<sup>w</sup>čikǎnǎlǎc* ‘chicken manure’ (< *čikǎn* ‘chicken’)
- 50 -*éle’c* ~ -*ǎle’c* ~ -*li’c* ‘container’  
*i<sup>θ</sup>imele’c* ‘berry basket’ (cf. *i<sup>θ</sup>i·m* [//i<sup>θ</sup>i m-ə m//?] ‘pick berries’)  
*i<sup>θ</sup>sǎle’ct* ‘nail it up (as a coffin)’ (cf. *i<sup>θ</sup>isǎt* ‘nail it’)  
*qǎ’li’c* ‘water box’ (< *qǎ* ‘water’)  
*ctéle’c* ‘cover, lid (of box)’ (< *√cǎt* ‘above’)
- 50.1 -*ǎle’c* ‘bundle’  
*nǎcǎle’c* ‘one bundle (as of blankets)’ (< *nǎcǎ* ‘one’)  
*qǎpǎle’ct* ‘tie them up in a bundle’ (cf. *qǎpǎt* ‘tie it up’)  
*yǎǎ’ǎle’ct* ‘untie it (something in a bundle)’ (cf. *yǎǎ’ǎt* ‘untie it’)
- 52 -*élc* ~ -*ǎlc* ‘hair, line’  
*šǎqtélc* ‘long-haired’ (< *šǎqt* ‘long’)  
*cǎǎ’élc* ‘black-haired’ (< *cǎǎǎ* ‘black’)  
*k<sup>w</sup>ǎnélc* ‘hold a harpoon line’ (cf. *k<sup>w</sup>ǎné* ‘hold it’)
- 53 -*ǎlxǎn* ‘line’  
*k<sup>w</sup>ǎyǎk<sup>w</sup>ǎlxǎn* (CC), *k<sup>w</sup>ǎyǎk<sup>w</sup>ǎlxǎn* (JP) ‘trolling line’ (cf. *k<sup>w</sup>ú·yǎk<sup>w</sup>* [CC],  
*k<sup>w</sup>ǎyǎk<sup>w</sup>ǎm* [JP] ‘troll’)  
*šǎqtǎlxǎn* ‘long line’ (< *šǎqt* ‘long’)
- 54 -*ǎlk<sup>w</sup>t* ~ -*ǎlk<sup>w</sup>t* ‘winter dancer, possessing song’  
*ǎǎ’ǎsǎlk<sup>w</sup>t* ‘new dancer (this year’s initiate)’ (< *ǎǎ’ǎs* ‘new’)  
*ʔǎmxǎlk<sup>w</sup>t* ‘“run” a new dancer’ (< *ʔimǎx* ‘walk’)  
*sǎǎlk<sup>w</sup>t* ‘non-dancer’ (< ?)

*x<sup>w</sup>áyəlkw<sup>t</sup>* ‘finish the season as a new dancer’ (< *háy* ‘finish’)  
*təqáyəʔálk<sup>w</sup>t* ‘having a wolf song’ (cf. *stəqáyeʔ* ‘wolf’)

54.1 -*álk<sup>w</sup>t* ‘child of’

*x<sup>w</sup>máθkwəyámàlk<sup>w</sup>t* ‘Musqueam child’ (< *x<sup>w</sup>máθkwəyám* ‘Musqueam’)  
*spéləwàlk<sup>w</sup>t* ‘Sparrow child’ (< surname *Sparrow*)

55 -*éləq* ‘wave’

*sq<sup>w</sup>téləq* ‘(moderate) surf’ (< *q<sup>w</sup>ət* ‘wash ashore’)  
*θiθéləq* ‘with big waves’ (< *θiθə* ‘big (pl.)’)  
*qíːləq* ‘rough, choppy (water)’ (//qəl-ələq//, < *qəl* ‘bad’)  
*háýələq* ‘wave’ (< ?)

56 -*éləqəp* ‘smell, taste, sound’ (perhaps ‘trace’)

*scək<sup>w</sup>áíéləqəp* ‘how does it smell?’ (< *scék<sup>w</sup>áí* ‘how?’)  
*ʔáyéləqəp* ‘smell good’ (< *ʔáy* ‘good’)  
*qálləqəp* ‘smell bad, taste bitter’ (< *qəl* ‘bad’)  
*pəpəi<sup>θ</sup>inéləqəp* ‘smell of skunk’ (< *spəpəi<sup>θ</sup>in* ‘skunk’)  
*stéwəíéləqəp* ‘taste like herring’ (< *stéwəí* ‘herring’)  
*θx<sup>w</sup>éləqəp* ‘die down, fade away (a sound)’ (< *θáx<sup>w</sup>* ‘disappear’)

57 -*éləqən* ~ -*ələqən* ‘line, stream?’

*sctéləqən* ‘cork line (of net)’ (cf. *cícət* ‘above’)  
*sʔpéləqən* ‘lead [the metal] line, lower edge of net’ (cf. *ʔíʔəp* ‘below’)  
*ʔ<sup>w</sup>ámələqən* ‘fast leak (in boat or roof)’ (< *ʔ<sup>w</sup>ám* ‘fast’)

58 -*əlqən* ‘pelt, fur, hide’

*pqáíqən* ‘mountain goat’ (< *pqáq* ‘white’)  
*təcáíqən* ‘shear wool’ (cf. *lícət* ‘cut it’)  
*k<sup>w</sup>əq<sup>w</sup>əlqən* ‘beat wool’ (cf. *k<sup>w</sup>áq<sup>w</sup>ət* ‘beat it’)  
*k<sup>w</sup>əq<sup>w</sup>əlqətən* “‘sword’ used for beating wool” (< *tən* ‘instrument’)  
*sʔpélqən* ‘feather’ (< *ʔəp* ‘deep’?)  
*ʔəxáíqən* ‘buckskin’ (cf. *ʔíxət* ‘scrape it’)

59 -*əlqt* ~ -*əlqt* ‘catch, game’

*təwélqt* ‘lose a fish, miss a shot’ (< *téw* ‘escape’)  
*qxélqt* ‘have a big catch’ (< *qəx* ‘many’)  
*k<sup>w</sup>ínəlqt* ‘how many caught?’ (< *k<sup>w</sup>ín* ‘how many?’)

60 -*ələxáí<sup>θ</sup>* ~ -*ələxáí<sup>θ</sup>* ‘barrier’

*cʔámələxáí<sup>θ</sup>* ‘jump over a fence’ (< *cʔám* ‘jump’)  
*k<sup>w</sup>ənələxáí<sup>θ</sup>* ‘pass over a barrier’ (< *k<sup>w</sup>ən-* ‘transfer’)  
*səx<sup>w</sup>ələxáí<sup>θ</sup>* ‘wet the bed’ (< *səx<sup>w</sup>aʔ* ‘urinate’)

## 61 -əlwət ‘garment’

*p̄q̄əlwət* ‘Hudson’s Bay Company blanket’ (< *p̄d̄q̄* ‘white’)

*i<sup>θ</sup>x̄w̄əlwətəm* ‘wash one’s clothes’ (cf. *i<sup>θ</sup>x̄w̄āt* ‘wash it’)

*?əx̄əlqənəlwət* ‘buckskin shirt’ (< *?əx̄əlqən* ‘buckskin’)

*təm<sup>w</sup>əlwət* ‘raincoat’ (< *təm<sup>w</sup>* ‘rain [v.]’; cf. *stəm<sup>w</sup>* ‘rain [n.]’)

*k̄wix̄w̄əlwət* ‘raincoat’ (< *k̄wix̄w̄* ‘pitch’)

*šx̄w̄p̄i<sup>θ</sup>əlwətəm* ‘wringer (on a washing machine)’ (cf. *p̄i<sup>θ</sup>ət* ‘wring it out’)

## 62 -əlwəs ‘heart, side of chest’

*?əȳ’əlwəs* ‘brave’ (< *?əȳ* ‘good’)

*qələlwəs* ‘cowardly’ (< *qəl* ‘bad’)

*i<sup>θ</sup>q̄w̄’əlwəst* ‘punch him on the side’ (cf. *i<sup>θ</sup>q̄w̄ət* ‘punch him’)

## 63 -élweʔs ~ -əlweʔs ‘paddle’

*tənəȳ’élweʔs* ‘woman’s paddle’ (< *sténəȳ* ‘woman’)

*isələlweʔs* ‘two paddles’ (< *yəsélə* ‘two’)

*q̄éw̄’əlweʔs* ‘pay the paddles (i.e., pay those who helped bring food for affines)’ (cf. *q̄éw̄ət* ‘pay him’)

*təlq̄əlweʔsəm* ‘put one’s paddle into the water’ (cf. *təlqt* ‘dip it’)

*stélq̄əlweʔs* ‘with unraised paddle (for a quiet approach)’ (resultative of last)

*q̄áyəlweʔs* ‘weaken’ (< *q̄áy* ‘die’)

## 64 -ícən ~ -əcən ~ -ic- ~ -əc- (before -t ‘transitive’ and -əm ‘intransitive’) ‘back, surface, top’

*x̄əx̄p̄ícən* ‘chipmunk’ (cf. *x̄ip̄ət* ‘scratch it’)

*sk<sup>w</sup>áməcən* ‘hump-backed’ (cf. *sk<sup>w</sup>ám<sup>i</sup>θ* ‘lump,’ *sk<sup>w</sup>ám̄* ‘ridge’)

*schícən* ‘top, surface’ (cf. *cícət* ‘above’)

*clíct* ‘put it on top’ (cf. last)

*səhícən* ‘this side’ (< *s-* ‘nominalizer,’ *?i* ‘be here’)

*snəʔícən* ‘that side, other side’ (< *níʔ* ‘be there’)

## 64.1 -eʔc ~ -éləc ~ -ələc ~ -líc ‘route across’

*c̄šáméʔct* ‘jump over it (as a log), skip it’ (< *c̄šám* ‘jump’)

*i<sup>θ</sup>w̄’élēc* ‘take a short cut (as a pass between islands)’ (cf. *i<sup>θ</sup>w̄’át* ‘cut it off’)

*čá:ləc* ‘cross over (an island), go over (a hill)’ (< *čéʔ* ‘land atop’)

*təq̄əlíc* ‘other side (as of a hill)’ (cf. *tq̄én* ‘other end’)

## 64.2 -c ‘low tide’? (-ac ‘surface’?)

*nátcām* ‘shift from low tides in the daytime to low tides at night (in the fall)’ (< *nét* ‘become night’)

*wéyālcām* ‘shift from low tides at night to lows in the day (in the spring)’ (< *wéyāl* ‘become day’)

## 64.3 -awíc ~ -awac ‘back’ (perhaps a connective and 64, -ic ~ -ac ‘surface’)

*táqtáwac* ~ *táqtawíc* ‘broad-backed’ (< *tqét* ‘wide’)

*ǰálawíc* ‘have an aching back’ (< *ǰál* ‘hurt’)

*sǰǰxèlqawíc* ‘striped backed’ (< *sǰélq* ‘stripe’)

## 65 -ac ‘hundred’?

*nécáwac* ‘one hundred’ (< *nécaw-* combining form of *náca* ‘one’)

*thémac* ‘two hundred’ (< *them-* ‘two’)

## 66 -écān ~ álacān ~ élacān ‘testicle(s)’

*mécān* ‘testicle’ (< *mā-* dummy root?)

*thíthálacān* ~ *tháhlálacān* ‘having big testicles’ (< *thí* ‘big’)

*x<sup>w</sup>lámé<sup>?</sup>álacān* ‘kick him in the balls’ (cf. *lámé<sup>?</sup>t* ‘kick him’)

*x<sup>w</sup>píǰálacān* ‘grab him by the balls’ (cf. *páyǰt* ‘squeeze it’)

*x<sup>w</sup>k<sup>w</sup>ák<sup>w</sup>á<sup>?</sup>élacān* ‘be lying on one’s back with legs flexed’ (< *k<sup>w</sup>í<sup>?</sup>* ‘ascend’)

## 67 -cāp ~ -alcāp ~ -álcāp ‘fire, firewood’

*q<sup>w</sup>á<sup>?</sup>cāp* ‘spark’ (< *q<sup>w</sup>é* ‘get through’?)

*q<sup>w</sup>á<sup>?</sup>icāp* ‘soot’ (cf. *q<sup>w</sup>á<sup>?</sup>yt* ‘scorch it’)

*pá<sup>?</sup>lcāp* ‘blow on a fire’ (cf. *pá<sup>?</sup>t* ‘blow on it’)

*yáq<sup>w</sup>alcāp* ‘light a fire’ (< *yáq<sup>w</sup>* ‘burn’)

*k<sup>w</sup>átx<sup>w</sup>álcāp* ‘bring in firewood’ (cf. *k<sup>w</sup>téx<sup>w</sup>t* ‘bring it in’)

*sqá<sup>?</sup>lcāp* ‘split firewood’ (< *sáq<sup>?</sup>* ‘get split’)

## 68 -cās ~ -cs- (before -ām ‘intr.’) ~ -cís ‘hand, branch (of tree)’

*sí<sup>?</sup>ám<sup>?</sup>cās* ‘bones of the hand’ (< *sí<sup>?</sup>ám* ‘bone’)

*ámámán<sup>?</sup>cās* ‘having small hands’ (< *ámámán* ‘little [pl.]’)

*táccās* (CC), *téccās* (JP) ‘get cut in the hand’ (cf. *tíccāt* ‘cut it’)

*síq<sup>w</sup>écās* ‘missing a finger’ (< *s-* ‘resultative,’ *í<sup>?</sup>q<sup>w</sup>* ‘get cut off’)

*k<sup>w</sup>ánacāst* ‘take him by the hand, shake his hand’ (cf. *k<sup>w</sup>ánāt* ‘take it’)

*sé<sup>?</sup>csām* ‘raise one’s hands’ (cf. *sé<sup>?</sup>t* ‘raise it’)

*ǰx<sup>w</sup>tācís* ‘way of doing something’ (< *ǰx<sup>w</sup>-* ‘oblique nominalizer,’ root of *sté<sup>?</sup>é* ‘like’?)

*íá<sup>?</sup>x<sup>w</sup>cās* ‘grand fir branch’ (< *íá<sup>?</sup>x<sup>w</sup>* ‘grand fir’)

*płátcās* ‘thick with branches’ (< *płét* ‘thick’)

68.1 -*áləw̄cəs* ‘finger’ (-*cəs* ‘hand’ with a double connective?)

*ǰəlqatáləw̄cəs* ‘long-fingered’ (< *ǰéləqt* ‘long [pl.]’)

*sənǰáləw̄cəs* ‘thumb’ (< *sənǰe?* ‘older sibling, senior cousin’)

*saʔasqʷtáləw̄cəs* ‘little finger’ (< *sáʔsəqʷt* ‘younger sibling, junior cousin’)

69 -*xən* ~ -*xə-* ~ -*xén* ~ -*xín* ~ -*xin̄* ‘foot, leg, brim (of hat)’

*čələləǰxən* ‘short-legged’ (cf. *čəčíǰ* ‘short’)

*snəsxən* ‘marrow’ (< *snás* ‘fat, oil’)

*qʷtəȳxən* ‘shoe’ (< *qʷtəȳ* ‘driftwood, log’)

*técxən* ‘cut one’s foot’ (cf. *tícət* ‘cut it’)

*ləkʷxén* ‘break a leg’ (< *ləkʷ* ‘get broken’)

*séʔxənəm* ‘raise a leg’ (cf. *séʔt* ‘raise it’)

*t̄θx̄xénəm* ‘wash one’s feet’ (cf. *t̄θx̄át* ‘wash it’)

*kʷənxət* ‘grab him by the foot’ (cf. *kʷənət* ‘take it’)

*ǰəxínt* ‘accompany him’ (< *ǰaʔ* ‘accompany’)

*šxʷnəxín* ‘feet’ (< *šxʷ-* ‘oblique nominalizer,’ *niʔ* ‘be there’)

*θíxən* ‘broad-brimmed (of hat)’ (< *θí* ‘big’)

*sǰəǰəxán* ‘partner’ (< *ǰaʔ* ‘accompany’) (see §1.5.12 [3])

69.1 -*áləw̄xən* ‘toe’ (-*xən* ‘foot’ with double connective? cf. 68.1)

*θíθáləw̄xən* ‘big-toed’ (< *θíθə* ‘big [pl.]’)

*sənǰáləw̄xən* ‘big toe’ (< *sənǰe?* ‘older sibling, senior cousin’)

69.2 -*xən* ‘drop, droplet’

*θíθəxən* ‘in big drops’ (< *θíθə* ‘big [pl.]’)

*šʷəčxən* ‘stop raining’ (< ?)

*qʷiqʷtím̄xən* ‘Scotch mist’ (cf. *sqʷət̄xəm* ‘fog’)

70 -*k̄e?* ~ -*k̄ʷa?* ‘dead person’?

*nəw̄ək̄ʷe?* (CC), *nəw̄ək̄ʷa?* (JP) ‘coffin’ (cf. *nəw̄əx* ‘insert it’)

*cmékk̄e?* ‘attend a funeral’ (< *c-* ‘make, get’; cf. *méʔx* ‘remove it’?)

71 -*xʷθət* ~ *éləxʷθət* ‘tongue’

*təxʷθət* ‘tongue’ (< *tə-* dummy root)

*ǰəqtéləxʷθət* ‘long-tongued’ (< *ǰəqt* ‘long’)

*st̄čéləxʷθət* ‘with a cut tongue’ (< *s-* ‘resultative,’ *tíc-* ‘cut’)

72 -*xʷət* ‘canoe’ (cf. 90)

*nécəxʷət* ‘one canoe’ (< *nəčəʔ* ‘one’)

*θéməxʷət* ‘two canoes’ (< *θém-* ‘two’)

*snəxʷət* ‘canoe (gen.), vehicle’ (< ?)

## 73 -eq ~ -əq ~ -q ‘penis, projection, rear’

- x<sup>w</sup>θé:q* ~ *θé:q* ‘having a big penis’ (< *θí* ‘big’)  
*q<sup>w</sup>íñeq* ‘man’s pubic hair’ (< *q<sup>w</sup>ín* ‘hair on face and body’)  
*k<sup>w</sup>əñəqt* ‘grab him by the penis’ (cf. *k<sup>w</sup>əñət* ‘take it’)  
*pəñéq* ‘slow match (cedar bark burning in clamshell)’ (< *pəñ* ‘be buried’)  
*yáq<sup>w</sup>əq* ‘light it (as a wick)’ (< *yáq<sup>w</sup>* ‘burn’)  
*s<sup>?</sup>ilé<sup>?</sup>eq* ‘stern (of boat)’ (< ?)  
*célqəm* ‘follow’ (perhaps //cəl-əlq-əm// from *cel-* ‘follow’ or *célt* //cél-ət// ‘follow him’)  
*ǎ́célqəm* ‘sneak after ducks’ (cf. *ǎ́ícət* ‘sneak up on him’)

73.1 -əy<sup>?</sup>e<sup>?</sup>q ~ a<sup>?</sup>y<sup>?</sup>e<sup>?</sup>q ~ -áy<sup>?</sup>əq ‘projection’

- x<sup>w</sup>əy<sup>?</sup>səláy<sup>?</sup>əq* (CC), *x<sup>w</sup>isəláy<sup>?</sup>e<sup>?</sup>q* ‘double-barrelled gun’ (< *yəsélə* ‘two’)  
*x<sup>w</sup>nəcáy<sup>?</sup>əq* ‘single-barrelled gun’ (< *náca* ‘one’)  
*šx<sup>w</sup>təǎǎáy<sup>?</sup>e<sup>?</sup>q* ‘prong’ (cf. *stítəǎ* ‘spread out’)  
*tǎ́éy<sup>?</sup>e<sup>?</sup>qt* ‘spread its legs (as a ladder)’ (cf. last)

## 74 -qən ~ -qín ‘head, end, bow of canoe’

- méqən* ‘hair’ (< *m-* of *máqsən* ?)  
*q<sup>w</sup>éqən* ‘bud out’ (< *q<sup>w</sup>é* ‘get through’)  
*s<sup>?</sup>p<sup>?</sup>qámqən* ‘form a flower’ (< *s<sup>?</sup>p<sup>?</sup>éqəm* ‘flower,’ *páq* ‘white, bright’)  
*smáí<sup>?</sup>qən* ‘brain’ (< *máí<sup>?</sup>* ‘soft’? cf. *máí<sup>?</sup>í<sup>?</sup>lθət* ‘become soft’)  
*táq<sup>?</sup>qən* ‘head of a long river’ (cf. *tqén* ‘other end’)  
*táq<sup>?</sup>qín* ‘other end of the house (as last)’  
*ǎ́iǎ́áq<sup>?</sup>qínəm* ‘be scratching one’s head’ (cf. *ǎ́íqət* ‘scratch it’)  
*x<sup>w</sup>əwqínt* ‘push it ahead’ (< *x<sup>w</sup>-* ‘move toward,’ *hiw* ‘upstream, toward fire’)  
*cəlqínəm* ‘turn one’s canoe around, turn one’s back’ (< *cəl-* ‘switch’)

## 74.1 -íqən ~ -əqən ~ -qən ~ -qén ‘front, slope’

- ʔéθəqən* ‘front’ (< *ʔeθ-* restrictive root)  
*sclíqən* ‘top of a hill’ (cf. *cícət* ‘above’)  
*sǎ́píqən* ‘bottom of a hill’ (cf. *ǎ́iǎ́əp* ‘below’)  
*ǎ́əp<sup>?</sup>qénəm* ‘descend (a mountain), go downhill’ (cf. *ǎ́iǎ́əp* ‘below’)  
*q<sup>w</sup>á<sup>?</sup>ləqən* ‘shore of bare rock’ (cf. *q<sup>w</sup>í<sup>?</sup>əlt* ‘uncover it’)  
*k<sup>w</sup>í<sup>?</sup>qən* ‘climb (a mountain), go uphill’ (< *k<sup>w</sup>í<sup>?</sup>* ‘ascend’)  
*táq<sup>?</sup>qént* ‘put something down in front of him’ (cf. *téqət* ‘lay it down’)

## 74.2 -qən ~ -qə- (before -t ‘transitive’) ~ -qín- (before -əm ‘intransitive’) ‘throat, voice, speech, meal, opening facing upward’ (an extension of 75?)

- x<sup>w</sup>í<sup>?</sup>ə<sup>?</sup>tqət* ‘quench his thirst’ (cf. *í<sup>?</sup>átəm* ‘cold,’ *í<sup>?</sup>éí<sup>?</sup>ə<sup>?</sup>ət* ‘refreshing’)  
*í<sup>?</sup>əǎ́<sup>w</sup>qínəm* ‘wash one’s throat (have a beer)’ (cf. *í<sup>?</sup>əǎ́<sup>w</sup>át* ‘wash it’)

*x<sup>w</sup>θíqən* ‘loud’ (< *θí* ‘big’)  
*x<sup>w</sup>məθk<sup>w</sup>əyámqən* ‘Musqueam speech’  
*qəwícəŋqən* ‘Cowichan speech’ (< *qəwícəŋ* ‘Cowichan’)  
*kínjá:jqənstəx<sup>w</sup>* ‘speak English to him’ (< *kínjá:j* ‘Englishman,’ < CJ)<sup>3</sup>  
*šx<sup>w</sup>nétətqən* ‘breakfast’ (< *šx<sup>w</sup>*- ‘oblique nominalizer,’ *nétət* ‘morning’)  
*x<sup>w</sup>pánəqət* ‘fill it up (e.g., a hole in the ground)’ (< *pán* ‘get buried’)

74.3 -əqən ~ -əqən̄ ‘container’ (an extension of 74.2?)

*šəθínəqən̄* ‘four (containers)’ (< *šə?áθən* ‘four’)  
*tqécsəqən̄* ‘five (containers)’ (< *tqécs* ‘five’)  
*θíθəqən* ‘big (containers)’ (< *θíθə* ‘big [pl.]’)

75 -qs ~ əqs ~ -qsən ~ -əqsən ~ qsín ‘nose, snout, point (of land)’

*məqsən* ‘nose’ (< *mə*- dummy root?)  
*q<sup>w</sup>áyqs* ‘a large gull with a yellow beak’ (cf. *cq<sup>w</sup>áy* ‘yellow, green’)  
*sxəqəqs* ‘nose ornament’ (< *xəq* ‘be finished?’)  
*θíqsən* ‘big-nosed’ (< *θí* ‘big’)  
*sí<sup>θ</sup>ámqsən* ‘bones of the nose’ (< *sí<sup>θ</sup>ám* ‘bone’)  
*təcəqt* ‘cut off its snout’ (< *tič-* ‘cut’)  
*k<sup>w</sup>əqsənəm* ‘turn one’s nose up’ (< *k<sup>w</sup>i?* ‘ascend?’)  
*s<sup>?</sup>əlqsən* ‘point (of land), Point Grey’ (< *əl-* restrictive root?)  
*šəqtəqsən* ‘long nose, long point’ (< *šəqt* ‘long’)  
*yəqsín* (CC), *yəqsənəm* (JP) ‘go against the wind’ (< ?)

76 -éxən ~ -əxən ~ -xén- (before -əm ‘intransitive’) ‘arm, side, branch, perimeter’

*sələxənəm* ‘raise one’s arms’ (cf. *sə<sup>?</sup>t* ‘raise it’)  
*pəypəyéxən* ‘have arms akimbo’ (cf. *páy<sup>t</sup>* ‘bend it?’)  
*ʔíləxən* ‘far end (of a house or road)’ (< *ʔíl-* ?)  
*šx<sup>w</sup>lək<sup>w</sup>éxən* ‘corner (in house)’ (< *lək<sup>w</sup>* ‘be broken,’ lit. ‘where the edge is broken’ [DK])  
*təytəxən* ‘p.n., the upper end of the row of houses at *sčələx<sup>w</sup>*’ (< *təyt* ‘upstream’)  
*nə<sup>?</sup>éxən* ‘reach an end’ (< *ní?* ‘be there’)  
*təlqəxət* ‘dip it (a blanket or garment) partly into the water’ (cf. *təlqt* ‘dip it’)  
*məléxət* ‘bend a branch down’ (cf. *mə<sup>t</sup>ət* ‘bend it’)  
*k<sup>w</sup>əcxénəm* ‘keep a lookout, keep watch’ (< *k<sup>w</sup>éc* ‘look’)  
*sqələxən* ‘stockade, fence’ (cf. *qələm* ‘camp’)<sup>4</sup>

3 When JP was a boy, older monolingual persons used this word in asking the young to interpret.

4 This is also a Chinook Jargon word, but it must be Salish in origin.

## 76.1 -əlḗḗən ‘arm’ (probably 76 with -əl- connective)

ǰəlqatəlḗḗən ‘long-armed’ (< ǰéləqt ‘long [pl.]’)

sí<sup>θ</sup>ámálḗḗən ‘arm bone’ (< sí<sup>θ</sup>ám ‘bone’)

sé:léḗənəm ‘raise one’s arms’ (cf. sé:t ‘raise it’)

qáǰəlḗḗət ‘tie it (as a kerchief) to his arm (as he dances)’ (cf. qéǰət ‘tie it up’)

77 -q<sup>w</sup> ~ -əq<sup>w</sup> ~ əq<sup>w</sup> ~ aq<sup>w</sup> ~ -a<sup>?</sup>q<sup>w</sup> ~ -i<sup>?</sup>q<sup>w</sup> ~ -ələq<sup>w</sup> ~ -awaq<sup>w</sup> ‘head’

ké<sup>w</sup>áq<sup>w</sup>q<sup>w</sup> ‘bladderwrack’ (< ké<sup>w</sup>áq<sup>w</sup> ‘get hit,’ because the dry bladders burst with a pop when struck?)

i<sup>θ</sup>ǰí<sup>?</sup>q<sup>w</sup> ‘get one’s head filthy’ (< i<sup>θ</sup>ǰ- ‘get filthy’)

ǰəx<sup>w</sup>í<sup>n</sup>aq<sup>w</sup> ‘small-headed’ (< ǰəx<sup>w</sup>í<sup>n</sup> ‘small’)

ǰá<sup>?</sup>təq<sup>w</sup> ‘have a headache’ (< ǰá<sup>?</sup>t ‘hurt’)

lí<sup>?</sup>cə<sup>?</sup>q<sup>w</sup>əm ‘get one’s hair cut’ (cf. lí<sup>?</sup>cət ‘cut it’)

x<sup>w</sup>i<sup>θ</sup>ǰ<sup>w</sup>ələq<sup>w</sup>t ‘hit him on the head’ (cf. i<sup>θ</sup>ǰ<sup>w</sup>ət ‘punch him’)

hí<sup>w</sup>aq<sup>w</sup> ‘headman, leader’ (< hí<sup>w</sup> ‘upstream, toward the fire’)

yásaq<sup>w</sup> ‘hat’ (< ?)

wə<sup>?</sup>təx<sup>w</sup>áwaq<sup>w</sup> ‘three (animals)’ (< wə- “‘established” aspectual prefix,”

líx<sup>w</sup> ‘three’)

ǰáq<sup>w</sup>təq<sup>w</sup> ‘high (mountain)’ (< ǰéqt ‘long’)

77.1 -áwəq<sup>w</sup> ‘hat’

təm<sup>w</sup>x<sup>w</sup>áwəq<sup>w</sup> ‘rain-hat’ (< təməx<sup>w</sup> ‘rain’)

k<sup>w</sup>əmləx<sup>w</sup>áwəq<sup>w</sup> ‘spruce-root basketry hat’ (< k<sup>w</sup>əmləx<sup>w</sup> ‘root’)

k<sup>w</sup>i<sup>w</sup>x<sup>w</sup>áwəq<sup>w</sup> ‘rain-hat of waterproof fabric’ (< k<sup>w</sup>i<sup>?</sup>x<sup>w</sup> ‘pitch, gum’)

## 78 -éy̆ ~ -əy̆ ‘plant, tree, wood’

q<sup>w</sup>téy̆ ‘driftwood, log’ (< q<sup>w</sup>ət ‘wash ashore’)

pq<sup>w</sup>éy̆ ‘rotten wood’ (< pəq<sup>w</sup> ‘get broken up’)

c<sup>w</sup>séy̆ ‘Douglas-fir wood’ (< c<sup>w</sup>is- ‘grow’?)

sá<sup>w</sup>k<sup>w</sup>əməy̆ ‘birch tree’ (< sá<sup>w</sup>k<sup>w</sup>əm ‘whole bark’)

## 79 -əy̆ ‘someone who does (agent)’?

sǰəǰéy̆ ‘child that cries a lot’ (cf. ǰém ‘cry’)

sténəy̆ ‘woman’ (< tən- ‘weave’?)

qéməy̆ ‘young woman, teenaged girl’ (< ?)

## 80 -əy̆ ~ -ay̆ ‘fish’?

sθəqəy̆ ‘sockeye salmon’ (< ?)

sí<sup>θ</sup>áq<sup>w</sup>əy̆ ‘chinook (“spring”) salmon, salmon (gen.)’ (cf. next)

sí<sup>θ</sup>q<sup>w</sup>áy̆ ‘little fish’ (cf. i<sup>θ</sup>ǰ<sup>w</sup>əq<sup>w</sup> ‘stickleback’)

wécəy̆ ‘perch’ (< ?)

ǰáq<sup>w</sup>áy̆ ‘salmon milt’(?) (< ?)

- 81 -əye ~ -əyə ~ -áyē ‘dear one’ (? in forms of address), ‘small creature’(?)  
*ʔíməye* ‘grandchild (address)’ (< *ʔíməθ* ‘grandchild’)  
*níkʷəye* ‘uncle, aunt (address)’ (cf. *šxʷəmnikʷ* ‘living parent’s sibling’)  
*səmáye* ‘bee, hornet’ (< ?)  
*qʷínəye* ‘clown dancer wearing bearskin appearing with *sšʷáyšʷəy*’  
 (< *qʷín* ‘hair on face and body’)  
*qíxəyə* ‘Negro’ (cf. *cqíx* ‘black’)
- 82 -éyən ~ *áləyən* ‘net, trap’  
*qʷséyən* ‘set a gill net’ (< *qʷəs* ‘go into the water’)  
*kʷtəyən* ‘set a net parallel to the shore’ (cf. *kʷátəst* ‘spread it [a net]’)  
*θékʷəlyən* ‘be pulling a net’ (cf. *θkʷət* ‘pull on it’)  
*ššəyqəyən* ‘be caught in a trap’ (cf. *ššəyqət* ‘press down on it’)
- 83 -əyás ~ -əyás ~ -əyəs ‘circular figure,’ ‘come full circle?’  
*qəqəyás* ‘barrel’ (cf. *qəq* ‘taut,’ *qəqət* ‘make it taut,’ *qíqət* ‘bind it’)  
*kʷəmləxʷəyás* ‘watertight coiled basket’ (< *kʷəmləxʷ* ‘root’)  
*tqʷiʔás* ‘tight around the middle’ (< *təqʷ* ‘tight’)  
*həncáwəyəs* ~ *ʔəmcáwəyəs* ‘come back to life, return after thought  
 dead’ (< *həncəw* ~ *ʔəmcəw* ‘come down to the shore’)
- 84 -éyət ~ *šəyət* ~ -eýł- (before -əm ‘intransitive’) ‘child, people, ceremony’  
*šəʔéyət* ‘stop a baby’s crying’ (cf. *šəʔt* ‘comfort him’)  
*nəwéyət* ‘advise a child’ (cf. *níwət* ‘advise him’)  
*xətáməyətəm* ‘take care of a baby’ (cf. *xətəmət* ‘take care of it’)  
*šəʔšəʔəyət* ‘abnormal baby’ (< *šəʔšə* ‘holy, taboo’)  
*čəyət* ‘thank a crowd’ (cf. *čít* ~ *čítət* ‘thank him’)  
*θəθšəyət* ‘girl’s puberty ceremony’ (< *θəθəš* ‘first menstruation’)
- 85 -íwən ~ -əwən ~ -íwə- (before -t ‘transitive’) ‘inside, middle, waist,  
 behind, rump, trunk (of tree)’  
*šxʷiʔəmíwən* ‘seed (of fruit), pit’ (< *síʔám* ‘bone’)  
*xʷθíwən* ‘think’ (< *θət* ‘say’)  
*šxʷqʷéləwən* ‘thoughts, feelings’ (< *qʷél* ‘speak’)  
*xʷšqíwət* ‘split it in two’ (cf. *sqét* ‘split it’)  
*xʷčíwət* ‘put it in the middle (as of a bundle)’ (cf. *xʷčət* ‘insert it’)  
*šxʷšqʷíwətən* ‘belt’ (< *šqíw* ‘get enmeshed’)  
*xʷtəqtíwən* ‘wide-rumped’ (< *təqét* ‘wide’)  
*xʷčqíwən* ‘get pricked in the rear’ (< *čqíw* ‘get pierced’)  
*xʷləməʔíwət* ‘kick him in the rear’ (cf. *ləməʔt* ‘kick him’)  
*xʷləməʔíwən.xət* ‘kick him in the shins (as last + -xən ‘foot’)  
*xʷškʷíwət* ‘grab him by the seat of the pants’ (cf. *škʷát* ‘grab it’)

*x<sup>w</sup>əq<sup>w</sup>áməwəŋ* ‘“smelly behind”’ (word coined by Coquitlam William for ‘automobile’) (< *háq<sup>w</sup>əm* ‘smell’)  
*x<sup>w</sup>ǰəqtíwəŋ* ‘tall (tree)’ (< *ǰéqt* ‘long’)

## 86 -áwəθ ~ -əwəθ ‘kind, ingredient’

*təw<sup>w</sup>k<sup>w</sup>ínəwəθ* ‘about how many kinds?’ (< *təw-* ‘somewhat,’ *k<sup>w</sup>ín* ‘how many?’)  
*x<sup>w</sup>nəčáwəθ* ‘one kind, one ingredient’ (< *nəčá?* ‘one’)  
*x<sup>w</sup>łx<sup>w</sup>áwəθ* ‘three kinds’ (< *łłx<sup>w</sup>* ‘three’)  
*qǰáwəθ* ‘many kinds’ (< *qǰǰ* ‘many’)

## 87 -íwəs ~ -əwəs ~ -iləwəs ~ -éləwəs ~ -ələwəs ‘body, bird’

*płíwəs* ‘regain consciousness’ (< *pǰł* ‘come to, become conscious’)  
*səwǰíwəs* ‘search for a lost person’ (< *sǰwǰ* ‘seek’)  
*q<sup>w</sup>ínəwəs* ‘body hair’ (< *q<sup>w</sup>ín* ‘hair other than head hair’)  
*ǰéləwəst* ‘harness it’ (< *ǰél* ‘get stuck, be constrained’)  
*məǰíwəst* ‘unharness it’ (cf. *mé?x* ‘remove it’)  
*x<sup>w</sup>θk<sup>w</sup>íwəsəm* ‘straighten oneself up’ (cf. *θk<sup>w</sup>ǰt* ‘stretch it’)  
*nəčíwəs* ‘one (bird)’ (< *nəčá?* ‘one’)  
*q<sup>w</sup>ǰməwəs* ‘pluck it (a bird)’ (cf. *q<sup>w</sup>ǰmət* ‘pull it out’)  
*k<sup>w</sup>síwəst* ‘singe it (a bird)’ (< *k<sup>w</sup>és* ‘get scorched’)  
*ǰǰtələwəs* (CC), *ǰłéləwəs* (JP) ‘have a pain’ (< *ǰǰt* ‘hurt’)  
*?əw<sup>w</sup>k<sup>w</sup>íləwəs* ‘become exhausted’ (< *?əw<sup>w</sup>k<sup>w</sup>* ‘be all gone, used up’)

## 88 -éwəs ‘figure, back, trunk (of body)’

*?ǰyéwəs* ‘having a good figure’ (< *?ǰý* ‘good’)  
*ǰəqtéwəs* ‘having a long back (trunk)’ (< *ǰéqt* ‘long’)  
*sθk<sup>w</sup>éwəs* ‘of straight bearing’ (cf. *θk<sup>w</sup>ǰt* ‘pull it,’ *sθəθék<sup>w</sup>* ‘straight’)  
*stq<sup>w</sup>éwəs* ‘too tight around the waist’ (< *tǰq<sup>w</sup>* ‘tight’)

## 89 -wəł~ -wíl ~ -ewəł ~ -awəł -wíl (before -t ‘transitive’ and -əm ‘intransitive’) ~ -wəl- (before -tən ‘instrument’) ‘canoe, vessel, mind’(?)

*tǰyewəł* ‘racing canoe’ (< *téy* ‘race’)  
*ík<sup>w</sup>éwəł* ‘caulk a canoe’ (< *ík<sup>w</sup>* ‘stuck in mud’)  
*ǰłłǰǰwəł* ‘battleship’ (< *ǰłłǰǰ* ‘make war’)  
*x<sup>w</sup>k<sup>w</sup>ənwíl* ‘transfer it from one craft to another’ (< *k<sup>w</sup>ən-* ‘transfer’)  
*íθǰǰwíl* ‘wash dishes’ (cf. *íθǰǰát* ‘wash it’)  
*ǰx<sup>w</sup>íθǰǰwəlłtən* ‘dish pan’ (< *-tən* ‘instrument’)  
*x<sup>w</sup>qǰłwəł* ‘mean, tough person’ (< *qǰł* ‘bad’)  
*x<sup>w</sup>qǰǰwíl* ‘tricky’ (< *qǰǰ* ‘many’)

- 90 -wíl ~ -álwət ~ -ǎlwət ~ alwəl- (before -t ‘transitive’) ~ -alwíl- (before -əm ‘intransitive’) ‘side’

ǎk<sup>w</sup>alwíl ‘grab him by the sides’ (cf. ǎk<sup>w</sup>át ‘grab it’)  
 šx<sup>w</sup>nəwíl ‘other side of the Gulf’ (< ní? ‘be there’)  
 snəǎlwət ‘other side (of house, log, etc.)’ (< ní? ‘be there’)  
 səhálwət ‘this side (of house, etc.)’ (< ?í ‘be here’)  
 sčálwət ‘upper side, top’ (cf. cícat ‘above’)  
 čálwət ‘put it on top’ (cf. last)  
 sǎpálwət ‘under side’ (cf. ǎíǎp ‘below’)  
 ǎpalwíləm ‘move under (cf. last)’

- 91 -we?t ~ əwe?t ‘back’

stǎqwe?t ‘back (of human body)’ (cf. tǎqén ‘other end’)  
 lak<sup>w</sup>əwe?t ‘break one’s back’ (< lǎk<sup>w</sup> ‘get broken’)  
 í<sup>θ</sup>q<sup>w</sup>əwét ‘punch him on the back’ (cf. í<sup>θ</sup>íq<sup>w</sup>ət ‘punch him’)

### 13.7. POSSIBLE LEXICAL SUFFIXES

The following appear in too few words to be safely identified as lexical suffixes.

- 1 -émət ‘stored food’ (only one example)  
 ?əwk<sup>w</sup>émət ‘run out of food’ (AG) (< ?əwk<sup>w</sup> ‘be used up’), ‘lose one’s breath’ (DK)
- 2 -tín variant of 16, -tən ‘instrument’?  
 šx<sup>w</sup>qaltín ‘hate, bad feelings, bad health’ (DK), ‘disliked one’ (AG)  
 (< qál ‘bad’)
- 3 -í?  
 témátəm ‘get drenched with rain’ (cf. tǎmǎx<sup>w</sup> ‘rain,’ stǎmtəm ‘dew’)
- 4 -íén?  
 šəy<sup>s</sup>íén ‘nit’ (< sǎšy<sup>s</sup>ás ‘head’?)
- 5 -ənt ‘day’?  
 θǎmənt ‘two (days)’ (< θəm- ~ θém- ‘two’)
- 6 -ánəm?  
 syǎlánəm ‘year’ (cf. syǎlǎx<sup>w</sup>ə? ‘old person,’ yǎléw ‘past’)
- 7 í<sup>θ</sup>?  
 sk<sup>w</sup>ǎm<sup>í</sup>θ ‘lump (as on body)’ (cf. sk<sup>w</sup>ámǎcən ‘hump-backed,’ sk<sup>w</sup>ǎmǎ  
 ‘bulge, ridge’)

*sk<sup>w</sup>əmi<sup>θ</sup>á:yθən* ‘chin’ (last plus *-á:yθən* ‘mouth,’ i.e., ‘mouth-bump’)  
*sk<sup>w</sup>əmi<sup>θ</sup>əlélǝən* ‘elbow’ (same plus *-əlélǝən* ‘arm’)  
*títét<sup>θ</sup>t* ‘make fun of him because of accident or bad luck’ (cf. *té<sup>θ</sup>it* ‘insult him’)  
*həwí<sup>θ</sup>é<sup>?</sup>t* ‘tease him’ (cf. *həwálam* ‘play’)

8 *-sím* ‘berry’?

*qǝle:qǝsím* ‘twinberry (berry of *Lonicera involucrata*)’ (< Cowichan *qǝlé:qǝ* ‘crow’; cf. *qǝlé:qǝt p* ‘twinberry bush’)

9 *-ətqəy* ‘snake’

*ʔətqəy* ‘snake’  
*s<sup>?</sup>ítqəy* (Cowichan, Northern Straits *s<sup>?</sup>ínətqəy*) ‘two-headed serpent’ (< ?)

10 *-ətǝe* ?

*θəqǝtǝé* ‘kneel’ (CC) (< *θəq* ‘be speared’?)  
*θəqǝtǝé<sup>?</sup>əm* ‘pray’ (CC)  
*t<sup>θ</sup>qǝtǝé* ‘kneel’ (JP) (cf. *t<sup>θ</sup>qǝt* ‘step on it’)

11 *-ǝǝ* ?

*sk<sup>w</sup>əmǝǝ* ‘protuberance on the body, bulge’ (cf. *sk<sup>w</sup>əmi<sup>θ</sup>* ‘lump on the body’; cf. 7 above)  
*šx<sup>w</sup>k<sup>w</sup>əmǝǝ* ‘p.n., at Musqueam, glossed ‘ridge’  
*šx<sup>w</sup>k<sup>w</sup>əmǝǝəs* ‘unflattened head’ (last with *-əs* ‘face’)

12 *-əlǝ* ‘standing object’?

*x<sup>w</sup>k<sup>w</sup>əǝlǝ* ‘scouring rush’ (cf. *x<sup>w</sup>ákwət* ‘polish it’)  
*xǝlǝ* (AC), *sxǝlǝ* (JP) ‘penis’ (cf. *xéwət* ‘vulva,’ with *-éwət* ‘vessel’? *xé<sup>?</sup>t* ‘hold it in front, hold it on one’s lap’)

13 *-ílǝx* ? (cf. 19 below)

*tǝílǝx* ‘stand’ (cf. *wətǝǝ* ‘stand up suddenly’)  
*q<sup>w</sup>əyílǝx* ‘dance’ (< ?)

14 *-é:ləq* ?

*qiqəwé:ləq* ‘menstrual pad (of shredded cedar bark)’ (< *qiqəw* ‘be menstruating’)

15 *-alwəm* ~ *-əlwəm* ? (cf. *ʔəlwəm* ‘be left alone’)

*x<sup>w</sup>nəcálwəm* (JP), *x<sup>w</sup>nəcəlwəm* (DK) “‘one family’” (perhaps the descendants of one couple, JP believed) (< *nəcá<sup>?</sup>* ‘one’)

## 16 -c ‘origin’?

*témc* ‘from what place? from what people?’ (cf. *stém* ‘what?’)

## 17 -cála? ~ -áčále? ?

*qatqatcála?* (JP), *qatqatáčále?* (CC) ‘spider’ (cf. *qítat* ‘wrap something around it, bind it’)

## 18 -č ~ -áč ?

*sálč* ‘go around’ (cf. *sálət* ‘spin it,’ *sáləm* ‘spin,’ *sálq̄t* ‘swing it around’)  
*míməláč* ‘someone who is always making mistakes’ (cf. *málməl* ‘misidentify’)  
*yályəláč* ‘storm, bad weather’ (< ?)

## 19 -əx ? (cf. 13 above)

*ʔíməx* ‘walk’ (< *ʔim-* suggested by *ʔəmícən* ‘walk on sand, as in shallow water looking for flounders,’ < *-ícən* ‘surface’)

## 20 -kʷ ?

*ǰéǰkʷəwstəm* ‘have rheumatism’ (< *ǰiǰ-* of *ǰiǰət* ‘scratch it,’ *ǰǰilt* ‘weaken him’? plus *-əws* ‘body’ and third-person passive suffixes; cf. *ǰéǰqəwstəm* ‘have rheumatism, have bones aching’)  
*ǰəǰkʷá:yθə̀m* ‘your teeth are chattering’ (< √ of *ǰéǰət* ‘tie it up,’ *ǰélǰətəm* ‘have a cramp’ plus *-á:yθən* ‘mouth’ and second-person passive suffixes)  
*ǰəm̄kʷθət* ‘shrink oneself’ (cf. *ǰəm̄ast* ‘make room for him,’ *-θət* ‘self’)  
*ǰəm̄kʷt* ‘crush a louse between the teeth’ (< ?)

## 21 -əxʷ ?

*təm̄əxʷ* ‘rain’ (cf. *stəm̄təm* ‘dew,’ *stém̄i* ‘drenched with rain’)  
*ləm̄əxʷ* ‘make the noise of something dropped, go plunk’ (< *lám̄* ‘get hit by something thrown’?)

## 22 -éxʷ ‘times’?

*nə̀céxʷ* ‘once’ (< *ná̀ca?* ‘one’; cf. *θəm̄é* ‘twice,’ *tə̀xʷét* ‘three times,’ and other forms with *-ét*)

## 23 -əxʷa? ?

*syálə̀xʷa?* ‘old person’ (cf. *syələ̀w* ‘past’)

## 24 -q ?

*ʔéməqt* ‘take for him, return something borrowed to him’ (cf. *ʔéʔəm* ‘give’)

*x<sup>w</sup>əmqłélt* ‘take food to him’ (< *ʔem-* of *ʔéʔəm* ‘give,’ *-tél-* ‘food’)  
*ʔéyąqt* ‘put it to one side’ (cf. *ʔéyəl* ‘go to one side,’ *-əl* ‘move toward’)  
*mélq* ‘forget’ (cf. *málməl* ‘be confused, misidentify’)  
*ǰépqəwstəm* ‘have rheumatism, have bones aching’ (cf. *ǰépq<sup>w</sup>əwstəm*  
 ‘have rheumatism,’ see 23 above)

25 -*q*ʔ

*səlqıt* ‘swing it around (e.g., a sling)’ (< *səl-* ‘spin’; cf. *səlč* ‘go around’)  
*čəlqəs* ‘sling’ (< *čəl-* ‘turn,’ *-əs* ‘round object’?)  
*yəmqθət* ‘rub oneself with cedar boughs’ (< ʔ, *-θət* ‘self’)

26 -*ǰ*ʔ

*x<sup>w</sup>θəyǰtél* ‘stir up the fire’ (cf. *θəyt* ‘fix it?’ *-tél-* ‘fire’)  
*θəyǰǰəlqən* ‘fluff out wool’ (cf. *θəyt* ‘fix it?’ *-əlqən* ‘fur’)  
*ǰǰpǰt* ‘scatter it, sow it’ (< *ǰǰp* ‘down?’)

27 -*q<sup>w</sup>* ‘fully, vigorously’?

*yətq<sup>w</sup>t* ‘scour it’ (< ʔ)  
*ítáq<sup>w</sup>t* ‘pry it off’ (< ʔ)  
*təlq<sup>w</sup>t* ‘snatch it off’ (< ʔ)  
*cətq<sup>w</sup>t* ‘grind it up’ (< ʔ)

28 -*é* ‘times’?

*θəmé* ‘twice’ (< *θəm-* ~ *θém-* ‘two’)

**13.8. SUFFIXES IN FORMAL PERSONAL NAMES**

I have not included the suffixes that appear in formal personal names, that is, the names that are formally given at potlatch-like events, as opposed to baby names and nicknames that are acquired informally. A formal name generally consists of an initial element (root or stem) and one of a fairly small number of suffixes that identify the name as masculine or feminine. In some names the initial element seems meaningful, but in most it does not. Several of the suffixes seem identical with Halkomelem lexical suffixes, but others are not. Suffixes in names that have been borne by Musqueam men include *-lenəx<sup>w</sup>*, *-ələq*, *-əltən*, *-əltx<sup>w</sup>*, and *-qínəm*, and those in names that have been borne by Musqueam women are *-tənət*, *-əye*, and *-əlwət*.

Names of this sort have been passed down over many generations, across language boundaries, and similar or identical forms appear throughout the Coast Salish social continuum to which the Musqueam belong. It seems that a name tends to become adapted to the phonology of the language in which it is used, though not always so. It would probably not be productive to try to analyze these names in any local context. Coast Salish formal names are best seen

as the property of the Coast Salish social network and not of any one people or language. They cannot be treated as simply additional items in the lexicon of any one language. Because of their regional, multilinguistic use, they pose a multilinguistic, perhaps pan-Salish, problem in analysis and historical reconstruction. (For a good discussion of the problem, see Kennedy 2000, 269-77.)

# 14

## Person Markers

The Halkomelem person markers, those forms that correspond in meaning to English personal pronouns, include several sets of affixes, one set of particles, and two sets of words. Because these several sets play different roles in the grammar of the language, each set has been introduced in the syntactic context where it appears. It also seems useful, however, to bring them all together here in a single section.

### 14.1. PERSON AND NUMBER

The person markers distinguish first, second, and third persons in singular and plural number, but the distinctions are not altogether consistently made throughout the system. The first- and second-person object suffixes are identical in one form. In the passive, a single form appears for both first-person and second-person plural. In most sets, the third person has no separate plural form; plurality is marked by adding a pluralizing particle when it is not shown by other means, as by a plural noun or verb form.

It is also possible that number has not always been a simple distinction between one and more than one. James Point stated that the forms I identify as second-person “singular” could be (or were once) used in addressing a married couple, a pair of brothers, or even a family, the “plural” forms being used for a larger or less integrated group. This does not appear to be current or recent usage. Arnold Guerin identified the “singular” forms as strictly singular. There are, however, a few instances (not yet gathered and examined) in material dictated by both Christine Charles and James Point of singular forms used when two or more persons were addressed. Moreover, in a text dictated by Andrew Charles, there is an instance of a first-person singular form used to mean ‘we (he and I),’ referring to the speaker and his cousin, who was his hunting partner, in speaking to a group of strangers. Thus the question of number seems worth further investigation. There is no dual number or inclusive/exclusive distinction, unless the usage just mentioned could once have provided one.

In both CC's and JP's texts, there are instances of second-person singular forms used in the sense of 'one,' as happens in colloquial English, for example, "If you ever went there, they would ...". Since there does not appear to be any other way of saying 'one,' one may assume that this usage may be native, not borrowed.

#### 14.2. FORMS

Table 14.1 lists the person markers, each set in a column. They will be described in the following order: (1) the first- and second-person coordinate subject particles, (2) the subordinate subject suffixes, (3) the third-person transitive subject suffix, (4) the possessive affixes, (5) the object suffixes, (6) the passive suffixes, (7) the personal words, (8) the possessive words, and (9) the third-person plural particle.

Table 14.1

The person markers										
	1 subj	2 subrd subj	4 poss	5 obj	6 pass	7 pers word	8 poss word			
1sg	<i>cən</i>	<i>-e'n</i> <i>-ən</i> <i>-ʔe'n</i>	<i>nə-</i>	<i>-S</i> <i>-Samx</i> <i>-amx</i>	<i>-Sel-</i> <i>-el-</i>	<i>ʔənθə</i> <i>ʔénθə</i>	<i>nəsweʔ</i>			
2sg	<i>čx<sup>w</sup></i>	<i>-əx<sup>w</sup></i>	<i>ʔən-</i> <i>ʔə-</i> <i>ʔəT-</i>	<i>-S</i> <i>-Samə</i> <i>-amə</i>	<i>-Sam</i> <i>-am-</i>	<i>nəwə</i>	<i>ʔəsweʔ</i> <i>ʔəθweʔ</i>			
1pl	<i>ct</i>	<i>-ət</i>	<i>-ct</i>	<i>-alx<sup>w</sup></i>	<i>-al</i>	<i>tnímət</i>	<i>sʔá-t</i>			
2pl	<i>ce'p</i>	<i>-e'p</i>	<i>ʔən-</i> <i>ʔəT-</i> <i>-ələp</i>	<i>-alə</i>	<i>-al-</i>	<i>twáləp</i>	<i>ʔəsweʔələp</i> <i>ʔəθweʔələp</i>			
	1 subj	2 subord subj	3 tr sub	4 poss	5 obj	6 pass co subrd	7 pers word	8 poss word	9 pl part	
3 sg	<i>0</i>	<i>-əs</i>	<i>-əs</i>	<i>-s</i>	<i>0</i>	<i>0</i>	<i>-əy-</i>	<i>ǰá</i>	<i>swéʔs</i>	<i>0</i>
3 pl	<i>0</i>	<i>-əs</i>	<i>-əs</i>	<i>-s</i>	<i>0</i>	<i>0</i>	<i>-əy-</i>	<i>ǰaləm</i>	<i>swéʔs</i>	<i>ʔé-tən</i>

Phonologically the coordinate subject, subordinate subject, and possessive sets can be grouped together, as can the object and passive sets, but the two groups have nothing in common. The coordinate subject set contains some of the same elements that appear in the possessive set. The object and passive sets

likewise share several elements. The personal words seem to share some elements with the first group. The possessive words contain the possessive affixes except for one case of suppletion. The third-person plural particle seems unrelated to the other person markers. Some further analysis will be presented below.

Constraints may be summarized as follows: In the active paradigm, a third person cannot play the role of subject with a second person as object. Forms corresponding literally to ‘he sees you’ cannot occur; instead we find passive forms like ‘you are seen.’ In the passive, only third persons can be agents. Forms like ‘I am seen by you,’ ‘you are seen by me,’ and ‘he is seen by me’ are not possible. Such relations can be expressed in the active only, as ‘you see me,’ and so on. The first-person plural possessive suffix cannot form a possessive word in the manner of the other possessive affixes; instead we find a wholly irregular form.

### 14.2.1. The First- and Second-Person Subject Particles

These must be grouped with the second-position predicate particles (see §16.2). As members of that set, they move to follow an auxiliary or adverb. They are:

<i>cən</i> ‘I’	<i>ct</i> ‘we’
<i>čx<sup>w</sup></i> ‘you (sing.)’	<i>ce·p</i> ‘you (pl.)’

They are composed of an initial element *c-* (*/c/* regularly becomes */č/* before */x<sup>w</sup>/*) and a set of final elements identifiable with final elements of the subordinate subject set (§14.2.3). (This *c-* is possibly identifiable with the prefix *c-* ‘get, have, make, do.’ One can conjecture that it was once an auxiliary verb.)

These particles mark first- and second-person subjects in both intransitive and transitive predicates in coordinate constructions (main clauses), as in the following sentences:

- |  |  |
|--|--|
| (a) <i>ném cən ce?</i> ‘I’ll go.’                          | (b) <i>ném ct ce?</i> ‘We’ll go.’                        |
| (c) <i>ném čx<sup>w</sup> ce?</i> ‘You’ll go.’             | (d) <i>ném ce·p ce?</i> ‘You folks will go.’             |
| (e) <i>čéwət cən ce?</i> ‘I’ll help him/her.’              | (f) <i>čéwət ct ce?</i> ‘We’ll help him/her.’            |
| (g) <i>čéwət čx<sup>w</sup> ce?</i> ‘You’ll help him/her.’ | (h) <i>čéwət ce·p ce?</i> ‘You folks will help him/her.’ |

With an intransitive predicate head, a third-person subject is marked by zero (i.e., is indicated by an absence of a first- or second-person marker) and plurality is optionally indicated by the particle *ʔé·ttən* (see §14.2.9), as in the following:

- (i) *ném ce?* ‘He/she/it/they will go.’ (j) *ném ce? ʔé·ttən*. ‘They will go.’

With a transitive predicate head, however, a third-person subject must be marked by the suffix given next.

### 14.2.2. The Third-Person Transitive Subject Marker

A suffix *-əs* marks a third-person subject of a transitive verb in a main clause, contrasting with zero marking a third-person subject of an intransitive verb in a main clause. It is identical in form with the suffix *-əs* that marks a third-person subject in a subordinate clause (see next set).

It always follows the transitivizer (and object person marker, if any). Unlike the first- and second-person subject particles, which move to follow an auxiliary or adverb, this suffix stays with the transitivized verb itself. Compare the following pairs of sentences:

- (a) *ćéwət cən ceʔ*. ‘I will help him/her.’      (b) *ćéwətəs ceʔ*. ‘He/she will help him/her.’  
 (c) *ni cən ćéwət*. ‘I helped him/her.’      (d) *ni ćéwətəs*. ‘He/she helped him/her.’

In the second pair, the particle *cən* ‘I’ moves to follow the auxiliary *ni*, while the suffix *-əs* ‘he/she’ does not.

Again, plurality of a third person may be indicated with the particle *ʔé-łtən*, as in:

- (e) *kʷəc-n-ám x-əs ceʔ ʔé-łtən*.  
 see-TR-me-3TR FUT 3PL  
 ‘They will see me.’

### 14.2.3. The Subordinate Subject Person Markers

These are the suffixes:

- en* ~ *-ən* ~ *-ʔen* ‘I’      *-ət* ‘we’  
*-əxʷ* ‘you (sing.)’      *-é-p* ~ *-əp* ‘you (pl.)’  
*-əs* ‘third person’

The first- and second-person forms have, as indicated above, the same final elements that occur in the corresponding subject particles. The third-person form bears a similar relationship to the third-person possessive suffix *-s*. The second-person plural *-é-p* has probably developed from the *-əłəp* that occurs in the possessive set and in the personal words through the loss of the medial resonant. In AG’s speech, it appeared as *-eʔep* in progressive forms.

The allomorphs *-ən* and *-əp* appear after the auxiliaries *ʔi* ‘be here’ and *ni* ~ *niʔ* ‘be there.’ In this environment, the schwas of the whole set may be realized as vowel length; for example, the auxiliary *niʔ* with the subordinate subject set yields *niʔn*, *niʔxʷ*, *niʔt*, *niʔp*, and *niʔs*. The first-person allomorph *ʔé-n* occurs following a vowel.

These suffixes mark the subject of a verb (either intransitive or transitive) in a subordinate clause. They regularly appear in three types of constructions:

(1) In subordinate clauses introduced by *wə-* ‘if, when, that’ or *ʔəł-* ‘whenever, whatever’ (see §4.2), as in:

<i>wənémè:n</i> ‘if I go’	<i>wənémət</i> ‘if we go’
<i>wənéməx<sup>w</sup></i> ‘if you go’	<i>wənémè:p</i> ‘if you folks go’
<i>wənéməs</i> ‘if [third person] goes’	<i>wənéməs (ʔéłtən)</i> ‘if they go’

(2) In the negative paradigm (see §6), in what may be seen as subordinate clauses complementing a main clause headed by *ʔəwə* ‘not’ or *x<sup>w</sup>əwé* ‘not yet,’ as in:

- (a) *ʔəwə cən ném-è:n.*  
not I go-I  
‘I don’t go.’
- (b) *ʔəwə cən ni:n ném.*  
*ʔəwə cən niʔ-ən ném*  
not I there-I go  
‘I didn’t go.’
- (c) *ʔəwə ném-əs.*  
not go-3SUB  
‘He doesn’t go.’

For further discussion and examples, see §6.1.1.

