INFORMATION TO USERS

This material was produced from a microfilm copy of the original document. While the most advanced technological means to photograph and reproduce this document have been used, the quality is heavily dependent upon the quality of the original submitted.

The following explanation of techniques is provided to help you understand markings or patterns which may appear on this reproduction.

1. The sign or "target" for pages apparently lacking from the document photographed is "Missing Page(s)". If it was possible to obtain the missing page(s) or section, they are spliced into the film along with adjacent pages. This may have necessitated cutting thru an image and duplicating adjacent pages to insure you complete continuity.

2. When an image on the film is obliterated with a large round black mark, it is an indication that the photographer suspected that the copy may have moved during exposure and thus cause a blurred image. You will find a good image of the page in the adjacent frame.

3. When a map, drawing or chart, etc., was part of the material being photographed the photographer followed a definite method in "sectioning" the material. It is customary to begin photoing at the upper left hand corner of a large sheet and to continue photoing from left to right in equal sections with a small overlap. If necessary, sectioning is continued again — beginning below the first row and continuing on until complete.

4. The majority of users indicate that the textual content is of greatest value, however, a somewhat higher quality reproduction could be made from "photographs" if essential to the understanding of the dissertation. Silver prints of "photographs" may be ordered at additional charge by writing the Order Department, giving the catalog number, title, author and specific pages you wish reproduced.

5. PLEASE NOTE: Some pages may have indistinct print. Filmed as received.

Preface

In writing this grammatical sketch of Colville I have
not adhered to any particular model of linguistic descrip-
tion. Rather, the goal I have set for myself is to couch
my description in clear prose statements. Some of these
are completely explicit; they account for those phenomena
I understand well. Others attempt to state as clearly as
possible the conditions for those phenomena which I do not
fully understand. Whatever solution is offered in such
cases is specifically indicated as tentative. Thus I have
intended to present not a formal hypothesis, but an ac-
curate description of the facts of the language. In fact
this sketch aims to be written in such a way that a lin-
guist, if he so wishes, may draw upon the data to test any
given theory of linguistic description.

Stating the facts of Colville in terms of clear prose
statements does allow an accurate description, and at the
same time makes the grammar accessible to non-specialists.
In this effort I have drawn on a long tradition in Amer-
indian linguistics, from Boas to Li, Newman, Haas and many
others, that aims to allow the individual structure of the
language emerge.

COLVILLE GRAMMATICAL STRUCTURE

by Anthony Mattina

A dissertation submitted to the Graduate Division of the
University of Hawaii in partial fulfillment of the
requirements for the degree of
Doctor of Philosophy

ABSTRACT

This dissertation is a grammatical sketch of Colville,
a Salishan language of eastern Washington. It is based on
the data obtained in four summers of field work, from 1968
to 1971.

After an introductory chapter which places the lan-
guage within its family, and otherwise defines the aims of
the study and the conditions under which it was under-
taken, the phonology is outlined. Consonants occur in six
positions: labial, apical, lateral, velar, postvelar and
glottal. Stops are voiceless and pattern in two series,
glottalized and unglottalized. In the apical complex there
are both stops t̕, t, and affricates c̕, c; the glottalized
lateral affricate lacks an unglottalized counterpart; velar
and postvelar stops occur rounded and unrounded. In the
spirant series the labial position is not represented; the
principal allophones of the spirants are voiceless.

Resonants are voiced and, like the stops, occur in glottalized and unglottalized series; the postvelar resonants are actually pharyngeals. Vowels are i̲, a̲, u̲, and ə̲, of which the last is never stressed. Morphophonemic sections introduce the most straight-forward phenomena of epenthesis and syllabicity of resonants, then deal with other changes. The most complex of these are stress assignment rules, affecting the vowels of roots and suffixes.

The chapter on morphology discusses the basic intransitive nature of all roots, and the processes these may undergo to produce the simplest kinds of transitive, middle, and intransitive bases. The pronominal system is detailed here. A presentation of more complex bases follows--reduplicated, infixed and extended bases. These last include in their make up one or more lexical affixes--bound morphemes with concrete primarily non-grammatical meanings. This chapter then describes a variety of further grammatical forms such as imperatives, reflexives, instrumentals and developmentals. It also treats three aspectual distinctions signalled by affixes, and concludes with a discussion of compounds.

Syntactic patterns are outlined in the final chapter. All full words are basically predicative; in simple sentences they function either as predicates or, with appropriate marking, as complements. Predicates are sen-

tence-initial; complements follow. Complements may be marked by several preposed particles such as the definite, sequential, locational, agentive, causal, or comitative. Clause types are interrogative, evidential, modal, future. More complicated sentences are formed by juxtaposition of clauses introduced by dependent clause particles. The variety of particles is discussed and exemplified here. The chapter closes with a discussion of restricted words-- words which are more like full words than particles, but which lack the wide distribution of full words; among these are impersonal, deictic, and interrogative words, and proper names.

TABLE OF CONTENTS

Chapter

1. Introduction

The Salishan family of North American Indian languages comprises two main divisions: Coast Salishan and Interior Salishan. The Interior Salishan languages can be subdivided in two branches, the Northern and the Southern.

Colville-Okanogan[1] is a language complex of the Southern Interior, flanked to the west by Columbian, and to the south and east by Spokan-Kalispel-Flathead. Further south and east is Coeur d'Alene. All of these languages belong to the Southern Interior branch. Generally north of the Colville-Okanogan speaking territory are found (roughly from east to west) Shuswap, Thompson, and Lilloet, forming the Northern Interior branch.[2]

The Colville-Okanogan continum can be divided into the two northern dialects Okanogan and Lakes, and the southern dialect, Colville. The northern dialects have recently been studied (research conducted concurrently with that reported on here), by Donald Watkins, who based a doctoral dissertation at the University of Alberta (1971) on the materials collected. The southern dialect has provided the great bulk of the materials on which the present analysis is founded, and has suggested the title of this study.

The language is spoken on the Colville reservation of northeastern Washington, which has existed in its present size and state since July 1, 1892. It is bounded on the east

and south by the Columbia River (now Roosevelt Lake), on the west by the Okanogan River, and on the north by the 48.5° north parallel of latitude. For twenty years before 1892, the Colville Reservation extended northward as far as the international boundary with Canada, for an additional 1,501,000 acres of territory, but this was restored to the public domain in 1872. As a result of the reduction in size of the land reserved for Indians, many local residents migrated south, resulting in a certain amount of dialectal admixture.

Of the eleven bands making up the Colville Confederated Tribes, six are of Salishan linguistic stock: Methow, Okanogan, San Poil, Lake, Colville-Nespelem, and Moses;[3] the remainder speak a Sahaptian language, Nez Perce. Although these are the official names of the bands, residents of the Reservation distinguish themselves sharply from the Okanogans, their Canadian kinsmen, and from the Moses (speakers of a distinct language, Columbian). Within the Colville proper they distinguish between the 'North-Half Colvilles' and the 'South-Half Colvilles', the latter subdivided into the Nespelem and the San Poil. Differences between the northern (Okanogan and Lake) dialects, and the southern (Colville), are not easily assessed, partly because of the high incidence of movements within the Colville speaking territory. Aside from a few lexical items, reported by

Colvilles to differ between geographical areas, noteworthy is the absence in Colville of a phonemic voiced front velar fricative found in the northern dialects.

The number of speakers of Colville cannot be estimated to exceed a few hundred--all middle-aged to elderly speakers. It seems certain now that in a few years the language will no longer be heard spoken by residents of the Reservation. The situation is less desperate in British Columbia, where Okanogan children are reported to be fluent in the language.

Earlier work on the Colville and Okanogan peoples has included very little with linguistic focus. The most common studies are ethnographic in nature--e.g. the report by Hill-Tout (1911) on the Okanogans, and the very important work by Ray that resulted in a book (1932) on the Southern Colvilles. Tales in English translations were also collected. Gould, Ray, Teit, Mourning Dove and a few others recorded some materials, all prior to 1933. There is also the undated translation in Okanogan of a catechism and a missal by Fr. De Rougé. In the archives of Gonzaga University I have found a few manuscript pages of notes of linguistic nature, some by Fr. Collins, and some anonymous. The latter include the transcription in syllabic script of a prayer and some paradigmatic material.

Important work has been, and is now being done, on related languages. A summary of past and on-going research

is found in Thompson (in press); here it will suffice to mention the availability of grammars of Coeur d'Alene (Reichard), Kalispel (Vogt), and, most recently, Spokan (Carlson), in addition to the comparative works of Reichard, Vogt, and Kinkade and Sloat.

I began my research on Colville in the summer of 1968 under the auspices of the National Science Foundation and the direction of Professor L.C. Thompson. Since then I have spent four summers in the town of Inchelium, Washington, gathering materials for my analysis. My first contact with Colville amounted to a few brief sessions with Mrs. Sophie Bailey McDonald (now deceased), originally from Marcus, Washington; and with Mrs. Mary Quintasket Lemery of Inchelium; they were followed by more substantial work with Mrs. Helen Perkins Toulou, originally of Ford, Washington (now deceased). My main source for narrative tales has been Mr. Pete Seymour, originally from Marcus, Washington. In terms of quantity and quality his aid has proved of immense value. I have also obtained excellent narrative materials from Mrs. Dora DeSautel, originally from Oroville, Washington, and conversational materials from Mrs. Cecilia Andrews, Mr. George Quintasket, Mrs. Mary Ensminger, Mrs. Dora DeSautel and Mrs. Helen Toulou. My main informant has been Mrs. Madeline Saint Paul DeSautel, originally from St. Paul's Mission, Washington, who helped

patiently and very effectively with the transcriptions and
analysis of the texts.

Footnotes

[1]Spelled Okanagan in Canada.

[2]For further details on the classification of Salishan languages, cf. Thompson (in press).

[3]Members of the Methow, San Poil and Colville-Nespelem bands all speak the same dialect, Colville. However, for the members of each band these terms are synonymous with the dialect they speak.

2. Phonology

Colville exhibits a rich consonantal system that distinguishes five manners and nine points of articulation. The vocalic system includes four phonemes. There are also three levels of stress and a system of intonational contours.

2.1. The consonantal system. Colville stops and resonants pattern in a plain and a glottalized series; all stops are voiceless, and all resonants voiced; the principal allophones of the spirants are voiceless. Each of the five manners of articulation is represented in the velar and post-velar positions, rounded and unrounded; the glottal position is represented by the glottal stop and <u>h</u>. A voiceless plain lateral affricate is lacking in the system, thus leaving a gap in that position; the bilabial position lacks a spirant. Finally, the apical complex includes two sets: the dental, represented by stops and nasal resonants; and the alveolar, represented by affricates and liquid resonants. The only apical spirant is <u>s</u>.

p̓	t̓	c̓	ƛ̓	k̓	k̓ʷ	q̓	q̓ʷ	
p	t	c		k̲	kʷ	q	qʷ	ʔ
		s	ɬ	x	xʷ	x̣	x̣ʷ	h
m̓	n̓	r̓	l̓	y̓	w̓	ʕ̓	ʕ̓ʷ	
m	n	r	l	y	w	ʕ	ʕʷ	

2.11. Stops. The glottalized stops are fortis (strongly articulated), and, as a rule, they can be easily distinguished from their plain counterparts. Affricates pattern as stops. Plain stops are aspirated and released finally (a feature that Colville speakers carry over into English), while they are unreleased immediately preceding a homorganic nasal. The underlying sequences //pm// and //tn// each have two phonetic realizations: [p⁼ʔm̩] and [t⁼ʔn̩]; and [pəm] and [tən]. [pəm] and [tən] are the careful, formal pronunciations, while [p⁼ʔm̩] and [t⁼ʔn̩] occur in ordinary speech (cf. also section 2.44). The plain alveolar affricate, but not its glottalized counterpart, has a palatalized allophone [č] in free variation with the norm [c].

2.12. Spirants. All spirants except h̲ can occur voiced intervocalically. In fact, it is sometimes hard to identify the lateral spirant correctly, because the voiced lateral spirant resembles the lateral resonant so closely. h̲ is quite rare and, as with ʔ, it can often be lost in rapid speech, especially in word initial position (h̲ does not occur word-finally).

2.13. Resonants. The resonants occur glottalized (often phonetically laryngealized) and plain, parallel to the glottalization of the stops. However, it may eventually be established that the glottalized resonants should be

interpreted as sequences of resonant plus glottal stop. Glottalized resonants are quite uncommon in initial position.

With the pharyngeal resonants one is faced with grave problems of recognition. The phonetic reality presents vowels with pharyngeal constriction. This constriction is somewhat greater at the beginning or at the end of the syllabic segment, and the phenomena seem best interpreted as sequences of vowels and pharyngeal non-syllabics. In terms of the system these fit logically with post-velar obstruents, supplying otherwise missing resonants in these columns. Their presence introduces a number of contrasts that are extremely difficult for the non-native to perceive: ʕ:ʕ̓; ʕ̓:ʔ; ʕʷ:w; ʕ̓ʷ:w̓.

In connection with some current hypotheses about marked sequences, it is worth noting that /n/ does not assimilate to a following velar (see Chomsky and Halle, The Sound Pattern of English, especially p. 419).

2.2. The vocalic system. The vowels of Colville
are /i/, /a/, /u/, and /ə/.

2.21. Full vs. reduced vowels. The term <u>full vowel</u>
distinguishes /i/, /a/, and /u/, on the one hand, from /ə/,
on the other. Full vowels (i̱, a̱, u̱) can occur stressed
or unstressed, while ə̱ does not occur stressed. We recog-
nize two functionally (not qualitatively) different types
of schwa: the first is systematic--a number of forms require
its use in their underlying representations; the second is
epenthetic--schwa is inserted by rule.

2.22. Allophonic range of vowels.

2.221. Schwa. The phonetic reality of schwa is
determined by phonetic environment. It is [Uᶜ] in the
neighborhood of rounded consonants:

  [Uᶜ] məq̓ʷəmáq̓ʷ. 'They are mountains.'

It is [əˇ] in the neighborhood of post-velar and glottal
(henceforth 'back') consonants (unrounded):

  [əˇ] qáqəna. 'She's the grandmother.'

It ranges from [I>] to [ɪ] contiguous   to labial and alveo-
lar consonants:

  [I>] ~ [ɪ] sípən. 'She's the daughter-in-law.'

It is [ə] elsewhere:

  [ə] skəkʕáka?. 'It's a chicken.'

    2.222. /i/ ranges from [i] down to [e^], in free variation,

  [i] ~ [e^] kiláwna?. 'It's a lion.'

            k̓íkət. 'It's near.'

But it has a transition [ᵊ] glide before or after post-velars.

  [ᵊI˅] x̣íl. 'He's scared.'[1]

  [I˅ᵊ] píq. 'It's white.'

    2.223. /u/ ranges freely from [u] down to [o],

  [u] ~ [o] lút. 'It is not.'

But it is usually [o] contiguous to a post-velar:

  [o] sq̓ʷúł. 'It's a yellow jacket.'

In addition, /u/ has a rare allophone [ᵊU] or [ᵊu] after un-rounded (post)velar obstruents. These occurrences are all word-internal, at morpheme junctures, and prevent the neu-tralization of unrounded and rounded (post)velars before /u/.

  //ł-p̓lk̓-ús-m// łp̓əlkúsəm [łp̓Ilk̓ᵊúsIm]. 'They turned

    back.'

    2.224. /a/ ranges from [æ] after y (less noticeably fronted after other non-back consonants),

[æ] myáɬ 'It is too much ...'

to [ɑ] contiguous to back consonants:
  [ɑ] spʕás. 'It's a nighthawk.'
        sx̣áx̣aʔ. 'He's the father-in-law.'

It ranges from [a] to [ɑ] elsewhere.
  [a] k̓ást. 'It's bad.'

2.3. Stress and intonation. I have recognized three distinctive degrees of stress in Colville; primary /ʹ/, secondary /ˌ/, and weak (unmarked). No word contains more than one primary stress. However, polysyllabic words sometimes contain a secondary stress. Other syllables have weak stress. Over a whole utterance stresses interacting with intonation may shift, but no systematic study of these phenomena has as yet been possible.

Intonation has not been studied in detail, but certain basic generalizations can be made about the most common types of intonational contours.

One type occurs in connection with declarative sentences. They usually have medium pitch throughout, with slight ups and downs, falling sharply at the end. Certain restricted words (see 4.5) in sentence initial position are accompanied by a rising-falling pitch. Thus the intonational contour of the sentence can be represented as

. This same type of contour characterizes imperative sentences.

Another type of pitch contour is that which marks interrogative sentences. It can be represented as and it will be discussed further in 4.41.

Noteworthy is a striking feature of conversational and narrative Colville (shared by all Salishan languages).

It is a phenomenon manifested in extra vowel length, together with a sharp rise in pitch, often going into falsetto voice; it achieves the stylistic effect of emphasis. The falsetto vowel is sometimes sustained for as long as three or four seconds.

2.4. Morphophonemics. Colville words are of two types (cf. 4.1): <u>independent words</u>, and <u>proclitic particles.</u> Independent words consist of a base and optional affixes; proclitic particles occur only with a following independent word, and do not undergo inflectional affixation.

Morphophonemic changes affect particles, prefixes, roots, infixes, and suffixes. Changes involving particles, infixes and prefixes do not depend on rules of stress placement; changes involving roots and suffixes, on the other hand, depend on such rules. General morphophonemic changes are discussed hereP, other changes in section 2.5. Except where they are specifically exemplified, word boundary morphophonemic changes are not reflected in the broad phonetic surface transcriptions.

2.41. Apocope. In the normal flow of speech (but not in careful citations) a word-final glottal stop is lost before a word beginning in glottal stop.

//ʔix-íʔ ʔáyxʷ-t//   ʔixí ʔáyxʷt.   'That one is tired.'

2.42. Insertion of glottal stop. A glottal stop is automatically inserted before word-initial vowels after pause.

//incáʔ//   incáʔ.   [ʔincáʔ]   'It is I.'

2.43. Schwa-epenthesis. An automatic ǝ is inserted in certain phonological environments, as defined below.

2.431. Epenthesis between two identical obstruents.

//mními-tt// mǝnímǝtǝt. 'We're the ones.'

//x̣-x̣nút// x̣ǝx̣ǝnút. 'They are nine.'

//p-píwt// pǝpíwt. 'It's lightweight.'

2.432. Epenthesis between a stop and its glottalized counterpart.[2]

//lút t̓íc̓// lut t̓íc̓. [lutǝt̓íc̓] 'It isn't pitch.'

//piq q̓ay-m-í-n// piq q̓ǝymín. [pɪǝq̓ǝqǝymín] 'It's a white pencil.'

2.433. Epenthesis between a glottalized consonant and a following consonant.

//t̓xʷ// t̓ǝxʷ 'indeed'

//k̓m// k̓ǝm 'except'

//k-c̓íl̓-(ú)laxʷ// kc̓íl̓ǝlaxʷ. 'It's shade.'

2.434. Epenthesis between a consonant and a following glottal stop.

//s-t?íw-t-xx// stǝ?íwtx. 'He's the youngest one.'

//xʷ?ít// xʷǝ?ít. 'They are many.'

2.435. Epenthesis between an unrounded (post)velar and a following //w// at morpheme boundary (for a related phenomenon cf. 2.223).

//k-wík-n-t// kəwíkənt! 'Find out!'

//s-ta?kmíx-wílx// sta?kəmxəwílx. 'She is becoming a woman.'

2.436. Epenthesis rules apply to proclitic particles, across word boundaries.

//t anwí?// t anwí? [tanwí?] 'by you'

//t tapit// t tapít [tətapít] 'by David'

2.44. Syllabicity of resonants. In cases involving resonants, ə insertion is closely related to syllabicity.

2.441. A schwa is inserted between a consonant and a following resonant (R) if the R, in its turn, is not followed by a full vowel.

//sípn// sípən. 'She's the daughter-in-law.'

//kn// kən 'I'

//lm-lim-s-t-sút// lmlmstsút (unstressed vowel deletion; cf. 2.541)

ləmələmscút. 'He is glad.'

//tar-m-í-sút// trmíst (unstressed vowel deletion; 2.541)

tərəmíst. 'It unraveled.'

2.442. A schwa is inserted between an initial R and a following consonant.

//mɫ// məɫ 'and, subordinate'

//mník// məník. 'It's excrement.'

//lkapí?// ləkapí?. 'It's coffee.'

2.443. All sequences əR (or Rə) vary freely with R̩ (syllabic resonants). For the sake of uniformity ə will be written consistently in the broad phonetic transcriptions.

2.444. The resonants y̱ and w̱ are related to the vowels i̱ and u̱, respectively. Sequences V́R or RV́ when unstressed become əR and Rə; if R is y̱ or w̱, then əy and yə vary freely with i̱, and əw and w̱ə vary freely with u̱; analogously əy̓ varies with i̱?, y̓ə varies with ?i̱; əw̓ varies with u̱?, w̓ə varies with ?u̱.

//əc-miy-s-t-(í)n// cməystín ~ cmistín. 'I know it.'

//q̓ay̓-m-í-n// q̓əy̓əmín ~ q̓i?mín. 'It's a writing implement.'

//sw̓-síw̓-n-t-(í)x^w// səw̓əsíw̓əntx^w ~ su?síw̓əntx^w. 'You questioned him.'

Sometimes, however, the morphophonemics involved are not evident and the representation of an underlying form, in the absence of grammatical motivation, remains arbitrary. Thus [?ilmíx^wəm] 'he is the chief' can be represented //?ilmíx^wm// or //y̓lmíx^wm//.

2.445. Two identical resonants in a sequence are simplified:

//kn n-<u>st</u>-(î)ls// kən nəstîls. [kənəstîls] 'I think.'

whiles two dissimilar ones insert a <u>ə</u> between them:

//kn mút// kən mut. [kənəmút] 'I sit.'

//<u>mlqn</u>-(ú)ps// məlqnúps. 'It's an eagle.'

2.5. Other morphophonemic changes. This section treats morphophonemic changes connected with particles, affixes, and roots.

