

Permaculture Farm Project

Survey Results & Phase One Project Design

January 2012

change your world
with permaculture

T/F: 0845 458 1805 E: farm@permaculture.org.uk www.permaculture.org.uk/farming

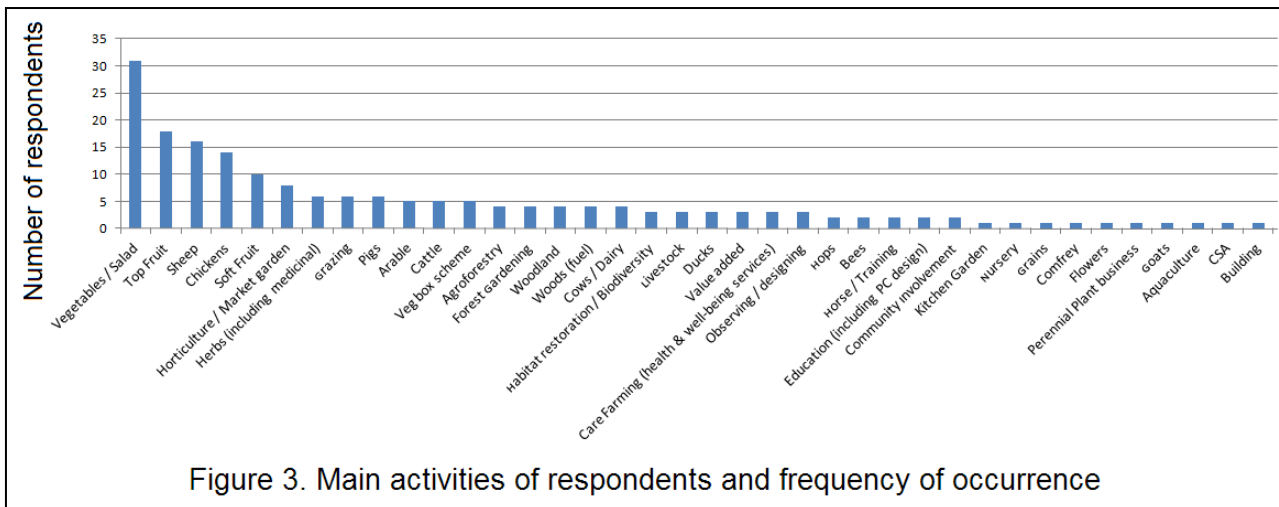

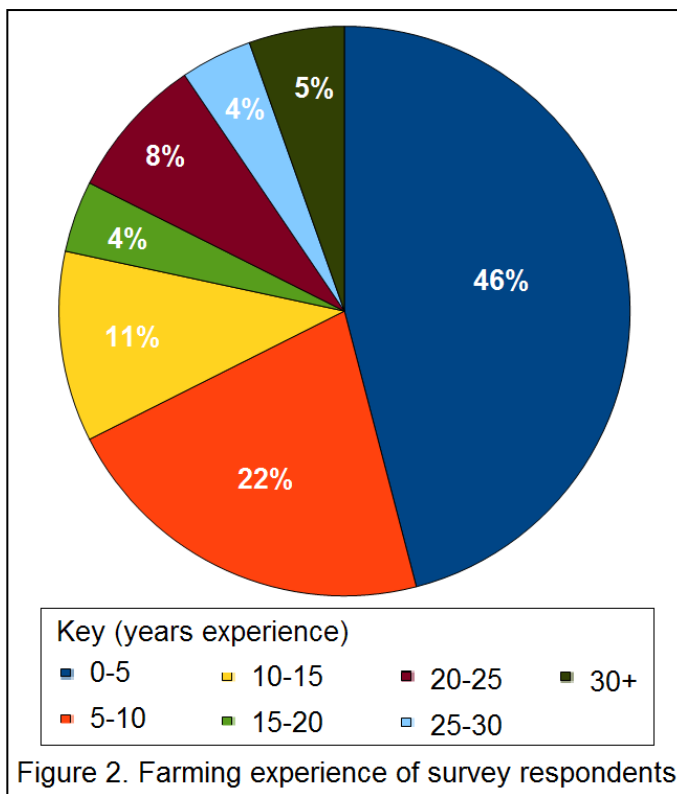

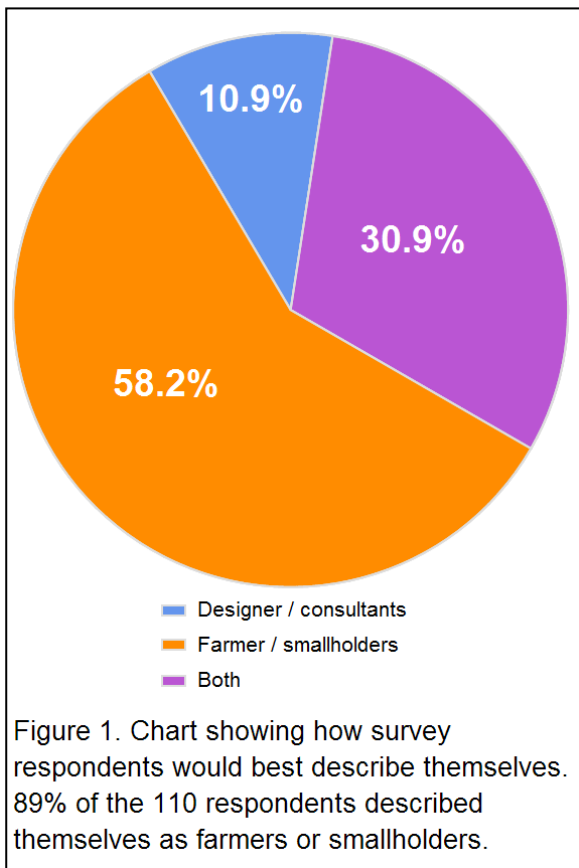

The Permaculture Association is a company (05908919) and registered charity (1116699 and SC041695)

Section One

Key results and observations from the permaculture farming project survey, released November 2011.

Part One

- Who answered the survey?
- How much farming experience do they have?
- What size holdings and farms do respondents have?
- What are their main activities?

Bin (acres)	Number of respondents	% of total acreage	% of total respondents
0-5	18	1%	25%
5-10	14	2%	19%
10-25	18	5%	25%
25-50	8	5%	11%
50-100	9	12%	12%
100-300	5	21%	7%
300+	1	53%	1%

Table 1. Holding sizes of survey respondents

Figure 4. Proportion of respondents on different sized holdings

Summary

Interesting findings about who answered the survey include the fact that nearly half of respondents have less than five years farming experience (Fig 2). In addition, nearly 70% of the survey respondents have holdings smaller than 25 acres (Table 1). These two facts suggest that this project should, at least in the main part, focus on supporting new entrant smallholders to learn how to incorporate permaculture in the design and running of their holding.

Also significant, however, was the level of respondents due to inherit large family farms and keen to learn how permaculture could be applied on a much larger scale. This highlights the importance of considering succession planning as another key aspect of this project design, as it is broadly the case that very large farms tend to be family-owned and thus will only pass to the management of another through inheritance.

The graph of main farming activities shows that respondents are clearly involved in a diverse range of activities (fig 3), with many listing two, three or more as central to their farming work. However, this question received inconsistent responses, with some people answering with only one word (typically, “mixed”), others giving much more detail. Therefore, the value of these results is questionable and arguably we still do not have sufficient understanding of what people are doing on their land in order to best direct our support.

Part Two

- What are the aims of the survey respondents?
- What challenges are farmers and smallholders currently facing?
- What skills and experience do we have already in the permaculture network?