(3) In relative clauses with extracted objects (see §4.1.1.1), such as:

- (d) *k<sup>w</sup>θə čéwət-è:n ceʔ*  
*k<sup>w</sup>θə čéw-ət-è:n ceʔ*  
ART help-TR-I FUT  
‘the one I will help’
- (e) *k<sup>w</sup>θə ni:n čéwət*  
*k<sup>w</sup>θə ni-ən čéw-ət*  
ART AUX-I help-TR  
‘the one I helped’

For further discussion and examples, see §4.1, “Relative Clauses.”

#### 14.2.4. The Possessive Affixes

These are:

<i>nə-</i> ‘my’	<i>-ct</i> ‘our’
<i>ʔən- ~ ʔəT-</i> ‘your’	<i>ʔən- ~ ʔəT- ... -əłəp</i> ‘your (pl.)’
<i>-s</i> ‘his/her/its/their (3POS)’	

As in other Salishan languages, the possessives are split between prefixes and suffixes. The possessives of the first- and second-person singular are prefixes,

the possessives of the first-person plural and the third person are suffixes, and the second-person plural possessive is a discontinuous form, a combination of the prefix for the singular and a suffix that makes it plural. As in other paradigms, a third person is optionally pluralized with the particle *ʔéttən*.

<i>nəléləm</i> ‘my house’	<i>léləmct</i> ‘our house’
<i>ʔənléləm</i> ‘your house’	<i>ʔənléləmələp</i> ‘your (pl.) house’
<i>léləms</i> ‘his/her/its house’	<i>léləms (ʔéttən)</i> ‘their house’

The first-person plural possessive is anomalous in being identical with the subject particle *ct* ‘we,’ which is composed of an element *c-* that occurs in the other subject particles and a *-t* that we can identify as ‘first-person plural.’ As a possessive, *-ct* is probably a borrowing from the subject particle set.

The second-person prefix appears as *ʔəT-* before */s/* and otherwise as *ʔən-*. For some speakers (e.g., CC and DK), the *ʔəT-* is realized as *ʔə-* or *ʔəs-*, while for others (e.g., JP) the *//T//* coalesces with the initial */s/* as */θ/*. Compare usages with *máñə* ‘child’ and *sqʷəméy* ‘dog’:

CC	<i>ʔənmáñə</i> ‘your child’	<i>ʔəsqʷəméy</i> ~ <i>ʔəssqʷəméy</i> ‘your dog’
JP	<i>ʔənmáñə</i> ‘your child’	<i>ʔəθqʷəméy</i> ‘your dog’

This difference is said to go back to dialect differences between the Musqueam settlements of *máləy* (on the downstream side) and *sčələxʷ* (on the upstream side), the form with */θ/* being that of *sčələxʷ*. (Historically, the form with */n/* is probably the older. In the *máləy* dialect, the */n/* assimilated to the */s/* or was dropped, while in the *sčələxʷ* dialect it became a stop *\*t* before */s/*, then the *\*ts* coalesced to become *\*c*, which regularly became */θ/*.)

The third-person possessive affixed to a word ending in */s/* remains an */s/*, and the resulting */ss/* is generally audible. Some speakers of the Island dialect dissimilate, converting the possessive to */θ/*; the Musqueam speakers for whom I have data did not do this.

Optional morphophonemic processes (see §1.5.1) create other variations. Both of the prefixed possessives tend to coalesce, especially in rapid speech, with a preceding article or word ending in a vowel. With *nə-* ‘my,’ the schwa may be dropped, leaving *-n*, so that *tə nəléləm* ‘my (present visible) house’ may become *tən léləm*. With *ʔən-* ~ *ʔəT-* ‘your,’ one of two things can happen. The schwa of the *ʔən-* form may be dropped, leaving the glottal stop and resonant to become a glottalized resonant, so that *tə ʔənléləm* ‘your (present visible) house’ may become *təñ léləm*. This leaves the glottalization of the resonant to carry the burden of distinguishing ‘my’ and ‘your.’<sup>1</sup> Or, the

1 Such small distinctions are evidently not unique to Halkomelem. Franz Boas, working with a Pentlatch speaker in 1886, complained, “It took me an hour to distinguish between ‘I’ and ‘you’” (Rohner 1969, 65).

sequence of two schwas produced by an article followed by ‘your’ may become /eʔe/ or /e·/, so that *kʷə ʔəθqʷəməyé* ‘your (nearby, invisible) dog’ may become *kʷe·θ qʷəməyé*.

The possessives are strictly limited in the kinds of words to which they can be affixed. (It is just these limitations that provide the basis for distinguishing the major classes of words in the language. See §2.1.) The possessives can be affixed to nouns and to nominalized non-passive verbs only.

Affixed to nouns, the possessives indicate the person of the possessor, “possession” having the usual sense of relating kin to kin, property to owner, part to whole, and so on, as in: *nəmén* ‘my father,’ *ʔəntén* ‘your mother,’ *mánəs* ‘his/her child,’ *nəsqʷəməyé* ‘my dog,’ *léləmct* ‘our house,’ *ʔənpútəlap* ‘your (pl.) boat,’ *nəcələx* ‘my hand,’ *məqsəns* ‘his/her nose.’

When the possessor is a noun, it follows the word taking the possessive, as in:

- (a) *tə θáθən-s tə sʰíʰqət*  
 ART mouth-3POS ART child(status)  
 ‘the child’s mouth’
- (b) *tə mánə-s θə sənʰeʔ*  
 ART child(kin)-3POS ART senior.sibling  
 ‘the son of the older sister’
- (c) *tə θáθən-s tə mánə-s*  
 ART mouth-3POS ART child(kin)-3POS  
 ‘her son’s mouth’
- (d) *tə qʰán-s kʷθə snəxʷət*  
 ART box-3POS ART canoe  
 ‘the bow of the canoe’
- (e) *tə šxʷləkʷéχən-s tə léləm*  
 ART corner-3POS ART house  
 ‘the corner of the house’
- (f) *kʷə snəʔálwət-s tə léləm*  
 ART far.side-3POS ART house  
 ‘the other side of the house’

When affixed to nominalized non-passive verbs, that is, active verbs with the prefix *s-* ‘nominalizer’ (see §12.1.1), Halkomelem possessives (like English possessives with gerunds) mark underlying subjects. Compare the following main-clause forms (left column) with their nominalizations (nominalized clauses):

- |  |  |
|--|--|
| (a) <i>ném cən</i><br>go I<br>'I go'   | (a') <i>nə-s-ném</i><br>my-NOM-go<br>'my going'  |
| (b) <i>čéwəθàm x čx<sup>w</sup></i><br>čéw-ət-Sam x čx <sup>w</sup><br>help-TR-me you<br>'you help me' | (b') <i>ʔəθčéwəθàm x</i><br>ʔəT-s-čéw-ət-Sam x<br>your-NOM-help-TR-me<br>'your helping me' |
| (c) <i>niʔ ném</i><br>AUX go<br>'he went'  | (c') <i>s-niʔ-s ném</i><br>NOM-AUX-3POS go<br>'his having gone'                            |
| (d) <i>ɦíc-ət-əs</i><br>cut-TR-3TR<br>'he cuts it'   | (d') <i>s-ɦíc-ət-s</i><br>NOM-cut-TR-3POS<br>'his cutting it'                              |

In each of these pairs, the possessive in the nominalized clause corresponds to the subject marker in the main-clause form (see §4.3 for the uses of nominalized clauses).

The possessives cannot be affixed to nominalized passive forms. This rule is consistent with the fact that the subjects of main-clause passives are not marked by the same elements that occur with main-clause non-passives. (See §14.2.6 below.)

Most importantly, the possessives also cannot be affixed to any non-passive verb that has not been nominalized. For example, *\*\*nəném* 'my go,' *\*\*nəčéwət* 'my help him,' and so on are not possible forms. (For exceptional cases, see §8.9.)

#### 14.2.5. The Object Person Markers

These are the suffixes:

- |                               |                              |
|-------------------------------|------------------------------|
| <i>-S ~ -Samx ~ -amx</i> 'me' | <i>-alx<sup>w</sup></i> 'us' |
| <i>-S ~ -Samə ~ amə</i> 'you' | <i>-alə</i> 'you (pl.)'      |

These forms appear to be composed of identifiable elements, *-S* and *-am-* 'non-third-person singular,' *-al-* 'non-third-person plural,' *-x* and *-x<sup>w</sup>* 'first person,' and *-ə* 'second person.' The third person is not marked.

An object person marker can be suffixed to a transitive verb only, that is, to a verb stem that has a transitive suffix (see §10.1.1).

The element *-S* occurs regularly with the transitivizer *-t* and with *-t* only, with which it coalesces as /θ/. It may stand alone to mean 'me' or 'you' or be followed by *-amx* 'me' or *-amə* 'you.' Thus with the root *čéw-* 'help' and *-t* 'transitive' we find:

*ćéwəθ* ~ *ćéwəθàmx* ‘help me’                      *ćéwətàl̄x<sup>w</sup>* ‘help us’  
*ćéwəθ* ~ *ćéwəθàmə* ‘help you’                      *ćéwətàlə* ‘help you (pl.)’  
*ćéwət* ‘help him/her/them’

Such forms are normally accompanied by subject person markers (see Table 14.2). There is, however, one notable hole in the pattern: the third-person transitive subject marker cannot appear with a second-person object marker. At these points in the paradigm, there is a switch to the passive.

Table 14.2

**Object-subject paradigm**

Subj/obj	Me	You	Us	You (pl.)	Him/ her/them
I		<i>ćéwəθ(àmə) cən</i>		<i>ćéwətàlə cən</i>	<i>ćéwət cən</i>
You	<i>ćéwəθ(àmx) čx<sup>w</sup></i>		<i>ćéwətàl̄x<sup>w</sup> čx<sup>w</sup></i>		<i>ćéwət čx<sup>w</sup></i>
We		<i>ćéwəθàmə ct</i>		<i>ćéwətàlə ct</i>	<i>ćéwət ct</i>
You (pl.)	<i>ćéwəθàmx ce:p</i>		<i>ćéwətàl̄x<sup>w</sup> ce:p</i>		<i>ćéwət ce:p</i>
He	<i>ćéwəθ(àmx)əs</i>	<i>(ćéwəθà:m)</i>		<i>ćéwətàləm</i>	<i>ćéwətəs</i>

For this reason, a form with *-S* alone, unaccompanied by a differentiating *-amx* or *-amə*, is not ambiguous. With a second- or third-person subject marker, the *-S* has to mean ‘me,’ and with a first-person subject marker, it has to mean ‘you,’ as in:

*ćéwəθ čx<sup>w</sup> ce?*. ‘You will help me.’                      *ćéwəθəs ce?*. ‘He will help me.’  
*ćéwəθ cən ce?*. ‘I will help you.’

For ‘He will help you,’ we find:

*ćéwəθà:m*. lit. ‘You will be helped.’  
*ćéwətàləm ce?*. lit. ‘You folks will be helped.’

often translated ‘They will help you’ or ‘Somebody will help you.’

With other transitive suffixes, the object set lacks the *-S* that appears with *-t*. With the root *k̄<sup>w</sup>éc* ‘look’ and *-n- ~ -nəx<sup>w</sup>* ‘limited control,’ we find:

*k̄<sup>w</sup>əcnámx* ‘see me’    *k̄<sup>w</sup>əcnál̄x<sup>w</sup>* ‘see us’  
*k̄<sup>w</sup>əcnámə* ‘see you’    *k̄<sup>w</sup>əcnálə* ‘see you folks’  
*k̄<sup>w</sup>əcnəx<sup>w</sup>* ‘see him/her/it/them’

With *yəwé?* ‘go along’ and *-st- ~ -stəx<sup>w</sup>* ‘causative,’ the paradigm is:

*yəwé?stàmx* ‘take me along’                                      *yəwé?stàl̄x<sup>w</sup>* ‘take us along’  
*yəwé?stàmə* ‘take you along’                                      *yəwé?stàlə* ‘take you (pl.) along’  
*yəwé?stəx<sup>w</sup>* ‘take him/her/it/them’ along

With the root of *k<sup>w</sup>é:l* (/k<sup>w</sup>é:l-ə1//) ‘hide’ and the transitivizer *-x*, the paradigm is:

<i>k<sup>w</sup>é:l x à m x</i> ‘hide me’	<i>k<sup>w</sup>é:l x à l̥ x<sup>w</sup></i> ‘hide us’
<i>k<sup>w</sup>é:l x à m ə</i> ‘hide you’	<i>k<sup>w</sup>é:l x à l ə</i> ‘hide you folks’
<i>k<sup>w</sup>é:l x</i> ‘hide him/her/it/them’	

And with the root *hé:k<sup>w</sup>* ‘remember’ and the transitivizer *-nas*, we find:

<i>hé:k<sup>w</sup> n ə s à m x</i> ‘remember me’	<i>hé:k<sup>w</sup> n ə s à l̥ x<sup>w</sup></i> ‘remember us’
<i>hé:k<sup>w</sup> n ə s à m ə</i> ‘remember you’	<i>hé:k<sup>w</sup> n ə s à l ə</i> ‘remember you folks’
<i>hé:k<sup>w</sup> n ə s</i> ‘remember him/her/it/them’	

In every case, however, a third-person subject and second-person object causes a switch to the passive paradigm.

In the progressive aspect, the resonants in the suffixes *-amx*, *-amə*, and *-alə* may be glottalized, as in:

(a) wəyáθ cən wəćéćəwəθàṁə.  
 wə-yáθ          cən          wə-ćéćəw-ət-Saṁə  
 EST-always    I            EST-help(PROG)-TR-you  
 ‘I’m always helping you.’

(Or so it appears in the material dictated by CC and JP, although I must admit there are inconsistencies. On the other hand, AG seemed to use a glottalized *-am̥x* ‘me’ and an unglottalized *-amə* ‘you’ consistently in both perfective and progressive aspects.)

#### 14.2.6. The Passive Person Markers

These mark the subjects in passive forms. (For “passive,” see §3.3, “Types of Verbal Predicates.”) They are the following suffixes:

<i>-Sel-</i> ~ <i>-el-</i> ‘first-person singular’	<i>-al-</i> ‘first-person plural, second-person plural’
<i>-Sam-</i> ~ <i>-am-</i> ‘second-person singular’	
<i>-əy-</i> ‘third-person subordinate’	

The first- and second-person forms share some components with their counterparts in the object set. The *-S-* ‘non-third-person singular’ and the *-al-* ‘non-third-person plural’ are identical. But in the passive set the *-am-* is confined to the second-person singular while another element, *-el-*, appears as the first-person singular. The first-person plural and second-person plural are not differentiated. The *-əy-* ‘third-person subordinate passive’ does not resemble anything else.

Like the object set, these must be preceded by a transitivizer. Unlike the object set, they cannot be word-final; they must be followed by a passive marker, either *-əm* ‘intransitive’ (§10.2.1) in main clauses or *-ət* ‘subordinate passive’

(§10.8) in subordinate clauses and nominalizations. In main clauses, the third person has no marker, but in subordinate clauses and nominalizations, it is marked by *-əy-*.

These suffixes combine according to several morphophonemic rules. As with the object set, the element *-S-* coalesces with *-t* transitive as /θ/ but does not appear with the other transitivizers. Moreover, in the coordinate passive, when the second-person singular is followed by *-əm*, the medial resonant is lost and the vowel lengthened, *-am- + -əm* becoming *-a:m*. In the subordinate passive, there is the kind of metathesis seen also when certain roots take the *-t* transitive (see §1.5.3) whereby *-el- + -ət* becomes *-e:lt* and *-al- + -ət* becomes *-a:lt*. Finally, the sequence *-əy- + -ət* usually, though not in very deliberate speech, becomes *-i:t*. (The corresponding form in the Cowichan dialect is *-ewət*.)

The paradigm based on *céwət* ‘help him’ in the coordinate passive is:

*céwəθələm* ‘I am helped’  
*céwəθà:m* ‘you are helped’  
*céwətàləm* ‘we are helped, you (pl.) are helped’  
*céwətəm* ‘he/she is helped, they are helped’

In the subordinate passive, it is:

*wəc'éwəθe:lt* ‘if I am helped’  
*wəc'éwəθà:m* ‘if you are helped’  
*wəc'éwətà:lt* ‘if we are helped, if you (pl.) are helped’  
*wəc'éwətì:t* ‘if he/she is helped, if they are helped’

The paradigm based on *kʷəcnəxʷ* ‘see him’ in the coordinate passive is:

*kʷəcnéləm* ‘I am seen’  
*kʷəcnà:m* ‘you are seen’  
*kʷəcnáləm* ‘we are seen, you (pl.) are seen’  
*kʷəcnəm* ‘he/she is seen, they are seen’

In the subordinate passive it is:

*wəkʷəcne:lt* ‘if I am seen’  
*wəkʷəcnámət* ‘if you are seen’  
*wəkʷəcná:lt* ‘if we are seen, if you (pl.) are seen’  
*wəkʷəcni:t* ‘if he/she is seen, if they are seen’

The passive paradigm differs from the intransitive and active transitive paradigms in that, ordinarily, neither the coordinate subject particles (*cən*, *čxʷ*, etc.) nor the subordinate subject suffixes (*-en*, *-əxʷ*, etc.) play any part in it. In a form like *céwəθələm ce?* ‘I will be helped,’ the subject is sufficiently marked by *-Sel-*. Forms like *\*\*céwəθələm cən ce?* do not seem to occur. However, in a negative clause with an auxiliary, the auxiliary will be followed by a third-person subordinate subject marker (see §6.1.2).

The passive is nominalized with *s-* nominalizer prefixed to the subordinate form, as in:

*sc'éwəθè:lt* 'my being helped'  
*sc'éwəθàmət* 'your being helped'  
*sc'éwətà:lt* 'our being helped, your (pl.) being helped'  
*sc'éwətì:t* 'his/her being helped, their being helped'

As indicated above, the nominalized passive differs from other nominalizations in that it does not take a possessive, forms like *\*\*nəsc'éwəθè:lt* evidently being badly formed. This absence of a possessive in the nominalization is consistent with the absence of a subject particle following the main-clause form of the passive.

#### 14.2.7. The Personal Words

These are words as defined in §2.1. They are:

1st person	<i>ʔə̀nθə ~ ʔé·nθə</i> 'I'	<i>tnímət</i> 'we'
2nd person	<i>nə̀wə</i> 'you'	<i>twələp</i> 'you folks'
3rd person	<i>ʃá</i> 'he, she, it'	<i>ʃáləm</i> 'they'

The plural forms are partly analyzable. The *t-* of the first-person plural and the second-person plural may be *t-* 'portion' (§12.4.6). The *-əlap* of the second-person plural occurs as a suffix with that meaning in the possessive. The *-w-* of *twələp* is conceivably a reduction of *nə̀wə*. The third-person plural is probably the singular *ʃá* plus an *-l-* that appears commonly as a pluralizing infix and a final *-əm* that may conceivably be the intransitive suffix.

Like other words (including the possessive words) but unlike the other person markers, the members of this set can function as predicates. They can also, with restrictions not imposed on other words, function as or enter into the formation of adjuncts.

The first-person forms *ʔə̀nθə* and *ʔé·nθə* (the latter generally so recorded from JP and CC but recorded *ʔé·n̄θə* from AG) both appear as predicates. (AG suggested that the form *ʔé·n̄θə* is emphatic, but data from JP and CC are not sufficient to support this. JP thought that the difference was a matter of dialect or idiolect.) Only the form *ʔé·nθə* (or *ʔé·n̄θə*) appears as an adjunct.

##### 14.2.7.1. As Predicate Heads

Standing alone or with predicate particles, these words usually have the sense of 'It's me,' 'It's you,' and so on, or 'I'm the one,' 'You're the one,' or, in answer to questions, 'I will,' and so on.

Followed by relative clauses, in a type of pseudo-cleft sentence (§4.1.5.1.2), they are usually translated 'I am the one who ...,' 'You are the one who ...,' and so on.

- (k)  $\dot{\lambda}a$        $tə$        $nə-m\acute{a}n\grave{a}$ . (CC)  
 BE3P    ART    my-child  
 ‘It’s my son.’

However, if there is a subject and a relative clause, the  $\dot{\lambda}a$  then functions as a copula, linking the two as subject and complement in a cleft sentence (§4.1.5.2).

The complement (i.e., the relative clause) may follow the  $\dot{\lambda}a$  directly and be followed by the subject (i.e., the adjunct), as in (l) and (m).

- (l)  $\dot{\lambda}a$   $ni\text{-}\dot{\lambda}$   $\acute{c}\acute{e}w\grave{a}\theta\grave{a}m\chi$   $t\theta\acute{e}?$ .  
 $\dot{\lambda}a$        $ni\text{-}\dot{\lambda}$        $\acute{c}\acute{e}w\text{-}\dot{\lambda}$ - $S\grave{a}m\chi$        $t\theta\acute{e}?$   
 BE3P    AUX-past    help-TR-me      that  
 ‘He is the one who helped me.’

- (m)  $\dot{\lambda}a$   $n\acute{a}sw\acute{e}?$   $n\acute{a}p\acute{u}k$   $t\acute{a}\text{'}\acute{a}n\grave{a}$ . (CC)  
 $\dot{\lambda}a$        $n\acute{a}$ - $sw\acute{e}?$        $n\acute{a}$ - $p\acute{u}k$        $t\acute{a}\text{'}\acute{a}n\grave{a}$   
 BE3P    my-own    my-book    this  
 ‘This is my book.’

Or the complement may follow the subject, as in (n) and (o).

- (n)  $\dot{\lambda}a$   $m\grave{a}$   $t\acute{a}\text{'}\acute{a}$   $sq^w\acute{a}m\acute{e}y\grave{?}$   $ni$   $\acute{q}\acute{a}k^w\acute{a}\theta$ . (CC)  
 $\dot{\lambda}a$        $m\grave{a}$        $t\acute{a}\text{'}\acute{a}$        $sq^w\acute{a}m\acute{e}y\grave{?}$        $ni$        $\acute{q}\acute{a}k^w\text{-}\dot{\lambda}$ - $S$   
 BE3P    CERT    this      dog                    AUX    get.bitten-TR    me  
 ‘This is the dog that bit me. It’s this dog that bit me.’

- (o)  $\dot{\lambda}a$   $m\grave{a}$   $t\acute{a}$   $Andrew$   $cw\acute{e}?$   $t\acute{a}$   $sq^w\acute{a}m\acute{e}y\grave{?}$ . (CC)  
 $\dot{\lambda}a$        $m\grave{a}$        $t\acute{a}$        $Andrew$        $c\text{-}w\acute{e}?$       [ $\text{'}\acute{a}$ ]       $t\acute{a}$        $sq^w\acute{a}m\acute{e}y\grave{?}$   
 BE3P    CERT    ART    A.                    get-own    OBL    ART    dog  
 ‘It’s Andrew who owns the dog.’

#### 14.2.7.2. As Adjuncts

The personal words can also function as adjuncts. As an adjunct, a first-person or second-person word is preceded by an article. The third-person counterparts, however, are a set of words formed by a coalescence of the third-person words with articles and the prefix  $w\acute{a}$ -. This set is described in §15.2.2.2. The present section will describe the uses as adjuncts of first- and second-person words only.

As direct adjuncts, the first- and second-person words usually relate anaphorically to person markers accompanying the verb, and they perform one or both of two functions that cannot be performed by the person markers. They give emphasis to the person (there being no emphatic forms of the person markers) and/or they provide a peg on which to hang a relative clause.

In (a) and (b) they serve to give emphasis:

- (a) ʔəwə čx
- <sup>w</sup>
- ɪ ni ɟáy tə nəwə i ... (JP 9)

ʔəwə čx<sup>w</sup> ɪ ni ɟáy tə nəwə ʔəy  
 not you ART AUX die ART you and  
 ‘You yourself don’t die and ...’

- (b) niwɪ ʕám k

 several.persons from OBL ART be.you(PL)  
 'several of you'

As oblique adjuncts, the personal words of the first and second persons can function as oblique objects only. They cannot function as agents of passives.

Sentences like *\*\*ni qá:ytəm ʔə ʔé:θə* ‘He was killed by me’ or *\*\*ni qá:ytəm ʔə ʔə nəwə* ‘He was killed by you’ are not possible.

### 14.2.8. The Possessive Words

The fact of possession may be expressed by two words: *swéʔ* ‘one’s own’ (pl. *swəwéʔ*), a nominalization of  $\sqrt{weʔ}$  ‘own,’ to which the possessive affixes other than *-ct* ‘our’ are attached; and *sʔá:t* (CC, JP) or *sʔá:ʔt* (AG) ‘ours,’ *\*\*swéʔct* being rejected.

The paradigm is:

<i>nəswéʔ</i> ‘it’s mine’	<i>sʔá:t ~ sʔá:ʔt</i> ‘it’s ours’
<i>ʔəθwéʔ ~ ʔəswéʔ</i> ‘it’s yours’	<i>ʔəθwéʔələp ~ ʔəswéʔələp</i> ‘it’s yours (pl.)’
<i>swéʔs</i> ‘it’s his/hers/its’	<i>swéʔs (ʔé:ttən)</i> ‘it’s theirs’

Some anomalies also occur in the way these words are used with nouns possessed. With the first-person singular and the second person, the prefix is repeated on the noun. With the third person, CC and JP did not repeat the suffix, while AG did. With the second-person plural, the suffix is not repeated.

<i>nəswéʔ nəsqʷəméy̆.</i> ‘It’s my dog.’
<i>ʔəθwéʔ ʔəθqʷəméy̆.</i> ‘It’s your dog.’
<i>swéʔs sqʷəméy̆.</i> (CC, JP) <i>swéʔs sqʷəméy̆s.</i> (AG) ‘It’s his dog.’
<i>sʔá:t sqʷəméy̆.</i> ‘It’s our dog.’
<i>ʔəθwéʔələp ʔənpút.</i> ‘It’s you guys’s boat.’ (AG)

As elsewhere, the third-person plural particle does not appear if plurality is indicated by other means. Compare (a) and (b):

(a) <i>swéʔ-s</i>	<i>ʔé:ttən</i>	<i>lélən̄-s</i>	<i>tə</i>	<i>ḡəq̄.</i> (AG)
own-3POS	3PL	house-3POS	ART	white
‘The white house is theirs. The white one is their house.’				
(b) <i>swéʔ-s</i>	<i>tθéləy</i>	<i>tə</i>	<i>lélən̄.</i> (AG)	
own-3POS	those/they	ART	house	
‘The house is theirs.’				

### 14.2.9. The Third-Person Plural Particle

This is the particle *ʔé:ttən*, which may be classed with the predicate particles, although it is unusual in its position. It is probably composed of a base, not now identifiable, and the suffix *-əttən* ‘others’ (see §10.2.4). It indicates plurality in a third-person subject, object (when the subject is other than third person), or possessor, when plurality is not indicated by other means.

When *ʔé:ttən* pluralizes the subject or object, it appears last in the predicate, as in (a) to (d).

- (a) ni? ném ʔé·tən.  
AUX go 3PL  
'They went.'
- (b) wə-ném-əs ʔé·tən  
if-go-3SUB 3PL  
'if they go'
- (c) kʷəcnàmχəs ce? ʔé·tən.  
kʷec-n-amχ-əs ce? ʔé·tən  
see-TR-me-3TR FUT 3PL  
'They will see me.'
- (d) ném cən ce? čéw-ət ʔé·tən.  
go I FUT help-TR 3PL  
'I'm going to help them.'

In a sentence with a third-person subject and a third-person object, *ʔé·tən* must refer to the subject, as in (e).

- (e) ni? kʷél-χ-əs ʔé·tən.  
AUX hide-TR-3TR 3PL  
'They hid it.' (not 'He hid them.')

When *ʔé·tən* pluralizes a possessor, it follows the possessive person marker, as in (f) and (i).

- (f) ʒa sıl-éwtχ<sup>w</sup>-s ʔé·tən tə sálaʔac.  
BE3P canvas-house-3POS 3PL ART house.mat  
'The mats were their tents.'

If plurality is indicated by a plural noun, then *ʔé·tən* cannot be used. Compare (g) and (h) and (i) and (j):

- (g) ni? qá·y-t-əm ʔé·tən.  
AUX die-TR-INTR 3PL  
'They were killed.'
- (h) ni qá·y-t-əm tə sqʷəmqʷəméy.

 BE3P house-3POS ART white.people that  
 ‘That one there is the White people’s house.’

But neither *\*\*niʔ qá:ytəmʔé:ttən tə sq<sup>w</sup>əmq<sup>w</sup>əméy* nor *\*\* $\dot{\lambda}a$  léləms ʔé:ttən tə x<sup>w</sup>ələnítəm* is possible.

# 15

## The Demonstrative System

Under this heading are included the various deictic elements that introduce nominal adjuncts or else stand as nominal adjuncts. These elements are the articles and the demonstratives. The latter include three sets of words that are either fuller forms of the articles or forms compounded of the articles and other elements. Together the articles and demonstratives form a system that pervades the language.

### 15.1. THE ARTICLES

These are the unstressed particles that stand initially in nominal adjuncts (§3.4) and adverbial adjuncts (§3.6). Some examples of usage will be found in sections describing each of these, where the focus is on syntactic functions. Other examples appear below, where the focus is on the features of meaning the articles express.

With one exception, the articles may be seen (as in Table 15.1) as a set structured by the intersection of two genders and three positions or degrees of proximity. The genders are non-feminine (more accurate than “masculine” but under M below) and feminine (F). The positions are present and visible (p); nearby, or somehow accessible, but invisible (n); and remote, out of reach, or non-existent – as deceased persons or hypothetical events (r). The exceptional article appears with oblique adjuncts of a few types only and does not express gender or positions.<sup>1</sup>

---

<sup>1</sup> It seems possible that historically the articles were formed from separate elements, perhaps *t-*, *s-*, *k<sup>w</sup>*, *l-*, and glottalization. Viewed synchronically, however, the set cannot be easily analyzed into meaningful components.

Table 15.1

**The articles**

	Non-feminine (M)	Feminine (F)	Oblique (obl.)
Present and visible (p)	<i>tə</i> ( <i>t<sup>θ</sup>ə</i> )	<i>θə</i>	
Nearby and invisible (n)	<i>k<sup>w</sup>θə</i> , <i>k<sup>w</sup>ə</i> , <i>k<sup>w</sup></i>	<i>tə</i> , <i>k<sup>w</sup>tə</i> , <i>t</i> , <i>k<sup>w</sup>t</i>	<i>ʃ</i>
Remote or hypothetical (r)	<i>k<sup>w</sup>ə</i> , <i>k<sup>w</sup></i>	<i>k<sup>w</sup>sə</i>	

The table notes one variation in form that is the result of Cowichan influence at Musqueam. The usual Musqueam non-feminine present article is *tə*, but JP and DK occasionally used *t<sup>θ</sup>ə* (phonetically [t<sup>θ</sup>ə]), which is the usual Cowichan form. There are also said to be variations in usage that are the result of Upriver influence (Elmendorf and Suttles 1960, 12).

The glosses indicated by the table, non-feminine present (MP), feminine present (FP), and so on, are no more than approximations. All of the distinctions that may be conveyed by choices of articles have yet to be fully analyzed, as the following account of gender and position will show.

**15.1.1. Gender**

This distinction is relevant when the article is used with a noun or a relative clause; nominalizations and adverbial phrases take only non-feminine forms. The distinction is “natural” rather than “grammatical,” that is, whether a Halkomelem speaker uses a non-feminine article or demonstrative with a noun or relative clause depends, as does an English speaker’s choice of pronoun, on facts external to the grammar. Halkomelem nouns, like English nouns and unlike Chinook or French nouns, do not fall into grammatical classes of masculine and feminine.

When the reference is to persons, the articles distinguish males and females. Compare:

- (a) *tə nəməńə* ‘my son (here)’
- (b) *θə nəməńə* ‘my daughter (here)’
- (c) *tə ni nəm* ‘the (male) one who went’
- (d) *θə ni nəm* ‘the (female) one who went’

This distinction of males and females through the articles (and demonstratives) is probably essential to the functioning of the kinship terms (see §21), which nearly all, like *məńə* ‘child,’ make no sex distinction in themselves. In fact, in the total lexicon there may be no more than seven words that can refer to persons of one sex only. These are: *swəyqe?* ‘man/male,’ *sténəy* ‘woman/female,’ *swíwlas* ‘young man,’ *qéməy* ‘young woman,’ *mén* ‘father,’

*tén* ‘mother,’ *šx<sup>w</sup>élax* ‘woman’s sister-in-law.’ The indication of sex through the article is redundant for these seven words only.<sup>2</sup>

But this distinction can be made for singular males and females only. The non-feminine is used for plurals of either sex and for female as well as male persons when referred to in a generic sense. Compare:

(e) *tə iǰámala stánténáy* ‘six women, the six women’

(f) *θə sténáy* ‘a woman, the woman’

(g) *i haʔ niʔ tə qémáy ...* (CC 19)  
and if be.there ART(MP) girl  
‘and if there was any girl who ...’

(h) *θə qémáy* ‘a girl, the girl’

The non-feminine article is also used with personal words regardless of the sex of the referent:

(i) *ǰa k<sup>wə</sup> lǰǰəl-lax<sup>w</sup>e-n tə ʔé-nθə*, Mrs. Andrew Charles. (CC 12)  
*ǰa k<sup>wə</sup> lǰǰəl-lax<sup>w</sup>-e-n tə ʔé-nθə*  
BE3P then know-TR-I ART(MP) I  
‘That is what I, Mrs. Andrew Charles, know.’

With words referring to animals, in some elicited sentences the article seem to refer to sex, but in narratives it seems that non-feminine forms are used for larger animals and feminine forms for smaller ones. However, the distinction between the generic and the specific may also determine choices; in an account of sturgeon harpooning, JP used non-feminine articles for sturgeon in discussing general principles but switched to feminine forms when describing a specific kind of situation.

With words for inanimate things, it also seems that feminine forms are preferred for smaller things, but there may well be other considerations that I have not yet detected.

### 15.1.2. Position

When the reference is to tangible things, usually the difference between present and near forms seems to be a matter of proximity and visibility. Compare (a), (b), and (c):

2 The root of *šx<sup>w</sup>élax* ‘woman’s sister-in-law’ is *ʔélax* ‘sibling of the opposite sex,’ i.e., a man’s sister or a woman’s brother. For this word, too, perhaps the gender of the article is redundant because the sex of the referent may be inferred from the sex of the speaker.

- (a) *ni ʔənəcə ɬə nəwáč. (CC)*  
*niʔ ʔənəcə ɬə nə-wáč*  
 be.there where ART(FN) my-watch  
 ‘Where is my watch?’
- (b) *ʔí wəʔí tə nəsləqʷəʔélə ɬə nəwáč. (CC)*  
*ʔí wə-ʔí [ʔə] tə nə-sləqʷəʔélə ɬə*  
*nə-wáč*  
 be.here EST-be.here OBL ART(MP) my-pocket ART(FN)  
 my-watch  
 ‘My watch is here in my pocket (on me).’
- (c) *nəw níʔ ɬə nəsləqʷəʔélə ɬə nəwáč. (CC)*  
*niʔ wə-níʔ [ʔə] ɬə nə-sləqʷəʔélə*  
*ɬə nə-wáč*  
 ART(FN) my-watch  
 ‘My watch is there in my pocket.’

In the situations given in all three of these sentences, my watch is out of sight and so marked by a nearby but invisible form. In (b), my pocket is in the jacket I am wearing and so my pocket is marked by a present and visible form. And in (c), my pocket is in my jacket somewhere else and so my pocket marked by a nearby but invisible form. My watch is consistently marked feminine, perhaps because it is small. But my pocket is non-feminine in the second sentence and feminine in the third. I do not know the reason for this change in gender.

Position is of course also indicated by the verbs *ʔí* ‘be here’ and *níʔ* ‘be there,’ which locate the speaker. This is seen in the previous sentences and in (d), (e), and (f).

- (d) *niʔ skʷtéxʷ tə léləmə kʷθə sqʷəməý. (CC)*  
*niʔ skʷtéxʷ [ʔə] tə léləmə kʷθə sqʷəməý*  
 be.there inside OBL ART(MP) house ART(MN) dog  
 ‘The dog is in the house.’
- (e) *niʔ nemə kʷətɬʷíləmə kʷθə sqʷəməý. (CC)*  
*ni nemə kʷətɬʷíləmə kʷθə sqʷəməý*  
 AUX(be.there) go enter ART(MN) dog  
 ‘The dog went in.’
- (f) *ʔí mi ʔəʔqəl tə sqʷəməý. (CC)*  
*ʔí ʔəməí ʔəʔqəl tə sqʷəməý*  
 AUX(be.here) come exit ART(MP) dog  
 ‘The dog came out.’

In the situations given in all three of these sentences, the speaker is outside the house. This is indicated by the choice of *?i* or *ni?* in all three sentences as well as by the choice of *?ámí* or *ném* in (e) and (f). (In the English, the choice of *come* or *go* would establish the position of the speaker in [e] and [f], but *is* in [d] would not.) In (d) the dog is invisible, being inside the house while the speaker is outside. In (e), he is invisible, having gone in. But in (f), he is visible, having come out. The house is, of course, visible.

Although the choice of present or near forms of the article is usually determined by actual position, as in the examples just given, it is also possible to use a near form to indicate former absence. For example, upon recovering a lost pocketknife, one might – even while holding it – say:

- (g)  $\dot{\lambda}a \ m\grave{a} \ k^w t\grave{a} \ n\grave{a} h\acute{o}l k^w$ . (CC)  
 $\dot{\lambda}a \ m\grave{a} \ k^w t\grave{a} \ n\grave{a} h\acute{o}l k^w$   
 BE3P CERT ART(FN) my-pocketknife  
 ‘It’s my (lost) pocketknife.’

On the other hand, in storytelling the narrator usually uses the present forms for persons and things that are “present” in the narrative, but there may be switching to convey other information, such as the deceased status of a character (see below).

The near forms have variants. The non-feminine near forms are  $k^w\theta\grave{a}$ ,  $k^w\grave{a}$ , and  $k^w$ . When the reference is to persons and things,  $k^w\theta\grave{a}$  is more usual but  $k^w\grave{a}$  occasionally occurs. With nominalized clauses used as nominal adjuncts (§4.3.2), the form is more often  $k^w\grave{a}$  or  $k^w$ .

The feminine near forms are  $t\grave{a}$  and  $k^w t\grave{a}$ . The first occurs more commonly. The second may imply greater distance or inaccessibility. Compare (h) and (i):

- (h)  $ni? \ s^?é\dot{\lambda}q \ t\grave{a} \ n\grave{a} m\acute{o}n\grave{a}$ . (CC)  
 be.there outside ART(FN) my-child  
 ‘My daughter is outside.’

- (i)  $ni \ ni? \ \dot{\lambda} \ st^{\theta}ám\acute{a}s \ k^w t\grave{a} \ n\grave{a} m\acute{o}n\grave{a}$ . (CC)  
 AUX be.there ART(OBL) Victoria ART(FN) my-child  
 ‘My daughter is in Victoria.’

CC said that in the first sentence there would be no choice in the article, but in the second there is a choice between  $t\grave{a}$  and  $k^w t\grave{a}$ . If she had been speaking of a son, she said, in both sentences the form would be  $k^w\theta\grave{a}$ .

The remote forms,  $k^w\grave{a}$  and  $k^w s\grave{a}$ , are used with persons to show they are deceased, as in:

- $k^w\grave{a} \ n\acute{a}s\acute{i}l\grave{a}$  ‘my late grandfather/great uncle’  
 $k^w s\grave{a} \ n\acute{a}s\acute{i}l\grave{a}$  ‘my late grandmother/great aunt’

However, deceased status may also be indicated by using the near forms while adding the particle *-ət* ‘past’:

*kʷθə nəsíleːt* ‘my late grandfather/great uncle’

*tə nəsíleːt* ‘my late grandmother/great aunt’

The feminine remote form *kʷsə* seems to be used for persons only. The non-feminine *kʷə* or *kʷ*, however, has several other uses.

In reference to location in space, *tə* and *kʷə* contrast in distinguishing simply what is visible to the speaker and what is invisible, around in back, around the corner, and so on, as in (j) to (n).

(j) *ni tə nəʔéθəqən*  
*niʔ*            [ʔə]        *tə*                *nə-ʔéθəqən*  
 be.there    OBL     ART(MP)    my-front  
 ‘in front of me (in a canoe)’ (lit. ‘there at my front’)

(k) *ni kʷə nəsíʔáʔaqʷt*  
*niʔ*            [ʔə]        *kʷə*                *nə-síʔáʔaqʷt*  
 be.there    OBL     ART(MR)    my-rear  
 ‘behind me (in a canoe)’ (lit. ‘there at my rear’)

(l) *ném cən tə spəlχən.*  
*ném*    *cən*    [ʔə]        *tə*                *spəlχən*  
 go      I        OBL     ART(MP)    prairie/pasture  
 ‘I’m going to the pasture (not far and visible).’

(m) *ném cən kʷə spəlχən.*  
*ném*    *cən*    [ʔə]        *kʷə*                *spəlχən*  
 go      I        OBL     ART(MR)    prairie/pasture  
 ‘I’m going to the pasture (way off, out of sight).’

CC explained that if the pasture is known to the listener, instead of (m), one might say (n).

(n) *ném cən kʷθə spəlχən.*  
*ném*    *cən*    [ʔə]        *kʷθə*                *spəlχən*  
 go      I        OBL     ART(MN)    prairie/pasture  
 ‘I’m going to the pasture (out of sight).’

The possibility that *kʷθə* and *kʷə* differ in their involvement of the listener in other contexts deserves further consideration.

In reference to time, the contrast is between the present and the past. Compare the following, which appear as adverbial adjuncts:

*tə̀na wéyəl* ‘today’

*kʷ caléqəl* ‘yesterday’

*kʷə̀na tə̀wə̀tné?* ‘the day before yesterday’

(The demonstratives *tə̀na* and *kʷə̀na* are formed with *tə̀* and *kʷə̀*, as discussed below.)

The article *kʷə̀* is also used for unknown and/or hypothetical things, as in (o), (p), and (q).

(o) *nəsʰí? kʷə̀ páy.* (CC)

<i>nə-s-c-ʰí?</i>	<i>kʷə̀</i>	<i>páy</i>
my-NOM-do-value	ART(MR)	pie

‘I want some pie.’

(p) *tə̀ʔá-məx kʷə̀ swə̀yqəʔ.* (CC)

<i>tə̀ʔá-məx</i>	[ʔə]	<i>kʷə̀</i>	<i>swə̀yqəʔ</i>
resemble	OBL	ART(MR)	male

‘It looks like a man.’

(q) *ʔə̀y kʷs némt sə̀wq̄t kʷ pə̀wə̀y tə̀ cáw̄cə̀w.* (AC 1)

<i>ʔə̀y</i>	<i>kʷ</i>	<i>s-ném-ct</i>	<i>sə̀wq̄-t</i>	<i>kʷ</i>	<i>pə̀wə̀y</i>
good	ART(MN)	NOM-go-our	seek-TR	ART(MR)	flounder

[ʔə]	<i>tə̀</i>	<i>cáw̄cə̀w</i>
OBL	ART(MP)	offing

‘We’d better go look for flounders offshore.’

The article *kʷə̀* also appears with nominalizations referring to hypothetical events, as in (r).

(r) *nəsʰí? kʷə̀ nəsném̄.*

<i>nə-s-c-ʰí?</i>	<i>kʷə̀</i>	<i>nə-s-ném̄</i>
my-NOM-do-value	ART(MR)	my-NOM-go

‘I want to go.’ (lit. ‘What I want is my hypothetical going.’)

(See also §4.3, “Nominalized Clauses.”)

Still another use of *kʷə̀* is to identify words as quoted terms presumably unfamiliar to the listener, as in (s), (t), and (u).

(s) *kʷíkʷə̀xtə̀m kʷə̀ mə̀θə̀l.* (JP 1)

<i>is.being.named</i>	ART(MR)	<i>mə̀θə̀l</i>
-----------------------	---------	----------------

‘It is called *mə̀θə̀l* [possibly Indian hemp, *Apocynum cannabinum*].’

(t) *tə̀ kʷíkʷə̀xtə̀m kʷə̀ sésq̄ə̀c.* (JP 2)

ART(MP)	<i>is.being.named</i>	ART(MR)	<i>sésq̄ə̀c</i>
---------	-----------------------	---------	-----------------

‘that which is called a “sasquatch”’

(u) səw niʔs θə ʃətəstəm sweʔs stəltaləs kʷfkʷəxtəs kʷə xʷəlmaxʷ kʷə  
qəlqəlif. (JP 2)

s-wə-niʔ-s	θə	ʃətəstəm	sweʔ-s
NOM-EST-be.there-3POS	ART(FP)	are.said.to.be	property-3POS
stəltaləs[-s ?]	kʷfkʷəxt-əs	kʷə	xʷəlmaxʷ
spouses-3POS	be.naming-3SUB	ART(MN)	Indian
kʷə	qəlqəlif		
ART(MR)	qəlqəlif		

‘Then there were the ones said to be their wives, whom the Indians called *qəlqəlif*.’

In (u), JP used the FP form before *ʃətəstəm* ‘said to be,’ gender presumably taking precedence over the plural ‘wives’; he used the MN form before ‘people’; and he used the MR *kʷə* before the name *qəlqəlif* (the Basket Ogress), perhaps to mark it as a quoted form. In the narrative that followed, however, he used feminine forms when he referred to her.

From AG, I recorded:

(v) kʷəkʷxít ct ceʔ əkʷ θəhá:yθən.

kʷəkʷx-i-t	ct	ceʔ	ʔə	kʷə	θəhá:yθən
name(DUR)-TR	we	FUT	OBL	ART(MR)	big.mouth

‘We shall call [keep calling] him “Bigmouth.”’

Here the oblique particle *ʔə*, which CC and JP often omitted, shows that these quoted-term phrases (*kʷə məθəl*, etc.) are syntactically oblique adjuncts, syntactically like adverbial adjuncts.

However, when a quoted term is presumably familiar to the listener, the article may be *tə* (for examples, see §17.15).

In adverbial adjuncts (see §3.6), the article *kʷə* appears before adjectives, as in (w).

(w) mətə ʔəʃqəl kʷə ʃwəm. (JP 24)

ʔəmí	ʔəʃqəl	[ʔə]	kʷə	ʃwəm
come	exit	OBL	ART(MR)	fast

‘He came out right away.’

So far, in nearly all of the examples given to illustrate how the articles distinguish position, they have preceded nouns. The same distinctions are made when the articles precede relative clauses, as in (x), (y), and (z).

(x) stém kʷə tə kʷənétəxʷ.

stém	kʷə	tə	kʷən-é-t-əxʷ
what	then	ART(MP)	get-DUR-TR-you

‘What are you holding?’

- (y) ni cən kʷácɲəxʷ kʷθə ni:nəʔ čéwət. (JP)  
 niʔ cən kʷác-nəxʷ kʷθə niʔ-ən-əʔ čéw-ət  
 AUX I see-TR ART(MN) AUX-I-past help-TR  
 ‘I saw the one I had helped.’
- (z) wét kʷə ni čéčəwəθámə. (JP)  
 wét kʷə niʔ čéčəw-ət-Samə  
 who ART(MR) AUX be.helping-TR-you  
 ‘Who helps you (when you are away at work)?’

In (x), what is being held is visible; in (y), the one who had been helped is not visible; and in (z), the speaker is not familiar with the situation and the helper is unknown.

What appear to be the FN forms *t* and *kʷt*, with variants *ʔət* (CC, DK) and *kʷət* (DK), can appear after *ʔəwə* ‘not’ (§6.1.4) and *ʔəwətəʔ* ‘none’ (§6.3) followed directly by a relative clause or followed by the interrogative words *wét* ‘who’ (§17.1) and *stém* ‘what’ (§17.3) followed by a relative clause, as in (aa) and (bb).

- (aa) ʔəwətəʔ kʷt ʔítət. (JP 25)  
 none ART sleep  
 ‘Nobody slept. There was no one who slept.’
- (bb) ʔəwətəʔ kʷt wét kʷác-nəxʷ-e-n. (AG)  
 none ART who look-TR-I  
 ‘I haven’t seen anybody.’

There also seems to be a predicate particle *kʷt* (§16.2.16), perhaps related to this usage of the article in a way not yet clear.

### 15.1.3. The Contrast with English

Some of the examples given above may suggest that there is a tendency for the Halkomelem *tə* and *θə* to correspond to the English definite article *the* and for the Halkomelem *kʷə* to correspond to the English indefinite article *a/an* (with a singular count noun), *some* (with a mass noun), or *zero* (with a plural). But there is really no parallel. In fact, any Halkomelem article can appear in a context where it must be translated as indefinite in English, or in a context where it must be translated as definite. Consider the articles in (a), (b), and (c).

- (a) səctəw kʷácɲəxʷ tə čičíʔqən. (CC 8)  
 s-niʔ-ct wə-kʷác-nəxʷ tə čičíʔqən  
 NOM-AUX-our EST-see-TR ART(MP) mink  
 ‘Then we saw a mink.’

- (b)  $k^w\acute{a}n\text{-}\acute{a}t\text{-}\acute{a}s$   $t\acute{a}$   $k^w\acute{f}'x^w$ . (JP 2)  
 get-TR-3TR ART(MP) pitch  
 ‘She took (some) pitch.’
- (c)  $n\acute{e}m$   $\acute{c}\acute{a}$   $\text{?}\acute{a}\text{-}\acute{t}$   $t\acute{a}$   $\acute{t}\acute{x}\acute{a}m\text{-}\acute{a}l\acute{a}$   $s\acute{t}n\acute{t}\acute{e}n\acute{a}y\acute{.}$  (JP 4)  
 go QUOT embark ART(MP) six-person women  
 ‘Six women embarked (it is said).’

In these sentences, the article  $t\acute{a}$  must be translated as indefinite in English because, in the narratives where the sentences appear, the mink, pitch, and six women have not been mentioned before. But they appear all “present” in the viewpoint of the narrator and so must take the article  $t\acute{a}$  in Halkomelem.

The reverse is illustrated by (d) and (e).

- (d) ...  $w\acute{a}m\acute{í}\text{-}s$   $k^w\theta\acute{a}$   $\theta\acute{í}$   $q^w\acute{t}\acute{e}y\acute{.}$  (JP 9)  
 $w\acute{a}\text{-}\text{?}\acute{a}m\acute{í}\text{-}\acute{a}s$   $k^w\theta\acute{a}$   $\theta\acute{í}$   $q^w\acute{t}\acute{e}y\acute{.}$   
 if/that-come-3SUB ART(MN) big log  
 ‘... when a big log comes.’
- (e)  $s\acute{t}\acute{e}m$   $k^w\acute{a}$   $sk^w\acute{f}x\text{-}s$   $t\acute{a}\text{?}\acute{í}$ . (CC)  
 $s\acute{t}\acute{e}m$   $k^w\acute{a}$   $sk^w\acute{f}x\text{-}s$   $t\acute{a}\text{?}\acute{í}$   
 what ART(MR) name-3POS this  
 ‘What do you call this? What is the name of this?’

The conditional clause (d) is from a statement made by Scouring Rush to Mink warning him of the dangers of standing beside him in the water. The log has not been previously mentioned in the narrative and so the article must be indefinite in English. The log is real though not yet visible to Scouring Rush and so takes the Halkomelem  $k^w\theta\acute{a}$  non-feminine near article. The more literal English translation of (e) requires the definite article, presumably because English speakers take the existence of a name as given even though they do not yet know it, while the Halkomelem sentence requires the  $k^w\acute{a}$  precisely because the name is not yet part of the real world of, or accessible to, the speaker.

However, the demonstratives do seem to be used for persons or things already known and so may function as definite articles. (See §15.2.3.)

#### 15.1.4. The Oblique Article

The article  $\acute{x}$ , which is neutral as to gender and position, has the following uses:

(1) It is obligatory before proper names in oblique adjuncts (see §3.4), as in (a), (b), and (c).

- (a)  $\acute{c}\acute{e}w\acute{a}t\acute{a}m$   $ce\text{?}$   $\acute{x}$  Tom  $t\acute{a}$  Jack. (JP)  
 $\acute{c}\acute{e}w\acute{a}t\acute{a}m$   $ce\text{?}$   $[\text{?}\acute{a}]$   $\acute{x}$  Tom  $t\acute{a}$  Jack  
 be.helped FUT OBL ART(OBL) Tom ART(MP) Jack  
 ‘Tom will help Jack.’ (lit. ‘Jack will be helped by Tom.’)

- (b) ʔi təlíʔ ə́ʃ Seattle. (CC)  
 ʔi təlíʔ ʔə ʃ Seattle  
 be.here from OBL ART(OBL) Seattle  
 ‘He came from Seattle.’
- (c) swéʔ mǎ ʃ Andrew tǎ sqʷəméy. (CC)  
 swéʔ mǎ [ʔə] ʃ Andrew tǎ sqʷəméy  
 property CERT OBL ART(OBL) Andrew ART(MP) dog  
 ‘The dog belongs to Andrew.’ (lit. ‘The dog is the property of Andrew.’)

(2) It is obligatory before personal words standing as oblique adjuncts, as in (d), (e), and (f).

- (d) wélx čxʷ xʷəmí ʃ (~ ʔə́ʃ) ʔé-nθə. (JP)  
 wél-x čxʷ xʷ-ʔəmí ʔə ʃ ʔé-nθə  
 throw-TR you toward-come OBL ART(OBL) be.me  
 ‘Throw it to me.’

- (e) ni cən yá:yəs ni ʔə́ʃ nəwə. (CC)  
 niʔ cən yá:yəs niʔ ʔə ʃ nəwə  
 AUX I be.working be.there OBL ART(OBL) be.you  
 ‘I am working for you.’

- (f) tǎwǎkʷí-lǎ təlí ʃ ɬwǎlǎp. (JP 22)  
 tǎ wǎ-kʷín-ǎlǎ təlíʔ [ʔə] ʃ ɬwǎlǎp  
 ART(MP) EST-how.many-person from OBL ART(OBL) you(pl.)  
 ‘several of you’

(3) It provides an optional way of relating a possessed noun to its noun possessor, as in (g) and (h).

- (g) kʷǎlǎw ʃ spéʔeθ (JP)  
 hide ART(OBL) black.bear  
 ‘bear hide, hide of a bear’ (cf. *kʷθə kʷǎlǎwʷs tǎ spéʔeθ* ‘a/the bear’s hide’ [AG])
- (h) sléwǎn ʃ pipá·m (CC, JP)  
 sleeping.mat ART(OBL) frog  
 ‘broad-leaf plantain’ (lit. ‘frog mat’)

Such forms are not common, so it is not clear whether there are any restrictions on the kind of noun that may be used in them.

(4) The article ʃ has also been recorded in a few other sentences that may not reflect general usage. JP gave (i) and (j), but AG would have to use a possessive, saying (k).

- (i) c-qǎḫ      ǎ      ʔéwǎḫ. (JP)  
 get-much      ART(OBL)      wealth  
 ‘He’s got lots of everything. He is well off.’ (lit. ‘He has much of wealth.’)
- (j) c-qǎḫ      ǎ      tǎlǎ      tθéʔ. (JP)  
 get-much      ART(OBL)      money      that.one(MP)  
 ‘He has lots of money.’
- (k) qǎḫ      kʷθǎ      tǎlǎ-s      tθéʔ. (AG)  
 much      ART(MN)      money-3POS      that.one(MP)  
 ‘He has lots of money.’ (lit. ‘Much is his money.’)

CC gave (l), but JP rejected this. Compare with his (m):

- (l) niwǎ sǎǎm ǎ ʔǎpǎn i kʷǎ nǎǎaʔ. (CC)  
 niʔ      wǎǎ-sǎǎm      ǎ      ʔǎpǎn      ʔǎy  
 be.there      already-wearing.off      ART(OBL)      ten      and  
 kʷǎ      nǎǎaʔ  
 ART(MR)      one  
 ‘It’s half past eleven.’
- (m) táḫʷ wiléw nǎǎaʔ (JP)  
 táḫʷ      wǎ-yǎléw      nǎǎaʔ  
 be.deadcentre      EST-past      one  
 ‘half past one’

The oblique article is restricted to these uses. Unlike the other articles, it cannot introduce nominalizations or relative clauses.

## 15.2. THE DEMONSTRATIVES

These express the same categories of gender and proximity as the articles, and also express definiteness. Further, they have plural forms and, in one set, diminutives. Like the articles, most of the demonstratives can stand before nouns as determiners. Unlike the articles, all of the demonstratives can also stand alone as adjuncts with the functions of demonstrative pronouns, third-person pronouns, and locatives.<sup>3</sup>

There are several sets of demonstratives. The total number of forms recorded is close to forty, and there may be a few not yet recorded. Because members

3 The distinction between third-person and demonstrative pronouns and between pronouns and locatives are, of course, distinctions of English. Whether a Halkomelem form such as *tθéʔ* is translated with the third-person pronoun ‘he’ or ‘it’ or with the demonstrative pronoun ‘that’ is probably a matter of how strong the deictic function of *tθéʔ* is felt to be and whether the referent is a person or a thing, things being more comfortably called ‘that’ than people. And when *tθéʔ* is translated ‘there,’ it is simply because English requires it in that context.

of the different sets have parallel functions, it seems best to present them all first and then discuss their functions.

The glosses given in the tables below are intended to show the range of functions and meanings, but the list is not exhaustive. Many of the non-feminine forms may appear as determiners with non-human plurals and so might also be glossed ‘these’ or ‘those.’

### 15.2.1. The Simple Demonstratives

The forms recorded are given in Table 15.2.

Table 15.2

#### The simple demonstratives

	Non-feminine (M)	Feminine (F)	Plural (pl.)
Present and visible (p)	<i>tθéʔ</i> ‘that, he, him, it, there’	<i>θéʔ</i> ‘that, she, her’	<i>yəθéʔ, yəθéləy̓</i> ‘those, they, them’
Nearby and invisible (n)	<i>kʷθéʔ</i> ‘that, he, him, it, there’	<i>kʷtélʔ</i> ‘that, she, her’	<i>kʷθéləy̓</i> ‘those, they, them’
Remote or hypothetical (r)	<i>kʷí</i> ‘that, there’		

The relationship of these forms with the articles is very close. Four of the five singular forms (*θéʔ*, *kʷθéʔ*, *kʷtélʔ*, and *kʷí*) may be no more than stressed or fuller forms of the corresponding articles (*θə*, *kʷθə*, *kʷtə*, and *kʷə*). Data from other dialects are useful in interpreting the other forms. The Cowichan non-feminine present article is *tʰə* [tʰə], which seems closer to the Musqueam *tθéʔ* than the Musqueam article *tə*. Chilliwack has a human plural article *yə* (Galloway 1993, 390), which seems identifiable with the Musqueam plural element *yə*. The Musqueam plurals *yəθéləy̓* and *kʷθéləy̓* are clearly formed with the plural infix *-lə-*, but the Cowichan singular demonstratives *tʰéy̓*, *θéy̓*, and so on seem to provide better bases than the Musqueam singulars.

### 15.2.2. The Compound Demonstratives

These are words each composed of an article and a root, possibly with other elements. They are probably all relative clauses that have become more or less fossilized. We may distinguish, by the type of root, locative and third-person demonstratives.

#### 15.2.2.1. The Locative Demonstratives

These are formed with *ʔí* ‘be here’ and *níʔ* ‘be there,’ which occur constantly as locative and auxiliary verbs, a third element *-ńá* ‘be here’ (or possibly simply ‘exist’), otherwise unattested, and perhaps a fourth element *-ńá* (or *-ná*) ‘be

yonder,’ only tentatively suggested. In some forms there is also a final *-nə*, which cannot be identified, although it seem possible that it might be an unstressed *-ńa* ‘exist.’

This set of demonstratives seems to have no forms corresponding to the articles *kʷθə* and *lə*. It distinguishes only two positions, perhaps simply visible and invisible. There are plurals formed with *-ńa*, but no others. Forms recorded so far are given in Table 15.3.

Table 15.3

**The locative demonstratives**

	Non-feminine (M)	Feminine (F)	Plural (pl.)
Present and visible (p)	<i>tɛʔi</i> ‘this, here, this way’ <i>təʔinə</i> ‘this’ <i>təniʔ</i> ‘there, that way’ <i>tənińə</i> ‘that’ <i>təńá</i> ‘this, he, him’	<i>θəʔi</i> ‘this’ <i>θəʔinə</i> ‘this’  <i>θəńá</i> ‘this, she, her’	<i>təńá·ttən</i> these, they, them’  <i>yəńá</i> ‘these, they, them’ <i>yəńá·ttən</i> ‘they, them, those’
	<i>təńá·nə</i> ‘that over there, over there’ <i>təniʔ[ə]təńá·nə</i> ‘that way over there’		
Remote or hypothetical (r)	<i>kʷəʔi</i> ‘around that way’ <i>kʷəńá</i> ‘he, him’ <i>kʷəńá·nə</i> ‘way over there’	<i>kʷsəńá</i> ‘she, her’	<i>kʷəńá·ttən</i> ‘they, them’

The forms with *ʔi* and *niʔ* are transparently relative clauses; for example, *təʔi* (usually pronounced [tiʔi]) is no doubt //tə ʔi// ‘the one who/that is here.’ If the final *-nə* is (as tentatively suggested) a reduction of *-ńa* ‘exist,’ then *təʔinə* may be ‘the one who/that exists here.’ The complex form *təniʔətəńá·nə* may be something like ‘the one/who that is there at that which is way over there.’ (See §17.17 for a comparable use of *tə ʔənəcə*, lit. ‘the one that is where,’ for ‘which.’)