2.51. Changes connected with particles.

2.511. Vowel apocope. The vowel of the particle //tí// 'evidential' (4.221) is obligatorily lost before words beginning with a vowel.

//ti an-s-t̲m̲k̲ʔ-ílt// ti astəmkəʔílt. [tastəmkəʔílt] 'As you can see, it's your daughter.'

It is optionally lost before words beginning with a consonant, in which case the ə-epenthesis rules apply.

//ti pus// ti pús ~ t pús [təpús]. 'As you can see, it's a cat.'

2.512. Vowel dissimilation.

(a) The vowels of the particles //yi// 'definite' (4.321), and //ti// 'evidential' (4.221) dissimilate to a̲ immediately preceding words the first (non-initial) full vowel of which is i̲.

//yi ylmíxʷm// yi yəlmíxʷəm [ya?ilmíxʷəm] 'the chief ...'

//ti əc-miy-s-t-(í)n// ti cməystín [tacmistín]. 'As you can see, I know it.'

(b) a similar rule of vowel change applies to the particles

//l//, //t//, //tl//, //k̓//, //k̓l// (4.32) after epenthesis
rules have applied: schwa becomes [a] immediately before
words the first (non-initial) full vowel of which is <u>i</u>.

//l ʔkín// lə ʔkín

la ʔkín 'where is it?'

//t ʔilíkʷlk-x(á)n// tə ʔilíkʷəlkxən

ta ʔilíkʷəlkxən 'by Ramhorn ...'

//tl ʔkín// tələ ʔkín

təla ʔkín. 'where is it from?'

Contrast the last derivation with one involving a word-ini-
tial <u>i</u>:

//tl in-s-k̓íwl-xx// təl isk̓íwəlx 'because I am old ...'

//k̓ y̓lmíxʷm// k̓ə y̓əlmíxʷəm

k̓a y̓əlmíxʷəm ~ k̓a ʔilmíxʷəm 'to the chief'

//k̓l ʔkín// k̓ələ ʔkín

k̓əla ʔkín 'where to?'

Contrast this last derivation with one not involving the
epenthesis of <u>ə</u> before a glottal stop:

//k̓l cítxʷ-tt// k̓əl cítxʷtət 'to our house ...'

2.52. Changes affecting prefixes. Prefixes are never
stressed. (For an apparent exception, cf. section 3.2112.)

2.521. Decapitation. ə of the prefix //əc-// 'actual' (3.373) is optionally lost when sentence initial; it is obligatorily lost when word internal. If //əc-// retains its initial ə after pause, a glottal stop is automatically inserted before it.

//əc-xʷúy̓// cxʷúy̓. ~ ʔəcxʷúy̓. 'He has actually gone.'

//s-əc-xʷúy̓-x// scxʷúy̓əx. 'He is actually going.'

2.522. Consonant fusion. The consonant of //əc-// 'actual' (3.373), //c-// 'cislocative' (3.241), and //k-// 'numeral classifier' (3.42) combine with a following glottal stop to yield ə̓c-, c̓-, and k̓-, respectively.

//əc-ʔácqaʔ// c̓ácqaʔ. ~ ʔəc̓ácqaʔ. 'He has actually gone out.'

//əc-c-ʔácqaʔ// cəc̓ácqaʔ. ~ ʔəcəc̓ácqaʔ. 'He has actually come out.'

//k-ʔs-ʔasíl// k̓əsəʔasíl. 'There are two of them.'

Presumably the same rule applies to //k-// 'directive' (3.242), but no examples in the material establish this.

2.523. Consonant dissimilation. //k-// 'directive' (3.242) and //k-// 'numeral classifier' (3.42) dissimilate to //t-// before a following velar.

//k-kíc// tkíc. 'He met (someone).' (kíc 'reach')

//k-xwil// txwíl. 'He came along.' (xwíl 'road')

//k-ka?-ka?łís// tka?ka?łís. 'There are three people.'

 (ka?łís 'three')

2.524. Consonant loss.

(a) n̲ of the absolutive pronouns //in-// 'my', and //an-// 'yours sg.' (3.112), is lost before s̲; and before the prefix //kł-// 'unrealized aspect' (3.371);

//in-s-xʷúy̓-t-n// isxʷúyətən. 'They are my tracks.'

//an-kł-tkłmílxʷ// akłtkłmílxʷ. 'She is your wife to be.'

//an-sipn// asípən. 'She is your sister-in-law.'

(b) ł of //kł-// 'possessive' (3.384), and of //kł-// 'unrealized aspect' (3.371), is lost before s̲.

//kł-s-tałm// kstáłəm. 'He has a boat.'

//kł-s-talm-s// kstáłəms. 'It's going to be his boat.'

2.525. Changes in reduplicative prefixes.

(a) Underlying pharyngeals of reduplicative prefixes vocalize to a̲.

//cʕ-cʕay-p-m// cacʕáypəm. 'He cried out loudly.'

//s-n-ʕc-ʕac-(í)na?-s// snacʕacína?s. 'They are her earrings.'

(b) No reduplicated root initial consonant remains glottalized, except /ƛ̓/.

//t̓n-t̓ína?// təntína?. 'They are ears.'

//p̓n-p̓ína?// pənp̓ína?. 'They are baskets.'

//ƛ̓?-ƛ̓a?kʷílx// ƛ̓ə?ƛ̓a?kʷílx. 'They are medicine men.'

(c) Non-initial //ƛ̓// of a reduplicative prefix is replaced by [t], which functions as its plain counterpart.

//s-kʷƛ̓-(ú)s// skʷƛ̓ús. 'It's an eye.'

//s-kʷƛ̓-kʷƛ̓-(ú)s// skʷtkʷƛ̓ús. 'They are eyes.'

For further discussion of reduplicative affixes see 3.21.

2.53. Changes affecting roots. This section briefly handles certain morphophonemic changes that are peculiar to a few roots. (Root reduplication is more properly affixation and is treated in section 3.21)

2.531. The root //mut// 'sit' loses its t before another t.

//s-n-kɬ-mut-t-n// sənkɬmútən. 'It's a chair.'

2.532. Root-final s of //yx̌ís// 'drive deer' is lost before //-x(í)-// 'benefactive' (3.13).

//yx̌ís-x(í)-t-(ú)m-(í)n// yəx̌íxtəmən. 'I drive the deer

to you.' (Cf. //kn kɬ-s-yx̌ís-x-aʔ-x// kən ksəyx̌ísaʔx.
'I am about to drive deer.')

2.533. Roots that have never been recorded stressed
are represented without vowel in their underlying forms (but
cf. 2.543), and they are underlined.
   //k̓l// 'wait'

2.54. Changes involved in suffixes.

2.541. Stress placement. Morphophonemic changes in
suffixes are affected by stress placement. In words containing
suffixes, stress falls sometimes on the root, sometimes on
one of the suffixes.

Suffixes are of three kinds: inherently stressed suf-
fixes which always take the stress from a root; variable
stress suffixes, with stressed and unstressed forms; and
unstressed suffixes. These last never occur with primary
stress, but some contain a full vowel which is never deleted.
Variable stress suffixes receive stress unless it is auto-
matically placed on the root or on a cooccurring inherently
stressed suffix. When variable stress suffixes occur un-
stressed, their vowel is deleted, at which time the general
morphophonemic rules of ə-epenthesis may apply. The vowel of
an inherently stressed suffix may also be deleted if an-
other inherently stressed suffix precedes in the word.

Inherently stressed suffixes are marked with primary stress in morphophonemic notation (e.g. //-sút//); unstressed suffixes have their vowel unmarked (e.g. //-wi?//); variable stress suffixes have their vowel parenthesized and marked with stress (e.g. //-(í)x^w//).

Roots are of two types: <u>stress retentive roots</u>, which receive primary stress unless an inherently stressed suffix is present; and <u>stress shifting roots</u>, which lose their stress to both inherently stressed and variable stress suffixes. Stress falls on the root if there is no suffix present which takes the stress.

When roots occur unstressed they usually lose their vowel, with some exceptions noted below. Stress retentive roots are marked with primary stress in morphophonemic notation (e.g. //x^{w}úy//); stress shifting roots have their vowel unmarked (e.g. //kar//). Except in cases of full reduplication, the reader will have no difficulty identifying the root: it follows any prefixes--none of which have the shape CVC(C) typical of roots (vowelless roots are underlined; cf. 2.533).

The following general rules apply to all suffixes, including lexical suffixes:

1. stress is placed on the inherently stressed suffix closest to the root;

2. if no inherently stressed suffixes are present, then

(a) stress will be placed on the root if it is stress retentive,

(b) if the root is stress shifting, stress will be placed on the variable stress suffix closest to the root.

3. If no variable stress suffix is present, then it is placed on the root.

Stress retentive roots occur stressed with variable stress suffixes:

//xʷúk// 'pull out'

//xʷúk-n-t-(í)xʷ// xʷúkəntxʷ. 'You pull it out.'

//ƙʷúɫ// 'make, do'

//ƙʷúɫ-s-t-(í)s// ƙʷúɫəsc. 'He fixes it.'

Stress retentive roots lose their stress (and their vowel) when an inherently stressed suffix is added:

//-nú// 'success'

//xʷúk-nú-n-t-(í)xʷ// xʷknúntxʷ. 'You managed to pull it out.'

//-sút// 'reflexive'

//s-ƙʷúɫ-c(í)n-sút-s// sƙʷəɫəcəncúc. 'It's his cooking.'

(-c(í)n 'mouth')

Stress shifting roots lose their stress if either inherent-
ly stressed or variable stress suffixes follow:

//x̣as// 'good'

//x̣as-t-wílx// x̣stwílx. 'He gets better.'

//ɬax̌ʷ// 'hanging, loose'

//ɬax̌ʷ-p-n-t-(í)n// ɬx̌ʷpəntín. 'I let it hang, put
it up.'

Additional examples of stress placement rules:

//kn kɬ-s-k̓ʷúɬ-(í)kst-m-í-sút-x-aʔ-x// kən ksk̓ʷələkst-
místaʔx. 'I am about to fix myself up.' (I unrealized-
absolute mode-make-hand-middle-secondary-self-incho-
ative)

//kn n-x̣as-(á)qs(t)-x(á)n// kən nx̣sáqstxən. 'I have a
good hip.' (I locative-good-rear-legs)

//t̓áq̌ʷ-p-q(í)n-n-t-(í)m// t̓q̌ʷápqəntəm. 'Someone was
slapped on the head.' (slap-noncontrol-head-active-
transitive-indefinite; cf. 2.543)

//k̓ʷu n-x̣as-t-(í)ls-m-í-sút// k̓ʷu nx̣stəlsmíst. 'Our
feelings will be settled.' (we locative-good-stative-
desiderative-middle-secondary-reflexive)

Although most roots are either stress retentive or stress shifting, there is at least some controversial--if not contradictory--evidence. The root //miy// 'know' is sometimes stress shifting:

//miy-s-t-(í)n// məystín (~ mistín). 'I know it.'

and sometimes stress retentive:

//míy-s-t-(í)n// místən. 'I know it, I am sure of it.' The difference in glosses may well reflect a basic grammatical process; however, the evidence at hand does not warrant any conclusive statement.

2.542. Unstressed roots with full vowels. It has been stated as a general rule that root vowels are deleted when unstressed. Some roots, however, retain an unstressed full vowel. Often such root vowels are contiguous to a pharyngeal or laryngeal consonant; it is also intriguing to note that some forms (not all) that retain a full unstressed vowel also contain the suffix //-í-// 'secondary' (3.141). It has not been possible to formulate rules predicting the retention of full unstressed vowels. Pertinent examples and related discussion are in sections 3.131 and 3.33; additional examples are provided here.

//kɬ-s-kʕaw-m-í-s-t-(í)m// kskʕawmístəm. 'Someone is going to be hired.'

//s-əc-ʕaẃ-p-m-í-xx// scʕaẃəpmíx. 'It's drooping.'

Note, however, that some roots, which phonetically may contain an unstressed full vowel, have an unambiguous underlying representation (cf. 2.444), and can be interpreted as containing no full root vowel.

//síẃ// 'ask'

//n-síẃ-c(í)n-m-í-sút// nəsəẃəcənmíst ~ nəsuʔcənmíst.

'He proposed in marriage.'

//ẃt// 'take out'

//əc-ẃt-n-t (í)s// cəẃətəntís ~ cuʔtəntís. 'He took it

out.'

2.543. Metathesized roots. There are certain roots which, before the suffixes //-p// 'non-control', //-m// 'middle', and //-n-t//, //-n-t-iʔ// 'imperative',

(a) metathesize their vowel with C_2

(b) insert a̲ between C_1 and C_2 if either is a pharyngeal or laryngeal consonant.

ə-epenthesis rules apply regularly thereafter.

All of the roots for which there is a vowel attested, contain [a] as the vowel; all of the roots which are attested only in their derived form, also contain [a]. It is therefore inferred that the root vowel is [a].

List of forms with attested root vowel [a]:

//kam̓-m// kəmám. 'He took a lot.'

//ta?-m// ta?ám. 'He pounds.'

//q̓ay̓-m// q̓əy̓ám. 'He writes.'

//ca?-p// ca?áp. 'He's hit.'

//s-x̣al-p// sx̣láp. 'It's tomorrow.'

//c̓axʷ-m// c̓əxʷám. 'He pours in.'

//psaʕ-p// psʕáp. 'He guessed.'

List of forms without an attested root vowel:

//k̓ar-m// k̓ərám. 'He cuts.'

//k̓ar-n-t// k̓əránt! 'Cut it!'

//ƛa?-m// ƛa?ám. 'He is searching.'

//ƛa?-n-t// ƛa?ánt! 'Look for it!'

//ʕal-p// ʕaláp. 'He lost, gambling.'

//ƛax̣-p// ƛəx̣áp. 'He grows.'

//ɬaxʷ-p// ɬxʷáp. 'It got away.'

//k̓ʷa?-m// k̓ʷa?ám. 'He bites.'

//kax-m// kxám. 'He walks along.'

//xʷar-p// xʷráp. 'He is shaking.'

//k̓ʷas-p// k̓ʷəsáp. 'It scorches.'

//ʕam-p// ʕamáp. 'It's wet.'

//ham-p// hamáp. 'It's damp.'

//takʷ-p// tkʷáp. 'It smothers.'

//ɬax̣ʷ-m// ɬx̣ʷám. 'It makes a hole.'

//paq̓-m// pq̓ám. 'It glues.'

//t̓ay-m// t̓əyám. 'He balks.'

//q̓aw-m// q̓əwám. 'He cracks.'

//xaƛ-p// xƛáp. 'He is beaten.'

//kʷaƛ-p// kʷƛáp. 'He comes in sight.'

//xʷac̓-m// xʷc̓ám. 'It breaks.'

//sɬak-m// səɬəkám. 'He twists.'

//t̓ˤap-m// t̓ˤapám. 'He shoots.'

//ƛal-p// ƛəláp. 'He stops.'

//cakʷ-n-t// ckʷánt! 'Pull it!'

Cf. also the following:

//c̓akʷ-p// c̓əkʷáp. 'It feels stiff.' (Cf. c̓ák̓ʷət.

 'It's stiff.'; c̓úk̓ʷət. 'It's stiff.')

And the irregular formation

//ʔam(n)-n-t// ʔamnánt! 'Feed him!' (Cf. ʔamtín. 'I

 feed him.')

    Roots with <u>i</u> (presumably also those with <u>u</u>) are not
found to undergo metathesis.

//c̓iqʷ-m// c̓íqʷəm. 'He butchers.'

//k̓ip̓-m// k̓íp̓əm. 'He pinches.'

//q̓it-m// q̓ítəm. 'He hooks rugs.'

//sʔiy-m// səʔílyəm. 'He weaves grass mats.'

    One root has been recorded with <u>i</u> metathesizing in a
similar way with C_2:

//kʷin-m// kʷním. 'He takes.'

However, other roots in i̲ do not exhibit such forms.

2.544. s-affrication. //-s// 'third person absolutive pronoun' dissimilates to c̲ following another [s] or [ɬ].

//s-pʔús-s// spəʔúsc. 'It's his wish.'
//páckɬ-s// páckɬc. 'It's his leaf.'

2.545. t- and n-deletion.

(a) //-t// 'transitive' is deleted between n̲ and homorganic consonants;

(b) //-n// 'active' (or stem-final n̲) is deleted before all s̲'s, except //-s// 'third person absolutive pronoun' (cf. 2.524);

//cú-n-t-(í)n// cún. 'I told him.'
cú-n-t-in (stress assignment)
cú-n-t-n (unstressed vowel deletion)
cú-n-n (t-deletion)
cún (resonant simplification)

//ʔaw-ʔaw-c(í)n-n-t-(í)s-lx// ʔawəʔawcísəlx. 'They went to ask it.'
ʔaw-ʔaw-cín-n-t-is-lx (stress assignment)
ʔaw-ʔaw-cín-n-t-s-lx (vowel deletion)
ʔaw-ʔaw-cín-n-s-lx (t-deletion)
ʔaw-ʔaw-cín-s-lx (resonant simplification)
ʔaw-ʔaw-cí-s-lx (n-deletion)

ʔawəʔawcísəlx (ə-epenthesis)

Note that the resonant simplification rule has to apply before the n-deletion rule.

Note further that the n-deletion rule before s̲ is a general rule of Colville--an analogous rule applies to the absolutive pronouns, 1st and 2nd sg. forms (cf. 2.524). n̲, however, is n̲o̲t̲ lost before //-s// '3rd sg. absolutive pronoun':

//s-xʷúy̓-t-n-s// sxʷúyətəns. 'They are his tracks.'

Note, finally, that -̲s̲ (unstressed form of //-(í)s// '3rd transitive') does not dissimilate to c̲ after stem final s̲ (it is recalled that //-s// '3rd absolutive' becomes c̲ after s̲; cf. 2.524). One may wish to speak of a general dissimilation rule, and invoke a different rule ordering to derive the correct surface forms (e.g., ə-epenthesis precedes n-deletion). In any case, the morphophonemic behavior of //-s// 'absolutive' and //-(í)s// 'transitive' is different. Thus,

//ʔáqʷ-(ú)s-n-t-(í)s// ʔáqʷəsəs. 'He shaved him.'

2.546. x-deletion. The first x̲ of //-xx// 'progressive' is always deleted, except in inchoative forms directly after the secondary suffix //-í-//

//kɬ-s-ʕaw̓-p-m-í-x-aʔ-x// ksʕaw̓əpmíxaʔx. 'It's about to begin drooping.' (//-aʔ-// 'inchoative'; cf. 3.39)

Footnotes

[1]Gender is not a marked category in Colville. Through-
out this study 'he' is a cover term for a generic third
person.

[2]Exception to this rule is the deletion of <u>t</u> of the
negative <u>lút</u> before the evidential predicative particle <u>ťi</u>.
//lut ťi in-s-əc-wîk// lut ťi iscwîk [lutiscwîk]. 'I
didn't see him.' (Cf. 2.521.)

3. Morphology

Colville independent words consist of a base and op-
tional affixes. A base may be simple, extended, or com-
pound. A <u>simple base</u> is one that consists of a simple root,
or a root with a primary suffix (3.113); an <u>extended base</u>
consists of a root and one or more lexical affixes (3.25);
a <u>compound base</u> (3.4) consists of more than one root.

3.1 Transitive and intransitive bases. Bases are
of two main types: <u>transitive</u> bases are marked by a tran-
sitive suffix; other bases are <u>intransitive</u>.

Roots underlie bases. Certain roots tend to appear
only as transitive bases, others only as intransitive bases.
Most roots, however, can appear as either transitive or
intransitive bases.

All intransitive bases may receive the middle suffix
//-m// and the resulting stems are labelled <u>middle</u> stems.

The middle suffix //-m//, the transitive suffix //-t//,
and the unmarked intransitive, define the Colville
<u>referent-focus system</u>, discussed in the following sections
and summarized in 3.16.

3.11. Bases in their uninflected state are intransitive.

x^{w}úy̓.   'He goes.'

t̓íł.   'He is grimy.'

pús.   'It's a cat.'

3.111.   Personal reference with intransitive bases is marked by means of the <u>primary reference pronouns</u>, a set composed of four proclitic particles,

//kn//   kən   '1st sg.'

//k^w//   k^w '2nd sg.'

//k^{w}u//   k^{w}u   '1st pl.'

//p//   p   '2nd pl.'

and one suffix,

//-lx//   -(ə)lx   '3rd pl.'[1]   (Cf. examples in 3.11 above.) Third person singular forms are unmarked.

kən x^{w}úy̓.   'I go.'

k^w t̓íł.   'You are grimy.'

x^{w}úy̓əlx.   'They go.'

3.112.   Personal reference with intransitive bases may also be marked by means of the <u>absolutive pronouns</u>, a set

consisting of two prefixes and four suffixes,

//in-//   in-   '1st sg.'

//an-//   an-   '2nd sg.'

//-s//   -s   '3rd sg.'

//-tt//   -tət '1st pl.'

//-mp//   -(ə)mp '2nd pl.'

//-s-lx//   -səlx '3rd pl.'

attached directly to the base as in

  inpús.   'It's my cat.'

    Absolutive pronouns cooccur with the <u>absolute mode</u>
<u>prefix</u> //s-//   (hereafter glossed 'absolute'; cf. 3.32)
in intransitive bases, as in the following examples:

  //in-s-xʷúy̓//   isxʷúy̓.   'I go; it is my going.'

  //in-s-ti̓ɫ//   isti̓ɫ.   'I am grimy.'

    Absolutive pronouns may also cooccur with the unrealized aspect prefix //kɬ-// (3.371).

  //in-kɬ-tkɬmílxʷ//   ikɬtkɬmílxʷ.   'She is my wife to be.'
  (tkɬmílxʷ 'woman, wife').

//kɬ-//, in turn, may cooccur with //s-// 'absolute', and,
in that case, pronominal reference is marked by means of
the primary reference pronouns   (Cf. example 3.371c).