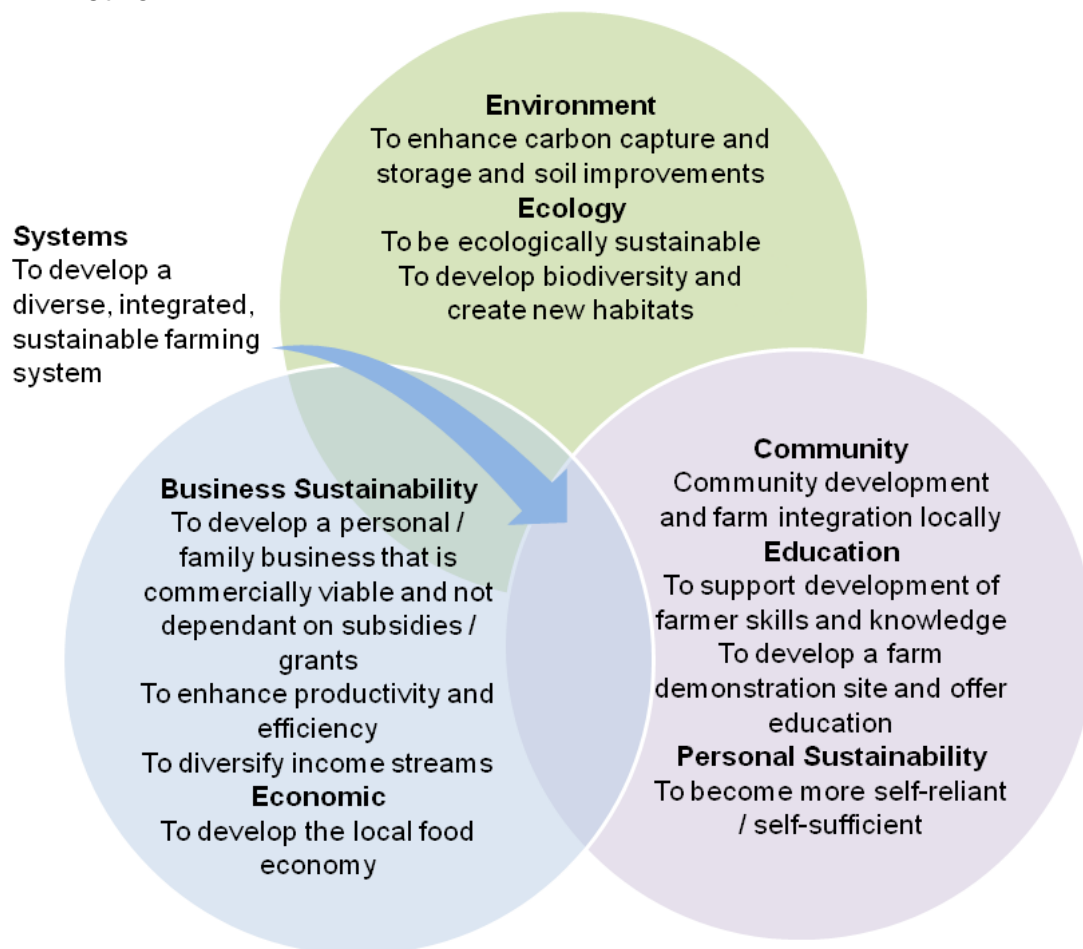

Figure 5. Summary of broad aims listed by survey respondents.

Summary

The survey elicited a wide range of broad aims and specific goals that people are working to achieve on their farms and smallholdings (fig 5). While there was a lot of overlap between respondents, ultimately people will have their own priorities, which at times may conflict with others'. Awareness of this diversity is important in order to be able to design a project that suits as many different needs as possible.

Challenges and Opportunities

The following sections summarise the challenges and opportunities described in survey responses. 'Challenges' refers to any of the major obstacles respondents have faced and would like this project to help them overcome. 'Opportunities' is a term we have derived from the survey question that asked respondents to tell us what elements of their holdings are working well or have been successful in the past. This elicited a wide range of responses; indicating the high level of skill, innovation and achievement already occurring in the permaculture network. This project aims to harness these opportunities in order to address the challenges currently being faced by permaculture farmers and smallholders.

Please have a look through the challenges and opportunities, considering which you feel ought to be the priorities for this project and how they might be best tackled.

Challenges – things that are holding us back as a network	Use this space for notes or comments
Business development	
<p>Policy and planning issues Planning permission Ability to live on-site Lack of support for low-impact living Achieving change-of-use permission Conservation rules and regulations Access to advice Access to land</p>	
<p>Farm conversion process Design skills: knowing the options and making choices</p>	
<p>Project management skills Managing staff and volunteers Marketing</p>	
<p>Land management skills Learning horticultural skills Acquiring appropriate tools and equipment</p>	
<p>Lack of start-up capital Finding grant aid Delaying planning and implementation To establish structural infrastructure</p>	
Achieving a sustainable income	
<p>Finding a reliable market Limited local markets Cannot sustain a viable income Consumer apathy / ignorance Competition from / control of supermarkets Turbulence: fluctuating prices Dependence, e.g. on contractors</p>	
<p>Marketing</p>	
<p>Land management skills</p>	
<p>Project management skills Managing staff and volunteers</p>	
<p>Limited Time To design For office work By having two jobs</p>	
<p>Business finances High input costs, e.g. fuel, animal feed, labour, etc. Debt management The need to diversify business activities</p>	
<p>Labour Availability of skilled growers Finding (motivated) people Supporting workers Accommodation needs Wages: Unviable</p>	