The plural markers are the *yə-* of the simple set and, very likely, the third-person plural particle *ʔé·ttən*. Thus *kʷəńá·ttən* is probably //kʷə ńá ʔé·ttən//, meaning something like ‘the invisible ones who exist.’

### 15.2.2.2. The Third-Person Demonstratives

These are based on *ǰá* ‘be third person.’ They form a set that has members in all three positions. There are also forms with *-ət* ‘past’ for deceased persons and there are diminutives (for at least the present visible position) formed by reduplication. And there are still other forms containing *niʔ* ‘be there.’ Attested forms are given in Table 15.4. There may well be others.

Table 15.4

The third-person demonstratives			
	Non-feminine	Feminine	Plural
Present and visible	<i>təwǰá</i>	<i>θəwǰá</i>	<i>təwǰáɫəm</i>
Nearby and invisible	<i>kʷθəwǰá</i>	<i>təwǰá</i>	<i>kʷθəwǰáɫəm</i>
Remote or hypothetical	<i>kʷəwǰá</i>	<i>kʷsəwǰá</i>	
Deceased	<i>kʷəwǰá·t</i>	<i>kʷsəwǰá·t</i>	<i>kʷθəwǰáɫəmət</i>
Diminutive present	<i>təwǰáǰəm</i>	<i>θəwǰáǰəm</i>	<i>təwǰəǰáǰám</i>
<i>niʔ</i> present	<i>tənəwǰá</i>	<i>θənəwǰá</i>	

These forms too, like the locative demonstratives, are probably relative clauses in origin, *təwǰá* being a contraction of //tə wə<sub>-2</sub> ǰá// ‘the one who is third person’ and so on. In rapid speech, the stress falls equally on both syllables or may appear to fall on the first. The Cowichan counterparts are *tʰəwnít* and so on, based on *nít*, the Island counterpart of Mainland *ǰá*.

The forms *tənəwǰá* and *θənəwǰá* are probably //tə niʔ wə<sub>-2</sub> ǰá// ‘the one who is third person there’ or ‘the one who is there being the third person’ and so on. These forms seem to be rare; they occur in a few sentences given by CC during elicitation but have not shown up in the texts.

### 15.2.3. Use as Determiners

It appears that nearly all of the demonstratives can stand before nouns as determiners. (There may be restrictions on some of the plural forms.) As determiners, the demonstratives may be translated ‘this,’ ‘that,’ ‘these,’ and ‘those,’ but for all but the locatives formed with *ʔí*, *níʔ*, and *-ná*, this deictic sense is weak. Perhaps a demonstrative is often chosen over an article mainly because it is definite, while the article is not. At any rate, demonstratives seem to appear more often in Halkomelem than in English, and often a Halkomelem demonstrative can be translated as easily with an English definite article. As determiners, the demonstratives are also often unstressed.

The simple demonstratives (*tθeʔ*, etc.) generally have the sense of a weak ‘that’:

- (a) wét k<sup>wə</sup> tθeʔ swáýqeʔ. (CC)  
 who then DEM(MN) man  
 ‘Who is that man?’
- (b) syáwín k<sup>wə</sup>θeʔ sk<sup>wí</sup>x. (JP 23)  
 spell.word DEM(MN) name  
 ‘That [or ‘this’ or ‘the’] name is a spell word.’
- (c) ǰa k<sup>wə</sup> k<sup>w</sup>teʔ qəlqəlɪfət ǰtwaʔ. (JP 2)  
 BE3P then DEM(FN) Basket.Ogress SPEC  
 ‘It was that Basket Ogress [now deceased, known from tradition].’
- (d) néǵ cən k<sup>w</sup>i spəlǰən. (CC)  
 go I DEM(MR) prairie/pasture  
 ‘I’m going to that pasture.’

The fact that *k<sup>w</sup>i* implies that something is simply invisible and not necessarily distant is clear from (e).

- (e) ʔi k<sup>w</sup>i sʔéǰq k<sup>wə</sup>θə nəká. (JP)  
 ʔi [ʔə] k<sup>w</sup>i sʔéǰq k<sup>wə</sup>θə nə-ká.  
 be.here OBL that(MR) outside ART(MN) my-car  
 ‘My car is outside.’

The *ʔi* tells us that the car is nearby while the *k<sup>w</sup>i* tells us that the outside is invisible. We are in the house and the car is parked outside, out of sight.

The locatives *təʔi* and *təʔinə* contrast with *tθeʔ*, and *tθeʔ* contrasts with *təniʔ*, and so on. Compare the following:

- təʔi sq<sup>w</sup>əméy* ‘this dog’  
*tθeʔ sq<sup>w</sup>əméy* ‘that dog’  
*təʔi púk<sup>w</sup>* ‘this book [in my hand]’  
*tθeʔ púk<sup>w</sup>* ‘that book [somewhere near me]’  
*təni<sup>nə</sup> púk<sup>w</sup>* ‘that book [over there]’  
*təniʔətəni<sup>nə</sup> púk<sup>w</sup>* ‘that book way over there’  
*təʔinə léqəməx* ‘this flat country [here in the Fraser Delta]’  
*təni<sup>nə</sup> scəwəθən* ‘the outer side over there [i.e., Tsawwassen]’

The forms *təni<sup>nə</sup>*, *θəni<sup>nə</sup>*, and so on seem to refer to what is simply present rather than right at hand:

- təni<sup>nə</sup> swéyəl* ‘this day, today’  
*ʔi ə təni<sup>nə</sup> təməx<sup>w</sup>* ‘on this earth’  
*θəni<sup>nə</sup> nəšx<sup>w</sup>əmník<sup>w</sup>* ‘this aunt of mine’ (CC 12)  
*yəni<sup>nə</sup> yáýsələ* ‘these two persons’

In (f) and (g), *təni<sup>nə</sup>* contrasts with *təni<sup>nə</sup>*.

- (f) *mí*      *čx<sup>w</sup>*      (*š<sup>w</sup>teʔ*)      *ə*)      *tə́ŋa*      *səqíŋ*. (JP)  
 come    you    move.toward    OBL    DEM(MP)    near.end  
 ‘Come to this end of the house.’
- (g) *ném*      *čx<sup>w</sup>*      [*ʔə*]      *tə́ŋá·nə*      *snəqíŋ*. (JP)  
 go    you    OBL    DEM(MP)    far.end  
 ‘Go to that end of the house.’

However, the nouns also contrast; *səqíŋ* ‘near end of a house’ contains *ʔi* ‘be here,’ while *snəqíŋ* ‘far end of a house’ contains *niʔ* ‘be there.’

In contrast with *tə́ŋá·nə*, which implies distance but visibility, *k<sup>w</sup>ə́ŋá·nə* can refer to something distant and unseen:

- (h) *ck<sup>w</sup>i k<sup>w</sup>éyəm*      *k<sup>w</sup>θə*      *məlstéyəx<sup>w</sup>*      *ni*      *k<sup>w</sup>ə́ŋá·nə*      *cak<sup>w</sup>*. (JP)  
 be.starving    ART(MN)    persons    be-there    DEM(MR)    far  
 ‘People are starving in that far-off country.’

The forms *k<sup>w</sup>ə́ŋá* and *k<sup>w</sup>sə́ŋá* indicate invisibility, but when referring to persons do not imply deceased status as the corresponding articles (*k<sup>w</sup>ə* and *k<sup>w</sup>sə*) do.

- (i) *šə́tə*      *k<sup>w</sup>ə́ŋa*      *bá·s* ... (JP)  
 be.saying    DEM(MR)    boss  
 ‘The “boss” says ...’

The forms *tə́ŋá* and *θə́ŋá* are unique among the demonstratives in that they can also serve as contemptuous second-person pronouns in vocative phrases, as in (j), (k), and (l).

- (j) *ʔa·*      *tə́ŋa*      *qə́·l*      *sq<sup>w</sup>əméy*      *spá·l*. (JP 4)  
 aah    DEM(MP)    baad    dog    raven  
 ‘Oh, you *baad* dog Raven!’ (said by women from whom Raven has stolen salmonberries)
- (k) *šeʔ*,      *θə́ŋa*      *qéməy*. (JP)  
 hey    DEM(FP)    girl  
 ‘Hey, you girl!’ (said to a young man who has done something effeminate, such as using *ʔə́š* instead of *šéʔ* as an interjection)
- (l) *tə́ŋa*      *qəl*      *smiṁxčə́ŋ*. (AG)  
 DEM(MP)    bad    lousy(DIM)  
 ‘You lousy little thing!’

The third-person determiners (*təwšá*, etc.) when used as determiners have a weak deictic sense; they probably often serve simply to mark definiteness. They are most frequently used with persons:

- təwšá swíwləs* ‘that/the young man’  
*θəwšá qéməy* ‘that/the young woman’

*təwʂa* Andrew ‘(that) Andrew’ (CC 12)  
*kʷθəwʂa sqəlícəməsət* ‘the late Sqəlícəməs’ (JP 1)  
*kʷθəwʂálam nəsəlsíle·t* ‘my late grandparents’ (JP 25)  
*kʷəwʂa syálexʷa?* ‘that [now deceased] old man’ (JP 25)  
*kʷəwʂán sqéʔeq* ‘my late junior cousin’ (CC 16)  
*təwʂəʂálam stéʔexʷət* ‘those little children’ (CC)

As determiners, however, they are not restricted to persons. They are also used for animals:

- (m) ʔəwəteʔ kʷə ʂxʷnéms təwʂa sməyəθ. (CC 7)  
 ʔəwəteʔ kʷə ʂxʷ-ném-s təwʂa sməyəθ  
 none ART(MN) OBLNOM-go-3POS DEM(MP) deer  
 ‘The deer has/have no place to go.’
- (n) ʔəwə kʷs kʷəyχθəts θəwʂa qʷtá·yθən. (JP 23)  
 ʔəwə kʷ s-kʷəyχ-θət-s θəwʂa qʷtá·yθən  
 not ART(MN) NOM-move-self-3POS DEM(FP) sturgeon  
 ‘The sturgeon doesn’t move.’

They seem generally not used for inanimate things, but I have found two exceptions in texts:

- (o) sʂíʂəc tə sʔáθəs ni ə  
 designed ART(MP) face be.there OBL  
*təwʂa sʂélməxʷcəs.* (CC 19)  
 DEM(MP) ritualist’s.rattle  
 ‘A face was carved on that/this [ritualist’s] rattle.’
- (p) wənáy cə kʷ-s-niʔ-s səcəcən wə-ʔəwʂkʷ  
 be.only QUOT ART-NOM-AUX-3POS truly EST-be.used.up  
*təwʂa ʔəχtən.* (JP 27)  
 DEM(MP) poison  
 ‘It was only when that poison was truly used up that ...’

But these may not be exceptions after all. Both the rattle and the poison may be seen as active entities.

As determiners, the third-person demonstratives seem to have the same anaphoric restriction that they have as demonstrative pronouns. This is discussed below.

The use of plural forms of all sets of demonstratives seems to vary with the kind of noun. If a noun that is plural in form or sense refers to human beings, a demonstrative used as a determiner is almost always a plural form, as in examples above. There are exceptions, however, as in (q), where plurality is not marked.

- (q) *təwʃa*      *ʒé·ymən* (CC 12)  
 DEM(MP)      Chinese  
 ‘the Chinese’ [farmers renting reserve land]

With animals, the choice of a plural seems to be optional. Non-plural forms may be used, perhaps especially when plurality is marked by other means. Compare the following sentences from a single passage in JP 23.

- (r) *ni*      *xém*                      *təwʃáɫəm*      *máʔəqʷ*.  
 AUX      come.to.surface      DEM(PL)      duck  
 ‘Those ducks came to the surface.’
- (s) *ʃa kʷə ni ʃxʷkʷáqʷəts tθeʔ máʔəqʷ*.  
*ʃa*      *kʷə*      *ni*      *ʃxʷ-kʷáqʷəts*      *tθeʔ*              *máʔəqʷ*  
 BE3P      then      AUX      OBLNOM-club      DEM(MP)      duck  
 ‘That’s what he used to club the ducks with.’
- (t) *sisəw néṁ ʔaɫ ləkʷləkʷ tə tǎpsəms təwʃa máʔəqʷ*.  
*s-ni-s*                      *wə-néṁ*      *ʔaɫ*      *ləkʷləkʷ*      *tə*      *tǎpsəm-s*  
 NOM-AUX-3POS      EST-AUX(go)      just      break(PL)      ART      neck-3POS  
*təwʃa*      *máʔəqʷ*  
 DEM(MP)      duck  
 ‘Then the necks of those ducks were just broken.’
- (u) *kʷən kʷənətəs tθeʔ máʔəqʷ*.  
*kʷən kʷən-ət-əs*              *tθeʔ*              *máʔəqʷ*  
 be.taken(PL)-TR-3TR      DEM(MP)      duck  
 ‘He took the ducks.’

The word *máʔəqʷ* ‘duck’ (really any larger bird) is not plural in form. In (r), plurality is indicated by the demonstrative, in (s) by nothing, in (t) by ‘get broken,’ and in (u) by ‘take.’

Inanimate plurals generally take non-plural forms, as in (v).

- (v) *kʷθeʔ*      *smən mé·nt* (JP)  
 DEM(MN)      rocks  
 ‘the/those rocks’

But again there are exceptions, as in (w), in which plurality is indicated in all three words.

- (w) *γəθéɫəý*      *θéməxʷəɫ*      *sən íxʷəɫ* (JP)  
 DEM(PL)      two.canoe      canoes  
 ‘those two canoes’

Like the articles, the demonstratives can introduce relative clauses (see §4.1.2). In this function, they seem to be used very much the same way as when introducing nouns.

### 15.2.4. Use as Adjuncts

The demonstratives can also stand alone as direct or oblique adjuncts, serving as third-person pronouns, demonstrative pronouns, and locatives. There are differences among the three sets of demonstratives in these functions. Demonstratives of the simple and locative sets, when standing as direct adjuncts and as oblique adjuncts in many contexts, can refer to either human or non-human entities and so serve as third-person or demonstrative pronouns, that is, be translated as ‘he,’ ‘she,’ ‘this,’ ‘that,’ and so on. However, when standing as oblique adjuncts following verbs implying location or motion in a particular direction, demonstratives of the simple and third-person sets can refer to place and serve as locatives, that is, be translated as ‘here,’ ‘there,’ and so on. When used as adjuncts, demonstratives of the third-person set always refer to human beings and so must be translated as third-person pronouns. For purposes of exposition, it seems useful to separate pronominal from locative uses.

#### 15.2.4.1. Pronominal Uses

In the following sentences, demonstratives of the simple set appear as direct adjuncts and refer to either human or non-human entities.

- (a) wét tθé?. (JP)  
 who that(MP)  
 ‘Who is that/he?’
- (b) stém k<sup>wə</sup> k<sup>wθé</sup>?. (CC)  
 what then that(MN)  
 ‘What is that?’
- (c) yə-mí tθé?. (JP)  
 along-come that(MP)  
 ‘He is coming.’
- (d) ʔcés-əł ċə tθé?. (JP 1)  
 island-past QUOT that(MP)  
 ‘It [Point Roberts] was an island, they say.’
- (e) təw-níñəq<sup>wə</sup>m tθé?. (JP)  
 somewhat-soft(PL) that(MP)  
 ‘They are soft.’
- (f) há<sup>ʔk<sup>w</sup>-əx</sup> ɬe tθé?. (JP)  
 be.used-TR PER that(MP)  
 ‘Use that!’
- (g) ʔəwə sʔiʔqəł-əs θé?. (JP)  
 not child-3SUB that(FP)  
 ‘She is not a child.’

- (h) *ni*      *čə*      *kʷən-əws-t-əm*      *kʷleʔ*. (CC)  
 AUX    QUOT    be.taken-body-TR-INTR    that(FN)  
 ‘She was harmed by sorcery, they say.’
- (i) *səwəyʔeʔ*      *yəθéləy*. (JP)  
 men                    those(MP)  
 ‘They are men.’
- (j) *neṃ*      *čə*      *tákʷ*      *yəθéləy*. (CC)  
 AUX(go)    QUOT    go.home    those(MP)  
 ‘They are going home, they say.’
- (k) *ni*      *tákʷ*      *kʷθéləy*. (CC)  
 AUX    go.home    those(MN)  
 ‘They went home.’

In (l) to (p), the simple demonstratives are oblique adjuncts.

- (l) *stəʔé ʔə tθéʔ*  
*stəʔé ʔə tθéʔ*  
 like    OBL    that  
 ‘thus, like that’
- (m) *xʷənčətə-tθeʔ*  
*xʷən-čətə ʔə tθéʔ*  
 still-be.doing    OBL    that  
 ‘while doing that, in the course of that’
- (n) *słénəy ʃa ʃxʷ-čətə-s*      [*ʔə*]      *tθéʔ*. (JP)  
 woman    BE3P    OBLNOM-be.doing-3POS    OBL    that  
 ‘She’s a woman, that’s why she does that.’
- (o) *wél-x čxʷ neṃ ʔə tθéʔ*. (AG)  
 throw-TR    you    go    OBL    him  
 ‘Throw it to him.’
- (p) *təlíʔ ʔə kʷθéʔ i ...* (CC 21)  
*təlíʔ ʔə kʷθéʔ ʔəy*  
 from    OBL    DEM(MN)    and  
 ‘from that [time, event], after that, from then on ...’

In (l) to (n), the *stəʔé* ‘be like’ and *čətə* ‘be doing’ are intransitive but can have objects in the oblique case. In (o), *neṃ* is a verb denoting motion, but it is used here as a preposition; the main verb denotes an action that normally has a human recipient and so the demonstrative refers to a human being. In (p), the demonstrative might also be interpreted as a locative.

The locative demonstratives formed with *ʔi* and *niʔ* generally refer to things and not to people.

- (q) stém ti'í. (AG)  
 what this(MP)  
 'What's this?'
- (r) há'k<sup>w</sup>-əx ɪe tə'í. (CC)  
 be.used-TR PER this(MP)  
 'Use this!'
- (s) nə-st<sup>θ</sup>f? tə'ínə. (JP)  
 my-loot this(MP)  
 'This is my loot.'
- (t) stém k<sup>w</sup>ə tənɪ?. (CC)  
 what then that(MP)  
 'What's that?'

Those formed with *-nía* more often refer to people.

- (u) tэм-c təńa. (AG)  
 what-tribe this(MP)  
 'Where is this man from?'
- (v) ném cə ʔaɪ ɪtətəs θəńá tə shés tə sʔit<sup>θ</sup>əm ni hak<sup>w</sup>əxəs k<sup>w</sup>s

 shé-s tə sʔit<sup>θ</sup>əm ni hak<sup>w</sup>-əx-əs k<sup>w</sup>  
 remainder-3POS ART blanket AUX use-TR-3TR ART  
 s-yé-qəw-ətən  
 NOM-along-pay-others  
 'This woman will go around distributing the remainder of the blankets  
 that she used to pay the people.'
- (w) ʒa sé·nʒe yəńa. (JP 29)  
 BE3P senior they  
 'They are older ones.'
- (x) ʒáɪəm ctwaʔ yəńáɪtən. (JP)  
 BE3P(PL) SPEC they  
 'They must be the ones.'
- (y) ʒa k<sup>w</sup>əńá. (AG)  
 BE3P that(MR)  
 'He's the one [just out of sight].'
- (z) ʔi qíqəw k<sup>w</sup>səńá. (JP)  
 AUX be.menstruating that(FR)  
 'She's having her period.'

The last sentence answers the question, “Why isn’t your wife helping?” The auxiliary *?i* indicates that she is nearby but the form *k<sup>w</sup>sə́nǎ́* indicates that she is out of sight.

The locative demonstratives in these examples are all direct adjuncts. In (aa), a locative demonstrative is an oblique adjunct.

- (aa) *ǰe nəw steʔé ʔaǎ ə təʔínə.* (CC 28)  
*ǰe niʔ wə-stəʔé ʔaǎ ʔə təʔínə*  
 also AUX EST-like just OBL this  
 ‘It’s the same as this.’

When used as either direct or oblique adjuncts, the third-person demonstratives refer to persons only.

- (bb) *néǎ ʔə k<sup>w</sup>ə təwǰa.* (CC)  
*go ROG then that(MP)*

 ‘I’m working for him.’
- (jj) steʔé cən [ʔə] təwʔa. (CC)  
 be.like I [OBL] that(MP)  
 ‘I’m the same as him.’
- (kk) səw kʷəcnəxʷs kʷəwʔá tə nácaʔ smáyəθ ʔa yəwéwəłətəs tə  
 stəłqáyə. (CC 16)  
 s-wə-kʷəc-nəxʷ-s kʷəwʔá tə nácaʔ smáyəθ ʔa  
 NOM-EST-see-TR-3POS DEM(MR) ART(MP) one deer BE3P  
 yə-wéwəł-ət-əs tə stəłqáyə  
 along-be.chasing-TR-3TR ART wolves  
 ‘Then he [deceased] saw a deer, which was the one that the wolves were chasing.’

In this last sentence, the narrator (AC) identified the principal character, his deceased junior cousin, with a form that shows deceased status, but for the deer and the wolves, he used present visible forms.

There is an anaphoric restriction, mentioned above, on the use of the third-person demonstratives: after *-əs* ‘third-person transitive subject,’ *təwʔa*, and so on can refer to the transitive subject only. The implications of this for syntax are discussed in §3.4.2.

#### 15.2.4.2. Locative Uses

Demonstratives of the simple and the locative sets, standing as oblique adjuncts after verbs denoting location or directional motion, serve as locatives.

With *ʔi* ‘be here’ and *niʔ* ‘be there’ used both as main verbs and as prepositions, these demonstratives have the senses ‘here’ and ‘there.’

- (a) ni cə niʔ kʷθéʔ. (JP)

 face      you      [OBL]      that (MP)  
 ‘Look that way.’

**15.3. THE DEMONSTRATIVE AUXILIARIES**

There is a set of four words that play the same role syntactically as the locative auxiliaries (§3.2.1), while calling attention to the existence of an entity or the immediacy of an event and identifying it as to gender. Each of the four has an initial element seemingly identifiable as a locative auxiliary. This is followed by the oblique particle  $ʔ$  and an article  $t\acute{a}$  (MP) and  $\theta\acute{a}$  (FP). The article agrees in gender with whatever the word calls attention to. The demonstrative auxiliaries are shown in Table 15.5.

*Table 15.5*

**The demonstrative auxiliaries**

	Non-feminine	Feminine	Plural
$ʔi$ ‘be here’	$ʔiʔ\acute{a}t\acute{a} \sim$ $ʔi\acute{a}t\acute{a} \sim ʔi't\acute{a}$	$ʔiʔ\acute{a}\theta\acute{a} \sim$ $ʔi\acute{a}\theta\acute{a} \sim ʔi'\theta\acute{a}$	
$n\acute{a}$ ‘be over there’	$n\acute{a}ʔ\acute{a}t\acute{a} \sim n\acute{a}'t\acute{a}$	$n\acute{a}ʔ\acute{a}\theta\acute{a} \sim n\acute{a}'\theta\acute{a}$	$n\acute{a}ʔ\acute{a}y\acute{e}$

The initial element  $ʔi-$  is certainly  $ʔi$  ‘be here.’ The  $n\acute{a}-$  (or  $n\acute{a}ʔ-$ ) is probably a variant of  $n\acute{i}ʔ$  ‘be there.’ The Cowichan forms (cf. Leslie 1979, 103), which are used by AG, show a variant of  $ʔi$  as well; they are  $ʔ\acute{e}ʔ\acute{a}t$ ,  $ʔ\acute{e}ʔ\acute{a}\theta$ ,  $n\acute{a}ʔ\acute{a}t$ ,  $n\acute{a}ʔ\acute{a}\theta$ .

Like other auxiliaries, the demonstrative auxiliaries precede the predicate head.

In (j), (k), and (l), the locative is repeated again in the demonstrative following the oblique particle.

- (j) náʔətə níʔ ə təníʔ (təwǎ́a). (CC)  
 náʔətə níʔ ʔə təníʔ təwǎ́á  
 be.there be.there OBL that he  
 ‘There he is. He is there.’
- (k) náʔəθə níʔ ə təníʔ. (CC)  
 náʔəθə níʔ ʔə təníʔ  
 be.there be.there OBL that  
 ‘There she is. She is there.’
- (l) ʔi·tə ʔi· təʔínə təńa qál. (JP 27)  
 ʔiʔətə ʔí ʔə təʔínə təńa qál  
 be.here be.here OBL this this bad  
 ‘Here is this bad one.’

The plural form was recorded only once, in (m).

- (m) náʔəýe hən hónqʷ. (CC)  
 be.over.there(PL) be.falling.asleep  
 ‘They are falling asleep.’

Presumably the ýe in the locative auxiliary is the element yə that appears in other plural forms. I do not know why the /y/ is glottalized.

# 16

## Predicate Particles and Tags

Under this heading, I have grouped three sets of particles (as defined in §2.7): the clause-initial particles, the second-position predicate particles, and the sentence-final tags.

### 16.1. CLAUSE-INITIAL PARTICLES

These are the two clause subordinators *wə-* ‘if, when, that,’ and *ʔət-* ‘whenever, whatever, that,’ and the two clause nominalizers *s-* ‘nominalizer’ and *šxw-* ‘oblique nominalizer.’ For uses of the first two, see §4.2, “Subordinate Clauses”; for uses of the second two, see §4.3, “Nominalized Clauses.”

### 16.2. SECOND-POSITION PREDICATE PARTICLES

There are more than twenty particles that can appear within the predicate. Some were introduced in §3.1.2. Here we will examine all that I have recorded. Most of them are mobile, appearing after the first word of the predicate whatever that may be. If the only word is the head, the particle will follow it; if the head is preceded by an auxiliary, the particle will follow the auxiliary; if the auxiliary is preceded by an adverb, the particle will follow the adverb. Two of these particles, however, can become more firmly attached to words and override this principle. A few can also appear in nominal adjuncts.

Four of the second-position particles are main-clause subject markers, two mark tense, one is restrictive in sense, while the rest are, broadly speaking, modal. The subject markers are *cən* ‘I,’ *čxw* ‘you,’ *ct* ‘we,’ and *ce·p* ‘you plural’ (see §14.2.1). The two tense markers are *-ət* ‘past’ and *ceʔ* ‘future.’ The particle *ʔal*, often glossed ‘just, only,’ is restrictive in sense. The particles *-ət* ‘past’ and *ʔal* ‘just’ are the ones that seem occasionally to behave like word suffixes. The modal particles distinguish questions, requests, quality of information and degree of certainty, relationship to previous assumptions, emotional tone, and so on.

Semantically, the modal particles present greater problems than perhaps any other feature of the language. Some are very common and their meanings are

generally quite clear, and yet one of these can appear in a rare context and suddenly be pretty opaque. Others seem to occur in only a few contexts, and I have too few examples to be sure of their meanings. All of them, of course, occur in sentences with intonation patterns that have not yet been worked out, and some of them no doubt convey feelings that are expressed by English intonation patterns. An ideal description, therefore, would set the Halkomelem particles in their intonational contexts and gloss them with English words and intonation patterns.

Many of the second-position predicate particles can co-occur and do so in a fixed order. When *ʔə* ‘interrogative’ and *ɣəx<sup>w</sup>* ‘inferential’ occur together, *ʔə* always precedes *ɣəx<sup>w</sup>*; these two always precede the subject markers; *mə* ‘certain’ always follows the subject markers; and so on. Some, like *ceʔ* ‘future’ and *tə* ‘imperative,’ have never been discovered in the same clause and seem to occupy the same position in relation to the others. Table 16.1 lists the second-position predicate particles by the positions they occupy. In the materials available, however, not all appear often enough with others to make the ordering of all of them certain.

Table 16.1

Order of second-position predicate particles											
1	2	3	4	5	6	7	8	9	10	11	12
<i>-ət</i>	<i>ʔə</i>	<i>ɣəx<sup>w</sup></i>	<i>cən</i>	<i>čə</i>	<i>ceʔ</i>	<i>ʔəl</i>	<i>mə</i>	<i>k<sup>w</sup>ə</i>	<i>k<sup>w</sup>t</i>	<i>waʔ</i>	<i>ʔaʔa</i>
‘past’	ROG	INF	‘I’	QUOT	FUT	‘just’	CERT	‘then’	‘yet’	PRES	ROG!
			<i>čx<sup>w</sup></i>	<i>ʔe</i>	<i>tə</i>	<i>ʔewət</i>	<i>čtwaʔ</i>	<i>qə</i>			
			‘you’	PLPR	PER	REAS	SPEC	EMPH			
			<i>ct</i>			<i>yet</i>		<i>θət</i>			
			‘we’			EXP		ADV			
			<i>cep</i>								
			‘you’								

These particles, with the exception of the coordinate subject markers (*cən*, *čx<sup>w</sup>*, etc.), are described below in the order in which they are listed in Table 16.1.

### 16.2.1. *-ət* ‘past’

Phonologically this behaves like a suffix, having no initial glottal stop and always coalescing with a final vowel, and so I write it as such. Grammatically, however, it is a particle in that it (usually) follows inflectional suffixes (but not altogether consistently). It has, it seems, unusual freedom in where it can occur. It can follow words of any type, including auxiliaries, adverbs, personal words, demonstratives, and others that take few if any other particles or suffixes.

Following a verb head in a predicate with no auxiliary, *-əl* indicates past intention or incipient action, as in (a) and (b).

- (a) *čéwət-əl cən.* (JP, AG, DK)

*čéw-ət-əl cən*  
 help-TR-past I  
 ‘I was going to help him.’

- (b) *čéwətəl ?ə čx<sup>w</sup>.*

*čéw-ət-əl ?ə čx<sup>w</sup>.*  
 help-past ROG you  
 ‘Were you going to help him?’

There are only two occurrences, (c) and (d), of this form in texts dictated by CC, and she interpreted both as simple past.

- (c) *k<sup>w</sup>écətəl cən nəcéləx i wəłstətíq<sup>w</sup> tə nəsənəčcəs.* (CC 12)

*k<sup>w</sup>éc-ət-əl cən nə-céləx ?əy wəł-stətíq<sup>w</sup> tə*  
 see-TR-past I my-hand and already-cut.through ART  
*nə-sənəčcəs*  
 my-finger

‘I looked at my hand and my finger was already cut through.’

- (d) *sá?asəməl wəlk<sup>w</sup>əcnəx<sup>w</sup>əs ...* (CC 16)

*sé?-as-əm-əl wəł-k<sup>w</sup>əc-nəx<sup>w</sup>-əs*  
 raise-head-INTR-past already-see-TR-3TR  
 ‘He lifted his head and saw ...’

However, in these contexts these forms could easily be reinterpreted as incipient past; (c) might better be ‘When I turned to look at my hand, my finger was already cut through,’ and (d) might better be ‘He went to raise his head and saw ...’ or ‘As he raised his head, he saw ...’ In other contexts (with auxiliaries, etc.) there seems to be no question that *-əl* is simply ‘past.’

Following auxiliaries, *-əl* produces what is often translated as an English perfect tense.

- (e) *niəl (~ ni·t) cən čéwət.*

*ni-əl cən čéw-ət*  
 AUX-past I help-TR  
 ‘I had helped him.’

- (f) *ni·t cən wəl(h)áy q<sup>w</sup>áq<sup>w</sup>əl k<sup>w</sup> x<sup>w</sup>əné?ent ...* (JP 8)

*ni-əl cən wəł-háy q<sup>w</sup>áq<sup>w</sup>əl k<sup>w</sup>*  
 AUX-past I already-finish be.speaking ART  
*x<sup>w</sup>ə-né?ent*  
 become-being.night

‘I have already spoken to you last night ...’

In relative clauses, it produces what is interpreted as a simple past.

- (g)  $k^w\theta\partial$   $ni\text{-}\partial\ddot{t}$   $\acute{c}\acute{e}w\partial\theta\grave{a}m\chi$   
 $k^w\theta\partial$       $ni\text{-}\partial\ddot{t}$       $\acute{c}\acute{e}w\text{-}\partial\text{-}S\grave{a}m\chi$   
 ART     AUX-past     help-TR-me  
 ‘the one who helped me’

There seems to be, however, some variation in where it is placed and its relationship with a subordinate subject marker. Compare (h) and (i):

- (h)  $k^w\theta\partial$   $ni\text{-}n\partial\ddot{t}$   $\acute{c}\acute{e}w\partial$  (JP)  
 $k^w\theta\partial$       $ni\text{-}n\partial\ddot{t}$       $\acute{c}\acute{e}w\text{-}\partial\text{-}$   
 ART     AUX-I-past     help-TR  
 ‘the one I helped’
- (i)  $t\partial$   $ni\partial\ddot{t}$   $\acute{c}\acute{e}w\partial\acute{e}\text{-}n$   $sw\acute{a}y\acute{q}e?$  (AG)  
 $t\partial$       $ni\text{-}\partial\ddot{t}$       $\acute{c}\acute{e}w\text{-}\partial\text{-}\acute{e}\text{-}n$       $sw\acute{a}y\acute{q}e?$   
 ART     AUX-past     help-TR-I     man  
 ‘the man I helped’

In (h), the  $\text{-}\partial\ddot{t}$  follows the subordinate subject marker  $\text{-}n$  ( $\sim\text{-}\acute{e}\text{-}n$ ) ‘I,’ but in (i), the  $\text{-}\partial\ddot{t}$  seems to have pushed the subordinate subject marker over to the predicate head.

In relative clauses, the  $\text{-}\partial\ddot{t}$  can also follow the predicate head:

- (j)  $k^w\theta\partial$   $ni$   $h\acute{a}y\partial\ddot{t}$   $s\acute{x}\partial\acute{x}\partial\ddot{t}n\acute{e}t$  (CC)  
 $k^w\theta\partial$       $ni$       $h\acute{a}y\text{-}\partial\ddot{t}$       $s\acute{x}\partial\acute{x}\partial\ddot{t}n\acute{e}t$   
 ART     AUX     finish-past     week  
 ‘last week’
- (k)  $ni$   $c\grave{a}n$   $w\acute{a}\acute{k}^w\acute{a}c\grave{n}\acute{x}^w$   $k^w\theta\partial$   $ni$   $h\acute{a}^?k^w\acute{x}\acute{x}\partial\ddot{t}$   $k^w\text{s}\theta\acute{e}\acute{q}ts$   $t\partial$   $q^w\acute{t}\acute{a}\text{-}y\theta\grave{a}n$ .  
 (JP 23)  
 $ni$       $c\grave{a}n$       $w\acute{a}\text{-}\acute{k}^w\acute{e}c\text{-}n\acute{x}^w$       $k^w\theta\partial$       $ni$       $h\acute{a}^?k^w\text{-}\acute{x}\text{-}\acute{x}\text{-}\partial\ddot{t}$

- (u) k<sup>w</sup>əńa-ł spánwə (DK)  
k<sup>w</sup>əńa-əl spánwə  
that(MR)-past summer[?]  
'last summer'

With possessed nouns, the position of *-əl* 'past' in relation to the possessive seems variable. Compare (v) and (w):

(v) k<sup>w</sup>θə s-yəwén-əł-ct (CC)  
 ART NOM-before-past-our  
 ‘our ancestors’

(w) k<sup>w</sup>θə s-yəwén-s-əł (JP)  
 ART NOM-before-3POS-past  
 ‘his ancestors’

The -əł ‘past’ is followed by a lexical suffix in at least one word: šx<sup>w</sup>nétəłqən ‘breakfast’ (< *nétəł* ‘morning,’ itself < *nét* ‘night’).

### 16.2.2. ʔə ‘interrogative’ (ROG)

This converts a statement or possible statement into a yes-or-no question. It does not occur with an interrogative word.

(a) ni ʔə lə́c̣.  
 AUX ROG full  
 ‘Is it full?’ (cf. *ni lə́c̣*. ‘It’s full.’)

(b) ném̄ ʔə ʔéłtən.  
 go ROG 3PL  
 ‘Are they going?’ (cf. *ném̄ ʔéłtən*. ‘They’re going.’)

(c) spēʔeθ ʔə.  
 bear ROG  
 ‘Is it a bear?’ (cf. *spéʔeθ c̣ə*. ‘It’s said to be a bear.’)

(d) ni ʔə čx<sup>w</sup> k̄<sup>w</sup>ác̣nəx<sup>w</sup>.  
 ni ʔə čx<sup>w</sup> k̄<sup>w</sup>éc̣-n-əx<sup>w</sup>  
 AUX ROG you see-TR-you  
 ‘Did you see him?’

(e) ṣ̌a ʔə ʔən-hólk<sup>w</sup>.  
 BE3P ROG you-be.breaking [pocketknife]  
 ‘Is it your pocketknife?’

(f) céw-ət-əł ʔə čx<sup>w</sup>.  
 help-TR-past ROG you  
 ‘Were you going to help him?’

The interrogative particle tends to assume the quality of a preceding vowel or to coalesce with it; thus *ṣ̌a ʔə* may become *ṣ̌a ʔa*, *ni ʔə* may become *ni*, and so on. Following an unstressed schwa, the interrogative particle may cause the stress to shift to it and may coalesce with it as a long *e*. Thus *//ʔəwə ʔə//* quite regularly becomes *ʔəwé ʔe* or *ʔəwé*, while *//-ámə ʔə//* may become *-amé ʔe* or *-amé*, as in (g) and (h).

- (g) ʔəwé· cən némè·n.  
 ʔəwə ʔə cən ném·e·n  
 not ROG I go-I  
 ‘Can’t I go?’
- (h) x<sup>w</sup>əyθàmé ʔe cən.  
 x<sup>w</sup>əy-t-Samə ʔə cən  
 wake-TR-you ROG I  
 ‘Shall I wake you?’

### 16.2.3. yəx<sup>w</sup> ‘inferential’ (INF)

This indicates that a statement is based on inference. In translations we often find ‘must’ in the sense of necessary inference (e.g., ‘He must have gone’) as opposed to obligation (e.g., ‘I must go’).

- (a) ni yəx<sup>w</sup> wəł-háyeʔ.  
 AUX INF already-leave  
 ‘He must have left.’
- (b) ni yəx<sup>w</sup> k<sup>w</sup>ə́n-ət-əm.

 ‘I got something in my eye. I wonder if you would try to get it out for me.’
- (e) ni ʔə yəx<sup>w</sup> ʔusθəθíʔ k<sup>w</sup>θə snóx<sup>w</sup>əłct. (AG)  
 ni ʔə yəx<sup>w</sup> ʔu-sθəθíʔ k<sup>w</sup>θə snóx<sup>w</sup>əł-ct  
 AUX ROG INF EST-right ART canoe-our  
 ‘I wonder if our canoe is all right.’

For other uses of yəx<sup>w</sup> with *mə* and other particles, see those below.

### 16.2.4. cə ‘quotative’ (QUOT)

This indicates that the statement is based on hearsay.

- (a) *n ém̄ cə təwʎa.*  
 go QUOT that(MP)  
 ‘He is going, they say.’
- (b) *spéʔeθ cə.*  
 bear QUOT  
 ‘It is said to be a bear. It is supposed to be a bear.’
- (c) *sʎéləqəm-əʎ cə. (JP 6)*  
 dangerous.being-past QUOT  
 ‘It is said that it was a dangerous being.’
- (d) *ni cən cə n ém̄.*  
 AUX I QUOT go  
 ‘I’m supposed to have gone. It is said that I went.’
- (e) *ni cə tʰəʎtén-t-əm.*  
 AUX QUOT poison-TR-INTR  
 ‘He was poisoned, according to rumour.’

Compare (e) with (f).

- (f) *ni m̄ə tʰəʎtén-t-əm.*  
 AUX CERT poison-TR-INTR  
 ‘He was certainly poisoned.’

Preceding the particles *ceʔ* ‘future’ and *θəʎ* ‘adversative,’ *cə* appears as *c̣*. See *ceʔ* for an example of *c̣ceʔ* and *θəʎ* for an example of *c̣θəʎ*.

### 16.2.5. ʔe· ‘plural imperative’ (PLPER)

This expresses a request or instruction to several. It may, but need not, be followed by *tə* ‘imperative-optative.’

- (a) *háy ʔe· (AG)*  
 stop PLPER  
 ‘Cut it out, you people!’
- (b) *hí-m ʔe· (AG)*  
 pick PLPER  
 ‘Pick (you several)!’
- (c) *hí-m ʔe· ʎe, hí-m ʔe· ʎe. (CC)*  
 pick PLPER PER pick PLPER PER  
 ‘You kids keep on picking.’
- (d) *kʷəyʎ-θət ʔe· ʎe. (CC)*  
 move-self PLPER PER  
 ‘Do something about it, all of you.’

- (e) ʔə́tən ʔè· ɬe. (JP)  
eat PLPER PER  
'Go ahead and eat it, all of you.' (to children at the table)

AG, in contrast to CC and JP, put the ʔe· after the ɬe when using both in (f).

- (f) ʔi ɬé ʔe·.  
AUX PLPER PER  
'Let's go.'

### 16.2.6. ceʔ 'future' (FUT)

This simply indicates future time.

- (a) k̄ʷáqʷ čxʷ ceʔ.  
get.hit you FUT  
'You'll get hit.'

**16.2.7. *lə* ~ *le* ‘imperative-optative’ (PER)**

This expresses a request or a wish. A request or command can consist of the verb alone or with a second-person subject particle or (if made to several) with *ʔe* ‘plural imperative,’ as in (a) to (d).

- |  |   |
|--|---|
| (a) <i>n é m̄.</i><br>go<br>‘Go!’  | (b) <i>n é m̄    č x w̄.</i><br>go        you<br>‘(You) go!’        |
| (c) <i>n é m̄    ce . p̄.</i><br>go        you(PL)<br>‘(You people) go!’ | (d) <i>n é m̄    ʔ e .</i><br>go        PLPER<br>‘(You people) go!’ |

But a request may also be expressed with *lə*, as in (e) to (l).

- |   |  |
|---|--|
| (e) <i>n é m̄    l ə .</i><br>go        PER<br>‘Go!’  | (f) <i>n é m̄    ʔ e .    l ə .</i><br>go        PLPER    PER<br>‘You all go!’   |
| (g) <i>h é ȳ        l ə    n é m̄ .</i><br>go.ahead    PER    go<br>‘Let’s go! Go ahead and go!’                                 | (h) <i>ʔ ə m̄ í l ə    č é w ə θ à m x̄ .</i><br><i>ʔ ə m̄ í    l ə    č é w - ə t - S à m x̄</i><br>come    PER    help-TR-me<br>‘Come and help me.’              |
| (i) <i>ʔ á ʔ θ ə t l ə    č ʔ ə m̄ .</i><br><i>ʔ e ʔ - θ ə t    l ə    č ʔ ə m̄</i><br>test-self    PER    jump<br>‘Try to jump.’ | (j) <i>ʔ á x w̄ ə s t l ə    t ə w ʔ a .</i><br><i>ʔ e x w̄ - ə s - t        l ə        t ə w ʔ a</i><br>give-RECIP-TR    PER        that(MP)<br>‘Give it to him.’ |
| (k) <i>ʔ ʰ i x w̄ ə m    l ə    č é w - ə t .</i><br>pity        PER    help-TR<br>‘Please help him.’                             | (l) <i>n ə w ə - s        l ə .</i><br>be.you-PERM    PER<br>‘You be the one.’   |

The particle *lə* may combine with *k<sup>wə</sup>* ‘consequential’ as *lk<sup>wə</sup>*:

- (m) *ʔ ə m ə t l k w ə .*  
*ʔ ə m ə t    l ə        k w ə*  
sit        PER        then  
‘Sit down then. Try to sit down. Sit down and let’s see how it goes.’

It may also combine with *q̇ə* ‘emphatic’ as *lq̇ə*:

- (n) *ʔ ə m ə t l q̇ ə .*  
*ʔ ə m ə t    l ə        q̇ ə*  
sit        PER        EMPH  
‘Sit down, won’t you! For Pete’s sake, sit down!’

The combination of *tə* and *ʔal* ‘restrictive’ expresses hope. The usual translation is ‘I hope (that) ...,’ but a more literal translation might be ‘may it be that ...’ Examples are (o) to (u).

- (o) *mí*            *tə*        *ʔal*        *x<sup>wə</sup>-ʔí*.  
 AUX(come)    PER        just        become-be.here  
 ‘I hope he comes.’
- (p) *mí*        *čx<sup>w</sup>*    *tə*        *ʔal*        *x<sup>wə</sup>-ʔí*.  
 come        you    PER        just        become-be.here  
 ‘I hope you come.’
- (q) *niʔ*        *tə*        *ʔal*        *xtéʔ-stəx<sup>w</sup>*.  
 AUX        PER        just        do-COM  
 ‘I hope he does it.’
- (r) *niʔ*        *čx<sup>w</sup>*    *tə*        *ʔal*        *xtéʔ-stəx<sup>w</sup>*.  
 AUX        you    PER        just        do-COM  
 ‘I hope you do it.’
- (s) *niʔ cən tə ʔal k<sup>wə</sup>čnəx<sup>w</sup>*.  
*niʔ cən tə ʔal k<sup>wə</sup>ec-nəx<sup>w</sup>*  
 AUX    I        PER        just        see-TR  
 ‘I hope I see it.’
- (t) *wə-θəʔít*    *tə*        *ʔal*        *técəl*.  
 EST-true        PER        just        arrive.here  
 ‘I hope it’s true that he comes.’
- (u) *mí*            *tə*        *ʔal*        *wə-θəʔít*    *técəl*.  
 AUX(come)    PER        just        EST-true        arrive.here  
 ‘I hope he really comes.’

The co-occurrence of *tə* and *ʔal* may, however, be accidental, as in

- (v) *wə-ʔí*            *tə*        *ʔal*.  
 EST-be.here    PER        just  
 ‘Stay here!’

in which *tə* makes a command of *wəʔí ʔal* ‘just be here.’

This particle appears stressed as *té* following *ʔi* or *heʔ* with the sense ‘Let’s’ (see §3.2.4).

### 16.2.8. *ʔal* ‘just’

This often serves to limit in some way the word it follows. Often, though not always, this word is preceded by *wə-* ‘established’ (§11.1.1). Often a translation is not needed, but if one is needed, it is usually ‘just’ or ‘only.’ The

particle is unusual in that it commonly follows the predicate head rather than simply the first word in the predicate.

When the predicate head stands alone, *ʔaɿ* appears in the order indicated by its position in Table 16.1, namely, following *ceʔ* ‘future’ or *tə* ‘imperative’ and preceding *mə* ‘certain’ or *kʷə* ‘then,’ as in (a), (b), and (c).

- (a)  $\dot{q}\acute{o}l\acute{e}m$   $ceʔ$   $ʔaɿ$   $ʔ\acute{e}t\acute{t}\acute{e}n$ .  
 camp FUT just 3PL  
 ‘They’ll just stay (camp) there.’
- (b)  $n\acute{i}ʔ$   $ceʔ$   $ʔaɿ$   $t\theta\acute{e}ʔ$   $kʷs\acute{c}\acute{e}y\acute{x}ʷs$ .  
 $n\acute{i}ʔ$   $ceʔ$   $ʔaɿ$   $t\theta\acute{e}ʔ$   $kʷ$   $s-\acute{c}\acute{e}y\acute{x}ʷ-s$   
 AUX ROG just that/there ART NOM-dry-3POS  
 ‘It will stay there to get dry.’
- (c)  $kʷ\acute{e}kʷ\acute{e}c$   $ce-p$   $ʔaɿ$   $kʷ\acute{e}$ .  
 be.looking you(PL) just then  
 ‘Just watch then.’

Normally the *ʔaɿ* follows an auxiliary as in (c); however, a predicate head enclosed by the combination  $w\acute{e}_2 \dots$  *ʔaɿ* can be preceded by an auxiliary, as in (d).

- (d)  $n\acute{i}$   $c\acute{e}n$   $w\acute{e}t\acute{i}t\acute{e}qʷn\acute{x}ʷ$   $ʔaɿ$ .  
 $n\acute{i}$   $c\acute{e}n$   $w\acute{e}-t\acute{i}t\acute{e}qʷ-n\acute{x}ʷ$   $ʔaɿ$ .  
 AUX I EST-be.bumping-TR just  
 ‘I just kept accidentally bumping him.’

Moreover, as indicated elsewhere (§3.8.3),  $w\acute{e}_2 \dots$  *ʔaɿ* can enclose what are simply adjective-like forms, in which this combination of prefix and particle seems to have no lexical meaning at all.

- (e)  $\acute{\lambda}a$   $h\acute{a}ʔkʷ$   $n\acute{i}$   $kʷ\theta\acute{e}w$   $s\acute{x}\acute{e}x\acute{e}m$   $ʔaɿ$   $q\acute{a}ʔ$ . (JP 23)

 come ADV eat  
 ‘Come and eat now!’ (instead of standing there)
- (m) *ʔəltən θəl.*  
 eat ADV  
 ‘Go ahead and eat now!’ (instead of sitting there)

### 16.2.16. *k<sup>w</sup>l* ‘by now, by then’(?)

This has been recorded in a few sentences following *híθ* ‘be a long time.’

- (a) *híθ k<sup>w</sup>l. (AG)*  
 last.long yet  
 ‘What a long time it has been!’
- (b) *híθ k<sup>w</sup>l yeł sis x<sup>w</sup>k<sup>w</sup>ən yəθéłəy. (JP)*  
 híθ k<sup>w</sup>l yeł s-ni-s x<sup>w</sup>k<sup>w</sup>ən yəθéłəy  
 last.long yet after.which NOM-AUX-3POS lose one.person  
 ‘It was a long while before they lost one of their number.’

This predicate particle *k<sup>w</sup>l* is distinct in function from the *k<sup>w</sup>l* that can appear after *ʔəwə* ‘not’ or *ʔəwəte?* ‘none’ and be followed by a relative clause (§6.1.3, 6.3). That *k<sup>w</sup>l* is probably an article (§15.1). However, in sentences with *ʔəwəte?* *k<sup>w</sup>l* ..., it is easy to infer a meaning ‘yet, up to now,’ as in (c).

- (c) *ʔəwəte? k<sup>w</sup>l x<sup>w</sup>əʔínsamx. (AG)*  
 ʔəwəte? k<sup>w</sup>l x<sup>w</sup>ə-ʔí-nəs-amx  
 none ART become-be.here-GOAL-me  
 ‘Nobody has gotten to me [yet].’ (lit. ‘The one who has reached me here is none.’)

Such an ascription of meaning may possibly have led to the use of the article as a predicate particle.

**16.2.17. *wa?* ‘presumptive’ (PRES)**

This seems to indicate that the statement is presumed by the speaker or someone else to be true, while also indicating doubt or surprise. Not many examples of usage have been recorded, however, and so this is one of the more elusive particles. It may be a component in the particle *ćtwa?* ‘speculative’ (§16.2.12) and possibly in the adverbs *?iwaʷə* ‘maybe’ (§18.4.34) and *wá:lə* ‘probably’ (§18.4.35), all of which also express some qualification about the truth of a statement.

In (a) and (b), *wa?* seems to have an inferential sense.

(a) *híθ-əł cən kʷł wa? ?iʔtət.* (JP 10)  
 last.long-past I yet PRES be.sleeping  
 ‘I must have been sleeping a long time.’

### 16.3. SENTENCE-FINAL TAGS

These occur as final elements in sentences. Two have been recorded.

#### 16.3.1. ʔa ~ ʔe ‘question tag’

This is added to a statement to seek confirmation.

- (a) cák<sup>w</sup> k<sup>w</sup>θə Darrington ʔa. cá·k<sup>w</sup> ǵə. (AG)  
 far ART Darrington eh? far EMPH  
 ‘So Darrington is a long way, eh? Sure, *fa---r!*’

#### 16.3.2. yé ‘taunting echo’

This expresses a thought supposedly held by another before his downfall.

- (a) swáʔqeʔ cən yé. (AG)  
 man I eh?  
 ‘I’m a man!’ or perhaps ‘I’m a man? Ha!’ (said to someone after he has been beaten in a contest of strength)
- (b) šx<sup>w</sup>áx<sup>w</sup>aʔ cən yé. (AG)  
 light I eh?  
 ‘So I’m a fast runner, eh?’ (lit. ‘I’m light, eh?’ said to the once-proud loser of a footrace)

AG suggested that this may be identical to the response *yé* used by listeners to a myth recital to encourage the narrator to continue, the common meaning being ‘so you said.’

# 17

## Interrogative Words

These are words that ask questions eliciting information. In this context, some correspond to the English interrogatives ‘who,’ ‘what,’ ‘when,’ ‘where,’ and so on, while others correspond to verbal phrases such as ‘do what,’ ‘say what,’ ‘go where,’ and so on. Interrogative words can also appear in embedded questions and in indefinites such as ‘somebody,’ ‘anywhere,’ and so on.

In simple questions, interrogative words function as predicate heads, for example, *wét* ‘who’ in (a), in which the subject is a relative clause.

- (a) *wét kʷə kʷə ʔi ʒé·nəq.* (CC)  
*wét kʷə kʷə ʔi ʒé·nəq*  
 who then ART AUX be.potlatching  
 ‘Who is potlatching?’ (lit. ‘Who then is the one who is potlatching?’)

An embedded question, such as ‘who took it’ in ‘I know who took it,’ is expressed by a subordinate clause with the interrogative word as its predicate head, as in (b).

- (b) *ʔəqəl·ləxʷ cən ʔuwétəs kʷθə ni kʷənət.* (AG)  
*ʔəqəl·ləxʷ cən wə-wét-əs kʷθə niʔ kʷən-ət*  
 know-TR I that-who-3SUB ART AUX get.taken-TR  
 ‘I know who took it.’

When interrogative words appear in adjuncts, they have an indefinite sense, as *wét* ‘who’ in (c).

- (c) *wəkʷənətəs kʷ wét ...* (CC 17)  
*wə-kʷən-ət-əs kʷə wét*  
 if-get.taken-TR-3SUB ART who  
 ‘if he takes anybody ...’

Usually they appear with other elements giving the sense ‘any,’ ‘every,’ and ‘no.’ Examples are given under the individual words below.

It seems that an interrogative word can also appear as a predicate head and have an indefinite sense if it bears a third-person subordinate subject suffix, such as *stém* ‘what’ in (d).

- (d) *stéməs k<sup>w</sup>θə ni·n k<sup>w</sup>əcnəx<sup>w</sup>*. (CC)  
*stém-əs k<sup>w</sup>θə ni<sup>?</sup>-ən k<sup>w</sup>éc-nəx<sup>w</sup>*  
 what-3SUB ART AUX-I look-TR  
 ‘I saw something.’

It is not clear why there is a subordinate subject marker in what appears to be a main clause. Perhaps a sentence like (d) is an ellipsis of something like ‘I don’t know what it was I saw.’

As indicated in the section on particles (§16.2.2), interrogative words cannot be followed by the simple interrogative particle *ʔə*, but they may be followed by *ʔaʔa* ‘emphatic interrogative’ (§16.2.18). They are also often followed by the particle *k<sup>w</sup>ə* ‘then’ (§16.2.13), often left untranslated.

The interrogative words are listed in Table 17.1 after their roots. They are described in the following sections in the order shown in the table. (Forms with lexical suffixes are omitted here but will be included in the later discussion.)

Table 17.1

**Interrogative words**

Root	Word	Gloss
<i>wet</i> ‘who’	1. <i>wét</i>	‘who?’
	2. <i>tx<sup>w</sup>wét</i>	‘whose?’
<i>tem</i> ‘what’	3. <i>stém</i>	‘what?’
	4. <i>témc</i>	‘what people?’
	5. <i>təmtém</i>	‘when?’
	6. <i>ctétəm</i>	‘be doing what?’
<i>cə-</i> ‘do what’	7. <i>cəstəx<sup>w</sup></i>	‘do what with it? ... about it?’
	8. <i>ctámət</i>	‘do what with oneself?’
	9. <i>x<sup>w</sup>cél</i>	‘go where?’
	10. <i>x<sup>w</sup>cəlθət</i>	‘go where?’
	11. <i>x<sup>w</sup>cəlstəx<sup>w</sup></i>	‘put it where?’
	12. <i>scék<sup>w</sup>əl</i>	‘how? how much?’
	13. <i>scək<sup>w</sup>əlím</i>	‘how? how constructed/intended?’
<i>ʔínt</i> ‘say what’	14. <i>x<sup>w</sup>ʔínt</i>	‘say what?’
	15. <i>sx<sup>w</sup>əʔínt</i>	‘what meaning?’
	16. <i>x<sup>w</sup>əʔínstəx<sup>w</sup></i>	‘say what to him?’
<i>ʔənəcə</i> ‘where’	17. <i>ʔənəcə</i>	‘where?’
	18. <i>ʔənəcəstəx<sup>w</sup></i>	‘put it where?’
<i>nəcím</i> ‘why’	19. <i>nəcím</i>	‘why?’
<i>k<sup>w</sup>ín</i> ‘how many’	20. <i>k<sup>w</sup>ín</i>	‘how many?’

**17.1. wét (CC, JP, AG), təwét (CC, DK) ‘WHO?’ wéʔəlt ‘WHO (PLURAL)?’ (AG)**

The form *təwét*, which CC used occasionally and DK regularly, is the usual Upriver form (Galloway 1977, 345).<sup>1</sup> A plural was recorded from AG only. Examples of usage follow.

- (a) wét tθéʔ. (JP)  
 who that  
 ‘Who is that guy?’
- (b) wét kʷə tθeʔ swáýqeʔ. (CC)  
 who then that male  
 ‘Who is that man?’
- (c) wét ceʔ kʷə m̄i céwəθàmə. (JP)  
 wét ceʔ kʷə m̄i céw-ət-Samə  
 who FUT ART AUX(come) help-TR-you  
 ‘Who is going to help you?’ (lit. ‘The one who comes to help you will be who?’)
- (d) wét kʷə kʷəná yə́m̄í. (CC)  
 wét kʷə kʷəná yə-ʔə́m̄í  
 who then that along-come  
 ‘Who is coming? Who is it then that’s coming?’

In the next three sentences, the subject is plural. CC and DK expressed plurality with demonstratives, AG with a plural ‘who.’

- (e) wét kʷə kʷəná-ítən yə́m̄í. (CC)  
 wét kʷə kʷəná-ítən yə-ʔə́m̄í  
 who then those along-come  
 ‘Who is coming? Who are those coming then?’
- (f) təwét yəθé́ləý. (DK)  
 who they  
 ‘Who are they?’
- (g) ʒa wéʔəlt kʷəθə ʔi yə-ʔí-məx. (AG)  
 BE3P who(PL) ART AUX along-be.walking  
 ‘Who are those walking (along)?’

The interrogative *wét* ‘who’ is used in asking for personal names. (For names of things, *stém* ‘what’ is used.)

1 That the *tə-* of *təwét* is a prefix rather than the article *tə* is clearly indicated by such Upriver forms as *wətəwétas* ‘who is it’ and *kʷə təwétas* ‘someone’ (Galloway 1977, 349, 373).

(h) wét k<sup>w</sup>e ʔeθk<sup>w</sup>íx. Jimmy. (JP)

wét k<sup>w</sup>ə ʔeT-sk<sup>w</sup>íx  
 who ART your-name  
 ‘What is your name?’ ‘Jimmy.’

As illustrated earlier, *wét* as a nominal adjunct has the sense ‘somebody.’ With the limiting *wə₂ ... ʔal*, it forms *k<sup>w</sup>əw wét ʔal* ‘anybody.’

(i) ni čx<sup>w</sup> k<sup>w</sup>ác<sup>w</sup>nəx<sup>w</sup> k<sup>w</sup>əw wét ʔal. (CC)

niʔ [ʔə] čx<sup>w</sup> k<sup>w</sup>éc-nəx<sup>w</sup> k<sup>w</sup>ə wə-wét ʔal  
 AUX ROG you look-TR ART EST-who just  
 ‘Did you see anybody?’

A phrase composed of *mə́k<sup>w</sup>* ‘all’ (with or without *wə₂ ... ʔal*) and *wét* has the sense ‘everybody’ or (with a negative) ‘anybody.’

(j) né<sup>m</sup> čx<sup>w</sup> yáθəst k<sup>w</sup>əw mə́k<sup>w</sup> wét ... (JP 3)

né<sup>m</sup> čx<sup>w</sup> yáθ-əs-t k<sup>w</sup>ə wə-mə́k<sup>w</sup> wét  
 go you tell-RECIP-TR ART EST-all who  
 ‘Go tell everybody ...’

(k) ʔəwə sǎ́ísəs k<sup>w</sup>əw mə́k<sup>w</sup> ʔal wét k<sup>w</sup>s né<sup>m</sup>s ... (JP 3)

ʔəwə s-cǎ́í-s-əs k<sup>w</sup>ə wə-mə́k<sup>w</sup> ʔal wét k<sup>w</sup>ə  
 not NOM-want-3POS-3SUB ART EST-all just who ART  
 s-né<sup>m</sup>-s  
 NOM-go-3POS

‘He didn’t want anybody to go ...’

Following *ʔəwəteʔ* ‘none,’ which usually stands as a predicate, *wét* has the sense ‘anybody.’ Or, the sequence can be rendered ‘nobody.’ The *wét* may appear as a nominal adjunct, introduced by an article indicating absence and followed by a relative clause, as in (l) to (n).

(l) ʔəwəteʔ čə k<sup>w</sup>ɪ wét né<sup>m</sup>. (JP 3)

none QUOT ART who go  
 ‘Nobody ever went, they say.’ (lit. ‘Was absent reportedly any who that went.’)