3.113. Intransitive bases may add the primary suffix //-p// indicating lack of control on the part of the primary referent.

cá?. 'He is hit.'

ca?áp. 'He is hit, and can't help it.'

kən ca?áp. 'I am hit, and can't help it.'

//-p// is called a primary suffix because it is attached immediately to the base, before any eventual lexical suffix.

c a?ápqən. 'He is hit on the head.' (//-q(í)n// 'head')

3.114. Intransitive bases may add the primary suffix //-m-//. This suffix is not common, and its function is not entirely clear. It seems to narrow the semantic import of the root to which it is suffixed, to its most natural property. Whenever a segment m̲ occurs word-finally, it is always possible and desirable to analyze it as the middle suffix //-m// (cf. section 3.12). There are two other suffixes, //-(í)m// '1st pl. transitive' (cf. section 3.131), and //-(í)m// '3rd indefinite recipient' (3.132), that, unstressed, are realized as [-m]. However, they are affixed to transitive stems.

In sum, it is preferable not to identify the suffix under discussion with //-m// 'middle', even though the two may ultimately be related.

//x̣íƛ// (intransitive root) 'go up'

//x̣íƛ-x(á)n// x̣íƛəxən. 'They are trousers.' (//-x(á)n// 'legs')

//x̣íƛ-m-ús// x̣ƛəmús. 'It's an incline.' (//-ús// 'surface'; not the same suffix as //-(ú)s// 'fire' or //-(ú)s// 'face')

//x̣íƛ-m// x̣íƛəm. 'He goes uphill' (middle).

//k̓ar// (intransitive root) 'swim'

//k̓ar-n-t-(í)n// (transitive form) k̓ərəntín. 'I take it somewhere swimming.' (//-n// 'active'; //-t// 'transitive'; //-(í)n// '1st sg. transitive')

//k̓ar-m-íw̓s// k̓ərmíw̓əs. 'It's a (good) place to cross swimming.' (//-íw̓s// 'middle')

//k̓ar-m// k̓ərám. 'He swims' (middle).

3.115. Intransitive bases may also add the suffix //-t// 'stative'. Unlike //-p// and //-m//, it cannot

appear before a lexical suffix.

//x̣as// 'good'

//x̣as-t// x̣ást. 'It's good.'

//x̣as-t-wílx// x̣stwílx. 'He is healing.' (//-wílx// 'developmental')

//s-əc-x̣as-(í)kst-m-s// scx̣síkstəms. 'He is good at fixing things.' (//s-// 'absolute mode'; //əc-// 'actual aspect'; //-(í)kst// 'hands'; //m-// 'middle'; //-s// '3rd sg. absolutive pronoun')

Many intransitive bases are found to occur consistently in their stative form:

x̣áʔcət. 'It's strong.'

cʔáɫt. 'It's cold.'

k̓ínt. 'He is uneasy.'

λ̓áx̣t. 'It's fast.'

q̓ʷúct. 'It's fat.'

k̓ʷíʔcət. 'It's full.'

qált. 'It's fresh.'

kʷáʔɫt. 'It's warm.'

cʔárt. 'It's sour.'

But many occur in forms that allow clear identification of the stative suffix:

//paẋ// 'think'

paʔẋam. 'He is thinking.' (//-ʔ-// 'inchoative'; cf. 3.22)

pẋpáẋt. 'He is smart.'

//k̓iỷ// 'cold'

k̓əy̓íkst. 'They are cold hands.'

k̓əy̓əy̓əx́ən ~ k̓ey̓əy̓íxən. 'They are cold feet.'

//ẋal// 'clear'

sẋəlẋált. 'It's a day.'

sẋláp. 'It's tomorrow.'

3.12. Middle stems. Bases may also receive the middle suffix //-m//, which indicates some involvement on the part of the primary referent. Middle forms are always conjugated with the primary reference pronoun set. The suffix //-m// is not a primary suffix, and follows any lexical suffixes in the stem formation.

//łaxʷ-p-(ú)s-m// łxʷpúsəm. 'He looped it around his neck.' (loose-non control-neck-middle)

//k-caʔ-caʔ-ál-aʔ-qʷ-m// kcaʔcaʔálaʔqʷəm. 'He knocked at the tipi poles.' (directive-hit-hit-diminutive cylindrical objects [//-álqʷ// 'cylindrical objects'; //-aʔ-//

'diminutive infix']-middle)

Many examples concerning //-m// 'middle' are listed
in section 2.543; the discussion of //-m// in conjunction
with success stems is presented in 3.1422. Middle stems can
also add the transitive suffixes //-n-t// or //-s-t// in the
formation of reflexive words, which, however, function as all
other intransitive forms. They are discussed in 3.33. For
the discussion of transitivized middle stems, see 3.141.

3.13. Transitive stems. Bases occurring with the tran-
sitive suffix //-t// constitute transitive stems. The label
'transitive' is used to indicate that these forms make refer-
ence to both an actor and a recipient. A simple transitive
form consists of:

$$\text{BASE} \begin{array}{c} \text{-n-} \\ \text{-s-} \\ \text{-ł-} \\ \text{-x(í)-} \end{array} \text{ - t - Recipient - Actor}$$

As indicated above, one of four suffixes may intervene
between the base (intransitive or middle) and the transitive
suffix //-t//. They are: //-n-// 'active'; //-s-// 'causa-
tive'; //-ł-// 'expressed goal'; //-x(í)-// 'benefactive'.
//-n-// and //-s-// are the two most common of the four.

Theoretically, each root can appear with any of these
four suffixes; in practice many such occurrences are not
recorded. The following general rules prevail:

Each base tends to appear predominantly with either //-n-t//, or //-s-t//; however, cases of the same base occurring now with //-n-t//, now with //-s-t//, are not uncommon.

//-x(í)-t// may be suffixed to any base to indicate action on behalf of (even if the action is directed against, or to the detriment of) the recipient. It is a sort of 'dative of interest.'

//-ł-t// optionally replaces either //-n-t// or //-s-t// to introduce a third party, which is then usually specified by a complement, or is clearly understood in context.

The difference in meaning between forms in //-s-t// and forms in //-n-t// is subtle and often very hard to convey in a translation:

//wík// 'see'
//wík-n-t-(í)xʷ// wíkəntxʷ. 'You see it.'
//wík-s-t-(í)xʷ// wíkstxʷ. 'You look at it.'

//kíc// 'reach'
//kíc-n-t-(í)xʷ// kícəntxʷ. 'You reached him.'
//kíc-s-t-(í)xʷ// kícstxʷ. 'You got to him.'

//wíkʷ// 'hide'
//wíkʷ-n-t-(í)m// wíkʷəntəm. 'Something was hidden by someone.'

//wík^w-s-t-(í)m// wík^wstəm. 'Something was hidden by someone.' (//-(í)m// 'indefinite')

In a number of cases, parallel forms with //-ł-t// and //-n-t// or //-s-t// were recorded without difference in translation.

cməystín ask^wíst. 'I know your name.' (//əc-miy-s-t--(í)n//)

cməyłtín ask^wíst. 'I know your name.' (//əc-miy-ł-t--(í)n//)

ƙáwəntəm pít. 'We cleaned Pete out.' (//ƙáw-n-t-(í)m//)
ƙáwłtəm pít. 'We cleaned Pete out.' (//ƙáw-ł-t-(í)m//)

x^wíc̓əntx^w. 'You give it to him.' (//x^wíc̓-n-t-(í)x^w//)
x^wíc̓əłtx^w. 'You give it to him.' (//x^wíc̓-ł-t-(í)x^w//)
x^wíc̓əxtx^w. 'You give it to him, and it's for him.' (//x^wíc̓-x(í)-t-(í)x^w//)

Transitive stems without personal pronoun marking have imperative force (cf. 3. 3 1).

3.131. The transitive pronoun affixes. Transitive pronouns accompany transitive stems. They mark a two-party relationship, while they place special attention on the party responsible. Thus, in all cases two entities are

involved, an actor and a specfic goal or object. Transitive pronouns are all variable-stress suffixes.

The basic subset of transitive pronouns marks the actor in conjunction with third person recipients (singular and plural; disambiguation of third person number is discussed below), and is charted thus:

//-(í)n//   '1st sg.'

//-(í)xʷ//   '2nd sg.'

//-(í)s//   '3rd sg.'

//-(í)m//   '1st pl.'

//-(í)p//   '2nd pl.'

//-(í)s-lx//   '3rd pl.'

//kɬ-s̲l̲-n-t-(í)n// kɬsələntín. 'I place something upon a surface.' (//kɬ-// 'down on a surface')

//ʔáqʷ-(ú)s-n-t-(í)xʷ// ʔáqʷəsəntxʷ. 'You shaved him.'

//k̲ɬ̲-s-t-(í)s// kəlstís. 'He has been waiting for him.'

//kim-s-t-(í)m// kimestəm. 'We dislike him.'

//əc-miy-s-t-(í)p// cməystíp. 'You (pl.) know it.'

//əc-miy-ɬ-t-(í)s-lx// cməyɬtísəlx. 'They know it.'

Third person recipient forms can optionally be disambiguated for number when the actor is singular. Specifically, first and second person singular forms receive the

suffix //-lx// to indicate third person plural recipient:

txəməntín.   'I stuck it on something.'

txəməntínəlx.   'I stuck some things on something.'

txəməntíxʷ.   'You sg. stuck some things on something.'

txəməntíxʷəlx.   'You sg. stuck some things on something.'

Third person singular actor forms reduplicate their stem to show third plural recipient:

//n-łxʷ-łaxʷ-p-(á)x̣n-n-t-(í)s// nəłxʷłx̣ṕáx̣s. 'He hooked something on their shoulders.' (//-(á)x̣n// 'arms, shoulders, hands')

//n-łaxʷ-p-(á)x̣n-n-t-(í)s// nəłxʷṕáx̣s. 'He hooked something on his (someone's) shoulders.'

A number of stems, however, refer only to singular or plural recipients. For example,

nəqə'ʔíksəs.   'He gives it to someone.'

nəx̣λíksəs.   'He gives it to more than one person.'

When the actor is plural, disambiguation of number for the recipient can be accomplished only by specific reference in an accompanying complement. Thus,

cársəməntp.   'You pl. made a motion to him/them.'

cársəməntp y̓i tka?ka?łís. 'You pl. made a motion to three people.'

When the recipient is other than third person, and thus
is expressed by a pronoun, the shape of the pronominal mar-
kers is conditioned by the combination of suffixes they
cooccur with: //-s-t//, //-ɬ-t// and //-x(í)-t// on the one
hand; and //-n-t// on the other. The following charts give
underlying forms; the morphophonemics involved are discussed,
and the surface realizations exemplified, in 2.545.

//-s-t// paradigm

Actor   Recipient

                    1st sg./pl.   2nd sg./pl.

1st sg.   //   -----   -s-t-(ú)m-(í)n

2nd sg.   kʷu   -s-t-(í)xʷ   -----

3rd sg.   kʷu   -s-t-(í)s   -s-t-(ú)m-(í)s

1st pl.   -----   -s-t-(ú)m-(í)t

(2nd pl.   kʷu   -s-t-(í)p   -----   )

3rd pl.   kʷu   -s-t-(í)s-lx   -s-t-(ú)m-(í)s-lx//

//-n-t// paradigm

Actor   Recipient

                          1st sg./pl.   2nd sg./pl.

1st sg.   //   -----   -n-t-s-(í)n

2nd sg.   kʷu   -n-t-(í)xʷ   -----

3rd sg.   kʷu   -n-t-(í)s   -n-t-s-(í)s

1st pl.   -----   -n-t-s-(í)t

(2nd pl.   kʷu   -n-t-(í)p   -----   )

3rd pl.   kʷu   -n-t-(í)s-lx   -n-t-s-(í)s-lx//

Note that all second person plural forms are listed in parentheses; in ordinary speech situations they are usually replaced by second person singular forms. In the following examples the first in each group is given in both underlying and surface forms as a model for the group.

//kʷu əc-t-ḱl-k̲l̲-s-t-(í)xʷ//, etc.

kʷu ctḱəlkəlstíxʷ. 'You have been expecting me/us.'

kʷu ctḱəlkəlstís. 'He has been expecting me/us.'

(kʷu ctḱəlkəlstíp. 'You (pl.) have been expecting me/us.')

kʷu ctḱəlkəlstísəlx. 'They have been expecting me/us.'

//kʷu əc-kím̓-s-t-(í)xʷ//, etc.

kʷu ckím̓əstxʷ. 'You dislike me/us.'

kʷu ckím̓əsc. 'He dislikes me/us.'

(kʷu ckím̓əstp. 'You (pl.) dislike me/us.')

kʷu ckím̓əscəlx. 'They dislike me/us.'

//əc-t-ǩl-ǩl-s-t-(ú)m-(í)n//, etc.

ctǩəlǩəlstúmən. 'I have been expecting you.'

ctǩəlǩəlstúms. 'He has been expecting you.'

ctǩəlǩəlstúmt. 'We have been expecting you.'

ctǩəlǩəlstúmsəlx. 'They have been expecting you.'

//lút-s-t-(ú)m-(í)n//, etc.

lútstəmən. 'I refused you.'

lútstəms. 'He refused you.'

lútstəmt. 'We refused you.'

lútstəmsəlx. 'They refused you.'

//kʷu člx-n-t-(í)xʷ//, etc.

kʷu čəlxəntíxʷ. 'You grab me/us.'

kʷu čəlxəntís. 'He grabs me/us.'

(kʷu čəlxəntíp. 'You (pl.) grab me/us.')

kʷu čəlxəntísəlx. 'They grab me/us.'

//kʷu ʔáq̓ʷ-(ú)s-n-t-(í)xʷ//, etc.

kʷu ʔáq̓ʷəsəntxʷ. 'You shave me/us.'

kʷu ʔáq̓ʷəsəs. 'He shaves me/us.'

(kʷu ʔáq̓ʷəsəntp. 'You (pl.) shave me/us.')

kʷu ʔáq̓ʷəsəsəlx. 'They shave me/us.'

//c̓x̱ʷ-n-t-s-(í)n//, etc.

c̓əx̱ʷəncín. 'I correct you (in speech).'

c̓əx̱ʷəncís. 'He corrects you.'

c̓əx̱ʷəncít. 'We correct you.'

c̓əx̱ʷəncísəlx. 'They correct you.'

//cú-n-t-s-(í)n//, etc.

cúncən. 'I told you something.'

cúncs. 'He told you something.'

cúnct. 'We told you something.'

cúncsəlx. 'They told you something.'

3.132. Indefinite forms. It seems appropriate to discuss here a third person indefinite recipient form. It consists of the suffix //-(í)m// 'indefinite' following the combinations //-n-t// or //-s-t//.

//cú-n-t-(í)n// cún. 'I told him.'

//cú-n-t-(í)xʷ// cúntxʷ. 'You told him.'

//cú-n-t-(í)s// cús. 'He told him.'

But note

//cú-n-t-(í)m// cúntəm. 'Someone was told.'

and the homophonous form

//cú-n-t-(í)m// cúntəm. 'We told him.'

Indefinite forms are limited to third person. Thus *kən cúntəm is not possible; nor is *kʷu cúntəm, meaning either 'I was told', or 'We were told'; the first person primary referent intransitive form is kən cút.[2] 'I said (so).' Further examples:

//púl-s-t-(í)m// púlstəm. 'Somebody was being fought.'

//kíc-n-t-(í)m// kícəntəm. 'Somebody was reached.'

//kɬ-s̲l̲-n-t-(í)m// kɬsələntím. 'Something was set down.'

For syntactic use of these forms, see 4.212.

3.14. Secondary stems. Two suffixes added to a base participate in the formation of secondary stems: //-í-// 'secondary formative' (hereafter glossed 'secondary'); and //-nú-// 'success'.

3.141. Purposive stems. //-í-// is added to middle bases which are then transitivized. These forms seem to contain a purposive notion, and they contrast with primary transitive and middle forms.[3]

//tarq-m-í-n-t-(í)xʷ// tərəqmíntxʷ. 'You danced around him.' (cf. tərəqəntíxʷ. 'You kicked him' [transitive]; kʷ tərqám. 'You danced' [middle].)

//c̓axʷ-m-í-n-t-(í)m// c̓əxʷmíntəm. 'We poured it [for a reason].' (cf. c̓əxʷəntím. 'We poured it' [transitive]; kʷu c̓əxʷám. 'We poured it' [middle].)

//kʕaw-m-í-s-t-(í)m// kʕawmístəm. 'Someone is hired for it.' (cf. kʕáwənt. 'Hire him' [transitive]; kʕáwəm. 'He does the hiring' [middle].)

//-í-// participates in the formation of more complex intransitive words. Pertinent discussion is presented for reflexive forms (3.33); instrumental forms (3.35); and progressive forms (3.372).

3.142. Success stems. //-nú-// is suffixed to an intransitive base to form a (bound) success stem which, in turn, will be transitivized or put in the middle form. In transitive stems //-nú-// denotes that an action is performed by an actor only with great difficulty; in middle stems it indicates that the state or situation is not anyone's direct responsibility, but rather that it exists or occurs accidentally.

3.1421. Transitive success stems. //-nú-// is found in active-transitive stems (i.e. before the active-transitive suffixes //-n-t//) or in causative-transitive stems (i.e. before the causative-transitive suffixes //-s-t//). It

exhibits an optional variant //-núy-// occurring in the
third person singular and plural.

//ƛal-1-nú-n-t-(í)n// ƛələlnún. 'I finally killed it.'
ƛələln únːtxʷ. 'You finally killed it.'
ƛələlnús ~ ƛələlnúys. 'He finally killed it.'
ƛələlnúncən. 'I finally killed you.'
etc.

//kc-ha-ham-nú-s-t-(í)n// kchahamnústən. 'I finally got
it right.' (kc - prefix of uncertain meaning, occurring
only in this formation)

//-nú-// may be affixed to a stem after the primary
suffix //-p// 'non-control'.

//kɬ-s-laxʷ-p-nú-n-t-(í)s// ksɩx̌ʷpnús ~ ksɩx̌ʷpnúys. 'He
will get away from him.' (More literally, 'He will
manage to have him lose him.')
//k̓ʷúɬ-nú-n-t-(í)n// k̓ʷəlnún. 'I managed to fix it.'
//ʔɬ-ʔiɬn-nú-n-t-(í)n// ʔɩəʔɩnún. 'I finally learned how
to eat it.'

3.1422. Middle success stems. //-nú-// may also be
found in the stative form of middle stems. These forms may
then be inflected with the primary reference pronouns.

//wiy// 'finish'
//kn wiy-nú-m-t// kən wəynúmt. 'I am ready.'

//s-wiy-nú-m-t-xx// səwəynúmtx. 'He is handsome.'
(//-xx// 'progressive'; cf. 3.372)

//ʔitx// 'sleep'
//kn k̓ɫ-ʔt-ʔitx-nú-m-t// kən k̓əɫəʔtəʔtxnúmt. 'I over-
slept.'

//k̓áw// 'gone'
//s-əc-k̓w-k̓áw-p-nú-m-t-xx// sck̓əwk̓əwpnúmtx. 'He is
feeling lonesome.'

//x̣n̓// 'hurt//
//s-x̣n̓-nú-m-t-xx// sx̣ən̓ənúmtx. 'He is hurt.'

   3.15. Grammatical range of bases. It can be seen
that a given base may appear in three different stems: in-
transitive, middle, and transitive, even though the full
range of possibilities is not commonly exhibited by any
one root. In addition, a base may further appear in pur-
posive and success stems.

   //in-s-əc-n-c̓axʷ// iscənc̓áxʷ. 'It's my pouring in
   (that did it).' (intransitive)
   //kn n-c̓axʷ-m// kən nəc̓əxʷám. 'I pour some in.' (middle)
   //n-c̓axʷ-n-t// nəc̓əxʷánt! 'Pour it in!' (transitive)
   //n-c̓axʷ-nú-n-t-(í)n// nəc̓əxʷnún. 'I managed to pour it
   in.' (success)

//n-c̓axʷ-m-í-n-t-(í)n// nəc̓əxʷmín. 'I pour it in.'
(purposive)

//kíc// kíc. 'He got there.' (intransitive)
//kíc-m// kícəm. 'He reached a particular place.'
(middle)
//kíc-n-t// kícənt! 'Meet him!' (transitive)
//kíc-s-t-(í)s// kícsc. 'He reached him.' (transitive)

//taɻq-n-t-(í)n// təɻəqəntín. 'I kicked him.' (tran-
sitive)
//taɻq-m-í-n-t-(í)m// təɻəqmíntəm. 'We danced around
him.' (purposive)

//ʔácqaʔ// ʔácqaʔ. 'He went out.' (intransitive)
//ʔácqaʔ-n-t// ʔácqaʔnt! 'Take him out!' (transitive)

//k-ʔaw// k̓áw. 'He is gone.' (intransitive)
//k-ʔaw-p-m-í-n-t// kə wpmínt! 'Leave him alone!' (pur-
posive)[4]

//puxʷ// púxʷ. 'It blows (as of wind).' (intransitive)
//puxʷ-m// púxʷəm. 'He blows.' (middle)
//puxʷ-n-t-(í)xʷ// pxʷəntíxʷ. 'You blow it.' (transi-
tive)

//caʔ-p// caʔáp. 'He is hit.' (intransitive)
//caʔ-m// caʔám. 'He hits.' (middle)
//caʔ-n-t-(í)s// caʔntís. 'He hit him.' (transitive)

//kʷúm// kʷúm. 'It's put away.' (intransitive)

//kn kʷúm-m// kən kʷúm. 'I put things away.' (middle)

//kʷúm-n-t-(í)n// kʷúmən. 'I put it away.' (transitive)

3.16. Summary of referent-focus system. Intransitive stems make reference to an actor by means of the primary reference pronouns, or the absolutive pronouns. No direct control or responsibility is attributed to the primary referent other than the necessary connection.