Environmental	
Wind exposure Slowing growth of orchard	
Water Too much Affecting animal health Too little Establishing catchment and storage systems Irrigation requirements	
Disease	
Pest management Establishing an integrated system	
Weeds Dealing with annual weeds	
Weather conditions Short growing seasons Harsh winters Erratic climate	
Wild animals Foxes Deer	
Soil Acidity Low fertility Water retention Shallow topsoil Compaction	
Social issues	
Community Public understanding of contemporary farming issues explaining CSA concept the role of soil in carbon sequestration Developing links with local community Building relationships and understanding	
Quality of life No leisure time Stress Tough physical work Isolation	
Succession planning Low status of farming / few opportunities for new entrants / old age of farmers	

Opportunities – what we can already do as a network	Use this space for notes or comments
Business development	
Farm-scale design and planning Policy and planning Gaining planning permission for structures, e.g. polytunnels and storage Gaining charity status Permaculture design process going well e.g. Zoning, surveying, developing a renewable energy plan Innovative design, e.g. use of vertical gardens	
Internal learning Attending courses Networking: Local contacts & advice e.g. "My managers have organised for 2 local organic growers to be on hand and act as mentors for any questions we have on the production site."	
Labour Engaging volunteers Finding skilled workers	
Capital Successful grant applications Environmental Stewardship schemes	
Finding a reliable market Some success found through: Farmers' markets Veg box schemes CSA business model Food festivals Farm gate sales Local co-operative markets Supplying local health food shops	
Successful diversified activities, e.g.: Fishing Accommodation Value adding activities	
Succession planning Some success in engaging parents	
Environmental	
Productivity High productivity from established polycultures Good for the amount of labour / inputs Ability to supply veg boxes solely from farm	
Integrating Perennials Forest gardens: Successful establishment Woodland management Coppicing improving woodland Creating a windbreak	
Soil management	

Soil quality improving through: Minimum / No tillage Adding organic matter	
Pasture management Multi-species rotational grazing Improving biodiversity Benefitting animal health	
Water management Improving water regulation by using: No-till in dry years Mulch layer Reducing requirements in polytunnel	
Pest management Design and implementation of strategies e.g. successful method of catching rats	
Livestock Improving stock Dairy farming skills	
Chickens Crossing pullets	
Bees Bee keeping skills	
Achieving environmental objectives Improving biodiversity Habitat creation	
Social	
Engaging community Designing and hosting events Workshops Open days Parties Gatherings Care farming	
Education Running courses, e.g. Intro to permaculture, PDCs Hosting skills events e.g. "Lost Art of Compost Toilets" Establishing a forest school Guided short tours	
Building Collaborative Local Networks Attending events Cooperative approach to land use e.g. "Others use our land for bee keeping and flower growing which dovetails quite well with the veg"	

Section Two

Phase One Project Design

Figure 6. Potential project ideas as rated by respondents.

When considering the potential project ideas, it can be seen that some ideas are more popular than others, e.g. 'farm visits / tours / walks' was rated as either *essential* or *desirable* by all respondents, suggesting it should be considered a priority (fig 6). In contrast, the idea that received the most negative responses was 'train a network of permaculture farm trainers', so on this occasion can perhaps be disregarded. However, overall there does not appear to be any clear winners or losers. This may be due to different interpretations of the ideas put forward, and may also reflect the diverse needs and requirements of respondents.

Given this complexity, we have decided not to disregard any of the ideas at this stage of the project design, but explore further the practical options for delivering the ideas.

Comments from the survey have been integrated into the project ideas, so that some have already been developed further. We now want you to look through the ideas already listed and comment on which ideas this project should focus on and how they could be effectively delivered. Now is the time for prioritising the ideas and clarifying the details of delivery.

The diagram below displays the ideas in an alternative way, considering the ways in which each may contribute to supporting farm-based or online learning and networking within the project. You may find this a useful way to decide which idea(s) ought to be focused on in this project design.

Type of knowledge exchange	Where	
	Farm / land based	Online
Practical	<ul style="list-style-type: none"> • Farm visits / tours / farm walks • Farming specific permaculture courses • Developing flagship farms for demonstration and learning • One-to-one permaculture design support for farmers • Train a network of permaculture farm trainers. 	<ul style="list-style-type: none"> • Website for storing resources and links to other initiatives and resources. • Signposting other training, consultancy and advice • Case studies and reports
Networking	Facilitating face-to-face networking	Facilitating self-organised learning
	<ul style="list-style-type: none"> • Local learning groups: people meeting to exchange experiences, improve their own activities and realise their visions • Regional and national events for information sharing. 	<ul style="list-style-type: none"> • Online maps of permaculture practitioners, projects, case studies. • Social networking facilities to enable farmers and permaculturalists to self-organise, share information and experiences. • National 'themed' learning groups, e.g. based on similar size holdings; soil types, etc.