(m) ʔəwəteʔ k<sup>w</sup> wét ɪ́qəl-ləx<sup>w</sup> k<sup>w</sup>θə swéyəl ... (JP 2)

none ART who know-TR ART day  
 ‘Nobody knew the day ...’

(n) ʔəwəteʔ k<sup>w</sup>ɪ wét k<sup>w</sup>ác<sup>w</sup>nəx<sup>w</sup>e.n. (AG)

ʔəwəteʔ k<sup>w</sup>ɪ wét k<sup>w</sup>éc-nəx<sup>w</sup>-e.n  
 none ART who look-TR-I

‘I haven’t seen anybody.’ (lit. ‘There no who whom I see.’)

Or *wét* may be preceded by no article, in which case it is presumably a part of the predicate, as in (o) and (p).

- (o) ?áwəte? cə wét ném. (DK)  
 ?áwəte? ce? wét ném  
 none FUT who go  
 ‘Nobody will go.’
- (p) təwét. ?áwəte? wét. (DK)  
 who none who  
 ‘Who is it?’ ‘Nobody.’

It should be added that ?áwəte? alone can have the sense ‘nobody,’ more literally ‘there is none who,’ as in (q).

- (q) ?áwəte? kʷɪ kʷəcnəxʷ. (JP 28)  
 ?áwəte? kʷɪ kʷéc-nəxʷ  
 none ART look-TR  
 ‘Nobody sees them.’

See also ?áwəte? (§6.3).

### 17.2. *txʷwét* (AG), *təwét* (JP) ‘WHOSE?’

The form *txʷwét* is clearly *wét* ‘who’ with the prefix *txʷ-* ‘belonging to’ (see §12.4.4), which occurs otherwise only with personal names. The *tə-* of *təwét* is not identifiable. (I recorded *təwét* from JP only a few times, and unfortunately I cannot find any form for ‘whose’ in material from CC. I would be inclined to suppose that I might have misheard JP’s form except that Hill-Tout (1902, 420) gives the Kwantlen forms as *wet* ‘who’ and *too-wet* ‘whose.’)

- (a) txʷ-wét tiʔí. (AG)  
 belonging.to-who this  
 ‘Whose is this?’

### 17.3. *stém* ‘WHAT?’ *stéləm* ‘WHAT (PLURAL)?’

This is evidently composed of a root *tem* ‘what’ and *s-* ‘nominalizer.’ The plural has been recorded from AG only. Example of usage are (a) to (f).

- (a) stém ?aʔa. (CC)  
 what ROG!  
 ‘What is it?’
- (b) stém ce? kʷe. (CC)  
 what FUT then  
 ‘What will it be (then)?’

- (c) *stém* *k<sup>wə</sup>* *k<sup>w</sup>θéʔ*. (CC)  
 what then that  
 ‘What’s that?’
- (d) *stém* *ʔaʔa* *tə* *niəx<sup>w</sup>* *k<sup>w</sup>ənét*. (JP)  
*stém* *ʔaʔa* *tə* *niʔ-əx<sup>w</sup>* *k<sup>w</sup>ənét-t*  
 what ROG! ART AUX-you hold-TR  
 ‘What is that thing you have?’
- (e) *stém* *k<sup>wə</sup>* *sk<sup>w</sup>íxs* *tiʔí*. (CC)  
*stém* *k<sup>wə</sup>* *sk<sup>w</sup>íx-s* *təʔí*  
 what ART name-3POS this  
 ‘What do you call this? What is the name of this?’
- (f) *stéləm* *tə* *ni* *yəǰəlǰéǰəm*. (AG)  
*stéləm* *tə* *niʔ* *yə-ǰəlǰéǰəm*  
 what(PL) ART AUX along-be.briefly.appearing(PL)  
 ‘What are those things we are glimpsing?’ (lit. ‘What [pl.] are those that are briefly appearing?’)

The word *stém* takes the variant *x<sup>w</sup>i-* of the prefix generally appearing as *x<sup>w</sup>ə-* ‘become,’ as in (g).

- (g) *héy* *x<sup>w</sup>i-stém*. (CC)  
 go.ahead become-what  
 ‘What’s next?’ (lit. ‘Go ahead become what?’)

The notion ‘what kind of a ...?’ is expressed in two ways. One is with a conditional clause (see §4.2.1) introduced by *ʔət-* generally ‘when’ or ‘whenever,’ as in (h).

- (h) *stém* *ʔət-sq<sup>w</sup>əméy-əs* *tθeʔ*. (JP)  
 what whatever-dog-3SUB that  
 ‘What kind of a dog is that?’ (lit. ‘What is that when it is a dog?’)

The other is simply with the article *k<sup>wə</sup>*, which indicates that something is unknown, as in (i).

- (i) *stém* *k<sup>w</sup>* *ləpláš* *tiʔí*. (DK)  
*stém* *k<sup>wə</sup>* *ləpláš* *təʔí*  
 what ART board this  
 ‘What kind of board is this?’

To serve in an embedded question, *stém* appears as the predicate of a subordinate clause, as in (j), (k), and (l).

- (j)  $\acute{k}^w\acute{e}cst\grave{a}l\acute{x}^w \check{c}x^w w\grave{a}st\acute{e}m\grave{a}s \acute{k}^w\grave{a} \text{?}\acute{a}\theta x^w \text{?}\acute{a}y\grave{a}l\acute{a}p.$  (JP 1)

**17.8. *ctámət* ‘DO WHAT WITH ONESELF?’**

This word is usually translated ‘do what?’ or ‘have what happen to one?’ but the progressive, *cək<sup>w</sup>stámət*, suggests that the perfective has the underlying form //c-stámət//, and so this may be simply the reflexive of *cástəx<sup>w</sup>* ‘do what with/about it?’ – being composed of the root *cə-* ‘do what’ and a suffix *-stámət* ‘with oneself, about oneself’ (cf. *-stánámət* ~ *-stánəmət*, §10.5.3), meaning ‘do what with oneself?’

- (a) *ctámət*    *čx<sup>w</sup>*. (JP)

somewhat-how.many.people(PL)  
'several groups of people'

# Adverbs and Adverbial and Modal Words and Phrases

Under this heading are included a number of words and phrases that can qualify a predicate in ways that may be termed adverbial or modal. Some of these words and phrases appear in but one kind of grammatical relationship to a predicate, while others can appear in several kinds. Some have no function to perform other than adverbial or modal, while others may also function as adjectives or verbs. Nevertheless, there seems to be a core of words (disregarding now the phrases) here that cannot be placed anywhere else. Most of these undergo no internal modification, that is, they are not inflected for aspect, number, and so on, and they might be seen to form a class on that basis. On the other hand, a few that seem to belong here on the basis of function are themselves inflected forms.

Adverbial and modal functions have already been identified in different contexts. Here, §18.1 reviews these functions, §18.2 considers adverbs as a category, §18.3 reviews the grammatical relations of what are called here adverbial and modal predicates, and §18.4 catalogues the words and phrases that have been recorded serving as adverbs and as adverbial and modal predicates and gives examples of usage.

## 18.1. ADVERBIAL AND MODAL FUNCTIONS

Adverbial functions are performed by modifiers standing in various relationships to the predicates or clauses they modify. Adverbs (see §3.2.2) stand within the predicate in ways reviewed in §18.2. Verbal adjuncts (analogous to English prepositional phrases – see §3.5) and adverbial adjuncts (§3.6) stand outside the predicate but within the clause. Subordinate clauses used as conditional clauses (§4.2.1) and nominalized clauses used adverbially (§4.3.2) stand outside the clause. In all of these, what is modified is a main clause predicate or predicate head, and the adverbial modifier is grammatically dependent on or subordinate to it.

There is still another way, however, in which an adverbial modifier can relate to the predicate it modifies. It can stand as a predicate and main clause itself while the modified predicate (or clause) relates to it as a subordinate clause or a coordinate clause. Adverbial modifiers of this sort may be said to function as “adverbial predicates,” and the words and phrases that can function so are called here “adverbial words and phrases.” Examples of adverbial predicates appear in several places in §4 and §5. The kinds of grammatical relations they have with predicates are reviewed in §18.3.

Functions termed “modal” (admittedly a vague concept) are performed by some of the predicate particles (§16.2) and by the modal suffixes (§11.2). There are also a few words that can stand in the same grammatical relationships to predicates (or clauses) as do the adverbial words and that might be termed “modal words” serving as “modal predicates.”

Actually, there is not a very clear distinction between the “adverbial” and the “modal” in this context, it being a matter of semantics rather than grammar. In English, grammar seems to make a clear distinction: “I cannot hear him” has a modal auxiliary, while “I barely hear him” has an adverb. In Halkomelem, however, “cannot” and “barely” are both expressed by adverbial/modal predicates with embedded qualified clauses.

Some of these adverbial and/or modal words can also function as subordinating conjunctions. Examples are given in §18.4.

## 18.2. ADVERBS

Adverbs are identified in §3.2.2 as words that can stand within a predicate as modifiers. They can appear in various positions.

In verbal predicates, they commonly appear initially, as with *yáθ* ‘always’ and *qéʔis* ‘recently’ in (a) and (b).

(a) *wə-yáθ-əł*            *cən*    *wə-ǰáǰəý.* (DK)  
 EST-always-past    I            EST-sick  
 ‘I was always sick.’

(b) *qéʔis*            *cən*    *ní*    *kʷáç-nəxʷ.* (JP)  
 recently    I            AUX    look-TR  
 ‘I saw him just now.’

Some can also appear between the auxiliary and the predicate head, as with *máǰʷ* ‘all’ in (c).

(c) *ní*            *cən*    *wə-máǰʷ*    *pán-ət.* (CC)  
 AUX    I            EST-all            get.buried-TR  
 ‘I buried them all.’

Or following the head, as with *ǰé* ‘also’ in (d).

- (d) *sis wəqáynəx<sup>w</sup>əs ʒe ʔé-ɫən.* (JP 12)  
 s-ni<sup>?</sup>-s            wə-qáy-nəx<sup>w</sup>-əs            ʒe            ʔé-ɫən  
 NOM-AUX-3POS    EST-die-TR-3TR            also            3PL  
 ‘Then they killed him too.’

In adjectival predicates (§3.7.1) and in nominal predicates with adjectival modifiers (§3.7.3), an intensifying adverb can precede the adjective, as with *nán* ‘very’ and *sécéən* ‘really’ in (e) and (f).

- (e) *wəhánəw k<sup>w</sup>ámk<sup>w</sup>əm θəna spəhéls.* (JP 24)  
 wə-nán            wə-k<sup>w</sup>ámk<sup>w</sup>əm            θəna            spəhéls  
 EST-very        EST-strong                    this            wind  
 ‘This wind is very strong.’
- (f) *sécéən yəx<sup>w</sup> ce<sup>?</sup> wə-qəx            spēqəm.*  
 really            INF            FUT            EST-many            flower  
 ‘There will really be lots of flowers.’

In nominal predicates, *ʒe* ‘also’ can appear either before or after the head, as in (g) and (h).

- (g) *ʒəwəɫ táwən.* (AC)  
 ʒə            wəɫ-táwən  
 also        already-town  
 ‘It’s still town [way out there too].’
- (h) *wəxpéy ʒe tə ni ʒx<sup>w</sup>qpeqəts.* (JP 27)  
 wə-xpéy            ʒe            tə            ʒx<sup>w</sup>-qəp-éqən-t-s  
 EST-cedar        also        ART        OBLNOM-stick-throat-TR-3POS  
 ‘What he covered it with was also cedar.’

The words most often recorded functioning as adverbs specify frequency, relative time, intensity, specificity, and similar qualities. There are fewer than twenty of these. They include: *yáθ* ‘always,’ *ɫəq* ‘usually,’ *át* ‘earlier, long ago,’ *qé<sup>?</sup>is* ‘recently,’ *ʒé* ‘again, also,’ *qəlé<sup>t</sup>* ‘again, also,’ *há<sup>?</sup>* ‘if, when,’ *x<sup>w</sup>ná<sup>?</sup>* ‘first,’ *yəwén* ‘before,’ *ɫi<sup>?</sup>á<sup>?</sup>aq<sup>w</sup>t* ‘next,’ *nán* ‘very, too,’ *sécéən* ‘really,’ *θə<sup>?</sup>it* ‘truly,’ *táx<sup>w</sup>* ‘precisely,’ *háy* ‘specifically,’ *wənáy* ‘only,’ *mə<sup>k</sup>w* ‘all.’

Words that function as adverbs, however, do not constitute a clearly definable class. It seems that there are very few words that serve as adverbs only, having no other functions. Only *há<sup>?</sup>* ‘if, when,’ *ɫəq* ‘usually,’ *nán* ‘very, too,’ and *sécéən* ‘really’ have been recorded as adverbs but nowhere else. Most words that commonly serve as adverbs may also appear elsewhere, as noun modifiers in nominal adjuncts (§3.8.3.3), such as *ʒé* ‘also’ and *mə<sup>k</sup>w* ‘all’; as heads of adverbial adjuncts (§3.6), such as *qé<sup>?</sup>is* ‘recently’; or as predicate heads, such as *yáθ* ‘always’ and *táx<sup>w</sup>* ‘precisely, adjust.’ (Examples of usage of all of these are found in §18.4.)

Moreover, at least some words that function primarily as adjectives (see §9) can also occasionally serve as adverbs, such as *θí* ‘big,’ *cák<sup>w</sup>* ‘far,’ and *ǰǰ* ‘painful, hurt’ in (i), (j), and (k).

- (i) *sćéćǰń cǰn ni<sup>w</sup> θí q<sup>w</sup>íǰ<sup>w</sup> ...* (JP 24)  
*sćéćǰń cǰn ni<sup>?</sup> wǰ-θí q<sup>w</sup>íǰ<sup>w</sup>*  
 really I AUX EST-big miss  
 ‘I really made a big mistake ...’ (lit. ‘I really greatly missed ...’)
- (j) *ni cǰn cá·k<sup>w</sup> x<sup>w</sup>ǰ-ǰǰ.* (CC 21)  
 AUX I far become-good  
 ‘I am *far* better.’
- (k) *ǰǰ ǰǰǰǰ.*  
 hurt/sore sick  
 ‘He was very sick.’

These adjectives used as adverbs are not catalogued in §18.4.

There is still another construction in which the predicate contains a modifier that may be identified as an adverb. In this construction (see §4.3.1), the predicate head is a nominalized clause that is preceded by the modifier, as with *yét* ‘just now’ in (l).

- (l) *yét mǰ s-ném-s.* (CC)  
 just.now CERT NOM-go-3POS  
 ‘He’s just going.’

Only four words have been recorded functioning as modifiers in this construction: *mǰk<sup>w</sup>* ‘all’ (with the sense ‘whenever’), *wǰnǰy* ‘only,’ *cǰléł ǰǰ* ‘barely,’ and *yét* ‘just now, after which.’ Of these, *mǰk<sup>w</sup>* and *wǰnǰy* appear as adverbs in the usual fashion, while *cǰléł (ǰǰ)* and *yét* have not been so recorded.

### 18.3. ADVERBIAL AND MODAL PREDICATES

These are words and phrases that stand as main-clause predicates followed by clauses that they in some way qualify. There are three kinds of grammatical relationships that can exist between an adverbial or modal predicate and the qualified clause:

(1) The qualified clause appears as a nominalized clause standing as a nominal adjunct (identified in §4.3.2), as in (a) and (b).

- (a) *sǰ<sup>w</sup>éy k<sup>w</sup>ǰn s-ném.* (JP)  
*sǰ<sup>w</sup>éy k<sup>w</sup>ǰ nǰ-s-ném*  
 impossible ART my-NOM-go  
 ‘I can’t go.’

- (b)  $hí\theta$   $k^w\text{əns}^?í\text{m}\text{əx}$ . (CC)  
 $hí\theta$   $k^w\text{ə}$   $n\text{ə-s-}^?í\text{m}\text{əx}$   
 last.long ART my-NOM-be.walking  
 ‘I was walking a long time.’

In (a), the nominal adjunct is probably a subject, the sentence being more literally ‘My going is impossible.’ In (b), the nominal adjunct may be a subject (‘My walking took a long time’), or it may be a nominalized clause used adverbially (‘It took a long time when I was walking’).

(2) The qualified clause stands as a subordinate clause (see §4.2), as in (c) and (d).

- (c)  $s\acute{k}^w\text{éy}$   $m\acute{a}$   $w\text{ə}^?áw\text{ə-n}$  (~  $w\text{əw}\acute{e-n}$ )  $n\acute{e}m\grave{e-n}$ . (CC)  
 $s\acute{k}^w\text{éy}$   $m\acute{a}$   $w\text{ə-}^?áw\text{ə-e-n}$   $n\acute{e}m\text{-e-n}$   
 impossible CERT that-not-I go-I  
 ‘I must go.’

- (d)  $w\text{ə}lq\check{x}\acute{e}l$   $^?á\text{l-n}\acute{e}m\grave{e-n}$   $k^wi$   $s\acute{c}ám\text{əs}$ . (CC)  
 $w\text{ə}l\text{-}q\check{x}\acute{e}l$   $^?á\text{l-n}\acute{e}m\text{-e-n}$  [ $^?á$ ]  $k^wi$   $s\acute{c}ám\text{əs}$   
 already-many.times that-go-I OBL that Songhees  
 ‘I have often gone to Victoria.’

In both of these the subordinate clauses are probably better identified as complements rather than conditional clauses (lit. ‘It is impossible that I not go’ rather than ‘It will be impossible if I do not go,’ etc.).

(3) The qualified clause stands as the second of a pair of coordinate clauses (see §5.2), as in (e) and (f).

- (e)  $\acute{c}\text{əx}^w\text{l}\acute{e}^?$   $\acute{c}\text{ə}$   $i$   $n\acute{e}m$   $h\acute{á}y\text{e}^?$   $t\text{ə}$   $cw\acute{e}^?$   $t\text{ə}$   $l\acute{e}l\text{ə}m$ . (JP 12)  
 $\acute{c}\text{əx}^w\text{l}\acute{e}^?$   $\acute{c}\text{ə}$   $^?á\acute{y}$   $n\acute{e}m$   $h\acute{á}y\text{e}^?$   $t\text{ə}$   $cw\acute{e}^?$  [ $^?á$ ]  
 sometimes QUOT and go leave ART own OBL  
 $t\text{ə}$   $l\acute{e}l\text{ə}m$   
 ART house  
 ‘Sometimes the owner of the house went away.’

- (f)  $\check{x}^w\text{ám}$   $^?á$   $\check{c}x^w$   $^?á\acute{y}$   $x^w^?áw\acute{e}l\text{c}\text{əs}$ . (JP)  
 fast ROG you and make.string.figures  
 ‘Can you make string figures?’

In both of these sentences, the  $^?á\acute{y} \sim i$ , which is ‘and’ in most contexts and occasionally ‘but,’ might be better translated ‘when.’ The sentences might be better translated ‘There were said to be occasions when the owner of the house left,’ and ‘Are you fast when you make string figures?’

The words that have been recorded as adverbial predicates include a few that have also been recorded as adverbs ( $y\acute{á}\theta$  ‘always,’  $y\acute{á}w\acute{e}n$  ‘first,’  $h\acute{á}y$  ‘specifically,’  $w\acute{ə}n\acute{á}y$  ‘only’). But most that have been recorded in one function have

not been recorded in the other. A few of these adverbial words have been recorded as simple predicates (*híθ* ‘last long,’ *néč* ‘be different’). Some of the adverbial and modal words have been recorded with more than one kind of qualified clause, while others have been recorded with one kind only.

As with adverbs, the function of adverbial predicates can be assumed by words that usually serve as adjectives, such as *kʷámkʷəm* ‘strong’ and *ʔáyəm* ‘slow’ in (g) and (h).

- (g) *kʷámkʷəm kʷs kʷáyəǰəm.s.* (JP 28)  
*kʷámkʷəm kʷə s-kʷáyəǰəm-s*  
 strong ART NOM-be.shaking-3POS  
 ‘They shook strongly.’

- (h) *wəʔáyəm ʔaí kʷsniʔs néǰm yəlíləqstxʷəs.* (JP 23)  
*wə-ʔáyəm ʔaí kʷə s-niʔ-s néǰm*  
 EST-slow just ART NOM-AUX-3POS AUX(go)  
*yə-líləq-stəxʷ-əs*  
 along-easy-CAUS-3TR  
 ‘Slowly he eased it [the harpoon line] out.’

Here (g) may be more literally rendered either ‘Their shaking was strong’ or ‘They were strong when they shook,’ and (h) seems best as ‘He was slow when he went easing it out.’

Some of the words considered here (*háy* ‘specifically,’ *wənáy* ‘only,’ *txʷáy* ‘only remaining’) enter into a kind of construction in which they qualify the subject rather than the predicate and so cannot be considered adverbs. In these cleft sentences (§4.1.5.2), the subject is either a noun followed by a relative clause or simply a relative clause, as in (i) and (j).

- (i) *wənáy ʔaí tə kʷáxʷaʔ ni kʷən-é-t-əs.* (JP 3)  
 be.only just ART box AUX get.taken-DUR-TR-3SUB  
 ‘It was only a box that he held.’

- (j) *wənáy ʔaí mi-əxʷ təl-ləxʷ.* (JP 28)  
 be.only just AUX(come)-you be.understood-TR  
 ‘That’s all you came to know.’

In (j), the *wənáy* might be taken for an adverb, but the fact that what follows is a relative clause suggests that (j) is a cleft sentence, even though the relative clause is not preceded by an article. This suggests the possibility that sentences in which these predicates take first- and second-person subject particles are also cleft sentences. Compare (k) and (l):

(k)  $tx^wáy$   $q^wáq^wəlstámx$ . (DK)

$tx^wáy$   $q^wáq^wəl-stəx^w-amx$   
 only.remaining be.speaking-COM-me  
 ‘He’s the only one who still speaks to me.’

(l)  $tx^wáy$   $ct$   $q^wáq^wəl-stəx^w$   $k^wə$   $ł-$  \_\_\_. (DK)

only.remaining we be.speaking-COM ART portion\_\_\_  
 ‘We are the only ones who still speak to the \_\_\_s.’ (surname deleted)

In (k), the status of  $q^wáq^wəlstámx$  as a relative clause is indisputable (there being no  $-əs$  ‘third-person transitive subject’ required by a main-clause verb), and so the status of the whole as a cleft sentence is indisputable. In (l), with other than a third person subject,  $q^wáq^wəlstəx^w$  has a form appropriate for either a main-clause or relative-clause predicate head. The presence of  $ct$  ‘we’ seems to identify  $tx^wáy$  as an adverb and  $q^wáq^wəlstəx^w$  as predicate head. However, DK’s translation shows that she saw the second sentence as constructed like the first.

**18.4. CATALOGUE**

This section lists forty-seven words and phrases that have been recorded serving as adverbs, adverbial predicates, or modal predicates, and gives examples of the functions in which they have been recorded. The list is certainly not exhaustive. These words and phrases are ordered by semantic categories. Numbers 1-8 express frequency, 9-23 express duration and relative time, 24-35 are intensifiers and quantifiers, 36-40 are restricters and quantifiers, and 41-47 are more purely modal terms. They are described in the order shown in Table 18.1.

*Table 18*

**Adverbs and adverbial and modal words and phrases**

Category	Terms
Terms expressing frequency	1 $yáθ$ ‘always’
	2 $łáq$ ‘usually’
	3 $cəx^wleʔ$ ‘sometimes’
	4 $néc$ ‘other times’
	5 $nəcécx^w$ ‘once,’ etc.
	6 $qǎél$ ‘often’
	7 $ʔəwə scék^wələs$ ‘never’
	8 $mákw swéyəl$ ‘every day,’ etc.

**18.4.1. yáθ ‘always, frequently’**

This has been recorded as an adverb only. It may precede the predicate head, as in (a).

- (a) wə-yáθ-əł cən wə-ǰáǰəý. (DK)  
 EST-always-past I EST-sick  
 ‘I was always sick.’

Or it may follow the head (but with a different meaning), as in (b).

- (b) wə-ǰáǰəý-əł cən wə-yáθ. (DK)  
 EST-sick-past I EST-frequently  
 ‘I was frequently sick.’

Or it may be followed by a nominalized clause, as in (c).

- (c) yáθ kʷə nəsníw yəłəʔé. (JP)  
 yáθ kʷə nə-s-niʔ wə-yə-łəʔé  
 always ART my-NOM-AUX EST-along-following  
 ‘I always go the same way.’

In the question (d) and the answer (e), the order changes.

- (d) wəyáθ ʔə čxʷ níw yəhə́nə́m. (JP)  
 wə-yáθ ʔə čxʷ niʔ wə-yə-hə́nə́m  
 EST-always ROG you AUX EST-along-be.going  
 ‘Do you always go that way (or there)?’

- (e) ni cən wəyáθ wəyə́hə́nə́m. (JP)  
 niʔ cən wə-yáθ wə-yə-hə́nə́m  
 AUX I EST-always EST-along-be.going  
 ‘Yes, I always do.’

**18.4.2. łəǰ ‘usually, generally, habitually’**

This has been recorded as an adverb only. It appears initially, as in (a) and (b).

- (a) łəǰ ʔə ǰíǰə́kʷə́łs tə́n sqʷə́məý. (DK)  
 łəǰ ʔə ǰíǰə́kʷə́łs tə ʔən-sqʷə́məý  
 usually ROG be.biting-ACT ART your dog  
 ‘Does your dog bite?’

- (b) łəǰ ni nə́čə́qən lísek tə kʷíʔxʷ. (CC 5)  
 usually AUX one.container sack ART pitch  
 ‘It usually takes one sack of pitch.’ (lit. ‘The pitch is usually one sack.’)

(For other examples, see §3.2.2. There is a related noun, łéǰ ‘fashion, custom,’ as in tə łéǰs tə mə́stə́yaxʷ ‘the people’s ways.’)

**18.4.3. *čəx<sup>w</sup>lɛʔ* ‘sometimes, there are times when’**

This is probably more than a simple root, but its composition is unclear. It has been recorded in one construction only, as the first in a pair of coordinate clauses, as in (a) and (b).

- (a) *čəx<sup>w</sup>lɛʔ* i *ném cən tə néč šx<sup>w</sup>imélə*. (CC)  
*čəx<sup>w</sup>lɛʔ*      *ʔəý*    *ném*    *cən*    [*ʔə*]    *tə*    *néč*            *šx<sup>w</sup>imélə*  
 sometimes    and    go    I            OBL    ART    different    store  
 ‘Sometimes I go to other stores.’
- (b) *čəx<sup>w</sup>lɛʔ* i *qáy-nəx<sup>w</sup>-əs tə smáyəθ*. (JP7)  
*čəx<sup>w</sup>lɛʔ*      *ʔəý*      *qáy-nəx<sup>w</sup>-əs*      *tə*      *smáyəθ*  
 sometimes    and    die-TR-3TR            ART    deer  
 ‘Once in a while he killed a deer.’

**18.4.4. *néč* ‘at other times, sometimes’**

The basic meaning of *néč* is ‘differ, be different, be strange.’ It has inflected forms, *néčt* ‘change it,’ *náčət* ‘change (oneself),’ and so on, and many forms with derivational suffixes. It can appear as a noun modifier with the sense ‘different’ or ‘other,’ as in (a) in §18.4.3. Followed by a nominalized clause introduced by *k<sup>w</sup>*, it has the meaning ‘at other times,’ as in (a) below.

- (a) *néč k<sup>w</sup>s néms š<sup>w</sup>ən xénəm nem tə šnəwíł i ...* (JP 1)  
*néč*            *k<sup>w</sup>ə*    *s-ném-s*                    *š<sup>w</sup>ən xénəm*    *nem*    [*ʔə*]

#### 18.4.14. *wéyəl* ‘tomorrow’ and so on

Two words, *wéyəl* ‘be day’ and *nét* ‘be night,’ are the basis of several terms for times of day and night, such as *swéyəl* ‘day’ (also ‘daylight, sky’), *təna wéyəl* ‘today,’ *yəwéwəyəl* ‘dawn’ (lit. ‘becoming daylight’), *nétəl* ‘morning’ (lit. ‘night-past’), *xʷənéʔənt* ‘evening’ (lit. ‘becoming night’), and so on. These are considered in §22.2.1. Here I will simply review the roles of these words in syntax.

As illustrated in §4.2.4 (a), *wéyəl ceʔ* (lit. ‘it will be day’) with the sense ‘tomorrow’ can appear as a main clause referring to the future with the qualified predicate as an accompanying subordinate clause. This is seen also in (a).

- (a) *wéyəl ceʔ wə-łákʷ-əxʷ wə-niʔ-əs ceʔ neḿ*

#### 18.4.20. $y\acute{ə}w\acute{e}\acute{n}$ ‘before’

This has the meaning ‘before, ahead, go first’ in both spatial and temporal senses, the second no doubt stemming from the first. It can appear as a predicate head in a simple sentence, as in (a), where the sense is both, and (b), where it might be either.

- (a)  $n\acute{e}m$   $\acute{t}e$   $y\acute{ə}w\acute{e}\acute{n}$ . (CC)  
 go PER first  
 ‘Go ahead.’ (or ‘Go first.’)
- (b)  $ni^?$   $y\acute{ə}w\acute{e}\acute{n}$ . (CC)  
 AUX go.before  
 ‘He’s ahead.’ (or ‘He went first.’)

It can precede a nominalized clause, as in (c), where it has a temporal sense.

- (c)  $y\acute{ə}w\acute{e}\acute{n}$   $\acute{c}\acute{ə}$   $k^w\text{s}$   $m\acute{i}s$   $\acute{p}\acute{a}k^w$   $k^w\theta\text{ə}$   $s\acute{i}t\acute{a}n\text{s}\acute{ə}\acute{t}$   $c\acute{ə}m\acute{e}^?t\acute{ə}s$ . (JP 16)  
 $y\acute{ə}w\acute{e}\acute{n}$   $\acute{c}\acute{ə}$   $k^w\text{ə}$   $s\text{-}m\acute{i}\text{-}s$   $\acute{p}\acute{a}k^w$   $k^w\theta\text{ə}$   
 first QUOT ART NOM-AUX(come)-3POS come.to.surface ART  
 $s\acute{i}t\acute{a}n\text{-}s\text{-}\acute{ə}\acute{t}$   $c\acute{ə}m\text{-}\acute{e}^?\text{-}t\text{-}\acute{ə}s$   
 basket-3POS-past carry.on.back-DUR-TR-3SUB  
 ‘First the basket she carried on her back comes to the surface.’

It may also appear within a clause before the head, as in (d), where the context, a myth, indicated that the sense is temporal.

- (d)  $^?əw\acute{ə}t\acute{e}^?$   $k^w\theta\text{ə}$   $ni\text{-}\acute{t}$   $y\acute{ə}w\acute{e}\acute{n}$   $ne\acute{m}$   $cs\acute{e}t\text{ə}m$ . (JP 10)  
 $^?əw\acute{ə}t\acute{e}^?$   $k^w\theta\text{ə}$   $ni^?\text{-}\acute{ə}\acute{t}$   $y\acute{ə}w\acute{e}\acute{n}$   $ne\acute{m}$   $cs\acute{e}\text{-}t\text{-}\acute{ə}m$   
 absent ART AUX-past before AUX(go) commission-TR-INTR  
 ‘There was no sign of the one who had been sent before.’ (lit. ‘The one who had been sent before was none.’)

In (e), it bears the suffix  $\text{-}\acute{ə}\acute{t}$  ‘past,’ which makes the reference clearly temporal.

- (e)  $k^w\acute{t}\acute{ə}$   $y\acute{ə}w\acute{e}\acute{n}\acute{ə}\acute{t}$   $\acute{c}\acute{t}k^w\text{ə}n\acute{a}t\acute{ə}\acute{s}$   $t\theta\text{e}^?$  (JP)  
 $k^w\acute{t}\acute{ə}$   $y\acute{ə}w\acute{e}\acute{n}\text{-}\acute{ə}\acute{t}$   $\acute{c}\acute{t}\text{-}k^w\text{ə}n\text{-}e\text{-}t\acute{ə}\acute{l}\text{-}s$   $t\theta\text{e}^?$   
 ART earlier-past fellow-get.taken-DUR-RECIP-3POS that  
 ‘the former wife of that person’

There is also a nominalization,  $sy\acute{ə}w\acute{e}\acute{n}$  ‘ancestors, heritage.’ (See also §22.1.8.4.)

**18.4.21. *hiʔáʔaqʷt* (probably //lǝýáʔəqʷt//) ‘after’**

This has the meaning ‘after, later, behind, next’ in both temporal and spatial senses. It is possibly a resultative form composed of  $\sqrt{le}y$  ‘degrade’ (cf. *leʔit* //lǝýət// ‘put him down,’ *leýstánmət* ‘feel cheap’), *-aqʷ* ‘head,’ and *-t* ‘stative.’ (See also §22.8.1.4.) It can appear as the predicate head in a simple sentence, as in (a).

- (a) ni hiʔáʔaqʷt. (JP)  
 niʔ hiʔáʔaqʷt  
 AUX go.last  
 ‘He’s behind [as one walking].’

Or it can appear before the predicate head either before an auxiliary, as in (b), where the predicate is a relative clause, or after an auxiliary, as in (c).

Or it can precede a predicate head, as in (c).

- (c) táxʷ čxʷ ʔaǎ́ ǎ́téʔ-stəxʷ. (CC)  
 later you just do-COM  
 ‘Do it later.’

**18.4.23. *x<sup>w</sup>ənəxǎtǎʔetθeʔ* ‘meanwhile, in the course of that, after some time, finally’**

This is in origin *x<sup>w</sup>ən.ǎtǎʔə tθeʔ* ‘be still doing that.’ However, the shift in stress and optional omission of *tθeʔ* ‘that’ with retention of the oblique particle (hanging there without an “object”) suggests that the literal meaning gets lost. It has been rendered ‘all of a sudden’ where suddenness was not implied by the context (the literal meaning of the English phrase having perhaps also been lost) or ‘finally.’

- (a) *x<sup>w</sup>ənǎtǎʔetθe iwəł q<sup>w</sup>él tə sáʔsəq<sup>w</sup>t ...* (AC 1)

 ‘They [two large boxes] had holes made in them just enough so their [the  
 cousins’] breath could come out.’

**18.4.34. ?iwáwə (CC), ?iwáwə? ~ ?iwáwə (JP), ?iwáwə? (AG) ‘maybe, perhaps’**

(The first form listed above for JP may have been an error for ?iwáwə?.) This term occurs initially only, as in (a) to (d).

- (a) ?iwáwə spē?eθ k̄wə ni k̄włét. (CC)  
 ?iwáwə spē?eθ k̄wə ni? k̄wəł-ét  
 perhaps black.bear ART AUX spill-TR  
 ‘It might be a bear that spilled it.’
- (b) ?iwáwə? ćáq̄w čxʷ. (JP)  
 perhaps get.shot you  
 ‘You might get shot.’
- (c) ?iwáwə? ni néǵ. (AG)  
 ?iwáwə? ni? néǵ  
 perhaps AUX go  
 ‘He may have gone.’
- (d) ?iwáwə. (JP)  
 ‘Maybe. Possibly [but who knows?]

After giving (d), JP added that some people say (e).

- (e) ?iwáwə m̄e.  
 perhaps certain

Presumably it means something like ‘I believe it’s possible.’

This term looks as if it may be a contraction of elements. In (a), it might be interpreted as being composed of the auxiliary ?i, the particle wə? ‘presumptive’ (§16.2.17), and wə- ‘established.’ This interpretation is hard to reconcile with the other examples, however.

**18.4.35. wáłə (CC, JP, AG), wáłə (DK) ‘probably, presumably, I guess’**

This functions in two different ways. When it stands initially, the predicate head has a subordinate subject suffix, as in (a).

- (a) wáłə q̄ísəcən-e-n ce?. (JP)  
 probably make.net-I FUT  
 ‘I guess I’d better make a net.’

But when it appears after an auxiliary, there is no such suffix. The meaning appears to be identical. Compare (b) and (c), (d) and (e), and (f) and (g):

- (b) wáłə spē?eθəs k̄wə ni k̄włét. (CC)  
 wáłə spē?eθ-əs k̄wə ni? k̄wəł-ét  
 probably black.bear-3SUB ART AUX spill-TR  
 ‘It was probably a bear that tipped it over.’

- (c) *spéʔeθ wáɫə kʷə ni kʷɛ́t.* (AG)  
*spéʔeθ wáɫə kʷə niʔ kʷəɫ-ét*  
 black.bear probably ART AUX spill-TR  
 ‘I guess it was a bear that tipped it over.’
- (d) *wáɫə niʔ-əs-əl ném.* (AG)

 ‘I guess he had gone.’
- (e) *ni wáɫə ném.* (AG)  
*niʔ wáɫə ném*  
 AUX probably go  
 ‘I guess he must have gone.’
- (f) *wáɫə ʔi-nəɫ ʔiʔtət.* (AG)  
*wáɫə ʔi-ən-əl ʔiʔtət*  
 probably AUX-I-past be.sleeping  
 ‘I guess I must have been sleeping.’
- (g) *ʔi-ɫ cən wáɫə ʔiʔtət.* (AG)  
*ʔi-əl cən wáɫə ʔiʔtət*  
 AUX-past I probably be.sleeping  
 ‘I guess I must have been sleeping.’

It can also appear after the predicate head, as in the relative clause at the end of (h).

- (h) *cəm'é-m̄ cə tə sítən θəwʃa qéməȳ tʰi-m̄ wáɫə.* (JP 15)  
*cəm'é-m̄ cə [ʔə] tə sítən θəwʃa*  
 be.carrying.on.one's.back QUOT OBL ART basket that  
*qéməȳ tʰi-m̄ wáɫə*  
 young.woman be.picking.berries presumably  
 ‘That girl who was presumably picking berries carried a basket on her back.’

Perhaps *wáɫə* has two different sources. The *wáɫə* that appears initially may contain *ʔəwə* ‘not,’ which requires a subordinate subject suffix on the predicate head. It may be *//ʔəwə ʔaʔa//*, though this can appear as *ʔəw'é:lə* (see §16.2.18 [i]). The *wáɫə* that appears after an auxiliary or the predicate head may be composed of *wəʔ* ‘presumptive’ (§16.2.17) and *ʔaʔa* ‘emphatic interrogative.’

#### 18.4.36. *háy* ‘specifically, uniquely, as for, more’

This is homophonous but probably not identical with *háy* ‘stop, finish.’ It has several uses. As an adverb, it seems to select the subject for emphasis or focus, as in (a).

- (a) ha čx<sup>w</sup> mē wəʔí ʔaɫ i háy cən ceʔ wəném. (CC)  
 haʔ čx<sup>w</sup> mē wə-ʔí ʔaɫ ʔəý háy cən  
 if you CERT EST-be.here just and specifically I  
 ceʔ wə-ném  
 FUT EST-go  
 ‘Even if you stay here, I will go.’

Often *háý* appears in pairs indicating a contrast between two subjects, as in (b).

- (b) háy wəɫmíməɫə tə x<sup>w</sup>lóməý i háy ʔəwə tə qəwícən. (DK)  
 háy wəɫ míməɫə tə x<sup>w</sup>lóməý ʔəý  
 specifically already be.winter.dancing ART Lummi and  
 háy ʔəwə tə qəwícən  
 specifically not ART Cowichan  
 ‘The Lummies are already dancing but the Cowichans are not.’

It can be a predicate head with a noun subject that is the subject of a following clause, as in (c).

- (c) i háy θə sáʔsəq<sup>w</sup>t, k<sup>w</sup>ənətəs tə íéwəɫ, səw ... (JP 1)  
 ʔəý háy θə sáʔsəq<sup>w</sup>t k<sup>w</sup>ən-ət-əs tə íéwəɫ  
 and specifically ART junior get.taken-TR-3TR ART shell  
 s-wə-  
 NOM-EST-  
 ‘But as for the younger, she took a shell and ...’

In (c), the second clause is a main clause, as indicated by the transitive subject marker *-əs*. In other sentences, the second clause may be a relative clause, in which case we have a kind of cleft sentence (see §4.1.5.2). A clear example of this is (d).

- (d) háy θə sənǰeʔ íélq-t tə səqé-n ... (AC 1)  
 specifically ART senior dip-TR ART feather  
 ‘It was the older who dipped a feather ...’

In (e), *háý* precedes a noun head, which is followed by a subject that is a relative clause. Here it functions like *ǰá* in similar cleft sentences (§4.1.5.2).

- (e) háy ceʔ sʔáǰ<sup>w</sup>aʔ k<sup>w</sup>ə ném-ət čəýx<sup>w</sup>-t. (CC 1)  
 specifically FUT butter.clam ART go-we dry-TR  
 ‘It will be butter clams that we will dry [in contrast to others who will dry salmon].’

Preceding an adjective (as indicated in §3.7.1), *háý* gives a comparative (or superlative) sense, as in (f) and (g).

- (f) háy nə ʃʷóm kʷsəs mí wəqʷíłəm. (CC 1)  
 háy níʔ ʃʷóm kʷə s-ʔi-s mí  
 more AUX fast ART NOM-AUX-3POS AUX(come)  
 wəqʷíłəm  
 drift-move.toward  
 ‘It was faster when they came downstream.’
- (g) kʷəeʔ háy ʔaí ɕəčíʃ sʔónəm (JP 23)  
 that more just short shaft  
 ‘that shortest [harpoon] shaft’

### 18.4.37. wənáy ‘only’

In this word, the *wə-* may be *wə-*<sub>2</sub> ‘established,’ but this is the only form recorded. It can appear as an adverb, as in (a), where the predicate head appears to be the final word.

- (a) wənáy ct ceʔ ʔaí ʔáíwəm. (DK)  
 only we FUT just left.home  
 ‘We’ll be the only ones left at home.’

It has not often been recorded as such, however. It more often appears as a predicate head. In this function, *wənáy* can be simply followed by a noun subject, as in (b) and (c).

- (b) wənáy ʔaí kʷθəw xʷálməxʷ ʔaí məstáyəxʷ. (JP 2)  
 wənáy ʔaí kʷθə wə-xʷálməxʷ ʔaí məstáyəxʷ

#### 18.4.38. *txʷáy* ‘only remaining’

This is probably *txʷ-* ‘remaining’ and *háy* ‘specifically.’ It can appear as an adverb, as in (a).

- (a) txʷáy cən ʔaɿ ʔámət. (DK)

only.remaining I just be.sitting

‘I’m the only one at home.’

It can appear as a predicate head with a noun subject, as in (b).

- (b)  $tx^{w}áy$                        $ʔaí$        $tə$        $ʃx^{w}qəʔələq^{w}$ . (JP 4)  
 only.remaining      just      ART      juice  
 ‘Only the juice was left.’

Or it can appear with a pronoun (or demonstrative) subject followed by a relative clause, as in (c).

- (c)  $wə-tx^{w}áy$                        $ceʔ$        $ʔaí$        $təwʃa$        $yə-ʔiʔxəl$ . (JP 9)  
 EST-only.remaining      FUT      just      he      along-be.paddling  
 ‘It will be only he [the man in the bow] who paddles.’

Or it can be followed by a relative clause only, as in (d).

- (d)  $tx^{w}áy$   $q^{w}áq^{w}əlstamx$ . (DK)  
 $tx^{w}áy$                        $q^{w}áq^{w}əl-stəx^{w}-amx$   
 only.remaining      be.speaking-COM-me  
 ‘He’s the only one who still speaks to me.’

The word  $tx^{w}áy$  can also appear in a verbal adjunct (see §3.5) as a kind of prepositional verb with the sense ‘except for,’ as in (e).

- (e)  $sćéćən$   $niw$   $x^{w}əm̩nəc$   $k^{w}θə$   $smáləy̆aɪ$   $x^{w}əl̩məx^{w}$   $tx^{w}áy$   $k^{w}ə̆n̩a$  Paddy.  
 (JP)  
 $sćéćən$      $niʔ$      $wə-x^{w}əm̩nəc$                        $k^{w}θə$      $s-máləy̆-aʔɪ$   
 really    AUX    EST-become.extinct                      ART    NOM-Mali-ATT

 people    except    that    Paddy  
 ‘The Mali people are all gone except for Paddy.’

As a verbal adjunct, however, this is exceptional in that the noun that follows the  $tx^{w}áy$  is its subject, whereas other prepositional verbs are followed by oblique objects.

### 18.4.39. *cəlím̩* ‘even’

This has been recorded in only one construction, as a predicate with a nominal adjunct as subject followed by a coordinate clause, as in (a) and (b).

- (a)  $ni$   $íʰq̆^{w}ámθət$   $tə$   $prunes$ .  $cəlím̩$   $tə$   $peaches$   $i$   $ni$   $ʃəw$   $íʰq̆^{w}ámθət$ . (CC)  
 $niʔ$      $íʰq̆^{w}əm-θət$      $tə$      $prunes$      $cəlím̩$      $tə$      $peaches$      $ʔəy̆$

#### 18.4.40. *mə́k<sup>w</sup>* ‘all’

This was discussed under §18.4.18, when it had the sense ‘whenever.’ With the sense ‘all,’ it is used as an adverb to refer, for some speakers, to the object of a transitive or the subject of an intransitive predicate, but not the subject of a transitive. It can appear before or after the head.

- (a) mə́k<sup>w</sup> nəwəxəs nem tə sítəns. (JP 22)  
 mə́k<sup>w</sup> nəw-əx-əs nem [ʔə] tə sítən-s

- In her translation, CC gave one sentence, (f), in which *mə́k<sup>w</sup>* refers to a transitive subject.
- (f) mə́k<sup>w</sup> mə nəw k<sup>w</sup>ék<sup>w</sup>əłxəs ʔé-łtən. (CC)  
 mə́k<sup>w</sup> mə ni? wə-k<sup>w</sup>ék<sup>w</sup>əł-x-əs ʔé-łtən  
 all certain AUX EST-be.hiding-TR-3TR 3PL  
 ‘They are all hiding it.’

To AG, however, this sentence seemed to mean ‘They are hiding all of them.’ To match CC’s translation, he offered (g).

- (g)  $m\acute{a}k^w \text{ } \text{?}\acute{e}\text{-}t\acute{a}n \text{ } n\text{ } i \text{ } k^w\acute{e}k^w\acute{a}l\text{-}x$ . (AG)  
 $m\acute{a}k^w \text{ } \text{?}\acute{e}\text{-}t\acute{a}n \text{ } n\text{ } i\text{?} \text{ } k^w\acute{e}k^w\acute{a}l\text{-}x$   
 all 3PL AUX be.hiding-TR  
 ‘They are all hiding it.’

This is literally ‘It is all of them who are hiding it.’ The predicate  $m\acute{a}k^w \text{ } \text{?}\acute{e}\text{-}t\acute{a}n$  refers to an unexpressed subject, the absent head of the relative clause  $n\text{ } i \text{ } k^w\acute{e}k^w\acute{a}l\text{-}x$ . This type of cleft sentence seems to provide a way of letting  $m\acute{a}k^w$  refer to what is semantically a transitive subject.

The word  $m\acute{a}k^w$  can appear as a noun modifier either following the article (and preceded by  $w\acute{a}\text{-}_2$ ), as in (h).

- (h)  $n\acute{e}m \text{ } y\acute{a}\text{-}l\acute{e}l\acute{a}q\acute{a}t\acute{a}s \text{ } t\acute{a}w \text{ } m\acute{a}k^w \text{ } t\acute{a} \text{ } st\acute{e}\text{?}e\text{ } x^w\acute{a}l$ . (JP 2)  
 $n\acute{e}m \text{ } y\acute{a}\text{-}l\acute{e}l\acute{a}q\text{-}\acute{a}t\text{-}\acute{a}s \text{ } t\acute{a} \text{ } w\acute{a}\text{-}m\acute{a}k^w \text{ } t\acute{a}$   
 AUX(go) along-be.whispering-TR-3TR ART EST-all ART  
 $st\acute{e}\text{?}e\text{ } x^w\acute{a}l$   
 children  
 ‘He went and whispered to all the children.’

Or it can appear before the article, as in (i).

- (i)  $s\acute{a}w \text{ } k^w\acute{a}k^w\text{?}i\text{?}x^w\acute{a}l\acute{a}st\acute{a}s \text{ } m\acute{a}k^w \text{ } t\acute{a} \text{ } st\acute{e}\text{?}e\text{ } x^w\acute{a}l$ . (JP 2)  
 $s\text{-}[n\text{ } i\text{?}\text{-}s] \text{ } w\acute{a}\text{-}k^w\acute{a}k^w\text{?}i\text{?}x^w\text{-}\acute{a}l\acute{a}s\text{-}t\text{-}\acute{a}s \text{ } m\acute{a}k^w \text{ } t\acute{a} \text{ } st\acute{e}\text{?}e\text{ } x^w\acute{a}l$   
 NOM-AUX-3POS EST-be.pitching-eye-TR-3TR all ART children  
 ‘Then she pitched up the eyes of all of the children.’

However, it can be argued that in this last sentence  $m\acute{a}k^w$  is an adverb and part of the predicate rather than a noun modifier and part of the subject.

Similarly, for the following two sentences, (j) and (k), two interpretations seem possible: either  $m\acute{a}k^w$  modifies a noun predicate head or  $m\acute{a}k^w$  is the predicate (cf. similar sentences with  $h\acute{a}y$  and  $w\acute{a}n\acute{a}y$ ) and the noun is the subject. In either case, the noun is followed by a relative clause that shows that it is an extracted transitive subject.

- (j)  $m\acute{a}k^w \text{ } t\acute{a} \text{ } x^w\text{ } m\acute{a}\theta k^w\acute{a}y\acute{a}m \text{ } n\acute{a}w \text{ } x^w\text{ } t\acute{k}^w\acute{e}c\acute{a}st \text{ } y\acute{a}\theta\acute{e}\text{?} \text{ } i \text{ } m\acute{a}k^w\text{ } \acute{a}t\text{ } x^w\acute{e}l\text{ } s \text{ } t\acute{a}$   
 $\acute{s}\acute{x}\acute{a}l\acute{l}\acute{a}s$ . (CC)  
 $m\acute{a}k^w \text{ } t\acute{a} \text{ } x^w\text{ } m\acute{a}\theta k^w\acute{a}y\acute{a}m \text{ } n\text{ } i\text{?} \text{ } w\acute{a}\text{-}x^w\text{-}t\acute{k}^w\acute{e}\text{-}c\acute{a}s\text{-}t \text{ } y\acute{a}\theta\acute{e}\text{?}$

# 19

## Numerals

Halkomelem is like other Native languages of northwestern North America in having a decimal system of numerals capable of generating numbers into the thousands.

### 19.1. SIMPLE FORMS

The numerals from one to ten are:

<i>náca?</i> ‘one’	<i>íxám</i> ‘six’
<i>?iséla ~ yáséla</i> ‘two’	<i>íθákw<sup>s</sup></i> ‘seven’
<i>líx<sup>w</sup></i> ‘three’	<i>tqéce?</i> ‘eight’
<i>ǰá?áθan ~ ǰá?áθan</i> ‘four’	<i>tú:x<sup>w</sup></i> ‘nine’
<i>tqécás</i> ‘five’	<i>?ápən</i> ‘ten’

The first two numerals have bound alternate forms, *nécəw-* ‘one-,’ which appears in one or two words, and *θém- ~ θəm-* ‘two-,’ which appears in six or seven words.

A traditional way of reckoning is to count on the fingers, starting with the little finger of the left hand as ‘one,’ proceeding to the left thumb (‘five’), crossing to the right thumb (‘six’), and finishing with the right little finger (‘ten’). Because the direction is consistent, each finger is identified with a number and so the outstretched hands may become a device for visualizing numerical relations. It is my impression, although I do not have the data to support it, that this practice also made it possible to signal numbers easily and consistently with the hands.

The linkage of numbers and hands makes etymological speculation about three of these numerals inviting (cf. Elmendorf 1962; Galloway 1977, 418-20). ‘Five’ seems to consist of the root of *tqét* ‘wide’ and the suffix *-cás* ‘hand,’ probably referring to the display of a spread-out hand. ‘Six’ may contain a root *táx* ‘bifurcate’ (cf. *íxáθət* ‘branch out’), perhaps referring to the shift to the right hand. ‘Eight’ may have the root *táq* ‘be closed in, be surrounded,’ with a suffix not otherwise attested in Halkomelem but possibly identifiable with

‘hand’ in several other Coast Salish languages. (The Cowichan dialect has *téʔcəs* ‘eight,’ possibly with a root *téʔ* ‘appear’ and *-cəs* ‘hand.’) Elmendorf (1962, 8) suggests that the Musqueam (and Upriver) word is a loan from Lushootseed. Hess (1976, 468) identifies the Lushootseed *tqáči* ‘eight’ as “lit. ‘closed hand.’” Possibly the source of this word was a gesture in which the right middle finger (“eight”) met the thumb in a circle.

The numerals from eleven to nineteen run: *ʔápən ʔi tə náčaʔ* ~ *ʔápən ʔi kʷ náčaʔ* ‘eleven’ (lit. ‘one and ten’) and so on, the article varying with the position of the referent.

‘Twenty’ is *čkʷəx*. The word is unique in the system and not transparent in Halkomelem; however, the Clallam word is *náčxʷkʷəš* ‘twenty,’ lit. ‘one count’ (Thompson and Thompson 1971, 270), and the Halkomelem word almost certainly has the same etymology (from *náčaʔ* ‘one’ and *kʷəx* ‘count’), referring to the twenty digits of the human body.

Multiples of ten from ‘thirty’ to ‘ninety’ are formed from unstressed variants of the numerals three to nine with the suffix *-ətsxé* ~ *-tsxé* (CC) or *-ətcyé* (JP) ‘times ten.’ The forms given by CC are:

<i>təxʷətsxé</i> ‘thirty’	<i>iʰəkʷsətsxé</i> ‘seventy’
<i>šəθəntsxé</i> ‘forty’	<i>təqəcətsxé</i> ‘eighty’
<i>təqəcsətsxé</i> ‘fifty’	<i>tu:xʷətsxé</i> ‘ninety’
<i>išəmətsxé</i> ‘sixty’	

The hundreds are:

<i>nécəwəc</i> ‘one hundred’	<i>hixʷ necəwəc</i> ‘three hundred,’ etc.
<i>θéməc</i> ‘two hundred’	<i>ʔápən necəwəc</i> ‘one thousand’

‘One hundred’ and ‘two hundred’ are formed with the bound forms of ‘one’ and ‘two’ and a suffix *-əc* (*-ʔəcʔ*), which cannot be identified.

These are the simple forms of the numerals. They are used both substantively and attributively in reference to many kinds of things. In the following sentence from a text (CC 14) on fishing, they refer to fish and days.

(a) *səw cəxəncəʔs ʔiwáwaʔ ʔápən ʔiwáwaʔ čkʷəx ʔiwáwaʔ lqécəs tə náčaʔ swéyəl.* (CC 14)

<i>s-wə-c-xəncəʔ-s</i>	<i>ʔiwáwaʔ</i>	<i>ʔápən</i>	<i>ʔiwáwaʔ</i>	<i>čkʷəx</i>
NOM-EST-get-prey-3POS	maybe	ten	maybe	twenty
	<i>ʔiwáwaʔ</i>	<i>lqécəs</i>	<i>tə</i>	<i>náčaʔ swéyəl</i>
	maybe	five	ART	one day

‘Then he made a catch, maybe ten, maybe twenty, maybe five in one day.’

And in one from a text on hunting, the numeral refers to animals.

(b) səsəw k<sup>w</sup>ác<sup>n</sup>əx<sup>w</sup>əs tə ʔisélə məlləs. (CC 8)

s-ni-s            wə-k<sup>w</sup>ec-nəx<sup>w</sup>-əs    tə    ʔisélə    məlləs  
 NOM-AUX-3POS    EST-see-TR-3TR    ART    two    racoon  
 ‘Then he saw two racoons.’

There are also, however, several sets of complex forms that are used for particular classes of things.

## 19.2. COMPOUND FORMS

These are mostly composed each of a numeral stem and a lexical suffix, but there are a few formed in other ways. Perhaps all of the lexical suffixes that appear in these forms can also occur with *k<sup>w</sup>ín* ‘how many’ (§17.20) and nearly all with *qə́x̣* ‘many.’ A few suffixes may be limited to use with numerals and these two roots, and so might be identified as “numerical classifiers,” but most have no such limitation. A few of these sets of complex forms have membership running to ten and beyond, but others are limited to fewer members. The following may not be a complete list.

(1) Persons. ‘One person’ and ‘two persons’ are reduplicated forms of ‘one’ and ‘two,’ while the rest are formed with the suffix *-élə ~ -ələ* ‘person.’

<i>nánə́ce?</i> (CC) ‘one [person]’	<i>tqecəʔélə</i> ‘eight’
<i>yə́ysələ</i> ‘two [persons]’	<i>tu:x<sup>w</sup>élə</i> ‘nine’
<i>təx<sup>w</sup>élə</i> ‘three [etc.]’	<i>ʔəpélə</i> ‘ten’
<i>ʃəθí-lə</i> ‘four’	<i>ʔápən i k<sup>w</sup> nánə́ce?</i> ‘eleven,’ etc.
<i>tqecselə</i> ‘five’	<i>c<sup>k</sup>w<sup>x</sup>élə</i> ‘twenty’
<i>íxə́mələ</i> ‘six’	<i>k<sup>w</sup>í-lə</i> ‘how many?’
<i>íʔak<sup>w</sup>selə</i> ‘seven’	

For JP, ‘one person’ was *nánə́ca?* or *nánca?*. These are used to refer to any human beings, as in (a) and (b).

(a) ʃəθí-lə ceʔ k<sup>w</sup>θə s<sup>q</sup>wáq<sup>w</sup>əł. (CC 7)

ʃəʔáθən-ələ ceʔ k<sup>w</sup>θə s<sup>q</sup>wáq<sup>w</sup>əł  
 four-person    FUT    ART    ready

‘There will be four [men] lying in wait.’

(b) nēm̄ cə ʔá-ł tə íxəm-ələ stənłénə́y. (JP 4)

go    QUOT    embark    ART    six-person    women

‘Six women are said to have embarked.’

For multiples of ten above twenty, the simple numerals are used, such as *təx<sup>w</sup>ət<sup>s</sup>xé məstéyəx<sup>w</sup>* ‘thirty people.’ ‘One person’ and ‘two persons’ are further reduplicated in *nə́cnánca?* ‘one by one’ and *yəsyə́ysələ* ‘two by two.’

(2) Times. The numerals for ‘times’ are irregular for ‘once’ and ‘twice’ but others recorded are formed with the suffix *-élə*. They are: *nə́céx<sup>w</sup>* ‘once,’ *θəmé*

‘twice,’ *tx<sup>w</sup>ét* ‘three times,’ *ǰáθánét* ‘four times,’ *lǰácsét* ‘five times,’ *íǰámét* ‘six times,’ *í<sup>θ</sup>ak<sup>w</sup>sét* ‘seven times,’ *ʔapánét* ‘ten times,’ *k<sup>w</sup>ónét* ‘how many times?’ ‘Eight times’ and ‘nine times’ were thought to be irregular but not remembered. (For use, see §18.4.3.)

(3) Round objects. These are formed with the suffix *-ás ~ -ás* ‘face, round object’ (which produces a shift from *é* to *á* in a root). They are used for counting months (moons) and dollars. Those recorded are: *náćás* ‘one,’ *ʔisálás* ‘two,’ *lIx<sup>w</sup>ás* ‘three,’ *ǰáθínás* ‘four,’ *ʔapánás* ‘ten,’ *k<sup>w</sup>ínás* ‘how many (months, dollars)?’ It is likely that there are more forms in the set and that they can be used for other round objects.

(4) Canoes and vehicles. Forms recorded are: *nécáx<sup>w</sup>át* ‘one canoe,’ *θémáx<sup>w</sup>át* ‘two canoes,’ *ǰálítáx<sup>w</sup>* ‘three canoes,’ *ǰáǰá<sup>ʔ</sup>áθán* ‘four canoes,’ *ǰáǰáćéćás* (CC), *ʔitáǰáćás* (JP) ‘five canoes.’ ‘One canoe’ and ‘two canoes’ have the bound forms of ‘one’ and ‘two’ with a suffix that may be a variant of *-wát* ‘vessel’ (perhaps also appearing in *snáx<sup>w</sup>át* ‘canoe,’ the root of which is unidentifiable). The three other members of this set have the prefix *ǰá-* ‘(moving) along’ and expanded forms of the roots, possibly progressive forms.

(5) Houses. Only three numerals have been recorded: *nécáwtx<sup>w</sup>* ‘one house,’ *θémtx<sup>w</sup>* ‘two houses,’ *lIx<sup>w</sup>áwtx<sup>w</sup>* ‘three houses,’ plus *k<sup>w</sup>ínáwtx<sup>w</sup>* ‘how many houses?’ The suffix is *-éwtx<sup>w</sup> ~ -áwtx<sup>w</sup> ~ -tx<sup>w</sup>* ‘house.’

(6) Containers. Numbers from ‘one’ through ‘six’ have been recorded: *náćáqáǰǰ,* *ʔiséláqáǰǰ,* *lIx<sup>w</sup>áqáǰǰ,* *ǰáθínáqáǰǰ,* *lǰéćsáqáǰǰ,* *íǰámáqáǰǰ.* The suffix may be the same as *-qáǰǰ* ‘throat.’ These are used for baskets, cups, and so on, usually meaning ‘containerful.’