Middle stems also make reference to an actor by means of the primary reference pronouns, or the absolutive pronouns. A limited amount of control or responsibility is attributed to the primary referent, beyond the measure of necessary connection.

Transitive stems make reference to an actor as well as to a recipient. The actor is in full control, or has full responsibility; the emphasis is on the recipient. Pronominal reference is expressed with the transitive pronouns.

Purposive stems make reference to an actor who is performing a given action for a specific purpose; success stems make reference to an actor who exerts only limited control: either succeeding to control after trying or struggling, or being victimized by an accidental happening.

3.17. Summary of the pronominal system. Reference to persons is made by means of various pronominal elements.

3.171. The dependent pronouns. Dependent pronouns are so labeled in contrast with independent pronouns (see 3.172): members of this broad class can only be affixes or particles, whereas independent pronouns are full words. In addition, pronominal forms pattern in sets that are not necessarily morphologically homogeneous; in fact, most sets include elements of disparate grammatical classes.

The unifying feature for all the pronominal sets is semantic; each of the personal markers in a set identifies the entity that is being focused upon, or it relates to an expressed notion (i.e. it points to the connection between itself and a second party, or a concept, or action, or state). Thus each set is labeled to reflect these orientations or relationships. One such set focuses on (marks, points to) the primary referent, the most important entity referred to; another focuses on the recipient of a certain action or activity in relation to an actor; yet another focuses neither on the actor nor on the goal, but rather on the totality of the concept expressed, the action or state, and particularly on its result or product. Thus we have:

1. a primary reference set (discussed in 3.111.);

2. a transitive set (discussed in 3.131.);

3. an absolutive set (discussed in 3.112.).

3.172. The independent pronouns are full words, al-beit restricted (cf. section 4.55). Reference to one or more specific persons ('I, you, we...') is implicit in each form.

3.1721. The members of the set are:

incá?. 'It is I.'

anwí?. 'It is you. sg.'

cníɬc. 'It is he/she/it.'

mənímɬtət. 'It is we.'

mənímɬəmp. 'It is you. pl.'

mənímɬcəlx. 'It is they.'

The absolutive pronoun affixes are incorporated in this paradigm: //in-// and //an-// are prefixes in their corresponding independent pronouns; //-s// and //-s-lx// appear in their regular morphophonemic alternants -c and -c-lx, respectively, following ɬ-; //-tt// and //-mp// appear affixed to a general plural stem //mnímɬ-//.

3.1722. Personal enclitic markers. Exceptionally, and for the stylistic effect of emphasis, the proclitic (primary reference pronouns, 3.111) can be used enclitically, each postposed to its independent pronoun counterpart.

    incá? kən kən ?áyx̌ʷt. 'As for me, I am tired.'

    anwí? kʷ kʷ ikɬtkɬmíɬxʷ. 'You will be my wife!'

3.2. Complex bases. Discussion thus far has centered on simple bases (containing just a single root, or a root and a primary suffix). Often, however, bases are more complex. They are still basically intransitive, and, like simple bases, may undergo transitive and middle suffixation.

3.21. Reduplicated bases. A number of reduplicative processes apply to Colville roots to form iterative bases, diminutive bases, and resultive bases.

3.211. Unanalyzable reduplicative forms. A number of words show reduplication of apparent roots which do not occur except in this double form. Regular morphophonemic rules apply, except that initial glottalized stops do not lose their glottalization, and pharyngeals are deleted (cf. 2.525).

3.2111. Full reduplication with two different stress patterns:

(a) $C_1 \acute{V}_1 C_2$ - $C_1 V_1 C_2$ (suggesting perhaps a full reduplicative suffix)

//x̣ʷat-x̣ʷat// x̣ʷátx̣ʷt. 'It's a duck' or 'They are ducks.'
//čixʷ-čixʷ// číxʷcəxʷ. 'It's a fish hawk.' etc.
//s-x̣aʔ-x̣aʔ// sx̣áʔx̣aʔ. 'He is the father-in-law.' etc.
//pal-pal-q(î)n// pálpəlqən. 'It's a thimbleberry.' etc.

//nax̣ʷ-nax̣ʷ// náx̣ʷənx̣ʷ. 'She's the wife.' etc.

//qʷam-qʷam-t// qʷámqʷəmt. 'It's excellent.' etc.

//kʷus-kʷus-t// kʷúskʷst. 'It's frisky.' etc.

(b) $C_1C_2C_3$ - $C_1C_2\acute{V}_1C_3$ (suggesting perhaps a full redupli-
cative prefix)

//ƛʕk̓-ƛʕak̓// ƛək̓əƛəʕák̓. 'It's a blackbird.' etc.

//c̓ʕn̓-c̓ʕan̓// c̓ən̓c̓əʕán̓. 'It's a grasshopper.' etc.

3.2112. Partial reduplication: an apparent $C_1\acute{V}_1$-
prefix.

//s-q̓ʷá-q̓ʷalqʷ// sq̓ʷáq̓ʷəlqʷ. 'It's a prairie chicken' or
   'they are prairie chickens.'
//k̓ʷú-k̓ʷuxʷ-(í)naʔ// k̓ʷúk̓ʷəxʷnaʔ. 'It's a mouse.' etc.

3.212. Iteratives are formed by prefixation of C_1C_2-
of the root. Regular morphophonemic rules then apply.

   Often iterative forms resemble English plurals; how-
ever, the Colville forms are used only when disambiguation
or emphasis require it.[5]

//k̓w-k̓áw-1x// k̓əwk̓áwəlx. 'They are all gone.' (k̓áw
   'gone'; cf. k̓áwəlx. 'They are gone.')
//kl-kilx// kəlkílx. 'They are hands.' (Cf. kílx.
   'It's a hand.')

//s-x̣ƛ-x̣íƛ-x(á)n// sx̣ləx̣íƛəxən. 'They are (pairs of)
trousers.' (Cf. xc̣íƛəxən. 'It's a pair of trousers.')

//s-n-ʕc-ʕac-(í)naʔ// snacʕacína?. 'They are earrings.'
(Cf. sənʕacína?. 'It's an earring.')

//sq̇ʷs-q̣ʷsiʔ// sqʷsqʷsíʔ. 'They are the sons.' (Cf.
sqʷsíʔ. 'He is the son.')

//tw-twít// təwətwít. 'They are young men.' (Cf.
//twít// 'young man')

//mt̓-mt̓ʕas// mət̓əmt̓əʕás. 'They are kidneys.' (Cf.
mət̓əʕás. 'It's a kidney.')

//x̣m-x̣mʕaɬt// x̣əmx̣əmʕáɬt. 'They are flies.' (Cf.
x̣əmʕáɬt. 'It's a fly.')

The following form is irregular:

//p̓s-p̓ʕas// psp̓ʕás. 'They are nighthawks.' (Cf. p̓əʕás.
'It's a nighthawk.')

Otherwise iterative forms may emphasize a repeated
action, an intense activity, or a customary function.

//sẃ-síẃ-n-t-(í)xʷ// səẃəsíẃəntxʷ. 'You questioned him.'
(síẃ 'ask')

//sxʷ-súxʷ-n-t-(í)n// sxʷsúxʷən. 'I identify it.'
(súxʷ 'recognize')

//s-x̣l-x̣al-t// sx̣əlx̣ált. 'It's a day.' (x̣al 'clear')

//əc-xʷl-xʷal-t// cxʷəlxʷált. 'He's alive.' (xʷal
'live')

//px̣-pax̣-t// px̣páx̣t. 'He's smart.' (pax̣ 'think')

Roots which are found to metathesize (cf. 2.543), have a special reduplicative prefix, $C_1V_1C_2$- of the root, which retains a full, unstressed vowel.

//caʔ-caʔ-m// caʔcaʔám. 'He hits repeatedly.' (caʔám 'he hits.')

//n-ƛaʔ-ƛaʔ-(ú)s-t-n// nəƛaʔƛaʔústən. 'It's eyesight.' (//ƛaʔ// 'search')

All iterative forms may undergo diminutive affixation (cf. 3.215).

3.213. Two special kinds of iterative forms are discussed here.

3.2131. Numeral iteratives. When numerals cooccur with the classifier //k-// 'persons' (3.42), their roots obligatorily undergo reduplicative suffixation, -C_1C_2 of the root.

//k-mus-ms// kmúsəms. 'They are four people.' (*kmús is not permissible.)

//k-cîl-cl-(î)kst// kcîlcəlkst. 'They are five people.' (cîl of uncertain meaning; //-(î)kst// 'hands'; cîlkst 'five': *kcîlkst is not permissible.)

3.2132. Intensive forms. Some forms which, semantically, contain a notion of intensity, customary or iterative action, have a special (non-productive) reduplicative infix: a consonant identical to that immediately preceding the

stressed vowel is infixed after the same stressed vowel.
Note that the deglottalization rule of reduplicated con-
sonants does not apply to these infixes (cf. 2.525).

//ní-n-k̓-m-n// ninkᵊmən. 'It's a knife.' (ník̓ 'cut')

//k̓í-k̓-t// k̓ik̓ᵊt. 'It's quite near.' (k̓ít 'near')

The following form seems to follow the same formative
pattern, but remains otherwise unanalyzed (cf. 4.5661):

//ní-n̓-wi?// nínᵊwi?. 'If and when...'

3.214. Resultive forms acquire a special meaning from
that of their underlying roots. The process by which these
forms are derived is similar to that discussed in 2.543:

   a. the root vowel metathesizes with C_2;

   b. the resultive suffix, $-C_2$ of the root, is added.
Thereafter the general rules of epenthesis apply.

//ƛ̓al-l// ƛ̓ᵊlál. 'He is dead.' (ƛ̓al 'still'; ƛ̓ᵊláp
 'he was stopped.')

//caq̓-q̓// cq̓áq̓. 'He hit the target.' (caq̓ 'hit')

//x̣aw̓-w̓// x̣w̓áw̓. 'It has (been) dried.' (x̣aw̓ 'dry')

//q̓ax̣ʷ-x̣ʷ// q̓ᵊx̣ʷáx̣ʷ. 'He put it above all else.'
 (q̓ax̣ʷ, basic meaning uncertain)

//xaƛ-ƛ// xƛáƛ. 'He grew.' (xaƛ, basic meaning un-
 certain)

Resultive forms may undergo iterative reduplication.

However, the addition of the reduplicative iterative prefix shifts the stress back on the root.

//λ̲ax̲-x̲// λ̲əx̲áx̲. 'He's an elder.' (λ̲ax̲ 'grow')

//λ̲x̲-λ̲ax̲-x̲// λ̲əx̲λ̲áx̲əx̲. 'They are elders.' (Cf. λ̲əx̲áp 'he grows.')

3.215. Diminutives are formed with the prefix C_1- of the root. (Other diminutive forms are discussed in 3.23.)

//-kəwáp// (bound morpheme) 'horse'

//k-kəwáp-aʔ// kəkəwápaʔ.6 'It's a dog.'

//s-łwíłc// słwíłc. 'She's the niece.'

//s-ł-łwíłc// słəłwíłc. 'She's the little niece.'

Iterative bases may undergo diminutive derivation:

//s-tł-tářm// stłtářəm. 'They are boats.'

//s-t-tł-tářm// stətłtářəm. 'They are little boats.'
(Cf. //s-tářm// stářəm 'it's a boat', and //s-t-tářm// stətářəm 'it's a little boat.')

3.22. Infixed bases. A rare infix //-ʔ-//, inserted after a root vowel, denotes inchoative aspect. It has been observed very sporadically in Colville, and it has not been possible to determine how active the process is. Related

languages exhibit active cognate forms. (Cf. 3.372; 3.39.)

//pax̣// 'think'

//pa-ʔ-x̣// pá̃ʔx̣. 'He begins to think.'

//pux^w// 'blow'

//pu-ʔ-x^w// pú̃ʔx^w. 'It begins to blow [as of wind].'

3.23. Glottalization of resonants. Root resonants are glottalized to add a diminutive notion. This process is not as important as the reduplicative and it applies only to a small class of roots.

sʕaníx^w. 'It's a muskrat.'

sʕaʔníx^w. 'It's a little muskrat.'

Sometimes the glottalization of root resonants produces the effect of singling out a particular referent:

suyápix. 'It's the White race.'

suyʔápix. 'He's a white man.'

The same process may apply to resonants in reduplicated diminutive bases, adding a notion of endearment.

isləɬwíɬc. 'She's my little niece.'

isləɬwʔíɬc. 'She's my cute little niece.' (Cf. isɬwíɬc 'she's my niece.')

inkəkəwápa?. 'It's my dog.'

inkəkəwápa?. 'It's my cute little dog.'

3.24. Other derived forms as bases. In this section
are discussed several prefixes which participate in the
formation of complex bases.

3.241. Directional prefixes. With the exception of
//ł-// 'back', which may precede other directionals, all the
directional prefixes are attached directly to the root.
They are:

//ł-// 'back'   //c-// 'cislocative'

                       //kł-// 'down'

                       //ḱł-// 'around, back to'

Examples:

  xʷúy̓. 'He went.'

  łxʷúy̓. ʾHe went back.'

  cxʷúy̓. 'He came.'

  łcxʷúy̓. 'He came back.'

  kíc. 'He got there.'

  ckíc. 'He got here.'

  łckíc. 'He got back here.'

  kəłkíc. 'He got back there.'

mút. 'He sat.'

kɪmút. 'He sat down.'

//sl// 'place'

kɪsələntín. 'I put something down on a surface.' (//kɪ-
-sl-n-t-(í)n// 'down-place-active-transitive-I')

//ník// 'cut'

kəɬníkəs. 'He cuts around it.' (//kɬ-ník-n-t-(í)s//
'around-cut-active-transitive-he')

púɬ. 'It smokes.'

kəɬpúɬ. 'It smokes from under.'

3.242. The directive prefix is //k-//, with an allo-
morph [t-] before roots beginning with a velar. The meaning
of bases so derived is an extension of the meaning of the
root. For example,

//wík// 'see'
//k-wík// 'find out'
//k-wík-n-t-(í)xʷ// kəwíkəntxʷ. 'You find it out.'

//tárq// 'kick'
//k-tárq// 'jump'
//k-tárq-n-t-(í)n// ktərəqəntín. 'I jump on it.'

//kíc// 'reach'

//k-kíc// 'meet'

//k-kíc-n-t// tkícənt! 'Go meet him!'

//xəwíl// 'road'

//k-xəwíl// 'travel along'

//k-xəwíl-m// txəwíləm. 'He came along.'

3.243. //n-// is the locative prefix. It specifies that a state or action has reference to a particular place.

//kax// 'walk'

//n-kax// 'follow a trail'

//n-kax-m// nəkxám. 'He follows the trail.' (locative-walk-middle)

//c̓aɬ-t// c̓áɬt. 'It's cold.' (cold-stative)

//n-c̓aɬ-t// nəc̓áɬt. 'It's cold water.'

Most often locative bases undergo more complex derivation:

//k̓ʕáw// 'greet, pray'

//n-k̓ʕáw//

//s-n-k̓ʕáw-m-n// sənk̓əʕáwmən. 'It's a church.' (absolute-locative-pray-middle-instrumental)

//qílxʷ// 'Indian'

//n-qílxʷ//

//s-n-qílxʷ-c(í)n// sənqílxʷcən. 'It's the Indian language.' (absolute-locative-Indian-mouth)

//pút// 'suffice'

//n-pút//

//n-pút-(í)ls// nəpútəls. 'He is satisfied.' (locative-suffice-state of mind)

For further examples of //n-// cf. sections 3.35 and 3.36⁵.

3.244. <u>Extended bases</u> consist of a root and at least one <u>lexical affix</u>, a bound morpheme with concrete meaning(s). There is insufficient contrastive material involving extended bases to assure that stress placement rules are the same as those affecting all other affixes, but the available data suggest that they are. Note, however, that no unstressed lexical suffixes have been recorded (cf. 2.541).

Lexical prefix, root:

//puʔ-ƛal//

//in-s-puʔ-ƛal-l// ispuʔƛəlál. 'It was my dead spouse.' (puʔ- 'marriage partner'; //ƛal-l// 'dead', cf. 3.214)

Stress-retentive root, inherently stressed suffix:

//s-x̣íƛ-m-ús// sx̣ƛəmús. 'It's a slope.' (x̣íƛ 'go up';

-ús 'surface')

Stress-retentive root, variable stress suffix:

//síc-x(á)n// sícxən. 'They are new shoes.' (síc 'new';

-x(á)n 'feet, shoes')

Stress-shifting root, inherently stressed suffix:

//x̣aw̓-w̓-álqʷ// x̣əw̓əwálqʷ. 'They are dry sticks.' (x̣aw̓

'dry'; -álqʷ 'cylindrical objects')

Stress shifting root, variable stress suffix:

//n-x̣as-c(í)n// nəx̣scín. 'It's a good sound.' (x̣as

'good'; -c(í)n 'mouth, language')

Two lexical suffixes may cooccur, affixed to a root:

//kn n-x̣as-(á)qs(t)-x(á)n// kən nəx̣sáqstxən. 'I have a

good hip.' (-(á)qs(t) 'rear, back'; -x(á)n 'legs, feet')

3.3. Further affixation of intransitive, middle, and transitive stems. A number of important affixes can be added to the stems already discussed to create more complex forms.

3.31. Imperatives. It has already been stated (3.13) that transitive stems without personal pronoun markings have imperative force. This is commonly the case with active-transitive and with benefactive forms:

//ʕac̓-n-t// ʕác̓ənt! 'Look at it!' (sg.)

//kʷu k̓ɬ-paҳ-x(í)-t// kʷu k̓əɬpҳx̣ít! 'Think of something for me!' (sg.)

Plurals of these imperative forms add the unstressed suffix //-iʔ//.

//ʕac̓-n-t-iʔ// ʕác̓əntiʔ! 'Look at it!' (pl.)

//kʷu k̓ɬ-paҳ-x(í)-t-iʔ// kʷu k̓əɬpҳx̣ítiʔ! 'Think of something for me!' (pl.)

Intransitive stems form imperatives by means of the suffixes //-x// 'singular', and //-wiʔ// 'plural'.

//xʷúy̓-x// xʷúy̓əx! 'Go!' (sg.)

//xʷúy̓-wiʔ// xʷúy̓əwiʔ! 'Go!' (pl.)

//ʔiɬn-x// ʔíɬənx! 'Eat!' (sg.)

//ʔiɬn-wiʔ// ʔíɬənwiʔ! 'Eat!' (pl.)

3.32. Absolute mode. The absolute mode prefix is //s-// It is better known to Salishanists as 'nominalizer'.[7] In its primary function //s-// is prefixed to simple intransitive or middle stems.

//ʔiɬn// 'eat'

//ʔiɬn// ʔíɬən. 'He eats.'

//s-ʔiɬn// səʔíɬən. 'It's food.'

//cix// 'warm'

//cix// cíx. 'He's warm.'

//s-cix// scíx. 'It's heat.'

//tarq// 'kick'

//tarq-m// tərəqám. 'He dances.'

//s-tarq-m// stərəqám. 'He's a dancer.'

The resulting forms are intransitive, and typically can be found with the absolutive pronouns.

//in-s-ʔiɬn// isəʔíɬən. 'It's my food.'

//an-s-cix// ascíx. 'You are feeling warm.' (more literally, 'it is your feeling warm.')

Where semantics do not restrict it, absolutive forms can be found with one of the marked forms of the primary reference pronouns.

//laҳ̱// 'share'

//s-laҳ̱-t// sláҳ̱t. 'He's the partner.'

//in-s-laҳ̱-t// isláҳ̱t. 'He's my partner.'

//kʷ in-s-laҳ̱-t// kʷ isláҳ̱t. 'You are my partner.'

Although most stems require //s-// prefixation before they can be inflected with the absolutive pronouns, some do not. Underlying such stems are roots with do not appear as transitive bases. For example,

//in-citxʷ// incítxʷ. 'It's my house.'

//an-kəwap// ankəwáp. 'It's your mount.'

Conversely, there are some roots which are consistently accompanied by //s-//.

//s-qltmixʷ// sqəltmíxʷ. 'He's a man.'

//s-waʔnixʷ// swaʔníxʷ. 'They are thornberries.'

Absolute forms undergo additional derivational cycles: they can function as stems underlying instrumental (3.35), unrealized (3.371), and progressive words (3.372), all of which are intransitive. (Other intransitive derivations are discussed in 3.38.)

3.33. Reflexives. The reflexive suffix is //-sút//. It occurs after transitive (3.13) and purposive (3.141) stems. The resulting forms are handled like intransitives: pronominal reference is marked with the primary reference pronouns, or with the absolutive pronouns. Reflexives are in a sense paradoxical: they are intransitive in grammatical terms, but have underlying transitive motivation, both in meaning and in form.

//xʷakʷ// 'separate'

//əc-xʷakʷ// cxʷákʷ. 'He is divorced.' (intransitive; əc- 'actual')

//xʷakʷ-n-t-sút// xʷkʷəncút. 'He divorced her.' (more literally, 'he separated himself from her.')

//wal// 'burn'

//wal-p// wəláp. 'It burns.' (intransitive)

//wal-n-t-sút// wələncút. 'He burns himself.'

//tarq// 'kick'

//tarq-m// tərəqám. 'He dances.' (middle)

//tarq-n-t-sút// tərəqəncút. 'He kicks himself.'

//taxʷ// 'straight'

//taxʷ-m-í-sút// taxʷmíst. 'He reached for something.' (purposive; cf. //taxʷ-m-s-t-(í)s// txʷəmstís 'he straightened it out.' [transitive])[8]

Occasionally purposive reflexives contrast with transitive reflexives:

//tiɫm// 'straight, flat'

//tiɫm-m-í-sút// tiɫəmíst. 'He lay flat.' (purposive; the glottalization of [m] is unexplained)

//tiɫm-n-t-sút// tɫəməncút. 'He straightened out, reformed.' (transitive)

3.34. Reciprocals. The inherently stressed suffix //-nwíxʷ// is added to intransitive stems to form reciprocals. Personal reference marking is accomplished by means of the primary reference pronouns, or the absolutive pronouns. Like reflexive forms, reciprocals have underlying transitive motivation while they are grammatically intransitive.