Farming project ideas and practical options for delivery

Project activity	Options to deliver it	Your comments and notes
Online networking ideas: creating a platform for farmers to share knowledge and skills		
Support farmers to set up local learning groups and national 'themed' learning groups: farmers meeting to exchange experiences, improve their own activities and realise their visions	<ul style="list-style-type: none"> • Local learning groups: Connecting people up to others nearby or on similar holdings – matchmaking system • National learning groups: based on similar size holdings; soil types, etc. • Advice pack for farmers wanting to set up / join a group? (based on experiences of others) 	
Social networking facilities to enable farmers and permaculturalists to self-organise, share information, exchange experiences	<ul style="list-style-type: none"> • Identify existing forums and social networking sites (e.g. RegenAg google) and link to on the website. • For our website make links to: Facebook; Linked in; Twitter; etc • Create forum or google group for project? • 'organic Groups' functionality on website e.g. "permaculture and sheep", seed saving/sharing group, etc. • Use videos, workshopping and exchanging experience from across the world. 	
Online map of farms using permaculture	<ul style="list-style-type: none"> • Google map based on information given via PA web profile <i>Available to members only?</i> • <i>Distinguish different scales / types?</i> • Tags / taxonomy would be key to find the right places; including e.g. holding size, main activities, skills to share 	
Online practical resources & links to others		
Website for storing resources and links to other initiatives	<ul style="list-style-type: none"> • Use existing websites - develop farming section of Permaculture Association website: <ul style="list-style-type: none"> • Develop signposting – taxonomy and tags. • Practical resources – may need 'drop box' for larger resources. • Indication of how well tried the idea is – e.g. "it works, go for it", or "needs researching" 	

Case studies and reports	<ul style="list-style-type: none"> • Specific angle (e.g. zone 2, planning permission, community funding and/or support of local sustainable agriculture) or specific places (e.g. Ragmans Lane) • Good practice guides? 	
Signposting other training, consultancy and advice, e.g.: <ul style="list-style-type: none"> – marketing – funding & financial planning – design skills/ courses – specialist advice 	<ul style="list-style-type: none"> • Via website (& e-bulletin?) • Develop Association consultancy / brokerage 	
Farm-based practical project ideas		
Farm visits / tours / walks	• Group Visit Scheme (funded for a group)	
	• LAND walks type approach (self-organised, small fee, website used for admin?)	
	• Develop a 3 day tour – minibus and itinerary covering WETsystems, agroforestry, etc.	
Farming specific permaculture courses	• Trial a series of different options – 1 day, 2 day, 3 day.	
	• Connect people to RegenAg course listings, marketed as distinct / connected.	
	• Permaculture farming advocacy pack – presentation plus info for local activists – for farmers meetings etc	
	• Consider internships and apprenticeship opportunities	
Developing flagship farms for demonstration and learning – for farmers <i>and permaculturalists</i> to learn about the realities of working at commercial farm scale	<ul style="list-style-type: none"> • Encourage and support network to do this – use LAND type criteria – FarmLAND project. • Identify other demonstration networks (LEAF etc) 	

One-to-one permaculture design support for farmers	<ul style="list-style-type: none"> • Like LAND Learner support • Shadow designers working on farms; Design partnerships / teams • Use diploma holders to deliver this – but only those with sufficient land based design experience. • Ensure good mix of farmers and permaculture trained people in the project mix. 	
Train a network of permaculture farm trainers	<ul style="list-style-type: none"> • Develop a register of particular skills • Support existing permaculture farmers to learn about ways of promoting it to others. • Farming Connect offers funding in Wales for Whole Farm Planning but they have no advisors for Permaculture, therefore see if we can get permaculture advisors into other people's advice systems. 	
Farm / land-based networking ideas		
Regional and national events	<ul style="list-style-type: none"> • Minimise national events, focus more on local / regional • Work out when best times are to hold events • Attend other people's event – NFU • Host events with other organisations eg OGA 	
Other		
Involving people in the running of the project	<ul style="list-style-type: none"> • Working group • Distributing roles and responsibilities 	
link all this in with the existing agricultural colleges and schools with farms	<ul style="list-style-type: none"> • Signpost college courses • (Farm)LAND centres to host education events (some already doing this) • Teach teachers • Develop apprenticeship scheme 	

Send us your feedback

Please email us at farm@permaculture.org.uk with your comments and ideas.

Thank you for taking part in the design of this project.