(7) Birds. The suffix is *-íwś ~ -áwś* ‘body.’ These may also be used for counting rabbits and other small game. A full set from ‘one’ to ‘ten’ and ‘twenty’ have been recorded: *náćíwś,* *ʔisálíwś,* *lIx<sup>w</sup>íwś,* *ǰáθíníwś,* *lǰéćáwś* (probably *lǰéćsáwś*), *íǰámáwś,* *í<sup>θ</sup>ak<sup>w</sup>síwś,* *lǰéćé<sup>ʔ</sup>íwś,* *lIx<sup>w</sup>íwś,* *ʔapénáwś,* *ćk<sup>w</sup>xíwś,* plus *k<sup>w</sup>ínáwś* ‘how many?’

(8) Trees. ‘One’ to ‘five’ have been recorded: *snáćátǰ,* *sʔisé<sup>ʔ</sup>éǰ,* *slIx<sup>w</sup>átǰ,* *sǰáθí<sup>ʔ</sup>ǰ,* *slǰéćsátǰ.* The suffix *-átǰ* ‘vegetation’ is very productive. I cannot account for the prefix *s-*, presumably ‘nominalizer.’

(9) Parts or kinds. The suffix *-mat* seems to have these several meanings; cf. *náćá<sup>ʔ</sup>mat* ‘one piece, whole,’ *ʔisélámat* ‘two pieces,’ *lIx<sup>w</sup>mat* ‘three pieces,’ *k<sup>w</sup>ónmàt* ‘how many kinds,’ *qáǰǰmàt* ‘many kinds’ are the only numerals recorded.

(10) Kinds. JP gave this set as ‘kinds,’ but I am uncertain of the suffix and the gloss. He gave only ‘one’ to ‘three’: *x<sup>w</sup>náćáwáθ,* *x<sup>w</sup>isáláwáθ,* and *x<sup>w</sup>lIx<sup>w</sup>áwáθ,* and *k<sup>w</sup>ínáwáθ* ‘how many kinds of animals?’

(11) Years. I have recorded only ‘one’ to ‘three’: *náćáwí<sup>n</sup>x<sup>w</sup>,* *θámí<sup>n</sup>x<sup>w</sup>,* *lIx<sup>w</sup>áwí<sup>n</sup>x<sup>w</sup>.* The suffix is *-áwí<sup>n</sup>x<sup>w</sup>* except with the bound form of ‘two’; cf. *k<sup>w</sup>ónáwí<sup>n</sup>x<sup>w</sup>* ‘how many years.’

(12) Paddles. Only one form has been recorded: *ʔisalélweʔs* ‘two paddles.’ The suffix is *-əlweʔs* ‘paddle.’ There are probably more in the set.

(13) Bundles. Only one form has been recorded: *nə́cəlɛʔc* ‘one bundle.’ The suffix is *-əlɛʔc* ‘bundle.’ There are probably more in the set.

(14) Net mesh. Four forms have been recorded: *čkʷaxálas* ‘twenty mesh,’ *təxʷətcyéʔálas* ‘thirty mesh,’ *šəθəntcyéʔálas* ‘forty mesh,’ and *kʷəntcyéʔálas* ‘how many tens of mesh?’ The suffix is *-álas* ‘eye.’ These are used in giving the depth of a gill net, the length being given in fathoms.

(15) Days. Days are usually counted with the simple numerals, but these two forms are also used, perhaps usually in counting ahead: *θəmənt* ‘two days,’ meaning also ‘day after tomorrow,’ *təxʷətnét* ‘three days.’ For *-ətnét*, see §22.2.3.

(16) Long objects. Only *nə́cémətʰ* ‘one’ has been recorded. The suffix is *-émətʰ ~ -əmətʰ*, which appears in *sḱʷínəmətʰ* ‘how many long things (poles, pilings, toothpicks, hairs),’ *šəqtémətʰ* ‘tall (as a person),’ and so on.

See Gerdts et al. 2002 for a discussion of numeral classifiers in Halkomelem, and Shaw et al. 2002 for greatly expanded lists in Musqueam.

### 19.3. ORDINALS

These are formed from compound numerals with *s-* ‘nominalizer’ and *-s* ‘third-person possessive,’ as in (a) to (d).

(a) *təs kʷθə sšəθí-1əs ...* (CC 17)  
*təs kʷθə s-šəʔaθən-ələ-s*  
 arrive.there ART NOM-four-person-3POS  
 ‘until the fourth person ...’

(b) *šə kʷθə sšəθənɛ́ts ceʔ ...* (CC 17)  
*šə kʷθə s-šəʔáθən-éł-s ceʔ*  
 BE3P ART NOM-four-time-3POS FUT  
 ‘It will be the fourth time ...’

(c) *šə s-yáʔsələ-s.* (JP 10)  
 BE3P NOM-two.persons-3POS  
 ‘That was the second person.’

(d) *təs tə səpé-1əs i tə náʔənčəʔ* (JP 10)  
*təs tə s-ʔápən-ələ-s ʔəy tə náʔənčəʔ*  
 arrive.there ART NOM-ten-person-3POS and ART one.person  
 ‘until the eleventh (person)’

The use of *s-* ‘nominalizer’ to form ordinals has a parallel in English: *true – truth; four – fourth*. The *-s* ‘third-person possessive’ may be interpreted as ‘of them,’ that is, of whatever set the ordinal belongs in.

It may be that these forms can be used only substantively and not attributively, cf. (e), in which the simple numeral modifies ‘morning’ but with the meaning ‘fourth.’

- (e)  $\check{\text{x}}\text{a}$      $\text{t}\text{ə}$      $\check{\text{x}}\text{a}^{\text{?}}\text{á}\theta\text{ə}\text{n}$      $\text{n}\acute{\text{e}}\text{t}-\text{ə}\text{ł}$ . (CC 17)  
       BE3P    ART    four            night-past  
       ‘It’s the fourth morning.’

Some of the names of the days of the week appear to be ordinals (see §22.2.3).

## 20

# Exclamations and Interjections

### 20.1. EXCLAMATIONS

Exclamatory sentences seem to have no distinctive features of syntax. They probably do have a distinctive intonation (not yet analyzed), but otherwise they may be marked simply by particles. (See *q̇ə*, *kʷt̪*, *waʔ*, and *ʔáʔa*, §16.1.14, 16.1.17, and 16.1.18.)

Some exclamations are notable, however, for their use of words of a special class, here termed exclamatory-interrogative adjectives. A few of these seem to have literal meanings opposite those intended.

Examples of words used for their opposite meaning, in a kind of sarcasm, are the following with *líləq* ‘easy’ and *sʰéʔʰəl̪*, seemingly identifiable with *sʰéʰəl̪* ‘stuck (in one place)’ or a diminutive of it.

- (a) ʔa; líləq ʔaʔa. (JP 7)  
oh easy ROG!  
‘Oh, it’s hard!’ (lit. more like ‘Easy? Ha!’)
- (b) sʰéʔʰəl̪ cən ʔaʔa. (AG)  
stuck I ROG!  
‘What a fast runner I am!’

### 20.2. EXCLAMATORY-INTERROGATIVE ADJECTIVES

These are words that identify qualities of an undetermined degree. They appear in exclamatory sentences with the sense ‘how \_\_\_!’ They (or some of them) can also have the sense ‘however \_\_,’ ‘\_\_\_ to whatever extent,’ or ‘nobody knows how \_\_\_.’ Seven words of this sort have been noted.

 $léq$   $\text{?a}$   $k^w\text{a}$   $s\text{-}n\dot{i}\text{?}\text{-}s$   $n\dot{e}\dot{m}$   
 how.fast ROG ART NOM-AUX-3POS AUX(go)  
 $x\text{t}\dot{e}\dot{m}\text{-}s\text{t}\dot{a}x^w\text{-}a\dot{l}\text{-}\dot{a}\dot{m}$   
 swim-CAUS-we-INTR  
 ‘Nobody knows how fast we were taken away.’ (lit. ‘It was an unknown speed when we were swum away with.’)

**20.2.3. təʔéñ ‘how wonderful! what a \_\_\_! how powerful!’**

- (a) təʔéñ                    kʷə    tə    sʰéləqəm. (JP)  
 how.wonderful    then    ART    fierce.being  
 ‘What a monster!’
- (b) təʔéñ                    kʷə    kʷlə    sxʷəxʷáʔas    i            kʷéyχθət  
 how.wonderful    then    ART    thunder            AUX    be.moving.self  
 kʷəna    xʷənén.t. (JP)  
 that       evening  
 ‘Boy, that was some thunder last night!’
- (c) təʔéñ                    kʷə    tə    snəxʷəl-s. (CC)  
 how.wonderful    then    ART    canoe-3POS  
 ‘What a wonderful canoe he has!’

**20.2.4. wéwə ‘how wonderful!’ (synonymous with §20.2.3?)**

- (a) wéwə                    kʷə    tə    sʰéləqəm. (JP)  
 how.wonderful    then    ART    monster  
 ‘What a monster!’

**20.2.5. xʷəwém ‘how big!’**

- (a) xʷəwém                ʔaʔa    tə    ʔən-léləm-ələp. (AG)  
 how.big        ROG!    ART    your-house-your(PL)  
 ‘What a big house you guys have!’

**20.2.6. ʰíć ‘how long!’**

Compare *ćáci·ʰ* ‘short,’ of which this may be the root. Perhaps this is another instance of a word used for the opposite meaning.

- (a) ʰíć                    kʷə    waʔ    tə    ʰílm-s. (AG)  
 how.long    then    PRES    ART    rope-3POS  
 ‘What a long rope he has!’

**20.2.7. cíʰəmətʰ ‘how tall!’**

Compare *ćáci·ʰəmətʰ* ‘short in stature,’ < *ćáci·ʰ* ‘short,’ -ə *mətʰ* ‘long object.’

- (a) cíʰəmətʰ                kʷə    tθeʔ    swáýqeʔ. (JP)  
 how.tall    then    that    man  
 ‘Boy, that fellow is tall!’

**20.3. INTERJECTIONS**

An interjection can appear either alone as a complete utterance or before a sentence but without any syntactic relationship to it. Interjections express affirmation and denial, some emotional quality, or simply some acknowledgment of a

second person. They include a few sounds that do not appear elsewhere. The following is probably not a complete list. The ordering is arbitrary.

### 20.3.1. *héʔe* ‘yes’

- (a) *Íáq̣ ʔə q̣íq̣əḳʷəɪs tən sqʷəméy̆. héʔe, q̣íq̣əḳʷəɪs.* (DK)  
*Íáq̣ ʔə q̣íq̣əḳʷəɪs tə ʔən-sqʷəméy̆ héʔe*  
 habitually ROG be.biting.something ART your-dog yes  
*q̣íq̣əḳʷəɪs*  
 be.biting.something  
 ‘Does your dog bite?’ ‘Yes, he bites.’

### 20.3.2. *ʔəwə* ‘no’

Identical with *ʔəwə* ‘not,’ which does have a syntactic role (§6.1).

- (a) *ʔəwə, ʃa nə-swéʔ nə-mə́nə.* (JP 1)  
 no BE3P my-own my-child  
 ‘No, it’s my child.’

### 20.3.3. *ná* ‘what, yes’ (as in answer to hearing one’s name called)

### 20.3.4. *n á w̆ ~ n á · w̆ ~ n ə w* ‘yes’ (in answer to one’s name), ‘hey’ (to get someone’s attention)

In the second sense, this is used especially with a spouse or a close friend, and may take the particle *q̣ə* ‘emphatic.’ In (a), AG explained, it shows that the speaker knows that the person addressed is there.

- (a) *ná w̆ q̣ə siʔém̆.*  
 ‘Hello!’ ‘Well, hello!’

To a spouse it may imply affection, as in (b).

- (b) *ném̆ cən wətyá·ys, nəw̆.* (AG)  
 ‘I’m going to work now, dear.’

### 20.3.5. *n íʔ ~ n í* ‘hey there, excuse me’

This is probably identical with *niʔ* ‘be there.’

- (a) *niʔ, siʔém̆, ʔəwe· čxʷ nəm̆əxʷ íéʔt ...* (JP 19)  
*niʔ siʔém̆ ʔəwə ʔə čxʷ nəm̆-əxʷ íéʔ-t*  
 hey.there sir not ROG you AUX(go)-you try-TR  
 ‘Say, sir, wouldn’t you try ...’

### 20.3.6. *ʔí* ‘here’ (to attract attention)

This is probably *ʔí* ‘be here.’

- (a) ʔí ʔí ʔí, ʔǎwə čxʷ kʷəkʷǎn-ət-əxʷ. (JP 19)  
 here here here not you being.taken-TR-you  
 ‘Hey, hey, hey! Don’t touch it.’

### 20.3.7. yé ~ yé· ‘well, all right’

This is said in urging someone to speak, and is also used by the audience in a myth telling to urge the teller to continue. (Cf. yé ‘taunting echo,’ §16.3.2.)

- (a) yè, qǎlǎmǎx, stémǎs kʷeθ xʷǎmí. (JP 9)

 niʔ-əp cǎlstámət  
 AUX-you(PL) happen.to(PL)  
 ‘Well, proceed with your story of whatever happened to you.’

### 20.3.8. ʔá· ‘ah, oh, aw, well’

This often seems to have no function other than to begin a statement. It is often followed by a term of address (such as *siʔém* ‘sir, ma’am,’ or a kinship term). In narratives with dialogue, ʔa may serve primarily to indicate to the audience that a new speaker is speaking.

- (a) ʔa; ni cǎn wəsǎǎǎǎǎm ... (JP 9)  
 ʔa· niʔ cǎn wə-sǎǎǎǎǎm  
 ah AUX I EST-enough  
 ‘Well, I’m ready ...’
- (b) ʔa· siʔém, wiʔé·ý čxʷ ʔaǎ. (JP 3)  
 ʔa· siʔém wə-yə-ʔé·ý čxʷ ʔaǎ  
 ah sir EST-along-continue you just  
 ‘Well, sir, just continue.’
- (c) ʔa· ʔǎwə čxʷ ǎǎǎǎǎ·xʷ tθéʔ. (JP 4)  
 ʔa· ʔǎwə čxʷ ǎǎǎǎǎ-əxʷ [ʔə] tθéʔ  
 ah not you be.saying-you OBL that  
 ‘Oh, don’t say that.’

### 20.3.9. ʔo·, ʔə· ‘oh’

These are perhaps only variants of the last.

- (a) ʔo· mǎhǎ, ʔi cǎn xʷǎcǎhǎm̄. ni cǎn cá·kʷ xʷǎʔǎȳ. (CC 21)  
 ʔo· mǎhǎ ʔi cǎn xʷǎ-scǎhǎm̄ ni cǎn cákʷ  
 oh child AUX I become-Shaker AUX I far  
 xʷǎ-ʔǎȳ  
 become-good  
 ‘Oh, child, I have become a Shaker. I have become far better.’
- (b) ɔ· scǎcǎn ce·p wǎ-ʔǎlǎȳ sǎwǎȳqeʔ. (JP 12)  
 oh really you(PL) EST-good(PL) men  
 ‘Oh, you’re really good men.’

### 20.3.10. ʔǎǎʔ, ʔǎʔǎ ‘ahhhh! aha!’

- (a) ʔǎǎʔ naətǎ wǎθǎʔít xʷǎsǎlíkʷ tǎ θǎθǎns tǎ sǎǎlǎqǎm. (JP 6)  
 ʔǎǎʔ na ʔǎ tǎ wǎ-θǎʔít xʷǎ-sǎlíkʷ tǎ  
 ahhh be.there OBL ART EST-truly become-broken ART  
 θǎθǎn-s tǎ sǎǎlǎqǎm  
 mouth-3POS ART fierce.being  
 ‘Ahhh! There the mouth of the monster is truly broken.’
- (b) ʔǎʔǎ, sǎw θǎt tǎ spǎ·ǎ, niʔ yǎxʷ aʔa ... (JP 7)  
 ʔǎʔǎ· s-wǎ-θǎt[-s] tǎ spǎ·ǎ, niʔ yǎxʷ aʔa  
 ahhh NOM-EST-say-3POS ART raven be.there INF ROG!  
 ‘‘‘Aha’’, said Raven, ‘‘It must be so ...’’’

### 20.3.11. ʔǎ ‘hmm’

This is perhaps a more casual ʔǎ:

- (a) ǎʔǎ sǎmǎm̄t̄hǎn, θǎyǎlsǎm cǎn ceʔ i nǎm̄  
 hmm proud(DIM) prepare.weapons I FUT and go  
 cǎn ... (JP 7)  
 I  
 ‘Hmmm, proud little thing, I’ll prepare and I’ll go ...’

Raven here is speaking to Seagull. Raven, Mink, and some other characters prefix ǎ- to some words.

### 20.3.12. ʔǎǎ ‘well!’

This expresses disapproval. It is used mainly by women. If a woman sees a girl working with male motions (pulling toward herself rather than pushing away), she might say:

- (a) ʔǎǎ, ǎtǎ-wǎn ʔǎ ǎxʷ k̄ʷǎθswǎȳqeʔ. (JP)  
 ʔǎǎ ǎxʷteʔǎwǎn ʔǎ ǎxʷ k̄ʷǎ ʔǎT-s-swǎȳqeʔ  
 well think ROG you ART your-NOM-man  
 ‘Well, do you think you’re a man?!’

**20.3.13. šé? ‘well!’**

Like the last, but used by both sexes. If a man heard a boy say ?əš, he might say:

- (a) šé?,    θə́na    qémə́y. (JP)  
well    this    young.woman  
‘Hey, are you a girl?!’

**20.3.14. šá·, šá·? ‘pshaw! oh, heck, etc.’ (DK)**

Perhaps the same as the last.

**20.3.15. ?écənè ‘oh my!’ (JP)**

An expression of surprise.

**20.3.16. ?énene ‘oh my!’ (AC)**

The same as the last?

**20.3.17. yá·? ‘my!’**

An expression of surprise, as in (a).

- (a) ?a? yá·...? (CC)  
‘Oh my!’ (as when seeing big fish)

**20.3.18. yu· ‘wow!’ [?] (JP)**

An expression of surprise and perhaps appreciation or condemnation.

## Kinship Terms

In every language, terms for relatives constitute a small, semantically structured group of words that are of cultural interest because they reflect features of the social structure of the speakers. In Musqueam and other Halkomelem dialects, the simple terms for relatives constitute an especially small set, only two of which, *mén* ‘father’ and *tén* ‘mother,’ have precise English equivalents, there being no simple Musqueam equivalent of ‘brother,’ ‘sister,’ ‘grandfather,’ ‘aunt,’ ‘cousin,’ and so on. This lack of correspondence is the result of differences in semantic principles, which are probably related to social structure, and of differences in grammar.

Differences of the first kind will be discussed with each group of terms below. Grammar is relevant in that it has allowed for some of what is probably historically a great reduction in the number of Proto-Salish terms.<sup>1</sup> Most English terms (and terms in several other Salishan languages) distinguish the sex of the referent – for example, a ‘brother’ is invariably male and a ‘sister’ female; of the bare terms in Musqueam, only those corresponding to ‘father’ and ‘mother’ make such a distinction. For all of the Musqueam terms, the article or demonstrative identifies the sex of the referent, as well as other facts ignored by English. On the other hand, several Musqueam terms make distinctions, such as whether the linking relative is living or dead or whether the speaker (“ego”) is male or female, that English terms ignore.

We can distinguish terms for consanguineal (“blood”) relatives from those for affinal relatives (“in-laws”). In Musqueam the two sets are structured differently. We can further distinguish three sets of each of the following: (1) terms of personal reference, (2) terms of address, and (3) terms of impersonal reference.

---

<sup>1</sup> See Elmendorf 1961 on the reduction of Proto-Salish kinship terms, and my comments in Suttles 1965.

Terms of personal reference appear with possessive affixes and in grammatical contexts that require articles. Terms of address are the terms of personal reference without any prefixes other than possessives; they may or may not take possessive affixes, and they appear without articles. Terms of impersonal reference appear in grammatical contexts with articles, but like the verb forms that they probably are, they cannot take possessive affixes. Three of the most common of these bear no relationship to the terms of personal reference; the rest are derivatives of the terms of personal reference. The terms of personal reference and address are described in §21.1 and §21.2, and those of impersonal reference in §21.3.

### 21.1. CONSANGUINEAL RELATIVES

I will first present the terms of personal reference and address for parents, children, siblings, and cousins, then the terms of impersonal reference for these, and finally all sets for other relatives.

#### 21.1.1. Parents and Children

The basic terms are:

*mén* ‘father’ (pl.?, dim. *mémən*, address *méʔ*, *mémən*)

*tén* ‘mother’ (pl.?, dim. *tétən*, address *téʔ*, *tétən*)

*mənə* ‘child’ (pl. *mémənə*, dim. *mímnə*, address *mənə*)

The terms of address for father and mother, especially the diminutives, which have the sense of ‘dear little father’ and ‘dear little mother,’ may be used in talking to a little boy or little girl. The term *mənə* is ‘child’ in the sense of ‘son, daughter, offspring,’ not in the sense of ‘baby’ (*sqéqələ*) or ‘child’ (*sʔíʔqət*) as a life-status term. An adult is still the *mənə* of his or her parents. However, there is a related or derived form, *ʔəməmən* ‘little.’

When used in reference, the basic terms must have possessives (my, your, etc.): *nəmén* ‘my father,’ *ʔəntén* ‘your mother,’ *mənəs* ‘his child, her child, their child.’ And they must also be preceded by articles (*tə*, *θə*, etc.) or demonstratives: *tə nəmén* ‘my father (who is here now),’ *θə nətén* ‘my mother (who is here now),’ *θə nəmənə* ‘my daughter (who is here now),’ *tə nəmənə* ‘my son (who is here now).’ Thus the articles indicate whether the person referred to is male or female and whether present and visible, somewhere not visible, or deceased.

If a relative is deceased, this must be indicated either through the article or through the particle *-ət* ‘past.’ A deceased parent is referred to as *kʷə nəmén* or *kʷθə nəmənət* ‘my late father,’ *kʷsə nətén* or *tə nəténət* ‘my late mother.’

There is also a word *ʃxʷwéʔ* ‘parent’ (from *wéʔ* ‘own,’ meaning ‘someone to whom one belongs.’ In its plural form, this term is probably more commonly used with a wider meaning than simply parent: *ʃxʷwéləy* ‘parents, uncles and

aunts, those to whom one belongs,’ that is, relatives of an older generation. Because it is plural, it takes the masculine (non-feminine) article: *tə nəʃx<sup>w</sup>wéləy* ‘my parents (who are here now).’ This term is used in addressing parents or uncles and aunts in formal speeches, as in (a).

- (a) *tə ɫwáləp nəʃx<sup>w</sup>wéləy, yəθəstálə cən k<sup>w</sup>θə nəʃx<sup>w</sup>q<sup>w</sup>éləwən.*  
*tə ɫwáləp nə-ʃx<sup>w</sup>wéləy yəθəs-t-álə cən k<sup>w</sup>θə*  
 ART you(PL) my-to.whom.belong tell-TR-you(PL) I ART  
*nə-ʃx<sup>w</sup>q<sup>w</sup>éləwən*  
 my-thought  
 ‘My parents (or my uncles), I will tell you my feelings.’

A deceased parent may be referred to with the term *ʃx<sup>w</sup>táíle* (lit. ‘origin?’), as in: *k<sup>w</sup>ə nəʃx<sup>w</sup>táíle* ‘my late father,’ *k<sup>w</sup>sə nəʃx<sup>w</sup>táíle* ‘my late mother.’

The term for ‘child’ has a derivative, *sməné<sup>m</sup>* ‘children and other junior relatives.’ It is used in addressing a group of younger relatives that might include children, nephews, and nieces, and grandchildren. These are the relatives whom one might take responsibility for and lecture to.

### 21.1.2. Siblings and Cousins

Halkomelem does not have separate words for siblings and cousins. The terms used for siblings can also be used for relatives in one’s own generation as distant as fourth cousins, persons who share a great-great-great-grandparent. In theory, at least, a marriage between a couple related to that degree was still incestuous.

There are four basic terms:

- sx<sup>?</sup>éyət* ‘older sibling, senior cousin’ (pl. *sx<sup>?</sup>əx<sup>?</sup>éyət*, address *ʔéyət*, possibly related to the suffix *-éyət* ‘child’)  
*sqé<sup>?</sup>əq* (*sqé<sup>?</sup>eq*, *sqé<sup>?</sup>q*) ‘younger sibling, junior cousin’ (pl. *sqəl<sup>?</sup>é<sup>?</sup>q*, address *qé<sup>?</sup>əq*, *qé<sup>?</sup>q*, possibly related to *qéqələ*, identified as ‘baby’ by CC and as ‘boy baby’ by JP, and *qéq*, identified as Cowichan for ‘baby’ by CC and as ‘girl baby’ by JP)  
*ʔéləx* ‘sibling or cousin of the opposite sex’ (that is, sister or female cousin of a male, brother or male cousin of a female) (pl. *ʔəléləx*, address not recorded)  
*ʃx<sup>w</sup>ʔáq<sup>w</sup>a<sup>?</sup>* ‘sibling or cousin (older or younger of either sex)’ (pl. *ʃx<sup>w</sup>ʔáləq<sup>w</sup>a<sup>?</sup>*, also used in address, reciprocal *ʔəq<sup>w</sup>í<sup>?</sup>təl*, *ʔíq<sup>w</sup>í<sup>?</sup>təl*, *yəq<sup>w</sup>í<sup>?</sup>təl* ‘related as siblings or cousins’)<sup>2</sup>

The first two terms distinguish siblings on the basis of their relative age – older brothers and sisters from younger brothers and sisters. Your older brother is your *sx<sup>?</sup>éyət*, and your younger brother is your *sqé<sup>?</sup>əq*. When these terms

2 SP gave a possibly related Katzie term, *səq<sup>w</sup>*, which he identified as a lineage going back to one’s great-great-great-grandparent. JP did not recognize the term.

are used for cousins, they distinguish senior from junior lines of descent, that is, your father or mother's older brother or sister's child is your *sxʔéyət*, even if that cousin is younger than you, and your parent's younger sibling's child is your *sqéʔəq*, even if that cousin is older than you. This principle is used to maintain seniority over the generations. If you have a distant cousin whose father or mother was a cousin of your father or mother, and you know that your father or mother called his or her father or mother *ʔéyət*, then you must call that distant cousin *ʔéyət* no matter what the age difference. This principle is consistent with primogeniture, the transmission of names and other property to the eldest child, which may have been generally followed in Aboriginal society.<sup>3</sup>

Again, when used in reference, these terms must have possessives and articles. And like 'child,' the article shows whether the person you are referring to is a female or a male.

*θə nəsxʔéyət* 'my older sister/senior female cousin (who is here)'  
*kʷθə nəsqéq* 'my younger brother/junior male cousin (who is not here)'  
*tə nəʔéləx* 'my brother/male cousin (who is here) (a woman speaking)'  
*lə nəʔéləx* 'my sister/female cousin (who is absent) (a man speaking)'

Thus, while the bare terms do not distinguish brothers (or male cousins) from sisters (or female cousins), the terms in a grammatical context do.

The plural of the term *šxʷʔáqʷaʔ* is used in speeches addressed to groups identified, at least for purposes of establishing solidarity, as relatives, as in (a).

(a) ʔá· si·éím                      nə-šxʷʔáqʷaʔ  
     o honoured.ones    my-siblings/cousins  
     'O my honoured brothers and sisters.'

The root of *šxʷʔáqʷaʔ* is probably the basis for *sʔəqʷəʔəyət* 'youngest child of a pregnant mother, next older sibling of an unborn child,' that is, the child who is about to be replaced as youngest by the one in the womb.<sup>4</sup>

Other terms for siblings will be given later, in §21.3, "Terms of Impersonal Reference."

### 21.1.3. Uncles and Aunts, Nephews and Nieces

As one might expect from the terms for siblings and cousins, the terms for parents' siblings include their cousins, and the terms for siblings' children include

3 However, this principle is seen in kinship terminologies of peoples in, among other regions, the Great Basin, for whom property was not especially important. It is characteristic of Spier's "Yuman" type of kinship terminology (Spier 1925, 75-76).

4 This term appeared in a text some time after I had elicited what I had supposed to be a full set of kinship terms in part by the traditional genealogical method, asking, "What do you call your father's brother Sam's wife Jane," and so on. As I could not possibly have thought of such a term, it shows the value of texts in filling out what might seem to be well-known areas of the lexicon.

cousins' children. The Musqueam terms also differ from English in that there is one set of terms while the linking relative is alive and another if the linking relative has died. Thus we have the following four terms:

*šx<sup>w</sup>əmnik<sup>w</sup>* (CC), *šx<sup>w</sup>əmnik<sup>w</sup>* (JP) 'parent's sibling or cousin during the lifetime of the parent' (pl. *šx<sup>w</sup>əmnelək<sup>w</sup>*, *šxəmnélək<sup>w</sup>*, address *nik<sup>w</sup>* or *nik<sup>w</sup>iye*)  
*stíwən* 'sibling or cousin's child during the lifetime of the sibling or cousin' (pl. *státíwən*, dim. *stítwən*, dim. pl. *stələtátíwən*, address *tíwən*, *títwən*)  
*šx<sup>w</sup>məθəyéł* 'parent's sibling or cousin after the death of the parent' (pl. *šx<sup>w</sup>məlməłθəyéł*, address *məθəyéł*)  
*swənméył*, *swənméyəl* (< *wénəm* 'orphan,' *-éyəl* 'child') 'sibling or cousin's child after the death of the sibling or cousin' (pl. not recorded, address *wənméył*, *wənméyəl*)

Thus while my mother was alive I would have referred to her brother (my uncle) as *nəšx<sup>w</sup>əmnik<sup>w</sup>*, and he would have referred to me (his nephew) as *nəstíwən*. But after my mother was gone, I would have referred to him as *nəšx<sup>w</sup>məθəyéł*, and he would have referred to me as *nəswənméył*. Similarly, while my brother was alive, I would have referred to his daughter (my niece) as *nəstíwən*, but after his death, I would have had to call her *nəswənméył*. Presumably, when people change from the first pair of terms to the second, they are reminded of the link between them and their responsibility for keeping the kinship tie.

In the system of classification used by anthropologists (e.g., Murdock 1949), Halkomelem kinship terms for relatives in parents' generations are "lineal," that is they distinguish between parents and parent's siblings but do not distinguish mother's siblings from father's siblings. In this, Halkomelem and other Coast Salish terms are like English and unlike those of Interior Salish languages, which are "bifurcate collateral," that is, they distinguish parents, father's siblings, and mother's siblings, and they are unlike those of the Northern Coast, which are "bifurcate merging," that is, they have a single term for father and father's brother and a single term for mother and mother's sister. Lineal and bifurcate collateral terminologies are consistent with bilateral descent, while a bifurcate merging terminology is consistent with unilineal descent, the principle basic to the system of matrilineal clans of the Northern Coast.

#### 21.1.4. Grandparents, Grandchildren, and Beyond

Just as the terms for siblings also refer to other relatives in one's own generation, that is, to cousins, so too do the terms for grandparents, grandchildren, great-grandparents, and so on refer to others of these relatives' generations. The basic terms are:

*sílə* 'grandfather, grandmother, great uncle, great aunt,' that is, 'relative in the second ascending generation' (pl. *səlsílə*, address *sílə*)

*ʔiməθ* ‘grandson, granddaughter, grandnephew, grandniece,’ that is, ‘relative in the second descending generation’ (pl. *ʔəmiməθ*, address *ʔiməθ*, *ʔiməyə*) *scááməqʷ* ‘great-grandparent, great-grandparent’s sibling or cousin, great-grandchild, sibling or cousin’s great grandchild,’ that is, ‘relative of the third ascending or descending generation’ (pl. *scááməqʷ*, dim. *scááməqʷ*, dim. pl. *scááməqʷ*, address *scááməqʷ*)

*ʔə́kʷəyəqʷ* (CC), *ʔə́kʷəyàqʷ* (JP) ‘great-great-grandparent, etc.,’ that is, ‘relative of the fourth ascending or descending generation’

*iʔə́pəyəqʷ* (CC), *iʔə́pəyàqʷ* (JP) ‘great-great-great-grandparent, etc.,’ that is, ‘relative of the fifth ascending or descending generation’ (also refers to the cap at the stem of a strawberry or salmonberry)

The diminutive *scááməqʷ* might be used, JP said, by a great-grandparent addressing a great-grandchild. I did not record terms of address for relatives in the fourth and fifth ascending or descending generations. Probably one does not ordinarily meet a lineal ancestor or descendant of such status, but collaterals could be contemporaries.

### 21.1.5. Relatives and Kin Groups

Kinship was and is of great importance in Coast Salish society. The most general term referring to kinship is *syéyə* (< *yéyə* ‘secure, tightly tied’) ‘friend, relative’ (pl. *siyéyə* // *syəyéyə* //). This term perhaps literally means ‘bond.’ In the old days, friendship without kinship may have been uncommon. When non-relatives wanted to establish close ties, they soon negotiated marriages and thus established kinship. And so the meaning ‘relative’ is probably more basic than ‘friend.’ The term has a reciprocal *yáʔitə́* // *yáyətə́* // ‘be related.’ JP said that one might address a “distant *sílə́*” as *yéyə* as a sign of respect. In the big house, speeches commonly begin: *ʔá siʔém nəsiyéyə* ‘O my honoured friends/relatives.’

There is a noun, *cá* ‘genealogical connection,’ and a verb derivative, *cáəm* ‘explain a relationship,’ which JP remembered hearing his mother use in the following:

(a) ni ʔə čxʷ íqə́l-ləxʷ kʷ cáʔct xʷtə́. yəθélay ʔəw nəsiyéyə. (JP)  
 ni ʔə čxʷ íqə́l-ləxʷ kʷ cáʔ-ct xʷtə́ ʔə  
 AUX ROG you know-TR ART connection-our toward OBL  
 yəθélay ʔə wə-nə-siyéyə  
 those also EST-my-relations

‘Do you know how we’re related to those ones who are my relatives?’

(b) qíʔqə́l kʷscáəm s yəθélay.  
 qíʔqə́l kʷ s-cáəm-s yəθélay  
 ignorant ART NOM-explain.genealogy-3POS those  
 ‘They don’t know how to explain how they’re related.’

Ancestors are referred to as:

*syəw'éñ* (< *yəw'éñ* ‘before’) (lit. ‘what was before,’ also ‘heritage’)  
*kʷθə mi:t yəʔé:yəqt* ‘those whom we are replacing’ (CC 1)

Descendants are referred to by several terms:

*stʰáqʷəm* ‘offspring, descendants’ (‘suckling’?; cf. *iʰáqʷət* ‘suck it’)  
*sʔəy'éq* ‘descendant’ (lit. ‘replacement’) as in (c)

- (c) *ʃawłmi sʔəy'éqs kʷθə xʷənčálwəməł.* (JP)  
*ʃa wəł-mi sʔəy'éq-s kʷθə xʷənčálwəm-əł*  
 BE3P already-come replacement-3POS ART one.family-past  
 ‘They are descendants of one family.’

The only term elicited for ‘family’ is *xʷnəčálwəm* ~ *xʷnəčálwəm* ~ *xʷənčálwəm* (< *nəčáʔ* ‘one’ + ?) ‘one family.’ JP believed that this term refers to the descendants of one couple, now not necessarily the residents of one house.

- (d) *ʔənθə wəłmi stʰáqʷəms kʷθə xʷənčálwəməł (~ kʷθə xʷənčálwəməł məstáyəxʷ).* (JP)  
*ʔənθə wəł-mi stʰáqʷəm-s kʷθə xʷənčálwəm-əł*  
 be.I already-come descendant-3POS ART one.family-past  
 (~ *kʷθə xʷənčálwəm-əł məstáyəxʷ*)  
 ART one.family-past person  
 ‘I am the descendant of that one family (~ the people of that one family).’

## 21.2. AFFINAL TERMS

Under this heading I will deal with terms for spouses and relationships resulting from marriage, as well as terms for in-laws.

### 21.2.1. Spouses

There is a single term for spouse: *stáləs* ‘spouse, husband, wife’ (pl. *stəłtáləs*, dim. *stáʔtələs*, *státələs*).

The diminutive may be used affectionately, as in *θə nəsqánəq nəstátələs* ‘my dear little wife,’ or derisively to refer to a married woman’s lover. A spouse may be addressed simply with *náw* ‘hey.’ There is a reciprocal form, *titəlástəl* ‘related as husband and wife’ or simply ‘married couple.’

Because in the old days a man could have more than one wife, there is a term *sxáyə* ‘co-wife’ (pl. *sxəxáyə*).<sup>5</sup> This term has a reciprocal form, *xəxʷəyʔtəl* (JP) or *xəxʷəyáʔtəl* (CC) ‘be co-wives, be wives of the same man.’ Something

5 Somewhere I have seen the term *sxáyə* identified with *xáyəʔ* ‘maggot.’ These words are not the same, and the resemblance is probably of no significance.

of the relations between women married to the same man is suggested by the belief that while eating either *swíwə*, the Fraser River eulachon (“hooligan”), or *sʔáyənəx*, the smaller variety that runs in the Squamish River, you should not mention the other, “because they are co-wives.”

Although a woman could not have two husbands, there is also a term, *sxəyé-seq*, which refers to another man with whom one shares (or has shared?) a woman, as a husband and a wife’s lover (perhaps a former husband), not a situation that men would openly agree to. The term may contain the root of *yəsélə* ‘two’ and the suffix *-eq* ‘penis.’ Some people regard it as obscene.

There are terms for having multiple wives:

*xʷʔəyséltəxʷ* ‘have two wives’ (< *yəsélə* ‘two’)

*xʷltxʷéltəxʷ* ‘have three wives’ (< *lítxʷ* ‘three’)

A person who has lost a spouse is a *syéʔtən* ‘widow, widower.’ In the old days, a person who has lost a spouse was encouraged or even obliged to marry a close relative of the deceased, following practices technically called “the levirate” and “the sororate.”

### 21.2.2. Primary Affines

There are four terms that refer to the relatives called in English ‘mother-in-law,’ ‘father-in-law,’ ‘sister-in-law,’ ‘brother-in-law,’ ‘daughter-in-law,’ and ‘son-in-law.’ However, while the English terms are simply based on the consanguineal terms used by the spouse, the Musqueam terms follow a different pattern. They are:

*škʷítəw* (*šxʷ*- ‘oblique nominalizer’? *kʷítəw* ‘to live with one’s in-laws’) ‘father-in-law, mother-in-law, wife’s brother’ (pl. *škʷé-təw*)

*scəwtét* ‘son-in-law, daughter-in-law, man’s sister’s husband’ (pl. *sciwətét*)

*smétəxʷtən* ‘sibling-in-law of the opposite sex,’ that is, ‘(man’s) brother’s wife, (woman’s) sister’s husband, wife’s sister, husband’s brother’ (pl. *sméʔəltəxʷtən*, address *métəxʷtən*)

*šxʷʔéləx* (< *šxʷ*- ‘oblique nominalizer,’ *ʔéləx* ‘sibling/cousin of opposite sex,’ i.e., ‘one who has a woman’s brother’) ‘sister-in-law (woman speaking),’ i.e., ‘husband’s sister, brother’s wife (woman speaking)’ (pl. *šxʷʔəléləx*)

Musqueam terms for blood relatives, like English terms, keep the generations apart. Except for *ʔéləx* ‘sibling/cousin of the opposite sex,’ they mean the same thing when used by either men or women. For males but not for females, however, the Musqueam terms for in-laws follow an overriding principle.

For a man, the term used for his wife’s parents applies also to a man in his own generation – his wife’s brother, while the term used for his child’s spouse applies also to a man of his own generation – his sister’s husband. The principle here is probably one that reflects the nature of marriage in aboriginal society: a man (with his family) was responsible for his wife to her parents and to

her brothers (his *škwéław*), while the men responsible to him for their wives were the husbands of his daughters and his sisters (his *sciwatétl*). His male *škwéław* are men from whom he received his wife, while his male *sciwatétl* are men who received their wives from him or his family.

For a woman, the terms for in-laws keep the generations separate. A woman's *škwéław* are simply her husband's parents, and her *sciwatétl* are simply her children's spouses. She refers to both her husband's brother and her sister's husband as *smétax<sup>w</sup>tən*, and they refer to her by the same term. She refers to both her husband's sister and her brother's wife as *šx<sup>w</sup>élax*, and they refer to her by the same term.

The term that is used reciprocally between the sexes, *smétax<sup>w</sup>tən* 'sibling-in-law of the opposite sex,' is used by persons that might marry in the event of the death of a spouse. If one of a married couple dies, the four terms in-law are replaced by a single term: *cé'ye* 'deceased spouse's relative, spouse of deceased relative' (pl. *čəy'cé'ye*, impers. *čəčə'ye*).

There is a verb derived from this term: *cé'yem* 'marry ones *cé'ye*'. Such a marriage was common in the old days. If a husband or wife died, the family of the deceased might provide a close relative of the deceased as a new spouse. This provided for children to the marriage and kept up the alliance between families.

### 21.2.3. Secondary Affines

There is another in-law term for which there is no equivalent in English (although some other European languages have one): *sk<sup>w</sup>əlwəs* 'co-parent-in-law,' that is, 'child's spouse's parent (or other close relative)' (pl. *sk<sup>w</sup>əlkw<sup>w</sup>ilwəs* [CC], *sk<sup>w</sup>ək<sup>w</sup>ilwəs* [JP]; reciprocal *k<sup>w</sup>i'lwastəl* [CC], *sk<sup>w</sup>ik<sup>w</sup>əlwástəl* [JP] 'be allied through the marriage of children').

This is a very important term. Marriages were alliances between families, arranged by and maintained by the people who became co-parents-in-law. Another term for this kind of affine is *snécəłtx<sup>w</sup>* (< *néc* 'different' + *-əłtx<sup>w</sup>* ?; cf. *-tx<sup>w</sup>* 'house,' *-əłtx<sup>w</sup>* 'spouse') 'opposite friend' (JP's gloss) (pl. *sné'əłčəłtx<sup>w</sup>*) (JP).

After the death of one of a married couple, the co-parents-in-law became *čłxé'm* 'deceased child's spouse's parent, child's deceased spouse's parent,' lit. 'co-weeper' (pl. *čłxəxé'm*).

And there is still another term for which there is no English equivalent: *snəcəłləq* ~ *səncəłləq* (< *nəča* 'one' or *néc* 'different' + ?) 'spouse's sibling's spouse,' that is, 'husband's brother's wife, wife's sister's husband, etc.' (pl. not recorded, address *nəcəłləq*).

There are also a few terms that correspond to persons sometimes called "relatives by marriage" in English:

*xcéþθ* ‘uncle by marriage (aunt’s husband), aunt by marriage (uncle’s wife)’  
*šx<sup>w</sup>sílá* ‘step-grandparent, great uncle/aunt by marriage’  
*šx<sup>w</sup>íməθ* ‘grandchild’s spouse’

#### 21.2.4. Step, Half, and Adopted Relatives

A few terms refer to relationships coming from second and plural marriages:

*snáčəwəyət* (< *náča* ‘one,’ *-eyet* ‘child’) ‘half-sibling’ (reciprocal *hincəwəyáttəl* ‘related as half-siblings’). This term, JP thought, was perhaps restricted to half-siblings born of the same mother.  
*čtmántəl* (< *čt-* ‘co-,’ *mén* ‘father,’ *-təl* ‘reciprocal’) ‘half-sibling sharing the same father’ (JP). I did not elicit a *tén* ‘mother’ counterpart.  
*čtilé?em* ‘step-parent’  
*sqəqstənámət* ‘step-sibling’ (< *sq’əq* ‘younger sibling, etc.’ + causative reflexive suffix [see §10.5.3], lit. ‘pretend younger sibling’)  
*sk<sup>w</sup>ámí?təm* (CC), *k<sup>w</sup>ámí?təm* (AG) (< √ of *k<sup>w</sup>ámət* ‘raise,’ *-əyət* ‘child’) ‘adopted child’  
*scimné?em* (< ?) ‘adopted child’

### 21.3. TERMS OF IMPERSONAL REFERENCE

In narratives, terms other than those given above are often used for relatives of the characters, identifying them in relation to one another. The two such terms most commonly used are:

*sənǰe?* ‘older sibling, cousin senior in descent’ (pl. *sénǰe?*, dim. not recorded)  
*sá?saq<sup>w</sup>t* ‘younger sibling, cousin junior in descent’ (pl. not recorded, dim. *sá?á:saq<sup>w</sup>t*)

These terms cannot take possessives, and so they cannot be used for one’s own relatives or another’s. You cannot say *\*\*nəsənǰe?* or *\*\*nəsá?saq<sup>w</sup>t*. And because they cannot refer to one’s own relatives, they cannot be used in talking to a relative. To call out to your older brother, you have to say *?á: ?éyət*. You cannot call out *\*\*?á: sənǰe?*. For these reasons, I have called them (Suttles 1965) “terms of impersonal reference.” In narratives these terms follow articles, as *tə sənǰe?* ‘the older (of a pair of brothers), the senior (of a pair of cousins)’ and *tə sá?saq<sup>w</sup>t* ‘the younger (of a pair of brothers), the junior (of a pair of cousins),’ referring to persons who have already been identified in the story.

They can, however, be used as modifiers of terms of personal reference, as in (a) and (b).

- (a) *k<sup>w</sup>əθ sánǰe? nə-sx<sup>?</sup>éyət*  
 ART senior my-older.sibling  
 ‘my oldest brother’

- (b)  $\lambda a$   $səʔá:səq^w t$   $nə-sxʔéyəł$   
 BE3P junior(DIM) my-older.sibling  
 ‘It’s my youngest older brother.’

There are also derivatives that can take possessives, such as:

- (c)  $k^w\thetaə$   $nəsən\lambda eʔmí:n$  (CC)  
 ‘my next older brother’
- (d)  $nəsən\lambda eʔtən$  (CC)  
 ‘my older sister’ (pl.  $sé:n\lambda eʔtən$  [JP])

Two derivatives refer to groups:

$saʔsəq^w tén$  ‘younger group’ (used for the first run of chum salmon) (JP)  
 $sən\lambda eʔén$  ‘older group’ (used for the second run of chum salmon) (JP)

And these can have plural forms, as in (e).

- (e)  $\lambda aw$   $mək^w$   $səláʔsəq^w tən$ . (JP)  
 ‘They are the younger ones.’ (referring to three younger siblings)

In not taking possessive affixes, these terms are like verbs rather than nouns. In fact, they may be verb forms. The term  $sən\lambda eʔ$  looks like a resultative form and  $saʔsəq^w t$  like a progressive form, but I cannot identify the roots.

For ‘parent’ and ‘child’ the terms of impersonal reference are:

$cíʔcət$  ‘parent’ (pl.  $cəlíʔcət$ ) (CC),  $syíʔəl$  ‘parent’ (pl.  $siyíʔəl$ ) (JP)  
 $səmnéʔ$  ‘parent, one who has a child’ (CC)  
 $mímneʔ$  ‘child’ (pl.  $mələ:mneʔ$ ) (CC)

The term  $cíʔcət$  may be historically related to Clallam  $cət$  ‘father,’ and if it is a progressive form, it may mean something like ‘one who is parenting.’ This term was given by CC; JP believed it was Cowichan and said that the Musqueam word was  $syíʔəl$ . The term  $səmnéʔ$  is a resultative meaning ‘childed.’ The term of impersonal reference for ‘child’ is also derived from  $mənə$  ‘child,’ the term of personal reference.

Again, the sibling terms can be used with this term, as in  $k^w\thetaə$   $sən\lambda eʔ$   $mímneʔ$  ‘the oldest child (who is male).’ The plural appears in  $təlíʔ$   $ʔə$   $k^w\thetaə$   $mələ:mneʔ$  ‘one of the children.’

It was CC who first led me to an understanding of the difference between these terms and the set that appears with possessives. After we had established a basis for identifying them, I asked her for more, and she produced a full set, which I give below in the right column, following the personal set (with glosses abbreviated in standard anthropological fashion).

$ʔéləx$	‘sb of op sex’	$ʔəléləx$
$\check{s}x^w əmnítk^w$	‘pa sb’	$\check{s}x^w əmnənək^w$

<i>stíwən</i>	‘sb ch’	<i>státəwən</i>
<i>šx<sup>w</sup>məθəyéł</i>	‘dec pa sb’	<i>šx<sup>w</sup>amələθéyalt</i>
<i>swənméyət</i>	‘dec sb ch’	<i>swəwənməyət</i>
<i>sílə</i>	‘gr pa’	<i>sásələ</i>
<i>?íməθ</i>	‘gr ch’	<i>?áməθ</i>
<i>scáməq<sup>w</sup></i>	‘gt gr pa’	<i>scáməq<sup>w</sup></i>
<i>šk<sup>w</sup>ítəw</i>	‘sp pa, wi br’	<i>šk<sup>w</sup>əšk<sup>w</sup>ətəw</i> , pl. <i>šk<sup>w</sup>ələk<sup>w</sup>ətəw</i>
<i>scəwítét</i>	‘ch sp, si hu’	<i>scəwítəłt</i>
<i>smétax<sup>w</sup>tən</i>	‘hu br, wi sis, etc.’	<i>səmtéx<sup>w</sup>tən</i>
<i>šx<sup>w</sup>?éləx</i>	‘hu sis, br wi’	<i>šx<sup>w</sup>?éləx</i> (probably <i>šx<sup>w</sup>?ələx</i> )
<i>čé:yə</i>	‘dec sp rel, dec rel sp’	<i>čəčəyé</i> , pl. <i>čələčəyé</i>
<i>sk<sup>w</sup>əlwəs</i>	‘ch sp pa’	pl. <i>sk<sup>w</sup>əšk<sup>w</sup>əlwəs</i>
<i>snəcálləq</i>	‘sp sb sp’	<i>səncələq</i>

Clearly, these terms of impersonal reference are all derived from those of personal reference, but the question remains as to how. In the impersonal set, there is usually reduplication of the first consonant, a full first vowel is reduced to schwa, the stress may fall on this vowel or on a later one, possibly a stressed full vowel, and resonants may be glottalized. In these respects, these forms resemble one or another aspect of the verb, but it is not possible to say unequivocally that they are progressive, durative, or what. One of the problems for analysis is that several of the personal set are composed of roots and affixes that cannot be identified. Most of these terms of impersonal reference have not appeared in the texts I have recorded, and, unfortunately, I did not try to elicit them from other speakers. They remain a problem for further analysis and comparative work.

## Space and Time

Distinctions involving space and time are required by the grammar in nearly every utterance in ways that have been described at various places in the preceding sections. Here I will simply summarize these and then describe the treatment of time and space in the lexicon.

### 22.1. SPACE

Grammar often requires the expression of location or direction in relation to the speaker or to the focus of interest in a narrative. Many predicates require auxiliaries, and thus the speaker must choose between *ʔi* ‘be here’ and *niʔ* ‘be there,’ which identify an event as appearing or occurring near the speaker or away from the speaker, or between *ʔami* ~ *mi* ‘come’ and *nem* ‘go,’ which identify any movement as toward the speaker or away from the speaker (see §3.2.1). Every nominal adjunct must be introduced by an article or demonstrative or consist of a demonstrative that locates it in relation to the speaker or the focus of interest by indicating whether it is present and visible, nearby but invisible, or remote, non-existent, or hypothetical (see §15.1.2). The locative demonstratives (§15.2.2.1) and demonstrative auxiliaries (§15.3), formed with *ʔi* ‘be here’ (with a variant *ʔé*) and *niʔ* ‘be there’ (and a variant *naʔ*), distinguish a ‘yonder’ position as well as a ‘here’ and a ‘there.’

In the lexicon, direction and location are also expressed by about fifty roots and their derivatives. Many of these roots are verbs that can stand alone (without affixes) to express motion or, less often, position. Many have progressive and resultative forms and can take transitive, causative, reflexive, and reciprocal suffixes. The resultative forms usually express location. There are also some roots that can only be inferred from complex forms and cannot be classified.

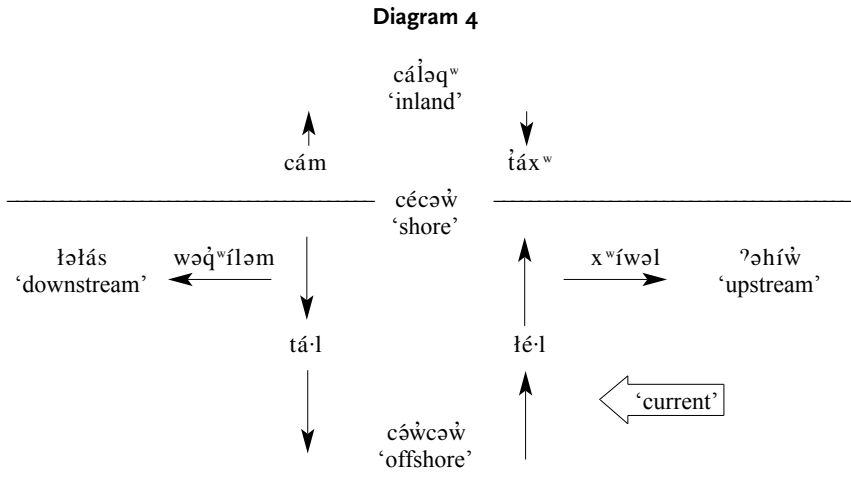

Most of these roots take one or more affixes that have a spatial meaning. The most common of these are the suffixes *-əl* ~ *-il*, *-iləm* ‘move toward’ (§12.3.1), *-álwət*, *-álwət*, *-wít* ‘side’ (§13.6, 90), *-ic*, *-icən* ‘back, upper surface’ (§13.6, 64), *-eʔc* ~ *-éleʔc* ‘route across’ (§13.6, 64.1), *-əs* ~ *-as* ‘face, front’ (§13.6, 28), *-éxən* ‘arm, side’ (§13.6, 76), and *-aʔθ*, *-aθ*, *-aθən* ‘lip, edge, margin’ (§13.6,

26), and the prefixes *x<sup>wə</sup>-* ‘become’ (§12.2.2), *yə-* ‘along’ (§11.1.5.), *x<sup>w-2</sup>* ‘move toward’ (§12.2.7), and *hən-*, *həm-*, *ʔəm-* ‘come’ (§12.4.10). To economize I will not gloss these affixes in the following three sections.

We will first consider terms referring to location or direction in relation to features of the environment and to the house, fire, and canoe, before considering terms of general reference.

**22.1.1. The Expression of Movement and Location in Relation to Water**

The direction of movement and location on land or water are commonly indicated with words that refer to the shore and the flow of water. In many contexts, these words are the counterparts of cardinal directional terms in English. The basic terms are illustrated in the following diagram.

These terms<sup>1</sup> can be categorized as follows:

- |   |   |
|---|---|
| DIRECTION                                   | LOCATION  |
| 1 On land in relation to the shore          |   |
| <i>cám</i> ‘go/come up inland’              | <i>cáləq<sup>w</sup></i> ‘inland, up in the bush’ |
| <i>tá·l</i> ‘go/come down toward the shore’ | <i>cécəw</i> ‘down on the shore’                  |

1 See Hess 1979a for comparable terms in Northern Straits and Lushootseed.

- 2 On water in relation to the shore  
*tál* ‘go/come out seaward’                      *cáw̄cəw̄* ‘out at sea, out from shore, out on the tide flats’  
*lél* ‘go/come in shoreward, ashore’
- 3 On land or water in relation to the flow of water  
*x<sup>w</sup>íwəl* ‘go/come upstream’                      *ʔəhíw̄* ‘upstream’  
*wəq̄<sup>w</sup>íləm* ‘go/come downstream’                      *łətás* ‘downstream’

The terms *x<sup>w</sup>íwəl* and *wəq̄<sup>w</sup>íləm* are used for movement both on the river and on land along the river. On Burrard Inlet, to go toward the head is *x<sup>w</sup>íwəl* ‘go upstream,’ but to go toward open water is *ʔəʃq̄aθ* ‘go out.’ Out on Georgia Strait (“the Gulf”), according to JP, you can only specify where you are going or use the terms *təywət* ‘north’ or *yíx* ‘south.’ (See §22.1.1.4.) The terms *tál* and *lél* are used for movement on both the river and the salt water.

The directional terms are verbs, as in (a) and (b).

- (a) *ní m̄ə yəcək<sup>w</sup>cák<sup>w</sup>əm̄.* (CC)  
 ‘They are going up from the shore.’
- (b) *ʔi wət̄m̄i łátəx<sup>w</sup>.* (JP)  
 ‘He’s coming down to the shore.’

The locational terms were used with articles as nouns by CC and JP, as in (c) and (d).

- (c) *ní níʔ [ʔə] k̄<sup>w</sup>ə cəcəw̄.* (CC)  
 ‘He’s down on the beach.’
- (d) *ʔəȳ k<sup>w</sup>sneim̄ct səw̄qt̄ k̄<sup>w</sup> p̄əwəȳ [ʔə] tə cəw̄cəw̄.* (AC 1)  
 ‘Let’s go look for flounders out from shore.’

AG, however, used some of them as predicate heads and had plural forms, as in (e) and (f).

- (e) *ní cəcəw̄.* (AG)  
 ‘He’s down.’
- (f) *ní cələw̄cəw̄.* (AG)  
 ‘They are out offshore.’

Inflected and derived forms are given in the next three sections.

### 22.1.1.1. Inland versus Shoreward

The directional terms *cám* ‘go/come inland’ and *łáx<sup>w</sup>* ‘go/come toward the shore’ are simple verb roots with progressive, causative, and other forms; *cám* has a progressive *cák<sup>w</sup>əm̄*, plural *cáləm*, progressive plural *cək<sup>w</sup>cák<sup>w</sup>əm̄*, and causative *cámstəx<sup>w</sup>* ‘take/bring it up from the shore,’ and *łáx<sup>w</sup>* has a progressive

*íáíəx<sup>w</sup>*, plural *íáíəx<sup>w</sup>*, progressive plural *íáx<sup>w</sup>íəx<sup>w</sup>*, and causative *íəx<sup>w</sup>stəx<sup>w</sup>* ‘take/bring it down to the shore.’ What appear to be forms in the dispositional-iterative aspect (§7.6) are *cámcam* ‘move one’s residence inland’ and *íəx<sup>w</sup>íəx<sup>w</sup>* ‘move one’s residence down to the shore.’

The root of the locational term *cáləq<sup>w</sup>* is not identifiable; *cécəw* is from the root *cew-* ‘shore.’ These two also have verbal derivatives, *həncáləq<sup>w</sup>* ‘get up to the house from the beach’ (AG) and *həncéw ~ həmcéw ~ ?əmcéw* ‘get down to the shore’ (JP). The latter has a transitive with *-nəx<sup>w</sup>*, implied by a recorded passive *?əmcéwnəm* ‘be brought down from the bush (as a deer),’ a causative implied by a recorded passive *həmcéwstəm* ‘be brought down from the bush (as a dead animal or the body of someone who had been lost),’ and a derivative *?əmcáwəyəs* ‘come back to life’ (with *-əyəs* ‘circular figure’).

As this last word implies, movement to and from inland can also refer euphemistically or metaphorically to movement to and from the grave, as in (a) and (b).

(a) *niwł nəm cəməstəm*. (CC)

‘They have taken the body to the graveyard.’ (lit. ‘He was taken inland.’)

(b) *ni ?əmcáwəyəs k<sup>wə</sup> nił ?íkw*. (JP)

‘The one who was lost has (unexpectedly) returned.’

Reference to the bush (the woods) is more specific in *xčíləm* ‘enter the woods’ (cf. *xíčət* ‘put it in the bush,’ *sxíxəč* ‘the bush,’ the root of which may mean simply ‘thrust into’; cf. also *x<sup>w</sup>čət* ‘put it in the middle,’ *šx<sup>w</sup>əx<sup>w</sup>íc* ‘within, among’).

The two locational terms are the bases of the contrasting pair *scəlq<sup>w</sup>álwət* ‘uphill side’ and *scəwálwət* ‘shore side.’ The root *cew-* also appears in *scəwéləc* ‘out on the river bank’ (also a place name at Musqueam) and *scəwáθən* ‘Tsawwassen’ (lit. ‘shore margin,’ < *-aθən* ‘mouth’), and in other derivatives given below.

### 22.1.1.2. Offshore versus Shoreward

The directional terms *tá:l* ‘go/come offshore/seaward’ and *tél* ‘go/come shoreward’ are composed each of a root (probably  $\sqrt{ta-}$  ‘out’? and  $\sqrt{tel-}$  ‘back, behind’) and the suffix *-əl* ‘move toward.’ The progressives are *tətál* (CC) or *tətí:l* (JP) and *tətí:l*. (AG also used *tətá:l*, but JP believed this was the Cowichan progressive.) Causatives are *táləstəx<sup>w</sup>* ‘take/bring it out from shore’ and *téləstəx<sup>w</sup>* ‘take/bring it ashore.’ (The root *tél-* also has a transitive form *télx* – see §22.1.4.)

The locational term *cəwəcəw* ‘out on the water, out on the tide flats’ looks like a form of *cew-* ‘shore’ in the iterative aspect, but it is not clear why this might be so. This term also has a verbal form, *x<sup>w</sup>əcəwəcəw* ‘get out in the water,’ as in (a).

- (a) ni čx<sup>w</sup> wəhánəw x<sup>w</sup>əčəwəw. (JP)  
 ‘You got out too far.’

An adjectival form appears in *scewcéwat q<sup>w</sup>alítəq* ‘offshore seagull’ (possibly the long-tailed jaeger) (JP). There is a derivative *ciwəwás* ‘be looking out to sea’ with *-as* ‘face.’