Personal reference is necessarily plural, but singular forms often substitute their plural counterparts, most commonly in the second and third persons.

//caʔ-nwíxʷ-lx// caʔnwíxʷəlx. 'They hit one another.' (hit-reciprocal-plural)

//caʔ-nwíxʷ// caʔnwíxʷ. 'They hit one another.' (hit-reciprocal)

//p c̓l-c̓lx-nwîxʷ// p c̓əlc̓əlxənwîxʷ. 'You grabbed one
another.' (you pl. grab-grab-reciprocal)

//kʷ c̓l-c̓lx-nwîxʷ// kʷ c̓əlc̓əlxənwîxʷ. 'You grabbed one
another.' (you sg. grab-grab-reciprocal)

Reciprocal forms, however, may be transitivized. Com-
pare:

//in-s-kl-kl-nwîxʷ// iskəlkələnwîxʷ. 'I chase deer with
him (towards one another).' (More literally, 'It is my
reciprocal deer-chasing.')

//kl-kl-nwîxʷ-s-t-(î)s// kəlkələnwîxʷsc. 'He started to
chase deer with someone.'

3.35. Instrumentals. The instrumental suffix is
//-n//. It occurs after intransitive stative stems, or
after middle and purposive stems.

Whereas the label 'stative' may have been literally
appropriate in all the examples discussed in 3.115, in the
case of many instrumental forms it may not seem equally
adequate.[9] The difficulty stems mostly from the English
glosses. All Colville instrumental forms correspond to
English nouns. But it is to be remembered that underlying
all Colville words are intransitive roots (verb-like), and
that //-t// 'stative' indicates the result or the inherent
property of whatever (verbal) notion is contained in the
root. Indeed it is often extremely difficult to identify

the meaning of Colville roots (and Salishan roots in
general), and this is just because of their nature: they
are all intransitive and verb-like; they often convey very
abstract notions. For a speaker of English it is hard to
see how an item such as 'hit' is intransitive; but it is
even harder to see how the item 'nose' is really verb-like.
Not surprisingly, very often instrumental forms occur in
the absolute mode (noun-like) form, and/or in the locative
form (cf. sections 3.32 and 3.243).

3.351. Stative instrumentals.

3.3511. Instrumentals discussed in this section are
built upon complex bases. They reflect the basic, natural
function of the notion contained in the root. No manipu-
lative or effort-like notions are included in these forms.

//s-n-wix^w-t-n// sənwíx^{w}tən. 'It's a place where people
used to live.' (absolute-locative-live-stative-in-
strumental)

//s-n-kɬ-mut-t-n// sənkɬmútən. 'It's a chair.' (ab-
solute-locative-down-sit-stative-instrumental)

//in-s-x^{w}úy̓-lwís-t-n// isx^{w}əy̓əlwístən. 'They are the
places where I travel all over.' (my-absolute-go-fre-
quentative-stative-instrumental)

//an-kɬ-s-n-ʔiliʔ-t-n// aksanaʔiliʔtǝn. 'It's your future residence.' (your-unrealized-absolute-locative-be there-stative-instrumental)

//s-n-ʔistk-t-n// sanaʔistktǝn. 'It's a wintering place.' (absolute-locative-winter-stative-instrumental)

//s-n-ʔiɬn-t-n// sanaʔiɬǝntǝn. 'It's a feeding place (as of deer).' (absolute-locative-eat-stative-in-strumental)

//s-n-qʷl-qʷil-t-n// sanqʷalqʷiltǝn. 'It's a language.' (absolute-locative-talk-talk-stative-instrumental; cf. the causative form //qʷl-qʷil-s-t-(i)n// qʷalqʷilstǝn 'I talk words.')

//s-xʷúy-t-n// sxʷúyǝtǝn. 'They are tracks.' (absolute-go -stative-instrumental)

3.3512. Instrumental stems may be compound (3. 4) or extended (3. 25). Such forms are also stative.

//s-n-ʕac-qáx̣aʔ-t-n// sanʕacqáx̣aʔtǝn. 'It's a corral.' (absolutive-locative-tie-animal-stative-instrumental)

//n-ƛaʔ-ƛaʔ-(ú)s-t-n// naƛaʔƛaʔústǝn. 'It's eyesight.' (locative-search-search-eyes-stative-instrumental)

//n-ʔiɬn-aʔ-s-qilxʷ-t-n// naʔɬnaʔsqilxʷtǝn. 'He's a cannibal.' (locative-eat-compound formative-absolute-person/Indian-stative-instrumental)

3.3513. Some forms involving more than one derivational cycle apparently affix //-n// directly to intransitive stems without the stative marker.

//k̉ʷúl̉// 'make, do' (intransitive root)

//k̉ʷúl̉-n-t// k̉ʷúl̉ənt! 'Do it!' (active-transitive)

//k̉ʷúl̉-n-t-sút// ˌk̉ʷəl̉əncút. 'He made it himself.' (intransitive stem)

//k̉ʷúl̉-n-t-sút-n// k̉ʷəl̉əncútən. 'It's God.'

//kʷil̉// 'sweat' (intransitive root)

//kʷil̉-s-t-(í)s// kʷil̉əsc. 'He sweats.' (causative-transitive)

//s-n-kʷil̉-s-t-n// sənkʷil̉əstən. 'It's a sweat house.'

3.352. Middle instrumentals. The instrumental suffix //-n// may be added to middle and purposive stems. The difference between the two types of forms seems to hinge upon the notion of direct effort on the part of an agent. In contrast with purposive instrumentals, middle instrumentals do not refer to (mechanical) tools requiring an agent's manipulation. Neither do they refer, however, to natural functions, as was the case with stative instrumentals.

//n-k̓ʕáw-m-n// nəkəʕáwmən. 'It's a prayer.' (locative-greet-middle-instrument)

//s-n-ní-n-k̓-m-n// sənínəkəmən. 'It's a knife holder.' (absolutive-locative-cut [intensive, cf. 3.2132] -middle-instrumental)

//n-k̓ʷúl-m-n// nək̓ʷúləmən. 'It's a work horse.' (locative-make-middle-instrumental. Cf. //sxʷ-k̓ʷúl-m// sxʷk̓ʷúləm. 'He's a working man.' [sxʷ - 'person'])

//n-taʔ-m-í-n// nətaʔmín. 'It's a pestle.' (locative-pound-middle-secondary-instrumental)

//ɬap̓-m-í-n// ɬpəmín. 'It's a line maker.' (line-middle-secondary-instrumental)

//s-tax-m-í-n// stxmín. 'It's a comb.' (absolute-comb-middle-secondary-instrumental)

//áy̓-m-í-n// qəy̓əmín. 'It's a pen.' (write-middle-secondary-instrumental)

3.36. State of mind. The variable stress suffix //-(í)ls// denotes a state of mind, often a wish. It usually cooccurs with the locative prefix //n-//. All state of mind forms discussed in sections 3.361 and 3.362 are intransitive and pronominal reference is marked by either the primary reference pronouns, or by the absolutive pronouns; those discussed in 3.363 are of a different type.

3.361. //-(í)ls// is suffixed directly to intransitive stems, including those marked non-control or stative.

//kʷu n-q̓iʔ-(í)ls// kʷu nəq̓əʔíls. 'We are bothered.'
(q̓iʔ 'trouble')

//n-naxʷ-naxʷ-(í)ls// nəxʷənxʷíls. 'He's thinking about/ wants a mate.' (naxʷ-naxʷ 'mate'; cf. 3.2111)

//n-st-(í)ls// nəstíls. 'He thinks.' (st 'think')

//kn ʕanq-(í)ls// kən ʕanqíls. 'I am satisfied.' (ʕanq of uncertain meaning)

//kn n-pút-(í)ls// kən nəpútəls. 'I am satisfied.' (pút 'suffice')

//lut kɬ-s-əc-n-pút-(í)ls-s// lut kscənpútəlsc. 'He is not satisfied.' (More literally, 'It is not his satisfaction.')

//əc-n-xl-(í)ls// cənxlíls. 'He was thinking that.' (xl of uncertain meaning)

//n-x̌ilw̓-(í)ls// nəx̌əlw̓íls. 'She wants a husband.' (x̌ilw̓ 'husband')

//n-k-ʔaw-p-(í)ls// nək̓əwpíls. 'He wants to be happier.' (ʔaw 'go'; cf. sck̓əwk̓əwpnúmtx. 'He's feeling lonesome.')

//n-ʔayx̌ʷ-t-(í)ls// nəʔayxʷtíls. 'He's feeling tired.' (ʔayx̌ʷ 'tired')

//kʷ n-xʷl-xʷal-t-(í)ls// kʷ nəxʷəlxʷəltíls. 'You want to stay alive.' (xʷal 'live')

//stím an-s-əc-n-q̓i?-(í)ls// stím ascənq̓ə?íls. 'What's on your mind?' (stím 'what?'; q̓i? 'trouble')

3.362. //-(í)ls// may be affixed to middle stems.

//kʷ n-kax-m-(í)ls// kʷ nəkxmíls. 'You want to follow along.' (kax 'walk')

//s-əc-n-kax-m-(í)ls-xx// scənkxmílsx. 'He is thinking of going along.' (absolute-actual-locative-walk-middle-state of mind-progressive)

//s-kʷilx-m-(í)ls// nək̓ʷəlxmíls. 'He wants to leave.' kʷilx 'leave')

//p s-əc-n-siẋl-m-(í)ls-xx// p scənsẋəlmílsx. 'You are in the mood to move away.' (you pl. absolute-actual-locative-move-middle-state of mind-progressive)

3.363. Intransitive state-of-mind words can undergo an additional derivational cycle, that characteristic of all intransitive bases. They can receive further affixes to form middle and transitive stems. There seem to be no grammatical restrictions on this type of secondary derivation, but further research may disclose some.

//kn n-ẋas-t-(í)ls-m-í-sút// kən nəẋstəlsmíst. 'I am satisfied.' (I locative-good-stative-state of mind-middle-secondary-reflexive)

//n-pút-(í)ls-m-n-t-(í)m// nəpútəlsəməntəm. 'He is feel-
ing satisfied with it.' (locative-suffice-state of mind-
·middle-active-transitive-indefinite)

//n-k̓ʷʔ-(í)ls-n-t-sút// nək̓ʷəʔəlsəncút. 'He started to
get cross.' (locative-ʔ-state of mind-active-transitive-
reflexive)

//k̓ʷu n-x̱ʔ-(í)ls-m-n-t-(í)m// k̓ʷu nəxəʔílsəməntəm. 'Some-
one is getting tired of us.' (we locative-ʔ-state of
mind-middle-active-transitive-indefinite)

//əc-k̓i-k̓-t-(í)ls-s-t-(í)s-lx// ck̓ək̓ətílscəlx. 'It came
to their minds.' (actual-near [intensive, cf. 3.2132]-
state of mind-causative-transitive-3rd person-plural)

This example is the only case recorded which lacks the loca-
tive prefix; its absence may be conditioned by the causative
suffix.

3.37. Aspectual affixes. In this section are dis-
cussed two prefixes and one suffix which function as part
of the aspectual system. Other aspect markers are two par-
ticles (cf. 4.45 and 4.4221), and one infix (3.22).

3.371. Unrealized. All unrealized words are intran-
sitive. //kɬ-// 'unrealized aspect' marks the action, state,
or entity it refers to as not yet realized. The ɬ of kɬ-
is lost before a stem beginning in s- (this loss is very
common because kɬ- so often occurs before absolutive stems,
formed with the prefix s-; cf. 3.32); the two absolutive
pronouns //in-// and //an-// lose their n before //kɬ-//
(cf. 2.524).[10]

//kɬ-// is involved in several types of constructions:
(a) together with absolutive pronouns,

   //in-kɬ-s-qltmíxʷ// iksqəltmíxʷ. 'He's my husband-to-be.'
   (Cf. kən sqəltmíxʷ 'I am a man'; kən ksqəltmíxʷ 'I have
   a man/husband.' [kɬ- 'possessive'; cf. 3.384])
   //an-kɬ-citxʷ// akɬcítxʷ. 'These are the materials with
   which your house will be built.' ('your-unrealized-
   ·house')

(b) together with absolutive pronouns and primary reference
pronouns,

   //kʷ in-kɬ-s-qltmíxʷ// kʷ iksqəltmíxʷ. 'You are my
   husband-to-be.'

(c) together with the inchoative marker //-x-aʔ-x// (and primary reference pronouns; cf. 3.372)[11]

//kn kɬ-s-ʔiɬn-x-aʔ-x// kən ksəʔíɬenaʔx. 'I am about to eat.' (Cf. kən ksəʔíɬen 'I have food'; iksəʔíɬen 'that's what I am going to eat'; kʷ iksəʔíɬen 'I am going to eat you.')

3.372. Progressive and inchoative. The progressive suffix is //-xx//. The infixation of //-aʔ-// 'diminutive' to //-xx// yields //-x-aʔ-x// 'inchoative' (cf. 3.39). (For morphophonemic details, cf. 2.546. Also, 3.22.)

//-xx// 'progressive' performs several functions, the most prominent of which is reflected by the label assigned to it.

(a) It denotes action in progress; always cooccurring with the absolute mode prefix //s-// (3.32), and often with the actual aspect prefix //əc-// (3.373) as well.

//s-əc-k̓ʷúɬ-xx// sck̓ʷúɬəx. 'He is working.'

//s-cú-t-xx// scútx. 'He was saying.'

(b) It corresponds to the various English suffixes -ite, -er, -an, of forms such as New Yorker, Chicagoan, etc.

//s-k̓ʷtíkn-xx// sk̓ʷətíkənx. 'He is a Seattleite.'

(c) It corresponds to the English 'one (who is)' as in:

//s-xʔít-xx// sxəʔítx. 'He is the oldest one.'

//s-wiy-nú-m-t-xx// swəynúmtx. 'He is the handsome one.'

(d) It denotes a state or condition, as in:

//s-əc-wix-xx// scwíxəx. 'He is living.'

//s-ʔácqaʔ-xx// səʔácqaʔx. 'He's staying out.'

//-x-aʔ-x// is the inchoative marker. Its function is
to indicate that an action is about to begin; it often
occurs in connection with the unrealized aspect prefix
//kɫ-// (3.371).

//kʷu kɫ-s-xʷúy̓-x-aʔ-x// kʷu ksxʷúy̓aʔx. 'We are about
to go.'

//kn kɫ-s-cʕawlx-x-aʔ-x// kən kscʕáwəlxaʔx. 'I am about
to bathe.'

//s-xʷar-p-m-í-x-aʔ-x// sxʷərpmíxaʔx. 'He is beginning
to shake.'

//s-əc-ʕaw̓-p-m-í-x-aʔ-x// scʕaw̓əpmíxaʔx. 'It's begin-
ning to droop.'

However, in some cases, the meaning is extended or
more difficult to characterize. In the following examples
the common denominator would seem to be 'at the beginning
of...'

//s-wiy-nú-m-t-x-aʔ-x// swəynúmtaʔx. 'He is rather
handsome.' (Cf. swəynúmtx 'he is the handsome one.')

//s-t?íwt-x-a?-x// stə?íwta?x. 'He is quite young. (Cf.
stə?íwtx. 'He is young.')

//s-x?ít-x-a?-x// sxə?íta?x. 'He is rather old.' (Cf.
sxə?ít. 'He is old.' ; sxə?ítx. 'He is the first, the
eldest.')

Thus it is interesting to note that in Colville 'less
handsome' is to 'handsome' as 'younger' is to 'young', and
as 'old' is to 'older'.

3.373. Actual. The actual aspect prefix is //əc-//.
It refers to an action, entity or state obtaining at a parti-
cular main time or situation of reference. The ə of [əc-]
is always lost word-internally; it is optionally retained
after pause, in which case a glottal stop automatically pre-
cedes it. c- and stem-initial ? combine to yield c̓ (cf.
sections 2.521 and 2.522).

//əc-?ácqa?// c̓ácqa? ~ ?əc̓ácqa?. 'He is actually out.'
(?ácqa? 'he went out.')

//əc-ʕác-n-t-(í)s// cʕác̓əs ~ ?əcʕác̓əs. 'He watches it.'
(ʕác̓əs 'he watched it.')

//əc-n-st-(í)ls// cənstíls ~ ?əcənstíls. 'He actually
thinks that...' (nəstíls 'he thought.')

//əc-k̓ʷúl// ck̓ʷúl ~ ?əck̓ʷúl. 'He actually works.' (k̓ʷúl
'he works.')

3.38. Intransitive derivations. In addition to the derivations already discussed, a number of derivations apply to either intransitive or middle stems, to form intransitive words. In all such cases personal reference is regularly indicated by means of either the primary reference pronouns, or the absolutive pronouns.

3.381. Preferential-customary. The inherently stressed suffix //-ímn// is added to intransitive or middle stems to form a preferential-customary word.

//kən pix̣-m-ímn// kən px̣míman. 'I like to hunt' or 'I hunt often/all the time.' (middle stem)

//captikʷl-ímn// captkʷlímən. 'He likes to tell stories' or 'He tells stories often.' (intransitive stem)

//kʷił-s-t-n-ímn// kʷəłəstnímən. 'He likes to go to the sweat-house' or 'He goes to the sweat-house all the time.' (intransitive stem)

3.382. Developmentals. The inherently stressed suffix //-wílx// is attached to intransitive (but not middle) stems to form developmentals.

//kn pax̣-pax̣-t-wílx// kən px̣px̣twílx. 'I got wise.' (pax̣ 'think')

//x̣as-t-wílx// x̣stwílx. 'He got better.' (x̣as 'good')

//s-t̓a?k̓mix-wílx-s// st̓a?k̓əmxəwílxs. 'She has grown

into a woman.' (t̓a?k̓míx 'woman')

3.383. Frequentatives. The inherently stressed suffix
//-lwís// is attached to intransitive or middle stems. It
is usually glossed 'all over, over and over, a lot'.

kən łúxʷt. 'I go in the brush.' (intransitive stem)
kən łxʷtəlwís. 'I go all around in the brush.'

cxʷúy̓. 'He goes.' (intransitive stem)
cxʷəy̓əlwís. 'He travels around a lot.'

k̓ərám. 'He swims.' (middle stem)
k̓ərəməlwís. 'He swims all over.'

3.384. Possessives. The possessive prefix is //kł-//,
with regular variant [k-] before stems beginning with s-
(2.524). It is prefixed to intransitive stems only. The
possessor of the item in question is always expressed by
means of a primary reference pronoun, in contrast with
//kł-// 'unrealized aspect', which is always accompanied by
an absolutive pronoun (3.371).

//kn kł-tkłmílxʷ// kən kłtkłmílxʷ. 'I have a woman/wife.'
//kł-pús// kłpús. 'He has a cat.'

//kʷkⱡ-s-qltmíxʷ// kʷ ksqəltmíxʷ. 'You have a
man/husband.'

3.39. Diminutive infixation. The diminutive //-aʔ-//[12]
is infixed between the two consonants of a lexical suffix:

//n-xʷy̓-xʷúy̓-ít-aʔ-kʷ// nəxʷəy̓əxʷəy̓ítaʔkʷ. 'It's Meteor.'
(place name, literally, 'where the little waters go';
xʷúy̓ 'go', -ítkʷ 'water'--reference to a place where
several creeks converge)
//k-caʔ-caʔ-ál-aʔ-qʷ-m// kcaʔcaʔálaʔqʷəm. 'He knocked
at the tipi poles.' (k- 'directive' [3.242], caʔ 'hit',
-álqʷ 'cylindrical objects')

The same element //-aʔ-// is also infixed between the
two consonants of //-xx// 'progressive'. The resulting form
//x-aʔ-x// is the inchoative marker. For examples and
pertinent discussion cf. sections 3.372.

Occasionally -aʔ- is found infixed in a root, as in
//s-qʷs-qʷ-aʔ-s-íyaʔ// sqʷsqʷaʔsíyaʔ. 'They are little
children.' (Cf. sqʷsíʔ 'he's the son'; sqʷsqʷsíʔ
'they are children.' The element -íyaʔ is not well under-
stood; it probably contains a pluralizing marker -iy-
and the suffix //-aʔ// discussed in footnote 6.

3.4. Compounds consist of at least two roots, usually connected by a <u>formative morpheme</u>, and optional affixes.

3.41. Compounds are fairly rare in Colville and at the present time are imperfectly understood. All compounds discussed in this section contain two roots.

The following general principles seem to prevail: primary stress is never on the first member of the compound; regular stress placement rules apply to the second member of the compound and its affixes. The first member of the compound may or may not retain a full (but unstressed) vowel, depending on the make-up of the second member. If the second member of the compound contains a stress retentive root, or an inherently stressed suffix, then the vowel of the first member is deleted; otherwise it is retained, but unstressed.

Some compounds require a connecting morpheme. Two such morphemes have been identified: //-ł-// and //-aʔ-//. The rules that govern the use of these compound formatives are not fully understood.