A term *télit* ‘ashore’ (landed but still aboard the vessel as opposed to *q<sup>w</sup>im* ‘disembark’) was given as the locational counterpart of *tél* ‘go/come ashore.’ It appears to be *tél* plus *-t* ‘stative’; the resultative is *stétəlt* ‘ashore, shore’ (JP), *stétəlt* (AG). Derivatives are *stəltálwət* ‘shore side (as the side of an island facing the mainland)’ (JP) and *šx<sup>w</sup>téléməx<sup>w</sup>* ‘sea hunter and fisher, expert at getting fish and sea mammals’ (JP).

### 22.1.1.3. Upstream versus Downstream

The directional term *x<sup>w</sup>iwəl* ‘go/come upstream’ (progressive *x<sup>w</sup>iwəl*) is composed of the prefix *x<sup>w</sup>-* ‘move toward,’ the root  $\sqrt{hiw}$  ‘ahead,’ and the suffix *-əl* ‘move toward,’ while *wəq<sup>w</sup>iləm* ‘go/come downstream’ (progressive *həwq<sup>w</sup>ələm*) is composed of the root *wəq<sup>w</sup>* ‘drift with the current’ and the compound suffix *-iləm* ‘move toward.’ There is another, evidently less frequently used term, *čələx<sup>w</sup>* ‘go/come upstream’ (progressive *čələx<sup>w</sup>*), which appears in the names *scələx<sup>w</sup>*, that of the upper part of the Musqueam village, and *scələx<sup>w</sup>i<sup>?</sup>q<sup>w</sup>* ‘Chilliwack.’

The locational  $\text{?əhíw}$  is from  $\sqrt{hiw}$  ‘ahead,’ perhaps a resultative form without the usual *s-* ‘resultative,’ and *tətás* is possibly from a root  $\sqrt{te-}$  or  $\sqrt{ti-}$  ‘back, behind.’ (For other derivatives of *hiw*, see §22.1.8.4.)

The Cowichan counterpart of  $\text{?əhíw}$  is *təyt* (< *təy-* ‘upstream’ and *-t* ‘stative’; cf. *təyəl* ‘go/come upstream’). The root  $\sqrt{təy}$  appears in several Musqueam terms, contrasting with *wəq<sup>w</sup>* ‘drift with the current,’ as in *stəytálwət* [sti<sup>?</sup>táwəl] ‘upstream side’ versus *səwq<sup>w</sup>álwət* ‘downstream side,’ used for something outside other than a house and *təytás* [ti<sup>?</sup>tás] ‘facing upstream’ versus *həwq<sup>w</sup>ás* ‘facing downstream.’

### 22.1.1.4. The Regional Axis

The terms *təywət* and *yíx* are often identified as ‘north’ and ‘south,’ but actually refer to the two ends of the great inland sea that the Halkomelem language straddles, *təywət* to the northern end of the Strait of Georgia and *yíx* to Puget Sound.

The term *təywət* may be derived from the  $\sqrt{təy-}$  of *təyt* ‘upstream’ and *təyəl* ‘go/come upstream,’ the northern end of the Strait of Georgia being perceived as the upstream end of the waterway leading out the Strait of Juan de Fuca to the ocean. The term may also refer to a westerly direction, as when JP said, *sk<sup>w</sup>tk<sup>w</sup>əm tə təywət* ‘It’s kind of red in the west,’ and its derivative *stəywət* refers to a wind that varies from place to place (see §22.1.7). The related term

*xʷtəywal*, usually glossed ‘Northern Indians,’ refers to the peoples from the northern end of the Strait of Georgia on northward.

The term *yíx* (*//yáx//?*) may be cognate with the *ləš* of Lushootseed (*dxʷləšúcid*) the language of Puget Sound. A derivative, *xʷyíxəl*, is said to refer to the people “from around La Conner south,” that is to the speakers of Lushootseed, although sometimes the Samish, who spoke Northern Straits, are included. The adjectival form *syíxaʔl* refers to the canoe type favoured by Puget Sound peoples.<sup>2</sup>

These terms also appear in two names for winds, given in §22.1.5. (For a more extended discussion, see Suttles 1987c.)

### 22.1.2. In Relation to the House and Fire

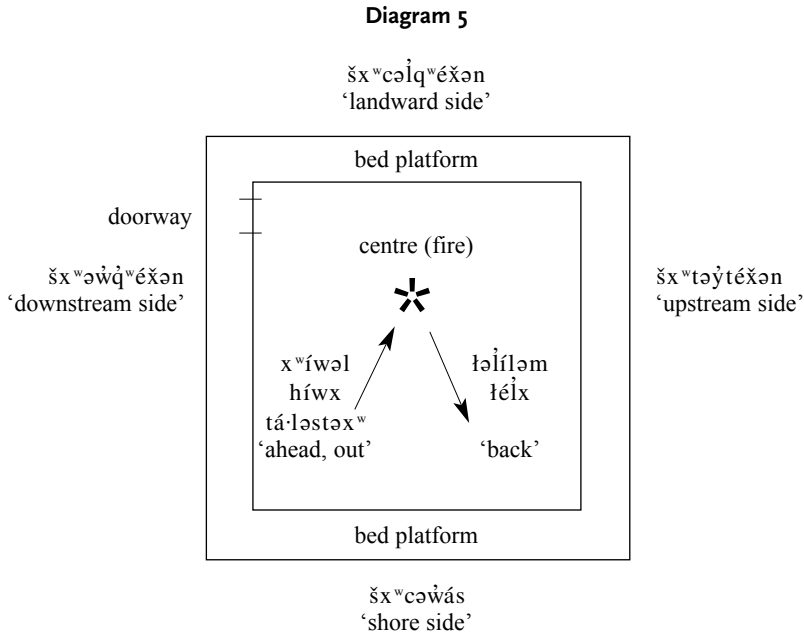

The traditional house was a large wooden structure, rectangular in form and with a single-pitched (shed) roof, standing parallel to the shore. Until the latter half of the nineteenth century, it consisted of a permanent framework of posts and beams covered with removable roof and wall planks, which could be laid across canoes to make “rafts” and be used at other sites. A smaller house may have had an entrance at one end and another on the side facing away from the water; a larger house may also have had one or more on the side facing the water. In winter the walls were lined with mats, which could also be removed for summer use over poles as temporary structures. Inside the house, a bed platform (*léʔweʔs*, probably from *√leʔ* ‘put away,’ *-éʔweʔs* ‘paddle’) wide enough for two adults and a baby extended around the walls, and partitions extended partway out from it to divide the house into family sections. Each family had a fire within its section, but for ceremonial occasions these were combined into a single fire in the centre of the house.

After milled lumber became available in the late nineteenth century, the walls and roofs became permanent features of the house and two-pitched (gable) roofs were usual, but these houses were generally built with the same orientation. Some of these structures continued to be used for winter dances long after they had been abandoned as residences, until the middle of the twentieth century, when they were replaced by more “modern” structures. The term for any structure lived in is *léləm* ‘house.’ The term for a large old-style house, especially one used for the winter dance or other ceremonial activities, is *sθéwtxʷ* ‘big house’ (< *θí* ‘big,’ *-əwtxʷ* ‘-house’).<sup>3</sup>

2 A Clallam, Sam Ulmer, identified *nəxʷyəš* as the people of Whidbey Island, at Coupeville, that is, the Skagit proper. On the other hand, Gibbs (1863, vi) wrote that the Skagits called the Lummi “Nūkh-lésh.”

3 At the time that I was doing most of my research, the English term for this structure was either “big-house” or “smoke-house.” In recent years, the term “longhouse” seems to have widely replaced these terms, but I do not remember ever hearing “longhouse” used by Native people before the 1960s or ’70s. I believe it came into general use about the same time as “elder,” which I also never heard until the 1960s or ’70s.

Terms expressing direction and location in relation to the house are illustrated in the following diagram.

Direction in relation to the house is expressed with derivatives of the roots referring to the shore and the flow of water, with the suffixes *-ás* ~ *-əs* 'face, -front' and *-éχən* 'upper arm, side.'

*xcəwás* (CC) (< *x-*, probably *šx<sup>w</sup>-* 'oblique nominalizer,' *cəw-* 'shore') 'front (water side) of house' (lit. 'facing the shore')

*xcəlq<sup>w</sup>éχən* (CC), *šx<sup>w</sup>cəlq<sup>w</sup>éχən* (JP) (< *cəlq<sup>w</sup>* 'inland') 'back (inland side) of house'

*təytéχən* [ti<sup>ʔ</sup>téχən], *šx<sup>w</sup>təytéχən* (< *təyt* 'upstream') 'upstream side (of house)'  
*həwq<sup>w</sup>éχən*, *šx<sup>w</sup>əwq<sup>w</sup>éχən* (< *həwq<sup>w</sup>* progressive of *wəq<sup>w</sup>* 'go with the current') 'downstream side (of house)'

(I did not record 'front of the house' from JP but assume he would have used an initial *šx<sup>w</sup>-* instead of CC's *x-*.) These terms are used as in (a) and (b).

(a) ni ni<sup>ʔ</sup> ə k<sup>w</sup>ə xcəwás. (CC)  
'He is in front of the house.'

(b) ni ni<sup>ʔ</sup> ə k<sup>w</sup>ə xcəlq<sup>w</sup>éχən. (CC)  
'He is in back of the house.'

They can be used to identify the corners of the house, as in (c) and (d).

(c) ni ʔə kʷθe šxʷəwǫ́wéχən scə́lqʷéχən šxʷləkʷéχəns kʷθə lélə́m. (AC)  
‘He’s at the lower back corner of the house.’

(d) ni niʔ ə kʷθə štitéχəns kʷθə lélə́m niʔ ə kʷθə šləkʷéχən. (AC)  
‘It’s in the corner of the upstream side of the house.’

In (d), AC used *šləkʷéχən* for an inside corner, but JP distinguished *šxʷləkʷéχən* ‘corner of the outside of a house’ from *šxʷc’éqəń* ‘corner inside the house,’ as in (e) and (f).

(e) ni ní tə šxʷc’éqəń.  
‘It’s way in the corner.’

(f) nistəxʷ čxʷ tə šxʷc’éqəń. (JP)  
‘Put it away in the corner.’

Within the house, direction in relation to the centre is expressed with some of the same terms or with terms derived from the same roots as those used in relation to water.

The term *xʷíwəl* ‘move upstream’ also means ‘move out into the centre of the house, toward the fire.’ Other derivatives of  $\sqrt{hiw}$  (see §22.1.8.4) with related meanings are *híwx* or *xʷíwx* (-x ‘transitive’) ‘take/bring him/her forward (a person to the centre of the house in front of people), bring it out (as food stored in the back),’ *xʷíwx* ‘move it over into the centre of the fire, move it onto the flame (as something being cooked),’ *ʔəhíwstəxʷ* ‘place it at the edge of the fire, put it upriver,’ *xʷəxʷíw* ‘front (as of the bed platform), side toward the fire,’ *xʷəxʷíwstəxʷ* ‘keep it close to the fire,’ *xʷəxʷíwəqən* ‘front (of a person, that is, nearer the fire),’ as in (a) and (b).

(a) ʔi-ʔ ʔamət ʔi ʔə tən xʷəxʷíwəqən. (CC)  
‘He was sitting in front of me.’

(b) ni xʷəxʷíwəqən kʷs ʔəmə́·mət[s]. (JP)  
‘They’re sitting in front of the bed platform.’

The term *tá:l* ‘move out onto the water, seaward’ has a causative *tá:ləstəxʷ*, which can mean ‘move it out (as a table into the middle of the room).’

The root of *té:l* ‘move shoreward’ appears in *təlíləm* ‘move back (from the centre of the house toward the bed platform, into the crowd, away from the fire, as at a big event),’ and *télx* ‘take/bring back (from the centre of the house, from the fire, as to seat a dancer),’ *təlél* ‘back, toward the wall,’ as in (c) and (d).

(c) ni təlél. (JP)  
‘He is in the back.’

- (d) ni lələlə́l k<sup>w</sup>is ʔə́má·mət. (JP)  
‘They are sitting in the back.’

One can also use *lətá·l̥wət* ‘behind, on the side away from the fire,’ as in (e) and (f).

- (e) ʔi ʔámət ʔi k<sup>w</sup>ən lətá·l̥wət. (CC)  
‘He’s sitting behind me (in the big house).’
- (f) nin lətá·l̥wət θən stáləs.  
‘My wife is behind me (nearer the wall in the bed).’

Terms for location relative to the speaker are derivatives of *ʔi* ‘be here’ and *niʔ* ‘be there’ (see §22.1.8.1), such as *səqín* ‘this end of the house’ and *snəqín* ‘that end of the house,’ *sʔəháʔalcəp* or *səhá·lcəp* ‘this side of the fire’ and *snəʔáʔalcəp* ‘that side of the fire,’ *səhá·l̥wət* ‘this side’ and *snəhá·l̥wət* ‘that side.’ The last is illustrated in (g).

- (g) néṃ cən ceʔ k<sup>w</sup>ə snəʔá·l̥wəts tə léləṃ.  
‘I’m going to the other side of the house.’

One can also use *təqín* ‘other end of the house.’

Going around inside the house is *x<sup>w</sup>qáqsəm* ‘make a complete circuit,’ a term also used for completing a full year. For the ceremonial circuit, see §22.1.3.

Coming or going in and out and inside and outside the house are expressed by the general terms *k<sup>w</sup>təx<sup>w</sup>* and *ʔəḥq-* and their derivatives given in §22.1.8.5, and leaving and returning by those given in §22.1.8.3. There are two terms relating more specifically to the house: *ták<sup>w</sup>* ‘go/come home,’ which has a causative *íḥk<sup>w</sup>stəx<sup>w</sup>* ‘take it home.’ The term *ʔəmət* ‘sit down (if standing), get up (if lying), be at home’ has the derivational forms *šx<sup>w</sup>ʔámət* ‘house site, bed’ and *həṃəmət* ‘get home.’

Usually the houses in a village stood in a row along the shore. On a stream, the upriver end of the row was called *stəytén* ‘upper end’ or *təytəḥən* ‘upper side,’ and the lower end was called the *səwq<sup>w</sup>én* ‘lower end’ or *wəq<sup>w</sup>əḥən* ‘lower side.’ The houses at the ends of the row at *sčələx<sup>w</sup>* at Musqueam were called *təytəḥən* and *wəq<sup>w</sup>əḥən*. On the salt water, as at Tsawwassen, the ends of the village were *stəytén* ‘north end’ and *syiʔxén* ‘south end.’

### 22.1.3. The Ceremonial Circuit

As elsewhere in this region, the ceremonial circuit is counterclockwise. Participants in the *smíteʔ*, the winter dance, move around the house in a counterclockwise direction. The dancers in a *sčəyčəy* performance circle counterclockwise. Participants in a Shaker service proceed around the church to shake each others’ hands and pass before the prayer table in a counterclockwise direction. Even a lady serving tea to her friends, CC explained, should

proceed around the table in a counterclockwise direction. To move clockwise is *qíq̇əθət* ‘bind oneself’ (< *qíq̇* ‘get bound’; cf. *qíq̇ət* ‘bind it’) and to move counterclockwise is *yáẋwəθət* ‘free oneself’ (< *yáẋw* ‘get free’ (cf. *yáẋwət* ‘free it, untie it’; cf. also *yáẋw* ‘thaw’). Thus, if you move clockwise you are tying yourself up, but if you move counterclockwise you are freeing yourself. The winter dancers moving counterclockwise around the house are “unwinding.”

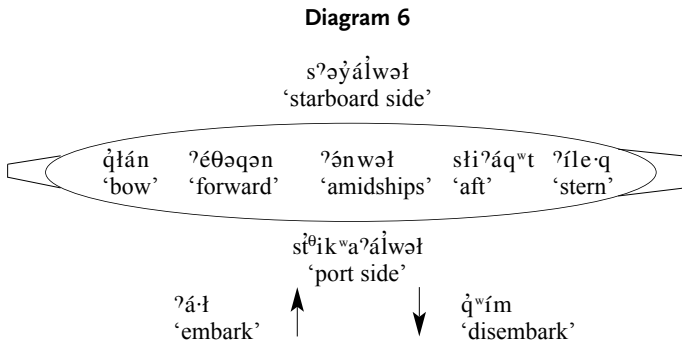

It seems likely that these reflexive terms are extensions in meaning arising from the practice of binding something, such as an arrow shaft, with a clockwise motion, requiring that it must be freed with a counterclockwise motion. (I am assuming that this was the ancient practice.) Once the meaning was extended from the action of binding and unbinding to the direction of the circuit, the implications of the terms would likely have reinforced the practice.

In the big house, there is another reason for moving in a counterclockwise direction, especially when you are entering for the first time and greeting people. If you turn to the right as you enter, you have the people seated along the wall at your right (the honoured side) and you can (in the modern tradition) shake their hands more easily.

The ceremonial circuit in this region contrasts with that of much of the rest of Native North America, where it is clockwise. This direction is often identified as “sun-wise” or “with the sun,” because the sun is seen, especially at higher latitudes (in the Northern Hemisphere), as moving in a clockwise direction. (Indeed, it must be the movement of the shadow on a sundial that makes clockwise “clockwise.”) The direction in this region, whatever its origin, is consistent with the importance of the house as the theatre of ceremonial activity, and with the absence of any special concern for the cardinal directions.<sup>4</sup>

**22.1.4. In Relation to the Canoe**

A few words seem to apply specifically to movement and location in relation to and within a canoe, or in recent times perhaps to any conveyance.

4 This discussion is taken from Suttles 1987c.

Terms for movement in relation to a canoe are:

(1) *át* (probably *lʔa1ə1ʔ*) ‘embark, go/come aboard,’ the durative (?) of which is *ʔəláʔət* ‘be aboard.’ Compare (a) and (b):

- (a) *ném cən ʔá-t*.  
‘I’m going aboard.’
- (b) *ʔi cən ʔəláʔət*.  
‘I am aboard.’

This has the causative *ʔátstəx<sup>w</sup>* ‘put him aboard’ and derivatives *ʔəltəleʔcəm* ‘load aboard’ and *ʔəltəleʔct* ‘load it aboard’ (< *-əleʔc* ‘bundle’). (Compare the suffix *-at* ‘travel by,’ §12.3.3.)

(2) *qʷím* ‘disembark, go/come ashore,’ which has the transitive *qʷímət* ‘let him off, take it out of the water,’ the resultative *sqʷíqʷəm* ‘ashore, disembarked,’ and the derivative *qʷíməleʔct* ‘unload it.’

Terms for position in a canoe are: *qłán*, *sqłán* ‘bow,’ *ʔíle-q* ‘stern,’ and *ʔənwət* ‘centre, amidships.’ Example of use are:

- (c) *ném čx<sup>w</sup> ʔíle-q*. (JP)  
‘Go to the stern.’
- (d) *nəm čx<sup>w</sup> tə ʔənwət*. (JP)  
‘Go sit in the middle.’
- (e) *ni sháy k<sup>w</sup>θə šx<sup>w</sup>níʔs k<sup>w</sup>θeʔ háyq<sup>w</sup> ni ʔə tθe sčécəñ wəsqłáns tə snəx<sup>w</sup>ət*. (JP 23)  
‘A place was prepared for that fire in the very bow of the canoe.’
- (f) *k<sup>w</sup>əyχθət tə šxqəqəwát ni k<sup>w</sup>θə ʔíle-q, ʔəxəl sčécəñ wətiməθət ʔəxəl*. (JP 23)  
‘The partner in the stern acts and paddles with all his might.’

Relative positions fore and aft in a canoe are expressed by *ʔéθəqən* ‘forward,’ *stíʔáq<sup>w</sup>t* or *liʔáʔaq<sup>w</sup>tmən* ‘aft, behind.’

The two sides of a canoe are *sʔəyálwət* [*sʔiʔálwət*] ‘starboard side, right side’ (< *ʔəy* ‘good,’ *-álwət* ‘side,’ and *sžək<sup>w</sup>əʔálwət* ‘port side, left side’ (< *íʔk<sup>w</sup>əʔ* ‘left’).

The terms for movement by canoe are:

*ʔəxəl* ‘paddle (v.; cf. *sqšməl* ‘paddle,’ n.), row (a skiff),’ also ‘take food to one’s affines’ (probably composed of a root  $\sqrt{ʔəx}$ - and the suffix *-əl* ‘move toward’), *sʔəxəl* ‘gift of food for affines,’ *ʔəxíls* *lʔəxəlélsl* ‘tow,’ *ʔəxíləstəm* ‘be paddled (used of either a canoe or a person being taken somewhere).’

*wəq<sup>w</sup>* ‘drift with the current.’ This is the root of *wəq<sup>w</sup>íləm* ‘go/come downstream’ and other terms given in the previous sections.

*x<sup>w</sup>əwqínt* ‘go ahead with it’ (< *x<sup>w</sup>*- *hiw*- ‘ahead,’ *-qin* ‘head, forward end,’ *-t* ‘transitive’)

*yáʔt* ‘back it up’ (< *√yaʔ* ‘reverse?’ *-t* ‘transitive’)

*ǰáǰəθət* ‘turn aside, swing around’ (< *√ǰeǰ* ‘be at right angles’; cf. *ǰéǰət* ‘cross him, contradict him,’ *ǰx<sup>w</sup>ǰéǰ* ‘weir,’ *ǰǰáǰwəttən* ‘canoe thwart’ [CC]; cf. *ǰǰáǰwəttən* ‘canoe thwart’ [JP])

*yəpənéc* ‘go with the wind’ (< *yə*- ‘along,’ *pənéc* ‘fair wind,’ composed of *pá* ‘get blown on’ and *-nəc* ~ *-néc* ‘base, butt’)

*yəqsín* ‘go against the wind’ (< *yə*- ‘along,’ *-qsən* ‘nose?’)

*ǰəǰǰənéʔe* ‘go with a wind from the side’ (< *ǰeǰ* ‘be at right angles,’ *-ənéc* ‘ear, side’)

The terms for ‘move upstream’ and ‘move downstream’ apply equally to movement on water and movement on land. There are very likely several, perhaps many, other terms relating to movement in a canoe and of a canoe that I have not noted.

### 22.1.5. Directions and Winds

While there are no simple terms for the cardinal directions, there are several terms identified as ‘north wind,’ ‘west wind,’ and so on. However, these glosses are inaccurate or incomplete. Direction is only one component of meaning; others are season, temperature, and precipitation. Nine winds were identified by either AC or JP or both:

(1) *stəywət* (< *təywət* ‘north’), a wind that blows mainly in summer, from the west to northwest, and brings good weather. Both AC and JP identified it as ‘west wind.’ At the Musqueam village, it comes from over Point Grey, according to AC, from up the gulf (the Strait of Georgia), according to JP. Upriver, where some of the Musqueam used to go for a supply of fish (see §23.1), it provided ideal conditions for drying the fish; it is said that it blows upriver every day in the daytime and is pretty strong after 10:00 AM, lasting through the day.

(2) *həwǰ<sup>w</sup>étət*, a wind that blows downstream at night during the fishing season on the Fraser River. It is said to be caused by the flow of the river.

(3) *scəs*, a wind identified by JP as a south-to-southwest wind and described as swinging around past Victoria and coming up through the gulf. The name means or implies that it swings around, he said.

(4) *təncáləq<sup>w</sup>* (*tən*- ‘from,’ *cáləq<sup>w</sup>* ‘inland, the “bush”’), a southwest wind that blows from over Vancouver Island and may bring squalls. It is said to be called a “bush wind” by some whites on Vancouver Island.

(5) *təlǰəθnəc* (*təl*- ‘from,’ *ǰəθnəc* ‘bay’), a southeast or south wind that brings rain, sometimes for weeks at a time. At the Musqueam village, it comes from the southeast, “from where the sun rises,” according to JP, from over San Juan Island (due south), according to AC. (The very destructive Typhoon Frieda of October 1962 was identified as this wind.)

(6) *tənyáx* (*tən-* ‘from,’ *yáx* “‘south,” Puget Sound’), a south wind that sometimes but not always brings showers. Both AC and JP identified it as coming over Point Roberts (south southeast).

(7) *tənyálməx̄*, identified by JP as a warm and wet wind that blows from the south in the winter and fights the cold. It is sent by *yálməx̄*, “a big, black, ugly man at the south end” who appears in a myth JP told. CC did not know the name. (See Suttles 1987c for more on the name.)

(8) *sátəc*, a cold winter wind from the north to northeast. It blows only in winter and brings a cold snap with ice and snow. AC called the wind *sásətəc*, but JP called it *sátəc* and used *təmsásətəc* for a period of continuing cold weather.

(9) *sqʷəx̄ʷəməx* (< *sqʷx̄ʷáməx* ‘Squamish’), a north wind that may blow in the summer. JP said that a wind from the same direction as *sátəc* in summer would not be called by this name because it would not be cold, but AG said a *sqʷəx̄ʷəməx* is also cold.

### 22.1.6. Measurement of Space

Perhaps only artifacts were measured in earlier times. The *tél* ‘fathom,’ the space that can be covered by the outstretched arms, was the unit for measuring the length of a line or canoe or the length and breadth of a house. The *təl̄cəs* ‘span’ (< *tél* ‘fathom,’ *-cəs* ‘hand’), the length covered by the outstretched hand, was the unit for measuring pieces of blanket and other smaller things.

The *sx̄əńə* ‘foot’ was also used by JP to describe the length of a harpoon shaft, among other things. He identified this unit as the distance between the knuckles of the little fingers when the two hands form fists with the thumbs out and touching at their tips. The length measured by one hand held this way is a *tsəq̄ sx̄əńə* ‘half foot’ or *l̄ əq̄ʷ sx̄əńə* ‘cut portion of foot.’ It is possible, if not likely, that this is a calque of the English measure.

The distance between two places could be expressed by the time taken to travel there.

### 22.1.7. Place Names

Musqueam place names do not differ in pattern from those of other peoples in this region. Typically there are names for every minor feature of the landscape that people know intimately. Often there are no names for some of the major features, such as large islands and bodies of salt water, probably because people’s movements were directed toward specific places for specific purposes. But there are names for distant mountains and mountain ranges, perhaps because these were used in setting courses on longer trips or used to mark seasonal changes in the path of the sun.

Generally, most place names are analyzable, but there are always a few that defy analysis. These may be either old worn-down names in the local language or else names adopted from another language. One common kind of analyzable

name is descriptive of the place. Some are simple terms such as *ʔəlqsən* ‘point’ for Point Grey and *ʔəθnəc* ‘bay’ for Burrardview. Some are composed of the name of some plant or animal found there with the prefix *xʷ-* and the suffix *-əm*. The name *xʷmáθkʷəyəm*, that of the Musqueam village, is an example, being composed of *máθkʷəy*, the name of a plant, and the prefix and suffix. Another common type is a term that reflects some event in the remote past, especially one involving *ǰéłs*, the Transformer, such as *ǰéwəm* ‘howling,’ the name of a rock near Point Grey said to have been given this name because a dog there was going to bite the Transformer.

Appendix 2 contains a list of names of places and peoples.

### 22.1.8. General Terms

These are terms referring to direction and location without regard to specific features of the environment. They are ordered by concepts that are admittedly based on English and not necessarily on Halkomelem. While the roots listed here are general in usage, some of their derivatives refer to features of the environment.

#### 22.1.8.1. The Concepts “Here” and “There” and “To” and “From”

The two pairs of verbs used as auxiliaries can also function as simple predicates, and each is the base of several other forms. The verbs *ʔi* ‘be here’ and *niʔ* ‘be there’ are the bases of terms that contrast the here and the there, as in *xʷəʔi* ‘get here’ versus *xʷəníʔ* ‘get there’; *xʷəʔinxʷ* ‘bring here,’ *xʷəʔíns* ‘reach it (here)’ versus *xʷəníns* ‘reach it (there)’; *səháłwət* ‘this side’ versus *snəʔáłwət* ‘that side (of house, log, etc.)’; *səhícən* ‘this side’ versus *snəʔícən* ‘that side, the other side’; *ʔəhás* ‘look this way, turn this way’ versus *nəʔás* ‘look toward,’ *náʔəsəm* ‘go toward.’ Others based on *niʔ* include *nəʔéxən* ‘reach an end,’ *snəʔáθən* ‘far side (of a road, creek, etc.),’ *snəʔáłwət* ‘other side (of a log, etc.),’ and *snélic* ‘other side (as of a hill).’

The *ʔi* and *niʔ* with the prefix *šxʷ-* ‘oblique nominalizer’ and a possessive form what are essentially relative clauses (see §4.1.1.2) that express ‘place where,’ as in (a) to (d).

- (a) *ʔá nəšxʷníʔ kʷə nəsyá-yəs*. (AG)  
‘That’s where I work.’
- (b) *ʔá šxʷníʔsət kʷs yá-yəss*. (AG)  
‘That’s where he used to work.’
- (c) *ʔá šxʷníʔs kʷs kʷánnəxʷs kʷθə θíθə qʷtá-yəθən*. (JP 23)  
‘That’s where they used to get the biggest sturgeons.’
- (d) *təhá léləm ʔi šxʷʔíct* (JP 5)  
‘this house where we are’

The verb *ʔí* with the prefix *təl-* ‘from’ (see §12.4.3) forms *təlí* (also recorded *təlíʔ* and *təlí* from CC) ‘be from,’ as in (e).

(e) *tə ɪwələp təlí: kʷi ʃxʷníʔct* (JP 5)

‘You people from down where we come from’ (lit. ‘You [pl.] who are from that [remote] place where we are,’ said by speaker addressing fellow Musqueam in a speech made upriver)

The second pair of auxiliaries, *ʔəmí* ‘come’ and *néḿ* ‘go,’ are derived from the first pair; *ʔəmí* is composed of *ʔí* and the prefix *ʔəm-* ‘come,’ and *néḿ* is composed of *níʔ* and the suffix *-əm* ‘intransitive.’ As a command, *ʔəmí* has an alternative form, *ʔəmé* ‘come!’ Both have causative forms, *ʔəmístəxʷ* ‘bring it’ and *nəʔéməstəxʷ* ‘take it.’ (The form of both the stem and the suffix of the latter indicate that *néḿ* is not a simple root [see §10.3], as do the transitive *nəʔémənəs* ‘go after him’ and a reflexive form, *nəʔəmnámət* ‘get to a destination.’ The progressive *háḿəḿ* ‘be going’ suggests the underlying form *//nəʔəm//*.)

Motion toward is also expressed by *ʃʷtəʔ* ‘head for, go toward.’ Its causative *ʃʷtəʔstəxʷ* seems to mean simply ‘take it away.’

A pair of verbs, *técəl* ‘arrive here, reach here’ and *təs* ‘arrive there, reach there,’ indicate the end point of motion. The first, *técəl*, has not been recorded with transitive or causative suffixes, but *təs* has inflected forms with the sense ‘near’ (see §22.1.8.2).

Five of these verbs, *ʔí*, *níʔ*, *ʔəmí*, *néḿ*, and *ʃʷtəʔ* and the derivative *təlí* are used as prepositional verbs with the senses ‘in,’ ‘at,’ ‘to,’ ‘toward,’ and ‘from.’ This use of *təlí* is seen in (f).

(f) *máḵʷ wəscéḿəḿ tə ḿi təcəl təlí ʃ sʔámənə*. (CC 6)

‘The ones who had come from Duncan were all Shakers.’

For examples of the others, see §3.5.

Hereafter in this section, terms are simply listed under semantic categories. The word or root (preceded by a bullet) is followed by inflected and derived forms and their glosses and, for most, by examples of usage. The symbol √ precedes morphemes that I have recorded with affixes only, but some or all of these may be independent words not yet recorded.

### 22.1.8.2. The Concepts “Near” and “Far”

• *təs* ‘arrive there.’ *tsət* ‘approach it,’ *təsneʃxʷ* ‘get close to it,’ *tsəθət* ‘approach,’ *stətés* ‘near.’

(a) *niʔ stətés*. (CC)

‘He’s close.’

(b) *néḿ cən stətés*. (CC)

‘I’m going close.’

- $\sqrt{cím-}$  ‘approach.’ *címəl* ‘get close,’ *címəθət* ‘go near,’ *címət* ‘put it close.’
- $\sqrt{p̄tiq̄}$  ‘beside.’ *s̄p̄tiq̄* ‘along side,’ *p̄tiq̄θət* ‘go alongside,’ *s̄p̄tiq̄təl* ‘beside each other.’
  - (c) *niʔ s̄p̄tiq̄.* (CC)  
‘He’s alongside.’
  - (d) *ni ct wəp̄tiq̄təl ʔaɪ tə ɪnɪməɪ.* (JP 22)  
‘We came alongside one another.’
  - (e) *niʔ ct ʔámət s̄p̄tiq̄təl.* (CC)  
‘We sat together.’
- $\sqrt{t̄ən-}$  ‘sit beside.’ *t̄ənəst* ‘sit beside him/her,’ *s̄t̄ənəs* ‘sitting beside,’ *t̄ənəstəl* ‘sit together’ (cf. also *šxʷt̄ənəx̄ən* ‘neighbour’).
  - (f) *ʔi tən s̄t̄ənəs.* (CC)  
‘He’s sitting beside me.’
- *cákʷ* ‘far.’ *xʷcákʷ* ‘go far,’ *xʷckʷiləm* ‘go far away,’ *xʷckʷiləməstəxʷ* ‘take someone far away,’ *cáckʷtəl* ‘be far apart,’ *yəlcákʷ* ‘far behind (while moving)’ (< *yə-* ‘along,’ and possibly *t̄₂* ‘portion’). (For others see §22.2.5, “The Tide.”)
  - (g) *s̄céčən wəcákʷ.* (CC)  
‘It’s really far.’
  - (h) *scékʷəl kʷs cákʷs.* (CC)  
‘How far is it?’
  - (i) *niʔ cən cákʷ xʷəʔáý.* (CC)  
‘I’m much better.’ (lit. ‘I’ve become far better.’)
  - (j) *ni yəlcákʷ tə péstən ʔəǎ Australia II.* (AG)  
‘The Americans were far behind the Australia II.’

### 22.1.8.3. The Concepts “Leaving,” “Staying Away,” and “Returning”

- $\sqrt{ʔey-}$  (?) ‘away.’ *ʔéyəl* ‘come/go away,’ *sʔéyəl* ‘be away,’ *ʔéyələs* ‘leave him/her/it.’
  - (a) *ʔéyəl təli tə šxʷk̄wcastən.* (JP)  
‘Come away from the window.’
- $\sqrt{kʷeȳ-}$  ‘stay away.’ *kʷáyəθət* [*kʷáʔiθət*] ‘move away, stay away,’ *skʷəýéʔ* ‘stay away.’
  - (b) *skʷəýéʔ čxʷ ʔaɪ.* (JP)  
‘Keep away.’
- $\sqrt{xən-}$  (?). *xənxeń* ‘out of the way, isolated’ (this appears to be an *s*-less resultative), *xənxeństəxʷ* ‘put it out of reach.’
  - (c) *neim ct ceʔ k̄w xənxeń.* (JP)  
‘We’ll go out of their way (e.g., to talk privately).’

- *háye* (also recorded *háyeʔ*) ‘go away, leave,’ *həyéʔstax* ‘take away.’
  - (d) *ném cən háyeʔ*. (JP)  
‘I’m going away.’
  - (e) *ni yəháyə*.  
‘He’s leaving.’
  - (f) *ni həliyéʔ*.  
‘They went away.’
  - (g) *ni yəhəyháyə kʷθə xʷələnítəm*. (AG)  
‘The White people are going away.’
- *héwə* ‘away, not at home, be hunting, absent.’ *ʔəhéwə* ‘hunt deer,’ *naxʷahéwə* ‘land hunter’ (cf. *šxʷtéléməx* ‘sea hunter’), *səwí* ‘gone, away,’ *həwènx* ‘poor year (for salmon)’ [absent season], opposite of *qəšənx* ‘good year’ (> *qəš* ‘many’).
  - (h) *niʔ héwə*. (CC)  
‘He’s away.’
  - (i) *ni səwí*. (JP)  
‘He’s gone for a while. He’ll be away for a while.’
- *√qen-* ‘return.’ *qənnəx* ‘get it back,’ *qənstəx* ‘return it,’ *qənθət* ‘return.’
  - (j) *ʔəwə ct ceʔ wəńánət ném xʷcák i mi ct qá-nθət*. (JP 22)  
‘We won’t go far and we’ll come back.’
  - (k) *məqá-nθət tə sʔəltən niʔət ném sʔəxʷeʔtct təwłáləm*. (CC)  
‘The food that was our gift to them has returned.’
  - (l) *ném čxʷ qá-nθət ném kʷθe ʔəθxʷʔámət*. (JP)  
‘Go back to bed.’

#### 22.1.8.4. The Concepts “Before,” “Behind,” and “Pass”

- *yəwén* ‘before, ahead, first (in both spatial and temporal senses).’ *yəwánθət* ‘move ahead,’ *yəwénmən* ‘front.’ (See also §18.4.20.)
- *√hiw* ‘ahead (in space only?).’ *híwəq* ‘headman, leader’ (-*aq* ‘head’), *xʷəwqínəm* ‘move up (as toward the pillow, to a child in bed)’ (*xʷ-*, -*qən* ‘head, front end,’ -*əm* ‘intransitive’), *xʷəwqínt* ‘move it ahead,’ *xʷáwqənt* ‘be moving it ahead.’ For other derivatives, see §22.1.1.3 and §22.1.2.
- *ləqét* ‘hit the mark, get it just right.’ *ləqélt* ‘put it in place,’ *ləqátθət* ‘get in the way, get on the right bearing,’ *ləqátəl* ‘jibe,’ *xʷələqét* ‘move in front, come into place,’ *ləqétmən* ‘just opposite, directly in front (in line with something).’
- *yələw*, *yələw* ‘pass (in space or time).’ *yələwəx*, *yələwx* ‘pass him,’ *yələwəl* ‘get past.’
  - (a) *niʔ yələw*. (CC)  
‘It’s passed.’

- (b) *ném cən yələwəl*. (CC)  
‘I’m going by, I’m going to pass.’
- $\sqrt{tel}$ - ‘back’ (see §22.1.1 and §22.1.2).
  - *liʔáʔaqʷt* ‘behind, after, next, last (in both spatial and temporal senses).’  
*stiʔáʔaqʷt* ‘behind,’ *liʔáʔaqʷtmən* ‘behind.’ (See also §18.4.21.)
  - (c) *ʔi yəliʔáʔaqʷt ʔəʃ ʔé-nθə*. (CC)  
‘He’s behind me (going along).’
  - (d) *ʔi ʔámət ʔi kʷən hiʔáʔaqʷt*. (CC)  
‘He’s sitting behind me (outside or in a canoe).’
  - (e) *ʔi ʔi kʷən ləʔáʔaqʷtmən kʷsis ʔi ʔámət*.  
‘He’s sitting behind me (in a canoe).’
  - (f) *ni cə təwyəlcákʷ yəliʔáʔəqʷt tə naʔəncəʔ*. (JP 14)  
‘There was one who was kind of far behind the other.’

### 22.1.8.5. The Concepts “In,” “Out,” “Middle,” “Between,” and “Among”

- *kʷtəxʷ* ‘get inside, enter abruptly.’ *kʷtəxʷt* ‘take/bring it in,’ *skʷtəxʷ* ‘inside (anything),’ *kʷətəxʷiləm* ‘go/come in.’
- $\sqrt{əʃq}$ - ‘move out.’ *ʔəʃqəl* ‘go/come out,’ *ʔəʃqilt* ‘eject, throw out (as a sponger or a spouse),’ *ʔəʃqáθ* ‘go out into open water from an inlet,’ *sʔəʃq* ‘outside,’ *sʔəʃqálwət* ‘outside (as outside of the family).’
- $\sqrt{nəw}$ - ‘enter.’ *nəwəx* ‘insert it,’ *səníw* ‘inside,’ *ʔənwínəs* ‘middle,’ etc. (This is the root of the Cowichan *nəwíləm* ‘enter,’ for which Musqueam has *kʷətəxʷiləm*, but Musqueam has both resultatives, *səníw* and *skʷtəxʷ*, for ‘inside.’)
- $\sqrt{xʷəc}$ - ‘be within.’ *xʷəcəθət* ‘go among, go between,’ *xʷəcət* ‘insert it,’ *šxʷíxʷəc* ‘within, among,’ *šxʷcíwən* ‘slipped in between’ (*-íwən* ‘middle’).  
(a) *niʔ šxʷəxʷíc*. (CC)  
‘It’s in between.’  
(b) *ni nem ʃwənχénəm tə pús xʷəcəθət tə lətém i tə xʷécénəctən*.  
‘The cat ran between the table and the chair.’
- $\sqrt{xəc}$ - ‘be within.’ *xícət* ‘put it in the woods,’ *xcíləm* ‘enter the woods,’ *sxícəc* ‘in the woods.’
- *cláqʷ* ‘pass through.’ *cláqʷθət* ‘go through,’ *cláqʷt* ‘poke it through,’ *scláqʷ* ‘through.’  
(c) *niwəl cláqʷ*. (CC)  
‘He is through.’  
(d) *nə ʃwənχénəm tə pús cláqʷθət tə léləm*.  
‘The cat ran through the house.’

- $\sqrt{?e?ye?}$  ‘middle?’  $\check{s}x^w?e?ye?$  or  $\check{s}x^w?e?ye?$  ‘middle,’  $\check{s}x^w?e?ye?stam$  ‘be placed in the middle.’  
(e)  $ni?$   $\check{s}x^w?e?ye.$  (CC)  
‘It’s in the middle.’

#### 22.1.8.6. The Concepts “Along,” “By Way of,” “Across,” and “Around”

- $\sqrt{qat-}$  ‘go following a natural feature.’  $qatnéc$  ‘go around (as a lake or bay),’  $qatáθan$  ‘go along the bank,’  $qatəst$  ‘go back and forth in front of it,’  $qatθínəmət$  ‘go along through the village inviting people,’  $qətəwət$  ‘go across (a small bridge),’  $\check{s}x^wqətəwət$  ‘foot bridge,’  $yəqətəqən$  ‘stay (be staying?) at the same level (on a hillside).’  
(a)  $ném cən qatnéc tə xáca?$  ( $s?əθnəc$ ). (CC)  
‘I’m going around the lake (bay).’
- $\sqrt{tə?é}$  ‘go by way of.’  $yətə?é$  (JP),  $yətəlélé$  (CC) ‘go the same way, go by way of.’  
(b)  $ném yətəlélé ?ə tə cécəw.$  (CC)  
‘Go along the beach.’  
(c)  $ném cə ce? nəpəc yətəlélé: x̣ Andy.$  (DK)  
‘I’ll send it with Andy.’
- $\sqrt{?ék^w-}$ ,  $?ék^wət$  ‘go across (a road, stream, the gulf).’
- $\sqrt{təq-}$  ‘broad, opposite side, straight ahead.’  $tqét$  ‘wide,’  $tqécəs$  ‘five’ (<  $-cəs$  ‘hand,’ i.e., ‘the spread-out hand’),  $téqəməx$  ‘flats, flat country (as the Fraser delta),’  $tqén$  ‘other end (of a line),’  $təqəlíc$  ‘other side (as of a peninsula),’  $təqín$  ‘other end of a house’ (JP),  $təqəqən$  ‘head of a big river like the Fraser, people living way upriver as around Kamloops,’  $tqéxən$  ‘one house’[?],  $tqá?iθən$  ‘one side of the mouth’ (CC),  $stəqəwət$  ‘back (of body), back (location),’  $təqənéc$  ‘rump,’  $x^wtəltqəs$  ‘go straight ahead.’  
(e)  $wəx^wtəltqəs čx^w ?a.l.$  (JP)  
‘Just go straight ahead.’
- $səlč$  ‘go around.’  $səlčstəx^w$  ‘surrounded,’  $səlčəlwət$  ‘around,’  $səlčəlwəlt$  ‘go around.’  
(f)  $ném cən səlč.$  (CC)  
‘I’m going to go around.’  
(g)  $nə x̣^wən xénəm tə sq^wəméy səlč tə léləm.$  (CC)  
‘The dog ran around the house.’  
(h)  $ni?$   $səlč tə qá?$ . (CC)  
‘There’s water all around.’

### 22.1.8.7. The Concepts “Turn,” “Left,” and “Right”

- $\sqrt{xax}$  ‘be at right angles.’  $xé\lambda\theta$  ‘cross him, contradict him,’  $xá\lambda\theta\theta$  ‘turn aside, swing around (as when travelling in a canoe),’  $yax\theta\lambda\theta\theta$  ‘be zigzagging (as while running),’  $\check{s}x^w xé\lambda$  ‘weir (built across a stream),’  $x\lambda\lambda w\lambda t\theta n$  ‘thwart in canoe’ (<  $-w\lambda$  ‘canoe,’  $-t\theta n$  ‘instrument’),  $xax\lambda\theta n\acute{e}’e$  ‘go with the wind from the side.’
- $\sqrt{cal}$ - ‘turn, switch, reverse.’  $c\acute{a}lqin\acute{a}m$  ‘turn a canoe around,’  $c\acute{a}l\acute{a}s\acute{a}m$  ‘turn the head, turn and look back,’  $c\acute{a}lq\acute{a}t$  ‘get him to turn around,’  $c\acute{a}lqint$  ‘make it turn around,’  $c\acute{a}l\acute{c}\acute{a}lqin\acute{a}m$  ‘topple over,’  $c\acute{a}lc\acute{a}s$  ‘switch sides when paddling,’  $c\acute{a}l\acute{a}w\acute{s}$  ‘switch sides when felling a tree or a spring-board ( $-i\acute{w}s \sim \acute{a}w\acute{s}$  ‘body’).
- $i^{\theta}ik^w\acute{a}$  ‘left.’  $si^{\theta}\acute{a}k^w\acute{a}i\acute{w}s$  (CC),  $i^{\theta}k^w\acute{a}i\acute{w}s$  (JP) ‘left hand, left shoulder, left side of body,’  $si^{\theta}k^w\acute{a}éi\acute{w}\acute{a}t$  ‘left side, left (direction).’
  - (a)  $n\acute{a}s\acute{a}m \check{c}x^w t\acute{a} \theta i^{\theta}k^w\acute{a}’\acute{a}i\acute{w}\acute{a}t$ . (JP)  
‘Look to your left.’
  - (b)  $n\acute{e}m \check{c}x^w t\acute{e}’e si^{\theta}ik^w\acute{a}$ . (CC)  
‘Go to the left.’
- $\acute{a}y\acute{i}w\acute{s} \sim s^{\acute{a}}y\acute{i}w\acute{s}$  ‘right hand, right (direction).’ (<  $\acute{a}y$  ‘good,’  $-i\acute{w}s$  ‘body’).
  - (c)  $n\acute{e}m \check{c}x^w t\acute{e}’e s^{\acute{a}}y\acute{i}w\acute{s}$ . (CC)  
‘Go to your right.’

### 22.1.8.8. The Concepts “Up” and “Down,” and “Above” and “Below”

- $\sqrt{cit}$ - ‘above.’  $c\acute{i}c\acute{a}t$  ‘above, high,’  $sct\acute{i}c\acute{a}n$  ‘top, surface,’  $ct\acute{i}ct$  ‘put it on top,’  $sct\acute{a}l\acute{w}\acute{a}t$  ‘above.’
  - (a)  $ni^{\acute{?}} c\acute{i}c\acute{a}t$ .  
‘He’s up above.’
  - (b)  $sq^w\acute{a}q^w\acute{e} ni^{\acute{?}} t\acute{a} c\acute{i}c\acute{a}t$   
‘perforated at the top’
- $\lambda\acute{a}p$  ‘deep.’  $\lambda\acute{p}il$  ‘go down, sink,’  $\lambda\acute{p}ilx$  ‘sink it,’  $s\lambda\acute{p}iq\acute{a}n$  ‘bottom of a hill,’  $\lambda\acute{a}p\acute{q}\acute{e}n\acute{a}m$  ‘descend a mountain, go downhill,’  $s\lambda\acute{p}\acute{a}l\acute{w}\acute{a}t$  ‘underside, underneath,’  $\lambda\acute{p}\acute{a}l\acute{w}il\acute{a}m$  ‘go under.’
  - (c)  $ni^{\acute{?}} \lambda\acute{i}\lambda\acute{a}p$ .  
‘He’s down below (as someone in a hole). It’s low (a ship in the water).’
  - (d)  $ni^{\acute{?}} s\lambda\acute{p}\acute{a}l\acute{w}\acute{a}t k^w\theta\acute{a} p\acute{i}p\acute{a} \acute{a} k^w\theta\acute{a} p\acute{u}k^w$ .  
‘There is paper under the book.’
  - (e)  $ni \check{x}^w\acute{a}n\acute{x}\acute{e}n\acute{a}m t\acute{a} p\acute{u}s y\acute{a}s\lambda\acute{p}\acute{a}l\acute{w}\acute{a}t t\acute{a} l\acute{e}l\acute{a}m$ .  
‘The cat ran under the house.’

The terms  $c\acute{i}c\acute{a}t$  ‘above’ and  $\lambda\acute{i}\lambda\acute{a}p$  ‘below’ are also used attributively, as in  $c\acute{i}c\acute{a}t sm\acute{e}nt$  ‘high mountain,’  $c\acute{i}c\acute{a}t si^{\acute{?}}\acute{e}m$  ‘God’ (lit. ‘Lord Above,’ probably in origin a calque of the Chinook Jargon  $s\acute{a}\check{x}ali tay\acute{i}$ ), and  $\lambda\acute{i}\lambda\acute{a}p h\acute{a}y\acute{q}^w$  ‘Hell’ (lit. ‘fire below’). There is also a true attributive form  $sct\acute{a}t\acute{a}t$  ‘of the heights,’

as in *scífta?t māmá?aq<sup>w</sup>* ‘birds of the heights (as vultures, ravens, golden eagles).’

- *k<sup>w</sup>i?* ‘ascend.’ *k<sup>w</sup>i?stax<sup>w</sup>* ‘raise it,’ *k<sup>w</sup>i?qan* ‘climb (a mountain), go uphill,’ *k<sup>w</sup>á?ás* ‘look upward,’ *k<sup>w</sup>áqsanəm* ‘turn up one’s nose, sniff’ (< *-áqsan* ‘nose,’ *-əm* ‘intransitive’), *šx<sup>w</sup>k<sup>w</sup>i?tan* ‘ladder’ (< *šx<sup>w</sup>-* ‘oblique nominalizer,’ *-tan* ‘instrument’).
  - (f) *ni? cən k<sup>w</sup>i?*  
‘I climbed up.’
  - (g) *?i cən k<sup>w</sup>ák<sup>w</sup>i?*  
‘I’m climbing.’
- *če?* ‘land on top.’ *čé?t* ‘put it up on something,’ *čá?l̥wət* ‘go over,’ *čá?l̥ac* ‘go over (an island, a hill),’ *x<sup>w</sup>čénəcəm* ‘sit on a chair,’ *číləm* ‘climb up, mount (a horse),’ *sčecčé?* ‘on top, mounted (as on a horse), put up on something.’
  - (h) *ném cən čá?l̥wət*. (CC)  
‘I’m going over (a log, canoe, etc.), to the far side (of a car, etc.).’
  - (i) *ném cən čá?l̥ac*. (CC)  
‘I’m going over (a hill, etc.).’
- *√se?* ‘raise.’ *sé?t* ‘lift it up,’ *sá?θət* ‘raise oneself.’
- *√x<sup>w</sup>e* ‘lower.’ *x<sup>w</sup>ét* ‘lower it,’ *x<sup>w</sup>á?θət* ‘go down’ (lit. ‘lower oneself’), *šx<sup>w</sup>ax<sup>w</sup>é* ‘down below, on the ground,’ *šx<sup>w</sup>ánéc* ‘seated on the floor,’ and *šx<sup>w</sup>énac* ‘the drop-off (the edge of a shallow shelf, where deep water begins).’
- *√hiq* ‘move under.’ *híqət* ‘put it under, shove it out into the water,’ *sí?q* ‘underneath.’
  - (j) *ni?əł mē sí?q tə lətém tə pús*.  
‘The cat was under the table.’
  - (k) *ni šx<sup>w</sup>ən xénəm tə pús yəsi?q tə léləm*.  
‘The cat ran under the house.’

#### 22.1.8.9. The Concept “Everywhere”

- *íé·i<sup>θ</sup>* ‘everywhere’ (cf. Cowichan *íéi<sup>θ</sup>ət* ‘scatter it’). *íái<sup>θ</sup>θət* ‘scatter (intr.),’ *íéi<sup>θ</sup>* ‘go from one place to another,’ *síéi<sup>θ</sup>* ‘spread out, all over, everywhere.’
  - (a) *ni? cən íé·i<sup>θ</sup> k<sup>w</sup>ən sáwq ?i ?áwəte?*. (CC)  
‘I looked everywhere and there isn’t anything.’
- *ʔasép* ‘complete, completely (spatially), be finished (temporally).’ *ʔasápnax<sup>w</sup>* ‘complete it (as something being studied),’ *sʔé?sáp* ‘all over.’
  - (b) *yámq<sup>θ</sup>ət čx<sup>w</sup> ʔasép tə ʔeθlax<sup>w</sup>íwš*. (JP 21)  
‘Rub yourself all over your body.’
  - (c) *i ni ʔasép tə sš<sup>w</sup>əyém*. (JP 1)  
‘And the story is finished.’

(d) *sʔéʔsəp̄ təwʎa ni θáynəxʷəs ʃpéy̆* (JP 22)  
 ‘all over that cedar he had made’

- *máʎʷ ʔánəcə* ‘everywhere’ (see §17.17).

## 22.2. TIME

The time of an event relative to the present is expressed by the particles *-əl* ‘past’ and *ceʔ* ‘future’ (see §15). The use of *-əl* to express the past is not obligatory, but the use of *ceʔ* for the future may be. Duration, frequency, and iteration are expressed by internal modifications of the verb root that distinguish perfective, progressive, durative, and other aspects.

The auxiliaries *ʔi* ‘be here’ and *niʔ* ‘be there’ may appear to refer to time, but, as explained in §3.2.1, this is only because ‘the here’ is more often ‘now’ and ‘the there’ more often ‘then.’

The demonstrative system expresses spatial relations, but in some contexts may imply temporal relations. What is present spatially may be present temporally, as in *təna wéyəl* ‘today,’ and what is remote may be past, as in *ʎʷ cələqəl* ‘yesterday’ (see §15.1.2).

Verbs of coming and going can be used in referring to a point in time. In an account of his family history, JP said:

- (a) *neʔéməstəxʷ cən kʷe ʔə kʷθə yəwénəl ʃxʷənʎas kʷθən scáməqʷəl*.  
 (JP 23)
- |                        |            |             |                           |             |                 |

| <i>nə-swéʔ-əl</i> | <i>nə-mén</i> |              |              |             |               |               |             |
| my-own-past       | my-father     |              |              |             |               |               |             |
- ‘We come now to the time of my own father.’ (lit. ‘It arrives here to the day of my own late father.’)

The compound prefix *ʃxʷ-* ‘oblique nominalizer’ (§4.3.3, §12.1.4) with *tás* ‘arrive there, reach’ can refer to a point in space, as in (c).

- (c) ni tás kʷθə ʃxʷtás i nə xʷənéʔent. (CC 1)  
lit. ‘They arrived where they arrived and it became night.’ (translated freely by DK as ‘They went as far as they could go by the time night came.’)

Or it can refer to a point in time, as in (d).

- (d) ... ʔəlni-s tás kʷθə ni ʃxʷtáss. (JP 17)  
whenever-AUX-3POS arrive.there ART AUX OBLNOM-arrive.there-3POS  
‘... whenever there came a time for it’

That time itself “comes” is implied by (e).

- (e) tə́na ceʔ yə́mi sǎ́ǎ́xə́lnet  
‘this coming week’

Adverbs are part of the lexicon, but have been described in their grammatical context in §18. There are some twenty-three adverbs and adverbial phrases that express frequency, duration, and relative time (see §18.4.1 to 18.4.23). See also *yəwén* ‘before’ and *tiʔáʔaqʷt* ‘after’ (in §22.1.8.4) and *ʔəséʔ* ‘complete’ (in §22.1.8.9).

### 22.2.1. Day and Night

The ‘day’ as a period of time is *swéyal* (< *wéyal* ‘be day’), also ‘daylight, sky.’ The daylight is distinct from the ‘sun,’ *syáqʷəm* (< *yáqʷ* ‘burn’?). The daylight comes in the morning before the sun, which is, of course, not visible every day. The daylight was regarded as a powerful force, perhaps a deity. In a text dictated by JP, a grandfather instructs his grandson to face the direction from which the sun rises and before it does to ask the daylight to grant his wishes. The grandfather says:

- (a) wə́náy tə́ swéyal wə́θəʔít ʃé́xə. (JP21)  
‘Only the Daylight is truly holy.’

The term *swéyal* can also be translated ‘weather,’ as in (b).

- (b) wə́scékʷəl ʔəl tə́ swéyal. qəlqələm tə́ swéyal. (JP)  
‘How is the weather?’ ‘It’s changing for the worse.’

(Possibly related to this sense is *cwəywéyal* ‘get caught in a storm.’)

The night as a period of time is *snét* (< *nét* ‘be night’). The two roots *wéyel* and *nét* are the basis for terms for periods of the day and night:

- yəwéwəyəl* ‘dawn’ (lit. ‘becoming daylight’)  
*táxʷ swéyal* ‘noon’ (< *táxʷ* ‘adjust, fit, be just so’)  
*yələw táxʷ swéyal* ‘after noon’  
*nétəl* ‘morning’ (lit. ‘night-past’)

*x<sup>w</sup>ənē<sup>?</sup>ənt* ‘evening’ (lit. ‘becoming night’)  
*wəl<sup>h</sup>iθ snét* ‘late at night’

Other terms for the break of day are *lq<sup>?</sup>ənap* ‘daybreak,’ referring to the coming light, not to the sun (etymology unclear; JP said that *-ənap* was not the suffix for ‘ground’), and *téwəl* ‘dawn, get light,’ recorded in *x<sup>w</sup>na<sup>?</sup> mi téwəl* ‘when daylight came’ (cf. *stétəw* ‘bright,’ *téwətəm* ‘be lit, have light thrown on’).

Present, future, and past days are expressed differently. ‘Today’ is *tə<sup>n</sup>awéyal*, lit. ‘this day.’ ‘Tomorrow’ is either *wəwéyaləs* (lit. ‘when it becomes day’), a conditional clause, or *wéyal ce<sup>?</sup>* (‘day will break’), a main clause accompanied by a conditional clause (see §4.2.4 for examples). ‘Yesterday’ is *k<sup>w</sup> cələqət* (composed of the article *k<sup>w</sup>* implying remote or absent status, a root not now identifiable, and, probably, the particle *-ət* ‘past’). Other such terms are: *k<sup>w</sup>ə<sup>n</sup>ə təwətne<sup>?</sup>* ‘the day before yesterday’ (< *k<sup>w</sup>ə<sup>n</sup>ə* ‘that absent,’ possibly *téw* ‘escape’ + *-ətne<sup>?</sup>* ?), *k<sup>w</sup> yəwéhə<sup>n</sup>ət snét* ‘the night before last,’ *θəmənt* ‘day after tomorrow,’ lit. ‘two days,’ i.e., ‘in two days’ (< *θəm- ~ θem-* ‘two’ + *-ənt* ?).

Days are usually counted with the simple numerals, but the following two forms are also used, perhaps usually in counting ahead: *θəmənt* ‘two days,’ meaning also ‘day after tomorrow,’ and *təx<sup>w</sup>ət<sup>n</sup>ét* ‘three days.’ For *-ət<sup>n</sup>ét* see §22.2.3, “The Week.”

The rising of the sun or moon is expressed by *k<sup>w</sup>ə<sup>n</sup>əs*, *k<sup>w</sup>ə<sup>n</sup>əsəm* (> *k<sup>w</sup>én* ‘go over,’ *-əs* ‘-face’) ‘rise, come into view,’ as in (c), (d), and (e).

- (c) *wək<sup>w</sup>ə<sup>n</sup>əs tə syáq<sup>w</sup>əm*. (AG)  
 ‘The sun has risen over the hills.’
- (d) *wəye<sup>l</sup> smis k<sup>w</sup>ə<sup>n</sup>əsəm tə lqélč*. (AC)  
 ‘The moon is just coming up.’
- (e) *mí yək<sup>w</sup>á<sup>?</sup>k<sup>w</sup>ənəsəm tə syáq<sup>w</sup>əm*. (CC)  
 ‘The sun is rising.’

A term, *wətqəyílt* ‘be up’ (etymology unclear) was also used by JP in (f).

- (f) *ʔəmət ʔé-ł qə, wətqəyílt*.  
 ‘Get up. The sun is up (said by a mother to children).’

The setting of the sun or moon is expressed by *i<sup>?</sup>ə<sup>?</sup>ə<sup>w</sup>* ‘get used up, worn out, burnt up,’ as in (g) and (h) ...

- (g) *ném yət<sup>?</sup>ə<sup>?</sup>ə<sup>w</sup> tə syáq<sup>w</sup>əm*. (CC)  
 ‘The sun is setting.’
- (h) *ní wət<sup>?</sup>ə<sup>?</sup>ə<sup>w</sup> tə lqélč*. (JP)  
 ‘The moon has set.’

... by *íánnac* (< *íén* ‘disappear,’ *-nac* ‘-base’) as in (i) ...

- (i) *niwəł nɛm̄ íánnac tə ɪqél̄c̄.* (AC)  
‘The moon has just gone down.’

... and by *kʷén* ‘go over,’ as in (j).

- (j) *ni kʷén tə syáqʷəm.* (AG)  
‘The sun set.’

If the moon rises later than expected, it is said that:

- (k) *niwəł ɪkʷxən tə ɪqél̄c̄.* (AC)  
‘The moon got tripped.’

Answering a question on eclipses, AC gave (l) and (m).

- (l) *niʔyeł [niʔəł] wəłtátəł tə ɪqél̄c̄ i tə syáqʷəm.*  
‘The moon and the sun have gone behind each other.’ (a solar eclipse)

- (m) *xʷčəθət əyɛł tə təməxʷ (ə) tə syáqʷəm i tə ɪqél̄c̄.*  
‘The earth comes between the sun and the moon.’ (a lunar eclipse)

These sentences must reflect a recent understanding of the phenomena.

### 22.2.2. Time by the Clock

For several generations, speakers of Halkomelem have reckoned the time of day by hours with clocks. The terms for ‘hour’ and ‘minutes’ are *ʔáwə* and *mánac* from English. The term for ‘clock, o’clock’ and ‘bell’ is *tíntən* from Chinook Jargon. Examples of usage are:

- (a) *scékʷəł kʷə kʷə ʔəsqéqəwəłtəñ. nəcəs ʔəy kʷə*  
how then ART your-be.paying-people. one-face and ART  
*ɪsəq̄ kʷə nəcəʔ ʔáwə.* (CC)  
half ART one hour

‘How much are you paying?’ ‘A dollar and a half an hour.’

- (b) *txʷápən mánac i ʔápən i kʷə nəcəʔ.* (CC)  
remaining-ten minutes and ten and ART one  
‘It’s ten minutes to eleven.’ (lit. ‘There are ten minutes more and it will be eleven.’)

- (c) *niwł słəm̄ ʃ ʔápən i kʷə nəcəʔ.* (CC)  
AUX already-worn.off OBL ten and ART one  
‘It’s half past eleven.’

- (d) *táxʷ wiléw nəcəʔ.* (JP)  
just.at EST-pass one  
‘It’s half past one.’

- (e) *tá·x<sup>w</sup> wəłsǫ́ tıntən k<sup>w</sup>s yǎléws ʃaʔáθən tə x<sup>w</sup>əné·nt.* (AC)  
 ‘It was just half past four in the afternoon.’

### 22.2.3. The Week

The week was introduced along with Christianity in the nineteenth century, and so the names of the days of the week must have been devised at that time. These names are:

- sǰǰǰǰǰnet* ‘Sunday,’ lit. ‘holy day,’ < *ǰéʔǰe* ‘holy’  
*syǎléwǎtnet* ‘Monday,’ lit. ‘after day,’ < *yǎléw* ‘past’  
*sθǎmǎnts* ‘Tuesday,’ lit. ‘second day’  
*stíx<sup>w</sup>s* ‘Wednesday,’ lit. ‘third’  
*sǰǰáʔáθǎns* ‘Thursday,’ lit. ‘fourth’  
*stǎǎécǎs[sʔ]* ‘Friday,’ lit. ‘fifth’  
*ǎǎǎǎǎǎǎ* ‘Saturday,’ lit. ‘be cut off’

The word *sǰǰǰǰǰnet* is also used for ‘week,’ as in *tǎǎ sǰǰǰǰǰnet* ‘this week,’ *k<sup>w</sup>θǎ ni háyǎt sǰǰǰǰǰnet* ‘last week’ (lit. ‘the week that has finished’), *tǎǎ ceʔ yǎǎǎ sǰǰǰǰǰnet* ‘this coming week,’ *nǎǎǎ sǰǰǰǰǰnet* ‘one week,’ *ʔisélǎ sǰǰǰǰǰnet* ‘two weeks.’

The ending *-ǎtnet* also appears in *tǎsǎtnet* ‘week’ (< *tǎs* ‘arrive there?’), *nǎǎǎǎtnet* ‘one week’ (presumably a contraction of *nǎǎǎǎ sǰǰǰǰǰnet*), *sǰǰǎǎtnet* ‘what day of the week is it?’ (< *k<sup>w</sup>ín* ‘how many’), and *tǎx<sup>w</sup>ǎtnet* ‘three days’ (< *tíx<sup>w</sup>* ‘three’). Thus it appears that we may have here a new lexical suffix with the possible meanings ‘week,’ ‘day of the week,’ and ‘day.’ A similar ending appears in *k<sup>w</sup>ǎǎǎ tǎwǎtneʔ* ‘the day before yesterday’ (< *téw* ‘flee?’). (See also §13.3.)

### 22.2.4. The Month

The month, that is, the lunation or lunar month, is *tǎǎǎǎ* ‘moon,’ reckoned as beginning with the new moon, *ǰéwǎs tǎǎǎǎ*. Phases of the moon were given by AC as follows:

- (a) *wǎǎǎǎǎ θǎ líʔtǎǎǎǎ*.  
 ‘The moon is new.’
- (b) *natǎwǎ yǎǎǎǎǎ tǎ tǎǎǎǎ*.  
 ‘The moon is in the first quarter.’ (lit. ‘The moon is swelling.’)
- (c) *wǎǎǎǎǎ i x<sup>w</sup>ǎǎǎǎǎ tǎ tǎǎǎǎ*.  
 ‘It’s a quarter moon.’
- (d) *niʔ wǎǎǎǎǎǎǎ tǎ tǎǎǎǎ*.  
 ‘It’s a half moon.’

(e) niwəł yələwətsəq̄ [yələw̄ wətsəq̄ ?] tə ɬqél̄c̄.  
‘The moon is three-quarters full.’

(f) wəłqəc̄ tə ɬqél̄c̄.  
‘The moon is full.’

Months may be identified as *təna ɬqél̄c̄* ‘this month,’ and *tə niwəł i<sup>θ</sup>əx̄ ɬqél̄c̄* ‘last month.’ JP could give no further such terms.

Months are counted with the suffix *-əs* ‘face, moon, dollar,’ as in *ʔisálas̄* ‘two months, two dollars’ (< *yəsél̄ə* ‘two’). A pregnant woman might be asked (g).

(g) ni čx<sup>w</sup> wəłk<sup>w</sup>ínəs.  
‘How many moons have you gone?’

And the answer might be (h).

(h) ʔi cən wəłxəθínəs.  
‘I have four moons.’ (i.e., ‘I am four months along.’)

The mother of a baby might be asked (i).

(i) niwəł k<sup>w</sup>ínəs ɬqél̄c̄ təna s̄ɬíɬqəł.  
‘How old is the child?’

And the answer might be (j).

(j) niwəł ʔisálas̄ ɬqél̄c̄.  
‘Two months.’

For the names of the months, see §22.2.8.

### 22.2.5. The Tide

It is important to know the state of the tide and to predict the tide for shellfish gathering, several kinds of fishing and hunting, and travel on water, both on the sea and on the river. Pacific tides have diurnal inequality; each day, full highs and lows alternate with half tides. As everywhere, the full highs and lows vary through the lunar cycle, the highest and lowest coming with the new moon and the full moon. In addition to the monthly cycle, there is an annual cycle. The timing of the highest highs and lowest lows moves through the year, the lowest tides coming during the middle of the night in winter and the middle of the day in summer, the lowest of all being near the winter and summer solstices.

There is no term corresponding precisely to English ‘tide,’ but *qáʔ* ‘water’ is often so translated, as is the suffix *-ətca* ‘water.’ Terms for tidal conditions are *sqəməł* ‘flooding tide,’ *qəqəməł* ‘be flooding,’ *síʔém̄* ‘ebbing tide,’ *íʔéíʔəmə̄* ‘be ebbing,’ *səłəl̄ic̄* ‘high tide’ (< *lác̄* ‘full’), *lác̄lác̄* ‘be just high water,’ *sxám̄.xám̄* ‘low tide,’ *x<sup>w</sup>cák<sup>w</sup>* ‘long run-out (of tide),’ *cák<sup>w</sup>cək<sup>w</sup>* ‘low water,’ *ck<sup>w</sup>áləs* ‘place that has lots of sandbars and/or mudflats,’ *x<sup>w</sup>ɬənəx<sup>w</sup>əm* ‘be slack water (that is, at the turn of the tide).’ The period between the new and full moon is a

period of half tides called *k<sup>w</sup>ik<sup>w</sup>écəm*, possibly from *k<sup>w</sup>éc* ‘see,’ because this is a time when the water in the river is clear and fish can see nets.

The relevance of moonlight to activity on the shore or just offshore is reflected in the terms *łqálc̄ətcə* ‘moonlit low tide’ (< *łqél̄c̄* ‘moon,’ -*ətcə* ‘-water’) and *θáʔtətcə* ‘low tide on a moonless night’ (< *θéʔt* ‘dark’).

The annual cycle is reflected in the terms *nátcəm* ‘shift from low tides in the daytime to low tides at night (in the fall)’ (< *nét* ‘become night,’ -*c* ‘-back, -surface,’ -*əm* ‘intr.’) and *wéyəcəm* ‘shift from low tides at night to low tides in the day (in the spring)’ (< *wéyəl* ‘become day’).

Tidal conditions are important not only on the saltwater shore but also on the river. The Fraser rises and falls with the tide. When the river is low, the flood tide is said to produce slack water as far up as Mission, about 80 kilometres (50 miles) from its mouth and at about the boundary between the Downriver and Upriver dialects of Halkomelem. Pitt Lake in Katzie country has a tide. Under optimal conditions, as in December, when the river is lowest and the tides highest, it is said that taking a canoe from Musqueam, you could catch the up-bound tide and on one flood tide make it to the Katzie village at Port Hammond. During the summer freshet, however, the water slacks to New Westminster only.

### 22.2.6. The Year

The word for ‘year’ is *syálanəm* (cf. *syáłəx<sup>w</sup>aʔ* ‘old person,’ *yáléw* ‘past,’ suffix not identifiable). It appears in *təna syálanəm* ‘this year.’ Another word, *spánwə* (*spánweʔʔ*) (‘another year’?), appears in *wəspánwəʔəs ceʔ* ~ *wəspánweʔes ceʔ* ‘next year’ (JP), *k<sup>w</sup> spánwə* ‘last year’ (JP), and *k<sup>w</sup>ənaʔ spánwə* ‘last summer’ (DK).

The suffix *-ínx<sup>w</sup>* ~ *-wínx<sup>w</sup>* ‘year’ is suffixed to numerals to count years and forms a few other terms: *nəcáwínx<sup>w</sup>* ‘one year,’ *θəmínx<sup>w</sup>* ‘two years’ (< *θem-* ~ *θəm-* ‘two’), *k<sup>w</sup>ənəwínx<sup>w</sup>* ‘how many years?’ (< *k<sup>w</sup>ín* ‘how many?’), *k<sup>w</sup> nəwínx<sup>w</sup>* ~ *k<sup>w</sup> nəwínx<sup>w</sup>əʔ* ‘year before last’ (the article *k<sup>w</sup>*, *niʔ* ‘be there’), *k<sup>w</sup>xəwínx<sup>w</sup>* ‘age (of someone or something)’ (cf. *k<sup>w</sup>xét* ‘count them’).

Years may also be counted as *méqeʔ* ‘snow (on the ground),’ as in the response (b).

- (a) *ni čx<sup>w</sup> wəłk<sup>w</sup>ənəwínəx<sup>w</sup>.*  
‘How old are you?’
- (b) *ni cən wəłxəθənłčé méqeʔ.*  
‘I am forty years old.’ (lit. ‘forty winters’)

To the question asked about a child, the answer might be (c).

- (c) *ni məwł nəcáwínx<sup>w</sup>.*  
‘One year.’

Or *x<sup>w</sup>qáqsən* ‘make a circuit’ may be used, as in (d).

(d) ni mawł tás k<sup>w</sup>θə ʃx<sup>w</sup>qáqsəns. (JP)

‘He has reached the day he was born, he is exactly one year old.’ (lit. ‘He has reached his complete circuit.’)

The age of an object can be expressed the same way as that of a person.

(e) ni<sup>?</sup>əs ətwa<sup>?</sup> wəłk<sup>w</sup>ənəwí-nəx<sup>w</sup> tə léləmə. (JP)

‘I wonder how old the house is.’

Years can also be counted with the ordinary word for ‘year,’ as in (f).

(f) niwł łqécəs syiəlánəm k<sup>w</sup>ənsni ʃx<sup>w</sup>čələx<sup>w</sup>əm.

‘I have been a dancer for five years.’ (lit. ‘It has been five years that I have been a dancer.’)

### 22.2.7. The Seasons

A division of the year into four seasons may not have been Aboriginal. Both CC and JP gave *təm*k<sup>w</sup>álək<sup>w</sup>əs ‘summer’ (*təm*- ‘season’; cf. *k<sup>w</sup>a*?k<sup>w</sup>əs ‘hot’) and *təm*čəyá ‘winter’ (< čəyá ‘cold’), and for ‘this summer’ JP gave *təhá* s<sup>k</sup>*w*áək<sup>w</sup>əs (*s*- ‘nominalizer,’ *k<sup>w</sup>a*k<sup>w</sup>əs ‘hot’). For ‘spring’ CC gave a descriptive sentence, (a).

(a) ʔəməí yək<sup>w</sup>ék<sup>w</sup>ələs.

‘It’s becoming warmer.’

But JP gave *q<sup>w</sup>íləs* ‘spring’ (lit. ‘uncover’; cf. *q<sup>w</sup>í?əlt* ‘uncover it,’ -əs ‘face’) or *təm*q<sup>w</sup>íləs ‘spring.’

For fall CC gave *haylénəx<sup>w</sup>*, which JP said was the name of a month; he also said, “There is no real word,” but you can refer to *x<sup>w</sup>isəlénəx<sup>w</sup>*, which is the name of a moon, or you can say *yəlqánəp* (< *yeq* ‘topple over’ + *-ənəp* ‘ground’), which means that “the grass and other things go down.”

Periods of time are distinguished by means of a prefix or one of two suffixes. The prefix is *təm*- ~ *tən*- ~ *təń*- ‘season for, time of,’ which appears in the words for ‘summer’ and ‘winter’ given above and in the following:

*təmlíle?* ‘salmonberry season’ (< *líle?* ‘salmonberry’)

*təm*θəqəy ‘sockeye season’ (cf. *s*θəqəy ‘sockeye’)

*təm*k<sup>w</sup>áləx<sup>w</sup> ‘dog [chum] salmon season’ (< *k<sup>w</sup>áləx<sup>w</sup>* ‘chum salmon’)

*təmsásətəc* ‘a period of continuing cold weather’ (< *sásətəc* ‘cold northeast wind’)

*təm*qəqá? ‘the freshet (when the Fraser rises in the spring)’ (< *qá?* ‘water’)

*təm*í<sup>θ</sup>ím ‘berry-picking time’ (< *í<sup>θ</sup>ím* ‘pick berries’; cf. *sí<sup>θ</sup>ím* ‘berries’)

*təm*háps ‘hop-picking time’ (< E. *hops*)

*tənmítə* ~ *təmmítə* ‘winter dancing season’ (< *mítə* ~ *míle?* ‘dance with one’s *syəwən*’)

*tə̀nqʷətqʷətɬxən* ‘period of continuous fog’ (cf. *sqʷətɬxən* ‘fog,’ *qʷiqʷtímɬxən* ‘drizzle’)

*wə̀ltəmʔíyəs*, *təmʔiʔíyəs*, *təmʔə̀yʔə̀yəs* (< *ʔíyəs* ‘enjoy oneself’) in early spring when the weather improves (JP)

The two suffixes are probably related. One is *-əlénəxʷ* ~ *-lénəxʷ* ‘season,’ which appears in:

*xʷəsəlénəxʷ* ‘a month in the fall when leaves fall’ (cf. *xʷísət* ‘shake it’)  
*hə̀ylénəxʷ* ‘the following month in the fall’ (< *háy* ‘stop, be finished’)

The other is *-énəxʷ* ~ *-énəxʷ* ~ *énəxʷ* ‘fish, fish run, season,’ and possibly ‘food,’ which appears in:

*pékʷénəxʷ* ‘smoke fish (as salmon)’ (cf. *pékʷət* ‘warm it’)  
*čə̀yʔxʷénəxʷ* ‘smoke little fish (herring, etc.)’ (< *čə̀yʔxʷ* ‘dry’)  
*qə̀xʷénəxʷ* ‘big run of fish, good year’ (< *qə̀xʷ* ‘many’)  
*təḿhú́nè́nəxʷ* ‘humpback year’ (< *hú́n* ‘humpback [pink] salmon,’ which run in alternate years)  
*ḡetʰénəxʷ* ‘Mt. Baker’ (lit. ‘measures the fish run’ or ‘measures the season’?)  
 cf. *ḡé-tʰt* ‘measure it’)

### 22.2.8. The Calendar

In earlier times the moons were named, but neither of my principal sources, AC (with CC) and JP, could give very many names for the moons. JP gave the names of seven moons; AC remembered only four, three the same as JP’s, for a total of eight names. These are, of course, names of lunar months, which cannot correspond to the names of months in the Gregorian (solar) calendar, hence my sources identified them as coming “about” when a Gregorian month came. The names were:

*xʷəsəlénəxʷ* (CC), *xʷísəlénəxʷ* (JP) (cf. *xʷísət* ‘shake it,’ referring to the wind blowing leaves off the trees) around October  
*hə̀ylénəxʷ* (< *háy* ‘stop, be finished’) around November (JP)  
*xčəlwéstən* (CC) (probably *xčəlwéʔstən* ‘put paddles away,’ <  $\sqrt{\text{of } xíčət}$  ‘put it in the bush’ + *-əlwéʔs* ‘paddle’) about December  
*pə̀néq* (CC, JP) (probably *pə̀néq* ‘slow match’) about January<sup>5</sup>  
*mímə̀n tqélč* (‘small moon’) (JP) about February  
*wə̀łxəs* “when you begin to hear the frogs” (JP) about March

5 JP believed that the name means ‘covered,’ from *pə̀n* ‘be buried,’ referring to snow on the ground, and he added that the name was avoided by women. Probably the suffix has been identified as that for ‘penis.’ However, Lummi, Katzie, and Cowichan sources all identified this moon name as the term for ‘slow match,’ a device for carrying fire in a canoe, a coil of twisted cedar bark rope lit at one end, which was kept in a horse-clam shell.

*lí-məs* (cf. *slí-m* ‘sandhill crane’) when the sandhill cranes come to the cranberry bogs, about May (JP), *lí-məs* ‘September’? (AC/CC) (They came for the “crane-berries,” JP said.)

*ł́éqt łqélć* (‘long moon’) “about June or July” (JP)

In earlier times there may have been more names for moons. However, there may not have been complete agreement on which names to use for each moon, different families naming them differently according to their activities, and there may have been names for no more than ten moons.

The problem with naming moons after natural events, like the croaking of frogs or the migration of cranes, is that these events are determined by the solar year. The only natural events determined by the phases of the moon are the tides. The solar year is about ten days longer than twelve lunar months, and if we had names for twelve moons and counted them continuously, after three years it would appear that the frogs and cranes were both a month late. In a few more years, the names of the moons would no longer make any sense at all.

One way of adjusting a lunar calendar to the solar year is to insert a thirteenth month every four years or so, as the Jewish and Chinese calendars do. Another, probably more common way is to begin counting moons with some event that is determined by the solar year, count up to, say, ten moons, stop counting, and then begin again when the event that you started with comes again. In this way a “Sandhill Crane Moon” will correspond to the coming of the sandhill cranes.

Counting moons, leaving a gap, and beginning the count again with the observation of something determined by the solar year is just what was done by people upriver from the Musqueam. According to Diamond Jenness (1955, 7-9), the Katzie, who spoke a Downriver Halkomelem dialect very close to that of the Musqueam, counted ten months beginning with the arrival of the sockeye in August of the Gregorian calendar, leaving a period covering June and July with two names but not regarded as part of the count. The Chehalis, an Upriver Halkomelem-speaking people, as reported by Charles Hill-Tout (1904, 334-35), began a count of moons with the chinook salmon spawning in October, counted ten moons, and stopped counting in July, leaving a period called by a term said to refer to the coming together of the ends of the year. Neither Jenness nor Hill-Tout gave any reason for this uncounted period. But James Teit (1900, 339), describing the practice of the Ntlakapmux (Thompson), is very clear about it. The Ntlakapmux began a moon count with the rutting of the deer or some other animal in the fall, counted eleven months, and left a period as “the rest of the year.” “This indefinite period of unnamed months,” Teit explains, “enabled the Indians to bring the lunar and solar years into harmony.”

On Vancouver Island, lists of twelve and thirteen names of lunar months have been recorded from Cowichan speakers among others (Donckele 1882; Jenness 1934; 1955, 87; Suttles Cowichan notes). These lists may simply have been the

result of attempts to make the old moon names fit the Gregorian calendar, or they may reflect a lunar calendar that was adjusted twice during the solar year, perhaps at the summer and winter solstices. Jenness (1934) reports that the Cowichan observed the winter solstice.

The calendar used by the Musqueam in earlier times must have been of this sort, although it is not clear what observation or observations may have been made. Timekeepers could have observed some biological event or some astronomical event. According to JP, there was a “weatherman” who watched progression of the sun along the horizon at sunrise and observed the solstices when the sun appeared to stand still or waver in the point at which it rises. The name given Mount Baker, *ḡeʔ<sup>θ</sup>énəx<sup>w</sup>* ‘measure fish’ or ‘measure season,’ seems to imply its use as a marker of the seasons. People also observed changes in the stars and noted in particular the rising of the constellation called *st<sup>θ</sup>ʔnə* ‘bull-head,’ probably the Pleiades, just before dawn.<sup>6</sup>

JP made two statements about the beginning of the year. On one occasion, he said that the year begins with *q<sup>w</sup>iłəs* (‘spring’), right before *wət.ḡəs*. On another occasion, shortly after the first, he said that *x<sup>w</sup>čáləwən* ‘the turn of the year,’ that is, the beginning of the new year, was in the fall, explaining that “the word really means the turn from old to new” and adding that “the next is *q<sup>w</sup>iłəs*.” His translation of the first term implies that the root is *čəl-* ‘turn round,’ but it seems possible that it could be *x<sup>w</sup>əč-* ‘insert,’ which could imply a gap in the moon count. His two statements suggest that there may have been two times during the year when a moon count was started, but these do not correspond to the solstices. We can only conclude that at this time we really do not know how the old calendar worked.

---

6 The fish is probably the cabezon, a large species of sculpin. The constellation is often called “Little Dipper” in English.

This text was dictated by Christine Charles on 23 November 1960 and reviewed with Della Kew in November 1972.

### Line

1-2. This is a statement of what is going to follow, perhaps a kind of title.

1. *√təʔé* ‘be like’ appears in *stəʔé* (usually pronounced *steʔé*), meaning ‘be like, resemble, be the same as,’ and in *šxʷtəʔé* ‘way, manner,’ lit. ‘that which is like.’ Compare *stéʔe* ‘remain, stay put, continue as before,’ as in line 25.

2. *ʔaləǰət* ‘get it, prepare it, provide it’ usually refers to food. *√qílə* has not been recorded without an affix. The noun *sqílə*, often glossed ‘winter supplies,’ refers to any kind of preserved food but especially dried or smoked salmon. The verb *čqílə* means ‘preserve food,’ especially ‘dry salmon.’ The *sʔáǰʷaʔ* is the butter clam (*Saxidomus giganteus*).

3. *kʷəyǰət*, lit. ‘move oneself,’ is often used to begin a narrative or a new segment of one. *syəwén*, lit. ‘what has gone before,’ can mean ‘ancestors’ or simply ‘heritage.’

9. *q'á'n'ǰá'* 'Kwantlen' is the name of the people at or near the mouth of the Salmon River, near the second site of Fort Langley. They have often been called "the Langley people."

10. The Musqueam who were going to dig clams went up the Fraser as far as Kwantlen, went up the Salmon River, portaged across the prairie to the Nicomekl, and down that stream to Boundary Bay. Although *smáq'wac* is the name for Point Roberts, CC initially translated it here as "Boundary Bay." This must have been a well-known route. In 1824, the first Hudson's Bay Company expedition to the Fraser was guided through it by Snohomish and Skagit people from Puget Sound. The term for 'portage' is probably *šxw-xwákw'əwət*, but it is given in the first line as recorded.

12. *šxw'ícəəs* was made by removing the backbone and scoring the flesh so that it could open up and dry more readily. Mrs. Charles described the catching and processing of salmon after dictating this text. For a description and photographs, see Wilson Duff's *The Upper Stalo Indians*, Anthropology in British Columbia, Memoirs 1, BC Provincial Museum, Victoria, 1952, 63-66.

16. *sála'ac* 'house-mat' refers to the larger mat used for lining the walls of the plank house or for making temporary shelters at camping sites, as here. These were made of tules (*wí'l*) or of cattails (*st'el'əqən*). The *stéwən* 'bed-mat' was a smaller cattail mat used for sleeping or simply sitting on. Both were made by sewing with a long matting needle and a mat creaser. *síl* 'canvas' is from the English *sail*.

22. *ʔəl'əle'cəm* 'load up' probably consists of *ʔá-t* 'board (a vessel),' which probably has the underlying form *lʔalətʔl*, the suffix *-əle'c* 'container,' and *-əm* 'intransitive.' The resultative of *ʔá-t* is *ʔəl'á'ət* 'aboard,' for which CC gave an unusual plural, *yəl'á'ət*. The form in line 27, *yəl'ə'ət'əle'c* 'loaded,' appears to be based on this form.

32. Recorded *xw'əl'amət*, but more likely *xw'ə'ámət* with *xw'ə-* 'become' or *xw'ən'ámət* with *xw'ən-* 'already.'

34-35. 'Those whom we are replacing' is another respectful term for the ancestors.

This text was narrated by Andrew Charles Sr. on the Musqueam Reserve on 26 October 1960, with Mrs. Charles repeating more slowly to allow me to write it down. The translation is based on work with CC. Although we had used a

tape recorder on two or three previous occasions, this was our first attempt at writing down a dictated narrative. I had asked AC if he would give me an account of some activity he participated in when he was young. He said he would think about it, and the next day he gave the first thirteen lines. I believe this is a thought-out composition. He added lines 14 to 19 after I requested information on the distribution of the game.

Although AC was Musqueam, he had lived as a boy on one of the Cowichan reserves near Duncan. He was fourteen when he went with “the bunch” on a deer drive. They had rifles then, but at an earlier time they would have used bows and arrows. “Halfway” is on the Cowichan River about halfway between “Duncan’s” and Cowichan Lake. That was the only place where they got deer by driving them. They had tried other places but these were too open and so they couldn’t get any deer. Above the pass at Halfway was a place that was all alders and grass, where the deer fed. The boys chased the deer from there into the pass.

AC once watched the men who waited space themselves out. They took places on both sides of the trail, spaced out alternately so that they were not shooting at each other. The first man usually hit the most; the last man might not have much chance. They might get five or six at one time. If only a few persons were driving the deer, they could not get many, because the deer would hide. Deer are smart. They prefer the open to shelter under the trees – even in the rain. It is said that they don’t like the heavy drops from the trees because they soak through.

The division of the deer was even, but if, say, five persons came from the same house, they might not quarter their carcass but take it home whole.

### Line

2. *sq̓əlím* ‘encamped, camped out,’ resultative of *q̓ələm* ‘camp.’ The root appears in *q̓əlmán* ‘campsite,’ *q̓əlácθət* ‘go under shelter,’ *x̣ẉq̓əléc* ‘shelter (as for a fire to protect it from the wind),’ and probably *q̓ələḡən* ‘stockade, fence’ and *sq̓ələḡən* ‘stockaded, fenced in.’

3. *sq̓ẉáq̓ẉət* ‘lying in wait, be ready,’ resultative of *q̓átət* ‘lie in wait for him/them, get ready for it (as an attack).’

4. The word for ‘shoot’ or ‘spurt out’ was recorded as *ḳẉələx*, *ḳẉəlləx*, *ḳẉəléləx*, and *ḳẉəlléləx*. It has an irregular progressive, recorded *ʔeʔḳẉələx*, *ʔeʔḳẉəlləx*, and possibly *heʔḳẉəlləx* ‘be shooting, be spurting,’ which appears in line 14. The transitives are *ḳẉələxt* ~ *ḳẉəlləxt* ‘shoot him (deliberately)’ and *ḳẉəlləxnəx̣ẉ* ‘shoot him accidentally, manage to shoot him.’ The plural is *həḷḳẉəlləxt* or *ʔəḷḳẉələxt* ‘shoot several,’ which appears in line 13. A noun derivative, *sḳẉəléləx* (plural *səḷḳẉəléləx*) means ‘arrow’ or ‘gun.’

5. In writing ‘and’ as *i*, I am following DK (see §1, note 9). *səẉáẉələs* ‘young men’ is the plural, as given by CC, of *sẉíẉləs* ‘young man.’ (JP gave the plural as *sẉáẉləs*.) The suffix *-əlt* ‘young’ added to the name for an animal produces

the term for the young of that species. Added to young man or *qéməy* ‘young woman,’ it produces ‘boy’ or ‘girl.’ A ‘boy’ is between 10 and 20 years old. *sqáʔ* is a nominalization of *qáʔ* ‘accompany.’

6. *qéwəm* (also recorded *qéwəm*) ‘be howling,’ progressive of *qəwəm* ‘howl.’ *stəʔé* ‘like, the same as, accordingly,’ is probably the resultative of a root  $\sqrt{te}$  ‘be alike(?), appear(?)’ Cf. *təʔá:məx* ‘resemble,’ *stəhím* ‘manner, way,’ *šxʷtəcís* ‘way (of doing something),’ *šxʷteʔéwən* ‘think,’ *ʔəwəteʔ* ‘none.’

7. *tétəsət* ‘be hitting together,’ progressive of *tásət* ‘hit together,’ < *tás* (also recorded [tʰás]) ‘get hit, get bumped.’

8. *wəlwétət* ‘be driving, chasing away,’ progressive of *wétət* ‘drive away,’ root not recorded.

9. *stqʷíqən* ‘steep, sheer (in slope of land)’ < *təqʷ* ‘be cut off, be broken off,’ *-íqən* ‘front, slope.’ *stətíqʷ* ‘cut up, cut off, cut straight, sheer,’ resultative of *təqʷ* ‘be cut off.’

14-15. See note for line 4.

16. *səmíyəθ* ‘deer,’ plural of *sməyəθ* ‘deer.’ *íáxətəl* ‘divide, distribute (a catch or game),’ < *íáx*, *-təl* ‘reciprocal’; cf. *íáxəst* ‘share with him,’ *íxəθət* ‘branch out (as a trail or stream).’

18. *íáxətəl* ‘be dividing,’ progressive of *íáxətəl*. *sxəncə* ‘game (of hunter), catch (of fisherman), prey (of predator)’; cf. *cxəncə* ‘take as game, catch, prey.’

19. It seems to me that the second nominalizer should not be there.

 aboard  
 He didn't know what happened to this thing that came aboard.

This account was told by Andrew Charles, speaking fairly fast, and relayed at dictation speed by Christine Charles on 2 November 1960. The incident happened when AC was a young man and living at Cowichan. The three of them, Gabriel Joe, Henry Louie, and Andrew, went by canoe from the Cowichan River out around Saltspring Island to “Plumper’s Pass.” Only Gabriel had a gun. In earlier times, hunters used pitch flares, but Gabriel had a “pit lamp,” a miner’s lamp worn on the forehead.

#### Line

1. The Halkomelem is literally ‘went and recruited me,’ but ‘came and recruited me’ seems more normal English. Perhaps in English the reference point of ‘come’ and ‘go’ moves with the speaker, while in Halkomelem it is the focus of the speech event, so that if I am no longer where I was recruited, they ‘went’ and recruited me.

*həl̥xəweʔ*, progressive of *ləx̥tíwə* ‘hunt with a torch’ (or in recent times with a miner’s pit lamp, hence *həl̥xəweʔ* is often rendered ‘be going pit-lamping.’

2. *háyeʔ* ‘leave,’ originally recorded *háyeʔ*. *sqθáqał*, probably should be *sqθáqałl*, place name, ‘Active Pass’; older people used to call it “Plumper’s Pass,” from *sqθéq* ‘pass’ (on water as between islands) and the place name “Porlier Pass” (“Cowichan Gap”) and the suffix *-áłl* ‘young,’ so ‘little pass’ or ‘Little Porlier Pass.’

3. *táx<sup>w</sup>* ‘exactly,’ so recorded from CC; recorded *təx<sup>w</sup>* from DK and *táx<sup>w</sup>* from AG.

4. *k<sup>w</sup>úk<sup>w</sup>* ‘cook,’ from English. The *-t* ‘transitive’ was not recorded but was probably there; grammar requires either *-t* or *ʔə* ‘oblique.’ *neʔənt*, progressive of *nét* ‘be night.’

6. *háñəm*, progressive of *ném* ‘go.’ *k<sup>w</sup>əcnəx<sup>w</sup>* ‘see it,’ < *k<sup>w</sup>éc* ‘see.’ The full vowel of the root appears as schwa before *-nəx<sup>w</sup>* ‘limited control transitive.’

9. *ʔəlá-t* ‘aboard,’ probably a durative of *ʔá-t* (//ʔaləł//?) ‘go aboard.’

10-11. There are three instances here of *i* or *ʔi* in a context where, because the place is elsewhere and the time is past, I would expect *niʔ*. Perhaps the *ʔi* makes the action more immediate.

10. *ʔé:y* ‘be continuing,’ progressive of *ʔéy* ‘continue.’

11. *ʔaxʔiʔal*, plural progressive of *ʔáxal* ‘paddle (v).’

12-14. The material in parentheses was added after the rest of the text was dictated. This was at my request that the story include the sounds that AC had used in an earlier discussion. The *px<sup>w</sup>* is sharp with gradually decreasing volume. CC remarked on its echoing quality. The *ǰ* rises in volume and then gradually falls and fades like the sound of a tree falling and echoing.

14. An article seems required, Gabe being the subject.

15. The particle *yel* ‘expectable’ perhaps gives the feeling of ‘It’s those pesky Little Choppers again!’ *k<sup>w</sup>àk<sup>w</sup>əq<sup>w</sup>nəci·ls* is literally ‘be striking at the base of something with a clubbing or chopping motion.’ ‘Little Choppers’ was CC’s term. They are forest dwarves who fell trees. (For a discussion of these and similar beings, see Suttles 1987, 73-99.)

16. *lé:yətp*, from the root of *slé:y* ‘Douglas-fir bark’ (thick bark suitable for fuel) and *-ətp* ‘plant,’ and hence ‘mature Douglas-fir tree.’

17. *ǰiǰəs* ‘islet,’ diminutive of *ǰés* ‘island.’

18. *q<sup>w</sup>áləm*, plural of *q<sup>w</sup>ím* ‘disembark.’

19-20. According to CC’s stated preference, the verb following the first two instances of *səw* ought to be followed by *-s* ‘third-person possessive,’ but because the third instance is followed by *-əs* ‘third-person transitive subject,’ it ought to be *səsəw*. Apparent errors of this sort may have been mine in the course of taking dictation.

22. *k<sup>w</sup>ək<sup>w</sup>cástəm* is a passive form, ‘is being looked at in the face.’ The deer is the subject of this passive. The agent must be Henry Louie, who was in the canoe.

 AUX end ART story [OBL] ART mink and ART beaver and ART scouring.rush  
 So ends the story of Mink, Beaver, and Scouring Rush.

This text was dictated by James Point on 22 March 1963, and reviewed with Arnold Guerin in 1983.

*Line*

1. ʃ̄néčəwtxʷ ‘visit.’ Composed of the prefix ʃ̄- ‘go to,’ the root *néč* ‘differ, be different,’ and the lexical suffix *-əwtxʷ* ~ *-éwtxʷ* ‘house.’

2. *xʷkʷəl̄ə* ‘scouring rush’ – the species *Equisetum hiemale*, a relative of the horsetail; it and dogfish skin were used like sandpaper. The word *xʷkʷəl̄ə* has the same root as *xʷákʷət* ‘polish it.’

*číčəsəm̄*. Progressive of *čísəm* ‘grow.’

*sʔəʃ̄qəl̄wət*. Composed of the prefix *s-* ‘nominalizer,’ the root *ʃ̄eʃ̄q* ‘out,’ and the lexical suffix *-əl̄wət* ‘side.’ AG pronounced the word *sʔəʃ̄qəl̄weʔt*.

3. The phrase *tə léləm̄* [ʔə] ʃ̄ *sqəlélw̄* is an alternate way of saying ‘the house of Beaver’ or perhaps ‘the house of the beaver.’ However, because the article ʃ̄ must appear before a proper noun or a pronoun in the oblique case, the use of it here suggests that Beaver, Mink, and Scouring Rush are proper nouns, the names of characters.

4. *scənéw̄əs* ‘reclining.’ Probably a resultative form, composed of *s-* ‘resultative,’ the root *cəh̄* ‘lean against, be propped up,’ and the lexical suffix *-iw̄s* ‘body.’ JP said that the word implied that Beaver was lying back with his hands clasped behind his neck, looking self-satisfied, we may assume.

*yə-* ‘along.’ Generally implies movement or duration; here it may suggest that Mink’s hunger was an ongoing condition.

5. *yé* ‘well.’ This interjection might also be translated ‘all right’ or ‘go ahead.’ It is used to urge someone to speak or to continue, as by the audience listening to a story being told.

*qəl̄məx* ‘pal.’ Evidently a familiar, perhaps patronizing, form of address. AG thought the root might be *qəl̄* ‘bad,’ but it looks like an Interior Salish word for ‘person.’

*stéməs*. The *-əs* is ‘third-person subordinate subject’ (3SUB). The subordinate subject series appears in subordinate clauses. Here there is probably an implied main clause such as ‘I wonder ...’

6. In stories, Mink, Raven, and perhaps some other disreputable characters begin words with the sound ʃ̄ ...

9. *ʔəθxʷəwéʔe kʷə ʔəȳətəxʷ* ... This is literally ‘Is it then the reason for your not eating my food?’ The same construction appears in line 19 with a similar interpretation, ‘How could you ...?’

10. *swéʔ* with the *s-* ‘nominalizer’ is literally ‘property’; *cwéʔ* with the *c-* ‘verbalizer’ is ‘to own.’ Speakers vary in whether they use the possessive with both the *swéʔ* and the noun that follows. Here JP used the possessive with the following noun the first time and omitted it the second. When AG read the story, he put in a possessive where JP had omitted it.

*kʷəw syát ʔal mə.* The *kʷə* implies hypothetical existence, indicating that Beaver is referring to *some* wood, not necessarily any that Mink can see. However, the particle *mə* (CERT) implies that the statement is based on direct experience, as opposed to hearsay. Beaver of course *knows* that’s what his food is. The interpretation ‘of course, it is’ was given to the same construction in another text.

11. *lákʷləkʷ* is the plural of *lákʷ* ‘break, get broken.’

14. *stélq.* Resultative of the root *ləlq*, seen in *ləlqt* ‘immerse it, dip it.’

15. *ítánàstəl* ‘be sitting beside each other,’ the progressive of *íánástəl* ‘sit beside each other,’ which is the reciprocal of *íánəst* ‘sit beside him/her.’

16. Some people identify *stʰqʷáy* as ‘trout,’ others as any small fish.

17. *ǰátə.* Progressive of both *θət* ‘say,’ as it is here, and *ǰtəʔ* ‘do,’ as in line 19.

21. *qʷtélý* is usually glossed ‘log,’ but it is composed of the root *qʷət* ‘wash ashore’ and *-éý*, an old lexical suffix meaning ‘tree’ or ‘plant,’ and so the word probably originally meant specifically a driftwood log.

23. The *ə̃* is a nasalized schwa.

26. *ʔəmət* is ‘sit down’ if one is standing or ‘sit up, get up’ if one is lying down.

30. *stətés* ‘near,’ the resultative of *təs* ‘arrive there.’

31. Mink is the subject of *ʔəmət* ‘sit down,’ but *íánəstəm* is the third-person passive form of *íánəst* ‘sit beside,’ and its subject is Scouring Rush. This shift to the passive may occur when the previous verb is intransitive. See also line 35. The use of *təwǰa* also indicates that Scouring Rush is the subject.

33. *syá:* ‘careful,’ lit. ‘warned,’ the resultative of *yát* ‘warn him/her.’

35. *ííqətəm* is a passive form. Mink and Scouring Rush, indicated by *é-ítən* ‘third-person plural’ (3PL) are its subject.

38. *síánəs*, the nominalization of *íánəs* ‘sit beside.’ The phrase *kʷθə síánəsət čičiʔqəh* might also be translated ‘the one who sat beside him, who was Mink.’

The conjunction *ʔi ~ ʔáy* can mean either ‘and’ or ‘but’ depending on context.

*həwqʷ* is the progressive of *wəqʷ* ‘drift downstream.’

*ǰʷkʷəʔiqən* ‘belly up’ is composed of the prefix *xʷ-*, which seems often required when the reference is to a body part, the root *kʷiʔ* ‘ascend, upward,’ and the suffix *-iqən* ‘front.’

*síʰəxnis* ‘with teeth showing’ is composed of *s-* ‘resultative,’ a root *íʰəx*, not identifiable, and *-nəs ~ -nís* ‘tooth.’ There is a verb *íʰəxnisəm* ‘show the teeth, grin.’

 So said my grandmother Peliqwiye.

This text was dictated by James Point on 1 April 1963 and checked with Arnold Guerin on 27 August 1983.

*Line*

1. *q<sup>w</sup>íłq<sup>w</sup>əl* ‘be telling,’ progressive of *q<sup>w</sup>əlq<sup>w</sup>əl* ‘tell, relate.’

2. AG said he would have begun the sentence with *ni cə ʔə k<sup>w</sup>ə* rather than JP’s *ni cə k<sup>w</sup>ə*, but reconsidering this, I think JP’s original is consistent with the syntax of the sentence as I understand it: ‘There was, it is said, what was called Mumquaam.’ An oblique particle *ʔə* would be appropriate if there were a different subject, identified as *at* the place called Mumquaam.

*x<sup>w</sup>məm<sup>w</sup>é<sup>m</sup>*, from *máq<sup>w</sup>əm* ‘bog’; a place name, that of a bog near Chaldecott Park. The name may be based on the diminutive *mám<sup>w</sup>q<sup>w</sup>əm* ‘little bog’ with the combination of the prefix *x<sup>w</sup>-* and the suffix *-əm*, the underlying form being //x<sup>w</sup>-mám<sup>w</sup>q<sup>w</sup>əm -əm//, with the medial *m* lost and a shift in stress. This combination of affixes with the meaning ‘place where there are’ is common in place names over the region.

3. *x<sup>w</sup>c<sup>w</sup>sí<sup>w</sup>m* ‘grown up,’ from *cí<sup>w</sup>səm* ‘grow,’ perhaps with the *x<sup>w</sup>-* and *-əm* seen in place names. The underlying form would be //x<sup>w</sup>-c<sup>w</sup>isəm-əm// ‘place where there are growing things.’ I have inserted, in square brackets, an oblique particle that AG would have used.

4. *cí<sup>w</sup>cəsəm* ‘be growing,’ progressive of *cí<sup>w</sup>səm* ‘grow.’

6. *ʔəłəstəm* ‘said to be, so-called.’ JP used this term fairly often as a modifier, as he did here.

*ʔəx<sup>w</sup>əniʔ* ‘place where.’ AG indicated that this is pronounced either *ʔəx<sup>w</sup>niʔ* or *ʔəx<sup>w</sup>əniʔ*.

*s<sup>w</sup>éləqəm*. This word can be translated in various ways. JP may have suggested ‘monster’ in this context, but in another narrative he referred to the warrior Capilano as *s<sup>w</sup>éləqəm*, meaning ‘fierce’ or ‘dangerous,’ and CC used it in

the context *sʰéləqəm šxʷnələʔəm*, which I translate ‘powerful shaman.’ AG commented on how broadly the term is used and how hard to give it a single gloss. He suggested ‘fearsome being’ in this context and said it could be used for feared things such as a whale at sea or a ghost; a little bug is a *sʰíʔʰələqəm* (the diminutive).

*sʰítqəy* ‘sealthkey.’ This is the two-headed serpent known to the speakers of Northern Straits as the *sʰínətqəy* and to the speakers of Kwakwaka as the *sisiut*. The name in Halkomelem and Northern Straits appears to be composed of an unidentifiable element and *ʔəlqəy* ‘snake.’

10. *kʷtə*, JP was not consistent in which gender he used with the sealthkey, but often, as here, it was feminine. *wəmə́n* ‘foolish, not having good judgment,’ probably composed of *wə-* ‘established’ and *mé́n* ‘weak.’

12. *šəlšəlčə́m* ‘you’ll get twisted up,’ probably a plural form, that is, ‘you’ll get twisted in several places’; cf. *šəlčət* ‘turn it around, twist it,’ *šəlčət* ‘be turning it.’ A sealthkey was said to cause a kind of paralysis that contorts the body of its victim.

13. *šxʷsəkʷéyʰs* ‘cause of its being impossible, reason why it is impossible’

15. *máʔəqʷ*, usually translated ‘duck,’ this term really refers to any larger bird; the eagle is a *máʔəqʷ*.

16. *tənəqsən* ‘mallard,’ composed of an unidentifiable root and the suffix *-əqsən* ‘nose, bill.’

17. *šxʷcšəʔéíʰs* ‘means by which it is made evident.’ The root is that of *šéíʰt* ‘measure it’ and *šəʔéíʰ* ‘measured, marked, known, evident.’ I heard JP say *šxʷšəʔéíʰs* here and in another context, but AG (on tape) clearly said *šxʷcšəʔéíʰs*. The verbalizing prefix *c-* seems reasonable.

18. *təqʷtəqʷəlləxʷ* is the plural of *təqʷəlləxʷ* ‘know it.’

*-ət čtwaʔ-* ‘past speculative.’ JP used this fairly often when referring to people of the past. If any translation is needed, it would be ‘who must have been.’

20. *máʔməl*. Progressive of *məlməl* ‘make a mistake, lose one’s way.’

27. *sšəʔéíʰ*. See 17 above. *sšəʔíʰstəxʷ* ‘witness it,’ causative of *sšəʔíʰ* ‘visible, seen’; cf. *šíʰ* ‘appear, be revealed,’ *šíʰt* ‘reveal, disclose.’

28. *šixšém*. Progressive of *štém* ‘watch.’

30. AG corrected what I had written *i sšə́ncə* as *yəscə́ncə*, and identified the *yə-* as ‘before,’ saying that the *yə-* could be omitted and in fact the sentence would be better without it.

33. The ‘big river’ is of course the Fraser. The ‘river-track’ became the bed of the creek that flows past *ščələxʷ*.

34. *sášə́l* is often translated ‘grass,’ but it has a wider meaning, since it includes flowering plants that die down in the fall, as seen in what follows.

37. *sštém* ‘sight, view,’ nominalization of *štém* ‘watch.’ AG pronounced the word *sštém*.

38. *šx<sup>w</sup>k<sup>w</sup>éʔəm* ‘storage basket,’ also given as *sk<sup>w</sup>éʔəm*.
39. *pálx<sup>w</sup>əm*. Progressive of *páləx<sup>w</sup>əm* ‘steam, come to a boil.’
39. *šx<sup>w</sup>qən<sup>w</sup>élə* ‘stomach.’ Composed of *šx<sup>w</sup>*- ‘oblique nominalizer,’ *qənəx<sup>w</sup>* ‘throat, gullet,’ and *-élə* ‘container’; cf. *sqənəx<sup>w</sup>* ‘greedy,’ *ctqən<sup>w</sup>íləm* ‘die of overeating.’ *sməqs* ‘that which it swallowed,’ a relative clause, from *məq* ‘swallow.’
41. *syəyáləx<sup>w</sup>aʔ* [siyáləx<sup>w</sup>aʔ] plural of *syáləx<sup>w</sup>aʔ* ‘old person.’
42. *spáy<sup>w</sup>pəy* ‘crooked, winding,’ plural of *spápəy* ‘bent,’ resultative of *pá·yt* ‘bend it.’
42. *stáʔtləw* ‘creek,’ diminutive of *stáləw* ‘river.’ *ʔəšqəʔθ* ‘go out into open water’ (as from Burrard Inlet into the gulf).
44. *x<sup>w</sup>čéləwən* ‘turn of the year’ was JP’s gloss, presumably from  $\sqrt{čal}$ - ‘turn’; cf. *čáləsəm* ‘turn the head (to look in another direction),’ said to come in the fall.
45. *k<sup>w</sup>s*. AG said he would have used *k<sup>w</sup>is* instead. This is short for *k<sup>w</sup>sniʔs*.
47. *məθk<sup>w</sup>əy*. The identity of this plant, for which Musqueam was named, is not clear. (See Appendix 2, under the name “Musqueam.”)
51. *qəlqəlílθət* ‘soil oneself, defecate’; cf. *qəlqəlíl* ‘spoil it,’ from *qəl* ‘bad,’ used today as a euphemism for *qəš<sup>w</sup>əš*.
52. *wəcšánəm* ‘fall beside’(?), from *wəcəš* ‘fall’ (also recorded *wəčəšš*, cf. Cowichan *wəššəč*), *-anəm* ‘-side’? (cf. *-én* ‘side,’ *-ənə* ~ *-əneʔ* ‘ear’).
55. *x<sup>w</sup>məθk<sup>w</sup>əyəm* ‘Musqueam,’ formed with *x<sup>w</sup>*- and *-əm*, ‘place of *məθk<sup>w</sup>əy*.’
57. *k<sup>w</sup>tə nəsiłət* ‘my deceased grandmother.’ JP used both the feminine remote article *k<sup>w</sup>tə* and *-ət* ‘past.’ Some older people speaking English nearly always use *poor* to convey the fact of deceased status. Others say *late*. I have generally ignored this in a free translation.
- pəlíq<sup>w</sup>əyə* (also recorded *pəlíq<sup>w</sup>əyə*) was JP’s mother’s mother, and she was AG’s great-great-aunt, the sister of his father’s mother’s mother.

## Appendix 1

# Index of Grammatical Elements and Lexical Affixes

This index lists all prefixes and suffixes, both grammatical and lexical, all particles, and words (and a few phrases) of special classes the functions of which are described in this grammar. Each entry gives the number of the section where the item is identified. In a few cases, other numbers refer to sections describing special uses.

The entries are ordered in a phonological (rather than alphabetical) order. Glottalized resonants are not given separate status but are ordered with the plain resonants. Suffixes with initial vowels are distinguished thereby, but otherwise vowels are ignored in the ordering. The order is as follows:

*p p̣ m ṭ ṇ θ ṭ<sup>θ</sup> ị<sup>θ</sup> s S š ṭ ʃ l c č x k<sup>w</sup> ḳ<sup>w</sup> x<sup>w</sup> q q̣ ʃ q<sup>w</sup> q̣<sup>w</sup> ʃ<sup>w</sup> y w h ? ə e a i*

nəcá<sup>?</sup> ‘one,’ §19, §18.4.10.

-nəx<sup>w</sup> ~ -nécx<sup>w</sup> ~ -n- ~ -ləx<sup>w</sup> ~ -l- ‘limited control transitive’ (LCTR), §10.1.2.

nəx<sup>w</sup>- (identical with x<sup>w</sup>- ‘inward’?) lexical prefix, §12.4.8.

*nax<sup>w</sup>s-* ~ *x<sup>w</sup>s-* ‘habitually’ (HAB), aspectual prefix, §11.1.8.  
*náy* (usually *wənáy*) ‘only,’ §18.4.37.  
*náw* ~ *náw* ~ *náw* ‘yes (in answer to call), hey,’ §20.3.4.  
*náwə* ‘you,’ second-person singular personal word, §14.2.7.  
*náʔatə* ‘there,’ demonstrative auxiliary verb, non-feminine, §15.3.  
*náʔəθə* ‘there,’ demonstrative auxiliary verb, feminine, §15.3.

### θ

-*θ* realization of -*t* ‘transitive’ and -*S* ‘me, you (singular),’ §14.2.5.  
*θə* ‘a, the,’ article, feminine, present and visible (ART), §15.1.  
*θém-* ~ *θəm-* ‘two’ (combining form), §19.  
*θəmé* ‘twice,’ §18.4.5, §19.2, 2.  
 -*θam-* realization of -*t* ‘transitive’ and -*Sam-* ‘you,’ second-person passive subject, §14.2.6.  
 -*θamx* realization of -*t* ‘transitive’ and -*Samx* ‘me,’ §14.2.5.  
 -*θamə* realization of -*t* ‘transitive’ and -*Samə* ‘you,’ second-person singular object, §14.2.5.  
*θát* ‘intend, try,’ §3.2.3.  
*θát* ‘say.’  
 -*θət* ~ -*θát* ‘oneself,’ reflexive suffix corresponding to -*t* ‘transitive,’ §10.5.1.  
 -*θən* ~ -*aʔθ* ‘mouth,’ lexical suffix, §13.6, 26.  
 -*θín* ~ -*aʔθ*, etc. ‘mouth, lip, margin, edge,’ lexical suffix, §13.6, 26.  
*θəńá* ‘this, she/her,’ locative demonstrative, feminine, visible, §15.2.2.1.  
*θəńəwǰá* ‘she/her, that,’ third-person demonstrative, §15.2.2.2.  
*θət* ‘however, nevertheless, but, still, etc.,’ adversative predicate particle (ADV), §16.2.15.  
 -*θél-* realization of -*t* ‘transitive’ and -*Sél-* ‘I,’ first-person singular passive subject, §14.2.6.  
*θəwǰá* ‘she/her, that,’ third-person demonstrative, §15.2.2.2.  
*θəwǰáǰəm* ‘that little one,’ third-person feminine diminutive demonstrative, §15.2.2.2.  
*θéʔ* ‘that, she/her,’ simple demonstrative, feminine, visible, §15.2.1.  
*θəʔí* ‘this,’ locative demonstrative, feminine, visible, §15.2.2.1.  
*θəʔít* (usually *wəθəʔít*) ‘truly, really,’ §18.4.26.

### t<sup>θ</sup>

*t<sup>θ</sup>* ‘a, the,’ article, Cowichan equivalent of *tə*, occasionally used by some Musqueam speakers, §15.1.

### i<sup>θ</sup>

-*i<sup>θ</sup>*(?) possible lexical suffix, §13.7, 7.  
*i<sup>θ</sup>ix<sup>w</sup>əm* ‘pity, be so kind as to ..., please ...,’ §3.2.3.  
*i<sup>θ</sup>x<sup>w</sup>tmət* ‘pity him, be so kind as to ... for him,’ §3.2.3.  
*i<sup>θ</sup>á<sup>w</sup>ks* ‘seven,’ §19.

S

- s*<sub>1</sub> ‘nominalizer’ (NOM), derivational prefix, §12.1.1; in nominalized clauses, §4.3; in relative clauses with extracted oblique objects, §4.1.1.2.
- s*<sub>2</sub> ‘resultative’ (RES), derivational prefix, §12.1.2. Cf. resultative aspect, §7.7.
- s*<sub>1</sub> ‘his, her, its, their,’ third-person possessive suffix, §14.2.4.
- s*<sub>2</sub> ‘permissive,’ §10.7; following *ʔəwə* ‘not,’ §6.1.1.
- s* ... -*aʔt* forming adjective-like words, §3.8.3.4.
- sím* ‘berry’(?), possible lexical suffix, §13.7, 8.
- st* → -*stəx*<sup>w</sup><sub>1</sub> ‘causative’ (CAUS), §10.3.
- stém* ‘what?’ interrogative word, §17.3.
- stətés* ‘near,’ as prepositional verb, §3.5.
- stəx*<sup>w</sup><sub>1</sub> ~ -*stéx*<sup>w</sup> ~ -*əstəx*<sup>w</sup> ~ -*st* ‘causative’ (CAUS), §10.3.
- stəx*<sup>w</sup><sub>2</sub> ‘comitative’ (COM), applicative, §10.4.1.
- stənámət* ~ -*stənəmət* ~ -*stənmət* ‘oneself,’ causative reflexive suffix corresponding to -*stəx*<sup>w</sup><sub>1</sub> causative, §10.5.3.
- stəʔé* ~ *stəʔé* ‘resembling, like,’ as prepositional verb, §3.5.
- sníʔənt* ‘enough, just enough, permitting,’ §18.4.32.
- səswəw* ~ *sisəw* ‘then he/she/it/they,’ composed of *s*<sub>1</sub> ‘nominalizer,’ the auxiliary *niʔ* or *ʔi*, the third-person possessive -*s*<sub>1</sub>, and the aspectual prefix *wə*<sub>2</sub> ‘established,’ §4.3.4.
- sħíʔ* ‘want, like,’ §18.4.47.
- sħáħəm* ‘enough, ought, can,’ §18.4.42.
- sc*- compound of *s*- ‘nominalizer’ and the verbalizing prefix *c*- ‘get, make, etc.,’ §12.2.1.
- scék*<sup>wə</sup><sub>1</sub> ‘how? how much? who?’ interrogative word, §17.12.

- swéʔ* ‘one’s own,’ basis of possessive words other than ‘ours,’ §14.2.8.
- sʔáʔ* ~ *sʔáʔt* ‘ours,’ first-person plural possessive word, §14.2.8.

S

- S* ‘me, you (sing.),’ first- and second-person singular object suffix following -*t* ‘transitive,’ the sequence realized as -*θ*, §14.2.5.
- Samx* ~ -*S* ‘me,’ first-person singular object suffix following -*t* ‘transitive,’ §14.2.5.

- Sam-* ‘you (sing.),’ second-person passive subject suffix following *-t* ‘transitive,’ §14.2.6.
- Samə* ~ *-S* ‘you,’ second-person singular object suffix following *-t* ‘transitive,’ §14.2.5.
- Sél-* ‘I,’ first-person singular passive subject suffix following *-t* ‘transitive,’ §14.2.6.

## š

*šx<sup>w</sup>-* ‘oblique nominalizer’ (OBLNOM) (‘place where, time when, means of, reason why’), derivational prefix composed of *s-* ‘nominalizer’ and *x<sup>w</sup>-* ‘oblique,’ §12.1.4; in relative clauses with extracted oblique nominal adjuncts, §4.1.1.2; in nominalized clauses, §4.3.3.

## t

- t<sub>1</sub>-* ‘partake, experience,’ verbalizing prefix, §12.2.4.
- t<sub>2</sub>-* ‘portion,’ lexical prefix, §12.4.6.
- tə* ~ *te* ~ *t-* ‘imperative-optative’ (PER), predicate particle, §16.2.7.
- tə* ~ *k<sup>w</sup>tə* ‘a, the,’ article (ART), feminine, near or accessible but invisible, §15.1.
- t* ~ *k<sup>w</sup>t* ~ *?ət* same as last, introducing relative clauses following negatives, §6.3, (s) to (x).
- tnímət* ‘we, us,’ first-person plural personal word, §14.2.7.
- tnét* ~ *tné?* ‘day of the week, day,’ lexical suffix, §13.6.34.
- tsxé* ~ *-tcyé* ‘tens,’ lexical suffix §13.6, 35.
- tət* ~ *-ətət* ~ *-tél-* ‘throat, breath, wind, food,’ lexical suffix, §13.6, 31.
- tél-* ‘fire,’ lexical suffix, §13.6, 36.
- tc-* ‘benefactive’ (BEN), applicative suffix, §10.4.4.
- tcyé* ~ *-tsxé* ‘tens,’ lexical suffix, §13.6, 35.
- tx<sup>w</sup>* ‘three,’ numeral, §19.
- tx<sup>w</sup>ét* ‘three times,’ §18.4.5.
- tqécəs* ‘five,’ §19.
- təq* ‘usually, generally, habitually,’ §18.4.2.
- təwšá* ‘she/her, that,’ third-person demonstrative, §15.2.2.2.
- təwələp* ‘you (pl.),’ second-person plural personal word, §14.2.7.
- ti<sup>?</sup>áaq<sup>w</sup>t* ‘after, next, following, behind, last, go last,’ §18.4.21.

## š

- š oblique article, §15.1.4.
- š- ‘go to,’ verbalizing prefix, §12.2.5.
- š (?) possible lexical suffix, §13.7, 11.
- šá ‘he, she, it (is),’ third-person singular personal word, §14.2.7; in the formation of demonstratives, §15.2.2.2; in nominalized narrative sentences (i.e., with *səw*, *səsəw*, etc.), §4.3.4; followed by *s- wət-* with the sense ‘be about to, be now starting,’ §4.3.1; in cleft sentences, §4.1.5.2.

ǰáləm ‘they (are),’ third-person plural personal word, §14.2.7.

ǰe ~ ǰe<sup>?</sup> ‘again, also, too,’ §18.4.15.

ǰíc ‘how long!’ exclamatory-interrogative adjective, §20.2.6.

ǰəx<sup>w</sup>lá<sup>?</sup>as (ǰal) ‘worthless, of no account, no matter that, even if,’ §18.4.33.

ǰqéy ‘how far! however far, for an unknown distance,’ exclamatory-interrogative adjective, §20.2.1.

## l

-l- ~ -ləx<sup>w</sup> (→ -nəx<sup>w</sup>) ‘limited control transitive’ (TR), §10.1.2.

-lámət (→ -námət) ‘oneself (limited control),’ §10.5.2.

-lénəx<sup>w</sup> ~ -əlénəx<sup>w</sup> ‘season,’ lexical suffix, §13.6, 25.1.

-ləc (→ -nəc) ‘base, etc.,’ lexical suffix, §13.6, 24.

-lítc ~ -e<sup>?</sup>c, etc. ‘route across,’ lexical suffix, §13.6, 64.1.