//kʷu taxʷ-ł-x̣ʷíc-(ú)łaxʷ-t-n// kʷu txʷłx̣ʷícłaxʷtən.
'We obtained machinery.' (we obtain-formative-work-
-earth-stative-instrumental)

//taxʷ-ɬ-sp-q(í)n-t-n// taxʷɬspqíntən. 'They obtained
threshers.' (obtain-formative-beat-head-stative-
instrumental)

//kʷ əc-miy-ɬ-q̓ay̓-m-í-n// kʷ cməyɬq̓əy̓əmín. 'You know
how to write.' (you actual-know-formative-write-middle-
secondary-instrumental)

//s-k̓ʷúl-ck̓ʷín̓k-s// sk̓ʷələck̓ʷín̓əks. 'It's the bow he
made.' (absolute-make-bow-his)

//n-ʔiɬn-aʔ-s-qilxʷ-t-n// nəʔɬnaʔsqílxʷtən. 'He's a
cannibal.' (locative-eat-formative-absolute-
person/Indian-stative-instrumental)

3.42. Numeral compounds form a subset of the broader
class of compounds. They are based on ten numerals, of which
some are partially analyzable.

náqs 'one'

ʔasíl 'two'

kaʔlís 'three'

mús 'four'

cílkst 'five' (//cíl-(í)kst// 'ʔ- hand')

t̓áq̓əmkst 'six' (//t̓áq̓-m-(í)kst// 'cross-middle-hand')

síspəlk̓ 'seven'

tíml 'eight'

x̣əx̣ n̓út 'nine' (//x̣-/xn̓út// 'diminutive- ʔ')

ʔúpənkst 'ten' (//ʔúpn-(í)kst// 'ʔ- 'hand')

Numbers eleven to nineteen are formed by adding the digits 1-9 to ʔúpənkst 'ten' (in first position), with the connecting morpheme //-ɬ-//. The stress of ʔúpənkst is reduced to weak (but the full vowel is retained), while stress on the following digit remains primary. For example,

ʔupənkstɬəʔasíl 'twelve'

ʔupənkstɬmús 'fourteen'

Multiples of ten reverse the order, placing the digit first; in addition most of these digits appear in special allomorphs; in one case //-ɬ-// 'formative' is deleted. Stress remains primary on ʔúpənkst, and is reduced to weak on the preceding digit, while vowels remain full (however, the allomorph of x̌əx̌ nút 'nine' in these forms is x̌əx̌ən, without a full vowel).

ʔasələʔúpənkst 'twenty'

kaɬələʔúpənkst 'thirty'

musɬəʔúpənkst 'forty'

cilkɬəʔúpənkst 'fifty'

taqəmɬəʔúpənkst 'sixty'

sispəlkəɬəʔúpənkst 'seventy'

timɬəʔúpənkst 'eighty'

x̌əx̌ənəɬəʔúpənkst 'ninety'

Intermediate numbers above twenty are formed analogous-
ly to 11-19, based on the above. Stress is primary on the
last digit, is reduced to secondary on ʔúpənkst, and remains
weak on the first digit.

ʔasələʔúpənkstłəʔasíl   'twenty-two'
musłəʔúpənkstłsíspəlk̓   'forty-seven'

Finally, the numeral 100 is x̌əcəcíkst.

Numeral stems exhibit a propensity for compounding and
for lexical affixation.

nəqsqáx̌aʔ. 'There's one horse.'

ʔasələʔíwł. 'There are two boats.'

kaʔłláyqən. 'There are three heads.'

kən muspústxən. 'I jump four times.'

knáqs. 'It's one person.'

k̓əsəʔasíl. 'They are two persons.'

tkaʔkaʔłís. 'They are three persons.'

kən knáʔnaqs. 'I am all alone.'

The last four examples contain the numeral classifier //k-//
'person'. Its morphophonemics are discussed in sections
2.522 and 2.523.

In the following charts, prefixes and suffixes are listed (in underlying form) according to their position relative to the root, proceeding from the closest to the farthest.

PREFIXES

1. lexical prefixes

2. c-   directional   'cislocative'

    kɨ-   directional   'down'

    kɨ-   directional   'around, under'

    k-   directive

    k-   personal

3. ɨ-   directional   'back'

4. əc-   actual aspect

5. n-   locative

6. s-   absolute mode

7. kɨ-   possessive

    kɨ-   unrealized aspect

8. absolutive pronoun prefixes

INFIXES

1. -ʔ- inchoative

2. -aʔ- diminutive

SUFFIXES

1. -p non-control

    -m primary formative

2. lexical suffixes

3. -nú- success

4. -m middle

5. -í- secondary formative

    -t stative

6. -n- active

    -s- causative

    -ł- expressed goal

    -x(í)- benefactive

7. -t transitive

8. transitive pronouns

9. -sút reflexive

10. -í? transitive imperative plural

-x intransitive imperative singular

-wi? intransitive imperative plural

11. -nwíxʷ reciprocal

-ímn preferential-habitual

-(í)ls desiderative

-wílx developmental

-n instrumental

12. -xx progressive

absolutive pronoun suffixes

13. -lx plural

Footnotes

[1]//-lx// has the broader function of third person
plural marker. With intransitive and middle forms it refers
to the actor; with transitive forms it refers to the reci-
pient (see sections 3.112 and 3.131).

[2]This form is tentatively analyzed //cú-t// 'say-sta-
tive'. //-t// seems to be of a broader scope than its
label implies.

[3]The workings of //-í-// are not fully understood.
The sporadic glottalization of m preceding it has been ob-
served; some cases of unstressed i have also been observed.
For example,
   //wík^w// hide
     kən wík^wmist 'I am hiding.'
     kən wək^wmist 'I'm keeping a secret.'
Note that these forms are intransitive, and, presumably
both reflexive (cf. 3.33).

[4]The root //ʔaw// is different from, although related
to, the root //kaw// of similar meaning, exemplified else-
where in this study. Reduplicated forms confirm this analy-
sis.
     kəwkáwəlx. 'They are all gone.'
     ʔawəʔawcíncən. 'I went to talk to you.'

⁵In addition to the reduplicative prefix under discussion there is a prefix //həł-// 'homogeneous group' which derives iteratives.

həłsqʷsí?s. 'They are all his sons.'

həłsənk̓əlíp. 'They are the members of the Coyote family.'

⁶The suffix //-a?// is of uncertain meaning. It may be a lexical suffix meaning 'living being' or 'concrete entity'. Cf. the following:

sáma?. 'He is a Frenchman.'

łqáqca?. 'He is the older brother.'

míla?. 'It's bait.' (live?)

qʷəqʷc̓əwíya?. 'It's a chipmunk.'

sx̣áx̣pa?. 'He is the grandfather.'

qáqəna?. 'She is the grandmother.'

t̓a?t̓úpa?. 'He is the great-frandfather.'

sínca?. 'He is the younger brother.'

sx̣á?x̣a?. 'He is the father-in-law.'

-qáx̣a? (lexical suffix) 'animal'

But cf.

q̓ípxʷa?. 'It's a nut.'

?ítxʷa?. 'It's black camas.'

⁷The more revealing label 'absolute mode' is adopted here from L.C. Thompson in seminar discussions.

[8]It is noteworthy that the roots which appear with the purposive suffix are most frequent with transitive inflection.

[9]See footnote 2.

[10]//kɬ-// may possibly be analyzed as consisting of the directive //k-// and the subordinating sequential //ɬ//, containing a notion 'potential-directive'. Forms with //kɬ-//, however, may also contain a separate //k-// 'directive', as in //kn kɬ-s-k-taṙq-x-aʔ-x// kən ksktáṙəqaʔx. 'I'm going to jump.'

[11]Inchoatives always contain the absolute mode prefix //s-//, that is, the <u>ɬ</u> of <u>kɬ-</u> is always lost. Nonetheless one would not want to analyze these forms as containing a different prefix *//ks-//, or //k-//.

[12]Attention is drawn to the similarities this infix bears to the inchoative infix //-ʔ-// (3.22). Further study may prove the two forms to be different surface realizations of the same underlying form.

4. Syntax

Colville sentences may be simple, compound, and complex. Simple sentences consist of a single clause; compound sentences of two or more independent clauses; complex sentences of two or more clauses, of which at least one has to be a dependent clause. Sentences that can occur as opening sentences in some independent utterance are independent; those that cannot are dependent. Dependent sentences include responses to questions, continuations of the thoughts of another speaker (e.g. reactions to comments, commands, accusations, etc.), and continuations of the speaker's own thoughts following an opening sentence. (Sentences left unfinished or otherwise elliptical are fragmentary.)

A clause consists of a predicate and, optionally, one or more complements. An independent clause is one that can stand alone and function as a (simple) independent sentence; other clauses are dependent. Dependent clauses normally cooccur with an independent clause in a complex sentence.

A predicate is the essential component of a clause, i.e. its head. It consists of an independent word (with or without affixes) and optional particles. Ordinarily it is clause-initial.

A complement is the predicate's optional dependent in a clause. It follows the predicate to expand it, complete

it, or explain it. It consists of one or more independent words and optional particles.

4.1. Words. Colville exhibits two main word types: particles and independent words. Each constitutes a separate syntactic class, defined by privileges of occurrence within a clause.

Particles are dependent words. They cannot occur as heads of predicates and complements. The syntactic class of particles is not a phonologically homogeneous set. Although for the most part particles do not occur with primary stress, on certain occasions certain particles are so stressed. They are of three types: predicative particles, clause particles, and complement particles.

In all cases the function of a particle is defined by its maximum possible immediate constituent partner. Each particle has its typical position in a fixed order with reference to the head of the construction. Preposed particles are the norm in Colville; exceptionally particles that are usually preposed can occur postpositionally (cf. 3.1722).

Independent words are the predicative elements of the language. Most of them have extensive inflectional and derivational patterns, as described in Chapter 3.

4.2. Predicates. The simplest Colville words are intransitive and refer to states, activities, entities, without necessary overt reference to particular persons, times, and places.

píq. 'It's white.'

tíc. 'It's pitch.', 'There is pitch.'

xʷúy̓. 'He went.'

More complex are middle and transitive words.

xʷúy̓əm. 'He leads.' (middle)

xʷúy̓əsc. 'He takes him there.' (transitive)

Reference to persons is added to words by various pronominal elements. They are of various types, from affixes to full words, discussed and exemplified in sections 3.111, 3.112, 3.131, and 3.17.

4.21. Distribution of words as predicates. All Colville full words are basically predicative. By themselves they may constitute complete sentences. When they cooccur with other words they may function as predicates or as complements: they may be expanded by following complements, or they themselves may follow a predicate and constitute complements.

4.211. Intransitive and middle words are conjugated with either the primary reference pronouns, or with the absolutive pronouns.

Words accompanied by primary referent pronouns usually occur in the predicate slot and can be expanded by positional complements and by other complements marked by complement particles (see 4.32).

χíƛəm susáp. 'Joseph climbed the hill.'

kən xʷúy̓ kəl cítxʷs. 'I went to his house.'

ʔáyxʷt incáʔ. 'I am tired.'

kən ʔáyxʷt təl anwíʔ. 'I am tired of you.'

Words accompanied by the absolutive pronoun affixes may be followed by positional complements (otherwise unmarked):

inχmínk susáp. 'I like Joseph.'

But more often they occur in the complement slot:

wíkən anpús. 'I saw your cat.'

4.212. Transitive words are accompanied by a transitive marker and pronominal reference is indicated with the transitive pronouns. They can be followed by complements of various sorts:

ckíməsc χəl ʔaxáʔ. 'He dislikes him because of that.'

wíkəntxʷ ʕápnaʔ. 'You can see it now.'

The most common kind of complement with transitive predicates

specifies a goal.

cús sənk̓əlìp. 'He told Coyote.'

Sentences of this type may be expanded further by an instru-

mental complement:

cús sənk̓əlip t nəqìlxʷcən. 'He told Coyote in Indian.'

If an agent is expressed, then it occurs (exceptionally)

sentence-initially, followed by the relativizing particle

ki? (4.414).

t səmx̣íkən ki? cus sənk̓əlip t nəqìlxʷcən. '(It was)

Grizzly (who) told Coyote in the Indian language.'

(See section 4.33 for further discussion of this type of

construction.)

In the third person indefinite recipient construction

(3.132), if an agent is to be expressed, that is accomplish-

ed by means of an agentive complement, as in

cúntəm t incà?. 'Someone was told by me.'

cúntəm t cnìłc. 'Someone was told by him.'

But the recipient cannot be further marked in the same

sentence; it is either clear in the context or it is truly

indefinite ('someone').

4.22. Predicative particles. In addition to the prono-

minal particles, which belong to the system just summarized,

there exist in Colville a few other predicative particles--

i.e. particles always found in IC partnership with a predicate. These particles add to the predicate various notions: emphatic, exceptional, intensive, etc. They differ from pronominal particles on one further account: whereas pronominal particles are clitics, these other predicative particles can, and do on occasion, have their own stress.

4.221. Evidential. The function of //ti// 'evidential' is to add to the predicate a notion of evidential emphasis, while it relieves the speaker of any responsibility about or control over the action or situation. Thus the resulting predicate singles out an event, state, or activity as observable; the semantic import of ti is, approximately, 'as it appears, as one can see (but I cannot be held responsible for it)'. (For morphophonemic details on ti see 2.51.)

ti stətəpína?k. 'He was somewhat pot-bellied.'

ti x̣ást ɫ x^wícəxəməntəm. 'It's best that we give it away.'

lut kən tə cəkínəm, wáy̓ ti kən x̣ást. 'There is nothing wrong with me, as you can see I'm quite OK.'

The last example shows ti in two different positions-- first in IC partnership with cəkínəm, then with kən x̣ást. Typically, primary reference pronouns precede ti when in construction with the negative lút. It may then be possible to interpret the pronoun (like kən here) as being used

postpositionally in relation to the base lút. This may be
a relic of an original postpositive pronominal system, simi-
lar forms of which are still observable in related languages.

There is another aspect of the use of ti in negative
sentences. Compare

   lut t̓ aksxʷúy̓. 'You <u>will not</u> go!'

   lut aksxʷúy̓. 'You will not go.'

Whereas <u>lut aksxʷúy̓</u> is a simple statement merely asserting
that the person addressed will not go, <u>lut t̓ aksxʷúy̓</u> has
emphatic force by virtue of the evidential ti: 'As you can
understand / for reasons that should be clear to you, you
won't go.' Note further that t̓ aksxʷúy̓ and aksxʷúy̓ in these
examples function as positional complements.

4.222. Contrastive. A predicate constructed with
//k̓m// 'contrastive' refers to an action, state, situation
or activity that is singled out as exceptional to or in con-
trast with an expressed norm. Thus k̓əm is usually glossed
into English as 'except', 'all but'.

  ksx̣stwílsx; k̓əm skʷλ́usc. 'He was healing (in general);
   [but] his face wasn't.'

  λ́axʷt ʔi sqʷsqʷsíʔs; k̓əm k̓əsəʔasíl. 'His children were
   dead; except for two who weren't.'

  k̓əm cxʷəlxʷált. 'He is the only one alive.'

4.223. Unsuccessful. A predicate with //ʔiwaʔ//
'unsuccessful' refers to an action or activity that is point-
ed out as extreme, or intense, but unsuccessful. <u>ʔiwaʔ</u> is
often glossed in English by the informants as 'even', but
in most cases ⸱⸱ would seem more accurately rendered as
'even ... but to no avail'. Examples:.

  ʔiwaʔ pix́əməlx. 'They hunted, but unsuccessfully.'

  ʔiwáʔ síwəntəm. 'He was asked, but to no avail.

  ʔiwáʔ cʕácəs. 'He looked and looked, [but couldn't see].'

4.3. Complements. Complements follow the predicate to expand it, clarify it, or add to it.

4.31. Positional complements. The simplest expansions of the predicate are complements marked merely by position.

sʕáyəmc səmx̣íkən. 'Grizzly was mad.' (sʕáyəmc predicate 'it was his being mad', səmx̣íkən complement, 'it was Grizzly')

kʷu nəkáwɬaxʷɪtxʷ isqʷsqʷaʔsíyaʔ. 'You took every one of my little children.' (me locative-gone-earth-expressed goal-transitive-you my-children-diminutive)

xʷúy patíl. 'Matilda went.'

cút sx̣əlpù?. 'Daylight [man's name] spoke.'

cús sx̣əlpù?. 'He told Daylight.'

Note that the form cús of the last example is the third person singular of the transitive paradigm (//cú-n-t-(í)s//), whereas cút of the previous example is the general intransitive form of the primary reference paradigm.

In the sentence cús sx̣əlpù?, sx̣əlpú? is the object or goal, whereas in the sentence cút sx̣əlpù?, sx̣əlpú? is the agent. In more detail, cús contains the information that a two-party relationship is involved, with a third person singular responsible party (//-(í)s// 'actor') and a third

person object which may be further specified by a comple-
ment; cút points to a primary referent which may be further
specified by the complement.

These facts are consonant with the notion that in
Colville all predications refer to events, actions or situa-
tions without necessarily any reference to particular persons,
time, or place; and that the inclusion of such referents
implies of necessity the specification of the relation-
ship(s) involved. We have already seen that three such
basic relationships obtain in Colville; they were discussed
in sections 3.111, 3.112, and 3.131, and recapitulated in
section 3.171.

4.32. Marked complements. In addition to those com-
plements that are marked only by their position following
the predicate, other complements may be marked by a number
of prepositive complement particles. These particles are
discussed and exemplified below. Some can be further analyz-
ed, a matter of derivation which is not discussed here ex-
cept to point out certain phonological similarities in the
course of the discussion. In the following chart particles
are given in their underlying forms:

COMPLEMENT PARTICLES

//ẏi	1
ła?	t, tl
ł	ḱ, ḱl
	x̣l
	la?ł//

4.321. Definite. //ẏi// 'definite' functions some-what like an article in Western European languages. Its use is optional with complements, except for certain defin-able cases in which it is not permissible. When ẏi is preposed to a complement it signals a definite referent; otherwise the referent is indefinite. Exceptions are proper nouns (personaland geographic) and non-third person absolutive forms, which may not be preceded by ẏi. It should not be concluded, however, that to each possible com-plement marked by ẏi corresponds naturally an indefinite unmarked complement, or vice versa. This is not an essen-tial dichotomy in Colville. It is true that to the sentence

   wíkən sqílxᵂ. 'I saw some people.'

corresponds a sentence

   wíkən ẏi sqílxᵂ. 'I saw the/those people.'

But this fact may not seem very meaningful to a Colville speaker, nor the observation a very insightful one. He may in fact point out that other Colville sentences may

express contrasts that are much more significant; for example,

sqílxʷ kiʔ wíkən. 'It was people I saw.'

wíkən ʔaxaʔ yi sqílxʷ. 'I saw those (obviative) people.'

wíkən ʔixiʔ yi sqílxʷ. 'I saw these (proximate) people.'

ʔixí? yi sqílxʷ kiʔ wíkən. 'It was those people that I saw.'

and, besides many others, he may even point out a sentence with the complement in emphatic position (see 4.33),

yi sqílxʷ kiʔ wíkən, (lut yi suyápix). 'It was Indians I saw, (not white people).'

Further examples:

xʷəʔít yi sqílxʷ. 'There are many people.' (many definite person/Indian)

sqít yi skʷisc. 'What's his name)' (who definite name-his)

tkɨmílxʷ yi stəmkəʔílc. 'His daughter is a woman [not a girl].' (woman definite daughter-his)

ʔaxá? yi staʔkəmix. 'This is the girl.' (this-obviative definite maiden)

yi may cooccur with other complement particles (as can be inferred from observing the chart above), but its

function remains essentially intact.   For example,

ʔaxáʔ ẏi təl scənəʔùɫxʷs. 'It's right inside the door.'
(this-obviative definite ablative absolute-actual-loca-
tive-enter-3rd person')
cwíltəm ʔaxaʔ ẏi təl tkaʔkaʔɫís. 'He had children from
these three persons [women].' (//cəw-(í)lt-m ʔax-aʔ
ẏi tl k-kaʔkaʔɫís// 'beget(ʔ)-children-middle these-
obviative definite ablative person-three-three')

4.322. Sequential. //ɫ// and //ɫaʔ// are sequential
complement particles. They are both subordinating parti-
cles, but whereas ɫaʔ conveys the notion of temporal
sequence, ɫ does not. Thus it is possible to say that ɫ
is the subordinating element, and -aʔ the temporal. Contrast
the following sentences:
  waẏ x̣ást ɫ kʷ cxʷùẏ. 'It's good if/that you come.'
  waẏ x̣ást ɫaʔ kʷ cxʷùẏ. 'It will be good when/after you
    come.'
In these sentences ɫ and ɫaʔ are found in IC partnership
with the complement. Note, however, that different part-
nerships are involved in the two sentences
  waẏ x̣ást kʷ ɫ cxʷùẏ. 'It's good if/that you come.'
  waẏ x̣ást kʷ ɫaʔ cxʷùẏ. 'It'll be good when you will have
    come.'

Here the complements ɫ cxʷúy̓ and ɫaʔ cxʷúy̓ are embedded in the larger complements kʷ ɫ cxʷúy̓ and kʷ ɫaʔ cxʷúy̓, respectively. These constructions seem to emphasize the pronominal element(s) in the complement. The flavor of these sentences can perhaps be conveyed by the following paraphrases:

'It's good if (when) you come.'

'That you eventually (will sometime) come, is good.'

Further examples of ɫ and ɫaʔ are:

q̓əsápiʔ ɫaʔ cpúlxəlx. 'It was a long time before they camped.' (//q̓ás-p-iʔ ɫ-aʔ əc-púlx-lx// 'old-non-control-past sequential-temporal actual-camp-plural')

čəpxíɫ məypnus ɫ kscxʷəlxísc. 'That's how he learned to get around.' (//əc-ʔx̌íɫ miy-p-nú-n-t-(í)s ɫ kɫ-s-cxʷ-lwís-s// 'actual-be-so know-noncontrol-success-active-transitive-he sequential unrealized-absolute-go-around-his')

məypnúntəm y̓i t ɫkíkxaʔs ɫ stíxʷəxʷələms. 'Her older sister realized that she [the younger sister] was different.' (//miy-p-nú-n-t-(í)m y̓i t ɫkíkxaʔ-s ɫ s-tíxʷxʷlm-s// 'know-noncontrol-success-active-transitive-indefinite definite agent older sister-hers sequential absolute-different-hers')

Characteristically, ɫ occurs after the restricted deictic words ʔixíʔ and ʔax̌áʔ (4.5151). These cases are equivalent to 'it was there/then that ...' For example,

ʔixiʔ sənháʔəlsc; ʔixiʔ ł łxʷúyəs. 'That's when he became

angry; that's when he took him back.' (//ʔix-íʔ s-n-háʔ-

(í)ls-s ʔix-íʔ ł ł-xʷúy-n-t-(í)s// 'it was then-

proximate absolute-locative-anger-state of mind-his it

was then-proximate sequential back-go-active-transitive-

he')

   In two different versions of the same text I have found

the following two sentences:

   a. myəł kən ʔáyxʷt kən ła? cknánaqs. 'I am too tired of

   being alone.'

   b. wày̓ kən ʔáyx̣ʷt kən ł cknánaqs. 'I am too tired of be-

   ing alone.'

these are linguistically different sentences and careful Eng-

lish translations should attempt to reflect grammatically

this fact. The following glosses may suggest more of the dif-

ferent flavor of the two sentences:

   a. 'I have been alone so long, I am tired of it.'

   b. 'I am alone and I am tired of it (already).'

   4.323. Locational. //1// is the locational complement

particle. It means, roughly, 'point of time or place at

which ...', 'point of reference in time or place'. Indeed,

the concepts of time and space in Colville are found to be

inextricably interrelated; this is reflected most trans-

parently in the organization and function of deictic elements,

a brief discussion of which is presented in section 4.515.

kɫtk̓ʷəntísəlx lə p̓ùyxən. 'They put him down in the car.'
(//kɫ-tk̓ʷ-n-t-(í)s-lx l p̓úy-x(á)n// 'down-put-active-
transitive-3rd person-plural locational wrinkle-feet')
ya?yáʕət p nəyáʕ lə cítxʷ. 'Gather together, all you
people, in the house.' (//yʕ-yáʕ-t p n-yáʕ l cítxʷ//
'gather-gather-stative you pl. locative-gather loca-
tional house')
xʷúy̓ lə sənkʷəkʷə?àc. 'He went in the night.'

In addition <u>l</u> is found to occur in extended uses; for
example,

?ixí? ck̓ʷúləmscəlx lə x̣w̓aw̓ y̓i sɫìqʷ. 'That's what they do
when they dry meat.' (//?ix-í? əc-k̓ʷúl-m-s-t-(í)s-lx l
x̣aw̓-w̓ y̓i sɫíqʷ// 'it is this-proximate actual-make-
middle-causative-transitive-3rd person-plural locational
dry-dry definite meat')

The form <u>la</u> is a morphophonemic variant of //l//, the
conditioning factors for which are phonological (cf. 2.512).

An element <u>l</u> identified as the same <u>l</u> of the locational
particle is present in the two directional particles //tl//
'ablative' and //k̓l// 'allative' (cf. sections 4.3242 and
4.325). It is not fruitful to elaborate on the derivational
processes involved with these two particles, although it is
appropriate to point out the obvious phonological and se-
mantic connections; thus //tl// and //k̓l// will be treated
as independent particles, though related to //t// and //k̓//.

4.324. Source complements.

4.3241. Agent-instrument. The particle //t// shows point of departure, source of action, and, figuratively, point of view.

As an agentive particle, t occurs in sentences that when translated "literally" into English are rendered as passive sentences. In each case there exist two Colville sentences, one that appears passive, another active. For example,

cúntəm t wàpupxən ... 'Lynx told him ...' ('He was told by Lynx ...')

cút wàpupxən ... 'Lynx said ...'

(For related discussion, cf. section 4.31.) Further examples:

way̓ xʷaʔspíntk kiʔ ctxtáməlx y̓i t səsíʔs. 'It's many years that her uncle has been taking care of them.' (//wáy̓ xʷaʔ-s-píntk kiʔ əc-k-xát-m-lx y̓i t səsíʔ-s// 'it is so many-absolute-year relative actual-directive-handle-middle-plural definite agent uncle-hers')

lut t̓i cməystín kiʔ kʷu kìcs t naspəpàsəs. 'I don't know when (that) Sea Gull got to me.' (//lút t̓i əc-miy-s-t-(í)n kiʔ kʷu kíc-n-t-(í)s t naspəpásəs// 'not evidential actual-know-causative-transitive-I relative me reach-active-transitive-he agent Sea Gull')

t is also found in complements that are dominated by a

number of specific items such as those listed below, which seem to involve in their semantics a notion of manipulation, and sometimes of instrumentality.

k̉ʷúləməlx ẏi t ksənx̣əwiɫc̉átənsəlx. 'They fix a scaffold to dry meat.'

stxtəmíx ẏi t sk̉ʷək̉ʷíməlt. 'She was pregnant with a baby.'

kən ksck̉ʷúm ẏi t akɫcìtxʷ,ʔuɫ ẏi t aksc̉iɫən, ʔuɫ ẏi t akɫtəmtmùtən. 'I have kept some poles for your house, and food for you, and clothes for you.' (//kn kɫ-s-əc-k̉ʷúm ẏi t an-kɫ-citxʷ ʔuɫ ẏi t an-kɫ-s-əc-ʔiɫn ʔuɫ ẏi t an-kɫ-tm-tmútn// 'I possessive-absolute-actual-store definite instrument your-unrealized-house and definite your-unrealized-absolute-actual-eat and definite instrument your-unrealized-clothes')

   4.3242. Ablative. //tl// is an ablative particle, indicating 'motion from'. Examples:

kʷ scútx təl sk̉ʷətìkənxʔ--təl nəsq̉ʷút. 'Were you saying [that he is] from Seattle?--From across the ocean.' (//kʷ s-cú-t-xx tl sk̉ʷətíkənx tl n-sq̉ʷút// 'you absolute-speak-stative-progressive ablative Seattle ablative locative-other side of the water')

xʷaʔásq̉ət təl sckìcxs. 'It was many days after he got there.' (//xʷaʔ-(á)sqt tl s-əc-kícx-s// 'many-days ablative absolute-actual-arrive-his')

Two extended uses of <u>təl</u>, a causal and a sort of
comparative, are examplifed below.

təl náqs ki? kìmən ?axa? isənə?alà?tən. 'There's one
reason why I don't like my house.' (//tl naqs ki? kím-
n-t-(í)n ?ax-aˀ in-s-n-?ala?-t-n// 'ablative one rela-
tive dislike-active-transitive-I this-obviative my-ab-
solute-locative-be here-stative-instrumental')
hâ?, təl iskíwəlx? 'Why, because I am old?' (fragmen-
tary responsive utterance: //in-s-kíwl-xx// 'my-abso-
lute-old-progressive')
sxə?ítx təl incà? kən. 'He is older than I am.' (//s-
x?ít-xx tl inca? kn// 'absolute-first-progressive
ablative me I')

4.325. Directionals. There are in Colville two
allative complement particles: //k̓// and //k̓l//. //k̓//
does not refer to a specific destination, but rather to
'motion or direction towards', in contrast with //k̓l// which
referes to 'motion to/into' a specific location. On occasion
//k̓// and //k̓l// are used interchangeably, but this is a func-
tion of the circumstances involved in the actual situation.

k̓ incítxʷ 'to my house (towards, not necessarily into
 it)'
k̓əl incítxʷ 'to my house (specifically there)'
xʷətəpúsəsəlx k̓əl sxʷəmrím. 'They started out to the

doctor.'

pənəkín mi cx^wə̀y̓ k^w cmíłət k̓əl cítx^wtət? 'When are you
coming to visit at our house?' (//pn-ʔkín mi c-x^wúy̓ k^w
əc-miłt k̓l cítx^w-tt// 'time-interrogative future cis-
locative-go you actual-visit allative house-our')
tanəmús k̓əl cniłc ł ksx^wəy̓əlwís y̓i t k̓əsùłax^w. 'It's
nothing for him to run around in the brush.' (//tanmús
k̓l cniłc ł kł-s-x^wúy̓-lwís y̓i t k̓as-(ú)łax^w// 'nothing
allative him sequential unrealized-absolute-go-around
definite instrumental bad-land')

4.326. Causal. The causal complement particle is
//x̣l//. It introduces a complement that specifies the
reason(s) for a certain state, action, feeling. We may
suspect an analysis x̣-1, but no independent x̣ appears in the
material.

nəłíptəmən x̣əl stím̓ lut iscx^wúy̓. 'I forget why I didn't
come.' (//nłípt-m-n-t-(í)n x̣l stím̓ lut in-s-c-x^wúy̓//
'forget-middle-active-transitive-I causal what not my-
absolute-cislocative-go')
náq̓^wəməntx^w y̓i stəməlscùt; x̣əl ʔixi? ʔuł x^włx^wíłəms t
asəsí?. 'You stole the beads; that's why your uncle ex-
pelled you.' (//náq̓^w-m-n-t-(í)x^w y̓i stəməlscút x̣l ʔix-í?
ʔuł x^wł-ẉíł-m-n-t-(í)s t an-səsí?// 'take-middle-active-
transitive-you definite beads causal this-proximate and

throw away-middle-active-transitive-he agent your-uncle')

4.327. Comitative. //la?ł// 'with' is an uncommon
particle and it can probably be further analyzed. Evidence
at hand does not warrant this at the moment. We note, how-
ever, one element resembling phonologically the locational
1, and another the sequential ł (cf. 4.323 and 4.322).

> kmix wápupxən ẏi la?ł skʷúmalt. 'There is only Lynx with
> the virgin.' (only Lynx definite with virgin)
> t xʷíxʷutxən txtəntìs ẏi sləwłwilc ẏi la?ł skʷúyəs. 'It
> was Badger who took care of his nieces and his mother.'
> (by Badger [emphatic complement; cf. 4.33] were-taken-
> care-of definite nieces-his definite with mother-his')

4.33. Emphatic complements. We have seen that, nor-
mally, complements marked by particles follow the predicate
in accordance with the general principle that in Colville
the first element is the predicate, and following elements
are complements.

However, this norm can be contravened in two clearly
definable circumstances. Specifically, a complement so
marked by a complement particle may be found to precede its
predicate either when

(a) special rhetorical emphasis is required; or

(b) for stylistic effect its predicate is preceded by one

of the clause particles k̓i?, ?uɬ, məɬ. Constructions of
the latter type have been presented as examples pertinent
at other points of the discussion; however, they require
additional comment here.

    Consider the sentence

  k̓əl nəspíləm ki? kən xʷùy̓. '[It was] to Nespelem that I
    went.'

The predicate kən xʷúy̓ 'I went' is in fact relativized by
means of the clause particle ki?. k̓əl nəspíləm does not
occur as an independent sentence (nəspíləm by itself, of
course, constitutes a full sentence 'It is Nespelem.') al-
though it can occur as a responsive (fragmentary) utterance
to the question

  k̓a ?kín ki? kʷ xʷùy̓? 'Where was it that you went?'

The normal reply to such a question is

  k̓əl nəspíləm ki? kən xʷùy̓.

or, as an alternative that does not employ the use of the
word xʷúy̓ 'go',

  wáy̓, k̓əl nəspíləm. 'Well, it was to Nespelem.'

    The relativization of kən xʷúy̓ in examples such as
these is not obligatory, and in fact one finds

  k̓əl nəspíləm kən xʷùy̓. 'To Nespelem I went.'

but this last case is the exemplification of the emphatic
use of sentence-initial complements mentioned above under
(a) and it may imply a variety of factors such as:

'To Nespelem I went, [not Omak].'

'To Nespelem I went [I repeat/I swear ...].'

etc.

What needs to be said is that the sentence

kən x^wúy̓ k̓əl nəspíləm. 'I went to Nespelem.'

is the normal (basic) declarative sentence, and that the

other sentences are secondary (derived) types. (In a trans-

formational treatment, these latter would be derived from

the first by means of transformations.)

4.4. Clauses. A clause contains a predicate as head. It may consist of a predicate alone, as shown by many earlier examples, or it may contain one or more complements, as in

kən xʷúy̓ k̓əl cítxʷs. 'I go to his house.' (kən xʷúy̓ predicate 'I go'; k̓əl cítxʷs complement 'to his house')

Clauses may further be introduced by (have as their immediate constituent partner) a <u>clause particle</u> that modifies them in some specific way. For example,

cakʷ kən xʷúy̓ k̓əl cítxʷs. 'I should go to his house.' Clause particles define further clause types.[1] They are of of two types, <u>independent clause particles</u>, and <u>dependent clause particles</u>. Independent clause particles introduce clauses which may stand alone as independent sentences, simple or compound; dependent clause particles introduce dependent clauses. Clause particles are charted below (in underlying form) so as to reflect the normal order of occurrence of each particle relative to other particles.

CLAUSE PARTICLES

Independent
clause
particles

//háʔ simple interrogative	naxmɬ contrastive	ʔaɬíʔ causal	ʔcm probable
ʔúc dubitative interrogative	ʔtxʷ evidential	cakʷ conditional	mt conjectural
ʔuɬ additive			mi future
			nixʷ additional

Dependent
clause
particles

	mɬ additive		ki? relative
	ʔkm alternative		//

4.41. Interrogative.

4.411. Simple interrogative. //há?// is the interrogative independent clause particle. Often, though not always, its immediate constituent partner is a whole sentence. One peculiar characteristic of há? is its tendency to be repeated at the end of the sentence, especially in stereotyped expressions such as

  há? nak̓ʷəm hà?. 'Is that so?'

in which the predicate nák̓ʷəm is a restricted word meaning 'indeed' (4.53).

The intonation of interrogative sentences can be mapped thus: ⌐‾⌐‾—— . The pitch of the first stressed vowel is the highest in the sentence, dropping rapidly and remaining level for the rest of the utterance. Those clauses in which há? is both clause-initial and clause-final, exhibit a sharp rise in pitch in the last vowel. However, whereas each interrogative sentence is obligatorily marked by the interrogative contour, the use of the particle há? is optional.

(Morphophonemic note: when há? occurs before a word beginning with a, the glottal stop is usually lost, with a resulting long a.)

Examples of initial há? in a dependent, responsive, or in a fragmentary sentence:

há? təl iskíwəlx? 'Why, because I am old?' (interrogative-
ablative my-old-progressive)

há? ?axa? ancítxʷ? 'Do you mean your house?' (inter-
rogative this-obviative your-house)

há? scəkínx? 'What's the matter?' (//há? s-əc-?kín-xx//
'interrogative absolute-actual-interrogative-progressive')

Examples of clause-initial <u>há?</u>:

há? kʷ ckícəms ẏi t sqílxʷ? 'Did somebody get to you?'
(More literally, 'Were you approached/attacked by some
people?')

há? kʷ kskʷənɨxʷə?ílta?x? 'How many times are you going
to hold the baby?' (//há? kʷ kɨ-s-kʷin-ɨ-xʷ?-(í)lt-x-
a?-x// 'interrogative you unrealized-absolute-how many-
formative-hold-child-inchoative')

4.412. The dubitative interrogative particle is
//?úc//. It is not a very common particle.

?úc kʷu ksɨxʷpnúys? 'Maybe I'll get away from him.'
(More literally, 'Maybe he won't catch me' or 'Will he
catch me? [I don't know.]' Informant's comment: 'He
has his fingers crossed.')

?úc kʷ?àyx̌ʷt? 'Are you tired?' [You shouldn't be.]'

?úc mi kən qʷəlqʷílt? 'Will I be allowed to talk?'

ʔúc wayʔ kʷinməʔàntpʔ 'Have you really decided?' ('Is
that really your decision?')

4.42. Conjunctive.

4.421. Independent clause conjunctives.

4.4211. Additive. The particle //ʔuł// is the most
common of all Colville clause particles. Its function is to
connect constructions by introducing a notion, a development,
a state in keeping with the situation previously established,
be it expressed or implied.

In English it is usually glossed as 'and' or 'so', but
very often not translated at all. ʔuł often opens an utter-
ance and it is profusely used by many speakers at points of
indecision, pause, or hesitation. A form ʔúłiʔ has been
observed (cf. 4.511). It is considered a fossilized derived
form //ʔuł-iʔ// 'and-past'.

The following narrative passage exemplifies the uses of
ʔuł:

[a] ʔixiʔ xaʔtúscəlx ẏi ʔilmíxʷəmsəlx. [b] ʔuł kstəmkəʔ-
ílt. [c] wayʔ ʔuł taʔkəmxəwílx. [d] wayʔ ʔuł tkłmílxʷ ẏi
stəmkəʔílc. [e] ʔuł swəynúmtx. '[a] This one was their
leader, their boss. [b] And he had a daughter. [c] She
was becoming a woman. [d] Yes, his daughter was already

a woman. [e] And she was good looking.'

4.4212. Contrastive. //naxmɪ// is a particle that introduces an independent clause. However, the notion contained in this clause takes exception to an earlier statement, assumption or premise, be it expressed or implied. naxəmɪ is usually glossed as 'but , however'.

xʷúyəx, nəpqʷəmnîtkʷəntxʷ yi scim, nàxəmɪ lut ti aksʕácəm. 'Go, throw the bones in the water, but don't look!' (//xʷúy-x n-pqʷmn-(î)tkʷ-n-t-(î)xʷ yi scim naxmɪ lut ti an-kɪ-s-ʕác-m// 'go-imperative locative-throw-water-active-transitive-you definite bones contrastive not evidential your-unrealized-absolute-look-middle')

nàxəmɪ ikspúlstəm ʔiti? yi kʷu pulsc istəmkəʔîlt. 'But I am going to kill the one who killedmy daughter.' (//naxmɪ in-kɪ-s-púl-s-t-(î)m ʔit-î? yi kʷu púl-s-t-(î)s in-s-tmkə?-(î)lt// 'but my-unrealized-absolute-kill-causative-transitive-indefinite this-proximate definite me kill-causative-transitive-he my-absolute-daughter-child')

4.4213. Additional. //nixʷ// is most commonly translated into English as 'also, too, even, again'. It defines the clause it introduces as similar in content or result to a previously expressed or implied condition.

nixʷ nəłíptəmən ł ikscut x̣əí stím luti? kən ckícx. 'Again
I forgot to say what my excuse is for not coming.'
(//nixʷ n-łíptm-n-t-(í)n ł in-kł-s-cú-t x̣l stím lut-i?
kn c-kícx// 'again locative-forget-active-transitive-
-I sequential my-unrealized-absolute-say-stative causal
what not-past I cislocative-reach')
nixʷ ?ixí? łpəlàk. 'He too turned back.'

4.422. Dependent clause conjunctives,

4.4221. Additive. //mł// is the dependent counterpart
of ?uł. It cannot occur sentence-initially; the clause in-
troduced by məł is the logical or temporal sequence to a pre-
viously expressed notion. An English gloss that approximates
this notion is 'then next'. A form məłi?, parallel to ?ułi?
(cf. 4.4211) has been recorded.

The following passage exemplifies the use of məł:

[a] x̣ʷúy̌, məł x̣ʷícəłc y̌i xa?xa?íc ... [b] kʷís y̌i pəptw-
ìna?xʷ, məł kəlkíca?s, məł kʷums lə sənkə?ína?s. '[a] He
would go, and give it to his grandmother ... [b] The old
lady would take it, then she would wrap it, and then she
would store it in [under] her bed.' ([a] //x̣ʷúy̌ mł x̣ʷíc-
ł -t-(í)s y̌i xa?-xa?ít-s// 'go and-then give-expressed
goal-transitive-he definite grandmother-his'; [b] //kʷín-
n -t-(í)s y̌i p-ptwína?xʷ mł klk̲-(í)ca?-n-t-(í)s mł kʷúm-

n -t-(í)s 1 s-n-k̓ə?ína̓-s// 'take-active-transitive-she
definite old-lady and-then wrap-blanket-active-transitive-
-h.e and-then store-active-transitive-she locational ab-
solute-locative-bed-hers')

4.4222. Alternative. //km̓// is a conjunctive particle
meaning 'or'. It never occurs initially in independent sen-
tences.

ksqʷəlqʷələnwíxʷa?x, kəm̓ sx̣ʷúsəm p ksə?ił̓na?x. 'There is
going to be a pow-wow, or [maybe] you folks are going to
eat foam berries.' (//kł-s-qʷl-qʷil-nwíxʷ-x-?a-x km̓
s-x̣ʷus-m p kł-s-?ił̓n-x-a?-x// 'unrealized-absolute-talk-
talk-reciprocal-inchoative or absolute-foam-middle you pl.
unrealized-absolute-eat-inchoative')
mət skəmxíst, kəm̓ mət səmx̣íkən. 'It was maybe a black
bear, or maybe a grizzly.' (maybe black-bear or maybe
grizzly)

4.4223. Causal. We have seen that məł is the dependent
sequential counterpart of ?uł. //?ałi?// 'causal' is the
dependent non-temporal counterpart of ?uł. Its function is
to introduce a clause which logically is a sequel to, a con-
sequence of, the reason for, a given premise. The premise
may be expressed or implied.

ʔixí? ikɨtkɨmɨlxʷ, ʔałi? qʷəqʷənə?qʷána?t. 'This one is

going to be my wife, because she arouses pity.'

kən cxʷúy, ʔuł ʔałi? kʷ inx̣mínk. 'I came because I like

you.' (More literally, 'I came, and that's because I

like you.')

4.43. Evidential. //tx̌ʷ// 'evidential' is used fairly

frequently in narration and in conversation. It appears to

be the clause level counterpart of ti, exempting the speaker

from responsibility in what he is reporting. It may be

glossed 'apparently', although informants usually do not

translate it at all.

ʔuł stím ʔixi? sckʷùləs?--təxʷ sqílxʷ. 'And what is his

[line of] work?--Apparently Indian work.' (//ʔuł stím

ʔix-í? s-əc-k̓ʷúl-s tx̌ʷ s-qilxʷ// 'and what this-proximate

absolute-actual-make-his evidential absolute-Indian')

ʔilí? ʔuł ksə?stkína?, təxʷ ʔałi? ʔístkəm. 'He settled

there for the winter because it was already winter.'

(//ʔilí? ʔuł kɨ-s-?istk-ína? tx̌ʷ ʔałi? ʔistk-m// 'be-

there and possessive-absolute-winter-time evidential

causal winter-middle')

4.44. Modal Particles.

4.441. Conditional. //cakʷ// 'conditional' adds to

its IC partner the notion 'should', 'would', or 'wish'.[2]

cakʷ suliʔ ckícx! 'Wish that Julie would get here!'

cakʷ ʔalá? kiʔ nəʕcùsəntəm. 'We should set a trap for it
right here.'