-ləx<sup>w</sup> (→ -nəx<sup>w</sup>) ‘limited control transitive’ (LCTR), §10.1.2.

léq ‘how fast! however fast, at an unknown speed,’ exclamatory-interrogative adjective, §20.2.2.

-lí<sup>?</sup>c ~ -əl<sup>?</sup>e<sup>?</sup>c ~ -əle<sup>?</sup>c ‘container,’ lexical suffix, §13.6, 50.

## c

c- ‘get, have, make, do,’ verbalizing prefix, §12.2.1.

-c ‘origin’(?), possible lexical suffix, §13.7, 16.

-c ‘low tide,’ lexical suffix, §13.6, 64.2.

-cəp ~ -əlcəp ~ -əlícəp ‘fire, firewood,’ lexical suffix, §13.6, 67.

ce·p ‘you (pl.),’ second-person plural subject particle, §14.2.1.

ct ‘we,’ first-person plural subject particle, §14.2.1.

-ct ‘our,’ first-person plural possessive suffix, §14.2.4.

ctétəm ‘be doing what?’ interrogative word, §17.6.

ctámət ‘do what with oneself? do what? have what happen to one?’ interrogative word, §17.8.

cən ‘I,’ first-person singular subject particle, §14.2.1.

-cəs ~ -cs- ~ -cís ‘hand, branch (of tree)’ lexical suffix, §13.6, 68.

cəstəx<sup>w</sup> ‘do what with it? do what about it?’ interrogative word, §17.7.

ct- ‘die of,’ verbalizing prefix, §12.2.6.

cəlél ‘nearly, about to,’ §18.4.28.

cəlél ǰal ‘barely,’ §18.4.29.

cəlím ‘even,’ §18.4.39.

-cala<sup>?</sup> ~ -əčále<sup>?</sup> (?) possible lexical suffix, §13.7.17.

ce<sup>?</sup> ‘future,’ predicate particle, §16.2.6.

## č

čx<sup>w</sup> (/c-x<sup>w</sup>/) ‘you,’ second-person singular subject particle, §14.2.1.

**č**

- č ~ -əč (?) possible lexical suffix, §13.7, 18.
- čə ~ č- ‘quotative’ (QUOT), predicate particle, §16.2.4.
- čtwəʔ ‘speculative’ (SPEC), predicate particle, §16.2.12.
- čt- ‘fellow, co-,’ lexical prefix, §12.4.7.
- čiǰəmətʰ ‘how tall!’ exclamatory-interrogative word, §20.2.7.
- čkʷəx ‘twenty,’ numeral, §19.
- čəxʷlɛʔ ‘sometimes, there are times when,’ §18.4.3.

**x**

- x ‘transitive’ (TR), §10.1.3.
- xən ~ -xə- ~ -xén ~ -xin ‘foot, leg, brim (of hat),’ lexical suffix, §13.6, 69.
- xən ‘drop, droplet,’ lexical suffix, §13.6, 69.2.

- átcə* ~ -*əlátcə* ‘giant,’ lexical suffix, §13.6, 39.
- al-* ‘we, you (pl.),’ first- and second-person plural passive subject suffix, §14.2.6.
- alə* ‘you (pl.),’ second-person plural object suffix, §14.2.5.
- alt* realization of -*al-*, first- and second-person plural passive subject, and -*ət*, subordinate passive suffix, §14.2.6.
- álx<sup>w</sup>* ‘us,’ first-person plural object suffix, §14.2.5.
- áləs* ~ -*əlás* ‘eye, mesh (of net), star, appearance, tendency’(?), lexical suffix, §13.6, 43.
- áls* ‘rock, spherical, object, round berry,’ lexical suffix, §13.6, 44.
- all* ~ -*all* ‘young,’ lexical suffix, §13.6, 47.
- álk<sup>w</sup>t* ‘winter dancer, possessing song,’ lexical suffix, §13.6, 54.

- álk<sup>w</sup>t* ‘child of,’ lexical suffix, §13.6, 54.1.
- alwəm* (?) possible lexical suffix, §13.7, 15.
- álw̄cəs* ‘finger,’ lexical suffix, §13.6, 68.1.
- álw̄xən* ‘toe,’ lexical suffix, §13.6, 69.1.
- aq<sup>w</sup>* ~ -*a<sup>?</sup>q<sup>w</sup>* ~ -*q<sup>w</sup>*, etc. ‘head,’ lexical suffix, §13.6, 78.
- aȳe* ~ *aȳə* ~ -*aȳə* ‘dear one (?), small creature (?),’ lexical suffix, §13.6, 82.
- ayaθ* ~ -*aȳa<sup>?</sup>θ* ‘head of weapon’(?), lexical suffix, §13.6, 26.1.
- áyθən* ~ -*a<sup>?</sup>θ*, etc. ‘mouth, lip, margin, edge,’ lexical suffix, §13.6, 26.
- aȳe<sup>?</sup>q* ~ *aȳe<sup>?</sup>q* ~ -*áyəq* ‘projection,’ lexical suffix, §13.6, 74.1.
- áw̄māx<sup>w</sup>* ~ -*māx<sup>w</sup>* ‘place, people, cluster’(?), lexical suffix, §13.6, 12.
- áw̄əθ* ~ -*əw̄əθ* ‘kind, ingredient,’ lexical suffix, §13.6, 87.
- áw̄ət* → -*w̄ət* ‘canoe, vessel, mind’(?), lexical suffix, §13.6, 90.
- álw̄ət* ~ -*alw̄il-* ~ -*w̄il-*, etc. ‘side,’ lexical suffix, §13.6, 91.
- awaq<sup>w</sup>* → -*q<sup>w</sup>* ‘head,’ lexical suffix, §13.6, 78.
- áwaq<sup>w</sup>* ‘hat,’ lexical suffix, §13.6, 78.1.
- a<sup>?</sup>θ* → -*θən* ‘mouth, lip, margin, edge,’ lexical suffix, §13.6, 26.
- a<sup>?</sup>t* ‘attribute formative’ (АТТ), derivational suffix, §12.1.5.

**i**

- i-* ~ -*əy* third-person subordinate passive subject suffix, §14.2.6.
- i·m* ‘die from,’ verbalizing suffix, §12.3.2.
- i·ma<sup>?</sup>* (?) lexical suffix, §13.6, 15.
- i·t* realization of -*əyə-*, third-person subordinate passive subject, and -*ət*, subordinate passive suffix, §14.2.6.
- i·n* (?) lexical suffix, §13.6, 19.2.
- ínəs* ~ -*íləs* ~ -*ənəs* ‘chest, beach,’ lexical suffix, §13.6, 22.
- ínx<sup>w</sup>* ~ -*wínx<sup>w</sup>* ‘year,’ lexical suffix, §13.6, 25.2.
- í<sup>θ</sup>e<sup>?</sup>* ~ -*e·lí<sup>θ</sup>e<sup>?</sup>* ‘blanket, wealth,’ lexical suffix, §13.6, 27.
- i·t* ~ -*iət* ‘arrange to, seek to (arrange),’ modal suffix, §11.2.2.
- il* ~ -*əl* ‘move toward, turn to, become,’ verbalizing suffix, §12.3.1.
- iləm* compound of -*il* ‘move toward’ and -*əm* ‘intransitive,’ §12.3.1.
- iləs* ~ -*ínəs* ~ -*ənəs* ‘chest, beach,’ lexical suffix, §13.6, 22.
- íls* ‘activity’ (АСТ), equivalent of -*éls* in the progressive aspect following a lexical suffix, §10.2.2.
- iləx* (?) possible lexical suffix, §13.7, 13.
- iləws* → -*iws* ‘body, bird,’ lexical suffix, §13.6, 88.
- ícən* ~ -*əcən* ~ -*ic-* ~ -*əc-* ‘back, surface, top,’ lexical suffix, §13.6, 64.
- iqən* ~ -*əqən* ~ -*qən* ~ -*qén* ‘front, slope,’ lexical suffix, §13.6, 75.1.
- iwən* ~ -*əwən* ~ -*iwə-* ‘inside, middle, waist, behind, rump, trunk (of tree),’ lexical suffix, §13.6, 86.
- iws* ~ -*əws* ~ -*iləws* ~ -*ələws* ‘body, bird,’ lexical suffix, §13.6, 88.

## Appendix 2

# Names of Places and Peoples

I will list first the names recorded from Musqueam sources for places or features within the territory that the Musqueam people regard as having been their own in the recent past. This territory extends from the north shore of Burrard Inlet south to the main channel of the Fraser River and eastward to where the North Arm separates from the main channel. Some of this territory may be disputed by others. While Musqueam traditions tell that they once had villages on Burrard Inlet at the Capilano River and at Jericho, for several generations Squamish people have been settling there. Kuipers (1969, 32-38) and others have recorded a greater number of Squamish place names on Burrard Inlet than I have recorded Musqueam place names.<sup>1</sup> What I have recorded for the whole territory is probably only a fraction of the names that were once in use, however.

These names were given by Andrew Charles (AC) and Christine Charles (CC) in the late 1950s, by James Point (JP) in the 1960s, by Arnold Guerin (AG) in the early 1980s, and by Ed Sparrow (ES) in 1994. I have also included names recorded by David Rozen (R) in 1979 from an unidentified source or sources, transliterated into the orthography used here. Where there are several versions of a name, I have listed first the one I believe to be most accurate. I will begin with the Musqueam village and its immediate environs and then list names to the north, east, and south.

### The Musqueam Village

(1) *x<sup>w</sup>máθk<sup>w</sup>ə́yám* (< *máθk<sup>w</sup>ə́y* ‘a rush-like plant’) Musqueam, the village and the people.

In the middle of the nineteenth century, Musqueam consisted of two settlements, *málə́y* and *sc'ələ́x<sup>w</sup>*, on the north bank of the North Arm, within the present Musqueam Reserve. The settlement of *málə́y* was near the bank of the

---

<sup>1</sup> See Suttles 1996 for a comparison of Musqueam and Squamish place names around Burrard Inlet.

Map 2 Map of Musqueam Territory

river, below the cemetery. A few hundred metres upriver was the mouth of a stream with two tributaries, one a creek flowing out of the forest to the north, the other a slough flowing from the east. The settlement of *sc̓əl̓éx*<sup>w</sup> was within the conflux of these two streams, a few hundred metres above the mouth of the creek. There may have been only a single large house at *m̓ál̓áŷ*, but there may have been as many as a dozen at *sc̓əl̓éx*<sup>w</sup>. By the mid-1890s, the space between the two settlements was partly filled with new houses.

The name “Musqueam” was first recorded, as “Misquiamé,” on 2 July 1808 by Simon Fraser, who was guided “up a small winding river to a lake to the vil-lage.” After an hour in the village, Fraser’s party found their canoe stranded by

an ebbing tide and had to drag it “some distance” to the water. Downriver they saw a second village, but did not land (Lamb 1980, 106). It is likely that the village Fraser visited was *sc'ələ́x*<sup>w</sup>. The one he only saw may have been *málə́y*, or it may possibly have been *q'ələ́xən*.

The plant for which the village is named has been described variously. The Charleses said that the plant, which they had never seen, was said to have been grasslike, with an edible root. It no longer exists because of grazing cattle. JP said it had sharp thorns, and possibly small violet flowers, and it was now gone because of burning and dyking. However, Kinkade (1986) has shown that comparative linguistic evidence indicates that the name originally designated the blackcap, which, aside from its thorns, does not fit either description.

The Charleses said that the plant underwent cycles of abundance; it could be reduced to small numbers and then increase greatly in a short time, and the Musqueam people were pleased to compare themselves to the plant in this respect. JP told a story of how a two-headed serpent came down out of a small lake at *x<sup>w</sup>məmq'ém* and through the village, making the winding bed of the stream and leaving the plant *məθk<sup>w</sup>ə́y*, which was regarded as sacred. (See §23.5 for the text.) During my work with them, however, the Charleses did not mention this story, but they learned from an older person that the name *x<sup>w</sup>məθk<sup>w</sup>ə́yəm* properly applies to a site between *málə́y* and *sc'ələ́x*<sup>w</sup> where Mink was playing with a log and got tangled in this grass and got stuck to the log.

Some of the named sites within the village were identified by references to houses that existed in the period when the work was done, from the late 1940s to the early 1970s. I have omitted references to occupants of earlier houses.

(2) *x<sup>w</sup>q'ímə́k<sup>w</sup>əm* (‘octopus place’ [AC]), *sqimə́k<sup>w</sup>əlmax<sup>w</sup>* (‘octopus breast’ [JP] < *sq'ímə́k<sup>w</sup>* ‘octopus,’ ‘devilfish,’” -*əlmax<sup>w</sup>* ‘breast, milk, spring’). A spring near *málə́y*, where *x'é́ls* destroyed a giant octopus.

(3) *málə́y* (< ?) below the cemetery (AC, CC). From the west end of the occupied area below the cemetery to Cornelius Johnny’s house (JP).

(4) *x<sup>w</sup>šə́pícən* (AC, CC, JP) (> *šə́p* ‘deep, down, below,’ -*icən* ‘-back, -surface’). From the last to Nelson Dan’s (AC, CC). Between *málə́y* and *i<sup>θ</sup>i<sup>θ</sup>ə́xət* (JP).

(5) *x<sup>w</sup>məθk<sup>w</sup>ə́yəm* (see [1] above). From Nelson Dan’s to Alice Louie’s (AC, CC).

(6) *i<sup>θ</sup>i<sup>θ</sup>ə́xət* (‘midden’? < *i<sup>θ</sup>ə́xət* ‘white beach of mixed shell and pebbles’). Extending from Alice Louie’s to the creek (AC, CC). From the site of the new smokehouse along the beach upriver (JP).

(7) *pípq<sup>w</sup>əcən* (‘sandy on high land,’ < *pq<sup>w</sup>ícən* ‘sand on the beach,’ < *páq<sup>w</sup>* ‘break,’ -*icən* ‘back, surface’). From George Robert’s house to the creek (AC, CC). Two big houses stood here, east of the church (JP).

(8) *šx<sup>w</sup>k<sup>w</sup>ə́mš* (‘ridge,’ < *k<sup>w</sup>əm-*, cf. *šx<sup>w</sup>k<sup>w</sup>ə́mšəs* ‘with unflattened head, with forehead sticking out,’ *sk<sup>w</sup>ə́m<sup>θ</sup>* ‘lump,’ *k<sup>w</sup>ə́məcən* ‘humpbacked’). The

ridge behind Alice Louie's house (AC, CC). There was just one big house here (JP).

(9) *stá?tláw* ('creek?') (AC, CC, JP). The creek that flows through Musqueam, separating *scálex*<sup>w</sup> from *máláw* and the other named sites.

(10) *stéłqay* (AC, CC) (< *stáłq* 'get muddy?'). A stream that flows from the northwest into the creek.

(11) *scáwéláç* (AC, CC) (< *scéw* 'shore,' *-éláç* 'route across'). The grassy area along the mouth of the creek, also called *spáłxan* 'meadow, prairie, pasture.'

(12) *scálex*<sup>w</sup> ('upstream,' resultative of *cálex*<sup>w</sup> 'go upriver'). The upper village. According to the Charleses, it consisted of two rows of houses, the gap between them filled by another house at the east end, the whole forming a rectangle open at the west end. The creek from the north flowed just to the west of this rectangle. The front row of houses was on a ridge running parallel to the slough. Unless the tide was low, canoes could be brought up the creek and into the slough. The space within the rectangle formed by the houses was a playground, in which the stone trophy called *qiscám* stood. JP identified the houses along the front ridge, but was less clear about location of the others. The house sites were sites 13 to 20 below.

(13) *wáq<sup>w</sup>áxan* (AC, CC, JP) ('downstream side,' < *wáq<sup>w</sup>* 'drift with current,' *-éxan* 'arm, side'). The lower (western) end of the ridge. AC and CC thought that two or three houses had stood here. JP thought that before his time there may have been four houses on this segment of the ridge, one or two of them standing at right angles to it. When he was a boy, there were two houses there. The upper one he identified as *sáméñá* (see next).

(14) *sáméñá* (AC, CC), *sáméñe* (JP) ("seems to mean 'missing one ear,'" < *stém-* 'give,' *-éñá* 'ear'). AC and CC identified this as a site above *wáq<sup>w</sup>áxan*. JP identified it as a part of that segment.

(15) *títmáłqsan* (AC, CC) ('painted end,' < *támáł* 'red ochre, red paint,' *-áqsan* '-nose, -point'). So called because a beam end was painted to prevent rot (AC). This house was said to have been built at right angles to the ridge and the other houses. It had three posts in front and sloped upward to the rear. It was gone before JP's time. Vincent Stogan's house was there in 1962 (JP).

(16) *qáłámqan* (AC, CC, JP) (< ?).

(17) *táytáxan* ('upstream side,' < *táyt* 'upstream,' *-éxan* '-arm, -side'). There were two houses on this segment of the ridge.

(18) *x<sup>w</sup>lámłmáç* (AC, CC, JP) (< *lám* 'get struck by something thrown,' *-áç* '-face'). The site of a house oriented at right angles to the front row. The ball used on the playing field used to strike the side of the house, hence the name (AC, CC). JP thought that this house may have been on the hillside to the east rather than where the Charleses indicated.

(19) *scáłq<sup>w</sup>áθan* ('woods-edge' < *cáłq<sup>w</sup>* 'inland,' *-áθan* '-lip, margin'). A row of houses parallel to the first (AC, CC). JP thought this site lay east of the ridge with sites 13 to 17, along the slough, at about a 45° angle to the ridge.

(20) *kʷə́kʷqʷələ́xən* (AC, CC) (< *kʷáqʷ* ‘get hit by something held in the hand,’ -*é́xən* ‘-arm, side’). A house at the upper (eastern) end of *scalkʷáθən*, opposite *tə́ytə́xən*.

(21) *xácaləqʷ* (R) (‘lake at the head,’ < *xácaʔ* ‘lake,’ -*ə́ləqʷ* ‘-head’). A small lake that is the source of Musqueam Creek, near 25th Avenue and Camosun Street, according to Rozen’s source.

(22) *xʷmə́mqʷém* (AC, JP) (‘boggy place,’ < *máqʷəm* ‘bog’). A swamp where the Catholic School is now (AC). A bog that was until recently a small, shallow lake, from which the two-headed serpent came in an account of how Musqueam got its name (JP; see §23.5). This is probably the same as the name Rozen recorded as *məqʷém*, off Crown Street and 25th Avenue.

### North Shore of North Arm Below the Village

(23) *hámləsəm* (AG), *hámləsəm* (CC, JP). A big rock at the west end of the reserve. The name is said to mean ‘bend over to drink directly from the water,’ but this word was given as *həmá·yəsəm*. A person doing this was turned into stone by *xé́ls*.

(24) *šxʷə́ytən* (AG), *šxʷə́ytən* (CC), *šxʷə́ytən* (JP) (‘chamber pot’). A smaller rock next to the last, to whom it had belonged. It was spilled at the time of the transformation (AG).

(25) *xə́(p)xə́pá·yətə́p* (R) (‘cedar trees’). A place near Point-No-Point.

(26) *syéʔtən* (CC) (‘widow, widower’). A rock below the Simon Fraser monument, a widow turned into stone by *xé́ls* (AC).

(27) *qíqələ́xən* (CC), *qíqələ́xən* (AG) (dim. of next). A place near Wreck Beach (in its earlier sense, not in its recent extension).

(28) *qələ́xən* (‘stockade,’ probably < *√qəl-* ‘camp,’ -*é́xən* ‘arm, side’). A place south of Point Grey, where Capilano had a fort (JP).

(29) *ʔə́lqsən* (AC, AG) (cf. *sʔə́lqsən* ‘point’). Point Grey.

(30) *iʰə́caliqʷ* (AC), *iʰə́caliqʷ* (JP), *iʰə́caliqʷ* (R) (possibly from *iʰcət* ‘grab by the hair,’ or possibly a plural of *iʰcʰqʷ* ‘hard head’). AC identified the name as that of a rock seen at low tide where people would poke the bottom and sing, *ʔa·stə́yəwət ʔa* ‘Oh, West Wind, Oh,’ to bring the west wind. JP identified the name as ‘Point Grey,’ saying that the name implies that the point is stormy, always rough. August Jack, a Squamish source, identified this as a man who had intended to blow away “the great man” (presumably *xé́ls*) but was instead transformed into a rock, the biggest on the shore at Point Grey (Matthews 1955, 394).

(31) *qéwəm* (JP, AG) (‘howling’). A rock near Point Grey that was a dog about to bite *xé́ls*.

(32) *iʰə́tə́təm* (JP) (‘shivering,’ progressive of *iʰə́təm* ‘feel cold’). A rock of white granite below the University of British Columbia. According to JP, it was an old lady who was crying here (presumably when *xé́ls* came and transformed her). Tim Moody, a Squamish source, identified the name as that of a

little ravine with a spring directly below the BC Tel cable hut (Matthews 1955, 395).

### Burrard Inlet

(33) *pəqʷəcən*, *pípqʷəcən* (R) ('sand on the beach,' < *pəqʷ* 'be broken' and *-icən* 'back, surface'). A sandbar off Spanish Banks.

(34) *šxʷsícəm* (ES) (so recorded, probably 'sandy place' < *šxʷ-*, *syícəm* 'sand'). Spanish Banks.

(35) *qʷəʔápət p*, *qʷáʔápət p* (R) ('crabapple tree'). A creek at Spanish Banks.

(36) *ʔəyálməxʷ* or *ʔiʔálməxʷ* (AC, JP, ES) *ʔiyélməxʷ* (AG) (< *ʔəy* 'good' and either a connective *-al-* plus *-məxʷ* 'earth, people' or *-əlməxʷ* 'breast, milk, spring,' thus either 'good place' or 'good spring water'). Jericho Beach. According to Musqueam tradition, this was the site of a Musqueam village at the time of the warrior Capilano. (The Northern Straits version of the name refers to a place at American Camp on San Juan Island that was a parklike prairie and also the site of a good spring.)

(37) *iʔəmíʔáməls* (AG), *iʔəmíʔáməls* (JP, R) ('grindstone,' from the root of *iʔáməls* 'file'). A creek at Bayswater Street.

(38) *skʷáyus*, *skʷəyəws* (R). Kitsilano Beach. The Squamish is *sqʷáyus*, possibly 'burnt face,' < *qʷáy* 'burn, scorch' and *-us* 'face,' which might have referred to the hillside after a logging operation there. If the Musqueam is correctly transcribed, it would seem to mean 'disabled body,' < *skʷéy* 'disabled,' *-əws* 'body.'

(39) *səháqʷ* (AC, JP, AG, ES, R) (according to information obtained by Donna Gerdts, the resultative of *nəʔáqʷ* 'direct the head there'). The site of the Kitsilano Reserve at the entrance to False Creek.

(40) *ʔəyələn* (ES) (< *ʔəy* 'good,' *-ən* '-foot,' hence probably 'good under foot'). English Bay.

(41) *sítəwəqʷ* (R) (dim. of *sítəwəqʷ* 'fuller's earth'). Second Beach.

(42) *stxíłəx* (*s-* 'nominalizer,' *txíłəx* 'be standing'). Siwash Rock.

(43) *šáʔxcə* (ES), *šáʔxcə* (R) (probably *šáʔxcəʔ*, dim. of *šácaʔ* 'lake'). Beaver Creek and Lake.

(44) *šʷáyšʷəy* (JP), *šʷáyšʷəy* (ES) (< *sšʷáyšʷəy* 'masked dance performance'). Lumberman's Arch. The name is from the tradition that an ancestor received the privilege there.

(45) *spápəyáq* (ES) (the final *q* may be an error for *q*, cf. Squamish *pápiyaq*, possibly < *√pay* 'be bent' and *-ayáq* 'projection,' i.e., 'bent at the end'). Brockton Point.

(46) *skʷθéʔ* (R). Deadman's Island. The name is probably an error for *skʷθéʔ* or *skʷθéʔs*, the Island Halkomelem for 'island.' The Squamish name for the islet is the cognate *skʷcáʔs* 'island.' The Musqueam for 'island' is *šcés*.

(47) *pqáls* (R) ('white rock' < *pəq* 'white,' *-als* 'rock'). The foot of Granville Street.

(48) *q̣əṃq̣əṃələt p* (ES, R) ('bigleaf maple trees,' < *q̣əṃəl* 'paddle'). Hastings Mill.

(49) *ǰəǰípi(ʔət p)* (R) (< *ǰpéy* 'Western red cedar'). Cedar Cove. The Squamish given by Rozen (recorded by Randy Bouchard) is *ǰapǰápayay*, which appears to be the plural of *ǰápayay* 'young cedar.' The Musqueam form recorded by Rozen is not one I have recorded, but it looks like a possible plural.

(50) *təmtəmixʷtən*. CC gave this for the Burrard Reserve, but it is properly the name for Belcarra. The name is the same in Squamish and seems to be from Squamish *təmixʷ* 'earth, land,' reduplicated, probably for plural, with the suffix *-tən* 'instrument.' The Halkomelem for 'earth' is *təməxʷ*. AG identified *təmixʷtən*, the unreduplicated form, as referring to crossed logs filled with earth to prevent erosion. The similar name *təmixʷtən* is the name in the Nooksack language of a Nooksack village near Sumas, Washington, said to have consisted of pit houses. The name suggests this use, but it is not the term for pit house, which is *sqəmín* in Nooksack and in Squamish (so given by Hill-Tout 1900, 485), *sqəməl* in Halkomelem, also *spənəwtxʷ* in Musqueam. The village at Belcarra is said to have been the earlier home of the Burrardview people. Probably for this reason CC identified the name with the Burrardview Reserve.

(51) *səlílwətaʔt* (ES), *səlílwətaʔt* (JP), *sʔəlílwətaʔt* (AG). Indian Arm and Indian River. This is also said to be the name of the Burrardview people, whose earlier home was at Belcarra and whose salmon stream was Indian River, which was also used by the Musqueam. According to Musqueam and Katzie sources, they formerly spoke Halkomelem and later adopted Squamish. The name is probably derived, by *Rǰ-* → *hǰR-* reduplication and the combination *s-* 'nominalizer' and *-aʔt* 'attributive,' from the name of the group identified by Boas (1887, 132) as the "Lel'elot" (in modern symbols probably *ləlílut*), the Squamish "family" on Burrard Inlet. The Squamish name is *səlʔílʔutut*. The affixes correspond to those of Halkomelem, but since this type of reduplication is usual in Halkomelem but rare if present at all in Squamish, the name is probably Halkomelem in origin.

(52) *ʔəθnəc* (ES) (cf. *sʔəθnəc* 'bay'). Burrardview Reserve. The Squamish is the cognate *ʔácnəč* or *ʔəcnəč* 'bay.' CC gave the name of the Burrardview Reserve as *təmtəmixʷtən*, no doubt because this is the name of the earlier village of the Burrard people.

(53) *ǰətəmátqəʔ* (R) (< *ǰétəm* 'salt?'). Mackay Creek. Kuipers translates the Squamish name *ǰətəmátʔəlkʷ* as 'salt water,' composed of Squamish *ǰátəm* and a suffix containing the formative *-kʷ* 'found in words connected with the sea,' and he adds that the name "is otherwise not quite clear." The suffix in the Musqueam name Rozen recorded is not identifiable, unless it is an error for *-ətca* 'water.'

(54) *xʷmáləčθən* (AC), *xʷmáləčθən* (JP, AG). Capilano River. According to AC, the name is from *máləč* 'horsefly,' because these were numerous there. AG

believed the root to be *málč* ‘roll,’ which appears in *málčθət* ‘roll (as salmon when spawning),’ and the suffix *-θən* ‘mouth, lip, margin.’ The name may thus mean ‘horseflies at the mouth’ or ‘where they [presumably salmon] roll at the mouth.’ According to Musqueam traditions, this was a Musqueam village site. Simon Pierre of Katzie gave the name of the Capilano River as *x<sup>w</sup>máθk<sup>w</sup>əyəməł* (probably more accurately transcribed *x<sup>w</sup>máθk<sup>w</sup>əy<sup>ə</sup>maʔł*) meaning ‘[river] of the Musqueam.’

### Up the North Arm

(55) *šx<sup>w</sup>əmq<sup>w</sup>əyəm* (AC) (< *máq<sup>w</sup>əm* ‘bog’?). Celtic.

(56) *čəsnáʔam* (CC, AG), *čəsnáʔəm* (JP). Marpole. JP knew two stories about the people who lived here, people who spoke the same as the Musqueam. They were wiped out by smallpox.

(57) *sk<sup>w</sup>téx<sup>w</sup>qən* (AG), *sk<sup>w</sup>téx<sup>w</sup>qən* (AC) (‘entering the throat,’ < *sk<sup>w</sup>téx<sup>w</sup>* ‘inside,’ *-qən* ‘throat’). Wiggins Drift. A place where a creek runs into the Fraser near the site of the bridge to Lulu Island, so called in English from the name of a settler and the fact that fishermen made a drift from there down.

(58) *šx<sup>w</sup>k<sup>w</sup>əlǰélə* (‘coupling place,’ < *k<sup>w</sup>éǰ* ‘copulate,’ *-elə* ‘-place for’). A creek that flows into the North Arm, so called because it was used as a lovers’ lane.

(59) *čəwǰéləməł* (R) (< ?). The east end of Mitchell Island. Rozen identified this name as ‘whistling (people),’ but cf. (63).

### Islands between the North Arm and South Arm (Richmond)

(60) *x<sup>w</sup>əyéyət* (AC), *x<sup>w</sup>iyéy<sup>ə</sup>t* (AG) (< ?). Iona Island.

(61) *sq<sup>w</sup>sáθən* (AC, JP) (‘sloping into the water, sunken shore,’ < *q<sup>w</sup>əs* ‘enter the water,’ *-áθən* ‘lip, margin’). IR #3, on the northwestern tip of Sea Island, sometimes used for the whole island.

(62) *xičəməłsəm* (R) (perhaps *xčəməłsəm*, < ?). A place on the western shore of Sea Island.

(63) *x<sup>w</sup>əyqəθən* (AG), *x<sup>w</sup>áyqəθən* (JP), *x<sup>w</sup>áyqəθən* (CC), *wáyqəθən* (R) (means ‘crook of land’ [JP], < ?). A place on the southwestern tip of Sea Island, at the mouth of the Middle Arm. It is said that there were once people here who whistled when they talked. They came from the black ducks that whistle (the *xápələθ* ‘American scoter,’ < *√xep* ‘whistle’). They did not behave correctly when *šéłs* came, and so disappeared (JP).

(64) *spələk<sup>w</sup>əqs* (AG), *spələk<sup>w</sup>əqs* (AC, JP) (‘boiling point’ < *pələk<sup>w</sup>* ‘boil up,’ *-əqs* ‘-nose, -point’). The northwestern tip of Lulu Island, at the mouth of the Middle Arm, site of the Terra Nova cannery. It was once a Musqueam village site, and continued to be used as a campsite. There were graves there.

(65) *ʔən<sup>w</sup>ícəń* (R) (? < *ʔənəx<sup>w</sup>* ‘stop,’ *-ícən* ‘back, surface’). On the western shore of Lulu Island, halfway between Terra Nova and Garry Point (R).

(66) *q<sup>w</sup>éyaʔx<sup>w</sup>* (JP, AG) (< ?). Garry Point. A summer campsite for some of the Musqueam people. JP's father stayed there and so took "Point" as his surname (JP).

(67) *q<sup>w</sup>áyač<sup>w</sup> stáləw* (AC). The main channel at Steveston.

(68) *q<sup>w</sup>łáyəm* (R) (probably *q<sup>w</sup>łéyəm* or *x<sup>w</sup>q<sup>w</sup>łéyəm*, 'driftwood place,' < *q<sup>w</sup>łéy* 'driftwood log'). Another campsite at the southwestern end of Lulu Island, east of Garry Point.

(69) *łəqətínəs* (AC, JP, AG) ('long shore,' < *łéqt* 'long,' *-ínəs* '-chest, beach'). On the south shore of Lulu Island, above where Ladner ferry was (AC), Woodward's Landing (AG). This was the great summer village of the Cowichan-speaking people of Vancouver Island.

### Westham Island and South Shore of South Arm

(70) *ʔələqsən* (JP, R) ('points'? < *sʔələqsən* 'point'; cf. *ʔələqsən* 'Point Grey'). The northwestern point of Westham Island (JP), the south end of Westham Island (R).

(71) *x<sup>w</sup>łícəm* (AG, R), *x<sup>w</sup>łícəm* (JP) ('cut inside out,' < *x<sup>w</sup>*- 'inside,' *łíc* 'cut'). Canoe Pass. According to AG, the name comes from the practice of cutting rushes to let salmon pass through.

(72) *sčələx<sup>w</sup>qən* (JP, AG, R) (< *čələx<sup>w</sup>* 'go upstream,' *-qən* 'throat'). Ladner.

(73) *pəlčənéməx* (JP, AG) ('meadow land'? cf. *spəlčən* 'prairie, meadow,' *-éməx* '-country'). An area a little above Ladner. AG translated the name as 'meadow flat.' Rozen recorded *pəlčənéməx<sup>w</sup>* 'meadow land' as the name for the western end of Deas Island and simply *spəlčən* 'meadow' for "The Delta Area."

(74) *x<sup>w</sup>mécənəłp* (JP) ('black haw trees,' < *mécən* 'black haw fruit'). The high land from Sunbury down to Mud Bay.

(75) *q<sup>w</sup>əq<sup>w</sup>əʔápəłp* (AC) ('crabapple trees'). The site of St. Mungo's Cannery.

(76) *səwq<sup>w</sup>éqsən* (R) ('drifting away point,' < *həwq<sup>w</sup>* 'be drifting with current,' *-əqsən* 'nose, point'). The southwestern side of Annacis Island.

### At and Above the Forks

(77) *yələłk<sup>w</sup>ə*, *yələłk<sup>w</sup>ə* (R) (< ?). The western end of "Tree Island" (Poplar Island?).

(78) *sk<sup>w</sup>łéx<sup>w</sup>qən* (R). The eastern end of "Tree Island"; but cf. (57).

(79) *wəłq<sup>w</sup>əčən sč<sup>w</sup>áyəmł* (AC). Usual designation for IR below New Westminster.

(80) *sč<sup>w</sup>əyéəm* (AC) ('story, myth'). A rock on the western side of the Patullo Bridge.

(81) *sč<sup>w</sup>éyəmł* (AG) (< *sč<sup>w</sup>əyéəm* 'myth'). New Westminster.

(82) *qíqéyt* (JP, AG), *qəyqəyt* (AC). South Westminster IR.

## Place Names and Tribal Names

These names for peoples, marked (tr), are also place names in the sense that they may be used to refer to the home territories of the peoples they name.

*To the east:*

*k<sup>w</sup>ík<sup>w</sup>áǎm* Coquitlam (tr), *sk<sup>w</sup>ǎ́smał* (*ǎ́xa?*) (the lake) belonging to the Coquitlam (JP).

*ǎ́íćǎý* ('moss') Katzie (tr).

*ǎ́<sup>w</sup>á<sup>w</sup>ǎǎǎł* 'Langley' (Kwantlen) (tr).

*méθx<sup>w</sup>ǎý* Matsqui (tr).

*sáméθ* Sumas (tr).

*scǎlx<sup>w</sup>í<sup>?</sup>q<sup>w</sup>* (< *ćǎłax<sup>w</sup>* 'go upstream,' *-i<sup>?</sup>q<sup>w</sup>* 'head') Chilliwack (tr).

*sqǎwǎín* (*ǎ́ǎiw* 'go round a point,' *-qǎn ~ -ǎín* 'head') Skulkayn IR.

*sqǎwǎnac* (< *ǎ́ǎiw* 'go round a point,' *-nac* 'butt bay') Scowlit, 'Harrison Mills' (tr).

*scǎłínǎs* (< *ćé<sup>?</sup>* 'land on,' *-inǎs* 'chest, beach') Chehalis (tr).

*sθq<sup>w</sup>ǎł* (< ?) Douglas and other Lillooet (tr).

*x<sup>w</sup>sé<sup>?</sup>eq* (< *sé<sup>?</sup>eq* 'bracken root') Nooksack (tr), *ǎ́x<sup>w</sup>sé<sup>?</sup>eqa<sup>?</sup>ł smǎnmé<sup>?</sup>nt* 'Nooksack Mountains,' i.e., the North Cascades.

*ǎ́ei<sup>θ</sup>énǎx<sup>w</sup>* (< *ǎ́ei<sup>θ</sup>* 'measure, mark,' *-enǎx<sup>w</sup>* 'season, fish') Mount Baker.

*łǎ́ǎte<sup>?</sup>* (< Klickitat?) Plateau tribes, described by JP as a "belt" of people from "our *łǎ́ǎqǎn*" (the Upper Fraser River) to Yakima; according to AG, the term refers to people with braids, cowboy hats, and teepees (tr).

*To the north:*

*sq<sup>w</sup>ǎ́ǎmǎx* (AC), *sqǎ́ǎmǎx* (DK) Squamish (tr), *sq<sup>w</sup>ǎ́ǎmǎxa<sup>?</sup>ł* (AC, JP) ('Squamish' + *-a<sup>?</sup>ł* 'attributive') Howe Sound, especially the eastern shore, where Musqueam hunters went for mountain goats (also the Squamish-style canoe).

*ǎ́<sup>w</sup>é<sup>k</sup><sup>w</sup>i łǎ́ǎłwǎł-ct smǎnmé<sup>?</sup>nt* 'mountains behind us,' i.e., the Coast Mountains north and east of Vancouver.

*sxi<sup>?</sup>xé<sup>?</sup>ł* (JP) Sechelt (tr).

*ćiyǎłǎlić* (JP) Skookumchuck Narrows, in Sechelt country.

*sǎ́<sup>w</sup>ǎ́łi* Lasquiti Island (AG), Texada Island (JP).

*ćí<sup>?</sup>ćsǎm* (dim. of *ćíćsǎm* 'be growing') Texada Island (AG).

*ǎ́<sup>w</sup>ǎ́wmǎx<sup>w</sup>s* (AG) The Comox (tr).

*yǎ́q<sup>w</sup>ǎ́te<sup>?</sup>ǎ́* (JP) (< Kwak<sup>w</sup>wala *łíG<sup>w</sup>ıłda<sup>?</sup>ǎ́<sup>w</sup>*, probably via Comox, which has /y/ for /ł/) Lekwiltok (the people now at Campbell River and Cape Mudge) (tr).

*k<sup>w</sup>é<sup>k</sup><sup>w</sup>e<sup>?</sup>ł* (AG) (< Kwak<sup>w</sup>wala *k<sup>w</sup>ǎ́g<sup>w</sup>ul*) The Kwakiutl, the people of Queen Charlotte Strait (tr).<sup>2</sup>

2 A form like *k<sup>w</sup>ǎ́k<sup>w</sup>ǎł* appears not only in Halkomelem and I believe in other Salishan languages but also in Heiltsuk, and it evidently refers to more than simply the people who settled at Fort Rupert, whom Boas identified as *k<sup>w</sup>ǎ́g<sup>w</sup>ul*.

$x^w t\acute{s}y\acute{w}a\acute{l}$  (AC) (<  $\sqrt{t\acute{s}y}$  ‘upstream’; cf.  $t\acute{s}y\acute{t}$  ‘upstream,’  $t\acute{s}y\acute{a}\acute{l}$  ‘go upstream,’  $t\acute{s}y\acute{w}a\acute{t}$  ‘west wind,’ ‘north’) The northern peoples (Comox and Cape Mudge northward [AC]).

*To the west:*

$\acute{s}x^w n\acute{a}w\acute{i}t\acute{a}^?t\acute{s} sm\acute{a}n\acute{m}\acute{e}^?nt$  ‘far-side mountains,’ i.e., the mountains on Vancouver Island.

$x^w k^w \acute{a}l\acute{x}^w \acute{a}m$  (<  $k^w \acute{a}l\acute{x}^w$  ‘chum salmon’) Qualicum.

$sn\acute{a}w\acute{n}\acute{a}w\acute{a}s$  (AC) (‘looking inward,’ <  $\sqrt{sn\acute{a}w}$ - ‘enter,’ - $\acute{a}s$  ‘-face’) Nanoose (tr).

$sn\acute{a}n\acute{e}y\acute{m}\acute{x}^w$  (AC) (< ?, probably not <  $n\acute{e}y\acute{a}m$  ‘laugh’) Nanaimo (tr).

$\acute{i}\acute{e}^?t\acute{a}q\acute{e}^?$  (AC) Valdez Island (tr).

$p\acute{a}n\acute{e}l\acute{x}\acute{x}\acute{a}^{\theta}$  (AC) Kuper Island (tr).

$x\acute{c}\acute{a}m\acute{i}n\acute{a}s$  (AC) Yellow Point (‘Chemainus Bay,’ the Kulleet Bay of charts) (tr).

$x^w \acute{c}\acute{a}s\acute{s}\acute{a}y$  (AC) Westholm (tr).

$q\acute{a}w\acute{i}c\acute{a}n$  (‘warm the back,’ <  $\sqrt{q\acute{a}w}$  ‘warm,’ - $ic\acute{a}n$  ‘-back’) (AC) Cowichan (tr). This name, or rather its Cowichan form  $q\acute{a}w\acute{a}c\acute{a}n$ , was identified by Cowichan speakers as that of Mt. Tzouhalem (named by the Whites after a famous warrior) because of its bare side facing the sun. Cowichan villages (identified by AC and CC) are:  $s^? \acute{a}m\acute{a}n\acute{e}^?$  Duncan,  $k^w \acute{a}m\acute{a}c\acute{a}n$  Quamichan,  $x^w \acute{a}l\acute{q}^w \acute{s}\acute{e}l\acute{a}$  Koksilah,  $q^w \acute{a}m\acute{a}y\acute{e}q\acute{a}n$  Komiaken,  $\acute{x}\acute{i}n\acute{a}p\acute{s}\acute{a}m$  Kanipsim,  $t\acute{a}m\acute{t}\acute{a}m\acute{a}l\acute{a}c$  Clemclemalitz.

$s^? \acute{a}m\acute{a}n\acute{e}^?$   $\acute{x}\acute{a}c\acute{e}$  Cowichan Lake.

$x\acute{s}\acute{e}n\acute{a}c$  (CC) Saanich (tr). Villages are:  $m\acute{e}l\acute{x}\acute{x}\acute{a}t$  Malahat, actually a Cowichan-speaking reserve, but it is generally classified as Saanich,  $p\acute{a}k^w \acute{a}c\acute{a}n$  Cole Bay,  $x^w s\acute{a}y\acute{q}\acute{a}m$  Patricia Bay,  $s\acute{i}^{\theta} \acute{e}w\acute{t}x^w$  ‘East Camp.’

$s\acute{i}^{\theta} \acute{a}m\acute{a}s$  Victoria (also  $m\acute{a}t\acute{u}l\acute{i}\acute{a}$ ).

$l\acute{a}k^w \acute{a}m\acute{a}n$  Victoria people (tr).

$s\acute{a}^? \acute{a}k^w$  Sooke (tr).

$m\acute{a}\theta\acute{e}l\acute{a}m\acute{x}^w$  West Coast (tr).

*To the south:*

$sc\acute{a}w\acute{a}\acute{a}\theta\acute{a}n$  (JP) Tsawwassen (tr).

$sm\acute{a}q^w \acute{a}c$  (JP) Point Roberts.

$x^w l\acute{a}m\acute{a}y$  (JP) Lummi (tr).

$sw\acute{e}l\acute{x}$  (JP) Orcas Island.

$x^w y\acute{i}x\acute{a}l$  (CC) the people from LaConner south, i.e., the speakers of Lushootseed (tr).  $\acute{s}x^w y\acute{i}x\acute{a}l\acute{a}^?t\acute{s} sm\acute{a}n\acute{m}\acute{e}^?nt$  the Cascades east of Puget Sound (JP).

$\acute{s}x^w \acute{x}\acute{e}l\acute{a}m$  Clallam (tr),  $\acute{s}x^w \acute{x}\acute{e}l\acute{a}m\acute{a}^?t\acute{s} sm\acute{a}n\acute{m}\acute{e}^?nt$  ‘Clallam mountains,’ i.e., the Olympic Mountains (JP).

## Appendix 3

# A History of Work on Halkomelem

### Early Vocabularies

Probably the earliest published example of Halkomelem is a short Cowichan word list, one of a number of Northwest Coast vocabularies collected by W.F. Tolmie, probably in the late 1830s, and appended by John Scouler to “Observations on the Indigenous Tribes of the N.W. Coast of America” (Scouler 1841). The words are poorly recorded and some are wrongly identified, no doubt because of the difficulties Tolmie must have had eliciting them through the recently introduced Chinook Jargon.

From the late 1850s, we have lists in the Cowichan and Chilliwack dialects collected by Charles Wilson and published in what is the earliest ethnographic article on the Halkomelem area (Wilson 1866), and we have lists in the Nanaimo and Tait dialects (about 1,100 words) collected by George Gibbs and published in his “Comparative Vocabularies” (Gibbs et al. 1877, 270-83). From the 1870s, we have word lists collected by Tolmie and G.M. Dawson and included in their *Comparative Vocabularies of the Indian Tribes of British Columbia* (1884, 38B-49B). These later vocabularies were recorded with somewhat greater accuracy in the identification of the words but without much improvement in transcription. If Tolmie and Dawson heard the difference between glottalized (ejective) and unglottalized plosives or between velars and uvulars, or had sorted out the laterals and the back fricatives, they give no indication of it in their spellings. The same symbol (letter or sequence of letters) may represent several sounds and the same sound may be represented by several symbols, and their words are generously sprinkled with gratuitous hyphens.

In 1882 the Roman Catholic missionary priest Fr. G.C. Donckele collected a vocabulary, now in the British Columbia Provincial Archives (Donckele 1882), of “la langue sauvage Cowichan” to complete a printed form evidently designed for use in French Oceania. It contains some interesting items but it is no better in the way it represents the sounds of the language. Fr. Donckele may

have left other manuscripts on Halkomelem. I was told that he tried preaching in Halkomelem rather than the usual Chinook Jargon but was not very fluent. A Protestant missionary, the Reverend C.M. Tate, is also said to have learned Halkomelem well enough to translate hymns (see Pilling 1893, 67, where Halkomelem appears as “Ankomelum”). I was told that he could indeed communicate in the native language but amused people by mixing dialectal forms. The Reverend Thomas Crosby may also have spoken some Halkomelem (which he wrote “An-ko-me-num”), but the few words given in his book (Crosby 1907) suggest that he too did not make the distinctions that the Native phonological system requires. Anything recorded by these and other nineteenth-century missionaries would certainly be useful in establishing the times and places when particular words were in use, but given the inadequacy of systems of transcription then available, it seems unlikely that they could contribute much to our understanding of Halkomelem grammar.

“Comparative vocabularies” such as those of Gibbs and Tolmie and Dawson did serve to suggest relationships among languages and had allowed Hale and Gallatin to propose a “Salish” or “Selish” family (Powell 1891, 102-5). But they were certainly not adequate for any more refined taxonomy. Even in the 1890s, it seems that the various samples of Salishan all stood coordinate, with dialects of the same language given equal status with separate languages. Powell (1891, 104-5) lists as Salishan sixty-four “principal tribes,” of which six (Cowichan, Kwantlen, Nanaimo, Nanoose, Sumas, and Tait) are names for groups of Halkomelem speakers. Pilling (1893) lists as Salishan “languages” five names (Kawichan, Kwantlen, Snanaimuk, Stalo, and Tait) that actually designate groups of Halkomelem speakers.

### **Boas**

In 1886, just two years after the publication of Tolmie and Dawson’s *Comparative Vocabularies*, a profound change occurred. Franz Boas, then a young man, made his first trip to British Columbia, where he met Tolmie, then an old man soon to die. Later Boas wrote home that he had managed in a few weeks to learn more about the Indians than Tolmie had in over fifty years on the Northwest Coast (Rohner 1969, 69). With respect to language, this extravagant statement was probably correct. In recording Native words and in discovering linguistic relations, Boas had moved far ahead.

Boas’s earliest transcriptions are certainly not wholly accurate (nor perhaps are anyone’s), but his earliest publications (e.g., Boas 1888) show that he was aware of the opposition of glottalized and unglottalized plosives and of velars and uvulars and was using an orthography that permitted him to make most of the distinctions that are phonemic, that is, significant to speakers of the Native languages. His principal faults were that he did not record glottal stops after vowels or distinguish labialized back consonants in all environments. During

the next few years he corrected these faults, so that by the time he was producing the reports of the Jesup North Pacific Expedition, around 1900, his transcriptions of Kwakiutl were meticulously accurate phonetically. Unfortunately, however, he did not continue work on the Salishan languages of the Strait of Georgia into that period, and so we have only his earlier transcriptions for Halkomelem and neighbouring languages, far superior to what came before and to much of what was done later but still not altogether accurate.

Boas's classification of the Coast Salish of Georgia Strait was also far superior to any before it. In 1887 he published an article (Boas 1887) in German that accurately distinguished the languages and presented a map that has not been excelled (and has been almost wholly ignored). The taxonomy was modified only slightly when presented again in later works (Boas 1890, 805-6; 1897, 320-21). As a statement of what forms of speech were spoken where, it needs no correction today.

Unfortunately, however, Boas always referred to the languages of the region as "dialects," using that word simply in the sense of "related forms of speech" (Thompson 1973, 992), while in recent decades the word has been used for mutually intelligible forms of speech (e.g., Sapir 1931), forms not mutually intelligible being called "languages." Boas almost certainly knew that his "dialects" such as "Sqxō'mic" (Squamish), "Qau'etcin" (Cowichan, i.e., Halkomelem), and "Lku'ñgEn" (Songhees, i.e., Northern Straits) were not intelligible; that they "diverge unusually strongly from one another" (*weichen ausserordentlich stark voneinander ab*). Some later anthropologists (e.g., Barnett 1942, 380), however, seem not to have understood Boas's usage and to have supposed that all of the "Coast Salish" speak dialects of a single Coast Salish language.

Boas is also the author of the first published material on Halkomelem grammar, less than three pages on the Nanaimo dialect, presented as one of a number of sketches published in his report to the British Association for the Advancement of Science (Boas 1891, 680-83). Short though it was, it showed that roots undergo internal modification for plural, diminutive, and progressive forms; it identified some of the affixes and auxiliaries expressing tense and mode and some of the pronominal and demonstrative elements; and it noted the categories of gender, presence versus absence, and visibility versus invisibility.

Boas seems to have done no further work with Halkomelem. He left a few pages of manuscript.

### Hill-Tout

Boas was succeeded among the Coast Salish of British Columbia by Charles Hill-Tout, a local scholar who worked in archeology, ethnography, and linguistics. Among his many publications are three (Hill-Tout 1903, 1904, 1907) that present Halkomelem material. These contain: (1) notes on the grammar of the

Chilliwack dialect, with a glossary of about a thousand words (1902, 369-400); (2) notes on the Kwantlen dialect, with a short vocabulary and two texts (1902, 415-41); (3) notes on the Chehalis (“Stseélits”) dialect, with one text (1904, 334-39); (4) five texts in the Scowlitz (“Sk-aúlitš”) dialect (1904, 368-76); and (5) two texts in the Cowichan dialect (1907, 366-72). The whole, including translations of the texts, amounts to a total of about seventy-five pages, which was fairly respectable for the time, being more than the shortest sketches that appear in the *Handbook of American Indian Languages* (Boas 1911). It has serious defects, however.

Phonologically, Hill-Tout’s work is retrogressive. It suffers from the same faults as Boas’s of the 1880s – the failure to record glottal stops after vowels and with resonants and to record labialization of back consonants except before vowels – while it also suffers from Hill-Tout’s own failure to distinguish glottalized plosives, which Boas did from his first work. (Hill-Tout’s raised commas simply separate consonant clusters, presumably to mark the absence of a vowel where English speakers might expect one.) Moreover, Hill-Tout was often inaccurate in distinguishing dentals from palatals, uvulars from velars, and even back fricatives from stops. Hill-Tout refers to Boas’s earlier work and must have been influenced by it, but he met Boas only once and clearly did not get much encouragement from him (Maud 1978, 1:15, 4:9). It seems that Hill-Tout did not fully grasp principles that Boas had discovered, and was unable to move ahead on his own.

Hill-Tout did go beyond Boas in his exploration of Halkomelem grammar, although not in the direction Boas would have gone. Rather than seeking to describe the language in its own terms, Hill-Tout pretty well kept to the categories of traditional grammar. And rather than analyzing forms and identifying sets of morphemes, Hill-Tout simply gave extensive paradigms. He did not account for all of the morphemes in his material; for example, subordinate subject pronominal suffixes occur in his paradigms, but he nowhere identified them and listed them parallel to their coordinate counterparts. Perhaps because of the defects in his transcription he could not have accounted for everything. One verb root, which he does identify, occurs in five different forms – not in reality but in Hill-Tout’s inconsistent spelling.

Nevertheless, Hill-Tout’s work is useful. It attests to the existence of words and features of grammar at the times when and places where he recorded them. His texts were, I believe, recorded carefully – within the limits of his capacity to transcribe the language. I found it possible, working with James Point, to reconstruct one of Hill-Tout’s Kwantlen texts. Mr. Point found only a few places where he might have used a different term or construction.

### **Twentieth-Century Ethnographers**

For half a century after Hill-Tout’s work, Halkomelem was almost wholly neglected. Hill-Tout’s last publication reporting work on the language appeared in

1907; the next publication reporting work on it was that of Elmendorf and Suttles in 1960.

During this time, a few ethnographers worked in the Halkomelem area – Curtis and his associates around 1912, Barnett and Jenness in the mid-1930s, Marian Smith and her students in the mid-1940s, Lane in the late 1940s, Duff in 1949 and 1950. Most recorded Native terms deemed culturally significant as well as proper names, but the quality of their transcriptions is quite variable. Terms in Curtis (1913) are spelled in a system that is not wholly adequate to the task but that is at least used consistently and (within its limits) fairly accurately. Those appearing in Barnett (1955) are more in the tradition of Tolmie and Dawson. Those appearing in Jenness (1934-35), Smith (1949), and Duff (1952) are somewhat better but still sometimes quite inconsistent. All are, of course, useful in documenting the existence of the terms but are not reliable for any study that requires phonetic accuracy.

### **This Study**

My own work on Halkomelem grew rather gradually out of the practice of ethnography and the conviction, dating back to student days, that ethnography ought to be based on more than “a smattering of knowledge” of the Native language (Boas 1911, 60). As a student at the University of Washington, I had had some experience with the Northern Straits language working on Northern Straits ethnography for my dissertation (Suttles 1951). I first recorded some Halkomelem in 1952, while teaching at the University of British Columbia, when I undertook the task of re-eliciting from Simon Pierre of Katzie (see Suttles 1955) the Native terms recorded by Diamond Jenness in the 1930s in the course of doing ethnographic work with Simon’s father, Peter Pierre – the “Old Pierre” of *The Faith of a Coast Salish Indian* (Jenness 1955). I did not proceed very far linguistically with Simon because, while he was a pleasure to work with on ethnography, his lack of interest in language (to say nothing of his lack of teeth) made linguistic work difficult. There are certainly errors in my transcription of Katzie words.

The opportunity to work with people more suitable for my purposes came in 1957, when Harry Hawthorn suggested that I continue ethnographic work that he had begun with Andrew and Christine Charles at Musqueam, which is very near the university. Mr. Charles was an excellent source of traditional knowledge, and Mrs. Charles proved to be an ideal teacher of her language, patient with my ignorance and yet intolerant of my mistakes.

During 1957 I elicited a fairly extensive vocabulary, reviewing what I had gotten from Simon Pierre, getting Halkomelem equivalents of Northern Straits terms I had recorded still earlier, and adding many new items. I also got some grammatical material and a good deal of ethnography.

During the summer of 1958, William W. Elmendorf was at the university and joined me in working with the Charleses. We re-elicited much of the

vocabulary that I had recorded the previous year, expanded on it in some areas, and matched the Musqueam with forms in Cowichan, from Mr. Charles, and Chilliwack, from Mrs. Charles and several people we interviewed briefly in the Chilliwack area. The result of this collaboration was an article (Elmendorf and Suttles 1960) in which we showed something of the phonological and lexical differences among these three dialects and discussed apparent evidence for recent change in the use of the articles. In particular, we showed that the three dialects seem to differ lexically to different degrees in different semantic categories.

I continued to work with the Charleses, for a few days only in 1959 and early 1960, then more frequently during the fall of 1960, when Mrs. Charles dictated nine texts of ethnographic and historical interest. I had hoped to continue this work during my sabbatical year of 1961-62 but Mr. Charles died during the summer of 1961 and Mrs. Charles, understandably, did not want to continue immediately with the work that we had all enjoyed so much together. And so during that year I collected materials, mainly on tape, in the Cowichan and Tait dialects, wrote a brief sketch of Musqueam grammar (essentially the first draft of the present work), and mainly observed and studied the winter ceremonialism, which had been developing and expanding for some years.

During the academic year 1962-63, I worked again briefly with Mrs. Charles, who dictated three more texts. In September 1962, I also began with James Point of Musqueam. Mr. Point was born in 1881. Although older than the Charleses, he was less traditional in his outlook. Nevertheless, he had a good knowledge of myths and, like Mrs. Charles, he was a patient and conscientious teacher. I worked with him often during 1962-63, and by July 1963 he had dictated twenty-seven texts totalling just 300 handwritten pages.

During the summer of 1963, I left the University of British Columbia to teach at the University of Nevada at Reno, where I taught for three years before going, in 1966, to Portland State University. While at Nevada, I was able to spend one short period at Musqueam, in 1965, working on problems in morphology with both Mrs. Charles and Mr. Point and recording one more text from Mr. Point.

After I went to Portland State, my work with Halkomelem had its productive and unproductive periods. During the summer of 1967, I worked again very briefly with Mrs. Charles (for the last time), Mr. Point, and Mrs. Della Kew, the daughter of Andrew and Christine Charles. During the academic year 1968-69, I experimented with teaching Halkomelem to university students. For the class, I ran off ditto copies of several texts and of grammatical notes, which might be seen as the second draft of the present work. During the summer of 1969, one of the students, Bonnie McCay, was able to spend a month at Musqueam eliciting and tape-recording materials from Mr. Point and also several people with whom I had not worked, among them Ed Brown and Steven August. In July

1971, I worked again with Mr. Point, mainly going through my lexical file, rechecking, and filling out paradigms. We worked very hard. He was then 90 but insisted on putting in around six hours a day with only an occasional day off. This was our last extended work together, although I consulted him again briefly in 1973. He died in 1979 at the age of 98 (older according to some). In the fall of 1973, Della Kew visited Portland, and we worked through her mother's texts, checking transcription and translation.

In June 1975, Dr. Barbara Efrat, then Curator of Linguistics at the British Columbia Provincial Museum, invited me to write a reference grammar of Halkomelem for a series of publications that the museum was planning. I accepted the invitation, but a number of other obligations slowed down the work. I did, however, spend several short periods between 1979 and 1983 working with Arnold Guerin, and worked again briefly with Della Kew in 1979. I finally turned in the last portions of the grammar in January 1985. Soon afterward, however, the museum abandoned the planned series, and this version of the grammar was never published. Because I had other work to do, I did nothing further with it for several years.

I had typed the version I submitted to the Provincial Museum (now the Royal British Columbia Museum) on an IBM Selectric typewriter. This version has been consulted by several linguists. When I went back to it, however, I felt that it had to be revised and redone on a computer. I had sent a copy of the typed version to Brent Galloway; he had it entered into a computer, using a font that he had devised for Upriver Halkomelem, and he sent it to me on disks in June 1993. By this time I was using a computer, but in spite of heroic efforts on Brent's part, I never found it possible to use his font. However, the format and the English were there and available, so in the end I simply retyped the phonetic symbols using the Straight font devised by Charles Ulrich. The present version differs from the typed version principally in formatting, but I have added more examples and made several changes in terminology and in the interpretation of the data.

### **Recent Linguistic Work**

Since the mid-1960s, a good deal of work has appeared on Halkomelem, especially on the Upriver and Island dialects. For Upriver we have a vocabulary collected by a non-linguist, Oliver Wells (1965), a master's thesis on phonology by Jimmy Harris (1966), and a doctoral dissertation and a series of articles describing the grammar and a number of semantic domains by Brent Galloway (1971, 1973). For Island Halkomelem we have a master's thesis on Cowichan phonology by Tiiu Kava (1969), a master's thesis on the Cowichan aspect system by M.K. Jones (1976), a doctoral dissertation on Cowichan grammar by Adrian Leslie (1979), a series of articles on grammatical problems by Thomas Hukari beginning in the mid-1970s, a text in Cowichan by Hukari, Ruby Peters,

and Ellen White (1977), a Cowichan dictionary by Hukari and Peters (1995), and a doctoral dissertation by Donna B. Gerdts (1981, 1988), author of a series of articles on problems in syntax. Gerdts's master's thesis (1977) was a survey of lexical differences among a number of dialects. Nancy C. Turner and M.A.M. Bell (1971) assembled ethnobotanical data that include Island Halkomelem plant names. David Rozen (1977a, 1977b, 1978a, 1978b) gathered both Island and Downriver place names and Cowichan ethnozoological data and transcribed Catholic prayers and hymns.

For much recent work on Island dialects by Gerdts, Hukari, and Mercedes Hinkson, on Musqueam by Patricia Shaw, Susan Blake, and Jill Campbell, and on Upriver dialects by Galloway and Marina Wiltschko, see the bibliographies in Czaykowska-Higgins and Kinkade 1998 and Mithun 1999.