In complex sentences cakʷ is the IC partner of the de-
pendent clause (the protasis); the independent clause con-
stitutes the apodosis. These constructions are roughly
equivalent to the English 'if ... then ...'.

cakʷ swit kʷu łxʷícəłcəlx inəʔìstən, waẏ təwmístən. 'If
someone gave me back what I paid for it, I'd sell it.'
(//cakʷ swit kʷu ł-xʷíc-ł-t-(í)s-lx in-ʔis-t-n waẏ tw-
m-í-s-t-(í)n// 'should someone me back-give-expressed
goal-transitive-he-plural my-pay-stative-instrumental
it-is-so sell-middle-secondary-causative-transitive-I')

4.442. Probable. //cm̀// is a particle that marks the
contents of the clause it introduces as probable.

nəcíxcəxəls, ʔałiʔ cəm̀ kʕʷuʔncútəmsəlx. 'This is shame-
ful, because people might laugh at it.' (//n-cix-cx-
(í)ls ʔałiʔ cm̀ kʕʷuʔ-n-t-sút-m-s-lx [this form involves
more than one derivational cycle]// 'locative-shame-
state of mind causal probable laugh-active-transitive-
reflexive-middle-his-plural')

cəm̀ cútəlx: lút. 'They might say: No.'

4.443. Conjectural. //mt// marks the contents of the clause it introduces as possible (but in doubt).

mət təwmísc Myrtle y̓i cìtxʷs. 'Myrtle's house must have been sold.' (//mt tw-m-í-s-t-(í)s ... y̓i citxʷ-s// 'conjectural sell-middle-secondary-causative-transitive-she ... definite house-hers')

mət k̓ʷənxásqət ki? łyaʕápəlx. 'It was an indeterminate number of days before they all returned.' (//mt k̓ʷinx-(á)sqt ki? ł-yaʕ-p-lx// 'conjectural how many-days relative back-gather-non-control-plural')

4.45. Future. //mi// is a particle which marks its (independent) clause as future.[3]

?ixì? mi kən ckícx, ?ixì? mi kʷu tkʷə?út. 'Then I will return here, and that's when we will go away.'
?ilí? mi kən púlx. 'It's there that I will camp.'

4.46. Relative. //ki?// is a dependent clause particle that occurs obligatorily with a preceding predicative con-stituent. It is a relativizing particle, pinpointing, spe-cifying or expanding the notion contained in the preceding clause. The reference may be temporal, spatial, or causal. It functions very much like the English conjunction 'that' in sentences like 'It was there that ...'.

swít ki? kʷis ẏi sq̓ʷəq̓ʷíməlt?   'Who was it that took the baby?'

?ilí? ki? cƛ́əlpùƚaxʷ.   'It was there that we camped.'
(//?ilí? ki? əc-ƛal-p-(ú)ƚaxʷ//   'be-there relative actual stop -non-control-land')

For further discussion related to ki?, cf. 4.33.

4.5. Restricted words. It has been stated that
Colville independent words are predicative. By themselves
they constitute full sentences. However, the function and
distribution of a number of independent words is restricted.
Consider the restricted word k^wmíɫ 'it was suddenly/unex-
pectedly that ...':

(a) it can occur (as the first clause) in a compound
sentence

   k^wmíɫ ʔuɫ x^wúy̓. 'He went suddenly.' ('It was suddenly,

   and he went.' Cf. sqílx^w ʔuɫ x^wúy̓. 'The Indian went.'

   ['He was Indian, and he went.'])

(b) it can occur as the predicate followed by a complement
in a simple sentence

   k^wmíɫ x^wùy̓. 'He went suddenly.' (Cf. sqílx x^wùy̓. 'An

   Indian went, [not someone else].' Cf. also the non-em-

   phatic sentence x^wúy̓ sqílx^w. 'An indian went,' to which

   there is no parallel form *x^wúy̓ k^wmìɫ.)

(c) it can appear in the same position that an independent
sentence would appear in, in a complex sentence

   k^wmíɫ kiʔ x^wùy̓. 'He went suddenly.' ('It was suddenly

   that he went.' Cf. sqílx^w kiʔ x^wùy̓. 'It was an Indian

   who went.')

(d) but it cannot occur alone as the predicate of a simple
independent sentence. k^wmíɫ does occur by itself as a re-

sponse, but it is felt to be incomplete--a fragmentary sen-
tence (cf. the opening paragraph of section 4.)

kən sqílxʷ. 'I am an Indian.'

kən xʷúy̓. 'I go.'

(but not *kən kʷmíł.)

sqílxʷ. 'He is an Indian.'

xʷúy̓. 'He goes.'

(but not *kʷmíł.)

Thus,

(a) restricted words as predicates are always accompanied
by other independent words;

(b) restricted words, with the exceptions noted below, do not
participate in the inflectional and derivational patterns
characteristic of other independent words.

Some of the words discussed in the following sections
meet both these conditions; others only one of the two.

4.51. Impersonals are restricted words. Most commonly
they introduce a dependent clause, as exemplified in section
4.5, example (c), above; often they also occur in compound
sentences, as exemplified in (a); and sometimes before a
complement in a simple sentence (b). In English they are
usually glossed with adverbial phrases.

4.511. Imperfective impersonals. q̓əsápi?, ʕápna? and nəy̓ʕíp are three restricted words which share the unifying semantic feature 'duration of time'. They are imperfective. They share a segment p̲ which may well be, or at least it is probably historically related to the suffix //-p// 'non-control' (3.113).

q̓əsápi? refers to duration of past time and can be translated 'for a long time it used to be that ...', 'it has been a long time since ...'

Comparative evidence shows that this form can be analyzed as //q̓as-p-i?//: q̓as 'long time, old'; -p 'non-control'; -i? 'past'. In Colville //-i?// is a very rare morpheme. It occurs with two intransitive stems, púti? 'it was just then' (cf. pút 'it suffices'); and lúti? 'it was not' (cf. lút 'it is not'). Interestingly, it also occurs attached to two particles which, otherwise, <u>never</u> undergo inflection or derivation: ?úłi? 'and, in the past' (cf. ?uł 'and'); and məłi? 'and, subordinate, in the past' (cf. məł 'and, subordinate').

q̓əsàpi? y̓i sqilxʷ sə?íłəns y̓i sƛ̓a?cínəm. 'For a long time the Indians used to eat deer.'

q̓əsápi? sənkʷəkʷə?àc. 'It was long after dark.'

q̓əsápi? has been found in the absolute mode, conjugated with the third person absolutive pronoun, sq̓əsápi?s 'it was

a long time.' This form is fully predicative, and can
occur as an independent sentence, in isolation.

ʕápnaʔ refers to duration of present time and can be
translates 'it is now that ...'

   ʕápnaʔ kʷu ksyaʕəmìxaʔx.   'It is now that we are all
      going to gather.'
   ʕápnaʔ skəlàxʷ.   'It's this evening.'

nəyʕíp is probably related to yaʕ 'gather' (cf. the
example four lines above).[4] It refers to duration of time
without specification of tense and can be translated 'it is/
was/will be continuously/forever/always that ...'

   nəyʕíp cùntəm t ʔilìkʷəlkxən ...   'Ramhorn kept telling
      him ...' (More literally, 'It was over and over that
      he was told by Ramhorn ...')
   nəyʕíp lut skəwàps.   'All the time it wouldn't stop.'

   4.512. Perfective impersonals. Two restricted words
share the semantic feature 'specific point in time': kʷmíɬ
'it is/was at once/suddenly/unexpectedly that ...'; and
qʷúm 'it was at a particular moment long ago that ...'

   kʷmíɬ kiʔ kʷu cùsəlx.   'It was unexpectedly when they
      told me that.'

ti kʷmíɫ silxʷatwílx. 'Suddenly she grew large (as from

   pregnancy).'

kʷmíɫ qʷəlqʷílstəm ẏi t scíms. 'It was suddenly that that

   pile of bones began to talk.'

qʷúm kiʔ wikən isənqsílxʷ. 'It was a long time ago that

   I last saw my relatives.'

qʷúm ƛ̓əlál. 'It's a long time ago that he died.'

4.513. Quantitative words. Three restricted words
have quantitative or limiting references: talíʔ 'it is
very much'; məyáɫ 'it is too much'; and kmíx 'it is only...'
These words do not occur in the environment described in
section 4.5(c).

talíʔ kən ʔáyxʷt. 'I am very tired.'
talíʔ smánxʷ. 'There is a great deal of tobacco.'

məyáɫ smíkʷət. 'There is too much snow.'
məyáɫ tətáqaʔt. 'He is too short.'

kmíx has a dialectal variant kmáx which is used as
the norm by those Colville speakers who lived as children,
or still live in the northern portion of the Colville
speaking territory.[5]

kmíx incáʔ. 'There is only me.'
kmíx scqʕáwx. 'He is always drunk.'

<u>kmíx</u> undergoes some inflection, albeit very limited.
Cf. the defective paradigm (other forms seem to be lacking):

    kʷu kəmxáx. ʷWe are by ourselves.'

    kəmxáxəlx. 'They are by themselves.'

    ckmáxəlx ~ ckəməmáxəlx. 'They are all by themselves.'

The last form is apparently a diminutive as shown by the
glottalization of <u>m</u>).

    4.514. Assertive. <u>wáy̓</u> regularly occurs in isolation,
usually as a responsive utterance. When so uttered it is an
assertive positive form signaling agreement or concurrence
with the interlocutor's yes-or-no question, or statement.
It can also be followed by a positional complement reaffirm-
ing the first interlocutor's statement or question, much
as in English one would say, 'Yes, I/it/they...do/did/
went...', etc.

    When <u>wáy̓</u> opens an independent (non-responsive) sentence,
it signals that the statement about to follow is an asser-
tion, and its function may be compared to the stylistic
effect obtained by 'well' in an utterance such as 'Well,
it finally worked.' In such cases it is accompanied by a
rising-falling pitch contour.

    It should be noted that <u>wáy̓</u> bears a phonetic resem-
blance to <u>ʔíwaʔ</u> (see 4.223), and to the root <u>wíy̓</u> 'complete,
finish', and that both may be related to <u>húy</u> 'finish'.

ʔúc kʷ xʷùy̓ʔ--wáy̓. (kən xʷúy̓.) 'Did you go?--Yes, I
did. (I went.)'

wày̓ kən pəptwína?xʷ. 'I am sure an old lady.'

wày̓ kʷ inx̣əmínk. 'I really like you.'

4.515. Topicals. All topicals are restricted words.
They occur sentence initially as predicates, roughly trans-
latable as 'It is that ...', 'It is from /to here/there
that ...'; and similar expressions. They do not occur alone
as predicates. Topicals are part of the Colville deictic
system, which is convenient to discuss here as a whole.

4.5151. All deictic words are compositional in nature.
Their bases are of the shape ?VC$_1$(C$_2$). To them are added
two suffixes, //-î?// 'proximate', and //-â?// 'obviative';
the root vowel V harmonizes with the suffix vowel: it is
i̲ before //-î?//, and a̲ before //-â?//.

With the exception of the consonant x̲ (C$_1$ in ?ixî?
and ?axá?), C$_1$ and C$_2$ are clearly related to particles found
in the language (Cf. 4.32): //t// 'source'; //l// 'location';
//k̓// 'motion toward'. In addition, the combination of
these elements yields additional forms: //tl// 'direction
from'; //k̓l// 'direction (in)to'. Forms with x̲ are the un-
marked, generic deictics.

The Colville topical deictic words are:

//ʔVx-í?// ʔixí? 'It is at this place/time (proximate)

that ...', 'It is he (proximate) who ...' etc.

//ʔVx-á?// ʔaxá? 'It is at this place/time (obviative)

that ...' etc.

//ʔVt-í?// ʔití? 'It is he (proximate) who ...' etc.

//ʔVt-á?// ʔatá? 'It is he (obviative) who ...' etc.

//ʔVt-1-í?// ʔitləi? 'It is from there (proximate) that ...'

etc.

//ʔVt-1-á?// ʔatlá? 'It is from there (obviative) that ...'

etc.

//ʔVk̓-1-í?// ʔikəlí? 'It is to there (proximate) that ...'

//ʔVk̓-1-á?// ʔakəlá? 'It is to there (obviative) that ...'

It is the rule that of any of two items in pairs exhibiting the opposition 'proximate': 'obviative', the proximate forms are the more common, by the approximate ratio of 4 to 1. No topical word has been found to combine with any further affixes or with any particles to yield more complex forms, with two rare exceptions: ʔixíʔəm and ʔaxáʔəm (of meanings identical to ʔixí? and ʔaxá?, respectively), which appear to be middles.

By far the most common type of construction that involves topical words is one in which the topic is followed

by a simple sentence, predicate and optional complement(s).
To exemplify effectively the proximate and obviative func-
tions of these words, longer contexts will have to be quoted.

[a] lut sq̓əsápi?s,   'It wasn't long (after that),

[b] wáy̓, ?ixí? ?uɬ silxʷa- well, it happened, she grew

twîlxs.   larger.

[c] ?ixî? stxtətí?sc.   The fact was that she was

pregnant.

[d] ?uɬ ?axá? nəstils y̓i   And at this point the girl

sta?k̓əmîx: ...   thought: ...

[a] ?itî? sxʷstálqʷs   'It was (from) there that Ape

spapʕàɬa?.   had crossed (on) the log.

[b] "ta ?kín ki? kʷ   "Where is the place where you

nî?ak̓ʷ?"   crossed?"

[c] "?atá? kən ctkxmálqʷ." "It's right here that I crossed."'

ksx̣əlpína?əlx, ?uɬ ?itlî? xʷúy̓əlx. 'Daylight came upon

   them, and from that moment they started their journey.'

ʕácənt! ?atlá? kʷ ?uckəlîpəm. 'Look! You can get down

   to the bottom (of the canyon) from here.'

?ik̓əlí? ki? xʷúy̓əsc. 'It was there that we took him.'

cakʷ kən kscîmxa?x ?ak̓əɬá?. 'I should move to this place

   (not stay where I live).'

4.5152. The remainder of the deictic system. In addition to the eight deictic forms just discussed, all found to be restricted words, two other forms complete the system, both independent words. They are

//ʔVl-íʔ// ʔilíʔ. 'It's here/there (proximate).'

//ʔVl-áʔ// ʔaláʔ. 'It's here/there (obviative).'

(Cf. //l// 'location')

Unlike all the other deictics, <u>ʔilíʔ</u> and <u>ʔaláʔ</u> undergo inflection and derivation freely. In addition, they may stand alone as simple predicates:

//ʔVl-íʔ// ʔilíʔ. 'He lives here.'

kən ʔilíʔ. 'I live here.'

kʷu ʔaláʔ. 'We live here.'

sənəʔilítəntət. 'This is our residence.' (//s-n-ʔVl-íʔ-t-n-tt// 'absolute-locative-be there-proximate-stative-instrumental-our')

The following chart summarizes the Colville deictic system.

	Generic (x)	Source (t)	Direction from which (tl)	Location (l)	Direction to which (ǩl)
Prox.	ʔixíʔ	ʔitíʔ	ʔitlíʔ	ʔilíʔ	ʔiǩəlíʔ
Obv.	ʔaxáʔ	ʔatáʔ	ʔatláʔ	ʔaláʔ	ʔaǩəláʔ

4.5153. Certain forms have been found that appear to function as deictic (restricted) words, but do not lend themselves to extensive analysis and discussion. It is extremely rare to find them used in normal speech situations, and attempts to elicit material that could clarify their functions have so far proved ineffective. They are ɬa? 'near', and ɬu?, of undetermined meaning. Forms that may be cognate with these have been described for other Interior Salishan languages: Coeur d'Alene, Columbian, Kalispel and Spokan.

4.52. Interrogative-indefinites. Not all of the interrogative-indefinite roots form restricted words. Cf., for example, the root //?kín// 'happen', which forms intransitive stems that stand alone as full predicates, and otherwise function like independent words.

//s-əc-?kín-xx// scəkínx. 'What's the matter with him?'
kʷ scəkínx. 'What's the matter with you?'
lut kən ti cəkínəm. 'As you can see, nothing has happened to me.'

//?kín// may also cooccur with several particles, forming elements which function very much like the impersonals discussed above:

//1 ʔkín// la ʔkín 'Where is it?'

k̓a ʔkín 'Where has it gone?' ('To where is it?')

tla ʔkín 'Where did it come from? ('From where is it?')

Examples in longer sentences follow.

k̓a ʔkín ʔuɬ kʷ xʷùy̓. 'Where is it you went?'

k̓a ʔkín kʷ xʷùy̓. 'Where did you go?'

k̓a ʔkín kiʔ kʷ xʷùy̓. 'Where is it that you went?'

In contrast with ʔkín, the independent words stím̓
'what', and swít 'who', also interrogative-indefinite words,
are restricted.

stím̓ ʔaxà?. 'What is this?'

lut stím̓. 'It's nothing.'

stím̓ ck̓ʷùɬəsc. 'What's he doing?'

swít askʷìst. 'What's your name?' (Note that *stím̓ as-
kʷìst is not permissible.)

swít ʔaxà?. 'Who's that person?'

lut swít. 'It's nobody.'

yayaʕt swít. 'It's everybody.'

There is, however, one example in the corpus in which
stím̓ undergoes affixation typical of an independent word:

lut t̓i kstím̓əlx. 'As you can see, they have nothing.'

(//lut t̓i kɬ-stím̓-lx// 'not evidential possessive-some-
thing-plural')

4.53. Interjections very often occur as isolated utterances; elsewhere they are always analyzable as independent clauses in compound sentences. Some common interjections are:

məʕán. 'Surprise!'

kmátəm. 'That's right!'

nətáʔ. 'Good!'

níkxnaʔ. 'My goodness!!'

ʔámsəm. 'Poor thing!'

ʔáx̣. 'Disgusting!'

nákʷəm. 'Indeed!'

4.54. Proper names do not undergo inflection. In addition to native place and personal names, Colville has borrowed a great number of proper names, primarily from French, but also from English.

kʷikʷitás. 'He is kʷikʷitás.'

siʔpícaʔ. 'She is siʔpícaʔ.

supíʔ. 'She is Sophie.'

susáp. 'He is Joseph.'

nəcaʔlíwəm. 'It is [the town of] Inchelium.'

wahúʔ. 'It is Hawaii.' (Oahu?)

4.55 Independent pronouns. Although independent pronouns can stand alone as predicates, they do not undergo any derivation beyond that described in section 3.172. In any given sentence they can function as predicates or as complements.

inca̧? kən x^wùy̧. 'It is I who went.'

inca̧? ki? kən x^wùy̧. 'It is I who went.'

cúntəm t inca̧?. 'Someone was told by me.'

4.56. Some problematic restricted words. In this section are presented

(a) words that at the present stage of research are difficult to classify; and

(b) words that participate widely in inflection and derivation, but whose frequency of occurrence is overwhelmingly in their uninflected form.

A brief discussion of both types follows.

4.561 Words difficult to classify.

ni̧nəwi? is a quite common word. It is translated by the informants in a bewildering variety of ways. It is impossible at this time to be certain of its basic meaning(s). The one tenuous evidence of a common denominator involves the concept of 'contingency'. Except for one case, a stereotyped expression, the reference is to future time. I can

only list a few of the more plausible ways to render it in English: 'If and when that happens...', 'It may happen that...', 'There will probably be...'

nínəwi? kənxítəmt. 'If that happens we will help.'
nínəwi? ?ałəʕałəcínəməncən. 'When that happens I will chew you up.'

nínəwi? is involved only in two stereotyped expressions, tə snínəwi?. 'It was a little while ago.', and kʷaʔ nínəwi?. 'It will be in a little while.'

síc is readily glossed by the informants. They usually translate it 'new'. However, the range would seem to be somewhat broader than that gloss would suggest.

?ixi? anłqʷíkəntən síc. 'That tire of yours is new.'
sic xʷíkʷsəlx. 'Tanning hides is just this [what I have been describing].'
sic cús. 'He finally spoke to him.'

4.562. pút and lút are two very common words. Although they can undergo extensive derivational and inflectional changes, they nearly always occur uninflected.

//pút// means 'It is just/enough.':

put kən x̣stwî1x, mi sic kən ʔácqaʔ. 'Just when I get

 better, [that's when] I'll come out.'

nəpútəls. 'He is satisfied.'

//lút// is the negative stem 'It is not.'

ʔúc kʷ ʔàyx̣ʷtʔ--lút. 'Are you tired?--No.'

lút ʔayx̣ʷt。 'He's not tired.'

sclútəm. 'He refuses.'

kslúts. 'He is excepted.'

Footnotes

[1]We have seen that in Colville, predicates are modified by means of pronominal and other elements to mark certain relationships with the complements of the proposition. Crudely, these relationships are summarized as follows: (1) primary reference, reminiscent of English intransitive verbs; (2) transitive, reminiscent of English transitive verbs; (3) absolutive, reminiscent of English nominalizations. It is also to be noted that (4) Colville has no copula. This summary amounts to a list of Colville basic sentence types (for analogous analytical procedures applied to English, see Thomas [1965:21ff]). Clause particles (from a generative point of view) reflect the operation of certain changes on the basic Colville sentences, such as coordination, subordination, relativization, interrogation, etc.

[2]I have noticed an occational variant cak^wəm. I have not been able to determine with certainty that this is merely an optional stylistic variant of cak^w, and the possibility remains that cak^w is an independent word, perhaps restricted.

[3]A rare form mína? exists in Colville with the meaning 'will not'. Clearly it is related to mi, but the element -na? does not recur elsewhere.

⁴The relationship may be seen more clearly if it is
recognized that pre-Colville *á̠ regularly developed to modern
í except before a back consonant. Thus here an old
*//n-yaʕ-p// *nəyʕáp became nəyʕíp ~ niʕíp, while old
*//yaʕ// became yáʕ

⁵This fact surely will deserve further attention since
it has important historical implication; however, these
considerations are beyond the immediate scope of this
description.
